ILLUSTRES. When Constantine the Great re-organized the Roman administration, he divided the principal magistrates and officials into three classes: — 1. The *Illustres*, who held the first rank; 2. The *Spectabiles*; and 3. The *Clarissimi*. The title of *Illustres* belonged only to the Consules, the Patricii, the Praefectus praetorio, the Praefectus urbi, the Praepositus sacri cubiculi, the Magistri militum, the Magister officiorum, the Quaestor sacri palatii, the Comes sacrarum largitionum, and the Comes rerum privatarum. Even among the *Illustres* there was a gradation of rank, the Consuls and Patricii being regarded as higher in dignity than the others. The titles *Sublimissimi*, *Excellentissimi*, and *Magnifici* are used as synonymous with *Illustres*. Among the privileges of the *Illustres* we read that in criminal cases they could only be tried by the emperor himself or by an imperial commission, and that they could appear before the courts by

means of procurators. (Cod. Theod. 6. tit. 6, &c., with the commentary of Gothofred; Walter, *Geschichte des Römischen Rechts*, § 380, 2nd ed.; Gibbon, *Decline and Fall*, c. 17. vol. iii. p. 34, London, 1797.)

IMA'GINUM JUS. [NOBILES.]

IMA'GO, the representation or likeness of any object, is derived from the root *im* or *sim*, which appears in *im-itari* and *sim-ilis*, and likewise in the Greek *ἰμι-ῶς*. ("Imago ab imitatione dicta," Festus, s. v.; "Imago dicitur quasi imitago," Porphy. *ad Hor. Carm.* i. 12. 4.) It was especially applied among the Romans to indicate the waxen busts of deceased ancestors, which distinguished Romans kept in the atria of their houses, and of which an account is given in the article NOBILES. The word is also used in general to signify a portrait or statue of a person; on both of which some remarks are made under PICTURA, No. XV. and STATUARIA, No. II.

I'MBRICES. [TEGULA.]

IMMUNITAS (from *im* and *munus*), signifies, 1. A freedom from taxes. 2. A freedom from services which other citizens had to discharge. With respect to the first kind of immunitas we find that the emperors frequently granted it to separate persons (Suet. *Aug.* 40), or to certain classes of persons, or to whole states. When granted to individuals the immunitas ceased with their death, but in the case of states the privilege continued to subsequent generations. (Dig. 50. tit. 15. s. 4. § 3.) Thus we find that certain people in Illyria had immunitas from taxes (Liv. xiv. 26), and that the emperor Claudius granted freedom from taxation in *perpetuum* to the inhabitants of Ilium. (Suet. *Claud.* 25.) The Roman soldiers from the time of Nero were exempt from all duties on goods which they might carry into the provinces for their own use or might purchase in any place. (Tac. *Ann.* xiii. 51; Cod. 4. tit. 61. s. 3.)

The second kind of immunitas was granted to all persons who had a valid excuse (*excusatio*) to be released from such services, and also to other persons as a special favour. Under the republic, public offices were objects of ambition, and consequently there was no difficulty in obtaining persons to discharge them even when they were attended with expense to the individual who held them. But under the empire the case became different. Many offices which entailed expenses, such, for instance, as that of the decuriones in the municipia, were avoided rather than sought after; and hence various regulations were made at different times to define the classes of persons who were entitled to exemption. (Comp. Dig. 50. tit. 6; Cod. 10. tit. 47 and 48.) The definition of immunitas in this sense is given by Paulus (Dig. 50. tit. 16. s. 18): — "Munus — onus, quod cum remittatur, vacationem militiae munerisque praestat, inde *immunitatem* appellari." The immunitas might be either general, from all services which a citizen owed to the state, or special, such as from military service [EXERCITUS, p. 499], from taking the office of tutor or guardian [TUTOR], and the like.

IMPE'NDIUM. [FENUS, p. 526, b.]

IMPERATI'VAE FERIAE. [FERIAE.]

IMPERATOR. [IMPERIUM.]

IMPERIUM. Gaius (iv. 103), when making a division of judicia into those Quae Legitimo jure consistunt, and those Quae Imperio continentur, observes that the latter are so called

because they continue in force during the Imperium of him who has granted them. Legitima judicia were those which were prosecuted in Rome or within the first miliarium, between Roman citizens, and before a single judex. By a Lex Julia Judiciaria, such judicia expired, unless they were concluded within a year and six months. All other judicia were said Imperio contineri, whether conducted within the above limits before recuperatores, or before a single judex, when either the judex or one of the litigant parties was a peregrinus, or when conducted beyond the first miliarium either between Roman citizens or peregrini. From this passage it follows that there were judicia quae Imperio continebantur, which were granted in Rome; which is made clearer by what follows. There was a distinction between a judicium ex lege, that is, a judicium founded on a particular lex, and a judicium legitimum; for instance, if a man sued in the provinces under a lex, the Aquilia for example, the judicium was not legitimum, but was said Imperio contineri, that is, the Imperium of the praeses or proconsul, who gave the judicium. The same was the case if a man sued at Rome ex lege, and the judicium was before recuperatores, or there was a peregrinus concerned. If a man sued under the praetor's edict, and consequently not ex lege, and a judicium was granted in Rome and the same was before one judex and no foreigner was concerned, it was legitimum. The judicia legitima are mentioned by Cicero (*Pro Rosc. Com.* 5; *Or. Part.* 12); but it may perhaps be doubted if he uses the term in the sense in which Gaius does. It appears then, that in the time of Gaius, so long as a man had jurisdiction, so long was he said to have Imperium. Imperium is defined by Ulpian (*Dig.* 2. tit. 1. s. 3) to be either merum or mixtum. To have the merum Imperium is to have "gladii potestatem ad animadvertendum in facinorosos homines," a power that had no connection with jurisdiction: the mixtum Imperium is defined by him as that "cui etiam jurisdictio inest," or the power which a magistrate had for the purposes of administering the civil (not criminal) part of the law. It appears then that there was an Imperium which was incident to jurisdiction; but the merum or pure Imperium was conferred by a lex (*Dig.* 1. tit. 21. s. 1). The mixtum Imperium was nothing more than the power necessary for giving effect to the Jurisdiction. There might therefore be Imperium without Jurisdiction, but there could be no Jurisdiction without Imperium. Accordingly, Imperium is sometimes used to express the authority of a magistratus, of which his Jurisdiction is a part. (Puchta, *Zeitschrift für Gesch. Rechtswissenschaft*, vol. x. p. 201.)

Imperium is defined by Cicero (*Phil.* v. 16) to be that "sine quo res militaris administrari, teneri exercitus, bellum geri non potest." As opposed to Potestas, it is the power which was conferred by the state upon an individual who was appointed to command an army. The phrases Consularis Potestas and Consulare Imperium might both be properly used; but the expression Tribunitia Potestas only could be used, as the Tribuni never received the Imperium. (*Liv.* vi. 37; in *Vell. Pat.* ii. 2, Imperium is improperly used.) A consul could not act as commander of an army (*attinere rem militarem*) unless he were empowered by a Lex Curiata, which is expressed by Livy (v. 52)

thus:—"Comitia Curiata rem militarem continent." Though consuls were elected at the Comitia Centuriata, the Comitia Curiata only could give them Imperium. (*Liv.* v. 52.) This was in conformity with the ancient constitution, according to which the Imperium was conferred on the kings after they had been elected: "On the death of King Pompilius, the populus in the Comitia Curiata elected Tullus Hostilius king, upon the rogation of an interrex; and the king, following the example of Pompilius, took the votes of the populus according to their curiae on the question of his Imperium." (*Cic. Rep.* ii. 17.) Both Numa (ii. 13), and Ancus Marcius (ii. 18), the successor of Tullus, after their appointment as Reges, are severally said "De Imperio suo legem curiatam tulisse." It appears then that, from the kingly period to the time of Cicero, the Imperium, as such, was conferred by a Lex Curiata. On the kingly Imperium see Becker, *Handbuch der Röm. Alterthümer*, vol. i. part ii. p. 314, &c.

The Imperium of the kings is not defined by Cicero. It is declared by some modern writers to have been the military and the judicial power; and it is said that the consuls also received the Imperium in the same sense; and the reason why the Lex Curiata is specially said to confer the Imperium Militare, is that it specially referred to the consuls, and by the establishment of the praetorship the jurisdiction was separated from the consulship. It may be conjectured that the division of Imperium, made by the jurists, was in accordance with the practice of the republican period: there was during the republican period an Imperium within the walls which was incident to jurisdiction, and an Imperium without the walls which was conferred by a lex curiata. There are no traces of this separation in the kingly period, and it is probable that the king received the Imperium in its full import, and that its separation into two parts belongs to the republican period. The Imperium, which was conferred by a lex under the republic, was limited, if not by the terms in which it was conferred, at least by usage: it could not be held or exercised within the city. It was sometimes specially conferred on an individual for the day of his triumph within the city; and, at least in some cases, by a plebiscitum. (*Liv.* xxvi. 21, xlv. 35.)

The Imperium was as necessary for the governor of a province, as for a general who merely commanded the armies of the republic, as he could not without it exercise military authority (*rem militarem attingere*). (See *Caes. B. C.* i. 6.) So far as we can trace the strict practice of the Roman constitution, military command was given by a special lex, and was not incident to any office, and might be held without any other office than that of imperator. It appears that in the time of Cicero there were doubts as to the necessity of the lex in some cases, which may have gradually arisen from the irregular practices of the civil wars, and from the gradual decay of the old institutions. Cicero, in a passage which is not very clear (*Ad Fam.* i. 9), refers to a Cornelia Lex according to which an individual who had received a Province ex Senatus-consulto thereby acquired the Imperium, without the formality of a Lex Curiata.

The Imperium (*merum*) of the republic appears to have been (1), a power which was only exercised out of the city; (2) a power which was

specially conferred by a *Lex Curia*, and was not incident to any office; (3) a power without which no military operation could be considered as done in the name and on the behalf of the state. Of this a notable example is recorded in Livy (xxvi. 2), where the senate refused to recognise a Roman as a commander because he had not received the Imperium in due form.

In respect of his Imperium, he who received it was styled imperator (*ἀρχηγός*): he might be a consul or a proconsul. It was an ancient practice, observes Tacitus (*Ann.* iii. 74), for the soldiers of a victorious general to salute him by the title of imperator; but in the instance referred to by Tacitus, the Emperor Tiberius allowed the soldiers to confer the title on an individual who had it not already, while under the republic the title as a matter of course was given with the Imperium; and every general who received the Imperium was entitled to the name of imperator. After a victory it was usual for the soldiers to salute their commander as imperator, but this salutation neither gave nor confirmed the title. Under the republic, observes Tacitus, there were several imperatores at a time: Augustus granted the title to some; but the last instance, he adds, of the title being conferred was in the case of Blaesus, under Tiberius. There were, however, later instances. The assumption of the praenomen of imperator by Julius Caesar (Suet. *Caes.* c. 76) was a usurpation; or it may have been conferred by the senate (Dion Cassius, xliii. 44). Under the republic the title came properly after the name; thus Cicero, when he was proconsul in Cilicia, could properly style himself M. Tullius Cicero Imperator, for the term merely expressed that he had the Imperium. Tiberius and Claudius refused to assume the praenomen of Imperator, but the use of it as a praenomen became established among their successors, as we see from the imperial coins. The title Imperator sometimes appears on the imperial medals, followed by a numeral (VI. for instance), which indicates that it was specially assumed by them on the occasion of some great victory; for though the victory might be gained by their generals, it was considered to be gained under the auspices of the Imperator.

The term Imperium was applied in the republican period to express the sovereignty of the Roman state. Thus Gaul is said by Cicero (*Pro Font.* 1) to have come under the Imperium and Ditio of the Populus Romanus; and the notion of the Majestas Populi Romani is said to be "in Imperii atque in nominis populi Romani dignitate." (Cic. *Or. Part.* 30.) Compare the use of Imperium in Horace, *Od.* i. 37, iii. 5. [G. L.]

IMPLUVIUM. [DOMUS, p. 427, b.]

IMPUBES. AN INFANS [INFANS] was incapable of doing any legal act. An impubes, who had passed the limits of infantia, could do any legal act with the auctoritas of his tutor; without such auctoritas he could only do those acts which were for his benefit. Accordingly such an impubes could stipulate (*stipulari*), but not promise (*promittere*); in other words, as Gaius (iii. 107) expresses it, a pupillus could only be bound by the auctoritas of his tutor, but he could bind another without such auctoritas. [INFANS]

But this remark as to pupilli only applies to those who had understanding enough to know what they were doing (*qui jam aliquem intellectum ha-*

beat), and not to those who were *infantes* or *Infanti proximi*, though in the case of the *infanti proximi* a liberal interpretation was given to the rule of law (*benignior juris interpretatio*), by virtue of which a pupillus, who was *infanti proximus*, was placed on the same footing as one who was *pubertati proximus*, but this was done for their benefit only (*propter utilitatem eorum*), and therefore could not apply to a case where the pupillus might be a loser (Compare Inst. iii. tit. 19. s. 10 with Gaius, iii. 108.) An impubes who was in the power of his father, could not bind himself even with the auctoritas of his father; for in the case of a pupillus, the auctoritas of the tutor was only allowed, in respect of the pupillus having property of his own, which a son in the power of his father could not have.

In the case of *obligationes ex delicto*, the notion of the auctoritas of a tutor was of course excluded, as such auctoritas was only requisite for the purpose of giving effect to rightful acts. If the impubes was of sufficient capacity to understand the nature of his delict, he was bound by it; otherwise, he was not. In the case of a person who was *Pubertati proximus*, there was a legal presumption of such capacity; but still this presumption did not exclude a consideration of the degree of understanding of the impubes and the nature of the act, for the act might be such as either to be perfectly intelligible, as theft, or it might be an act which an impubes imperfectly understood, as when he was made the instrument of fraud. These principles were applicable to cases of *furtum*, *damnum injuria datum*, *injuria*, and others; and also to crimes, in which the nature of the act mainly determined whether or not guilt should be imputed.

An impubes could enter into a contract by which he was released from a debt, but he could not release a debt without the auctoritas of his tutor. He could not pay money without his tutor; nor could he receive money without his tutor, at least it was not a valid payment, because such payment was, as a consequence, followed by a release to the debtor. But since the rule as to the incapacity of an impubes was made only to save him from loss, he could not retain both the money and the claim.

An impubes could not be a plaintiff or a defendant in a suit without his tutor. He could acquire the ownership of property alone, but he could not alienate it without the consent of his tutor, nor could he manumit a slave without such consent. He could contract *sponsalia* alone, because the auctoritas of the tutor has reference only to property: if he was in his father's power, he was of course entirely under his father's control.

An impubes could acquire an hereditas with the consent of his tutor, which consent was necessary, because an hereditas was accompanied with obligations. But as the act of cretion was an act that must be done by the heres himself, neither his tutor nor a slave could take the hereditas for a pupillus, and he was in consequence of his age incapable of taking it himself. This difficulty was got over by the doctrine of *pro herede gestio*: the tutor might permit the pupillus to act as heres, which had the effect of cretion; and this doctrine would apply even in the case of *infantes*, for no expression of words was necessary in order to the *pro herede gestio*. In the case of the *bonorum possessio*, the father could apply for it on behalf of his child, and the tutor on behalf of his pupillus, without any act

being done by the impubes. By the imperial legislation, a tutor was allowed to acquire the hereditas for his pupillus, and a father for his son, who was in his power; and thus the doctrine of the *pro herede gestio* was rendered unnecessary.

A pupillus could not part with a possession without the *auctoritas* of a tutor, for though possession of itself was no legal right, legal advantages were attached to it. As to the acquisition of possession, possession in itself being a bare fact, and the fundamental condition of it being the *animus possidendi*, consequently the pupillus could only acquire possession by himself, and when he had capacity to understand the nature of the act. But with the *auctoritas* of his tutor he could acquire possession even when he was an *infans*, and thus the acquisition of possession by a pupillus was facilitated, *utilitatis causa*. There was no formal difficulty in such possession any more than in the case of *pro herede gestio*, for in neither instance was it necessary for words to be used. Subsequently the legal doctrine was established that a tutor could acquire possession for his pupillus. (Dig. 41. tit. 2. s. 1. § 20.)

With the attainment of *pubertas*, a person obtained the full power of his property, and the *tutela* ceased: he could also dispose of his property by will; and he could contract marriage. According to the legislation of Justinian (Inst. i. tit. 22), *pubertas*, in the case of a male, was attained with the completion of the fourteenth, and, in a female, with the completion of the twelfth year. In the case of a female, it seems that there never had been any doubt as to the period of the twelve years, but a dispute arose among the jurists as to the period of fourteen years. The Sabiniani maintained that the age of *pubertas* was to be determined by physical capacity (*habitus corporis*), to ascertain which a personal examination might be necessary; the Proculiani fixed the age of fourteen complete, as that which absolutely determined the attainment of puberty. (Gaius, i. 196; Ulp. *Frag.* xi. 28.) It appears, therefore, that under the earlier emperors there was some doubt as to the time when *pubertas* was attained, though there was no doubt that with the attainment of puberty, whatever that time might be, full legal capacity was acquired.

Until a Roman youth assumed the *toga virilis*, he wore the *toga praetexta*, the broad purple hem of which (*praetexta*) at once distinguished him from other persons. The *toga virilis* was assumed at the *Liberalia* in the month of March, and though no age appears to have been positively fixed for the ceremony, it probably took place as a general rule on the feast which next followed the completion of the fourteenth year; though it is certain that the completion of the fourteenth year was not always the time observed. Still, so long as a male wore the *praetexta*, he was *Impubes*, and when he assumed the *toga virilis*, he was *Pubes*. Accordingly, *Vesticeps* (*Festus*, s. v.) was the same as *Pubes*, and *Investis* or *praetextatus* the same as *Impubes*. (Gell. v. 19. *Vesticeps*.) After the assumption of the *toga virilis*, the son who was in the power of his father had a capacity to contract debts; and a pupillus was released from the *tutela*. But if neither the pupillus wished to get rid of his tutor, nor the tutor to be released from the responsibility of his office (for which he received no emolument), the period of assuming the *toga virilis* might be

deferred. If the pupillus and the tutor could not agree, it might be necessary that there should be a judicial decision. In such case the Proculiani maintained as a theoretical question, that the age of fourteen should be taken as absolutely determining the question, fourteen being the age after the attainment of which the *praetexta* had been generally laid aside. The Sabiniani maintained that as the time of puberty had never been absolutely fixed, but had depended on free choice, some other mode of deciding the question must be adopted, where free choice was out of the question, and therefore they adopted that of the physical development (*habitus corporis*). But though there are allusions to this matter (Quint. Inst. Or. iv. 2), there is no evidence to show that inspection of the person was ever actually resorted to in order to determine the age of puberty. It appears that the completion of fourteen years was established as the commencement of *pubertas*. The real foundation of the rule as to the fourteen and the twelve years appears to be, that in the two sexes respectively, puberty was, as a general rule in Italy, attained about these ages. In the case of females, the time had been fixed absolutely at twelve by immemorial custom, and had no reference to any practice similar to that among males of adopting the *toga virilis*, for women wore the *toga praetexta* till they were married. And further, though the pupillaris *tutela* ended with females with the twelfth year, they were from that time subject to another kind of *tutela*.

A male had a capacity to make a will upon completing his fourteenth, and a female upon completing her twelfth year (Gaius, ii. 113; Paulus, S. R. iii. tit. 4. a.); and the same ages, as already observed, determined the capacity, in the two sexes, for contracting a legal marriage. The dispute between the two schools as to the time when the male attained the age of puberty, appears to have had reference to the termination of the *tutela*, and his general capacity to do legal acts; for the test of the personal examination could hardly, from the nature of the case, apply to the capacity to make a will or contract a marriage, as Savigny shows.

Spadones (males who could never attain physical *pubertas*) might make a testament after attaining the age of eighteen. (Savigny, *System des heud. Röm. Rechts*, vol. iii. p. 55, &c.) [G. L.]

INAUGURATIO was in general the ceremony by which the augurs obtained, or endeavoured to obtain, the sanction of the gods to something which had been decreed by man; in particular, however, it was the ceremony by which things or persons were consecrated to the gods, whence the terms *dedicatio* and *consecratio* were sometimes used as synonymous with inauguration. (Liv. i. 44, 55; Flor. i. 7, 8; Plin. *Ep.* ix. 39, x. 58, 59, 76; Cic. in *Caecil.* iv. 1.) The ceremony of inauguration was as follows:—After it had been decreed that something should be set apart for the service of the gods, or that a certain person should be appointed priest, a prayer was addressed to the gods by the augurs or other priests, soliciting them to declare by signs whether the decree of men was agreeable to the will of the gods. (Liv. i. 18.) If the signs observed by the inaugurating priest were thought favourable, the decree of men had the sanction of the gods, and the inauguration was completed. The inauguration was, in early times, always performed by the augurs; but subsequently we find that the

inauguratio, especially that of the rex sacrificulus and of the flamines, was sometimes performed by the college of pontiffs in the comitia calata. (Geil. xv. 27.) But all other priests, as well as new members of the college of augurs, continued to be inaugurated by the augurs, or sometimes by the augurs in conjunction with some of the pontiffs (Liv. xxvii. 8, xl. 42); the chief pontiff had the right to enforce the inauguratio, if it was refused by the augurs, and if he considered that there was no sufficient ground for refusing it. Sometimes one augur alone performed the rite of inauguratio, as in the case of Numa Pompilius (Liv. i. 18; compare Cic. *Brut.* i.; Macrob. *Sat.* ii. 9); and it would seem that in some cases a newly appointed priest might himself not only fix upon the day, but also upon the particular augur by whom he desired to be inaugurated. (Cic. *l. c.*; and *Philipp.* ii. 43.)

During the kingly period of Rome the inauguration of persons was not confined to actual priests; but the kings, after their election by the populus, were inaugurated by the augurs, and thus became the high-priests of their people. After the civil and military power of the kings had been conferred upon the consuls, and the office of high-priest was given to a distinct person, the rex sacrorum, he was, as stated above, inaugurated by the pontiffs in the comitia calata, in which the chief pontiff presided. But the high republican magistrates, nevertheless, likewise continued to be inaugurated (Dionys. ii. 6), and for this purpose they were summoned by the augurs (*conductio, denunciatio*) to appear on the capitol on the third day after their election. (Serv. *ad Virg. Aen.* iii. 117.) This inauguratio conferred no priestly dignity upon the magistrates, but was merely a method of obtaining the sanction of the gods to their election, and gave them the right to take the auspices; and on important emergencies it was their duty to make use of this privilege. At the time of Cicero, however, this duty was scarcely ever observed. (Cic. *de Divin.* ii. 36.) As nothing of any importance was ever introduced or instituted at Rome without consulting the pleasure of the gods by augury, we read of the inauguratio of the tribes, &c. [L. S.]

INAURIS, an ear-ring; called in Greek ἐνώτιον, because it was worn in the ear (ὄψ), and ἑλάδιον, because it was inserted into the lobe of the ear (λοτός), which was bored for the purpose. (Hom. *Il.* xiv. 182, *Hymn.* ii. in *Ven.* 9; Plin. *H. N.* xii. 1.)

Ear-rings were worn by both sexes in oriental countries (Plin. *H. N.* xi. 50); especially by the Lydians (Xen. *Anab.* iii. 1. § 31), the Persians (Diod. Sic. v. 45), the Babylonians (Juv. i. 104), and also by the Libyans (Macrob. *Sat.* vii. 3), and the Carthaginians (Plaut. *Poen.* v. 2. 21). Among the Greeks and Romans they were worn only by females.

This ornament consisted of the ring (κρήκος, Diod. Sic. *l. c.*) and of the drops (σταγμία, Festus, s. v.; Plaut. *Men.* iii. 3. 18.) The ring was generally of gold, although the common people also wore ear-rings of bronze. See Nos. 1, 4, from the Egyptian collection in the British Museum. Instead of a ring a hook was often used, as shown in Nos. 6, 8. The women of Italy still continue the same practice, passing the hook through the lobe of the ear without any other fastening. The drops were sometimes of gold, very finely wrought (see Nos. 2, 7, 8), and sometimes of pearls (Plin. *l. c.*;

INCENDIUM.

Sen. *de Ben.* vii. 9; Ovid. *Met.* x. 265; Claud. *de VI. Cons. Honor.* 528; Sen. *Hippol.* ii. 1. 33), and precious stones (Nos. 3, 5, 6). The pearls were valued for being exactly spherical (Hor. *Epod.* viii. 13), as well as for their great size and delicate whiteness; but those of an elongated form, called *clenchi*, were also much esteemed, being adapted to terminate the drop, and being sometimes placed two or three together for this purpose. (Plin. *H. N.* ix. 56; Juv. vi. 364.) In the *Iliad* (xiv. 182, 183), Hera, adorning herself in the most captivating manner, puts on ear-rings made with three drops resembling mulberries. (See Eustath. *ad loc.*) Pliny observes (xi. 50) that greater expense was lavished on no part of the dress than on the ear-rings. According to Seneca (*l. c.*) the ear-ring, No. 3, in the preceding woodcut, in which a couple of pearls are strung both above and below the precious stone, was worth a patrimony. (See also *De Vita Beata*, 17.) All the ear-rings above engraved belong to the Hamilton collection in the British Museum.

In opulent families the care of the ear-rings was the business of a female slave, who was called *Auriculae Ornatrix* (Gruter, *Inscript.*). The Venus de' Medici, and other female statues, have the ears pierced, and probably once had ear-rings in them. The statue of Achilles at Sigeum, representing him in female attire, likewise had this ornament. (Serv. *in Virg. Aen.* i. 30; Tertull. *de Pall.* 4.) [J. Y.]

INCENDIUM, the crime of setting any object on fire, by which the property of a man is endangered. It was thus a more general term than the modern *Arson*, which is limited to the act of wilfully and maliciously burning the property of another. The crime of incendium was the subject of one of the laws of the Twelve Tables, which inflicted a severe punishment on the person who set fire to property maliciously (*sciens, prudens*); but if it was done by accident (*casu, id est, negligentia*), the law obliged the offender to repair the injury he had committed. (Dig. *l. tit.* 9. s. 9.) The punishment, however, of burning alive, which is mentioned in the passage of the Digest referred to, is supposed by modern commentators not to have been contained in the Twelve Tables, but to have been transferred from the imperial period to earlier times. In the second Punic war a great fire broke out at

Rome, which was evidently occasioned *humana fraude*. The offenders were discovered and punished (*animadvertum est*), but Livy unfortunately does not state (xxvi. 27) in what manner. The crime of incendium was the subject of various enactments in the last century of the republic. Sulla, in his *Lex Cornelia de Sicariis*, punished malicious (*dolo malo*) incendium, but only in the city, or within a thousand paces of it, with *aquae et ignis interdictio*, since it was frequently employed as a means for the perpetration of murder, which was especially the subject of this law. (Dig. 48. tit. 8. s. 1.) Cn. Pompeius, in a.c. 52, made incendium a crime of *Vis* by his *Lex Pompeia de Vi*, in consequence of the burning of the Curia and the Porcia Basilica on the burial of Clodius; and Julius Caesar also included it in his *Lex Julia de Vi*, which enacted that any act of incendium committed by large numbers of men, even if the object of their assembling together was not incendium, should be treated as *Vis*, and punished with *aquae et ignis interdictio*. (Cic. *Phil.* i. 9; comp. *Parad.* 4.) The more recent *Lex Julia de Vi* seems to have been less severe, but it is uncertain what punishment it ordained. (Paull. v. 26. § 3.) Besides the two criminal prosecutions given by the *Lex Cornelia* and *Lex Julia*, a person could also bring actions to recover compensation for the injury done to his property: 1. By the *actio legis Aquiliae*, in case of accidental incendium. (Dig. 9. tit. 2. s. 27 § 5.) 2. In the case of a person who had committed robbery or done injury during an incendium, there was a praetorian action de incendio, which compelled him to restore fourfold the amount. (Dig. 47. tit. 9. s. 1, 5.) In the imperial period various distinctions were made in the crime. First, a distinction was made according to the greater or smaller danger of the incendium to the contiguous objects: thus incendium in the city was punished with less severity than incendium in the country. Secondly, a distinction was made according as the act had been performed *dolo*, *culpa*, or *casu*. If the incendium was not malicious, but still might have been avoided by ordinary care, a person had to make compensation; but if the incendium was purely accidental, no compensation was necessary. The *cognitio* was *extraordinaria* and belonged to the Praefectus urbi, who could inflict whatever punishment he pleased, for it appears that there was no punishment fixed by law. We accordingly find mention of execution by the sword, burning alive, condemnation to the mines and to public works, deportatio, relegatio, flogging, &c., as punishments inflicted on account of incendium. (Dig. 48. tit. 19. s. 28. § 12; 9. tit. 2. s. 30. § 3; 47. tit. 9. § 1; Paull. v. 20. § 1. v. 3. § 6; Coll. Leg. tit. 12.) The preceding account is taken from Rein, *Das Criminalrecht der Römer*, pp. 765—774, where all the authorities are given.

INCENSUS. [CAPUT; CENSUS, p. 263, a.]

INCESTUM or INCESTUS. Incestum is non castum, and signifies generally all immoral and irreligious acts. In a narrower sense it denotes the unchastity of a Vestal, and sexual intercourse of persons within certain degrees of consanguinity. If a man married a woman whom it was forbidden for him to marry by positive morality (*moribus*), he was said to commit incestum. (Dig. 23. tit. 2. s. 39.) Such a marriage was in fact no marriage, for the necessary connubium between the parties was wanting. Accordingly, incestum

is the sexual connection of a male and a female, whether under the form of marriage or not, if such persons cannot marry by reason of consanguinity.

There was no connubium between persons related by blood in the direct line, as parents and children. If such persons contracted a marriage it was *Nefariae et Incestae nuptiae*. There was no connubium between persons who stood in the relation of parent and child by adoption, not even after the adopted child was emancipated. There were also restrictions as to connubium between collateral kinsfolk (*ex transverso gradu cognationis*): there was no connubium between brothers and sisters, either of the whole or of the half blood; nor between children of the blood and children by adoption, so long as the adoption continued, or so long as the children of the blood remained in the power of their father. There was connubium between an uncle and his brother's daughter, after the emperor Claudius had set the example by marrying Agrippina; but there was none between an uncle and a sister's daughter. There was no connubium between a man and his *amita* or *mateterna* [COGNATI]; nor between a man and his *socrus*, *nurus*, *privigna* or *noverca*. In all such cases when there was no connubium, the children had a mother, but no legal father.

Incest between persons in the direct line was punishable in both parties; in other cases only in the man. The punishment was Relegatio, as in the case of adultery. Concubinage between near kinsfolk was put on the same footing as marriage. (Dig. 23. tit. 2. s. 56.) In the case of adulterium and stuprum between persons who had no connubium, there was a double offence: the man was punished with deportatio, and the woman was subject to the penalties of the *Lex Julia*. (Dig. 48. tit. 18. s. 5.) Among slaves there was no incestum, but after they became free their marriages were regulated according to the analogy of the connubium among free persons. It was incestum to have knowledge of a vestal virgin, and both parties were punished with death.

That which was stuprum, was considered incestum when the connection was between parties who had no connubium. Incestum, therefore, was stuprum, aggravated by the circumstance of real or legal consanguinity, and, in some cases, affinity. It was not the form of marriage between such persons that constituted the incestum; for the nuptiae were incestae, and therefore no marriage, and the incestuous act was the sexual connection of the parties. Sometimes incestum is said to be *contra fas*, that is, an act in violation of religion. The rules as to Incestum were founded partly on the *Jus Gentium* and partly on the *Jus Civile*; but the distinction did not exist in the early periods, and the rules as to Incestum were only such as were recognized by the *Jus Gentium*. Though the rules as to Incestum were afterwards more exactly determined by the *Jus Civile*, there does not seem to have been any complete lex on the matter. The *Lex Julia de adulteriis* only treated Incestum incidentally, or so far as it was also adultery; but the jurists connected all the imperial legislation on this matter and their own interpretation with the *Lex Julia*. (Rein, *Das Criminalrecht der Römer*, p. 869, &c.) [G. L.]

INCITE'GA, a corruption of the Greek *ἀγροθήκη* or *ἐγροθήκη*, a term used to denote a piece of domestic furniture, variously formed ac-

cording to the particular occasion intended ; made of silver, bronze, clay, stone, or wood, according to the circumstances of the possessor ; sometimes adorned with figures ; and employed to hold amphorae, bottles, alabastra, or any other vessels which were round or pointed at the bottom, and therefore required a separate contrivance to keep them erect. (*Festus, s. v. Incitega* ; Bekker, *Anecd.* 245 ; Wilkinson, *Man. and Customs*, vol. ii. pp. 158, 160, 216, 217.) Some of those used at Alexandria were triangular. (*Athen. v. 45*.) We often see them represented in ancient Egyptian paintings. The annexed woodcut shows three ἀγγυθήκαι, which are preserved in the British Museum. Those on the right and left hand are of wood, the one having four feet, the other six ; they were found in Egyptian tombs. The third is a broad earthenware ring, which is used to support a Grecian amphora. [J. Y.]

I'NCOLA. [DOMICILIUM.]

INCORPORA'LES RES. [DOMINIUM.]

INCUNA'BULA or CUNA'BULA (σπάργανον), swaddling-clothes.

The first thing done after the birth of a child was to wash it ; the second to wrap it in swaddling clothes, and the rank of the child was indicated by the splendour and costliness of this, its first attire. Sometimes a fine white shawl, tied with a gold band, was used for the purpose (*Hom. Hymn. in Apoll.* 121, 122) ; at other times a small purple scarf, fastened with a brooch. (*Pind. Pyth. iv.* 114 ; *χλαμύδιον*, Longus, i. 1. p. 14, 28, ed. Boden.) The poor used broad fillets of common cloth (*panni*, Luke, ii. 7, 12 ; *Ezek. xvi.* 4. *Vulg.* ; compare *Hom. Hymn. in Merc.* 151, 306 ; *Apollod. Bibl.* iii. 10. § 2 ; *Aelian, V. H.* ii. 7 ; *Eurip. Ion.* 32 ; *Dion Chrysost.* vi. p. 203, ed. Reiske ; *Plaut.*

Amphit. v. 1. 52, *Truc.* v. 13). The preceding woodcut, taken from a beautiful bas-relief at Rome, which is supposed to refer to the birth of Telephus, shows the appearance of a child so clothed, and renders in some degree more intelligible the fable of the deception practised by Rhea upon Saturn in saving the life of Jupiter by presenting a stone, enveloped in swaddling-clothes, to be devoured by Saturn instead of his new-born child. (*Hes. Theog.* 485.) It was one of the peculiarities of the Lacedaemonian education to dispense with the use of incunabula, and to allow children to enjoy the free use of their limbs. (*Plut. Lycurg.* p. 90, ed. Steph.) [J. Y.]

INCUS (ἄκμων), an anvil. The representations of Vulcan and the Cyclopes on various works of art, show that the ancient anvil was formed like that of modern times. When the smith wanted to make use of it, he placed it on a large block of wood (*ἀκμυθέρων*, *Hom. Il.* xviii. 410, 476, *Od.* viii. 274 ; *positis incudibus*, *Virg. Aen.* vii. 629 ; viii. 451) ; and when he made the link of a chain, or any other object which was round or hollow, he beat it upon a point projecting from one side of the anvil. The annexed woodcut, representing Vulcan forging a thunderbolt for Jupiter, illustrates these circumstances ; it is taken from a gem in the Royal Cabinet at Paris. It appears that in

the "brazen age," not only the things made upon the anvil, but the anvil itself, with the hammer and the tongs, were made of bronze. (*Hom. Od.* iii. 433, 434 ; *Apollon. Rhod.* iv. 761, 762.) [MALLEUS.] [J. Y.]

INDEX. [LIBER.]

INDIGITAMENTA. [PONTIFEX.]

INDU'SIUM. [TUNICA.]

I'NDUTUS. [AMICTUS ; TUNICA.]

INFAMIA. The provisions as to Infamia, as they appear in the legislation of Justinian, are contained in Dig. 3. tit. 2. De his qui notantur Infamia, and in Cod. 2. tit. 12. Ex quibus causis Infamia irrogatur. The Digest contains (a. 1) the cases of Infamia as enumerated in the Praetor's Edict. There are also various provisions on the subject in the Lex Julia Municipalis (a. c. 45), commonly called the Table of Heraclaea.

Infamia was a consequence of condemnation in any Judicium Publicum, of ignominious (*ignominiae causa*) expulsion from the army (*Tab. Heracl.* 1. 121), of a woman being detected in adultery, though she might not have been condemned in a Judicium Publicum, &c. ; of condemnatio for Fur-

tum, Rapina, Injuriae, and Dolus Malus, provided the offender was condemned in his own name, or provided in his own name he paid a sum of money by way of compensation; of condemnation in an action Pro Socio, Tutelae, Mandatum, Depositum or Fiducia (compare the Edict with Cic. *pro Rosc. Com.* 6, *pro Rosc. Amer.* 38, 39, *pro Caecina*, 2, *Top.* c. 10; Tab. Heracl. l. 111), provided the offender was condemned in his own name. Infamia only followed for a condemnation in a direct actio, not if a man was condemned contrario iudicio, unless the person condemned was guilty of some special dishonesty. Infamia was also a consequence of insolvency, when a man's bona were Possessa, Proscripta, Vendita (Cic. *pro Quint.* 15; Tab. Heracl. l. 113—117; Gaius, ii. 154); of a widow marrying within the time appointed for mourning, but the Infamia attached to the second husband, if he was a paterfamilias, and if he was not, then to his father, and to the father of the widow if she was in his power; the Edict does not speak of the Infamia of the widow, but it was subsequently extended to her. Infamia was a consequence of a man being at the same time in the relation of a double marriage or double sponsalia; the Infamia attached to the man if he was a paterfamilias, and if he was not, to his father; the Edict here also speaks only of the man, but the Infamia was subsequently extended to the woman. Infamia was a consequence of prostitution in the case of a woman, of similar conduct in a man (*qui mulieribus passus est*), of Lenocinium or gaining a living by aiding in prostitution (Tab. Heracl. l. 123); of appearing on a public stage as an actor, of engaging for money to appear in the fights of the wild beasts, even if a man did not appear, and of appearing there, though not for money.

It results from this enumeration that Infamia was only the consequence of an act committed by the person who became Infamia, and was not the consequence of any punishment for such act. In some cases it only followed upon condemnation; in others it was a direct consequence of an act, as soon as such act was notorious.

It has sometimes been supposed that the Praetor established the Infamia as a rule of law, which however was not the case. The Praetor made certain rules as to Postulatio (Dig. 3. tit. 1. s. 1), for the purpose of maintaining the purity of his court. With respect to the Postulatio, he distributed persons into three classes. The second class comprehended, among others, certain persons who were *turpitudine notabiles*, who might postulate for themselves but not for others. The third class contained, among others, all those "qui Edicto Praetoris ut infames notantur," and were not already enumerated in the second class. Accordingly it was necessary for the Praetor to enumerate all the Infames who were not included in the second class, and this he did in the Edict as quoted. (Dig. 3. tit. 2. s. 1.) Consistently with this, Infamia was already an established legal condition; and the Praetor in his edicts on Postulatio did not make a class of persons called Infames, but he enumerated as persons to be excluded from certain rights of Postulatio, those who were Infames. Consequently the legal notion of Infamia was fixed before these edicts.

It is necessary to distinguish Infamia from the Nota Censoria. The Infamia does not seem to have been created by written law, but to have

been an old Roman institution. In many cases, though not in all, it was a consequence of a judicial decision. The power of the Censors was in its effects analogous to the Infamia, but different from it in many respects. The Censors could at their pleasure remove a man from the Senate or the Equites, remove him into a lower tribe, or remove him out of all the tribes, and so deprive him of his suffragium, by reducing him to the condition of an aerarius. (Cic. *pro Cluent.* 43, 45.) They could also affix a mark of ignominy or censure opposite to a man's name in the list of citizens, nota censoria or subscriptio (Cic. *pro Cluent.* 42, 43, 44, 46, 47); and in doing this, they were not bound to make any special inquiry, but might follow general opinion. This arbitrary mode of proceeding was however partly remedied by the fact that such a censorian nota might be opposed by a colleague, or removed by the following censors, or by a judicial decision, or by a lex. Accordingly the censorian nota was not perpetual, and therein it differed essentially from Infamia, which was perpetual.

The consequences of Infamia were the loss of certain political rights, but not all. It was not a capitis deminutio, but it resembled it. The Infamia became an Aeraria, and lost the suffragium and honores; that is, he lost the capacity for certain so-called public rights, but not the capacity for private rights. Under the empire, the Infamia lost its effect as to public rights, for such rights became unimportant.

It might be doubted whether the loss of the suffragium was a consequence of Infamia, but the affirmative side is maintained by Savigny with such reasons as may be pronounced completely conclusive. It appears from Livy (vii. 2) and Valerius Maximus (ii. 4. § 4), that the Actores Atellanarum were not either removed from their tribe (*neque tribu moventur*), nor incapable of serving in the army: in other words such actors did not become Infames, like other actors. The phrase "tribu moveri" is ambiguous, and may mean either to remove from one tribe to a lower, or to move from all the tribes, and so make a man an aerarius. Now the mere removing from one tribe to another must have been an act of the Censors only, for it was necessary to fix the tribe into which the removal was made; but this could not be the case in a matter of Infamia, which was the effect of a general rule, and a general rule could only operate in a general way; that is, "tribu moveri," as a consequence of Infamia, must have been a removal from all the tribes, and a degradation to the state of an Aerarius. (Compare Liv. xlv. 15.)

The Lex Julia Municipalis does not contain the word Infamia, but it mentions nearly the same cases as those which the Edict mentions as cases of Infamia. The Lex excludes persons who fall within its terms, from being Senatores, Decuriones, Conscripti of their city, from giving their vote in the senate of their city, and from magistracies which gave a man access to the senate: but it says nothing of the right of voting being taken away. Savigny observes that there would be no inconsistency in supposing that the lex refused only the Honores in the municipal towns, while it still allowed Infames to retain the suffragium in such towns, though the practice was different in Rome, if we consider that the suffragium in the Roman Comitia was a high privilege, while in the municipal towns it was comparatively unimportant.

Cicero (*pro Rosa. Com.* 6) speaks of the *judicia Fiducia, Tutelae, and Societatis* as "*summæ existimationis et pene capitis.*" In another oration (*pro Quint.* 8, 9, 13, 15, 22) he speaks of the *ex edicto possessio bonorum* as a *capitis causa*, and in fact as identical with *Infamia* (c. 15, *cujus bona ex edicto possidentur, hujus omnis fama et existimatio cum bonis simul possidetur*). This *capitis minutio*, however, as already observed, affected only the public rights of a citizen; whereas the *capitis deminutio* of the imperial period and the expression *capitalis causa*, apply to the complete loss of citizenship. This change manifestly arose from the circumstance of the public rights of the citizens under the empire having become altogether unimportant, and thus the phrase *capitis deminutio*, under the empire, applies solely to the individual's capacity for private rights.

In his private rights the *Infamia* was under some incapacities. He could only postulate before the *Prætor* on his own behalf, and on behalf of certain persons who were very nearly related to him, but not generally on behalf of all persons. Consequently he could not generally be a *Cognitor* or a *Procurator*. Nor could a cause of action be assigned to him, for by the old law he must sue as the *cognitor* or *procurator* of the assignor (*Gaius*, ii. 39); but this incapacity became unimportant when the *Cessio* was effected by the *utiles actiones* without the intervention of a *Cognitor* or *Procurator*. The *Infamis* could not sustain a *Popularis Actio*, for in such case he must be considered as a *procurator* of the state. The *Infamia* was also limited as to his capacity for marriage, an incapacity which originated in the *Lex Julia*. (*Ulp. Frag.* xiii.) This *lex* prohibited senators, and the children of senators, from contracting marriage with *Libertini* and *Libertinae*, and also with other disreputable persons enumerated in the *lex*: it also forbade all freemen from marrying with certain disreputable women. The *Jurists* made the following change:—they made the two classes of disreputable persons the same, which were not the same before, and they extended the prohibition, both for senators and others, to all those whom the *Edict* enumerated as *Infames*. The provisions of the *Lex Julia* did not render the marriage null, but it deprived the parties to such marriage of the privileges conferred by the *lex*; that is, such a marriage did not release them from the penalties of celibacy. A *senatus-consultum*, under *M. Aurelius*, however, made such marriage null in certain cases. (*Savigny, System, &c.*, vol. ii.) [G. L.]

INFAMIS. [INFAMIA.]

INFANS, INFANTIA. In the Roman law there were several distinctions of age which were made with reference to the capacity for doing legal acts:—1. The first period was from birth to the end of the seventh year, during which time persons were called *Infantes*, or *Qui fari non possunt*. 2. The second period was from the end of seven years to the end of fourteen or twelve years, according as the person was a male or a female, during which persons were defined as those *Qui fari possunt*. The persons included in these first two classes were *Impuberes*. 3. The third period was from the end of the twelfth or fourteenth to the end of the twenty-fifth year, during which period persons were *Adolescentes*, *Adulti*. The persons included in these three classes were *minores xxv annis* or *annorum*, and were often, for

brevity's sake, called *minores* only [*CURATOR*]; and the persons included in the third and fourth class were *Puberes*. 4. The fourth period was from the age of twenty-five, during which persons were *Majores*.

The term *Impubes* comprehends *Infans*, as all *Infantes* are *Impuberes*; but all *Impuberes* are not *Infantes*. Thus the *Impuberes* were divided into two classes; *Infantes* or those under seven years of age, and those above seven, who are generally understood by the term *Impuberes*. *Pupillus* is a general name for all *Impuberes* not in the power of a father. (*Dig.* 50. tit. 16. s. 239.)

The commencement of *Pubertas* was the commencement of full capacity to do legal acts. Before the commencement of *Pubertas*, a person, according to the old civil law, could do no legal act without the *auctoritas* of a tutor. This rule was made for those *Impuberes* who had property of their own; for it could have no application to *Impuberes* who were in the power of a father. Now the age of *pubertas* was fixed as above mentioned, on the supposition that persons were then competent to understand the nature of their acts, and the age of twelve or fourteen was only fixed because it was necessary to fix some limit which might apply to all cases; but it was obvious that in many cases when a person bordered on the age of Puberty (*pubertati proximus*), and had not yet attained it, he might have sufficient understanding to do many legal acts. Accordingly, a person who was *proximus pubertati* was in course of time considered competent to do certain legal acts without the *auctoritas* of a tutor; but to secure him against fraud or mistake, he could only do such acts as were for his own advantage. This relaxation of the old law was beneficial both to the *Impubes* and to others, but owing to its being confined to such narrow limits of time, it was of little practical use, and accordingly it was extended as a positive rule to a longer period below the age of puberty; but still with the same limitation: the *Impubes* could do no act to his prejudice without the *auctoritas* of a tutor. It was, however, necessary to fix a limit here also, and accordingly it was determined that such limited capacity to do legal acts should commence with the termination of *infantia*, which, legally defined, is that period after which a person, either alone or with a tutor, is capable of doing legal acts.

Infans properly means *Qui fari non potest*; and he of whom could be predicated, *Fari potest*, was not *Infans*, and was capable of doing certain legal acts. The phrase *Qui fari potest* is itself ambiguous; but the Romans, in a legal sense, did not limit it to the mere capacity of uttering words, which a child of two or three years generally possesses, but they understood by it a certain degree of intellectual development; and, accordingly, the expression *Qui fari potest* expressed not only that degree of intellectual development which is shown by the use of intelligible speech, but also a capacity for legal acts in which speech was required. Thus the period of *infantia* was extended beyond that which the strict etymological meaning of the word signifies, and its termination was fixed by a positive rule at the end of the seventh year, as appears by numerous passages. (*Dig.* 26. tit. 7. s. 1; 23. tit. 1. s. 14; *Cod.* 6. tit. 30. s. 18; *Quintilian, Inst. Or.* i. 1; *Isidorus, Orig.* xi. 2.)

The expressions *proximus pubertati*, and *proxi-*

in infantiae or infanti (Gaius, iii. 109), are used by the Roman jurists to signify respectively one who is near attaining Pubertas, and one who has just passed the limit of Infantia. (Savigny, *System des heut. R. R.* vol. iii.) [IMPUBES.] [G. L.]

INFEBRIAE. [FUNDUS, p. 562, b.]

INFULA, a flock of white and red wool, which was slightly twisted, drawn into the form of a wreath or fillet, and used by the Romans for ornament on festive and solemn occasions. In sacrificing it was tied with a white band [VITTA] to the head of the victim (Virg. *Georg.* iii. 487; Lucret. i. 88; Sueton. *Calig.* 27), and also of the priest, more especially in the worship of Apollo and Diana. (Virg. *Aen.* ii. 430, x. 538; Servius, *in loc.*; Isid. *Orig.* xix. 30; Festus, s. v. *Infulae*.) The "torta infula" was worn also by the Vestal Virgins. (Prud. *c. Sym.* ii. 1085, 1094.) Its use seems analogous to that of the lock of wool worn by the flamines and salii [APEX]. At Roman marriages the bride, who carried wool upon a distaff in the procession [FUSUS], fixed it as an infula upon the door-case of her future husband on entering the house. (Lucan, ii. 355; Plin. *H. N.* xxix. 2; Servius, *in Virg. Aen.* iv. 458.) [J. Y.]

INGENUI, INGENUITAS. Freeman (*liberi*) were either ingenui or libertini. Ingenui are those free men who are born free. (Gaius, i. 11.) Libertini are those who are manumitted from legal slavery. Though freedmen (*libertini*) were not ingenui, the sons of libertini were ingenui. A libertinus could not by adoption become ingenuus. (Gell. v. 19.) If a female slave (*amilla*) was pregnant, and was manumitted before she gave birth to a child, such child was born free, and therefore was ingenuus. In other cases, also, the law favoured the claim of free birth, and consequently of ingenuitas. (Paulus, *Sent. Recept.* iii. 24, and v. 1. *De liberali causa*.) If a man's ingenuitas was a matter in dispute, there was a *judicium ingenuitatis*. (Tacit. *Ann.* xlii. 27; Paulus, *S. R. v.* 1.)

The words ingenuus and libertinus are often opposed to one another; and the title of freeman (*liber*), which would comprehend libertinus, is sometimes limited by the addition of ingenuus (*liber et ingenuus*, Hor. *Ar. P.* 383). According to Cincius, in his work on Comitia, quoted by Festus (s. v. *Patricios*), those who, in his time, were called ingenui, were originally called patricii, which is interpreted by Goettling to mean that Gentiles were originally called Ingenui also: a manifest misunderstanding of the passage. If this passage has any certain meaning, it is this: originally the name ingenuus did not exist, but the word patricius was sufficient to express a Roman citizen by birth. This remark then refers to a time when there were no Roman citizens except patricii; and the definition of ingenuus, if it had then been in use, would have been a sufficient definition of a patricius. But the word ingenuus was introduced, in the sense here stated, at a later time, and when it was wanted for the purpose of indicating a citizen by birth, merely as such. Thus, in the speech of Appius Claudius Crassus (Liv. vi. 40), he contrasts with persons of patrician descent, "Unus Quiritium quilibet, duobus ingenuis ortus." Further, the definition of Gentilis by Scaevola [GNA, p. 567], shows that a man might be ingenuus and yet not gentilis, for he might be the son of a freedman; and this is consistent with

Livy (x. 8). If Cincius meant his proposition to be as comprehensive as the terms will allow us to take it, the proposition is this:—All (now) ingenui comprehend all (then) patricii; which is untrue.

Under the empire, Ingenuitas, or the Jura Ingenuitatis, might be acquired by the imperial favour; that is, a person, not ingenuus by birth, was made so by the sovereign power. A freedman who had obtained the Jus Annulorum Aureorum, was considered ingenuus; but this did not interfere with the paternal rights. (Dig. 40. tit. 10. s. 5 and 6.) By the natalibus restitutio the princeps gave to a libertinus the character of ingenuus; a form of proceeding which involved the theory of the original freedom of all mankind, for the libertinus was restored, not to the state in which he had been born, but to his supposed original state of freedom. In this case the patron lost his paternal rights by a necessary consequence, if the fiction were to have its full effect. (Dig. 40. tit. 11.) It seems that questions as to a man's ingenuitas were common at Rome; which is not surprising, when we consider that paternal rights were involved in them. [G. L.]

INGRATUS. [PATRONUS.]

INJURIA. Injuria, in the general sense, is opposed to Jus. In a special sense injuria was done by striking or beating a man either with the hand or with any thing; by abusive words (*convicium*); by the proscription bonorum, when the claimant knew that the alleged debtor was not really indebted to him, for the bonorum proscription was accompanied with infamia to the debtor (Cic. *pro Quint.* 6, 15, 16); by libellous writings or verses; by soliciting a mater familias or a praetextatus [IMPUBES]; and by various other acts. A man might sustain injuria either in his own person, or in the person of those who were in his power or in manu. No injuria could be done to a slave, but certain acts done to a slave were an injuria to his master, when the acts were such as appeared from their nature to be insulting to the master; as, for instance, if a man should flog another man's slave, the master had a remedy against the wrong-doer, which was given him by the praetor's formula. But in many other cases of a slave being maltreated, there was no regular formula by which the master could have a remedy, and it was not easy to obtain one from the praetor.

The Twelve Tables had various provisions on the subject of Injuria. Libellous songs or verses were followed by capital punishment, that is, death, as it appears (Cic. *Rep.* iv. 10, and the notes in Mai's edition). In the case of a limb being mutilated the punishment was Talio (Festus, s. v. *Tulio*). In the case of a broken bone, the penalty was 300 asses if the injury was done to a freeman, and 150 if it was done to a slave. In other cases the Tables fixed the penalty at 25 asses. (Gellius, xvi. 10, xx. 1; Dirksen, *Uebersicht*, &c.)

These penalties which were considered sufficient at the time when they were fixed, were afterwards considered to be insufficient; and the injured person was allowed by the praetor to claim such damages as he thought that he was entitled to, and the judex might give the full amount or less. But in the case of a very serious injury (*atrox injuria*), when the praetor required security for the defendant's appearance to be given in a particular sum, it was usual to claim such sum as the damages in the plaintiff's declaration, and though the judex

was not bound to give damages to that amount, he seldom gave less. An injuria had the character of atrox, either from the act itself, or the place where it was done, as for instance, a theatre or forum, or from the condition of the person injured, as if he were a magistratus, or if he were a senator and the wrong-doer were a person of low condition.

A Lex Cornelia specially provided for cases of pulsatio, verberatio, and forcible entry into a man's house (*domus*). The jurists who commented on this lex defined the legal meaning of pulsatio, verberatio, and domus. (Dig. 47. tit. 10. s. 5.)

The actions for Injuria were gradually much extended, and the praetor would, according to the circumstances of the case (*causa cognita*), give a person an action in respect of any act or conduct of another, which tended, in the judgment of the praetor, to do him injury in reputation or to wound his feelings. (Dig. 47. tit. 10. s. 15, 22, 23, 24, &c.) Many cases of Injuria were subject to a special punishment (Dig. 47. tit. 11) as deportatio; and this proceeding extra ordinem was often adopted instead of the civil action. Various imperial constitutions affixed the punishment of death to libellous writings (*fumosi libelli*). [LIBELL.]

Infamia was a consequence of condemnation in an actio Injuriarum [INFAMIA]. He who brought such an action per calumniam was liable to be punished extra ordinem. (Gaius, iii. 220—225; Hor. Sat. i. l. 80; Dig. 47. tit. 10; Cod. Theod. ix. tit. 34; Cod. ix. tit. 36; Paulus, Sent. Recop. v. tit. 4; Rein, *Das Criminalrecht der Römer*, p. 35, &c.) [G. L.]

INJURIA RUM ACTIO. [INJURIA.]

INOA (*Ἰνώα*), festivals celebrated in several parts of Greece, in honour of the ancient heroine Ino. At Megara she was honoured with an annual sacrifice, because the Megarians believed that her body had been cast by the waves upon their coast, and that it had been found and buried there by Cleo and Tauropolia. (Paus. i. 42. § 8.) Another festival of Ino was celebrated at Epidaurus Limera, in Laconia. In the neighbourhood of this town there was a small but very deep lake, called the water of Ino, and at the festival of the heroine the people threw barley-cakes into the water. When the cakes sank it was considered a propitious sign, but when they swam on the surface it was an evil sign. (Paus. iii. 23. § 5.) An annual festival, with contests and sacrifices, in honour of Ino, was also held on the Corinthian Isthmus, and was said to have been instituted by king Sisyphus. (Tzetzes, *ad Lycophr.*) [L. S.]

INOFFICIO SUM TESTAMENTUM. [TESTAMENTUM.]

INQUILINUS. [EXSILIUM, p. 516, b.]

INSANIA, INSA'NIUS. [CURATOR.]

INSIGNE (*σημεῖον, ἐλπίσμα, ἐλπίσμα, παράσημον*), a badge, an ensign, a mark of distinction. Thus the BULLA worn by a Roman boy was one of the insignia of his rank. (Cic. Ferr. ii. 58.) Five classes of insignia more especially deserve notice:—

I. Those belonging to officers of state or civil functionaries of all descriptions, such as the FASCES carried before the CONSUL at Rome, the laticlave and shoes worn by senators [CALCEUS; CLAVUS], the carpentum and the sword bestowed by the emperor upon the praefect of the praetorium. (Lydas, *de Mag.* ii. 3. 9.) The Roman EQUITES were distinguished by the "equus publicus," the

golden ring, the angustus clavus [p. 294], and the seat provided for them in the theatre and the circus. (C. G. Schwartz, *Diss. Selectae*, pp. 84—101.) The insignia of the kings of Rome, viz. the trabes, the toga-praetexta, the crown of gold, the ivory sceptre, the sella curulia, and the twelve lictors with fasces, all of which except the crown and sceptre were transferred to subsequent denominations of magistrates, were copied from the usages of the Etruscans and other nations of early antiquity. (Flor. i. 5; Sallust, *B. Cat.* 51; Virg. *Aen.* vii. 188, 612, xi. 334; Lydas, *de Mag.* i. 7, 8, 37.)

II. Badges worn by soldiers. The centurions in the Roman army were known by the crests of their helmets [GALEA], and the common men by their shields, each cohort having them painted in a manner peculiar to itself. (Veget. ii. 18; compare Caes. *Bell. Gall.* vii. 45.) [CLIPPEUS.] Among the Greeks the devices sculptured or painted upon shields (see woodcut, p. 298), both for the sake of ornament and as badges of distinction, employed the fancy of poets and of artists of every description from the earliest times. Thus the seven heroes who fought against Thebes, all except Amphiarauus, had on their shields expressive figures and mottoes, differently described, however, by different authors. (Aeschyl. *Sept. c. Theb.* 383—646; Eurip. *Phoen.* 1125—1156; Apollodor. *Bibl.* iii. 6. § 1.) Alcibiades, agreeably to his general character, wore a shield richly decorated with ivory and gold, and exhibiting a representation of Cupid brandishing a thunderbolt. (Athen. xii. p. 534, e.) The first use of these emblems on shields is attributed to the Carians (Herod. i. 171); and the fictitious employment of them to deceive and mislead an enemy was among the stratagems of war. (Paus. iv. 28. § 3; Virg. *Aen.* ii. 389—392.)

III. Family badges. Among the indignities practised by the Emperor Caligula, it is related that he abolished the ancient insignia of the noblest families, viz. the torques, the cincinni, and the cognomen "Magnus." (Sueton. *Calig.* 35.)

IV. Signs placed on the front of buildings. A figure of Mercury was the common sign of a GYMNASIUM; but Cicero had a statue of Minerva to fulfil the same purpose. (*Ad Att.* i. 4.) Cities had their emblems as well as separate edifices; and the officer of a city sometimes affixed the emblem to public documents as we do the seal of a municipal corporation. (Antigonus Caryl. 15.)

V. The figure-heads of ships. The insigne of a ship was an image placed on the prow, and giving its name to the vessel. (Tacit. *Ann.* vi. 34; Caes. *B. Civ.* ii. 6.) Paul sailed from Melite to Puteoli in the Dioscuri, a vessel which traded between that city and Alexandria. (*Acts*, xxviii. 11.) Enschedé has drawn out a list of one hundred names of ships, which occur either in classical authors or in ancient inscriptions. (*Diss. de Tit. et Insignibus Navium*, reprinted in Ruhnken, *Opusc.* pp. 257—305.) The names were those of gods and heroes, together with their attributes, such as the helmet of Minerva, painted on the prow of the ship which conveyed Ovid to Pontus (*a picta casside nomen habet*, *Trist.* i. 9. 2); of virtues and affections, as Hope, Concord, Victory; of countries, cities, and rivers, as the Po, the Minicius (Virg. *Aen.* x. 206), the Delia, the Syracuse, the Alexandria (Athen. v. 43); and of men, women, and animals, as the boar's head, which distinguished the vessels of Samos (Herod. iii. 59;

Choerilus, p. 155, ed. Naekke; Hesych. s. v. *Σαμωὸς τρώος*: Eust. in *Hom. Od.* xiii. p. 525, the swan, the tiger (Virg. *Aen.* x. 166), the bull (*πρωτόμην ταύρου*, Schol. in *Apoll. Rhod.* ii. 168). Plutarch mentions a Lycian vessel with the sign of the lion on its prow, and that of the serpent on its poop, manifestly intended to express the form of the chimæra. (*De Mul. Virt.* p. 441, ed. Steph.) After an engagement at sea, the insigne of a conquered vessel, as well as its aplustre, was often taken from it and suspended in some temple as an offering to the god. (Plut. *Themist.* p. 217.) Figure-heads were probably used from the first origin of navigation. On the war-galleys of the Phœnicians, who called them, as Herodotus says (iii. 37), *παρακοί, i. e.* "carved images," they had sometimes a very grotesque appearance.

Besides the badge which distinguished each individual ship, and which was either an engraved and painted wooden image forming part of the prow, or a figure often accompanied by a name and painted on both the bows of the vessel, other insignia, which could be elevated or lowered at pleasure, were requisite in naval engagements. These were probably flags or standards, fixed to the aplustre or to the top of the mast, and serving to mark all those vessels which belonged to the same fleet or to the same nation. Such were "the Attic" and "the Persian signals" (*τὰ Ἀττικὸν σημεῖον*, Polyæn. iii. 11. § 11, viii. 53. § 1; Becker, *Charities*, vol. ii. p. 63). A purple sail indicated the admiral's ship among the Romans, and flags of different colours were used in the fleet of Alexander the Great. (Plin. *H. N.* xix. 5.) [J. Y.]

INSTITA (*περιπόδιον*), a flounce; a fillet. The Roman matrons sometimes wore a broad fillet with ample folds, sewed to the bottom of the tunic and reaching to the instep. The use of it indicated a superior regard to decency and propriety of manners. (Hor. *Sat.* i. 2. 29; Ovid, *Ars Amat.* i. 32.) It must have resembled a modern flounce. By the addition of gold and jewellery it took the form of the more splendid and expensive CYCLAS.

When this term denoted a fillet, which was used by itself, as in the decoration of a THYRSUS (Stat. *Theb.* vii. 654), it was equivalent to VITTA or FASCIA. [TUNICA.] [J. Y.]

INSTITOR. [INSTITORIA ACTIO.]

INSTITORIA ACTIO. This actio was allowed against a man who had appointed either his son or a slave, and either his own or another man's slave, or a free person, to manage a taberna or any other business for him. The contracts with such manager, in respect of the taberna or other business, were considered to be contracts with the principal. The formula was called *Institoria*, because he who was appointed to manage a taberna was called an *Institor*. And the *institor*, it is said, was so called, "quod negotio gerendo instet sive instiat." If several persons appointed an *institor*, any one of them might be sued for the whole amount for which the persons were liable on the contract of their *institor*; and if one paid the demand, he had his redress over against the others by a *societatis iudicium* or *communi dividundo*. A great deal of business was done through the medium of *institores*, and the Romans thus carried on various lucrative occupations in the name of their slaves, which they could not or would not have carried on personally. *Institores* are coupled with *Nautæ* by

Horace (*Ep.* xvii. 20), and with the *Magister Navis* (*Carm.* iii. 6. 30). (Gaius, iv. 71; *Instit.* iv. tit. 7; Dig. 14. tit. 3.) [G. L.]

INSTITUTIONES. It was the object of Justinian to comprise in his Code and Digest or Pandect, a complete body of law. But these works were not adapted to elementary instruction, and the writings of the ancient jurists were no longer allowed to have any authority, except so far as they had been incorporated in the Digest. It was, therefore, necessary to prepare an elementary treatise, for which purpose Justinian appointed a commission, consisting of Tribonianus, Theophilus, and Dorotheus. The commission was instructed to compose an institutional work which should contain the elements of the law (*legum cunabula*), and should not be encumbered with useless matter (*Prooem. Inst.*). Accordingly, they produced a treatise, under the title of *Institutiones*, or *Elementa* (*De Juris docendi Ratione*), which was based on former elementary works of the same name and of a similar character, but chiefly on the Commentarii of Caius or Gaius, his *Res Quotidianæ*, and various other Commentarii. The *Institutiones* were published with the imperial sanction, at the close of the year A. D. 533, at the same time as the Digest.

The *Institutiones* consist of four books, which are divided into titles. They treat only of *Privatum Jus*; but there is a title on *Judicia Publica* at the end of the fourth book. The *judicia publica* are not treated of by Gaius in his *Commentaries*. Heinæccius, in his *Antiquitatum Romanarum Jurisprudentiam illustrantium Syntagma*, has followed the order of the *Institutiones*. Theophilus, generally considered to be one of the compilers of the *Institutiones*, wrote a Greek paraphrase upon them, which is still extant, and is occasionally useful. The best edition of the paraphrase of Theophilus is that of W. O. Reitz, Haag, 1751, 2 vols. 4to. There are numerous editions of the Latin text of the *Institutiones*. The editio princeps is that of Mainz, 1468, fol.; that of Klense and Boecking, Berlin, 1829, 4to, contains both the *Institutiones* and the *Commentarii* of Gaius; the most recent edition is that of Schrader, Berlin, 1832 and 1836.

There were various institutional works written by the Roman jurists. Callistratus, who lived under Septimius Severus and Antoninus Caracalla, wrote three books of *Institutiones*. Aelius Marcianus wrote sixteen books of *Institutiones* under Antoninus Caracalla. Florentinus, who lived under Alexander Severus, wrote twelve books of *Institutiones*, from which there are forty-two excerpts in the Digest. Paulus also wrote two books of *Institutiones*. There still remain fragments of the *Institutiones* of Ulpian, which appear to have consisted of two books. But the first treatise of this kind that we know of was the *Institutiones* of Gaius in four books. They were formerly only known from a few excerpts in the Digest, from the *Epitome* contained in the *Breviarium*, from the *Collatio*, and a few quotations in the *Commentary* of Boethius on the *Topica* of Cicero, and in Priscian.

The MS. of Gaius was discovered in the library of the Chapter of Verona, by Niebuhr, in 1816. It was first copied by Goeschen and Bethman-Hollweg, and an edition was published by Goeschen in 1820. The deciphering of the MS. was a work of great labour, as it is a palimpsest, the writing on which has been washed out, and in some places erased with a knife, in order to adapt

the parchment for the purposes of the transcriber. The parchment, after being thus treated, was used for transcribing upon it some works of Jerome, chiefly his epistles. The old writing was so obscure that it could only be seen by applying to it an infusion of gall-nuts. A fresh examination of the MS. was made by Blume, but with little additional profit, owing to the condition of the manuscript. A second edition of Gaius was published by Goeschen in 1824, with valuable notes, and an Index Siglarum used in the MS. The preface to the first edition contains the complete demonstration that the MS. of Verona is the genuine Commentarii of Gaius, though the MS. itself has no title. An improved edition of Goeschen's by Lachmann appeared in 1842.

It appears from the Institutiones that Gaius wrote that work under Antoninus Pius and M. Aurelius.

Many passages in the Fragments of Ulpian are the same as passages in Gaius, which may be explained by assuming that both these writers copied such parts from the same original. Though the Institutiones of Justinian were mainly based on those of Gaius the compilers of the Institutiones of Justinian sometimes followed other works: thus the passage in the Institutes (ii. tit. 17. § 2, "si quis prior") is from the fourth book of Marcianus' Institutes (Dig. 36. tit. 1. a. 29); and, in some instances, the Institutiones of Justinian are more clear and explicit than those of Gaius. An instance of this occurs in Gaius (iii. 109) and the Institutiones of Justinian (iii. tit. 19. a. 10).

Gaius belonged to the school of the Sabiniani [JURISCONSULTI]. The Jurists whom he cites in the Institutiones, are Cassius, Fufidius, Javolenus, Julianus, Labeo, Maximus, Q. Mucius, Ofilius, Proculus, Sabinus, Servius, Servius Sulpicius, Sextus, Tubero.

The arrangement of the Institutes of Justinian is the same as that of the work of Gaius; whatever difference there is between them in this respect, is solely owing to the changes in the Roman law, which had been made between the time of Gaius and that of Justinian. There has been considerable difference of opinion as to the nature of the arrangement of Gaius; and it is obvious that most persons have misunderstood it. According to Gaius: "omne jus quo utimur vel ad personas pertinet, vel ad res, vel ad actiones" (i. 8). It is generally supposed that the division (the first book) which treats of Persons comprehends the status or condition of persons as the subjects of rights; others affirm that it treats of legal capacity, or of the three conditions which correspond to the threefold capitis deminutio. But the first book of Gaius which treats of Persons contains both matter which has nothing to do with legal capacity, and it does not contain all that relates to legal capacity, for it does not treat of one of three chief divisions which relate to legal capacity, that of Cives, Latini, Peregrini. It treats in fact only of Marriage, Patria Potestas, Manus, Slavery, Patronatus with respect to the different classes of freed men, Mancipium and Tutela. Accordingly, this part of the work treats only of persons so far as they belong to Familia, in the widest and Roman acceptance of that term. The part which treats of res comprehends the Law of ownership, &c. and Law of Obligations, which two divisions occupy the second and third books. The fourth book treats of

Actiones, which is the third of the three divisions of Gaius. The division of Gaius is faulty in several respects; but this does not detract from the merit of the work, which is perspicuous and abounds in valuable matter. This view of the nature of the division of Gaius is from Savigny. (*System, &c.*, vol. i. p. 393, &c.) [G. L.]

INSTITUTO'RIA ACTIO. [INTERCESSIO.]

I'NSULA. [DOMUS, p. 430, a.]

I'NTEGRUM RESTITUTIO, IN. [RESTITUTIO.]

INTER'NTIO. [ACTIO.]

INTERCESSIO. It is a case of Intercessio when a man takes upon himself the debt of another by virtue of some dealing with the creditor. This may be in either of the following ways: he who intercedes may take upon himself the debt of another, and may become debtor in place of that other: or the intercedent may become debtor while the debtor still continues debtor. (Vangerow, *Pandekten, &c.* vol. iii. p. 133, &c.)

To the first class belong (1) the case of a man undertaking an already existing obligation, so as to exclude the existing debtor; (2) And the case of a man taking an obligation on himself, which does not already exist in the person of another, but which without such intervention would exist.

To the second class belong (1), the case when the creditor may consider either the original debtor or the intercedent as his principal debtor, or when, in other words, the intercedent is *correus debendi* (Inst. iii. tit. 16. De duobus reis stipulandi et promittendi); (2) When the creditor can consider the intercedent only as liable to pay, when the principal debtor does not pay, or when in other words, the intercedent is a *fidejussor*. (Inst. iii. tit. 20, de Fidejussoribus.)

The views of Puchta as to the Intercessio are contained in his *Institutiones*, vol. iii. p. 48, &c.)

In the Institutes of Gaius, a distinction is made between *sponsores* and *fidepromissores*, on one side; and *fidejussores* on the other. With respect to one another, *sponsores* were *consponsores*. (Cic. *ad Att.* xii. 17.) In the Institutes of Justinian, the distinction between *sponsores* and *fidejussores* does not exist.

Sponsores and *fidepromissores* could only become parties to an *obligatio verborum*, though in some cases they might be bound, when their principal (*qui promiserit*) was not, as in the case of a *pupillus* who promised without the *auctoritas* of his tutor, or of a man who promised something after his death. A *fidejussor* might become a party to all obligations, whether contracted *re, verbis, litteris, or consensu*. In the case of a sponsor the interrogatio was, *Idem dari spondes?* in the case of a *fidepromissor*, it was, *Idem fidepromittis?* in the case of a *fidejussor*, it was, *Idem fidei tua esse jubes?* The object of having a sponsor, *fidepromissor*, or *fidejussor*, was greater security to the stipulator. On the other hand, the stipulator had an *adstipulator* only when the promise was to pay something after the stipulator's death, for if there was no *adstipulator* the stipulation was *inutilis* or void. (Gaius, iii. 100, 117.) The *adstipulator* was the proper party to sue after the stipulator's death, and he could be compelled by a *mandati judicium* to pay to the heres whatever he recovered.

The heres of a sponsor and *fidepromissor* was not bound, unless the *fidepromissor* were a *peregrinus*, whose state had a different law on the

matter; but the heres of a fidejussor was bound. By the Lex Furia, a sponsor and fidepromissor were free from all liability after two years, which appears to mean two years after the obligation had become a present demand; but the Lex Furia only applied to Italy. All of them who were alive at the time when the money became due could be sued, but each only for his share (*singuli viriles partes*). Fidejussors were never released from their obligation by length of time, and each was liable for the whole sum (*singuli in solidum obligantur*); but by a rescript (*epistola*) of Hadrian, the creditor was required to sue the solvent fidejussors separately, each according to his proportion. If any one of them was not solvent, his share became a burden to the rest.

A Lex Apuleia, which was passed before the Lex Furia, gave one of several sponsors or fidepromissors, who had paid more than his share, an action against the rest for contribution. Before the passing of this Lex Apuleia, any one sponsor or fidepromissor might be sued for the whole amount; but this lex was obviously rendered useless by the subsequent Lex Furia, at least in Italy, to which country alone, as already observed, the Lex Furia applied, while the Lex Apuleia extended to places out of Italy; yet not to fidejussors.

A fidejussor, who had been compelled to pay the whole amount, had no redress if his principal was insolvent; though, as already observed, he could by the rescript of Hadrian compel the creditor to limit his demand against him to his share.

A creditor was obliged formally to declare his acceptance of the sponsors or fidepromissors who were offered to him, and also to declare what was the object as to which they were security; if he did not comply with this legal requisition, the sponsors and fidepromissors might, within thirty days (it is not said what thirty days, but probably thirty days from the time of the sureties being offered), demand a *praedjudicium* (*praedjudicium postulare*), and if they proved that the creditor had not complied with the requisitions of the law, they were released. (Gaius, iii. 123.)

A Lex Cornelia limited the amount for which any person could be a security for the same person to the same person within the same year, but with some exceptions, one of which was a security "*dotis nomine*." No person could be bound in a greater amount than his principal, but he might be bound in less; and every surety could recover on a *mandati judicium* from his principal whatever he had been compelled to pay on his account. By a Lex Publilia sponsors had a special action in duplum, which was called an *actio duplens*.

There is a passage in the Epitome of Gaius in the Breviarium (ii. 9. § 2), which is not taken from Gaius: it is to this effect:—The creditor may sue either the debtor or his fidejussor; but after he has chosen to sue one of them, he cannot sue the other.—Cicero appears to allude to the same doctrine (*ad Att.* xvi. 15) in a passage which is somewhat obscure, and is variously explained. The subject of the *sponsio* often occurs in Cicero's letters; and in one case he was called upon in respect of a *sponsio* alleged to have been given by him twenty-five years before (*ad Att.* xii. 17). Cicero uses the expression "*appellare*" to express calling on a surety to pay (*ad Att.* i. 8).

(Gaius, iii. 115—127; *Inst.* iii. tit. 20; Dig. 44. tit. 7; 46. tit. 1.)

Women generally were incapacitated from doing many acts on account of the weakness of the sex. It was a general rule that any person might "*intercedere*," who was competent to contract and to dispose of his property; but *minores xxv* and women had only a limited capacity in respect of their contracts and the disposition of their estates. In the early part of the reign of Augustus and in that of Claudius, it was declared by the Edict that women should not "*intercedere*" for their husbands. Subsequently the *Senatusconsultum Velleianum* [*SENATUSCONSULTUM VELLEIANUM*] absolutely prohibited all *Intercessio* by women; and the Novella 134. c. 8, had for its special object to make null all *Intercessio* of a wife for her husband. A woman who was sued in respect of her *Intercessio*, or her heres, might plead the *Senatusconsultum*, and she might recover anything that she had paid in respect of her *Intercessio*. The *Senatusconsultum*, though it made null the *intercessio* of a woman, protected the creditor so far as to restore to him a former right of action against his debtor and fidejussors: this action was called *Restitutio* or *Rescissoria*. In the case of a new contract, to which the woman was a party, the *Intercessio* was null by the *Senatusconsultum*, and the creditor had the same action against the person for whom the woman "*intercessit*," as he would have had against the woman: this action, inasmuch as the contract had no reference to a former right, but to a right arising out of the contract, was *Institoria*. In certain cases, a woman was permitted to renounce the benefit of the *Senatusconsultum*; and there was a considerable number of exceptions to the rule that a woman could plead the *senatusconsultum*.

(Dig. 16. tit. 1. *ad S.C. Velleianum*; Paulus, *S.R.* ii. tit. 11; Vangerow, *Pandekten*, &c. iii. p. 149.) [G. L.]

INTERCESSIO was the interference of a magistratus to whom an appeal [*APPELLATIO*] was made. The object of the *Intercessio* was to put a stop to proceedings, on the ground of informality or other sufficient cause. Any magistratus might "*intercedere*," who was of equal rank with or of rank superior to the magistratus from or against whom the *appellatio* was. Cases occur in which one of the praetors interposed (*intercessit*) against the proceedings of his colleague. (*Cic. in Ferr.* i. 46.)

The *Intercessio* is most frequently spoken of with reference to the Tribunes who originally had not *juridictio*, but used the *Intercessio* for the purpose of preventing wrong which was offered to a person in their presence (*Gell.* xiii. 12). The *Intercessio* of the Tribunes of the Plebs, was *Auxilium* (*Liv.* vi. 38; *Cic. pro Quintio*, 7, 20); and it might be exercised either in *jure* or in *judicio*. The tribune who *intercessit* could prevent a *judicium* from being instituted. That there could be an *Intercessio* after the *Litis Contestatio* appears from Cicero (*pro Tullio*, 38). The tribunes could also use the *Intercessio* to prevent execution of a judicial sentence. (*Liv.* vi. 27.) T. Gracchus interfered (*intercessit*) against the praetor Terentius, who was going to order execution, in the case of L. Scipio who was condemned for peculation (*Liv.* xxxviii. 60; *Gell.* vii. 19), and he prevented Scipio being sent to prison, but he did not interfere to prevent execution being had on his property. A single tribune could effect this, and against the opinion of

his colleagues, which was the case in the matter of L. Scipio. [TRIBUNL.]

The term *Intercessio* and the verb *intercedo* also applied to the tribunitian opposition to a rogatio. (Liv. vi. 35; Cic. de Orat. ii. 47.) [G. L.]

INTERCISI DIES. [DIES.]

INTERCOLUMNIA. [TAMPLUM.]

INTERDICTIO AQUAE ET IGNIS. [EX-SILIUM, p. 516, h.]

INTERDICTUM. "In certain cases (*certis ex causis*) the praetor or proconsul, in the first instance (*principaliter*), exercises his authority for the termination of disputes. This he chiefly does when the dispute is about Possession or Quasi-possession; and the exercise of his authority consists in ordering something to be done, or forbidding something to be done. The formulae and the terms, which he uses on such occasions, are called either *Interdicta* or *Decreta*. They are called *Decreta* when he orders something to be done, as when he orders something to be produced (*antibere*) or to be restored: they are called *Interdicta* when he forbids something to be done, as when he orders that force shall not be used against a person who is in possession rightfully (*sine vitio*), or that nothing shall be done on a piece of sacred ground. Accordingly all *Interdicta* are either *Restitutoria*, or *Exhibitoria*, or *Prohibitoria*." (Gaius, iv. 139, 140.)

This passage contains the essential distinction between an *Actio* and an *Interdictum*, so far as the praetor or proconsul is concerned. In the case of an *Actio*, the praetor pronounces no decree, but he gives a *Judex*, whose business it is to investigate the matter in dispute, and to pronounce a sentence consistently with the formula, which is his authority for acting. In the case of an *Actio*, therefore, the praetor neither orders nor forbids a thing to be done, but he says *Judicium dabo*. In the case of an *Interdictum*, the praetor makes an order that something shall be done or shall not be done, and his words are accordingly words of command: *Restituas*, *Exhibeas*, *Vim fieri veto*. This immediate interposition of the praetor is appropriately expressed by the word "*principaliter*," the full effect of which is more easily seen by its juxtaposition with the other words of the passage, than by any attempt to find an equivalent English expression.

Savigny observes that it may be objected to this exposition, that in one of the most important *Interdicta*, that *De Vi*, the formula is, *Judicium dabo*. (Dig. 43. tit. 16. s. 1.) But, as he observes, the old genuine formula was, *Restituas* (Cic. *pro Caecina*, 8, 30); and the "*Judicium dabo*" must have been introduced when the formulae of the two old *Interdicta* (*De Vi Armata* and *De Vi Quotidianae*) were blended together, and at a time when the distinctions between the old formulae had become a matter of indifference.

The mode of proceeding as to the *Interdictum* was as follows:—The party aggrieved stated his case to the praetor, which was the foundation of his demand of an *Interdictum*, and was therefore analogous to the *Postulatio actionis*. If the praetor saw sufficient reason, he might grant the *Interdictum*, which was often nothing more than the words of the *Edict* addressed to the litigant parties; and in doing so, he used his "*auctoritas finendi controversia*" in the first instance, or immediately and without the intervention of a *judex* (*principiater*), and also "*certis ex causis*," that is, in cases already

provided for by the *Edict*. If the defendant either admitted the plaintiff's case before the *interdictum* was granted, and complied with its terms, or submitted to the *interdictum* after it was granted, the dispute was of course at an end. This is not stated by Gaius, but follows of necessity from the nature of the case; and when he goes on to say "that when the praetor has ordered any thing to be done or forbidden anything to be done, the matter is not then ended, but the parties go before a *judex* or *recuperatores*," he means that this further proceeding takes place, if the praetor's *Interdictum* does not settle the matter. The whole form of proceeding is not clearly stated by some modern writers, but the following is consistent with Gaius.

The complainant either obtained the *Interdictum* or he did not, which would depend on the case that he made out before the praetor. If he failed, of course the litigation was at an end; and if he obtained the *interdictum*, and the defendant complied with its terms, the matter in this case also was at an end. If the defendant simply did not obey the terms of the *Interdictum*, it would be necessary for the complainant again to apply to the praetor, in order that this fact might be ascertained, and that the plaintiff might give full satisfaction. If the defendant was dissatisfied with the *Interdictum*, he might also apply to the praetor for an investigation into the facts of the case: his allegation might be that there was originally no ground for the *Interdictum*. He might also apply to the praetor on the ground that he had satisfied the terms of the *Interdictum*, though the plaintiff was not satisfied, or on the ground that he was unable to do more than he had done. In all these cases, when the praetor's order did not terminate the dispute, he directed an inquiry by certain formulae, which were the instruction of the *judex*, *recuperatores*, or *arbitrator*. Accordingly, the process of the *Interdictum* belonged to the *ordo judiciorum privatorum*, but the *judicium* was constituted by the peculiar process of the *Interdictum*. The inquiry would be, Whether anything had been done contrary to the Praetor's *Edict**; or, Whether that had been done, which he had ordered to be done: the former inquiry would be made in the case of a *Prohibitory Interdictum*; and the latter in the case of an *Exhibitory* or *Restitutory Interdictum*.

In the case of *Interdicta Prohibitoria* there was always a *sponsio*; that is, the parties were required to deposit or give security for a sum of money, the loss of which was in the nature of a penalty (*poena*) to the party who failed before the *judex*: this *sponsio* was probably required by the praetor. In the case of *Interdicta Restitutoria* and *Prohibitoria*, the proceeding was sometimes per *sponsionem*, and therefore before a *judex* or *recuperatores*, and sometimes, without any *sponsio*, per *formula* *arbitrariam*, that is, before an *arbitrator*. In the case of these two latter *Interdicta*, it seems to have depended on the party who claimed the inquiry whether there should be a *sponsio* or not: if such party made a *sponsio*, that is, proffered to pay a sum of money, if he did not make out his

* "Edict" is the word used by Gaius, but he means *Interdictum*. He uses *Edict*, because the *Interdictum* would only be granted in such cases as were provided for by the *Edict* (*certis ex causis*), and thus an *Interdictum* was only an application of the *Edict* to a particular case.

case, the opposite party was required to make one also. In the case of *Caecina* (Cic. *pro Caecina*. 8) a *sponsio* had been made: Cicero says, addressing the recuperatores, "*sponsio facta est: hac de sponsione vobis iudicandum est.*" In fact, when the matter came before a *iudex* or *arbitrator*, the form of proceeding was similar to the ordinary *iudicium*.

The chief division of *Interdicts* has been stated. The various purposes to which they were applicable appear from the titles; as, *Interdictum de Aqua*, *de Arboribus caedendis*, *de Liberis exhibendis*, *de Riva*, *de Superficiebus*, &c.

Another division of *Interdicts* was into those for the purpose of acquiring Possession, retaining possession, or recovering possession. (Gaius, iv. 144.)

The *Interdictum adiacendae possessionis* was given to him to whom the *Bonorum possessio* [*BONORUM POSSESSIO*] was given, and it is referred to by the initial words *Quorum bonorum*. (Dig. 43. tit. 2. s. 1.) Its operation was to compel a person, who had possession of the property of which the *Bonorum possessio* was granted to another, to give it up to such person, whether the person in possession of such property possessed it *pro herede* or *pro possessore*. The *Bonorum Emptor* [*BONORUM EMPTOR*] was also entitled to this *Interdict*, which was sometimes called *Possessorium*. It was also granted to him who bought goods at public auction, and in such case was called *Sectorium*, the name "*Sectores*" being applied to persons who bought property in such manner. (Cic. *pro Rosc. Am.* 36.)

The *Interdictum Salvianum* was granted to the owner of land, and enabled him to take possession of the goods of the colonus, who had agreed that his goods should be a security for his rent. (Dig. 43. tit. 3.)

This *Interdict* was not strictly a *Possessorial Interdict*, as Savigny has shown (*Das Recht des Besitzes*, p. 410; Puchta, *Institutionen*, &c. ii. § 225.) It did not, like the two other *Interdicts*, presuppose a lawful possession, that is, a *Jus possessionis* acquired by the fact of a rightful possession; the complainant neither alleged an actual possession nor a former possession.

The *Interdictum retinendae possessionis* could only be granted to a person who had a rightful possession, and he was intitled to it in respect of damages sustained by being disturbed in his possession, in respect of anticipated disturbance in his possession, and in the case of a dispute as to ownership in which the matter of possession was first to be inquired into. Its effect in the last case would be, as Gaius states, to determine which of two litigant parties should possess, and be the defendant, and which should be the claimant, and have the burden of proof. There were two *Interdicts* of this class named respectively *Uti Possidetis* and *Utrubi*, from the initial words of the Edict. The *Interdictum Uti Possidetis* applied to land or houses, and the other to moveables. The *Uti Possidetis* protected the person who at the time of obtaining the *Interdict* was in actual possession, provided he had not obtained the possession against the other party (*adversarius*) *vi*, clam, or *precario*, which were the three *vitia possessionis*. (Festus, s. v. *Possessio*; Gaius, iv. 160.) In the case of the *Interdictum Utrubi*, the possession of the movable thing was by the *Interdict* declared to belong to him who had possessed the thing against the other party during the greater part of that year, "*nec vi*

nec clam nec precario." There were some peculiarities as to possession of moveable things. (Gaius, iv. 151.)

The *Interdictum recuperandae possessionis* might be claimed by him who had been forcibly ejected (*vi dejectus*) from his possession of an immovable thing, and its effect was to compel the wrongdoer to restore the possession, and to make good all damage. The initial words of the *Interdict* were, *Unde tu illum vi dejecisti*; and the words of command were, *Re restituas*. (Cic. *pro Caecina*. 30, *pro Tull.* 4, 29, 44; Gaius, iv. 154; Dig. 43. tit. 16. s. 1.) There were two cases of *Vis*: one of *Vis* simply, to which the ordinary *Interdict* applied, which Cicero calls *Quotidianum*; the other of *Vis Armata*, which had been obtained by *Caecina* against *Aebutius*. The plaintiff had to prove that he was in possession of the premises, and had been ejected by the defendant or his agents (*familia* or *procurator*, Cic. *pro Tull.* 29.) If the matter came before a *iudex* the defendant might allege that he had complied with the *Interdict*, "*restituere*," though he had not done so in fact; but this was the form of the *sponsio*, and the defendant would succeed before the *iudex* if he could show that he was not bound to restore the plaintiff to his possession. (*Pro Caecina*. 8, 32.)

The defendant might put in an answer (*exceptio*) to the plaintiff's claim for restitution: he might show that the plaintiff's possession commenced either *vi*, clam, or *precario* with respect to the defendant (*pro Caecina*. 32, *pro Tull.* 44); but this *exceptio* was not allowed in the case of *vis armata*. (*Pro Caecina*. 8, 32.) The defendant might also plead that a year had elapsed since the violence complained of, and this was generally a good plea; for the *Interdict* contained the words "*in hoc anno.*" But if the defendant was still in possession after the year, he could not make this plea; nor could he avail himself of it in a case of *Vis Armata*. (Cic. *ad Fam.* xv. 16.)

A clandestine possession is a possession in which the possessor takes a thing (which must of course be a movable thing) secretly (*furtive*) and without the knowledge of the person whose adverse claim to the possession he fears. Such a possession, when it was a disturbance of a rightful possession, gave the rightful possessor a title to have the *Interdict de clandestina possessione* for the recovery of his possession. All traces of this *interdict* are nearly lost; but its existence seems probable, and it must have had some resemblance to the *Interdictum de vi*. The *exceptio clandestinae possessionis* was quite a different thing, inasmuch as a clandestine possession did not necessarily suppose the lawful possession of another party.

The *Interdictum de Precaria possessione* or *de Precario* applied to a case of *Precarium*. It is *Precarium* when a man permits another to exercise ownership over his property, but retains the right of demanding the property back when he pleases. It is called *Precarium* because the person who received such permission usually obtained it by request (*proes*); though request was not necessary to constitute *Precarium*, for it might arise by tacit permission. (Paulus, S. R. v. tit. 6. s. 11.) The person who received the detention of the thing, obtained at the same time a legal possession, unless provision to the contrary was made by agreement. In either case the permission could at any time be recalled, and the possession, which in

its origin was *iusta*, became *injusta*, *vitiosa*, as soon as restitution was refused. Restitution could be claimed by the *Interdictum de Precario*, precisely as in the case of *Vis*; and the sole foundation of the right to this *Interdict* was a *vitiosa possessio*, as just explained. The *Precarium* was never viewed as a matter of contract. The *Interdictum de precario* originally applied to land only, but it was subsequently extended to movable things. The obligation imposed by the *Edict* was to restore the thing, but not its value, in case it was lost, unless *dolus* or *lata culpa* could be proved against the defendant. But from the time that the demand is made against the defendant, he is *in mora*, and, as in the case of the other *Interdicts*, he is answerable for all *culpa*, and for the fruits or profits of the thing; and generally, he is bound to place the plaintiff in the condition in which he would have been, if there had been no refusal. No exceptions were allowed in the case of a *Precarium*.

The origin of the *Precarium* is referred by Savigny to the relation which subsisted between a patronus and his *cliens*, to whom the patronus gave the use of a portion of the *ager publicus*. If the *cliens* refused to restore the land upon demand, the patronus was entitled to the *Interdictum de precario*. As the relation between the patronus and the *cliens* was analogous to that between a parent and his child, it followed that there was no contract between them, and the patron's right to demand the land back was a necessary consequence of the relation between him and his *cliens*. (*Festus, s. v. Patres.*) The *precarium* did not fall into disuse when the old *ager publicus* ceased to exist, and in this respect it followed the doctrine of *possessio* generally. [*AGRIARIÆ LEGES.*] It was in fact extended and applied to other things, and, among them, to the case of pledge. [*PIGNUS.*]

Gaius (iv. 156) makes a third division of *Interdicts* into *Simplicia* and *Duplicia*. *Simplicia* are those in which one person is the plaintiff (*actor*), and the other is the defendant (*reus*): all *Restitutoria* and *Exhibitoria* *Interdicts* are of this kind. *Prohibitoria* *Interdicts* are either *Simplicia* or *Duplicia*: they are *Simplicia* in such cases as those, when the *prætor* forbids any thing to be done in a *locus sacer*, in a *flumen publicum*, or on a *ripa*. They are *Duplicia* as in the case of the *Interdictum uti Possidetis* and *Utrubi*; and they are so called, says Gaius, because each of the litigant parties may be indifferently considered as *actor* or *reus*, as appears from the terms of the *Interdict*. (Gaius, iv. 160.)

Interdicts seem to have been also called *Duplicia* in respect of their being applicable both to the acquisition of a possession which had not been had before, and also to the recovery of a possession. An *Interdict* of this class was granted in the case of a *vindicatio*, or action as to a piece of land against a possessor who did not defend his possession, as, for instance, when he did not submit to a *iudicium* and give the proper *sponsiones* or *satiationes*. A similar *interdict* was granted in the case of a *vindicatio* of an *hereditas* and a *usufructus*. Proper security was always required from the person in possession, in the case of an *in rem actio*, in order to secure the plaintiff against any loss or injury that the property might sustain while it was in the possession of the defendant. If the defendant refused to give such security he

lost the possession, which was transferred to the plaintiff (*petitor*). (Rudorff, *Ueber das Interdict Quem Fundum*, &c., *Zeitschrift*, vol. ix.)

"By all these *Interdicts* Possession is protected, and possession in itself, in its immediate form as power, in fact, over a thing. Possession thus obtains a legal existence, which is simply connected with that fact. This pure reception of possession among Rights is not perplexed by the consideration of the rightful or wrongful origin of the possession, which origin has no effect with respect to the protection given to possession. The *Injusta Possessio*, that is, the possession which has been acquired *vi*, or clam or *precario*, is certainly not protected against the person from whom it has been acquired by the possessor by any one of these three *vitia possessionis*; but apart from this case, the *Injusta Possessio* gives the same claim to protection as the *Iusta*. (Dig. 43. tit. 17. s. 2.) The *Interdicts* arise out of *Possessio*, and indifferently whether it is *Iusta* or *Injusta*; only, if two possessors claim against one another, a former and a present possessor, of whom the one has obtained possession from the other *vitiose*, the former is not protected against the latter. (Dig. 43. tit. 17. s. 1. § 9.)" Puchta, *Institutiones*, &c., ii. § 225.

(For other matters relating to the *Interdict* see Gaius, iv. 138—170; Paulus, *S. R. v. tit. 6*; Dig. 43; Savigny, *Das Recht des Besitzes*, pp. 403—516; Savigny and Haubold, *Zeitschrift*, vol. iii. pp. 305, 358, 421; Keller, *Ueber die Deductio quas moribus fit* and *Das Interdictum Uti possidetis*, *Zeitschrift*, vol. xi.; Rudorff, *Bemerkungen über dasselbe Interdict*, *Zeitschrift*, vol. xi.; Puchta, *Institutiones*, &c., ii. §§ 169, 225.) [G. L.]

INTERPRES, an interpreter. This class of persons became very numerous and necessary to the Romans as their empire extended. Embassies from foreign nations to Rome, and from Rome to other states, were generally accompanied by interpreters to explain the objects of the embassy to the respective authorities. (Cic. *de Divinat.* ii. 64, *de Finib.* v. 29; Plin. *H. N.* xxv. 2; Gell. xvii. 17. 2; Liv. xxvii. 43.) In large mercantile towns the interpreters, who formed a kind of agents through whom business was done, were sometimes very numerous, and Pliny (*H. N.* vi. 5) states that at *Dioscurias* in *Colchia*, there were at one time no less than 130 persons who acted as interpreters to the Roman merchants, and through whom all the business was carried on.

All Roman *prætores*, *proconsuls*, and *questors*, who were entrusted with the administration of a province, had to carry on all their official proceedings in the Latin language (Val. Max. ii. 2. § 2), and as they could not be expected to be acquainted with the language of the provincials, they had always among their servants [*APPARITORES*] one or more interpreters, who were generally Romans, but in most cases undoubtedly freedmen. (Cic. *pro Balb.* 11.) These interpreters had not only to officiate at the *conventus* [*CONVENTUS*], but also explained to the Roman governor everything which the provincials might wish to be laid before him. (Cic. *c. Verr.* iii. 37, *ad Fam.* xiii. 44; Caes. *Bell. Gall.* i. 19; compare Dirksen, *Civil. Abhandl.* i. p. 16, &c.) [L. S.]

INTERREX, INTERREGNUM (called by the Greek writers *μεσοβασιλεύς*, *μεσοβασιλεία* *ἀρχή*, *μεσοβασιλεία*). The office of *Interrex* is said to have been instituted on the death of Romulus,

when the senate wished to share the sovereign power among themselves instead of electing a king. For this purpose, according to Livy (i. 17), the senate, which then consisted of one hundred members, was divided into ten decuries; and from each of these decuries one senator was nominated. These together formed a board of ten, with the title of *Interreges*, each of whom enjoyed in succession the regal power and its badges for five days; and if no king was appointed at the expiration of fifty days, the rotation began anew. The period during which they exercised their power was called an *Interregnum*. Dionysius (ii. 57) and Plutarch (*Numa*, 2) give a different account of the matter; but that of Livy appears the most probable. Niebuhr (*Hist. of Rome*, vol. i. p. 334, vol. ii. p. 111) supposes that the first interreges were exclusively Ramnes, and that they were the Decem Primi, or ten leading senators, of whom the first was chief of the whole senate. (Compare Walter, *Gesch. des Röm. Rechts*, § 21, 2nd ed.)

The interreges agreed among themselves who should be proposed as king (Dionys. iv. 40, 80), and if the senate approved of their choice, they summoned the assembly of the curiae, and proposed the person whom they had previously agreed upon; the power of the curiae was confined to accepting or rejecting him. The decree of the curiae, by which they accepted the king, was called *jussus populi* (Liv. i. 22; Cic. *de Rep.* ii. 13, 21.) After the king had been elected, the curiae conferred the imperium upon him by a special law, *lex curiata de imperio*. (Cic. *de Rep.* ii. 13, 17, 18, 20, 21.)

Interreges were appointed under the republic for holding the comitia for the election of the consuls, when the consuls, through civil commotions or other causes, had been unable to do so in their year of office. (Dionys. viii. 90; Liv. iv. 43, &c.) Each held the office for only five days, as under the kings. The comitia were, as a general rule, not held by the first interrex; more usually by the second or third (Liv. ix. 7, x. 11, v. 31); but in one instance we read of an eleventh, and in another of a fourteenth interrex. (Liv. vii. 22, viii. 23.) The comitia for electing the first consuls were held by Sp. Lucretius as interrex (Dionys. iv. 84), whom Livy (i. 60) calls also *præfectus urbis*. The interreges under the republic, at least from B. C. 482, were elected by the senate from the whole body, and were not confined to the decem primi or ten chief senators as under the kings. (Dionys. viii. 90.) Plebeians, however, were not admissible to this office; and consequently when plebeians were admitted into the senate, the patrician senators met together (*coiere*) without the plebeian members to elect an interrex. (Liv. iii. 40, iv. 7, 43, vi. 41; Cic. *pro Domo*, 14; Niebuhr, vol. ii. p. 429; Walter, §§ 55, 131.) For this reason, as well as on account of the influence which the interrex exerted in the election of the magistrates, we find that the tribunes of the plebs were strongly opposed to the appointment of an interrex. (Liv. iv. 43, xxii. 34.) The interrex had jurisdiction. (Liv. x. 41; Niebuhr, vol. iii. p. 24.)

Interreges continued to be appointed occasionally till the time of the second Punic war (Liv. xxii. 33, 34); but after that time we read of no interrex, till the senate, by command of Sulla, created an interrex to hold the comitia for his election as Dictator, B. C. 82. (Appian, *Bell. Civ.* i. 98.) In B. C. 55 another interrex was appointed to hold the

comitia, in which Pompey and Crassus were elected consuls (Dion Cass. xxxix. 27, 31); and we also read of interreges in A. C. 53 and 52, in the latter of which years an interrex held the comitia, in which Pompey was appointed sole consul. (Dion Cass. xl. 45; Ascon. *ad Cic. Mil.* init. p. 32, Orelli; Plut. *Pomp.* 54; comp. Becker, *Handbuch der Römischen Alterthümer*, vol. ii. part i. p. 296, &c.)

INTERULA. [TUNICA.]

INTESTA'BILIS. In the Twelve Tables it was declared "qui se alierit testarier libripensve fuerit, ni testimonium fariatur, improbus intestabilisque esto." (Dirksen, *Uebersicht*, &c. p. 607; compare Gellius, vi. 7, xv. 13.) According to these passages, a person who had been a witness on any solemn occasion, such as the making of a will, and afterwards refused to give his testimony, was "intestabilis," that is, disqualified from ever being a witness on any other occasion. The word afterwards seems to have had its meaning extended, and to have been used to express one who could not make a will, and who laboured under a general civil incapacity. (Hor. *Sat.* ii. 8. 181; Dig. 28. tit. 1. a. 18. 26; Inst. ii. tit. 10.) [G. L.]

INTESTATO, HEREDITATES AB.

[HERES, p. 598, a.]

INTESTATUS. [HERES, p. 598, a.]

INTESTINUM OPUS, joiner's work, is referred to in some passages of Vitruvius as used in the interior of buildings; but there is nothing in his allusions to it that requires explanation (Vitruv. ii. 9, v. 2, v. 3). [P. S.]

ISOPOLITEIA (ισπολιτεία). [CIVITAS, p. 289, b.]

ISOTELEIS (ισοτελεῖς). [CIVITAS, p. 289, b.]

ISTHμία (ἰσθμία), one of the four great national festivals of the Greeks. This festival derived its name from the Corinthian isthmus, where it was held in honour of Poseidon. Where the isthmus is narrowest, between the coast of the Saronic gulf and the western foot of the Oenean hills, was the temple of Poseidon, and near it was a theatre and a stadium of white marble, the scene of the Isthmian games. (Paus. ii. 1. § 7; Strab. viii. 6. p. 380.) The entrance to the temple was adorned with an avenue of statues of the victors in the Isthmian games, and with groves of pine-trees. These games were said originally to have been instituted by Sisyphus in honour of Melicertes, who was also called Palaemon. (Apollod. iii. 4. § 3; Paus. ii. 1. § 3.) Their original mode of celebration partook, as Plutarch (*Thes.* 25) remarks, more of the character of mysteries, than of a great and national assembly with its various amusements, and was performed at night. Subsequent to the age of Theseus the Isthmia were celebrated in honour of Poseidon; and this innovation is ascribed

to Theseus himself, who, according to some legends, was a son of Poseidon, and who, in the institution of the new Isthmian solemnities, is said to have imitated Heracles, the founder of the Olympian games. The celebration of the Isthmia was henceforth conducted by the Corinthians, but Theseus had reserved for his Athenians some honourable distinctions; those Athenians who attended the Isthmia sailed across the Saronic gulf in a sacred vessel (*Scopis*), and an honorary place (*προεστία*), as large as the sail of their vessel, was assigned to them during the celebration of the games. (Plut. *l. c.*) In times of war between the two states a sacred truce was concluded, and the Athenians were invited to attend at the solemnities. (Thucyd. viii. 10.) The Eleans did not take part in the games, and various stories were related to account for this singular circumstance. (Paus. v. 2. § 2.) It is a very probable conjecture of Wachsmuth (*Hellen. Alterth.* vol. i. p. 155), that the Isthmia, after the changes ascribed to Theseus, were merely a panegyris of the Ionians of Peloponnesus and those of Attica; for it should be observed, that Poseidon was an Ionian deity, whose worship appears originally to have been unknown to the Dorians. During the reign of the Cypselids at Corinth, the celebration of the Isthmian games was suspended for seventy years. (Solin. c. 12.) But after that time they gradually rose to the rank of a national festival of all the Greeks. In Olymp. 49 they became periodical, and were henceforth celebrated regularly every third year, twice in every Olympiad, that is, in the first and third year of every Olympiad. The Isthmia held in the first year of an Olympiad fell in the Corinthian month Panemus (the Attic Hecatombeon); and those which were held in the third year of an Olympiad, fell either in the month of Munychion or Thargelion. (Corini, *Dissert. Agon.* 4; compare Goeller *ad Thucyd.* viii. 9.) Pliny (*H. N.* iv. 5) and Solinus (c. 9) erroneously state that the Isthmia were celebrated every fifth year. With this regularity the solemnities continued to be held by the Greeks down to a very late period. In 228 B.C. the Romans were allowed the privilege of taking part in the Isthmia (Polyb. ii. 13); and it was at this solemnity that, in A.C. 196 Flamininus proclaimed before an innumerable assembly the independence of Greece (Polyb. xvii. 29). After the fall of Corinth, in B.C. 146, the Sicyonians were honoured with the privilege of conducting the Isthmian games; but when the town of Corinth was rebuilt by Julius Caesar (Paus. ii. 1. § 2, ii. 2. § 2), the right of conducting the solemnities was restored to the Corinthians, and it seems that they henceforth continued to be celebrated till Christianity became the state-religion of the Roman empire. (Sueton. *Nero*, 24; Julian *Imperat. Epist.* 35.)

The season of the Isthmian solemnities was, like that of all the great national festivals, distinguished by general rejoicings and feasting. The contests and games of the Isthmia were the same as those at Olympia, and embraced all the varieties of athletic performances, such as wrestling, the pancratium, together with horse and chariot racing. (Paus. v. 2. § 4; Polyb. *l. c.*) Musical and poetical contests were likewise carried on, and in the latter women also were allowed to take part, as we must infer from Plutarch (*Sympos.* v. 2), who, on the authority of Polemo, states that in the treasury at Sicyon there was a golden book which had

been presented to it by Aristomache, the poetess, after she had gained the victory at the Isthmia. At a late period of the Roman empire the character of the games at the Isthmia appears greatly altered; for in the letter of the emperor Julian, above referred to, it is stated that the Corinthians purchased bears and panthers for the purpose of exhibiting their fights at the Isthmia, and it is not improbable that the custom of introducing fights of animals on this occasion commenced soon after the time of Caesar.

The prize of a victor in the Isthmian games consisted at first of a garland of pine-leaves, and afterwards of a wreath of ivy; but in the end the ivy was again superseded by a pine-garland. (Plut. *Sympos.* v. 3.) Simple as such a reward was, a victor in these games gained the greatest distinction and honour among his countrymen; and a victory not only rendered the individual who obtained it, a subject of admiration, but shed lustre over his family and the whole town or community to which he belonged. Hence Solon established by a law that every Athenian who gained the victory at the Isthmian games, should receive from the public treasury a reward of one hundred drachmae. (Plut. *Sol.* 23.) His victory was generally celebrated in lofty odes, called Epinikia, or triumphal odes, of which we still possess some beautiful specimens among the poems of Pindar. (See Massieu in the *Mém. de l'Acad. des Inscrip. et Bell. Lett.* v. p. 214, &c.; Dissen, *De Ratione Poetica Carminum Pindaricorum*, prefixed to the first volume of his edition of Pindar; Müller, *Hist. of Greek Lit.* p. 220, &c.; Krause, *Die Pythien, Nemeen, und Isthmien*, p. 165, &c.) [L.S.]

ITA'LIA. [COLONIA; PROVINCIA.]

ITER. [VIAR.]

ITINERIS SERVITUS. [SERVITUTES.]

JUDEX, JUDICIUM. A Roman magistratus generally did not investigate the facts in dispute in such matters as were brought before him: he appointed a Juxer for that purpose, and gave him instructions. [ACTIO; INTERDICTUM.] Accordingly, the whole of Civil procedure was expressed by the two phrases Jus and Judicium, of which the former comprehended all that took place before the magistratus (*in jure*), and the latter all that took place before the judex (*in judicio*). The meaning of the term Judices in a passage of Livy (iii. 55) is uncertain. In the Theodosian Code the term Juxer designates the governor of a province. From the earlier periods to the time of Constantine it designated a person, whose functions may be generally understood from what follows.

In many cases a single Juxer was appointed: in others, several were appointed, and they seem to have been sometimes called Recuperatores as opposed to the single Juxer. (Gaius, iv. 104—109.) Under certain circumstances the Juxer was called Arbitr: thus Juxer and Arbitr are named together in the Twelve Tables. (Dirksen, *Uebersicht*, &c. p. 725.)

A Juxer when appointed was bound to discharge the functions of the office, unless he had some valid excuse (*excusatio*). A person might also be disqualified from being a Juxer. There were certain seasons of the year when legal business was done at Rome (*cum res agebantur*, Gaius, ii. 279), and at these times the services of the judices were required. These legal terms were regulated according to the seasons, so that there

were periods of vacation (Cic. *ad Att.* i. 1; *cum Romae a iudiciis forum refrigerit*): in the provinces, the terms depended on the *Conventus*. A *Judex* was liable to a fine if he was not in attendance when he was required. In any given case, the litigant parties agreed upon a *judex* or accepted him whom the magistratus proposed. A party had the power of rejecting a proposed *judex*, though there must have been some limit to this power. (Cic. *pro Cluent.* 43.) In cases where one of the litigant parties was a peregrinus, a peregrinus might be *judex*. (Gaius, iv. 105.) The *judex* was sworn to discharge his duty faithfully. (Cic. *de Invent.* i. 39.)

When Italy had received its organization from the Romans, the magistratus of the several cities had jurisdiction, and appointed a *Judex* as the praetor did at Rome (*Lex Rubria de Gallia Cisalpina*). In the provinces, the governors appointed a *Judex* or *Recuperatores*, as the case might be, at the *Conventus* which they held for the administration of justice; and the *Judex* or *Recuperatores* were selected both from Roman citizens and natives.

When the *Judex* was appointed, the proceedings *in jure* or before the praetor were terminated, which was sometimes expressed by the term *Litis Contestatio*, the phrases *Lis Contestata* and *Judicium acceptum* or *ordinatum*, being equivalent in the classical jurists. [*LITIS CONTESTATIO*.] The parties appeared before the *Judex* on the third day (*comperendinatio*), unless the praetor had deferred the *judicium* for some sufficient reason. The *Judex* was generally aided by advisers (*jurisconsulti*) learned in the law, who were said "*in consilio adesse*" (Cic. *pro P. Quintio*, 2. 6, *Top.* 17); but the *Judex* alone was empowered to give judgment. The matter was first briefly stated to the *Judex* (*causae conjunctio, collectio*), and the orators or patroni of each party supported his cause in a speech. The evidence seems to have been given at the same time that the speeches were made, and not to have been heard before the patroni made their address. (Cic. *pro Rosc. Com.* 14, *pro P. Quintio*, 18.) But it is probable that the practice in this respect might vary in different cases. Witnesses were produced on both sides and examined orally; the witnesses on one side were also cross-examined by the other. (Cic. *pro Caecina*, 10, *pro Flacco*, 10.) Written documents, such as instruments and books of account, were also given in evidence; and sometimes the deposition of an absent witness was read, when it was confirmed by an oath. (Cic. *pro Rosc. Com.* 15, Cic. *ad Att.* ii. 12, xiv. 15.) There were no direct means of compelling a person to give evidence before the legislation of Justinian, unless they were slaves, who in some cases might be put to the torture. As to the application of the oath in *judicio*, see *JUSJURANDUM*.

After all the evidence was given and the patroni had finished, the *judex* gave sentence: if there were several *judices*, a majority decided. If the matter was one of difficulty, the hearing might be adjourned as often as was necessary (*ampliatio*); and if the *judex* could not come to a satisfactory conclusion, he might declare this upon oath and so release himself from the difficulty. This was done by the form of words "non liquere" (N.L.). (Gell. xiv. 2.) The sentence was pronounced orally, and was sometimes first written on a tablet. If the

defendant did not make his appearance after being duly summoned, judgment might be given against him (*judicium desertum, eremodisium*), according to the proof which the plaintiff had made. If the plaintiff did not appear, the defendant could demand an acquittal. (Dig. 40. tit. 12. s. 27. § 1, 49. tit. 1. s. 28. pr.)

The sentence was either of *Absolutio* or *Condemnatio*. That part of the formula which was called the *Condemnatio* [*ACTIO*, p. 12, b], empowered the *Judex* to condemn or acquit (*condemnare, absolvere*, Gaius, iv. 43). The defendant might satisfy the plaintiff after the *judicium* had been constituted by the *litis contestatio* (*post acceptum judicium*, Gaius, iii. 180, iv. 114), and before judgment was given; but in this case it was a disputed question between the two schools whether the *judex* should acquit, or whether he should condemn on the ground that at the time when the *judicium* was constituted, the defendant was liable to be condemned and it was the business of the *judex* merely to follow his instructions. The dispute accordingly involved one of those principles on which the schools were theoretically divided, — the following out of a legal principle to all its logical consequences; but, like many other questions between the schools, this question was practically of no importance, as the plaintiff would not be allowed to have satisfaction twice.

While the *Legis actiones* were in force, the judgment was for the restitution of a thing, if a given thing (*corpus*) was the object of the action; but under the process of the formula, the *Judex* gave judgment, pursuant to the formula, in a sum of money, even when a piece of property was the object of dispute. The sum of money was either fixed or not fixed in the formula. If the claim was for a certain sum of money, the amount was inserted in the *condemnatio*, and the *judex* was bound to give that or nothing to the plaintiff. If the claim was for damages or satisfaction, the amount of which was not ascertained, the *condemnatio* was either limited to a sum named in the formula, and which the *judex* could not exceed except at his own peril (*litam suam faciendo*); or, if the action was for the recovery of property from the possessor, or if it was an *actio ad exhibendum*, the *condemnatio* empowered the *judex* to condemn the defendant in the value of the thing. Generally, the term in the formula which expressed the value which was the object of the demand was, " *quanti res est.*" *Res* may mean either a thing in the limited sense of the word, or generally the claim or demand, and the fixing this at a money value, was equivalent to *litis aestimatio*. The *judex* was always bound to condemn in some definite sum, even though the formula did not contain a definite sum: the reason of which is obvious, for, unless the *condemnatio* was definite, there would be no judgment. (Gaius, iv. 48—52.)

The following is the distinction between an *Arbitrium* and *Judicium*, according to Cicero (*pro Rosc. Com.* 4): — In a *judicium* the demand was of a certain sum or definite amount (*pecuniae certae*); in an *arbitrium*, the amount was not determined (*incerta*). In a *judicium* the plaintiff obtained all that he claimed or nothing, as the words of the formula show: "*Si paret H. S. 1000 dari oportere.*" (Compare Gaius, iv. 50.) The corresponding words in the formula *arbitraria* were: "*Quantum aequius melius id dari;*" and their

equivalents were, "Ex fide bona, Ut inter bonos bene agier." (*Top.* 17.) In a dispute about *dos*, which Cicero calls "*arbitrium rei uxoriae*," the words "*Quod aequius, melius*," were added. (Compare *Gaius*, iv. 47, 62.) If the matter was brought before a *judex*, properly so called, the *judicium* was constituted with a *poena*, that is, per *sponsionem*; there was no *poena*, when an arbiter was demanded, and the proceeding was by the formula *arbitraria*. The proceeding by the *sponsio* then was the strict one (*angustissima formula sponsionis*, *Cic. pro Rosc. Com.* 14): that of the *arbitrium* was *ex fide bona*, and the arbiter, though he was bound by the instructions of the formula, was allowed a greater latitude by its terms. The engagement between the parties who accepted an arbiter, by which they bound themselves to abide by his *arbitrium*, was *Compromissum* (*pro Rosc. Com.* 4. 4); but this term was also employed, as it appears, to express the engagement by which parties agreed to settle their differences by arbitration, without the intervention of the praetor. Cicero appears to allude to this arbitration. (*Pro P. Quinctio*, 5; compare *Senec. de Benef.* iii. 7.)

In the division of judicial functions between the *Magistratus* and *Judex* consisted what is called the *Ordo Judiciorum Privatorum*, which existed in the early periods of Rome, and continued till the time of Constantine. At the same time with the *Ordo Judiciorum Privatorum* existed the proceeding *extra ordinem* or *extraordinaria cognitio*, in which the magistratus made a decision by a *decretum*, without letting the matter come to a *judex*. Finally, under the later empire the *extraordinaria cognitio* supplanted the old mode of proceeding.

According to Cicero (*pro Caecina*, 2) all *Judicia* had for their object, either the settlement of disputes between individuals (*controversiae*), or the punishment of crimes (*maleficia*). This passage refers to a division of *Judicia*, which appears in the *Jurista*, into *Publica* and *Privata*. The term *Privata Judicia* occurs in Cicero (*Top.* 17), where it refers to the class of *Judicia* which he indicates in the *Caecina* by the term *Controversiae*. The term *Publica Judicia* might not then be in use, but the term *Publica Causa* is used by Cicero (*pro Rosc. Amer.* c. 21) with reference to a *Judicium*, which by the *Jurists* would be called *Publicum*. In the *Digest* (48. tit. 1. s. 1) it is stated that all *Judicia* are not *Publica* in which a *crimen* was the matter in question, but only those in which the offence was prosecuted under some *lex*, such as the *Julia Majestatis*, *Cornelia de Sicariis*, and others there enumerated. The *Judicia Popularia* or *Populares Actiones* as they are called (*Dig.* 47. tit. 23. s. 1) are defined to be those by which "*sum jus populus tuetur*;" and they agreed with the *Publica Judicia* in this, that any person might be the prosecutor, who was not under some legal disqualification. The *Judicia Populi* (*Cic. Brut.* 27) were those in which the *populus* acted as *judices*; and accordingly Cicero enumerates the *Populi Judicia* among others when he says (*pro Domo*, c. 13) that "*nihil de capite civis, aut de bonis, sine judicio senatus aut populi aut eorum qui de quaque re constituti judices sint, detrahi posse*." As the *Judicia Publica* are defined by the *jurists* to be those in which *crimina* were tried by a special *lex*, it appears that the *Judicia Populi*, strictly so called, must have fallen into disuse or have gradually become unnecessary after the *Judicia Publica*

were regulated by special *leges*; and thus the *Judicia Publica* of the later republican period represent the *Judicia Populi* of the earlier times. The *Judicia Populi* were originally held in the *Comitia Curiata* and subsequently in the *Centuriata* and *Tributa*. A *lex* of P. Valerius Publicola (*Liv.* ii. 8; *Cic. Rep.* ii. 31) gave an appeal (*provocatio*) to the *populus* from the *magistratus*; and a law of C. Sempronius Gracchus (*Cic. pro Rabir.* 4) declared to the same effect: "*Ne de capite civium Romanorum injussu populi judicaretur*."

The kings presided in the *Judicia Populi*, and the *consuls* succeeded to their authority. But after the passing of the *Lex Valeria de Provocatione* (a. c. 508) persons were appointed to preside at such trials as affected a citizen's caput, and they were accordingly called *Quaesitores* or *Quaestores Parricidii* or *Rerum Capitalium*. In some cases (*Liv.* iv. 51) a *plebiscitum* was passed, by which a magistrate was appointed to preside at the judicial investigation. In the course of time, as cases were of more frequent occurrence, these *Quaestiones* were made *Perpetuae*, that is, particular magistrates were appointed for the purpose. In the year 149 a. c. the tribune L. Calpurnius Piso Frugi carried a *Lex De Pecuniis Repetundis*, by which a Praetor presided at all such trials during his year of office, from which time the *Quaestio Repetundarum* became *Perpetua*. L. Sulla gave to one praetor the *Quaestiones de Majestate*, and to others those of *Peculatus* and *Ambitus*; and he also added four other *Quaestiones Perpetuae*. Thus he carried out the principle of the *Lex Calpurnia*, by establishing permanent courts for the trial of various specified offences, and the praetors determined among themselves in which of these new courts they should severally preside. The ordinary functions of the praetor *urbanus* and *peregrinus* were not interfered with by these new arrangements. The *Quaestiones* of Sulla were, *De Repetundis*, *Majestatis*, *De Sicariis* et *Veneficiis*, *De Parricidio*, *Peculatus*, *Ambitus*, *De Nummis Adulterinis*, *De Falsis* or *Testamentariis*, and *De Vi Publica*. But in special cases the senate still sometimes by a *decretum* appointed the *consuls* as *quaesitores*, of which an example occurs in Cicero (*Brut.* 22.)

Any person, not legally disqualified, might be an accuser (*accusator*) in a *Judicium Publicum*. On such an occasion a praetor generally presided as *quaesitor*, assisted by a *judex quaestionis* and a body of *judices* called his *consilium*. The *judex quaestionis* was a kind of assistant to the presiding magistratus, according to some opinions; but others consider him to be a *quaesitor*, who was sometimes specially appointed to preside on the occasion of a *quaestio*. (Walter, *Geschichte des Röm. Rechts*, p. 861.) The *judices* were generally chosen by lot out of those who were qualified to act. Both the accuser and the *reus* had the privilege of rejecting or challenging (*rejicere*) such *judices* as they did not like. (*Cic. ad Att.* i. 16.) The *judices* appointed according to the provisions of the *Lex Licinia de Ambitu*, a. c. 55, were called *edititii*, and these were *judices* named by the accuser, whom the accused (*reus*) could not challenge. (*Cic. pro Ca. Plancio*, 15, 17, ed. Wunder, *Prolegom.* p. lxxvi.) The *judices* were called *editi*, when they could be challenged by the *reus*. In many cases a *lex* was passed for the purpose of regulating the mode of procedure. In the matter

of Clodius and the Bona Dea, the senate attempted to carry a lex by which the praetor who was to preside at the trial should be empowered to select the judices, the effect of which would have been to prevent their being challenged by Clodius. After a violent struggle, a lex for the regulation of the trial was proposed by the tribune Fufius and carried: it only differed from the lex recommended by the senate in the mode of determining who should be the judices (*judicum genus*): a difference however which was not unimportant, as it secured the acquittal of Clodius. The judices voted by ballot, and a majority determined the acquittal or condemnation of the accused. If the votes were equal, there was an acquittal (Plut. *Marinus*, 5). Each judex was provided with three tablets (*tabulae*), on one of which was marked A, Absolve; on a second C, Condemno; and on a third N. L., Non liquet. The judices voted by placing one of these tablets in the urn (*urna*, Juv. *Sat.* v. 4), which was then examined for the purpose of ascertaining the votes. It was the duty of the magistratus to pronounce the sentence of the judices; in the case of condemnation, to adjudge the legal penalty; of acquittal, to declare him acquitted; and of doubt, to declare that the matter must be further investigated (*amplius cognoscendum*).

Mention is often made of the *Judicia Populi* in the Latin writers. A *Judicium* was commenced by the accuser, who must be a magistratus, declaring in a contio, that he would on a certain day accuse a certain person, whom he named, of some offence, which he also specified. This was expressed by the phrase "*diem dicere*" (*Virginius Cassoni capitis diem dicit*, Liv. iii. 11). If the offender held any high office, it was necessary to wait till his time of service had expired, before proceedings could be thus commenced against him. The accused was required to give security for his appearance on the day of trial; the security was called *vades* in a *causa capitalis*, and *praedes* when the penalty for the alleged offence was pecuniary. If such security was not given, the accused was kept in confinement. (Liv. iii. 13.) If nothing prevented the inquiry from taking place at the time fixed for it, the trial proceeded, and the accuser had to prove his case by evidence. The investigation of the facts was called *Anquisitio* with reference to the proposed penalty: accordingly, the phrases *pecunia, capite* or *capitis anquirere*, are used. (Liv. xxvi. 3.) When the investigation was concluded, the magistratus promulgated a *rogatio*, which comprehended the charge and the punishment or fine. It was a rule of law that a fine should not be imposed together with another punishment in the same *rogatio*. (Cic. *pro Dom.* c. 17.) The *rogatio* was made public during three *nundinae*, like any other lex; and proposed at the *comitia* for adoption or rejection. The form of the *rogatio*, the effect of which was to drive Cicero into banishment, is given in the *Oratio Pro Domo*, c. 18. The accused sometimes withdrew into exile before the votes were taken; or he might make his defence, of which we have an instance in the *oration* of Cicero for Rabirius. Though these were called *Judicia Populi*, and properly so in the early ages of the state, the *leges* passed in such *judicia* in the latter period of the republic were often *Plebiscita*.

The offences which were the chief subject of *Judicia Populi* and *Publica* were *Majestas*, *Adul-*

teria and *Stupra*, *Parricidium*, *Falsum*, *Vis Publica* and *Privata*, *Peculatus*, *Repetundae*, *Ambitus*, which are treated under their several heads.

With the passing of special enactments for the punishment of particular offences, was introduced the practice of forming a body of Judices for the trial of such offences as the enactments were directed against. Thus it is said that the *Lex Calpurnia De Pecuniis Repetundiis* established the *Album Judicum Selectorum*, or the body out of which Judices were to be chosen. It is not known what was the number of the body so constituted, but it has been conjectured that the number was 350, and that ten were chosen from each tribe, and thus the origin of the phrase *Decuriae Judicum* is explained. It is easy to conceive that the *Judicia Populi*, properly so called, would be less frequent as special *leges* were framed for particular offences, the circumstances of which could be better investigated by a smaller body of Judices than by the assembled people. It is affirmed that up to the passing of the *Calpurnia Lex*, the Judices were chosen from the senators only, but after this time they were not taken from that body exclusively; and further, that not only the Judices in the *Quaestiones de Repetundiis*, but also the Judices in private matters were from the date of this lex taken from the *Album Judicum* which was annually made (Goetting, *Geschichte der Röm. Staatsverfassung*, p. 425); for which there appears to be no evidence. Some modern writers affirm that by the *Lex Calpurnia* the Judices were chosen by the Praetor annually out of the body of senators, and arranged according to their tribes; and that the necessary number for each trial was chosen out of this body by lot.

As many of those who were tried in the *quaestiones perpetuae* belonged to the class of the *Optimates*, it often happened that the Judices acquitted those members of their own body, who would have been convicted by impartial judices. Accordingly a struggle arose between the popular party and the *Optimates*, whom the popular party wished to exclude from the office of *Judex*. The laws which relate to the constitution of the body of Judices are called *Judiciariae*, whether these laws related only to this matter, or made rules about it and other things also. The first lex which excluded the Senators from the *Album judicum selectorum* was a *Lex Sempronia* of C. Gracchus, B. C. 123, in accordance with which the judices were taken only from the *Equites*. This arrangement lasted above forty years, and gave satisfaction to the popular party; but it did not work well in all respects, because the magistrates in the provinces favoured the rapacity of the *Publicani*, in order to keep on good terms with the *Equites*, to which class the *Publicani* belonged. (Cic. *Verr.* iii. 41.) A *Lex Servilia Caepionis* B. C. 106 is said to have repealed the *Sempronia Lex*; but this *Lex Servilia* was itself repealed by a *Lex Servilia Glauciae repetundarum*, probably in B. C. 104. This *Lex* is said to have given the *Judicia* to the *Equites*, and consequently it either repealed the *Lex* of B. C. 106 indirectly, or it may merely have confirmed the *Lex Sempronia*; for the real nature of the *Lex* of B. C. 106 is hardly ascertainable. There is a passage in Tacitus (*Annal.* xii. 60) in which he speaks of the *Serviliae leges* restoring the *Judicia* to the senate. The *Lex Servilia* of B. C. 104 excluded from the function of

Judices every person who had been tribunus plebis, quaestor, triumvir capitalis, tribunus militum in one of the first four legions, triumvir agris dandis assignandis, who was or had been in the senate, who was infamia, every person who was under thirty or above sixty years of age, every person who did not live in Rome or in the immediate neighbourhood, every father, brother, or son of a person who was or had been in the senate, and every person who was beyond seas. The Praetor who presided in this Quaestio, was to choose 450 judges, from whom the Judges for the particular case were to be taken by lot. (*Fragmenta Legis Serviliae Repetundarum*, &c. C. A. C. Klenze, Berlin, 1825, 4to.)

The attempts of the tribune M. Livius Drusus the younger had no result [*LEXO LIVIAE*]. A Lex Plantia B. C. 89 enacted, that the Judges should be chosen by the tribes, five by each tribe, without any distinction of class. The Optimates triumphed under L. Cornelius Sulla, who by a Lex Cornelia B. C. 80 enacted that the Judges should be taken exclusively from the Senators. But a Lex Aurelia (B. C. 70) enacted that the Judges should be chosen from the three classes — of Senators, Equites, and Tribuni Aerarii (Vell. ii. 32.) The Tribuni Aerarii were taken from the rest of the citizens, and were, or ought to have been, persons of some property. Thus the three decuriae of Judges were formed; and it was either in consequence of the Lex Aurelia or some other lex that, instead of one urn for all the tablets, the decuriae had severally their balloting urn, so that the votes of the three classes were known. Dion Cassius (xxxviii. 8) ascribes this regulation to a Lex Fufia, and he says that the object was that the votes of the decuriae (ἐθνη, γένη) might be known, though those of individuals could not, owing to the voting being secret. It is not known if the Lex Aurelia determined the number of Judges in any given case. A Lex Pompeia passed in the second consulate of Pompey (B. C. 55), seems to have made some modifications in the Lex Aurelia, as to the qualification of the Judges; but the new provisions of this lex are only known from Asconius, who explains them in terms which are very far from being clear. The Lex Pompeia de Vi, and De Ambitu (B. C. 52) determined that eighty judges were to be selected by lot, out of whom the accuser and the accused might reject thirty. In the case of Clodius (B. C. 61), in the matter of the Bona Dea, there were fifty-six judges. It is conjectured that the number fixed for a given case, by the Lex Aurelia, was seventy judges.

A Lex Judiciaria of Julius Caesar (Sueton. *Jul.* 41; Cic. *Philipp.* i. 8) took away the decuria of the Tribuni Aerarii, and thus reduced the judges to two classes (*genera*, the γένη of Dion Cassius). A Lex Judiciaria, passed after his death by M. Antonius, restored the decuria of the Tribuni Aerarii, but required no pecuniary qualification from them: the only qualification which this lex required was, that a person should have been a centurion or have served in the legions. It appears that the previous Lex Pompeia, Lex Aurelia, and a Lex of Caesar, had given to those who had been centurions (*qui ordines duxerant*) the privilege of being judges (*judicatus*), but still they required a pecuniary qualification (*census*). The Lex of Antoninus, besides taking away the pecuniary qualification, opened the judicia to the soldiers. (Cic.

Phil. i. 8, v. 5; Sueton. *J. Caes.* c. 41.) It seems probable that the expression *ex centuriis*, which is used by Asconius in speaking of the change introduced by this Lex Pompeia, had reference to the admission of the centurions into the third class of judges.

Augustus, who altered the whole constitution of the body of judges by his *leges judiciorum publicorum et privatorum*, added to the existing three Decuriae Judicum, a fourth Decuria, called that of the Duoenarii, who had a lower pecuniary qualification, and only decided in smaller matters (*de levioribus summis*, Sueton. *Aug.* 32). Caligula (Sueton. *Calig.* 16) added a fifth Decuria, in order to diminish the labours of the judges. Augustus had already allowed each Decuria, in its turn, an exemption for one year, and had relieved them from sitting in the months of November and December. The whole number of judges was raised by Augustus to near 4000 (Plin. *Hist. Nat.* xxxiii. 7); and the judges in civil cases were taken out of this body. They were chosen by the Praetors out of the persons who had the property qualification, and the duty of serving as a judex thus became one of the burdens to which citizens were liable.

As to the whole number of judges, included at any given time in the Album Judicum, it seems almost impossible to state any thing with precision; but it is obvious from what has been said, that the number must have varied with the various changes already mentioned. After the time of Augustus the number was about four thousand, and from this period, at least, there is no doubt that the Album Judicum contained the whole number of persons who were qualified to act as judges, both in *Judicia Privata* and *Judicia Publica*. The fourth Decuria of Augustus was limited in its functions to the *Judicia Privata* in which the matter in dispute was of small value. It is often stated by modern writers, without any qualification, that the various changes in the judiciary body from the time of the Lex Calpurnia to the end of the republic had reference both to the *Judicia Publica* and *Privata*; though it is also stated that the objects of these various enactments were to elevate or depress one of the great parties in the state, by extending or limiting the body out of which the judges in any given case were to be chosen. But it is obvious that these reasons do not apply to the matter of *Judicia Privata*, in which a single judex generally acted, and which mostly concerned matters of property and contract. Accordingly, a recent writer (Walter, *Geschichte des Röm. Rechts*, p. 716) has observed with more caution than some of his predecessors, that "there is no doubt that from the time of Augustus the Album Judicum had reference to the judges in civil matters, but that as to earlier times a difficulty arises from the fact that while the Lex Semproniana was in force, by which the senators were excluded from the Album Judicum, a Consularis is mentioned as a judex (Cic. *de Off.* iii. 19); and, on the other hand, an Eques is mentioned as a judex at a time when the Lex of Sulla was in force, and consequently senators only could be judges. (Cic. *Pro Rosc. Com.* c. 14.)" These instances certainly are inconsistent with the fact of the *Judicia Privata* being regulated by the various *Legis Judiciariae*; but they are of small weight, compared with the reasons derivable from the character of the two

kinds of *Judicia* and the difference in the mode of procedure, which render it almost a matter of demonstration that the various changes in the judiciary body had reference to the *Questiones* and *Judicia Publica*. It is true that some of these *leges* may have contained provisions even as to *Judicia Privata*, for many of the Roman *leges* contained a great variety of legislative provisions, and it is also true that we are very imperfectly acquainted with the provisions of these *Leges Judiciarie*; but that the regulation of the *Judicia Privata* was included in their provisions, in the same form and to the same extent as that of the *Judicia Publica*, is an assertion totally unsupported by evidence, and one which leads to absurd conclusions. Two *Leges Juliae* together with a *Lex Aebutia* put an end to the *Legis Actiones* (Gaius, iv. 30); and a *Lex Julia Judiciaria* limited the time of the *Judicia Legitima* (Gaius, iv. 104): but it does not appear whether these *leges* were passed solely for these objects, or whether their provisions were part of some other *leges*.

Bethmann-Hollweg (*Handbuch des Civilprozesses*, p. 13) observes: "the establishment of a more limited body of judges out of the senatorial body (*album judicum selectorum*), A. V. C. 605, the transfer of this privilege to the equites, by C. Gracchus, the division of it between both classes after long struggles and changes, and even the giving it to the third class, whereby three classes or *decuriae* of judges were established; all these changes, which were so important in a constitutional point of view, referred especially to the criminal proceedings which were politically so important."

Though the general character of the Roman *Judicia*, and the modes of procedure both in civil and criminal matters, are capable of a sufficiently clear exposition, there is much uncertainty as to many details, and the whole subject requires a careful examination by some one who combines with a competent knowledge of the original authorities, an accurate acquaintance with the nature of legal procedure.

Invernizzi, *De Publicis et Criminalibus Judiciis Romanorum*, Libri Tre, Leipzig, 1846; Puchta, *Instit.* i. § 71, ii. § 151, &c.; Gaius, iv.; Dig. 5. tit. 1. *De Judiciis*; Dig. 48. *De Judiciis Publicis*; Inst. iv. tit. 18.) [G. L.]

JUDEx ORDINARIUS. [JUDEx PEDANEUS.]

JUDEx PEDANEUS. The origin and meaning of this term seem to be unknown. It is not used by the classical Roman writers. The judges to whom the praetor or praeses referred a matter in litigation with the usual instructions, were sometimes called Pedanei. (Theophil. iv. 15; Cod. 3. tit. 3.) Subsequently the praeses, who was now sometimes designated *Judex Ordinarius* or *Judex* simply (Cod. Theod. 1. tit. 7), decided most matters without the intervention of a *Judex*; but still he was empowered to appoint a permanent body of judges for the decision of less important matters, and these also were called *Judices Pedanei*, "hoc

est qui negotia humiliora disceptant." (Cod. 3. tit. 3. a. 5.) The proceedings before this new kind of *Judices Pedanei* were the same as before the praeses. Some modern writers are of opinion that these new pedanei judges did not form a permanent court, but only decided on matters which were referred to them by a superior authority. (Cod. 3. tit. 3.) The reason of these judges receiving a distinctive name is conjectured to be this, that the magistrate himself was now generally called *Judex*. The Greek translation of Pedaneus is *χαμαδικαστής* (Theophil. iv. 15. pr.) [G. L.]

JUDEx QUAESTIO'NIS. [JUDEx, p. 648.]

JUDICATI ACTIO. A thing was a *Res judicata*, when the matter in dispute had been determined by a judicial sentence; and the *actio judicati* was a mode which the successful party might adopt, for obtaining a decree of the magistrate by which he could take possession of the property of the person who had lost the cause and had not satisfied the judgment. The plaintiff in the *actio judicati* was also protected in his possession of the defendant's property by a special interdict, and he was empowered to sell it. The party condemned was limited as to his defence. Originally the *judicatus* was obliged to find a *vindex* (*vindicem dare*); but in the time of Gaius it had become the practice for him to give security to the amount of the judgment (*judicatum solvi satis dare*). If the defendant pleaded that there was no *res judicata*, he was mulcted in double the amount of the judgment, if his plea was false.

The *actio judicati*, as a peculiar obligation, is merely the development and completion of the obligation which is founded on the *Litis Contestatio*; but this peculiar obligation is merely another form of execution, and it participates in the general nature of the process of execution. The general nature of the *actio judicati* appears from the following passages. (Dig. 42. tit. 1. a. 4, 5, 6, 7, 41. § 2, 43, 44, 61.) Savigny, *System*, &c. vi. p. 411. (Gaius, iv. 9, 25, 171, 102; Cic. *pro Flacc.* 21; Paulus, S. R. 1. tit. 19.) [G. L.]

JUDI'CIUM PRIVATUM, PU'BLICUM. [JUDEx, p. 648.]

JU'GERUM or JUGUS (the latter form, as a neuter noun of the third declension, is very common in the oblique cases and in the plural), a Roman measure of surface, 240 feet in length and 120 in breadth, containing therefore 28,800 square feet. (Colum. R. R. v. 1. § 6; Quintil. i. 18.) It was the double of the *Actus Quadratus*, and from this circumstance, according to some writers, it derived its name. (Varro, L. L. v. 35, Müller, R. R. i. 10.) [ACTUS.] It seems probable that, as the word was evidently originally the same as *jugus* or *jugum*, a yoke, and as *actus*, in its original use, meant a path wide enough to drive a single beast along, that *jugerum* originally meant a path wide enough for a yoke of oxen, namely, the double of the *actus* in width; and that when *actus*

was used for a square measure of surface, the *jugerum*, by a natural analogy, became the double of the *actus quadratus*; and that this new meaning of it superseded its old use as the double of the single *actus*. The uncial division [As] was applied to the *jugerum*, its smallest part being the *scrupulum* of 10 feet square, = 100 square feet. Thus the *jugerum* contained 288 *scrupula*. (Varro, *R. R. l. c.*) The *jugerum* was the common measure of land among the Romans. Two *jugera* formed an *heredium*, a hundred *heredia* a *centuria*, and four *centurias* a *saltus*. These divisions were derived from the original assignment of landed property, in which two *jugera* were given to each citizen as heritable property. (Varro, *l. c.*; Niebuhr, *Hist. of Rome*, vol. ii. pp. 156, &c., and Appendix ii.) [P. S.]

JUGUM (ζυγός, ζυγόν), signified in general that which joined two things together. It denoted more especially,

1. In architecture any cross beam (Vitruv. x. 8. 19).

2. The transverse beam which united the upright posts of a loom, and to which the warp was attached. (Ovid. *Met.* vi. 55.) [TELA]

3. The transverse rail of a trellis (Varro, *de Re Rust.* i. 8; Col. *de Re Rust.* iv. 17, 20, xii. 15, *Geopon.* v. 29), joining the upright poles (*periticae*, *χάρakes*) for the support of vines or other trees. [CAPISTRUM.] Hence by an obvious resemblance the ridges uniting the tops of mountains were called *juga montium*. (Virg. *Ecl.* v. 76; Flor. ii. 3, 9, 17, iii. 3.)

4. The cross-bar of a lyre. (Hom. *Il.* ix. 187.)

5. A scale-beam, and hence a pair of scales [LIBRA]. The constellation Libra was consequently also called Jugum. (Cic. *Div.* ii. 47.)

6. The transverse seat of a boat. (Aeschyl. *Agam.* 1608; Soph. *Ajax*, 247; Virg. *Aen.* vi. 411.) This gave origin to the term *ζυγίτης*, as applied to a rower. A vessel with many benches or banks for the rowers was called *νής πολυζυγος* or *ἐκατόζυγος*. (Hom. *Il.* iii. 293, xx. 247.)

7. The yoke by which ploughs and carriages were drawn. The yoke was in many cases a straight wooden plank or pole laid upon the horses' necks; but it was commonly bent towards each extremity, so as to be accommodated to the part of the animal which it touched (*curva juga*, Ovid. *Fast.* iv. 216, *Trist.* iv. 6. 2). The following woodcut shows two examples of the yoke, the upper from a MS. of Hesiod's Works and Days, preserved at Florence, the lower from a MS. of Terence belonging to the Vatican library. These may be compared with the still ruder forms of the yoke as now used in Asia Minor, which are introduced in the article ARATRUM. The practice of having the yoke tied to the horns and pressing upon the foreheads of the oxen (*aspice, non cervicis junctis*, Plin. *H. N.* viii. 70), which is now common on the continent of Europe, and especially in France, is strongly condemned by Columella on grounds of economy as well as of humanity. (*De Re Rust.* ii. 2.) He recommends that their heads should be left free, so that they may raise them aloft and thus make a much handsomer appearance. (Cic. *Nat. Deor.* ii. 63; Ovid. *Met.* vii. 211.) All this was effected by the use either of the two collars (*σπίθγια*, Vitruv. x. 3. 8; *μεσάδα*, Hesiod. *Op. et Dies*, 469; Proclus, *ad loc.*; *ζύγλαι*, Hom. *Il.* xix. 406; Schol. *ad Apoll. Rhod.* iii. 232)

shown in the upper figure of the woodcut, or of the excavations (γλύφαι) cut in the yoke, with the bands of leather (*lora*; *vincula*, Tib. ii. 1. 7; *ταυροτέρη βύρσαν* *ἐπ' αὐχένῃ*, Brunck, *Ana.* iii. 44, *λεωδόντα*), which are seen in the lower figure.

This figure also shows the method of tying the yoke to the pole (*τετα, θυμός*) by means of a leathern strap (*ζυγόδεσμον*, Hom. *Il.* v. 730, xxiv. 268—274), which was lashed from the two opposite sides over the junction of the pole and yoke. These two parts were still more firmly connected by means of a pin (*ἐμβολος*, Schol. in *Eurip. Hippol.* 666; *ἑστῶρ*, Hom. *l. c.*; Arrian. *Exped. Alex.* ii. p. 85, ed. Blan; *ἐμβρον*, Hes. *l. c.*), which fitted a circular cavity in the middle of the yoke (*δμφαλός*, Hom. *l. c.*). Homer represents the leathern band as turned over the fastening thrice in each direction. But the fastening was sometimes much more complicated, especially in the case of the celebrated Gordian knot, which tied the yoke of a common cart, and consisted only of flexible twigs or bark, but in which the ends were so concealed by being inserted within the knot, that the only way of detaching the yoke was that which Alexander adopted. (Arrian, *l. c.*; Q. Curt. iii. 2; Schol. in *Eurip. l. c.*)

Besides being variegated with precious materials and with carving, the yoke, especially among the Persians, was decorated with elevated plumes and figures. Of this an example is presented in a bas-relief from Persepolis, preserved in the British Museum. The chariot of Dareius was remarkable for the golden statues of Belus and Ninus, about eighteen inches high, which were fixed to the yoke over the necks of the horses, a spread eagle, also wrought in gold, being placed between them. (Q. Curt. iii. 3.) The passages above cited show that when the carriage was prepared for use, the yoke which had been laid aside, was first fastened to the pole, and the horses were then led under it. Either above them, or at the two ends of the yoke, rings were often fixed, through which the reins passed. These frequently appear in works of ancient art, representing chariots.

Morning and evening are often designated in poetry by the act of putting the yoke on the oxen (Hes. *Op. et Dies*, 581) and taking it off. (Hor. *Carm.* iii. 6. 42; Virg. *Ecl.* ii. 66; Ovid. *Fast.* v. 497; *βοῦλυσιν*, *βουλυρὸς*, Arrian, *l. c.*; Hom. *Il.* xvi. 779; Cic. *ad Att.* xv. 27; *βουλῆσις* *ἔρη* Arat. *Diss.* 387.)

By metonymy *jugum* meant the quantity of land which a yoke of oxen could plough in a day. (Varro, *de Re Rust.* i. 10.) It was used as equivalent to the Latin *par* and the Greek *σῆρος*, as in *aqualorum jugum*. (Plin. *H. N.* x. 4, 5.) By another figure the yoke meant *slavery*, or the condition in which men are compelled against their will, like oxen or horses, to labour for others. (Aeschyl. *Agam.* 512; Florus, ii. 14; Tacit. *Agric.* 31; Hor. *Sat.* ii. 7. 91.) Hence, to express symbolically the subjugation of conquered nations, the Romans made their captives pass under a yoke (*sub jugum mittere*), which, however, in form and for the sake of convenience, was sometimes made, not like the yoke used in drawing carriages or ploughs, but rather like the jugum described under the two first of the preceding heads; for it consisted of a spear supported transversely by two others placed upright. [J. Y.]

JUGUMENTUM. [JANUA, p. 624, b.]

JUNIO'RES. [COMITIA, p. 338.]

JURA IN RE. [DOMINIUM.]

JURE ACTIO, IN. [JURISDICTION.]

JURE CESSIO, IN, was a mode of transferring ownership by means of a fictitious suit, and so far resembled the forms of conveyance by fine and by common recovery, which, till lately, were in use in England. The *In Jure Cessio* was applicable to things Mancipi and Nec Mancipi, and also to Res Incorporales, which, from their nature, were incapable of tradition. The parties to this transaction were the owner (*dominus qui cedit*), the person to whom it was intended to transfer the ownership (*vindicans, cui ceditur*), and the magistratus, qui addicit. The person to whom the ownership was to be transferred, claimed the thing as his own in presence of the magistratus and the real owner; the magistratus called upon the owner for his defence, and on his declaring that he had come to make, or remaining silent, the magistratus decreed (*addixit*) the thing to the claimant. This proceeding was a legis actio.

An hereditas could be transferred by this process [HÆRES, p. 601, b.]; and the res corporales, which belonged to the hereditas, passed in this way just as if they had severally been transferred by the *In Jure Cessio*.

The *In Jure Cessio* was an old Roman institution, and there were provisions respecting it in the Twelve Tables. (*Frag. Vat.* a. 50.)

[Gaius, ii. 24; Ulp. *Frag.* tit. 19. a. 9.] [G. L.]

JURGIIUM is apparently a contracted form of Juridicium. The word had a special legal meaning, as appears from a passage of Cicero, *De Republica*, quoted by Nonius: "Si jurgant, inquit, benevolentum concertatio, non his inimicorum jurgium dicitur. Et in sequenti: Jurgare igitur lex putat inter se vicinos, non litigare." Rudorff states that the small disputes which arose between owners of contiguous lands within the "quinque pedes" (Cic. *de Leg.* i. 18) were comprehended under the term Jurgium. He refers for a like use of the word to Horace (*Ep.* ii. l. 38, and ii. 2. 170),

Sed vocat usque suum, qua populus adita certis
Limitibus vicina refugit jurgia.

(Rudorff, *Zeitschrift*, &c. vol. x. p. 346, *Ueber die Gränzscheidungsklage*.)

Compare also Cicero, *de Legibus*, ii. 8. "Feriis jurgia amovento;" and Facciolati, *Lexicon*, s. v. *Jurgium*. [G. L.]

JURIDICI. Under Hadrian, Italy was divided into five districts, one of which contained Rome, and continued in the same relation to the Roman praetor that it had been before the division of Hadrian. Each of the other four districts received a magistratus with the title of consularis, who had the higher jurisdiction, which was taken from the municipal magistrates. We may also infer that the court of the consularis was a court of appeal from the inferior courts in the matters which were left to their jurisdiction. (Spart. *Hadrian.* 22; Capitol. *Pius*, 2.) This arrangement of Hadrian was an advantage to the Italians, for before this time the inhabitants had to go to the Roman praetor's court for all matters which were not within the jurisdiction of the duumviri; for we must assume that the consulares resided in their districts. M. Aurelius placed functionaries with the title of Juridici in the place of the Consulares (Puchta, *Instit.* i. § 92; and note (m) on the passage of Appian, *Bell. Civ.* i. 38). [G. L.]

JURIDICI CONVENTUS [PROVINCIA.]

JURISCONSULTI or JURECONSULTI.

The origin among the Romans of a body of men, who were expounders of the law, may be referred to the separation of the Jus Civile from the Jus Pontificium. [JUS CIVILE FLAVIANUM.] Such a body certainly existed before the time of Cicero, and the persons who professed to expound the law were called by the various names of jurisperiti, jurisconsulti, or consulti simply. They were also designated by other names, as jurisprudentes, prudentiores, peritiores, and juris auctores. The word which Plutarch uses is *νομοδιδασκῆς* (*Th. Græc.* 9), and *νομικός* (*Sulla*, 36.) Cicero (*Top.* 5) enumerates the jurisperitorum auctoritas among the component parts of the Jus Civile. The definition of a jurisconsultus, as given by Cicero (*De Or.* i. 48), is, "a person who has such a knowledge of the laws (*leges*) and customs (*consuetudo*) which prevail in a state as to be able to advise (*respondendum*), act (*agendum*), and to secure a person in his dealings (*covendum*):" Sextus Aelius Catus [JUS AELIANUM], M. Manilius, and P. Mucius are examples." In the oration *Pro Murena*, Cicero uses "scribere" in the place of "agere." The business of the early jurisconsulti consisted both in advising and acting on behalf of their clients (*consultores*) gratuitously. They gave their advice or answers (*responsa*) either in public places which they attended at certain times, or at their own houses (Cic. *de Or.* iii. 38); and not only on matters of law, but on any thing else that might be referred to them. The words "scribere" and "cavere" referred to their employment in drawing up formal instruments, such as contracts or wills, &c. At a later period, many of these functions were performed by persons who were paid by a fee, and thus there arose a body of practitioners distinct from those who gave responsa and who were writers and teachers. The earlier jurisconsulti cannot be said to be the same kind of persons as those of a later period. Law had not then assumed a scientific form. The first whom Pomponius mentions was Papirius, who is said to have made a collection of the *Leges Regiæ*. Tiberius Coruncanus, a plebeian, who was consul a. c. 281, and also the first plebeian Pontifex Maximus, is mentioned as the first who publicly professed (*publico professus est*), and he was distinguished both for his knowledge of the law and his eloquence. He left

no writings. It must not, however, be assumed that Coruncanus was a professor of law in the modern sense of the term; nor any other of the jurists after him who are enumerated by Pomponius. Before the time of Cicero the study of the law had become a distinct branch from the study of oratory, and a man might raise himself to eminence in the state by his reputation as a lawyer, as well as by his oratorical power or military skill. There were many distinguished jurists in the last two centuries of the republican period, among whom are M'. Manilius; P. Mucius Scaevola, Pontifex Maximus (a. c. 131); Q. Mucius Scaevola, the augur; and Q. Mucius Scaevola, the son of Publius, who was consul a. c. 95, and afterwards Pontifex Maximus, and one of the masters of Cicero (*jurisperitorum eloquentissimus, eloquentium jurisperitissimus*, Cic. *de Or.* i. 39, *Brutus*, c. 89). This Scaevola the Pontifex, was considered to have been the first who gave the Jus Civile a systematic form, by a treatise in eighteen books. (Dig. 1. tit. 2. a. 2. § 41.) There are four excerpts in the Digest from a work of his in one book, on Definitions. Servius Sulpicius Rufus, the friend and contemporary of Cicero, and consul a. c. 51 (*Brut.* 7, 40), was as great an orator as the Pontifex Scaevola, and more distinguished as a jurist. Many persons, both his predecessors and contemporaries, had a good practical knowledge of the law, but he was the first who handled it in a scientific manner, and as he had both numerous hearers and was a voluminous writer, we may view him as the founder of that methodical treatment of the matter of law which characterised the subsequent Roman jurists (Cic. *Brut.* 41; Dig. 1. tit. 2. a. 2. § 43), and in which they have been seldom surpassed.

The jurists of the imperial times are distinguished from those of the republican period by two circumstances, the Jus Respondendi, and the rise of two Schools of Law.

It is said that Augustus determined that the Jurisconsulti should give their responsa under his sanction (*ex auctoritate ejus responderent*). The jurists who had not received this mark of imperial favour, were not excluded from giving opinions; but the opinions of such jurists would have little weight in comparison with those of the privileged class. Those who obtained the Jus Respondendi from the Princes, would from this circumstance alone have a greater authority, for formally their Responsa were founded on the authority of the Princes. These responsa were given sealed (*signata*), apparently to prevent falsification. The matter proposed for the opinion of the Jurisconsulti was sometimes stated in the Responsum, either fully or briefly; and the Responsum itself was sometimes short, sometimes long; sometimes it contained the grounds of the opinion, and sometimes it did not. (Brisson. *de Form.* iii. c. 85—87.)

The responsa of a privileged jurisconsultus would be an authority for the decision of a judex; if there were conflicting responsa given, the judex would of course decide as he best could. But, besides the direct responsa, which were given in particular cases, there was the authority of the writings of the privileged jurists. As before the time of Augustus, public opinion only gave authority to a jurist's responsa and writings, so from the time of Augustus this authority was given by the Jus Respondendi to the responsa and writings of

a jurist. This privilege gave to a jurist the condition of a Juris auctor, and to his writings legal authority, neither of which belonged to a jurist who had not received the privilege. Accordingly, the writings of such privileged jurists received the same authority as their responsa; and if the opinions of the Juris auctores, as expressed in their writings, did not agree, the Judex was left to decide as he best could. This explanation of the nature of the Jus Respondendi, which is by Puchta (Instit. i. § 117), is applied by him to the elucidation of the passage in Gaius (i. 7. Responsa prudentium sunt sententiae et opiniones, &c.). He supposes that this interpretation of the passage is strictly conformable to what has been said of the authority of the writings of the jurists. If we leave out of consideration the technical expression Responsa, with which the passage begins, there is no difficulty at all in applying the words of Gaius to the writings of the jurists; and, in fact, it is most consistent to take responsa in this passage in a wider sense, and as equivalent to auctoritas. The term Responsa originated at a time when responsa, in the simple sense of the term, were the only form in which the auctoritas of a jurist was manifested; whereas in the time of Gaius, the writings of the jurists had become a very important legal authority, and consequently they must be included by Gaius in the term Responsa Prudentium, for otherwise he would not have mentioned at all the Auctoritas Prudentium, to which he so often refers in various parts of his work. Puchta's explanation of this passage, which bears the stamp of great probability, may be compared with that of Savigny (*System*, &c. vol. i. p. 155).

In the time of Augustus there arose two schools (*scholae*) of Jurists, the heads of which were respectively Ateius Capito and Antistius Labeo. The followers of Labeo, whom we know with certainty to have been such, were Nerva, Proculus, Nerva the son, Pegasus, Celsus, Celsus the son, and Neratius Priscus. The followers of Capito were Massurius Sabinus, C. Cassius Longinus, Coelius Sabinus, Priscus Javolenus, Aburnus Valens Tuscianus, Gaius, and probably Pomponius. But the schools did not take their names from Labeo and Capito. The followers of Labeo were named Proculiani, from Proculus. The followers of Capito derived their name of Sabiniani from Massurius Sabinus, who lived under Tiberius, and as late as the reign of Nero: they were sometimes also called Cassiani, from C. Cassius Longinus. It is not easy to state with precision the differences which characterised the two schools. Whatever may have been the origin of these differences, which may perhaps be partly referred to the personal character of Capito and Labeo, the schools were subsequently distinguished by a difference in their manner of handling the matter of the law. The school of Capito adhered more closely to what was established, and to the letter of what was written. Labeo was a man of greater acquirements than Capito, and his school looked more to the internal meaning than to the external form, and thus, while apparently deviating from the letter, they approached nearer to true results; though the strict logic of this school might sometimes produce a result less adapted to general convenience than the conclusions of the Sabiniani, which were based on the prevailing notions of equity. Much has been written on the characteristics of the two schools,

but to very little purpose. The matter is briefly treated by Puchta. (*Instit.* i. § 98.)

The writings of the juriconsulti consisted of commentarii on the Twelve Tables, on the Edict, on particular leges, more especially on some of the Julian Leges, and on other matters. The later jurists also commented on the writings of the earlier jurists. They also wrote elementary treatises (*elementa, commentarii*), such as the *Institutiones* of Gaius, which is the earliest work of the kind that we know to have been written; books called *Regulae*, and *Definitiones*, which probably were collections of maxims and legal principles; collections of cases and answers, under the various names of *responsa*, *epistolae*, *sententiae*, and *opiniones*; systems of law; and various works of a miscellaneous character, with a great variety of names, such as *disputationes*, *quaestiones*, *enchiridia*, *res quotidianae*, and various other titles.

The juridical writers were very numerous: they formed a series, beginning with Q. Mucius Scaevola, the Pontifex, and ending about the time of Alexander Severus, with Modestinus who was a pupil of Ulpian. With the exception of the fragments preserved in the Digest, this great mass of literature is nearly lost. [ΠΑΝΔΕΚΤΑ.]

The mode of teaching law at Rome was of a practical nature. Professors of law in the modern sense did not exist till the Imperial period. Ulpian calls them *Juris civilis professores* (Dig. 50. tit. 13. s. 1. § 5); but there is no indication that he considered himself as one of the class; nor can we consider that such men as Julian, Papinian or Paulus ever followed the occupation of teacher of law. The instruction which was given in the republican period consisted in the *Juriconsulti* allowing young men to be present as *auditores*, when they delivered their legal opinions, and to see how they conducted their business. (Cic. *Brut.* 89, *Laelius*, l.) Previous, however, to attending to this practical instruction, young men were taught the elements of law, which was expressed by the term *institutus*, whence probably the name *Institutiones* was given to elementary treatises like those of Gaius. Accordingly, *institutus* and *audire*, expressed the two parts of a legal education; and this mode of instruction continued probably till near the time of Constantine. In the Imperial period, probably young men devoted themselves for a still longer period to attendance on those jurists, who had the *Jus Respondendi*. These young men are the *juris studiosi*, who are mentioned by Ulpian and others. Thus Ulpian calls Modestinus, "*studiosus meus*." As already observed, the class called *Juris Civilis Professores* arose under the empire, and they received from those who attended them an *Honorarium*, or fee. (Ulpian, Dig. 50. tit. 13. s. 1. § 5.)

(Pomponius, *De Originis Juris*, Dig. 1. tit. 2. s. 2; Zimmern, *Geschichte des Römischen Privatrechts*.) [G. L.]

JURISDICTION. The "*officium*" of him "*qui jus dicit*" is defined as follows (Dig. 2. tit. 1. *De Jurisdictione*): — "*Bonorum possessionem dare potest, et in possessionem mittere, pupillis non habentibus tutores constituere, judices litigantibus dare.*" This is the general signification of the word *Jurisdiction*, which expresses the whole "*officium jus dicentis*." The functions which are included in the "*officium jus dicentis*" belong either to the *Jurisdiction* (in its special sense), or to the

Imperium Mixtum, or they are those which are exercised by virtue of some *lex*, *senatusconsultum*, or authority delegated by the princeps, as the "*Tutoris datio*." (Dig. 26. tit. 1. s. 6.) The *Jurisdiction* of those magistratus who had no *Imperium*, was limited in consequence of not having the *Imperium*, and therefore was not *Jurisdiction* in the full meaning of that term. [*IMPERIUM; MAGISTRATUS.*] Inasmuch as *Jurisdiction* in its special sense, and the *Imperium Mixtum*, are component parts of *Jurisdiction* in its wider sense, *Imperium* may be said to be contained in or incident to *Jurisdiction* (*imperium quod jurisdictioni cohaeret*, Dig. 1. tit. 21. s. 1). Sometimes *Imperium* is viewed as the term which designates the full power of the magistratus; and when so viewed, it may be considered as equivalent to *Jurisdiction*, in its wider sense, or as comprehending *Jurisdiction* in its narrowest sense. Thus *Imperium* may be considered as containing or as contained in *Jurisdiction*, according as we give to each term respectively its wider or its narrower meaning. (Puchta, *Ueber den Inhalt der Lex Rubria*, *Zeitschrift*, vol. x. p. 195.) The *Jurisdiction* was either *Voluntaria* or *Contentiosa*. (Dig. 1. tit. 1. 6. s. 2.) The *Jurisdiction Voluntaria* rendered valid certain acts done before the magistratus, for which certain forms were required, as adoption and manumission. Thus adoption, properly so called, could take place before the praeses of a provincia (Gaius, i. 100); but in Rome it took place before the praetor, and was said to be effected "*imperio magistratus*." The *Jurisdiction Contentiosa* had reference to legal proceedings before a magistratus, which were said to be *in jure* as opposed to the proceedings before a *judex*, which were said to be *in judicio*. The parties were said "*Lege agere*:" the magistratus was said *jus dicere* or *reddere*. Accordingly "*magistratus*" and "*qui Romae jus dicit*" are equivalent. (Cic. *ad Fam.* xiii. 14.) The functions included in *Jurisdiction* in this, its special sense, were the *addictio* in the *legis actiones*, the giving of the formula in proceedings conducted according to the newer process, and the appointment of a *judex*. The appointing of a *judex*, "*judicis datio*," was for the purpose of inquiring into the facts in dispute between the parties. The words of the formula are "*Judex esto*," &c. (Gaius, iv. 47); and the terms of the edict in which the praetor declares that he will give a *judex*, that is, will recognise a right of action, are "*Judicium dabo*." (Cic. *pro Flacc.* 35.) *Addictio* belongs to that part of jurisdiction by which the magistratus himself makes a decree or gives a judgment: thus in the case of the *In Jure Cessio*, he is said "*rem addicere*." (Gaius, ii. 24.) *Addicere* is to adjudge a thing or the possession of a thing to one of the litigant parties. In the case of *furtum manifestum*, inasmuch as the facts would be certain, there was an *addictio*. (Gaius, iv. 189.)

Other uses of the word *addictio* are collected in Facciolati.

It is with reference to the three terms, *Do*, *Dico*, *Addico*, that Varro (*De Ling. Lat.* vi. 80) remarks that the praetor must use one of these words "*cum lege quid peragitur*." Accordingly, those days were called *Nefasti* on which no legal business could be done, because the words of legal force could not be used. (Compare Ovid. *Fast.* i. 47; Macrobius, *Satur.* i. 16.) [G. L.]

JUS. "All people," says Gaius (i. 1), "who are governed by *Leges* and *Mores*, use partly their

own law (*jus*), partly the law (*jus*) that is common to all mankind; for the law (*jus*) which a state establishes for itself is peculiar to such state, and is called *Jus Civile*, as the peculiar law (*jus*) of that state. But the law (*jus*) which natural reason (*naturalis ratio*) has established among all mankind is equally observed by all people, and is called *Jus Gentium*, as being that law (*jus*) which all nations follow. The Roman *populus* therefore follows partly its own peculiar law (*suum proprium jus*), partly the common law (*commune jus*) of all mankind."

According to this view, all Law (*jus*) is distributed into two parts, *Jus Gentium* and *Jus Civile*, and the whole body of law peculiar to any state is its *Jus Civile*. (Cic. *de Orat.* i. 44.) The Roman law, therefore, which is peculiar to the Roman state, is its *Jus Civile*, sometimes called *Jus Civile Romanorum*, but more frequently designated by the term *Jus Civile* only, by which is meant the *Jus Civile* of the Romans.

The *Jus Gentium* is here viewed by Gaius as springing out of the *Naturalis Ratio* common to all mankind, which is still more clearly expressed in another passage (i. 189) where he uses the expression "omnium civitatum *jus*" as equivalent to the *Jus Gentium*, and as founded on the *Naturalis Ratio*. In other passages he founds the acquisition of property, which was not regulated by Roman law, on the *naturalis ratio* and on the *naturale jus* indifferently, thus making *naturalis ratio* and *naturale jus* equivalent (ii. 65, 66, 69, 73, 79). He founds *Cognatio* on *Naturalis Ratio*, as being common to all mankind, and *Agnatio* on *Civilis Ratio*, as being purely a Roman institution (i. 158). In two passages in the Digest (l. tit. 8) he calls same thing *Naturale Jus* in a. 2, and *Jus Gentium* in a. 3, 5. (Compare Gaius, iii. 132.) The *Naturale Jus* and the *Jus Gentium* are therefore identical. (Savigny, *System*, &c., vol. i. p. 113.) Cicero (*de Off.* iii. 5) opposes *Natura* to *Leges*, where he explains *Natura* by the term *Jus Gentium*, and makes *Leges* equivalent to *Jus Civile*. In the *Partitiones* (c. 37) he also divides *Jus* into *Natura* and *Lex*.

There is a threefold division of *Jus* made by Ulpian and others, which is as follows: *Jus Civile*; *Jus Gentium*, or that which is common to all mankind; and *Jus Naturale* which is common to man and beasts. The foundation of this division seems to have been a theory of the progress of mankind from what is commonly termed a state of nature, first to a state of society, and then to a condition of independent states. This division had, however, no practical application, and must be viewed merely as a curious theory. Absurd as it appears at first sight, this theory is capable of a reasonable explanation, and Savigny shows that it is not meant to say that beasts have law, but only the matter of law; that is, some of those natural relations on which legal relations are founded, exist among beasts as well as men. Such natural relations are those by which the species is propagated. (See also Puchta's remarks, *Instit.* i. § 9, note a.) In the *Institutes* the two divisions are confounded (i. tit. 2. *De Jure Naturali, Gentium et Civili*); for the explanation of *Jus Naturale* is first taken from the threefold division of Ulpian, and then the *Jus Gentium* and *Civile* are explained according to the twofold division of Gaius already quoted, so that we have in the same section the *Jus Na-*

turale explained in the sense of Ulpian, and the *Jus Gentium* explained in the sense of Gaius, as derived from the *Naturalis Ratio*. Further, in the second book (tit. l. a. 11) the *Jus Naturale* is explained to be the same as *Jus Gentium*, and the *Jus Naturale* is said to be coeval with the human race. Notwithstanding this confusion in the *Institutes*, there is no doubt that the two-fold division of Gaius was that which prevailed in Roman jurisprudence. (Savigny, *System*, &c. vol. i. p. 413.) This two-fold division appears clearly in Cicero, who says that the old Romans separated the *Jus Civile* from the *Jus Gentium*; and he adds that the *Jus Civile* (of any state) is not therefore *Jus Gentium*, but that what is *Jus Gentium* ought to be *Jus Civile* (*de Off.* iii. 17).

Those rules which regulated the declaration of war and the conduct of war are comprehended under the term *Jus Feciale*. Some modern writers give to the term a wider signification; and others limit it more closely. Osenbrueggen (*De Jure Belli et Pacis Romanorum*, p. 20. Lips. 1836) defines the *Jus Feciale* to be that which prescribed the formulæ, solemnities and ceremonial observed in the declaring, carrying on, and terminating a war, and in the matter of treaties. The Romans often used the expression *Jus Gentium* in a sense which nearly corresponds to the modern phrase Law of Nations, or, as some call it, International Law. (Livy, ii. 14, vi. 1, quod legatus in Gallos, ad quos missus erat, contra *jus gentium* pugnasset; xxviii. 48; Sallust. *Jug.* 22.) The term *Jus Belli* (Cic. *de Leg.* ii. 14) is used in the same sense.

The origin of the opposition between *Jus Gentium* and *Jus Civile* was not a speculative notion, nor did it originate with the Jurists, though they gave it a theoretical form. The *Jus Gentium* in its origin was the general law of Peregrini, according to which the Romans determined the legal relations among Peregrini, a class of persons to whom the *Jus Civile* was not applicable. Consequently, the foundation of the *Jus* was foreign law, modified by the Romans according to their own notions, so as to be capable of general application. This is one side of the original *Jus Gentium*. The other is that Law which owed its origin to the more enlarged views of the nature of law among the Roman people, and was the development of the national character. The two notions, however, are closely connected, for the law of Peregrini was that which first presented the Romans with the notion of the *Jus Gentium*, and it was formed into a body of Law, independent of the *Jus Civile*, and not interfering with it. But the general Law of Peregrini also obtained among the Romans, as Law, and not considered merely with reference to their intercourse with Peregrini. "The Law of Peregrini and Roman Law, disencumbered of all peculiarity of individual nations, are the two sides of the same notion, which the Romans express by the term *Jus Gentium*." (Puchta, *Instit.* i. § 84.) The *Jus Gentium* was chiefly introduced by the *Edictum*,—as the Law of Peregrini by the *Edict* of the *Praetor Peregrinus* and the *Edicta Provincialia*, and as Law for the Romans by the *Edictum* of the *Praetor Urbanus*.

The *Jus Civile* of the Romans is divisible into two parts, *Jus Civile* in the narrower sense, and *Jus Pontificium* or *Sacrum*, or the law of religion.

This opposition is sometimes expressed by the words *Jus* and *Fas* (*Fas et jura sinunt*, Virg. *Georg.* i. 269); and the law of things not pertaining to religion and of things pertaining to it, are also respectively opposed to one another by the terms *Res Juris Humani et Divini*. (Instit. 2. tit. 1.) [DOMINIUM.] Thus the Pontifices Maximi, P. Crassus, and T. Cornucanius, are said to have given *Responsa de omnibus divinis et humanis rebus*. (Cic. *de Orat.* iii. 33.)

The Law of Religion, or the *Jus Pontificium*, was under the control of the Pontifices, who in fact originally had the control of the whole mass of the law, and it was only after the separation of the *Jus Civile* in its wider sense into the two parts of the *Jus Civile*, in its narrower sense, and the *Jus Pontificium*, that each part had its proper and peculiar limits. But after this separation was fully made the *Auctoritas Pontificum* had the same operation and effect with respect to the Law of Religion that the *Auctoritas Prudentium* had on the *Jus Civile*. (Cic. *de Leg.* ii. 19, 20.) Still even after the separation there was a mutual relation between these two branches of law; for instance, an *Adrogatio* was not valid by the *Jus Civile* unless it was valid by the *Jus Pontificum*. (Cic. *de Orat.* iii. 33, *Brut.* 42; *ADOPTIO*.) Again, *Jus Pontificum*, in its wider sense, as the law of religion, had its subdivisions, as into *Jus Augurum*, *Pontificum*, &c. (Cic. *de Senect.* 11.)

"Law," says Gaius (i. 2), meaning the Roman civil law (*jura*), "is composed of *leges*, *plebiscita*, *senatus-consulta*, *constitutiones* *Principum*, the *Edicts* of those who have the *Jus Edicendi*, and the *Responsa Prudentium*." This is a division of law merely according to its formal origin. The divisions enumerated by Cicero (*Top.* 5) are "*leges* (which include *plebiscita*), *senatus-consulta*, *res judicatae*, *jurisperitorum auctoritas*, *edicta magistratuum*, *mos*, *aequitas*." A consideration of the different epochs at which these writers lived, will account for part of the discrepancy; but the addition of *Mos* in Cicero's enumeration is important.

Jus Civile is opposed to the *Jus Praetorium* or *Honorarium* [EDICTUM]; and the opposition consists in the opposition of the means or form by which the two severally obtained an existence; whereas the opposition of *Jus Civile* and *Gentium* is founded on the internal character of the two kinds, and the extent of their application.

Lex and *Mos* are sometimes opposed to one another, as parts component of the *Jus Civile*, but different in their origin. Horace (*Carm.* iv. 5) speaks of "*Mos et Lex*:" Juvenal (viii. 50) opposes "*Juris nodos et legum aenigmata*:" *Jus Civile* is opposed to *Leges* (Cic. *de Orat.* i. 43), to *Lex* (*de Off.* iii. 17), and to *Senatus-consultum* (Gaius, ii. 197). As then opposed to *Leges*, *Jus Civile* appears to be equivalent to *Mos*. In fact the opposition between *Lex* and *Mos* follows the analogy of that between *jus scriptum* and *non scriptum*. "When there are no *scriptae leges* we must follow that which has been introduced by *mores* and *consuetudo*. — Immemorial (*inveterata*) *consuetudo* is properly observed as a *lex* (*pro lege*), and this is the *jus* which is said to be '*moribus constitutum*.'" (Julian, Dig. 1. tit. 3. s. 32.) Thus immemorial usage was the foundation of the "*jus Moribus constitutum*." (See the article *INFAMIA* as to the origin of *Infamia*.) The ultimate origin of custom is the common consciousness of the people among

whom it exists: the evidence of it is usage, repeated and continued use: it is law when recognized by a competent authority. There is a passage of Ulpian (Dig. 1. tit. 3. s. 34) in which he distinctly speaks of confirming a *consuetudo* in a *judicium*, which can have no other meaning than that its force as law depended on a decision in a *judicium*. And the meaning is clear, whether we read *contradicto* or *contradicta* in the passage just referred to.

The Roman writers indeed frequently refer to a large part of their law as founded on *Mores* or on the *Mos Majorum* and not on *Leges*. (Quintil. *Instit. Orat.* v. 10.) Thus Ulpian (Dig. 1. tit. 6. s. 8) says that the *Jus Patriae Potestatis* is *moribus receptum*. But *mores* contained matters relating to religion as well as to the ordinary affairs of life; and therefore we may also view *Mos* and *Lex*, when opposed, as component parts of the *Jus Civile* in its wider sense, but not as making up the whole of it. *Mores* in the sense of immorality, that which positive morality disapproves of, must not be confounded with *jus* founded on *mores*: the former is *mali mores* in respect of which there was often a *jus moribus constitutum*. Thus in the matter of the *dos* there was a *retentio* in respect of the *mores gravesiores* or *maiores*, which was adultery. (Ulp. *Frag.* tit. 6.)

The terms *Jus Scriptum* and *Non Scriptum*, as explained in the Institutes (i. tit. 2), comprehended the whole of the *Jus Civile*; for it was all either *Scriptum* or *Non Scriptum*, whatever other divisions there might be. (Ulp. Dig. 1. tit. 1. s. 6.) *Jus Scriptum* comprehended every thing except that "*quod usus approbavit*." This division of *Jus Scriptum* and *Non Scriptum* does not appear in Gaius. It was borrowed from the Greek writers, and seems to have little or no practical application among the Romans. The sense in which Written and Unwritten law has been used by English writers is hardly the same as the Roman sense. Hale says (*Hist. of the Common Law*, p. 2), "Those laws that I call *leges scriptae* (he should have used the expression *jus scriptum*, though Cicero uses the expression *Lex Scripta*) are such as are originally reduced into writing before they are enacted." Hale applies his definition only to statutes or acts of parliament; but it is equally applicable to any rules which are promulgated in writing and have the force of law or of a law, by virtue of authority delegated to those who make such rules.

Jus was also divided into *Publicum* and *Privatum* by the Roman jurists. (Dig. 1. tit. 1. s. 1.) *Publicum Jus* is defined to be that which relates to the *Status Rei Romanae*, or to the Romans as a State; *Privatum Jus* is defined to be that which relates "*ad singulorum utilitatem*." The *Publicum Jus* is further said by Ulpian (Dig. 1. tit. 1. s. 1) "*in sacris, in sacerdotibus, in magistratibus consistere*." According to this view, it comprehends the Law of Religion and all the rest of the *Jus Civile*, which is not *Privatum*; and the matter which is comprehended in *Jus Privatum* is that which is contained in the Institutes of Gaius and Justinian. The elementary treatise of Gaius does not mention this division, and it is limited to the *Jus Privatum*. Justinian, in his Institutes, after making this division of *Jus* into *Publicum* and *Privatum*, says, "we must therefore treat of *Jus Privatum*," from which it appears that he did not contemplate treating of *Jus Publicum*, though the

last title of the fourth book is *De Judiciis Publicis*. The Roman term *Jus Publicum* also comprehended Criminal Law and Criminal Procedure, and Procedure in Civil Actions. It is said by Papinian (Dig. 28. tit. 1. a. 3) that the *Testamentifacio* belonged to *Publicum Jus*. Now the *Testamentifacio* was included in *Commercium*, and only Roman citizens and Latini had *Commercium*. This is an instance of the application of the term *Publicum Jus*. All *Jus* is in a sense *Publicum*, and all *Jus* is in a sense *Privatum*; but the Roman *Publicum Jus* directly concerned the constitution of the state and the functions of government and administration; the *Privatum Jus* directly concerned the interests of individuals. The opposition between these two things is clear, and as well marked as the nature of such things will allow. If the terms be found fault with, the meaning of the terms admits of a defence.

The expression *Populus Romanus Quirites* has given rise to much discussion. Becker (*Handb. der Römischen Alterthümer*, vol. ii. p. 24) concludes that *Romani* and *Quirites* are so far opposed that *Romani* is the historical and political name viewed with respect to foreign states, and *Quirites* the political name as viewed with reference to Rome. Accordingly *Quirites* is equivalent to *Cives*. (Sueton. *Caes.* 70; Plut. *Caes.* 51; Liv. xlv. 37.) It does not seem easy to explain the difference between *Civitas Romana* and the *Jus Quiritium*, yet so much seems clear that *Civitas Romana* was a term large enough to comprehend all who were *Cives* in any sense. But the *Jus Quiritium* in its later sense seems to be the pure *Privatum Jus* as opposed to the *Publicum Jus*, and thus it differs from *Jus Civile* viewed as the whole Roman law, or as opposed to the law of other people. He who claimed a thing exclusively as his own claimed it to be his *ex Jure Quiritium*. (Gaius, ii. 40. &c.) Accordingly we find the expressions *Dominus* and *Dominium Ex Jure Quiritium*, as contrasted with *In bonis* [*DOMINIUM*]. Such part of the Roman law, in its widest sense, as related to buying, selling, letting, hiring, and such obligations as were not founded on the *Jus Civile*, were considered to belong to the *Jus Gentium* (Dig. 1. tit. 1. a. 5), that is, the *Jus Naturale*. (Gaius, ii. 65.) Accordingly when ownership could be acquired by tradition, occupation, or in any other way, not specially provided for by the *Jus Civile*, such ownership was acquired by the *Jus Gentium*. When the *Jus Civile* prescribed certain forms by which ownership was to be transferred, and such forms were not observed, there was no ownership *Jure Civili* or *Jure Quiritium*, but there was that interest which was called *In bonis*. It is not said by Gaius (ii. 40, &c.) that the *In bonis* arose by virtue of the *Jus Gentium*, and it may perhaps be concluded that he did not so view it; for in another passage (ii. 65), he speaks of alienation or change of ownership being effected either by the *Jus Naturale*, as in the case of tradition, or by the *Jus Civile*, as in the case of mancipatio, in jure cessio, and usucapion. In this passage he is speaking of alienation, which is completely effected by tradition, so that there is a legal change of ownership recognized by Roman law; not by Roman law, specially as such, but by Roman law as adopting or derived from the *Jus Gentium*. In the other case (ii. 40) there is no ownership either as recognized by Roman law as such, or by Roman law

as adopting the *Jus Gentium*: the *In bonis* is merely recognized by the Praetorian Law, to which division it therefore belongs. So far as the equity of the praetor may be said to be based on the *Jus Gentium*, so far may the *In bonis* be said to be founded on it also. Properly speaking, the *Jus Gentium* was only received as Roman law, when it did not contradict the *Jus Civile*; that is, it could only have its full effect as the *Jus Gentium* when it was not contradicted or limited by the *Jus Civile*. When it was so contradicted or limited, the praetor could only give it a partial effect, but in so doing, it is obvious that he was endeavouring to nullify the *Jus Civile* and so to make the *Jus Gentium* as extensive in its operation, as it would have been but for the limitation of the *Jus Civile*. The bounds that were placed to this power of the praetor were not very definite. Still he generally fashioned his *Jus Praetorium* after the analogy of the *Jus Civile*, and though he made it of no effect as against his *Jus Praetorium*, he maintained its form and left it to its full operation, except so far as he necessarily limited its operation by his own *Jus Praetorium*.

Jus used absolutely is defined to be "*ars boni et aequi*" (Dig. 1. tit. 1. a. 1), which is an absurd definition. What it really is, may be collected from the above enumeration of its parts or divisions. Its general signification is Law, and in this sense it is opposed to *Lex* or a Law. *Lex*, however, as already shown, is sometimes used generally for Law, as in the instance from Cicero where it is opposed to *Natura*. *Lex* therefore in this general sense comprehends *leges* and all the other parts of the *Jus Civile*. In its special sense of a Law, it is included in *Jus*. *Jus* is also used in the plural number (*jura*) apparently in the sense of the component parts of *Jus*, as in Gaius (i. 2), where he says "*Constant autem jura ex legibus*," &c.; and in another passage (i. 158), where he says with reference to the *Agnationis Jus* or Law of Agnation, and the *Cognationis Jus* or Law of Cognation, "*civilis ratio civilia quidem jura corrumpere potest*." Indeed in this passage *Agnationis Jus* and *Cognationis Jus* are two of the *Jura* or parts of *Jus*, which with other *Jura* make up the whole of *Jus*. Again (Gaius, ii. 62), that provision of the *Lex Julia de Adulteriiis*, which forbade the alienation of the *Fundus Dotalis*, is referred to thus—"quod quidem jura," "which rule of law" or "which law"—it being a law comprehended in another law, which contained this and many other provisions. Thus though *Lex* in its strict sense of a Law is different from *Jus* in its large sense, and though *Jus*, in its narrower sense, is perhaps never used for a *Lex*, still *Jus*, in this its narrower sense, is used to express a rule of law. Thus Gaius (i. 47) speaks of the *jura* or legal provisions comprised in the *Lex Aelia Sentia*; and of *jura* as based on the *Responsa Prudentium* ("*responsa prudentium sunt sententiae et opiniones eorum quibus permissum est jura condere*," Gaius, i. 7; *JURISCONSULTI*).

Jus has also the meaning of a faculty or legal right. Thus Gaius says, "it is an *actio in rem*, when we claim a corporeal thing as our own, or claim some *jus* as our own, such as a *jus utendi, eundi, agendi*." The parental power is called a "*Jus proprium civium Romanorum*." The meaning of *law* generally, and of a *legal right*, are applied to *Jus* by Cicero in the same sentence: "*I, a man ignorant of law (imperitus juris), seek to*

maintain my right (*meum jus*) by the Interdict." (*Pro Caecina*, c. 11.) As the several rules of law which are often comprised in one lex, or which make up the whole body of Jus (Law), may be called jura with reference to their object, so the various legal rights which are severally called jus with reference to some particular subject, may be collectively called jura. Thus we find the phrase Jura Parentis to express all the rights that flow from the fact of legal paternity.

The phrase Jura Prædiorum, which is used by the Roman Jurists, is somewhat peculiar, and open to objection. [SERVITUS.]

The potestas which a Roman father had over his children and a husband over his wife in manu, being a jus or legal right, there hence arose the distinction of persons into those who are *sui* and those who are *alieni juris*. All the rights of such persons severally are represented by the phrase "Jus Personarum," or that division of the whole matter of Jus which treats of the condition of persons as members of a Familia. [FAMILIA.]

This leads to the mention of another division of the matter of law which appears among the Roman Jurists, namely, the Law of Persons; the Law of Things, which is expressed by the phrase "jus quod ad res pertinet;" and the Law of Actions, "jus quod ad actiones pertinet." (Gaius, i. 8.) In his first book Gaius treats of the Law of Persons, in the sense explained in the article INSTITUTIONES, in the fourth he treats of the Law of Actions; and accordingly the second and third contain the Law of Things, to express which he does not use a phraseology analogous to that of "Jus Personarum;" but he says he will treat De Rebus. [INSTITUTIONES.]

The adjective Justum often occurs in the Latin writers, in the sense of that which is consistent with Jus or Law, or is not contrary to law. Thus it is a justum (legal) matrimonium, if there is consubium between the two parties to the marriage. The word Justum has many varieties of meaning, which may generally be derived, without much difficulty, from the meanings of Jus: as justa servitus, justum concilium, justum iter, justus exercitus, justa causa.

Jus is opposed to Judicium, and a thing was said to be done in jure or in judicio, according as it was done before the magistratus or before a judex. [JUDICIUM.] Thus all matters of legal question were said to be done "aut ad populum, aut in jure, aut ad judicem." (Plaut. *Menæch.* iv. 2. 18.) Jus, in the sense of the place "in quo jus redditur" (Dig. i. tit. 1. s. 11), is only an application of the name of what is done to the place in which it is done. The expression Jus Dicere is explained under Jurisdiction.

The foregoing explanation of Jus may not be entirely free from error, nor would it be easy to make it so, as will appear from comparing the views of various modern writers. [G. L.]

JUS AEDILITIUM. [AEDILES; EDICTUM.]

JUS AELIANUM was a compilation by Sextus Aelius Paetus, surnamed Catus, who was consul B. C. 198 (Liv. xxxii. 7), and who is called by his contemporary Ennius, "egregie cordatus homo." He is also frequently mentioned with praise by Cicero (*de Rep.* i. 18, *de Or.* i. 45, iii. 33). The Jus Aelianum, also called Triperitita, contained the Law of the Twelve Tables, an interpretatio, and the Legis Actiones. This work

existed in the time of Pomponius. (Dig. i. tit. 2. s. 2. § 38.) Cicero also speaks of some commentarii by Aelius. (*De Orat.* i. 56, *Top.* 2.) [G. L.]

JUS ANNULORUM. [ANNULUS.]

JUS APPLICATIONIS. [EXSILIUM, p. 516, b.]

JUS CIVILE. [Jus.]

JUS CIVILE FLAVIANUM. Appius Claudius Caecus, who was censor B. C. 312, is said to have drawn up a book of Actiones or forms of procedure, which his clerk Cn. Flavius made public. (Cic. *de Or.* i. 41.) According to one story (Dig. i. tit. 2. s. 7) Flavius surreptitiously obtained possession of the book of Appius, and was rewarded by the people for his services by being made Tribunus Plebis and Curule Aedile. The effect of this publication was to extend the knowledge and the practice of the law to the plebeians, and to separate the Jus Civile from the Jus Pontificium. (Liv. ix. 45; Gellius, vi. 9; Cic. *pro Murena*, 11.) [G. L.]

JUS CIVILE PAPIRIANUM or PAPISIANUM was a compilation of the Leges Regiæ or laws passed in the kingly period of Rome. They are mentioned by Livy (vi. 1). This compilation was commented on by Granius Flaccus in the time of Julius Caesar (Dig. 50. tit. 16. s. 144), to which circumstance we probably owe the preservation of existing fragments of the Leges Regiæ. There is great doubt as to the exact character of this compilation of Papirius, and as to the time when it was made. Even the name of the compiler is not quite certain, as he is variously called Caius, Sextus, and Publius. The best notice of the fragments of the Leges Regiæ is by Dirksen, in his "Versuchen zur Kritik und Auslegung der Quellen des Röm. Privatrechts." See also Zimmermann, *Gesch. des Röm. Privatrechts*. JUS VOCATIO, IN. [ACTIO.]

JUSJURANDUM (ὅρκος), an oath. 1. GREEK. An oath is an appeal to some superior being, calling on him to bear witness that the swearer speaks the truth, or intends to perform the promise which he makes. Hence the expressions *ἵνα Ζεὺς*, *ὅρκον μαρτύρομαι*, and others of the same import, so frequently used in the taking of oaths. (Soph. *Trach.* 399, *Antig.* 184; St.

Paul, *Galat.* i. 20.) It is obvious that such an appeal implies a belief, not only in the existence of the being so called upon, but also in his power and inclination to punish the false swearer; and the force of an oath is founded on this belief. Hence an oath is called *θεῶν ὅρκος*. (Hom. *Hym. ad Merc.* 272. 515; Pind. *Ol.* vii. 119.) *Zeus ὅρκιος* (Soph. *Philoc.* 1324) is the god who has regard to oaths, and punishes their violation. *Ζῆν' ἔχων ἐπ' αἵματόν* (Soph. *Trach.* 1190) means (according to Suidas) *ὅρκον ἐγγυητήν*.

We find early mention in the Greek writers of oaths being taken on solemn and important occasions, as treaties, alliances, vows, compacts, and agreements, both between nations and individuals. Thus, when the Greeks and Trojans agree to decide the fate of the war by a single combat between Menelaus and Paris, they ratify their agreement by an oath. (*Il.* iii. 276.) The alliance between Croesus and the Lacedaemonians is confirmed by oath. (Herod. i. 69.) So is the treaty between the Medes and Lydians, whose rites in swearing (as Herodotus tells us, i. 74) were the same as those of the Greeks, with this addition, that they made an incision in their arms and tasted each other's blood. We may further notice the treaty of peace between the Athenians and Peloponnesians, upon which every state was to swear *ἐπιχώριον ὅρκον τῶν μέγιστον* (Thucyd. v. 47), the vow of the Ionian women (Herod. i. 146), that of the Phocaeans (Id. 165), and the promise of Circe to Ulysses (*Od.* x. 345). The reliance placed in an oath is specially shown in the dialogue between Aegeus and Medea in Eurip. *Med.* 736—760; and the speech of Athens in Eurip. *Suppl.* 1196. For other examples we refer the reader to Soph. *Oed. Tyr.* 647, *Oed. Col.* 1637, *Trachin.* 1183; Herod. vi. 74; Hom. *Il.* ix. 132.

That the Greeks (as a nation) were deeply imbued with religious feeling, and paid high regard to the sanctity of oaths, may be gathered from the whole tenor of their early history, and especially from the writings of the poets, Homer, Aeschylus, and Pindar. (See Thirlwall, *Hist. of Greece*, vol. i. c. vi. § 3.) They prided themselves on being superior in this respect to the barbarians. (Aelian. xiv. 2.) The treacherous equivocation practised by the Persians at the siege of Barca (Herod. iv. 201) would have been repugnant to the feelings of a people, whose greatest hero declared that he hated like hell one

“Ὅς χ' ἔτρεπον μὲν κεύθερ ἐνὶ φρεσίν, ἄλλο δὲ βδ' ἔν.”
Il. ix. 313.

The poets frequently allude to the punishment of perjury after death, which they assign to the infernal gods or furies (Hom. *Il.* iv. 157, xix. 260; Pind. *Olymp.* ii. 118; Aristoph. *Ran.* 274), and we find many proofs of a persuasion that perjurers would not prosper in this world. (Hom. *Il.* iv. 67, 270, vii. 351; Hesiod. *Op. et Dies.* 280; Thuc. vii. 18.) One of the most striking is the story told by Leutychides to the Athenians, of Glaucus the Spartan, who consulted the Pythian oracle whether he should restore a deposit, or deny on oath that he had ever received it; and who, for merely deliberating upon such a question, was cut off with his whole family. (Herod. vi. 86; Pausan. ii. 18, viii. 7; Juv. *Sat.* xiii. 202.)

Anciently the person who took an oath stood up, and lifted his hands to heaven, as he would in

prayer; for an oath was a species of prayer, and required the same sort of ceremony. (Hom. *Il.* xix. 175, 254; Pind. *Ol.* vii. 119.) Oaths were frequently accompanied with sacrifice or libation. (Hom. *Il.* iv. 158; Aristoph. *Acharn.* 148, *Vesp.* 1048.) Both sacrifice and libation are used in the compact of the Greeks and Trojans in *Il.* iii. 276. The victims on such occasions were not eaten; but, if sacrificed by the people of the country, were buried in the ground; if by strangers, were thrown into the sea or river. (*Il.* iii. 310, xix. 267.)

The parties used also to lay their hands upon the victims, or on the altar or some other sacred thing, as if by so doing they brought before them the deity by whom the oath was sworn, and made him witness of the ceremony. Hence the expressions *πρὸς τὸν βοῦν ἐποικίσεν, ὑμνίαι καὶ ἱερῶν*. (See Reiske, *Index ad Dem.* s. v. *Ὀμνύται*; Harpocr. s. v. *Αἶθος*; Thuc. v. 47; Goeller, *ad loc.*; Juv. *Sat.* xiv. 219; Ovid. *Epist. Dido ad Aen.* 129.) In Homer (*Il.* xiv. 270), Juno, making a solemn promise to Sleep, takes the Earth in one hand and Heaven in the other, and swears by Styx and the subterranean gods. To touch the head, hand, or other part of the body, of the person to whom the promise was made, was a common custom. The hand especially was regarded as a pledge of fidelity, and the allusions to the junction of hands in making contracts and agreements abound in the ancient writers. (Eurip. *Medea*, 496; Soph. *Philoc.* 812, *Trach.* 1183; Ovid. *Ep. Phyllis ad Demoph.* 21, *Briseis ad Ach.* 107; Hom. *Hym. ad Ven.* 26.) Other superstitious rites were often superadded, to give greater solemnity to the ceremony (Aesch. *Sept. c. Theb.* 42; Soph. *Antig.* 264; Demosth. c. *Con.* 1269), which appear to be ridiculed by Aristophanes (*Lysist.* 188).

The different nations of Greece swore by their own peculiar gods and heroes; as the Thebans by Hercules, Iolaua, &c., the Lacedaemonians by Castor and Pollux, the Corinthians by Poseidon (Aristoph. *Acharn.* 774, 860, 867, *Equites*, 609, *Lysist.* 81, 148); the Athenians swore principally by Zeus, Athena, Apollo (their *πατὴρ Zeus*), Demeter, and Dionysus.

The office or character of the party, or the place, or the occasion often suggested the oath to be taken. Thus, Iphigeneia the priestess swears by Artemis in Eurip. *Iph. in Tauris*. Menelaus bids Antilochus swear by Poseidon (the equestrian god), the subject being on horses. (*Il.* xxiii. 585.) So Philippiades, in Arist. *Nub.* 83, is made ridiculously to swear *τὴν Ποσειδῶ τὸν ἵππιον*. Achilles swears by his sceptre (*Il.* i. 234), Telemachus by the sorrows of his father (*Od.* xx. 339). Hence the propriety of the famous oath in Demosthenes, by the warriors who fought at Marathon, &c. Here we may observe, that as swearing became a common practice with men upon trivial occasions, and in ordinary conversation, they used to take oaths by any god, person, or thing, as their peculiar habits or predilections, or the fancy of the moment, dictated. Pythagoras on this account swore by the number Four. (Lucian, *Pythag.* 4; Plut. *de Plac. Phil.* i. 3. 1616.) Socrates used to swear *τὴν κύνα*, in which he was absurdly imitated by others. (Athen. ix. p. 370.) Aristophanes, so keenly alive to all the foibles of his countrymen, takes notice of this custom, and turns it into ridicule. Hence he makes the sausage-dealer swear *τὴν Ἐριμνὴν τὸν ἀγοραῖον* (*Equit.*

297), Socrates μὴ τὴν Ἀναπνοήν, &c. (*Nub.* 627.) (See further *Vesp.* 83, *Aves*, 54, 1611, *Ran.* 336, 1169.)

Women also had their favourite oaths. As the men preferred swearing by Hercules, Apollo, &c., so the other sex used to swear by Aphrodite, Demeter, and Persephone, Hera, Hecate, Artemis; and Athenian women by Aglauros, Pandrosus, &c. (*Lucian, Dial. Meretr.* 7; *Xen. Memor.* i. 5. § 5; *Aristoph. Lysid.* 81, 148, 208, 439, *Eccles.* 70, *Thesm.* 286, 383, 533; *Theocr. Idyll.* xv. 14.)

The security which an oath was supposed to confer induced the Greeks, as it has people of modern times, to impose it as an obligation upon persons invested with authority, or intrusted with the discharge of responsible duties. (*Plato, de Leg.* xii. p. 948.) The Athenians, with whom the science of legislation was carried to the greatest perfection, were, of all the Greek states, the most punctilious in this respect. The youth, entering upon his 20th year, was not permitted to assume the privileges of a citizen, or to be registered in the ἀγχιπαρχικὸν γράμματιον, without taking a solemn oath in the temple of Aglauros to obey the laws and defend his country. (The form of his oath is preserved in *Pollux*, viii. 105.) The archon, the judge, and the arbitrator, were required to bind themselves by an oath to perform their respective duties. (See *Pollux*, l. c.; *Hudtwalcker, über die Diät.* p. 10; and *DICASTES*.) As to the oath taken by the Senate of Five Hundred, see *Demosth. c. Timoc.* 745. As to the oath of the witness, and the voluntary oath of parties to an action, see *MARTYRIA*. The importance, at least apparently, attached to oaths in courts of justice, is proved by various passages in the orators. (*Andoc. de Myst.* 5; *Lycurg. c. Leocr.* 157. ed. Steph.; *Antiph. de m. Herod.* 139, 140. ed. Steph.; *Demosth. c. Aphob.* 860.) Demosthenes constantly reminds his judges that they are on their oaths, and *Lycurgus* (l. c.) declares that τὸ συνέχον τὴν δημοκρατίαν ὄρκος ἐστίν.

The experience of all nations has proved the dangerous tendency of making oaths too common. The history of Athens and of Greece in general furnishes no exception to the observation. While in the popular belief and in common parlance oaths continued to be highly esteemed, they had ceased to be of much real wealth or value. It is impossible to read the plays of Aristophanes, the orators, and other writers of that period, without seeing that perjury had become a practice of ordinary occurrence. The poet who wrote that verse which incurred the censure of the comedian, ἡ γλώσσ' ὀμόμοχ', ἡ δὲ φρὴν ἀνόματος (*Eur. Hippol.* 612; *Aristoph. Thesm.* 275), was not the only person who would thus refine. The bold profligacy described by Aristophanes (*Nub.* 1232—1241, *Equit.* 298) was too often realized in action. To trace the degeneracy of the Greek character belongs not to this place. We conclude by reminding our readers that in a later age the Greeks became a by-word among the Romans for lying and bad faith. (*Cic. pro Flacco*, 4; *Juv. Sat.* iii. 60, &c.)

A few expressions deserve notice. *Nῆ* is used by Attic writers in affirmative oaths, μὴ in negative. The old form of affirmation, still preserved by the other Greeks, and used by Xenophon, was *val* μὴ. (*Xen. Mem.* ii. 7. § 14, *Apol. Socr.* 20.) *Nῆ* is nothing more than another form of *val*, used with an accusative case, μὴ being omitted, as it often is in negative oaths. (*Soph. Oed. Tyr.* 660.

1088, *Elect.* 758, 1063.) *Nῆ*, however, is never used by the tragedians, who always employ a paraphrase in affirmative oaths, such as *Σὲν μαρτύρεσθαι*. Ἐπομύναι is used affirmatively, ἀπομύναι negatively, according to Eustathius. (*Hom. Od.* ii. 377.) Διόμυσθαι is to swear strongly, to protest. (*Soph. Trach.* 378.) Ὀρκιον, though often used synonymously with ὄρκος, signifies more strictly a compact ratified by oath; ὄρκια τάμνειν is to make a compact with oaths and sacrifice; and through the frequent practice of sacrificing on such occasions, it came that ὄρκιον was sometimes used for the victim itself. (*Hom. Il.* iii. 245.) In the phrase ὀμύναι καθ' ἑαυτῶν, the original meaning of κατὰ was, that the party laid his hand upon the victims; but the same phrase is used metaphorically in other cases, where there could be no such ceremony. Thus κατὰ χιλίων εὐχὴν ποιῆσθαι χιμάρων (*Arist. Equit.* 660) is to make a vow to offer a thousand kids; as though the party vowing layed his hands upon the kids at the time, as a kind of stake. The same observation applies to ὀμύναι κατ' ἑαυλείας. (*Comp. Lausauls, Ueber den Eid bei den Griechen*, Würzburg, 1844.)

2. ROMAN. The subject of Roman oaths may be treated under four different heads, viz.:—1. Oaths taken by magistrates and other persons who entered the service of the republic. 2. Oaths taken in transactions with foreign nations in the name of the republic. 3. Oaths, or various modes of swearing in common life. 4. Oaths taken before the praetor or in courts of justice.

1. Oaths taken by magistrates and other persons who entered the service of the republic.—After the establishment of the republic the consuls, and subsequently all the other magistrates, were obliged, within five days after their appointment, to promise on oath that they would protect and observe the laws of the republic (*in leges jurare*, *Liv.* xxi. 50; compare *Dionys.* v. 1.). Vestal virgins and the flamen dialis were not allowed to swear on any occasion (*Liv.* l. c.; *Feat. s. v. Jurare*; *Plut. Quaest. Rom.* p. 275), but whether they also entered upon their sacred offices without taking an oath analogous to that of magistrates is unknown. When a flamen dialis was elected to a magistracy, he might either petition for an especial dispensation (*ut legibus solveretur*), or he might depute some one to take the oath for him. But this could not be done unless the permission was granted by the people. The first Roman consuls seem only to have sworn that they would not restore the kingly government, nor allow any one else to do so (*Liv.* ii. 1; *Dionys.* l. c.), and this may have been the case till all fears of such a restoration having vanished, the oath was changed into a jusjurandum in leges. The consular oath was occasionally taken under the empire. (*Plin. Paneg.* 64.)

During the later period of the republic we also find that magistrates, when the time of their office had expired, addressed the people and swore that during their office they had undertaken nothing against the republic, but had done their utmost to promote its welfare. (*Cic. ad Fam.* v. 2. § 7, *pro Sulla*, 11, *in Pison.* 3, *pro Dom.* 35; *Dion Cass.* xxxvii. p. 52, xxxviii. p. 72, liii. p. 568, ed. Steph.; *Liv.* xxix. 37.) In some cases a tribune of the people might compel the whole senate to promise on oath that they would observe a plebiscitum,

and allow it to be carried into effect, as was the case with the *lex agraria* of Saturninus. The censor Q. Metellus, who refused to swear, was sent into exile. (Appian, *B. C.* i. 29; Cic. *pro Sext.* 47; Plut. *Mar.* 29.) During the time of the empire all magistrates on entering their office were obliged to pledge themselves by an oath that they would observe the *acta Caesarum* (*iurare in acta Caesarum*, Suet. *Tiber.* 67; Tacit. *Annal.* i. 72, xiii. 26, xvi. 22; Dion Cass. xlvii. p. 384, &c.), and the senators had to do the same regularly every year on the first of January. (Dion Cass. lviii. p. 724; compare Lipsius, *Excurs. A. ad Tacit. Annal.* xvi. 22.)

All Roman soldiers after they were enlisted for a campaign, had to take the military oath (*sacramentum*), which was administered in the following manner:—Each *tribunus militum* assembled his regiment, and picked out one of the men to whom he put the oath, that he would obey the commands of his generals and execute them punctually. The other men then came forward one after another and repeated the same oath, saying that they would do like the first (*idem in me*, Polyb. vi. 7; Fest. s. v. *Præjuraciones*). Livy (xxii. 38) says that until the year 216 B.C. the military oath was only *sacramentum*, i. e. the soldiers took it voluntarily, and promised (with imprecations) that they would not desert from the army, and not leave the ranks except to fight against the enemy or to save a Roman citizen. But in the year 216 B.C. the soldiers were compelled by the tribunes to take the oath, which the tribunes put to them, that they would meet at the command of the consuls and not leave the standards without their orders, so that in this case the military oath became a *jusjurandum*. But Livy here forgets that long before that time he has represented (iii. 20) the soldiers taking the same *jusjurandum*. A perfect formula of a military oath is preserved in Gellius (xvi. 4; compare Dionys. vi. 23.)

It may here be remarked that any oath might be taken in two ways: the person who took it, either framed it himself, or it was put to him in a set form, and in this case he was said *in verba iurare*, or *iurare verbis conceptis*. Polybius (vi. 33) speaks of a second oath which was put to all who served in the army, whether freemen or slaves, as soon as the *castrametatio* had taken place, and by which all promised that they would steal nothing from the camp, and that they would take to the tribunes whatever they might happen to find. The military oath was, according to Dionysius (xi. 43), the most sacred of all, and the law allowed a general to put to death without a formal trial any soldier who ventured to act contrary to his oath. It was taken upon the *signa*, which were themselves considered sacred. In the time of the empire a clause was added to the military oath, in which the soldiers declared that they would consider the safety of the emperor more important than anything else, and that they loved neither themselves nor their children more than their sovereign. (Arrian, *Epict.* iii. 14; Suet. *Calig.* 15; Ammian. Marc. xxi. 5.) On the military oath in general, compare Brissoni, *De Formul.* iv. c. 1—5.

II. *Oaths taken in transactions with foreign nations in the name of the republic.* The most ancient form of an oath of this kind is recorded by Livy (i. 24), in a treaty between the Romans and Albans. The *pater patratus* pronounced the oath in the

name of his country, and struck the victim with a flint-stone, calling on Jupiter to destroy the Roman nation in like manner, as he (the *pater patratus*) destroyed the animal, if the people should violate the oath. The chiefs or priests of the other nation then swore in a similar manner by their own gods. The ceremony was sometimes different, inasmuch as the *fetialis* cast away the stone from his hands, saying, *Si sciens fallo, tum me Dis pater salva urbe arceque bonis ejiciat, uti ego hunc lapidem.* (Fest. s. v. *Lapidem*.) Owing to the prominent part which the stone (*lapis stiles*) played in this act, Jupiter himself was called *Jupiter Lapis* (Polyb. iii. 25), and hence it was in aftertimes not uncommon among the Romans in ordinary conversation to swear by *Jupiter Lapis*. (Gellius, i. 21; Cic. *ad Fam.* vii. 1, 12; Plut. *Sulla*, 10.) In swearing to a treaty with a foreign nation, a victim (a pig or a lamb) was in the early times always sacrificed by the *fetialis* (whence the expressions *foedus iocere*, *ῥεκτα τέμνειν*), and the priest while pronouncing the oath probably touched the victim or the altar. (Virg. *Aen.* xii. 201, &c.; Liv. xxi. 45; compare FETIALIS.) This mode of swearing to a treaty through the sacred person of a *fetialis*, was observed for a long time, and after the second Punic war the *fetiales* even travelled to Africa to perform the ancient ceremonies. (Liv. xxx. 43.) The *jus fetiale*, however, fell into disuse as the Romans extended their conquests; and as in most cases of treaties with foreign nations, the Romans were not the party that chose to promise anything on oath, we hear no more of oaths on their part; but the foreign nation or conquered party was sometimes obliged to promise with a solemn oath (*sacramentum*) to observe the conditions prescribed by the Romans, and documents recording such promises were kept in the capitol. (Liv. xxvi. 24.) But in cases where the Romans had reason to mistrust, they demanded hostages as being a better security than an oath, and this was the practice which in later times they adopted most generally. At first the Romans were very scrupulous in observing their oaths in contracts or treaties with foreigners, and even with enemies; but attempts were soon made by individuals to interpret an oath sophistically and explain away its binding character (Gellius, vii. 18; Liv. iii. 20, xxii. 61; Cic. *de Off.* iii. 27, &c.), and from the third Punic war to the end of the republic, perjury was common among the Romans in their dealings with foreigners as well as among themselves.

III. *Oaths or various modes of swearing in common life.* The practice of swearing or calling upon some god or gods as witnesses to the truth of assertions made in common life or in ordinary conversations, was as common among the Romans as among the Greeks. The various forms used in swearing may be divided into three classes:—

1. Simple invocations of one or more gods, as *Herce* or *Meherce*, that is, *ita me Hercules juvet, amet, et servet* (Fest. s. v. *Mecastor*); *Pol, Perpol* or *Aedepol*, that is, *per Pollucem; per Jovem Lapidem* or simply *per Jovem; per superos; per deos immortales; medius fidius*, that is, *ita me Dius (Alos) filius juvet* (Fest. s. v.; Varro, *de Ling. Lat.* iv. p. 20, Bip.); *ita me deus amet, or dii ament*. Sometimes also two or a great number of gods were invoked by their names. (Plaut. *Bacchid.* iv. 8, 51; Terent. *Andr.* iii. 2, 25.) The *genii* of

men were regarded as divine beings, and persons used to swear by their own genius, or by that of a friend, and during the empire by that of an emperor. (Horat. *Epist.* i. 7, 94; Suet. *Calig.* 27.) Women as well as men swore by most of the gods; but some of them were peculiar to one of the sexes. Thus women never swore by Hercules, and men never by Castor; Varro, moreover, said that in ancient times women only swore by Castor and Pollux, while in the extant writers we find men frequently swearing by Pollux. (Gellius, xi. 6.) Juno and Venus were mostly invoked by women, but also by lovers and effeminate men in general. (Plaut. *Amphit.* ii. 2. 210; Tibull. iv. 13. 15; Juv. ii. 98; Ovid. *Amor.* ii. 7. 27, ii. 8. 18.)

2. Invocations of the gods, together with an execration, in case the swearer was stating a falsehood. Execrations of this kind are, *Dii me perdat* (Plaut. *Mil. Glor.* iii. 2. 20, *Cistell.* ii. 1. 21); *dii me interficiant* (Plaut. *Mostell.* i. 3. 35); *dis peream* (Horat. *Sat.* i. 9. 47); *ne vivam* (Cic. *ad Fam.* vii. 23; Mart. x. 12. 3); *ne salvus sim* (Cic. *ad Att.* xvi. 13), &c.

3. Persons also used to swear by the individuals or things most dear to them. Thus we have instances of a person swearing by his own or another man's head (Dig. 12. tit. 2. s. 3. § 4; Ovid, *Trist.* v. 4. 45; *Heroid.* iii. 107; Juv. vi. 16), by his eyes (Plaut. *Menech.* v. 9. 1; Ovid, *Amor.* ii. 16. 44), by his own welfare or that of his children (Dig. 12. tit. 2. s. 5; Plin. *Epist.* ii. 20), by the welfare of an emperor (Cod. 2. tit. 4. s. 41), &c.

Respecting the various forms of oaths and swearing see Brissonius, *de Formul.* viii. cc. 1—18.

[L. S.]

IV. *Oaths taken before the praetor or in courts of justice.* There might be a *jusjurandum* either in jure or in judicio. The *jusjurandum* in jure had a like effect to the *confessio* in jure, and it stood in the place of the *LITIS CONTESTATIO* (Dig. 5. tit. 1. s. 28. § 2). The *jusjurandum* in jure is the oath which one party proposed to his adversary (*detulit*) that he should make about the matter in dispute; and the effect of the oath being taken or refused was equivalent to a *judicium*. If the defendant took the oath, he had in answer to the *actio* an *exceptio* (plea) *jurisjurandi*, analogous to the *exceptio rei in judicium deductae* and *rei judicatae*. If the plaintiff swore, he had an *actio in factum* (on the case) analogous to the *actio judicati*. The reason of the *jusjurandum* having this effect is explained (Dig. 44. tit. 5. s. 1) to be, that a party to a cause makes his adversary the *judex* by proposing to him to take the oath (*deferendo ei jusjurandum*). This *jusjurandum* which is proposed (*delatum*) in jure, is called *necessarium*, because he to whom it is proposed cannot simply refuse it; he must either take the oath, or, in his turn, propose (*referre*) that the proposer shall take it. Simple refusal was equivalent to *confessio* (*confessionis est nolle nec jurare nec jusjurandum referre*; Dig. 12. tit. 2. s. 38). In the Edict (Dig. 12. tit. 2. s. 34. § 6), the praetor says that he will compel the person from whom the oath is demanded to pay or to take the oath. A *pupillus*, a *procurator*, or *defensor*, a *Vestal*, and a *flamen dialis* could not be compelled to swear (Gell. x. 15).

The *jusjurandum* in *judicio* (*jusjurandum judiciale*) is required by the *judex*, and not by either of the parties, though either of the parties may

suggest it. This *jusjurandum* has not the effect of the *jusjurandum* in jure: it is merely evidence, and the *judex* can give it such probative force as to him seems just. Such an oath is only wanted when other evidence fails. The judicial oath was particularly applicable in cases in which the *judex* had to determine the value of the matter in dispute. As a general rule, the *aestimatio* or estimate of value or damages was to be made by the *judex* conformably to the evidence furnished by the plaintiff; but if the defendant by his *dolus* or *contumacia* prevented the plaintiff from recovering the specific thing, which was the object of the action, and consequently the plaintiff must have the value of it, the *judex* could put the plaintiff to his oath as to the value of the thing; but he could also fix a limit (*taxatio*) which the plaintiff must not exceed in the amount that he declared upon oath. This is called *jusjurandum in litem* (Dig. 12. tit. 3). This oath is merely evidence; the *judex* may still either acquit the defendant or condemn him in a less sum (Dig. 22. tit. 3; De probationibus et praesumptionibus).

As to the *Jusjurandum Calumniæ*, see *CALUMNIA*; and see *JUDEX*, *JUDICIUM*. [G. L.]

JUSSU, QUOD, ACTIO, is a Praetorian *actio* which a man had against a father or master of a slave (*dominus*), if a *filiusfamilias* or a slave had entered into any contract at the bidding (*jussu*) of the father or master, for the full amount of the matter in dispute. He who thus contracted with a *filiusfamilias* or a slave, was not considered to deal with them on their own credit, but on that of the father or master. This *Actio* is classed by Gaius with the *Exercitoria* and *Institoria*. (Gaius, iv. 70; Dig. 15. tit. 4.) [G. L.]

JUSTA FUNERA. [FUNERA, p. 558, b.]

JUSTINIANÆUS CODEX. [CODEX JUSTINIANÆUS.]

JUSTITIUM, probably signified originally a cessation of judicial business (*juris quasi interdictio quaedam et cessatio*, Gell. xx. 1), but is always used to indicate a time in which public business of every kind was suspended. Thus the courts of law and the treasury were shut up, no ambassadors were received in the senate, and no auctions took place (*jurisdictionem intermittere, claudi aerarium, judicia tolli*, Cic. *de Har. Resp.* 36; *pro Planc.* 14, with Wunder's note). The *Justitium* was proclaimed (*edicere, indicere*) by the senate and the magistrates in times of public alarm and danger; and after confidence and tranquillity had been restored, the *Justitium* was removed (*remittere, exuere*) by the same authorities. (Liv. vi. 7, ix. 7, x. 21; Plut. *Sull.* 8, *Mar.* 35.) As such times of alarm are usually accompanied with general sorrow, a *Justitium* came in course of time to be ordained as a mark of public mourning, and under the empire was only employed for this reason. Thus we find it usually proclaimed on the death of an emperor or of a member of the imperial family. It was observed in the provinces as well as at Rome, and during its continuance the soldiers were released from their ordinary military duties. (Tac. *Ann.* i. 16, ii. 82; Suet. *Tib.* 52, *Cal.* 24, *Galb.* 10.)

JUVENALIA, or **JUVENALES LUDI** (*Ἰουβενάλια ὡς περ τινα νεανισκεύματα*), were scenic games instituted by Nero in A. D. 59, in commemoration of his shaving his beard for the first time, thus intimating that he had passed from youth to manhood. He was then in the

twenty-second year of his age. These games were not celebrated in the circus, but in a private theatre erected in a pleasure-ground (*nemus*), and consisted of every kind of theatrical performance, Greek and Roman plays, mimetic pieces, and the like. The most distinguished persons in the state, old and young, male and female, were expected to take part in them. The emperor set the example by appearing in person on the stage; and Dion Cassius mentions a distinguished Roman matron, upwards of eighty years of age, who danced in the games. It was one of the offences given by Paetus Thrasea that he had not acquitted himself with credit at this festival. (Dion Cass. lxi. 19; Tac. Ann. xiv. 15, xv. 33, xvi. 21.) Suetonius (*Ner.* 12) confounds this festival with the Quinquennialia, which was instituted in the following year, A. D. 60. [QUINQUENNALIA.] The Juvenalia continued to be celebrated by subsequent emperors, but not on the same occasion. The name was given to those games which were exhibited by the emperors on the 1st of January in each year. They no longer consisted of scenic representations, but of chariot races and combats of wild beasts. (Dion Cass. lxxvii. 14; Sidon. Apoll. *Carm.* xxiii. 307, 428; Capitol. *Gord.* 4; comp. Lipsius, *ad Tac. Ann.* xiv. 15.)

L.

LABARUM. [SIGNA MILITARIA.]

LABRUM. [BALNEAR, p. 191.]

LABYRINTHUS (Λαβύρινθος). This word appears to be of Greek origin, and not of Egyptian as has generally been supposed; it is probably a derivative form of *λάβρος*, and etymologically connected with *λαῖπα*. Accordingly, the proper definition of labyrinth is a large and complicated subterranean cavern with numerous and intricate passages, similar to those of a mine. (Welcker, *Aeschyl. Trilog.* p. 212, &c.) Hence the caverns near Nauplia in Argolis were called labyrinths. (Strabo, viii. 6. p. 369.) And this is indeed the characteristic feature of all the structures to which the ancients apply the name labyrinth, for they are always described as either entirely or partially under ground.

The earliest and most renowned labyrinth was that of Egypt, which lay beyond lake Moeria, at a short distance from the city of Crocodiles (Arsinoë), in the province now called Faioum. Herodotus (ii. 148) ascribes its construction to the dodecarch (about 650 B. C.), and Mela (i. 9) to Psammetichus alone. But other and more probable accounts refer its construction to a much earlier age. (Plin. *H. N.* xxxvi. 13; Diod. Sic. i. 61, 89; Strabo, xvii. p. 811.) This edifice, which in grandeur even excelled the pyramids, is described by Herodotus and Pliny (*l. c.*) It had 3000 apartments, 1500 under ground, and the same number above it, and the whole was surrounded by a wall. It was divided into courts, each of which was surrounded by colonnades of white marble. At the time of Diodorus and of Pliny the Egyptian labyrinth was still extant. But the ruins which modern travellers describe as relics of the ancient labyrinth, as well as the place where they saw them, do not

agree with what we know from the best ancient authorities respecting its architecture and its site. (British Mus. *Egyptian Antiq.* vol. i. p. 54, and more especially Bunsen, *Aegyptens Stelle in der Weltgesch.* vol. ii. p. 324, &c.) The purpose which this labyrinth was intended to serve, can only be matter of conjecture. It has been supposed by some writers that the whole arrangement of the edifice was a symbolical representation of the zodiac and the solar system. Herodotus, who saw the upper part of this labyrinth, and went through it, was not permitted by the keepers to enter the subterranean part, and he was told by them that here were buried the kings by whom the labyrinth had been built, and the sacred crocodiles.

The second labyrinth mentioned by the ancients was that of Crete, in the neighbourhood of Cnosus: Daedalus was said to have built it after the model of the Egyptian, and at the command of king Minos. (Plin. *Diod. l. c.*) This labyrinth is said to have been only one hundredth part the size of the Egyptian, and to have been the habitation of the monster Minotaurus. Although the Cretan labyrinth is very frequently mentioned by ancient authors, yet none of them speaks of it as an eyewitness; and Diodorus and Pliny expressly state that not a trace of it was to be seen in their days. These circumstances, together with the impossibility of accounting for the objects which a Cretan king could have had in view in raising such a building, have induced almost all modern writers to deny altogether the existence of the Cretan labyrinth. This opinion is not only supported by some testimonies of the ancients themselves, but by the peculiar nature of some parts of the island of Crete. The author of the *Etymologicum Magn.* calls the Cretan labyrinth "a mountain with a cavern," and Eustathius (*ad Odyss.* xi. p. 1688) calls it "a subterranean cavern;" and similar statements are made by several other writers quoted by Meursius (*Crete*, pp. 67 and 69). Such large caverns actually exist in some parts of Crete, especially in the neighbourhood of the ancient town of Gortys; and it was probably some such cavern in the neighbourhood of Cnosus that gave rise to the story of a labyrinth built in the reign of Minos. (See Walpole's *Travels*, p. 402, &c.; Höckh, *Kreta*, i. p. 56, &c., and p. 447, &c.)

A third labyrinth, the construction of which belongs to a more historical age, was that in the island of Lemnos. It was commenced by Smilis, an Aeginetan architect, and completed by Rhoeus and Diodorus of Samos, about the time of the first Olympiad. (Plin. *l. c.*) It was in its construction similar to the Egyptian, and was only distinguished from it by a greater number of columns. Remains of it were still extant in the time of Pliny. It is uncertain whether this labyrinth was intended as a temple of the Cabeiri, or whether it had any connection with the art of mining. (Welcker, *Aeschyl. Tril. l. c.*)

Samos had likewise a labyrinth, which was built by Theodorus, the same who assisted in building that of Lemnos; but no particulars are known. (Plin. *H. N.* xxxiv. 8.)

Lastly, we have to mention a fabulous edifice in Etruria, to which Pliny applies the name of labyrinth. It is described as being in the neighbourhood of Clusium, and as the tomb of Lar Porrena. But no writer says that he ever saw it, or remains of it; and Pliny, who thought the description which

be found of it too fabulous, did not venture to give it in his own words, but quoted those of Varro, who had probably taken the account from the popular stories of the Etruscans themselves. It was said to have been built partly under and partly above ground, whence the name labyrinth is correctly applied to it. But a building like this, says Niebuhr (*History of Rome*, vol. i. p. 130. note 405), is absolutely impossible, and belongs to the Arabian Nights. (Comp. Abeken, *Mittelitalien*, p. 243.) [L. S.]

LACERNA (*μανδύας, μανδύη*), a cloak worn by the Romans over the toga, whence it is called by Juvenal (ix. 28) "munimentum togae." It differed from the paenula in being an open garment like the Greek pallium, and fastened on the right shoulder by means of a buckle (*fibula*), whereas the paenula was what is called a *vestimentum clausum* with an opening for the head. [PAENULA.] The Lacerna appears to have been commonly used in the army (Vell. Pat. ii. 70, 80; Ovid, *Fast.* ii. 746; Prop. iv. 3. 18), but in the time of Cicero was not usually worn in the city (Cic. *Philipp.* ii. 30.) It soon afterwards, however, became quite common at Rome, as we learn from Suetonius, who says (*Aug.* 40) that Augustus, seeing one day a great number of citizens before his tribunal dressed in the lacerna, which was commonly of a dark colour (*pullati*), repeated with indignation the line of Virgil.

"Romanos rerum dominos, gentemque togatam."

and gave orders that the Aediles should henceforth allow no one to be in the forum or circus in that dress.

Most persons seem to have carried a lacerna or paenula with them, when they attended the public games, to protect them from the cold or rain (Dion Cass. lvi. 13); and thus we are told that the equites used to stand up at the entrance of Claudius and lay aside their lacernae. (Suet. *Claud.* 6.)

The lacerna was usually, as already remarked, of a dark colour (*fusci colores*, Mart. i. 97. 9), and was frequently made of the dark wool of the Baetic sheep (*Baeticae lacernae*, xiv. 133). It was, however, sometimes dyed with the Tyrian purple, and with other colours. (Juv. i. 27; Mart. i. 97.) Martial (viii. 10) speaks of lacernae of the former kind, which cost as much as 10,000 sesterces. When the emperor was expected at the public games, it was the practice to wear white lacernae only. (Mart. iv. 2, xiv. 137.)

The lacerna was sometimes thrown over the head for the purpose of concealment (Hor. *Sat.* ii. 7. 55); but a *cucullus* or cowl was generally used for that purpose, which appears to have been frequently attached to the lacernae, and to have formed a part of the dress. (Mart. xiv. 139, 132.) See Becker, *Gallus*, vol. ii. p. 95, &c. [CUCULLUS.]

LACINIAE, the angular extremities of the toga, one of which was brought round over the left shoulder. It was generally tucked into the girdle, but sometimes was allowed to hang down loose. Plautus (*Mercat.* i. 2. 16) indicates that it occasionally served for a pocket-handkerchief (*At tu adepol summa laciniam atque absterge sudorem tibi*): Velleius Paterculus (ii. 3) represents Scipio Nasica as wrapping the lacinia of his toga round his left arm for a shield (compare Val. Max. iii. 2. § 17) before he rushed upon Tib. Gracchus; while, ac-

cording to Servius (*ad Virg. Aen.* vii. 612), the Cinctus Gabinus was formed by girding the toga tight round the body by one of its laciniae or loose ends. These expressions are quite irreconcilable with the opinion of Ferrarius and others, that the lacinia was the lower border or skirt of the toga, while all the passages adduced by them admit of easy explanation according to the above view. The lacinia was undoubtedly permitted by some to sweep the ground, especially by such as wore their garments loosely. Thus Macrobius (*Sat.* ii. 3) remarks upon one of Cicero's witticisms, "Jocatus in Caesarem quia ita praecingebatur, ut trahendo laciniam velut mollis incederet," which corresponds with the well-known caution of Sulla addressed to Pompey, "Cave tibi illum puerum male praecinctum;" and Suetonius tells how the emperor Caius, being filled with jealousy on account of the plaudits lavished on a gladiator, hurried out of the theatre in such haste "ut calcata lacinia togae praeceps per gradus iret." Moreover, the secondary and figurative meanings of the word, namely, a rag (Plin. *H. N.* xix. 7), a narrow neck of land (Id. v. 32), the point of a leaf (Id. xv. 30), the excrescences which hang down from the neck of a she-goat (Id. viii. 50), &c., accord perfectly with the idea of the angular extremity of a piece of cloth, but can scarcely be connected naturally with the notion of a border or skirt.

The corresponding Greek term was *κράσινος*, and perhaps *πρεσβύριον* (Pollux considers these synonymous); and accordingly Plutarch (*Gracch.* 19) and Appian (*B. C.* i. 16) employ the former in narrating the story of Scipio alluded to above, with this difference, however, that they describe him as throwing τὸ κράσινον τοῦ ἱματίου over his head instead of twisting it round his arm. [W. R.]

LACONICUM. [BALNEAR, p. 184, b. 190, b.]

LACUNAR. [DOMUS, p. 432, a.]

LACUS. [FONS, p. 544, b.]

LAENA, the same word with the Greek *χλαῖνα*, and radically connected with *λάχνη*, *luna*, &c.

1. It signifies, properly, a woollen cloak, the cloth of which was twice the ordinary thickness (*duarum togarum instar*, Varro, *de Ling. Lat.* v. 133, ed. Müller), and therefore termed *duplex* (Festus, s. v. *Laena*; Serv. *ad Virg. Aen.* iv. 262), shaggy upon both sides (Schol. *ad Juv.* iii. 283), worn over the pallium or the toga for the sake of warmth. (Mart. xiv. 136.) Hence persons carried a laena with them when they went out to supper (Mart. viii. 59); and the rich man in Juvenal, who walks home at night escorted by a train of slaves and lighted on his way by flambeaux, is wrapped in a scarlet laena. (Juv. iii. 283.)

2. A robe of state, forming, it is said, in ancient times, part of the kingly dress. (Plut. *Num.* 7.)

3. The flamines offered sacrifice in a laena which was fastened round the throat by a clasp, and in the case of the dialis was woven by the hands of the flaminica. (Serv. *ad Virg. Aen.* iv. 262; Cic. *Brut.* 57.)

4. In later times the laena seems, to a certain extent, to have been worn as a substitute for the toga. Thus the courtly bard in Persius (i. 32) is introduced reciting his fashionable lays with a violet-coloured laena over his shoulders; and we gather from Juvenal (v. 130, vii. 73) that it was

an ordinary article of dress among the poorer classes. (Becker, *Gallus*, vol. ii. p. 99.)

5. Nonius defines it to be "vestimentum militare quod supra omnia vestimenta sumitur," but quotes no authority except Virg. *Aen.* iv. 262. [W. R.]

LAGE'NA. [VINUM.]

LAMPADA'RCHIA. [LAMPADOPHORIA.]

LAMPADOPHORIA (λαμπαδοφορία), torch-bearing (as Herodotus calls it), or λαμπαδοδρομία, torch-race (as some lexicographers), also λαμπαδοῦχος ἀγών, and often simply λαμπάς, was a game common no doubt throughout Greece; for though all we know concerning it belongs to Athens, yet we hear of it at Corinth, Pergamus, and Zerinthus (Böckh, *Publ. Econ. of Athens*, p. 463, 2nd ed.; Müller, *Minerv. Polias*, p. 5); and a coin in Mionnet, with a λαμπάς on it, which is copied below, bears the legend Ἀμφιπολιτῶν.

At Athens we know of five celebrations of this game: one to Prometheus at the Prometheia (Schol. ad Aristoph. *Ran.* 131; Inter. ap. Harpocr. s. v.); a second to Athena at the Panathenaea* (Herod. vi. 105, and *ll. cc.*); a third to Hephaestus at the Hephaestea† (Herod. viii. 9, and *ll. cc.*); a fourth to Pan (Herod. v. 105); a fifth to the Thracian Artemis or Bendis. (Plat. *de Rep.* p. 328, a.) The three former are of unknown antiquity; the fourth was introduced soon after the battle of Marathon; the last in the time of Socrates.

The race was usually run on foot, horses being first used in the time of Socrates (Plat. *l. c.*); sometimes also at night. (Interp. vetus ad Lucret. ii. 77. ap. Wakef.) The preparation for it was a principal branch of the γυμνασιάρχια, so much so indeed in later times, that λαμπαδορχία seems to have been pretty much equivalent to the γυμνασιάρχια. (Aristot. *Pol.* v. 8, 20.) The gymnasiarch had to provide the λαμπάς, which was a candlestick with a kind of shield set at the bottom of the socket, so as to shelter the flame of the candle; as is seen in the following woodcut, taken from a coin in Mionnet (pl. 49. 6.) He had also to provide for the training of the runners, which was of no slight consequence, for the race was evidently a severe one (compare Aristoph. *Vesp.* 1203, *Ran.* 1085), with other expenses, which on the whole were very heavy, so that Isaeus (*de Philoct. Haered.* p. 62. 20) classes this office with the χορηγία and τρηφαρχία, and reckons that it had cost him 12 minae. The discharge of this office was called γυμνασιαρχεῖν λαμπάδι (Isaeus, *l. c.*), or ἐν ταῖς λαμπάδι γυμνασιαρχεῖσθαι (Xen. *de Vectig.* iv. 52). The victorious gymnasiarch presented his λαμπάς as a votive offering (ἀνθήμα, Böckh, *Inscr.* No. 243, 250).

As to the manner of the λαμπαδοφορία, there are some things difficult to understand. The case stands thus. We have two accounts, which seem contradictory. — First, it is represented as a course, in which a λαμπάς was carried from one point to

another by a chain of runners, each of whom formed a successive link. The first, after running a certain distance, handed it to the second, the second in like manner to the third, and so on, till it reached the point proposed. Hence the game is used by Herodotus (viii. 98) as a comparison whereby to illustrate the Persian ἀγγαραφίον, by Plato (*Leg.* p. 776, b.) as a living image of successive generations of men, as also in the well-known line of Lucretius (ii. 77.)

"Et quasi cursores vitae lampada tradunt."

(Compare also Auctor, ad *Herenn.* iv. 46.) And it is said that the art consisted in the several runners carrying the torch unextinguished through their respective distances, those who let it go out losing all share of honour. Now, if this were all, such explanation might content us. But, secondly, we are plainly told that it was an ἀγών, the runners are said ἀμυλλᾶσθαι (Plat. *Rep.* *l. c.*); some are said to have won (νικᾶν λαμπάδι, Andoc. in *Aleob.* ad fin.; compare Böckh, *Inscr.* No. 243, 244); the Schol. on Aristoph. *Ran.* (*l. c.*) talks of τοὺς ὑστάτους τρέχοντας, which shows that it must have been a race between a number of persons; the Schol. on the same play (v. 133) speaks of ἀφείναι τοὺς δρομέας, τοὺς τρέχοντας, which shows that a number must have started at once.

This second account implies competition. But in a chain of runners, each of whom handed the torch to the next man successively, where could the competition be? One runner might be said to lose—he who let the torch out; but who could be said to win?

We offer the following hypothesis in answer to this question. Suppose that there were several chains of runners, each of which had to carry the torch the given distance. Then both conditions would be fulfilled. The torch would be handed along each chain, — which would answer to the first condition of successive delivery. That chain in which it travelled most quickly and soonest reached its destination would be the winner, — which would answer to the second condition, it being a race between competitors.

In confirmation of this hypothesis we observe as follows: — The inscription in Böckh, No. 245, consists of the following lines: —

λαμπάδα νεκίσας σὺν ἐφέβοις τὴν δ' ἀνέθηκα
Εὐτυχίδης παῖς δὲν Εὐτυχίδους Ἀθμονεῖς.

This Eutychides was no doubt the gymnasiarch who won with the ἐφέβοι he had trained, just as Andocides (*l. c.*) talks of his νεκικήναι λαμπάδι as gymnasiarch; so too Inscr. No. 250 records a like victory of the tribe Cecropia.* Now we know that the gymnasiarchs were chosen one from each tribe. If then each furnished a chain of λαμπαδοφόροι, there would have been ten (in later times twelve) chains of runners. Perhaps, however, the gymnasiarchs were not all called on to perform this service, but each once only in the year, which would allow us for each of the three greater celebrations

* No. 244 gives a list of οἱ νεκίσαντες τὴν λαμπάδα, the winners in the torch-race, fourteen in number. Who were these? If the several links of the winning chain, it is rather against analogy that they should be named. No one ever heard the names of a chorus; yet they can hardly be fourteen winning gymnasiarchs.

* Probably the greater Panathenaea. (Böckh, *ubi sup.*)

† The ceremony at the Apaturia was different. [APATURIA.]

(the Prometheia, Panathenaea, and Hephaestea) three or four chains of competitors.

The *place* of running was, in these great celebrations, from the altar of the Three Gods (Prometheus, Athena, and Hephaestus) in the outer Cerameicus to the Acropolis, a distance of near half a mile. (Pausan. i. 30. § 2; Schol. ad *Ram.* 1085.) That in honour of Bendis was run in the Peiraeus. (Plat. *L. c.*)

The *origin* of these games must be sought, we think, in the worship of the Titan Prometheus. The action of carrying an unextinguished light from the Cerameicus to the Acropolis is a lively symbol of the benefit conferred by the Titan upon man, when he bore fire from the habitations of the gods, and bestowed it upon man.

πλέγας ἀκαμάτοις πυρὸς τηλέσκοπον αὐγὴν
ἐν κόλῳ νάρθηκι. (Hesiod. *Theog.* 566. Gaisf.)

But the gratitude to the giver of fire soon passed to the Olympian gods who presided over its use, — Hephaestus, who taught men to apply it to the melting and moulding of metal, and Athena, who carried it through the whole circle of useful and ornamental arts. To these three gods, then, were these games at first devoted, as the patrons of fire. And looking to the place it was run in — the Cerameicus or Potters' quarter — we are much inclined to adopt Welcker's suggestion (*Aeschylische Trilogie*, p. 121), viz. that it was the *κεραμῆς* or potters who instituted the *λαμπαδηφορία*. Athena (as we learn from the *Κεραμῆς*) was their patron goddess; and who more than they would have reason to be thankful for the gift and use of fire? Pottery would be one of the first modes in which it would be made serviceable in promoting the arts of life. In later times the same honour was paid to all gods who were in any way connected with fire, as to Pan, to whom a perpetual fire was kept up in his grotto under the Acropolis, and who was in this capacity called by the Greeks Phanetes, by the Romans Lucidus; so also to Artemis, called by Sophocles Ἀμφίπυρος, and worshipped as the moon. (Creuzer, *Symbolique*, vol. ii. pp. 752, 764, French transl.) At first, however, it seems to have been a symbolic representation in honour of the gods who gave and taught men the use of *material moulding fire* (πάντεχρον πῦρ, διδασκαλὸς τέχνης, as Aeschylus calls it, *Prom.* 7. 110), though this special signification was lost sight of in later times. Other writers, in their anxiety to get a common signification for all the times and modes of the *λαμπαδηφορία*, have endeavoured to prove that all who were honoured by it were connected with the heavenly bodies, *λαμπερὸν δυνάσται*, (so Creuzer, *L. c.*; Müller, *Minerva Polias*, p. 5); others that it always had an inner signification, alluding to the inward fire by which Prometheus put life into man (so Brünsted, *Voyages*, vol. ii. p. 286, note 2). But this legend of Prometheus was a later interpretation of the earlier one, as may be seen by comparing Plat. *Protag.* p. 321. d, with Hesiod. *Theog.* 561, &c. [H. G. L.]

LAMPAS. [LAMPADOPHORIA.]

LANARIUS. [PILEUS.]

LAN'CEA. [HASTA, p. 588 a.]

LANIFICIUM. [TELA.]

LANISTA. [GLADIATORES.]

LANTERNA. [LATERNA.]

LANX, *dim.* LANCULA, a large dish, made of silver or some other metal, and sometimes em-

bossed, used at splendid entertainments to hold meat or fruit (Cic. *ad Att.* vi. 1; Hor. *Sat.* ii. 2. 4, ii. 4. 41; Ovid. *de Ponto*, iii. 5. 20; Petron. 31); and consequently at sacrifices (Virg. *Georg.* ii. 194, 394, *Aen.* viii. 284, xii. 215; Ovid. *de Ponto*, iv. 8. 40) and funeral banquets (Propert. ii. 13. 23). The silver dishes, used by the Romans at their grand dinners, were of a vast size, so that a boar, for example, might be brought whole to table. (Hor. *L. c.*) They often weighed from 100 to 500 pounds. (Plin. *H. N.* xxxiii. 52.)

The *balance* (*LIBRA bilanz*, Mart. Cap. ii. 180) was so called, because it had two metallic dishes. (Cic. *Acad.* iv. 12, *Tusc.* v. 17; Virg. *Aen.* xii. 725; Pers. iv. 10.) [J. Y.]

LA'PHRIA (*Ἀφρία*), an annual festival, celebrated at Patrae in Achaia, in honour of Artemis, surnamed Laphria. The peculiar manner in which it was solemnised during the time of the Roman empire (for the worship of Artemis Laphria was not introduced at Patrae till the time of Augustus), is described by Pausanias (viii. 18. § 7). On the approach of the festival the Patraeans placed in a circle, around the altar of the goddess, large pieces of green wood, each being sixteen yards in length; within the altar they placed dry wood. They then formed an approach to the altar in the shape of steps, which were slightly covered with earth. On the first day of the festival a most magnificent procession went to the temple of Artemis, and at the end of it there followed a maiden who had to perform the functions of priestess on the occasion, and who rode in a chariot drawn by stags. On the second day the goddess was honoured with numerous sacrifices, offered by the state as well as by private individuals. These sacrifices consisted of eatable birds, boars, stags, goats, sometimes of the cubs of wolves and bears, and sometimes of the old animals themselves. All these animals were thrown upon the altar alive at the moment when the dry wood was set on fire. Pausanias says that he often saw a bear, or some other of the animals, when seized by the flames, leap from the altar and escape across the barricade of green wood. Those persons who had thrown them upon the altar, caught the devoted victims again, and threw them back into the flames. The Patraeans did not remember that a person had ever been injured by any of the animals on this occasion. (Comp. Paus. iv. 31. § 6; Schol. ad *Eurip. Orest.* 1087.) [L. S.]

LAPIS SPECULARIS. [DOMUS, p. 432 a.]

LA'QUEAR. [DOMUS, p. 432 a.]

LA'QUEUS, a rope, was used to signify the punishment of death by strangling. This mode of execution was never performed in public, but only in prison and generally in the Tullianum. Hence we find the words *carcer* and *laqueus* frequently joined together (see e.g. Tac. *Ann.* iii. 50). Persons convicted of treason were most frequently put to death by strangling, as for instance the Catilinarian conspirators (*laqueo gulam fringere*, Sall. *Cat.* 55). This punishment was frequently inflicted in the reign of Tiberius (Tac. *Ann.* v. 9, vi. 39, 40; Suet. *Tib.* 61), but was abolished soon afterwards (Tac. *Ann.* xiv. 48).

LAQUEATORES. [GLADIATORES, p. 575, b.]

LARA'RIMUM was a place in the inner part of a Roman house, which was dedicated to the Lares,

and in which their images were kept and worshipped. It seems to have been customary for religious Romans in the morning, immediately after they rose, to perform their prayers in the lararium. This custom is said at least to have been observed by the emperor Alexander Severus (Lamprid. *Al. Sev.* 29, 31), who had among the statues of his Lares those of Christ, Abraham, Orpheus, and Alexander the Great. This emperor had a second lararium, from which the first is distinguished by the epithet *majus*, and the images of his second or lesser lararium were representations of great and distinguished men, among whom are mentioned Virgil, Cicero, and Achilles. That these images were sometimes of gold, is stated by Suetonius (*Vitell.* 2). We do not know whether it was customary to have more than one lararium in a house, or whether the case of Alexander Severus is merely to be looked upon as an exception. [L. S.]

LARENTA'LIA, sometimes written LARENTINA'LIA and LAURENTA'LIA, was a Roman festival in honour of Acca Larentia, the wife of Faustulus and the nurse of Romulus and Remus. It was celebrated in December on the 10th before the Calends of January. (Festus, s. v.; Macrob. i. 10; Ovid, *Fast.* iii. 57.) The sacrifice in this festival was performed in the Velabrum at the place which led into the Nova Via, which was outside of the old city not far from the porta Romanula. At this place Acca was said to have been buried. (Macrob. l. c.; Varr. *de Ling. Lat.* v. 23, 24.) This festival appears not to have been confined to Acca Larentia, but to have been sacred to all the Lares. (Hartung, *Die Religion der Römer*, vol. ii. p. 146.)

LARES. See *Dict. of Gr. and Rom. Biography and Mythology*.

LARGITIO. [AMBITUS; FRUMENTARIAE LEGES.]

LARNACES (ἀρνάκες). [FUNUS, p. 555, b.] LATER, *dim.* LATERCULUS (πλινθος, *dim.* πλινθίς, πλινθιον,) a brick. Besides the Greeks and Romans other ancient nations employed brick for building to a great extent, especially the Babylonians (Herod. 179; Xen. *Anab.* iii. 4. §§ 7, 11; Nahum, iii. 14) and Egyptians. In the latter country a painting on the walls of a tomb at Thebes (Wilkinson's *Manners and Customs*, vol. ii. p. 99) exhibits slaves, in one part employed in procuring water, in mixing, tempering, and carrying the clay, or in turning the bricks out of the mould [FORMA], and arranging them in order on the ground to be dried by the sun, and in another part carrying the dried bricks by means of the yoke [ASILLA]. In the annexed woodcut we see a man with three bricks suspended from each end of the yoke, and beside him another who returns from having deposited his load.

These figures are selected from the above-mentioned painting, being in fact original portraits of two Ἀργυπτιοὶ πλινθοφόροι, girt with linen round the loins in exact accordance with the description given of them by Aristophanes, who at the same time alludes to all the operations in the process of brick-making (πλινθοποιία, Schol. in *Pind. Ol.* v. 20), which are exhibited in the Theban painting. (*Aves*, 1132—1152; Schol. *ad loc.*)

The Romans distinguished between those bricks which were merely dried by the sun and air (*lateres crudi*, Plin. *H. N.* xxxv. 48; Varro, *de Re Rust.* i. 14; Col. *de Re Rust.* ix. 1; πλινθος ὠμὴ,

Paus. viii. 8. § 5), and those which were burnt in the kiln (*cocti* or *coctiles*; *ὄψαλ*, Xen. *Anab.* ii. 4. § 12; Herod. l. c.). They preferred for the purpose clay which was either whitish or decidedly red. They considered spring the best time for brick-making, and kept the bricks two years before they were used. (Pallad. *de Rust.* vi. 12.) They made them principally of three shapes; the *Ly-dian*, which was a foot broad, 1½ feet long; the *tetradoron*, which was four palms square, i. e. 1 foot; and the *pentadoron*, which was five palms square. They used them smaller in private than in public edifices. Of this an example is presented in the great building at Treves, called the palace of Constantine, which is built of "burnt bricks, each of a square form, fifteen inches in diameter, and an inch and a quarter thick." (Wytttenbach's *Guide to the Roman Antiquities of Treves*, p. 42.) These bricks therefore were the pentadora of Vitruvius and Pliny. At certain places the bricks were made so porous as to float in water; and these were probably used in the construction of arches, in which their lightness would be a great advantage. (Plin. *H. N.* xxxv. 49; Vitruv. ii. 3.) It was usual to mix straw with the clay. (Vitruv. l. c.; Pallad. *de Re Rust.* vi. 12; Exod. v. 7.) In building a brick wall, at least *crudo latere*, i. e. with unburnt bricks, the interstices were filled with clay or mud (*luto*, Col. l. c.), but the bricks were also sometimes cemented with mortar. (Wytttenbach, p. 65, 66.) For an account of the mode of arranging the bricks, see *MURUS*. The Babylonians used asphaltum as the cement. (Herod. l. c.) Pliny (vii. 57) calls the brickfield *lateraria*, and to make bricks *lateres ducere*, corresponding to the Greek πλινθους ἔλκειν or ἔρπειν. (Herod. i. 179, ii. 136.)

The Greeks considered perpendicular brick walls more durable than stone, and introduced them in their greatest public edifices. Brick was so common at Rome as to give occasion to the remark of the emperor Augustus in reference to his improvements, that, having found it brick (*lateritium*), he had left it marble. (Sueton. *Aug.* 29.) The Babylonian bricks are commonly found inscribed with the characters called from their appearance arrow-headed or cuneiform. It is probable that these inscriptions recorded the time and place where the bricks were made. The same practice was enjoined by law upon the Roman brickmakers. Each had his mark, such as the figure of a god, a plant, or an animal, encircled by his own name, often with the name of the place, of the consulate, or of the owner of the kiln or the brickfield. (Seroux

d'Agincourt, *Rec. de Fragmens*, pp. 82—88.) It has been observed by several antiquaries, that these imprints upon bricks might throw considerable light upon the history and ancient geography of the places where they are found. Mr. P. E. Wiener has accordingly traced the 22nd legion through a great part of Germany by the bricks which bear its name. (*De Leg. Rom. vic. sec.*, Darmstadt, 1830, p. 106—137.) In Britain many Roman bricks have been found in the country of the Silures, especially at Caer-leon, with the inscription LEG. II. AVG. stamped upon them. (*Archæologia*, v. p. 35.) The bricks, frequently discovered at York, attest the presence there of the 6th and 9th legions. (Wellbeloved's *Eburacum*, pp. 13, 34, 118.)

The term *laterculus* was applied to various productions of the shape of bricks, such as pastry or confectionery (Plaut. *Poen.* i. 2. 115; Cato, *de Re Rust.* 109); and for the same reason ingots of gold and silver are called *lateres*. (Plin. *H. N.* xxxiii. 17.) [J. Y.]

LATERNA or LANTERNA (*λυνός*, Aristoph. *Pas.* 841; Pherecrates, p. 26. ed. Runkel; *Λυχνόχος*, Phrynichus, *Eclog.* p. 59; in later Greek, *φανάριον*, Athen. xv. 58; Philox. *Gloss.*), a lantern. Two bronze lanterns, constructed with nicety and skill, have been found in the ruins of Herculaneum and Pompeii. One of them is represented in the annexed woodcut. Its form is cylindrical. At the bottom is a circular plate of metal, resting on three bells. Within is a bronze lamp attached to the centre of the base and provided with an extinguisher, shown on the right hand of the lantern. The plates of translucent horn, forming the sides, probably had no aperture; but the hemispherical cover may be raised so as to admit the hand and to serve instead of a door, and it is also perforated with holes through which the smoke might escape. To the two upright pillars supporting the frame-work, a front view of one of which is shown on the left hand of the lantern, chains are attached for carrying the lantern by means of the handle at the top.

We learn from Martial's epigrams (xiv. 61, 62) that bladder was used for lanterns as well as horn. Some centuries later glass was also substituted. (*Isid. Orig.* xx. 10.) The most transparent horn lanterns were brought from Carthage. (Plaut. *Aul.* iii. 6. 30.) When the lantern was required for use, the lamp was lighted and placed within it.

(Pherecrates, p. 21.) It was carried by a slave (Plaut. *Amphitr.* *Prod.* 149, i. 1. 185; Val. Max. vi. 8. § 1), who was called the *laterarius*. (Cic. *in Pis.* 9.) [J. Y.]

LATICLA'VII. [CLAVUS.]

LATI'NAE FER'IAE. [FERIAE.]

LATINITAS, LATIUM, JUS LA'TII (τὸ καλουμένον Λατίνιον, Strab. p. 186, Casaub.; *Λατίνιον δίκαιον*, Appian, *B. C.* ii. 26.) All these expressions are used after the Social war to signify a certain status intermediate between that of Cives and Peregrini. The word "Latinitas" occurs in Cicero (*ad Att.* xiv. 12), where he is speaking of the Latinitas being given to the Siculi after Caesar's death. Before the passing of the Lex Julia de Civitate, Latini were the citizens of the old towns of the Latin nation, with the exception of those which were raised to the rank of municipia: it also comprehended the coloniae Latinae. There were before the Lex Julia only two classes, Cives and Peregrini; and Peregrini comprehended the Latini, Socii, and the Provinciales, or the free subjects of the Romans beyond the limits of Italy. About the year a.c. 89, a Lex Pompeia gave the Jus Latii to all the Transpadani, and the privilege of obtaining the Roman civitas by having filled a magistratus in their own cities. To denote the status of these Transpadani, the word Latinitas was used, which since the passing of the Lex Julia had lost its proper signification; and this was the origin of that Latinitas which thenceforth existed to the time of Justinian. This new Latinitas or Jus Latii was given to whole towns and countries; as for instance by Vespasian to the whole of Spain (Plin. *Hist. Nat.* iii. 4); and to certain Alpine tribes (*Latia donati*, Id. iii. 20). Hadrianus gave the Latium (Latium dedit) to many cities. (Spart. *Hadrian.* 21.)

This new Latinitas was given not only to towns already existing, but to towns which were founded subsequently to the Lex Pompeia, as Latinae Coloniae; for instance Novum-Comum, which was founded a.c. 59 by Caesar. (Appian, *B. C.* ii. 26.) Several Latin towns of this class are mentioned by Pliny, especially in Spain.

Though the origin of this Latinitas, which makes so prominent a figure in the Roman jurists, is certain, it is not certain wherein it differed from that Latinitas which was the characteristic of the Latini before the passing of the Julia Lex. It is however clear that all the old Latini had not the same rights, with respect to Rome; and that they could acquire the civitas on easier terms than those by which the new Latinitas was acquired. (Liv. xli. 12.) Accordingly the rights of the old Latini might be expressed by the term *Majus Latium*, and those of the new Latini by the term *Minus Latium*, according to Niebuhr's ingenious emendation of Gaius (i. 96). The *Majus Latium* might be considered to be equivalent to the *Latium Antiquum* and *Vetus* of Pliny (iv. 22); for Pliny, in describing the towns of Spain, always describes the proper colonies as consisting "Civium Romanorum," while he describes other towns as consisting sometimes "Latinorum" simply, and sometimes "Latinorum veterum," or as consisting of oppidani "Latii veteris;" from which an opposition between Latini Veteres and Latini simply might be inferred. But a careful examination of Pliny rather leads to the conclusion that his Latini Veteres and Latini are the same, and that by these

terms he merely designates the Latini Coloniarii hereafter mentioned. The emendation of Niebuhr is therefore not supported by these passages of Pliny, and though ingenious, it ought perhaps to be rejected; not for the reasons assigned by Madvig, which Savigny has answered, but because it does not appear to be consistent with the whole context of Gaius.

The new Latini had not the connubium; and it is a doubtful question whether the old Latini had it. The new Latini had the commercium.

This new Latinitas, which was given to the Transpadani, was that legal status which the Lex Junia Norbana gave to a numerous class of freedmen, hence called Latini Juniani. (Gaius, i. 22, iii. 56; Ulp. *Frag.* tit. i.) The date of this lex is not ascertained; but it is fixed with some probability at A. U. C. 772. (*Latini Juniani*, by C. A. Von Vangerow, Marburg, 1833.)

The Latini Coloniarii, who are mentioned by Ulpian (*Frag.* xix. s. 4), are the inhabitants of towns beyond Italy, to whom the Latinitas was given. These are the towns which Pliny calls "oppida Latinorum veterum," and enumerates with the "oppida civium Romanorum" (iii. 3), which were military colonies of Roman citizens. The passages in which the Latini Coloniarii are mentioned, as a class then existing, must have been written before Caracalla gave the Civitas to the whole empire.

These, which are the views of Savigny on this difficult subject, are contained in the *Zeitschrift*, vol. ix. *Der Röm. Volksschluss der Tafel von Heraclea*.

The Latini could acquire the Jus Quiritium, according to Ulpian (*Frag.* tit. iii. *De Latinis*), in the following ways:—By the Beneficium Principale, Liberi, Iteratio, Militia, Navis, Aedificium, Pistrinum; and by a Senatus-consultum it was given to a female "vulgo quae sit ter enixa." These various modes of acquiring the civitas are treated in detail by Ulpian, from which, as well as the connection of this title "De Latinis" with the first title which is "De Libertis," it appears that he only treated of the modes in which the civitas might be acquired by those Latini who were Liberti. The same remark applies to the observations of Gaius (i. 28) on the same subject (*Quibus modis Latini ad Civitatem Romanam perveniunt*). In speaking of the mode of acquiring the civitas by means of Liberi, Gaius speaks of a Latinus, that is, a Libertus Latinus, marrying a Roman citizen, or a Latina Coloniaria, or a woman of his own condition, from which it is clear that all his remarks under this head apply to Liberti Latini; and it also appears that Gaius speaks of the Latini Coloniarii as a class existing in his time. Neither Ulpian nor Gaius says anything on the mode by which a Latinus Coloniarius might obtain the Civitas Romana.

Savigny's opinions on the nature of the Latinitas are further explained in the eleventh number of the *Zeitschrift* (*Nachträge zu den früheren Arbeiten*). Richard of Cirencester, in his work *De Situ Britanniae*, speaks of ten cities in Britain, which were *Latia jure donatas*; and this is a complete proof, independent of other proofs, that Richard compiled his work from genuine materials. The expression "Latium Jus" could not be invented by a monk, and he here used a genuine term, the full import of which he certainly could not understand. See also CIVIS, LIBERTUS, MANUMISSIO. [G. L.]

LATROCINIUM, LATRONES. Armed persons, who robbed others abroad on the public roads, or elsewhere, were called *Latrones*, and their crime *Latrocinium*. Murder was not an essential part of the crime, though it was frequently an accompaniment. (Sen. *de Ben.* v. 14; Festus, p. 118, ed. Müller; Dig. 49. tit. 15. s. 24, 50. tit. 16. s. 118.) Under the republic, Latrones were apprehended by the public magistrates, such as consuls and praetors, and forthwith executed (Liv. xxxix. 29, 41). By the *Lex Cornelia de Sicariis* of the dictator Sulla, they were classed with sicarii, and punished with death, and this law continued in force in the imperial period (Paulus, v. 23; Dig. 48. tit. 19. s. 28. § 15; Sen. *de Clem.* ii. 1, *Epist.* 7; Petron. 91). The *Grassatores* were another kind of robbers, who robbed people in the streets or roads. The name seems to have been originally applied to those robbers, who did not carry arms, and who followed their trade alone. They appear to have been classed with the sicarii by the Lex Cornelia; and if they used arms or were united with others in committing the robbery, they were punished in the same manner as latrones (Cic. *de Fato*, 15; Suet. *Oct.* 32; Dig. 48. tit. 19. s. 28. § 10). Comp. Rein, *Das Criminalrecht der Römer*, pp. 424–426.

LATRUNCULI (ῥεσσοί, ψῆφοι), draughts. The invention of a game resembling draughts was attributed by the Greeks to Palamedes (ARACUS, § 5). The game is certainly mentioned by Homer, who represents the suitors of Penelope amusing themselves with it. (*Od.* i. 107.) Others ascribed the invention to the Egyptian Theuth (Plat. *Phaedr.* p. 274 d.); and the paintings in Egyptian tombs, which are of far higher antiquity than any Grecian monuments, not unfrequently represent persons employed in this recreation. The painting, from which the accompanying woodcut is taken, is on a papyrus preserved in the Museum of Antiquities at Leyden, and was probably made about 1700 years B.C. It is remarkable that a man is here represented playing alone; whereas not only in works of Egyptian art, but also on Greek painted vases, we commonly observe two persons playing together. For this purpose there

were two sets of men, one set being black, the other white or red. Being intended to represent a miniature combat between two armies, they were called soldiers (*mīlites*, Ovid. *Trist.* ii. 477), foes (*hostes*), and marauders (*latrones*, dim. *latrunculi*, Ovid. *Art. Amat.* ii. 208, iii. 357; Mart. xiv.

20; Sen. *Epist.* 107); also *CALCULLI*, because stones were often employed for the purpose. (Gell. xiv. 1.) Sometimes they were made of metal or ivory, glass or earthenware, and they were various and often fanciful in their forms. The object of each player was to get one of his adversary's men between two of his own, in which case he was entitled to take the man kept in check (Ovid, *ll. cc.*; Mart. xiv. 17), or, as the phrase was, *alligatus* (Sen. *Epist.* 118). Some of the men were obliged to be moved in a certain direction (*ordine*), and were therefore called *ordinarii*; others might be moved any way, and were called *vagi* (Isid. *Orig.* xviii. 67); in this respect the game resembled chess, which is certainly a game of great antiquity.

Seneca calls the board on which the Romans played at draughts, *tabula latruncularia* (*Epist.* 118). The spaces into which the board was divided were called *mandrae*. (Mart. vii. 71.) The abacus, represented at page 1, is crossed by five lines. As five men were allowed on each side, we may suppose one player to arrange his five men on the lines at the bottom of the abacus, and the other to place his five men on the same lines at the top, and we shall have them disposed according to the accounts of ancient writers (*Etymol. Mag. s. v. Περσολ*: Pollux, ix. 97; Eustath, in *Hom. l. c.*), who say that the middle line of the five was called *λεπὰ ὑπάμυν*. But instead of five, the Greeks and Romans often had twelve lines on the board, whence the game so played was called *duodecim scripta*. (Cic. *de Orat.* i. 50; Quintil. xi. 2; Ovid, *Art. Amat.* iii. 363.) Indeed there can be little doubt that the *latrunculi* were arranged and played in a considerable variety of ways, as is now the case in Egypt and other Oriental countries. (Niebuhr, *Reisebesch. nach Arabien*, vol. i. p. 172.)

Besides playing with draughtsmen only, when the game was altogether one of skill, the ancients used dice (*Tesserae*, κυβόλι) at the same time, so as to combine chance with skill, as we do in backgammon or tric-trac. (Ter. *Adelph.* iv. 7. 23; Isid. *Orig.* xviii. 60; Bruckn. *As.* iii. 60; Becker, *Gallus*, vol. ii. p. 228, &c.) [J. Y.]

LATUS CLAVUS. [CLAVUS LATUS.]

LAUDATIO FUNEBRIS. [FUNUS, p. 559 a.]

LAURENTALIA. [LARENTALIA.]

LAUTIA. [LEGATUS.]

LAUTUMIAE, LAUTO'MIAE, LATO'MIAE, or LATU'MIAE (Λαυτομίαι or λατομίαι, Lat. *Lapidinae*), are literally places where stones are cut, or quarries; and in this sense the word *λατομίαι* was used by the Sicilian Greeks. (Pseudo-Ascon. ad Cic. *c. Verr.* ii. 1. p. 161, ed. Orelli; compare Diodor. Sic. xi. 25; Plant. *Poenul.* iv. 2. 5, *Capt.* iii. 5. 65; Festus, *s. v. Latumiae*.) In particular, however, the name *lautumiae* was given to the public prison of Syracuse. It lay in the steep and almost inaccessible part of the town which was called *Epipolae*, and had been built by Dionysius the tyrant. (Aelian. *V. H.* xii. 44; Cic. *c. Verr.* v. 55.) Cicero, who had undoubtedly seen it himself, describes it (*c. Verr.* v. 27) as an immense and magnificent work, worthy of kings and tyrants. It was cut to an immense depth into the solid rock, so that nothing could be imagined to be a safer or stronger prison than this, though it had no roof, and thus left the prisoners exposed to the heat of the sun, the rain, and the coldness of the nights. (Compare Thucyd. vii. 87.) The

whole was a stadium in length, and two plethra in width. (Aelian. *l. c.*) It was not only used as a prison for Syracusan criminals, but other Sicilian towns also had their criminals often removed to it.

The Tullianum at Rome was also sometimes called *lautumiae*. [CARCER.] [L. S.]

LECTICA (κλίνη, κλινίδιον, or φορέιον) was a kind of couch or litter, in which persons, in a lying position, were carried from one place to another. They may be divided into two classes, viz., those which were used for carrying the dead, and those which served as conveniences for the living.

The former of these two kinds of lecticae (also called *lectica funebris*, *lecticula*, *lectus funebris*, *feretrum* or *capulum*), in which the dead were carried to the grave, seems to have been used among the Greeks and Romans from very early times. In the beauty and costliness of their ornaments these lecticae varied according to the rank and circumstances of the deceased. [FUNUS, p. 559 a.] The lectica on which the body of Augustus was carried to the grave, was made of ivory and gold, and was covered with costly drapery worked of purple and gold. (Dion. Cass. lvi. 34; compare Dionys. *Ant. Rom.* iv. 76; Corn. Nepos, *Att.* 22. § 2; Tacit. *Hist.* iii. 67.) During the latter period of the empire public servants (*lecticarii*) were appointed for the purpose of carrying the dead to the grave without any expense to the family to whom the deceased belonged. (Novell. 43 and 59.) Representations of lecticae funebres have been found on several sepulchral monuments. The following woodcut represents one taken from the tombstone of M. Antonius Antius Lupus.

(Compare Lipsius, *Elect.* i. 19; Scheffer, *De Re Vehiculari*, ii. 5. p. 89; Gruter, *Inscript.* p. 954. 8; Böttiger, *Sabina*, vol. ii. p. 200; Agyafalva, *Wanderungen durch Pompeii*.)

Lecticae for sick persons and invalids seem likewise to have been in use in Greece and at Rome from very early times, and their construction probably differed very little from that of a lectica funebris. (Liv. ii. 36; Aurel. Vict. *De Vir. Ill. c.* 34.) We also frequently read that generals in their camps, when they had received a severe wound, or when they were suffering from ill health, made use of a lectica to be carried from one place to another. (Liv. xxiv. 42; Val. Max. ii. 8. § 2; i. 7; Sueton. *Aug.* 91.)

Down to the time of the Gracchi we do not hear that lecticae were used at Rome for any other purposes than those mentioned above. The Greeks, however, had long been familiar with a different kind of lectica (κλίνη or φορέιον), which was introduced among them from Asia, and which was more an article of luxury than anything to supply an actual want. It consisted of a bed or mattress and a pillow to support the head, placed upon a kind of bedstead or couch. It had a roof consisting of the skin of an ox, extending over the couch and resting on four posts. The sides of this lectica were covered with curtains (αἰαλαί). It ap-

pears to have been chiefly used by women (Suid. *s. v. φορτωτήρ*), and by men only when they were in ill health. (Anacr. *ap. Athen.* xii. p. 533, &c.; Plut. *Pericl.* 27; Lysias, *De Vuln. Praem.* p. 172; Andocid. *De Myst.* p. 30; Plut. *Eumen.* 14.) If a man without any physical necessity made use of a lectica, he drew upon himself the censure of his countrymen as a person of effeminate character. (Dinarch. *c. Demosth.* p. 29.) But in the time subsequent to the Macedonian conquests in Asia, lecticae were not only more generally used in Greece, but were also more magnificently adorned. (Plut. *Araf.* 17.) The persons or slaves who carried their masters or mistresses in a lectica were called *φορτωφόροι* (Diog. Laert. v. 4. § 73), and their number was generally two or four. (Lucian, *Epist. Saturn.* 28; *Somn. s. Gall.* 10; *Cyn.* 9; compare Becker, *Charikles*, ii. p. 71, &c.) When this kind of lectica was introduced among the Romans, it was chiefly used in travelling, and only very seldom in the city of Rome itself. The first trace of such a lectica is in a fragment of a speech of C. Gracchus, quoted by Gellius (x. 3). From this passage it seems evident that this article of luxury was introduced into Italy from Asia, and that at the time scarcely any other lectica than the lectica funebris was known to the country people about Rome. It also appears from this passage that the lectica there spoken of was covered; otherwise the countryman could not have asked whether they were carrying a dead body. (Compare Cic. *Philipp.* ii. 45; Plut. *Cic.* 48; Dion Cass. xlvii. 10.) The resemblance of such a lectica used by the Romans to that which the Greeks had received from Asia is manifest from the words of Martial (xi. 98): *lectica tuta pelle veloque*. It had a roof consisting of a large piece of skin or leather expanded over it and supported by four posts, and the sides also were covered with curtains (*vela, plagae, or plagulae*; compare Senec. *Swas.* i. 6; Suet. *Tib.* 10). During the time of the empire, however, the curtains were not thought a sufficient protection for a lectica; and, consequently, we find that lecticae used by men as well as women, were closed on the sides with windows made of transparent stone (*lapis specularis*), whence Juvenal (iv. 20) calls such a lectica an *antrum clausum latis specularibus*. (Compare Juv. iii. 239.) We sometimes find mention of a lectica aperta (Cic. *Phil.* ii. 24), but we have no reason to suppose that in this case it had no roof, for the adjective *aperta* probably means nothing more than that the curtains were removed, i. e. either thrown aside or drawn up. The whole lectica was of an oblong form, and the person conveyed in it lay on a bed, and the head was supported by a pillow, so that he might read and write in it with ease. To what extent the luxury of having a soft and pleasant bed in a lectica was carried, as early as the time of Cicero, may be seen from one of his orations against Verres (v. 11). Feather-beds seem to have been very common. (Juv. i. 159, &c.) The framework, as well as the other appurtenances, were, with wealthy persons, probably of the most costly description. The lectica, when standing, rested on four feet, generally made of wood. Persons were carried in a lectica by slaves (*lecticarii*) by means of poles (*asserēs*) attached to it, but not fixed, so that they might easily be taken off when necessary. (Sueton. *Calig.* 58; Juv. vii. 122, iii. 245; Martial, ix. 23. 9.) There can be no doubt that the

asserēs rested on the shoulders of the lecticarii, and not on thongs which passed round the necks of these slaves and hung down from their shoulders, as some modern writers have thought. (Senec. *Epist.* 80. 110; Tertull. *ad Uxor.* i. 4; Clem. Alex. *Paedag.* iii. 4; Juv. iii. 240, ix. 142.) The act of taking the lectica upon the shoulders was called *succollare* (Plin. *H. N.* xxxv. 10; Sueton. *Claud.* 10), and the persons who were carried in this manner were said *succollari* (Sueton. *Otho.* 6). From this passage we also learn that the name lecticarii was sometimes incorrectly applied to those slaves who carried a person in a sella or sedan-chair. The number of lecticarii employed in carrying one lectica varied according to its size, and the display of wealth which a person might wish to make. The ordinary number was probably two (Petron. *Sat.* 56; Juv. ix. 142); but it varied from two to eight, and the lectica is called hexaphoron or octophoron, accordingly as it was carried by six or eight persons. (Juv. i. 64; Mart. ii. 81, vi. 77; Cic. *c. Verr.* v. 11, *ad Quint.* ii. 10.) Wealthy Romans kept certain slaves solely as their lecticarii (Cic. *ad Fam.* iv. 12); and for this purpose they generally selected the tallest, strongest, and most handsome men, and had them always well dressed. In the time of Martial it seems to have been customary for the lecticarii to wear beautiful red liveries. The lectica was generally preceded by a slave called anteambulo, whose office was to make room for it. (Martial, iii. 46; Plin. *Epist.* iii. 14; compare Becker, *Gallus*, i. p. 213, &c.)

Shortly after the introduction of these lecticae among the Romans, and during the latter period of the republic, they appear to have been very common, though they were chiefly used in journeys, and in the city of Rome itself only by ladies and invalids. (Dion Cass. lvii. 17.) But the love of this as well as of other kinds of luxury increased so rapidly, that Julius Caesar thought it necessary to restrain the use of lecticae, and to confine the privilege of using them to certain persons of a certain age, and to certain days of the year. (Sueton. *Caes.* 43.)

In the reign of Claudius we find that the privilege of using a lectica in the city was still a great distinction, which was only granted by the emperor to his especial favourites. (Suet. *Claud.* 28.) But what until then had been a privilege became gradually a right assumed by all, and every wealthy Roman kept one or more lecticae, with the requisite number of lecticarii. The emperor Domitian, however, forbade prostitutes the use of lecticae. (Suet. *Domit.* 8.) Enterprising individuals gradually began to form companies (*corpus lecticariorum*), and to establish public lecticae, which had their stables (*castra lecticariorum*) in the regio transiberina, and probably in other parts also, where any one might take a lectica on hire. (Victor, *De Regionib. Urb. Rom.* in Graevii Thesaur. iii. p. 49; Martial, iii. 46.) The persons of whom these companies consisted, were probably of the lower orders or freedmen. (Compare Gruter, *Inscript.* 599. 11, 600. 1.)

The lecticae of which we have hitherto spoken, were all portable, i. e. they were constructed in such a manner that the asserēs might easily be fastened to them whenever it was necessary to carry a person in them from one place to another. But the name lectica, or rather the diminutive lecticula, was also sometimes applied to a kind of

sofa, which was not moved out of the house. On it the Romans frequently reclined for the purpose of reading or writing, for the ancients when writing seldom sat at a table as we do, but generally reclined on a couch; in this posture they raised one knee, and upon it they placed the parchment or tablet on which they wrote. From this kind of occupation the sofa was called *lecticula lucubratoria* (Suet. *Aug.* 78), or more commonly *lectulus*. (Plin. *Epist.* v. 5; Ovid, *Trist.* i. 11. 38; compare Alstorph, *De Lecticis Veterum Distrib.*, Amsterdam, 1704.) [L. S.]

LECTICARIA. [LECTICA.]

LECTISTERNIUM. Sacrifices being of the nature of feasts, the Greeks and Romans on occasion of extraordinary solemnities placed images of the gods reclining on couches, with tables and viands before them, as if they were really partaking of the things offered in sacrifice. This ceremony was called a *lectisternium*. Three specimens of the couches employed for the purpose are in the Glyptotek at Munich. The woodcut here introduced exhibits one of them, which is represented with a cushion covered by a cloth hanging in ample folds down each side. This beautiful *pulvinar* (Sueton. *Jul.* 76; Corn. Nep. *Timothe.* 2) is wrought altogether in white marble, and is some-

what more than two feet in height. At the *Epulum Jovis*, which was the most noted lectisternium at Rome, and which was celebrated in the Capitol, the statue of Jupiter was laid in a reclining posture on a couch, while those of Juno and Minerva were seated on chairs by his side; and this distinction was observed in allusion to the ancient custom, according to which only men reclined and women sat at table. (Val. Max. ii. 1. § 2.) Nevertheless it is probable that at a later period both gods and goddesses were represented in the same position: at least four of them, viz. Jupiter Serapis and Juno or Isis, together with Apollo and Diana, are so exhibited with a table before them on the handle of a Roman lamp engraved by Bartoli. (*Luc. Ant.* ii. 34.) Livy (v. 13) gives an account of a very splendid lectisternium, which he asserts to have been the origin of the practice. [J. Y.]

LECTUS (λέχος, κλίνη, εὐνή), a bed. In the heroic ages of Greece beds were very simple; the bedsteads, however, are sometimes represented as ornamented (πρηγὰ λέχους, *Il.* iii. 448; compare *Odys.* xxiii. 219, &c.). The principal parts of a bed were the *χλαῖναι* and *θήγεια* (*Odys.* xix. 337); the former were a kind of thick woollen cloak, sometimes coloured, which was in bad weather worn by men over their *χιτὼν*, and was sometimes spread over a chair to render the seat soft. That

these *χλαῖναι* served as blankets for persons in their sleep, is seen from *Odys.* xiv. 488, 500, 504, 513, 529, xx. 4. The *θήγεια*, on the other hand, were probably a softer and more costly kind of woollen cloth, and were used chiefly by persons of high rank. They were, like the *χλαῖναι*, sometimes used to cover the seat of chairs when persons wanted to sit down. (*Odys.* x. 352.) To render this thick woollen stuff less disagreeable, a linen cloth was sometimes spread over it. (*Odys.* xiii. 73.) It has been supposed that the *θήγεια* were pillows or bolsters; but this opinion seems to be refuted by the circumstance that, in *Odys.* vi. 38, they are described as being washed without anything being said as to any operation which would have necessarily preceded the washing had they been pillows. Beyond this supposition respecting the *θήγεια*, we have no traces of pillows or bolsters being used in the Homeric age. The bedstead (λέχος, λέκτρον, δέμνιον) of persons of high rank was covered with skins (κῶσα) upon which the *θήγεια* were placed, and over these linen sheets or carpets were spread; the *χλαῖνα*, lastly, served as a cover or blanket for the sleeper. (*Odys.* iv. 296, &c.; *Il.* xxiv. 643, &c.; ix. 660, &c.) Poor persons slept on skins or beds of dry herbs spread on the ground. (*Odys.* xiv. 519; xx. 139, &c.; xi. 188, &c.; compare Nitzsch, *zur Odys.* vol. i. p. 210.) These simple beds, to which shortly after the Homeric age a pillow for the head was added, continued to be used by the poorer classes among the Greeks at all times. Thus the bed of the orator Lycurgus is said to have consisted of one sheep-skin (κῶδιον) and a pillow. (Plut. *Vit. Dae. Orat. Lycurg.* p. 842. c.) But the complete bed (εὐνή) of a wealthy Greek in later times, generally consisted of the following parts: κλίνη, ἐπίτονος, τυλεῖον or κνέφαλον, προσκεφάλειον, and στρώματα.

The κλίνη is properly speaking only the bedstead, and seems to have consisted only of posts fitted into one another and resting upon four feet. At the head part alone there was a board (ἀνδάλιντρον or ἐπικλιντρον) to support the pillow and prevent its falling out. Sometimes the ἀνδάλιντρον was wanting, as we see in drawings on ancient vases. (Pollux, x. 34, vi. 9.) Sometimes, however, the bottom part of a bedstead was likewise protected by the board, so that in this case a Greek bedstead resembled a modern so-called French bedstead. The κλίνη was generally made of wood, which in quality varied according to the means of the persons for whose use it was destined; for in some cases we find that it was made of solid maple or box-wood, or veneered with a coating of these more expensive woods. At a later period, bedsteads were not only made of solid ivory or veneered with tortoiseshell, but sometimes had silver feet. (Pollux, l. c.; Aelian, *V. H.* xii. 29; Athen. vi. p. 255.)

The bedstead was provided with girths (τόνος, ἐπίτονος, κειρία) on which the bed or mattress (κνέφαλον, τυλεῖον, καινὸς or τύλη) rested; instead of these girths poorer people used strings. (Aristoph. *Av.* 814, with the Schol.) The cover or ticking of a mattress was made of linen or woollen cloth, or of leather, and the usual material with which it was filled (τὸ ἐμβαλλόμενον, πλήρωμα, or γνέφαλον) was either wool or dried weeds. At the head part of the bed, and supported by the ἐπικλιντρον, lay a round pillow (προσκεφάλειον)

to support the head; and in some ancient pictures two other square pillows are seen, which were intended to support the back. The covers of such pillows are striped in several pictures on ancient vases (see the woodcut under *SYMPOSIUM*), and were therefore probably of various colours. They were undoubtedly filled with the same materials as the beds and mattresses.

The bed-covers, which may be termed blankets or counterpanes, were called by a variety of names, such as *περιστρώματα*, *ὑποστρώματα*, *ἐπιβλήματα*, *ἐρεστριδες*, *χλαῖναι*, *ἀμφιεστριδες*, *ἐπιβόλαια*, *δάπιδες*, *ψιλοδάπιδες*, *ἐυστίδες*, *χρυσόπαστοι*, *τάπητες* or *ἀμφιδάπητες*. The common name, however, was *στρώματα*. They were generally made of cloth, which was very thick and woolly either on one or on both sides. (Pollux, vi. 9.) It is not always easy to distinguish whether the ancients, when speaking of *κλῖναι*, mean beds in our sense of the word, or the couches on which they lay at meal times. We consequently do not know whether the descriptive epithets of *κλῖναι*, enumerated by Pollux, belong to beds or to couches. But this matters little, as there was scarcely any difference between the beds of the ancients and their couches, with this exception, that the latter being made for appearance as well as for comfort, were, on the whole, undoubtedly more splendid and costly than the former. Considering, however, that bedsteads were often made of the most costly materials, we may reasonably infer that the coverings and other ornaments of beds were little inferior to those of couches. Notwithstanding the splendour and comfort of many Greek beds, the Asiatics, who have at all times excelled the Europeans in these kinds of luxuries, said that the Greeks did not understand how to make a comfortable bed. (Athen. ii. p. 48; Plut. *Pelop.* 30.) The places most celebrated for the manufacture of splendid bed-covers were Miletus, Corinth, and Carthage. (Aristoph. *Ran.* 410, 542, with the Schol.; *Lysistr.* 732; Cic. *a. Verr.* i. 34; Athen. i. pp. 27, 28.) It appears that the Greeks, though they wore night-gowns, did not simply cover themselves with the *στρώματα*, but wrap themselves up in them. Less wealthy persons continued, according to the ancient custom, to use skins of sheep and other animals, especially in winter, as blankets. (Pollux, x. 123; Aristoph. *Nub.* 10.)

The bedsteads of the poorer classes are designated by the names *σκιμνους*, *ἀσκάδης*, and *κράββατος*, and an exaggerated description of such a bed is given by Aristophanes. (*Plut.* 540, &c.; compare *Lysistr.* 916.) The words *χαμῆνιον* and *χαμῆνιον*, which originally signified a bed of straw or dry herbs made on the ground (Theocrit. iii. 33; Plut. *Lycorg.* 16), were afterwards applied to a bed which was only near the ground, to distinguish it from the *κλῖναι* which was generally a high bedstead. *Χαμῆνιον* were the usual beds for slaves, soldiers in the field, and poor citizens, and the mattresses used in them were mere mats made of rushes or bast. (Pollux, *l. c.*, and vi. 11; Becker, *Charities*, vol. ii. pp. 114—123; Pollux, x. c. 7, 8, vi. 1.)

The beds of the Romans (*lecti cubicularis*) in the earlier periods of the republic were probably of the same description as those used in Greece; but towards the end of the republic and during the empire, when Asiatic luxuries were imported into Italy, the richness and magnificence of the beds of

the wealthy Romans far surpassed everything we find described in Greece. The bedstead was generally rather high, so that persons entered the bed (*ascendere, ascendere*) by means of steps placed beside it (*accommum*, Varro, *de Ling. Lat.* v. 168, Müller; *Ovid. Fast.* ii. 349, &c.). It was sometimes made of metal, and sometimes of costly kinds of wood or veneered with tortoise-shell or ivory; its feet (*fulcræ*) were frequently of silver or gold. (Plin. xvi. 43; Mart. xii. 67; Juv. xi. 94.) The bed or mattress (*culcita* and *torus*) rested upon girths or strings (*vestes, fusciae, intitæ, or funes*) which connected the two horizontal side-posts of the bed. (Cic. *de Div.* ii. 65; Mart. v. 62; Petron. 97; compare Horat. *Epod.* xii. 12; Cato, *de Re Rust.* c. 10.) In beds destined for two persons, the two sides are distinguished by different names; the sides at which persons entered was open, and bore the name of *sponda*; the other side, which was protected by a board, was called *pluteus*. (Isidor. xx. 11. p. 629, ed. Lindemann.) The two sides of such a bed are also distinguished by the names *torus exterior* and *torus interior*, or *sponda exterior* and *sponda interior* (Ovid. *Amor.* iii. 14. 32; Sueton. *Cæs.* 49); and from these expressions it is not improbable that such lecti had two beds or mattresses, one for each person. Mattresses were in the earlier times filled with dry herbs (Varro, *l. c.*; Ovid. *Fast.* i. 200 and 205), or straw (Horat. *Sat.* ii. 3. 117; Mart. xiv. 160; Senec. *De Vita Beat.* a. 25), and such beds continued to be used by the poor. But in subsequent times wool, and at a still later period, feathers were used by the wealthy for the beds as well as the pillows. (Plin. *H. N.* viii. 48, x. 22; Plaut. *Mil. Glor.* iv. 4. 42; Cic. *Tusc.* iii. 19; Mart. xiv. 161 and 159.) The cloth or ticking (*operimentum* or *involucrum*), with which the beds or mattresses were covered, was called *toral*, *torale*, *linterum*, or *segestre*. (Horat. *Sat.* ii. 4. 84, *Epist.* i. 5. 21; Varro, *l. c.*) The blankets or counterpanes (*vestes stragulae, stragula peristromata, peripetasmata*) were in the houses of wealthy Romans of the most costly description, and generally of a purple colour (*stragula conchyliotincta, peristromata conchyliata, oocinea stragula*) and embroidered with beautiful figures in gold. Covers of this sort were called *peripetasmata Attalica*, because they were said to have been first used at the court of Attalus. (Plin. *H. N.* *l. c.*; Cic. *a. Verr.* iv. 12, 26, *Philipp.* ii. 27; Mart. ii. 16.) The pillows were likewise covered with magnificent casings. Whether the ancients had curtains to their beds is not mentioned anywhere; but as curtains, or rather a kind of canopy (*aulææ*), were used in the lectus tricliniarius (Horat. *Carm.* iii. 29. 15, *Sat.* ii. 8. 54) for the purpose of preventing the dust falling upon the persons lying on it, it is not improbable that the same or a similar contrivance was used in the lectus cubicularis.

The *lectus genialis* or *adversus* was the bridal bed which stood in the atrium, opposite the janua, whence it derived the epithet *adversus*. (Horat. *Epist.* i. 1. 87; Festus, s. v.; comp. *Domus*, p. 428, a.) It was generally high, with steps by its side, and in later times beautifully adorned. (Gellius, xvi. 9; Lucan. ii. 356; Cic. *pro Cluent.* c. 5.)

Respecting the lectus funebriis see the articles *FUNUS* and *LECTICA*. An account of the disposition of the couches used at entertainments, and

of the place which each guest occupied, is given under TRICLINIUM. (Becker, *Gallus*, vol. i. p. 42, &c.) [L. S.]

LECYTHUS (Λέκυθος), a small narrow-mouthed vessel, the principal use of which was to hold oil, for anointing after the bath, and in the palaestra. It was sometimes of leather, but more often of earthen-ware. Numerous terra-cotta vessels of this sort exist, of an oval shape, holding about a pint, generally painted a plain dark brown or black, but sometimes a bright colour, while a few examples are adorned with beautifully executed paintings. Most of them are the productions of the Athenian potteries. (Hom. *Od.* vi. 79; Krause, *Gymn. u. Agon.* vol. i. p. 189, and in Pauly's *Real-Encyclopädie*, s. v.) [P. S.]

LEGAT'IO LI'BERA. [LEGATUS, p. 678, b.]

LEGAT'UM is defined (Dig. 30. s. 116) to be "delibatio hereditatis qua testator ex eo quod universum heredis foret alicui quid collatum velit." This singular succession presupposes a universal succession, for if there is no heres ex testamento or person loco heredis, there can be no legacy. A Legatum then is a part of the hereditas which a testator gives out of it, from the heres (*ab herede*); that is, it is a gift to a person out of that whole (*universum*) which is diminished to the heres by such gift. Accordingly the phrase "ab herede legare" thus becomes intelligible. (Dig. 30. s. 116; "ei testamento legat grandem pecuniam a filio," Cic. *pro Cluent.* 12.) A legatee could not be charged with the payment of a legacy out of what was given to him, a rule of law which was thus expressed, "A legatario legari non potest." A legatum was something given according to the Jus Civile, and therefore could only be given in civilia verba, and in Latin. [TESTAMENTUM.]

The word "Legatum," from the verb *lego*, contains the same element as *Lex*. *Lego* has the sense of appointing or disposing of a matter, as in the phrase "legatum negotium" (Plaut. *Cas.* i. 1. 12); and it is used in the Twelve Tables to express generally a testator's disposition of his property (*uti legassit*, &c.). Ulpian accordingly explains the word Legatum by referring to its etymology, and likening a Legatum to a *Lex* properly so called. "A Legatum," he says, "is that which is left by a testament, *legis modo*, that is, *imperatives*; for those things which are left *precativo modo*, are called Fideicommissa." (Frag. tit. 24.) A legatee was named *legatarius*; those to whom a thing was given jointly (*conjunctim*) were collegatarii. A legacy which was legally valid or good, was *legatum utile*; a void legacy was *inutile*. A legacy which was given absolutely or unconditionally, was said to be given *pure*; one which was given conditionally was said to be given *sub conditione*. The expression *purum legatum*, an unconditional legacy, also occurs. (Dig. 36. tit. 2. s. 5.)

Gaius apologizes for treating of Legata in that part of his Institutional work in which he has placed them. In the first ninety-six chapters of his second book he treats of the acquisition of property in Res singulae, to which class legacies belong. But as the matter of legacies is not intelligible without reference to the matter of hereditas or universal succession, he places the law of legacies (*hanc juris materia*) immediately after that of hereditas.

There were four Civil forms in which a legacy

could be left: Per Vindicationem, Per Damnationem, Sinendi modo, Per Praeceptionem.

A legatum per vindicationem was given in these words: "Hominem Stichum Do, Lego;" or the words might be with reference to the legatee, "Capito, Sumito, Sibi Habeto." A legatum per vindicationem was so called with reference to the legal means by which the legatee asserted his right to the legacy against the heres or any possessor, which was by a vindicatio or an Actio in rem; for as soon as the Hereditatis aditio had taken place, the legatee had the Quiritarian (*ex jure Quiritium*) ownership of the legacy. The two schools raised a question as to this, Whether under such circumstances, the legatee obtained the Quiritarian ownership of the thing before he had consented to take it. The opinion of the Proculiani who contended for such consent, was confirmed by a Constitution of Antoninus Pius (Gaius, ii. 195). It was consistent with the nature of the Per Vindicationem, that those things only could be so given, in which the testator had Quiritarian ownership: and it was also necessary that he should have such ownership both at the time of making his will and at the time of his death; otherwise the legacy was void (*inutile*). But there was an exception in respect of things "quae pondere, numero, mensura constant," as wine, oil, corn, and the precious metals in the form of coin (*pecunia numerata*), in regard to which it was sufficient if the testator had the Quiritarian ownership at the time of his death. By a *senatusconsultum* of the time of Nero, it was enacted that if a testator left a thing as a legacy, which had never been left, the legacy should be equally good as if it had been left in the form most advantageous to the legatee (*optimis jure*), which form was the Legatum per damnationem. But if a testator gave a thing of his own by a testament, which he afterwards alienated, it was the best opinion that the legacy was inutile by the Jus Civile, and that the *Senatusconsultum* did not make it good. If the same thing was given to more than one person either jointly (*conjunctim*) so as to make them collegatarii, or severally (*disjunctim*), each took an equal share. A legatum was given *conjunctim* thus: "Titio et Seio hominem Stichum do, lego;" *disjunctim*, thus: "Titio hominem Stichum do, lego; Seio eundem hominem do, lego." If one collegatarius failed to take, his portion went to the others. In the case of a conditional legacy left per vindicationem, the schools were divided in opinion: the Sabiniani said that it was the property of the heres during the pendency of the condition; the Proculiani said that it was "res nullius."

The form of the Per damnationem was this: Heres meus Stichum servum meum dare damnas esto; but the word *Dato* was equally effective. A thing which belonged to another (*aliena res*) could be thus left, and the heres was bound to procure the thing for the legatee or to pay him the value of it. A thing not in existence at the date of the will might be left by this form, as the future produce of a female slave (*ancilla*). The legatee did not acquire the Quiritarian ownership of the legacy by virtue of the hereditatis aditio: the thing still remained the property of the heres, but the effect of the legatum was to establish an obligatio between the heres and the legatee, who could sue for it by an Actio in personam. If it was a thing Mancipi, the legatee could only acquire the Quiri-

tarian ownership of it by Mancipatio or In jure cessio from the heres: if it was merely delivered, the legatarius only acquired the complete ownership (*plenum jus*) by usucapion. If the same thing was left to two or more *conjunctim*, each had an equal share; if *disjunctim*, the heres was bound to give the thing to one and its value to the rest. In the case of a gift *conjunctim* the share of the legatee who failed to take belonged to the hereditas; but the Lex Papia made it caducum, and gave it first to a collegatarius who had children, then to the heredes who had children, and then to the other legatees who had children (*legatarii*), a privilege which Juvenal alludes to (*dulce caducum*, ix. 88).

The Legatum Sinendi modo was thus given: "Heres meus damnas esto sinere Lucium Titium hominem Stichum sumere sibi que habere;" by which form a testator could give either his own property or that which was the property of his heres at the time of the death. As in the case of a legatum per damnationem, the legatee prosecuted his claim by an Actio in personam. It was doubted whether the heres was bound to transfer the property, in the case of a res mancipi, by mancipatio or in jure cessio, or, in the case of a thing nec mancipi, by traditio or delivery, for the words of the gift are "permit him to take." If the same thing was left to several *conjunctim*, they took it in common, but without any *jus accrescendi* if one of them failed to take. It was a still more doubtful question (in the time of Gaius), whether, if the same thing was given in this way to two severally (*disjunctim*), the whole was due to each, or if the heres was released from all further claim, when either of them had obtained possession of the whole with his permission.

The Legatum per praeceptionem was in this manner: "Lucius Titius hominem Stichum Praecipito;" where "praecipito," in the opinion of the Sabiniani, is the same as "praecipuum sumito," or "take first." The Sabiniani accordingly were of opinion that a legacy could only thus be left to one who was also made a heres; but a Senatusconsultum Neronianum made the legacy good, even if it was thus left to an extraneus, that is, to another than the heres, provided the legatee was a person to whom a legacy could be left in any of the three other modes. For the Senatusconsultum made those legacies valid which were not valid by the Jus Civile on account of the words of the gift (*verborum vitio*), but not those legacies which were invalid on account of the incapacity of the legatee (*vitio personae*), which was the case with a peregrinus. The Sabiniani also maintained that a man could leave in this manner only what was his own, for the only way in which the legatee could enforce his right was by a *judicium familiae erciscundae*, in which *judicium* it was necessary that the *judex* should adjudicate that which was given per praeceptionem, and he could adjudicate on nothing else than the *res hereditaria*. But the same *senatusconsultum* made a legacy valid, which was given in this form, even if the thing did not belong to the testator. The Proculiani contended that a legacy could be given to an extraneus per praeceptionem; and further that if the thing was the testator's *ex jure Quiritium*, it could be sued for (*vindicare*) by the legatee, whether he was a heres or not (*extraneus*); if it was the testator's in bonis, it was a *utile legatum* to the extraneus by the

senatusconsultum; and the heres, if he was the legatee, could obtain it in a *judicium familiae erciscundae*. If it did not belong to the testator in either way, still the legatum was made *utile* both to the heres and the extraneus by the *senatusconsultum*. If the same thing was thus left to more than one either *disjunctim* or *conjunctim*, each had only his share. In all the three forms, except the *per damnationem*, only Things and Jura in re could be the objects of *legata*: but by the *per damnationem* any thing could be made the object of a legatum which could be made the object of an obligation.

By the Law of the Twelve Tables a man could dispose of his property as he pleased, and he might exhaust (*erogare*) the whole hereditas by legacies and bequests of freedom to slaves, so as to leave the heres nothing. The consequence was that in such cases the *scripti heredes* refused to take the hereditas, and there was of course an intestacy. The first legislative measure on this subject was the Lex Furia, called Testamentaria, which did not allow a testator to give as a *donatio mortis causa* or as a legacy more than a thousand *asses* to one person, certain kinsfolk excepted. (Gaius, iii. 225; Ulp. *Frag.* i. 2, xxviii. 7.) But this measure was a failure, for it did not prevent a man from giving as many several thousands to as many persons as he pleased, and so exhausting his estate. The Lex Voconia (a.c. 169) afterwards enacted that no person should take by way of legacy or *donatio mortis causa* more than the heredes (severally, as it seems); but this lex was ineffectual, for by the testator distributing his property among numerous legatees, the heres might have so small a portion as not to make it worth his while to assume the burdens attached to the hereditas. (Gaius, ii. 26; Cic. in *Verr.* i. 43.) The Lex Falcidia (a.c. 40) at last took away all means of evasion by declaring that a testator should not give more than three-fourths in legacies, and thus a fourth was secured to the heres; and "this law," says Gaius, "is now in force." The *Senatusconsultum Pegasianum* extended the same rule of law to *fideicommissa* [*FIDEICOMMISSUM*]; and the Emperor Antoninus applied it to the case of *fideicommissa*, when there was an intestacy. (Dig. 35. tit. 2. a. 18.) The Lex Falcidia applied to the wills of persons who died in captivity (*apud hostes*), for a previous Lex Cornelia had given to the wills of such persons the same force as if they had died *cives* (*in civitate*, Dig. 35. tit. 2. a. 1).

Legata were *inutilia* or void, if they were given before a heres was instituted by the will, for the will derived all its legal efficacy from such institution; there was the same rule as to a gift of freedom. It was an *inutile legatum*, if in form the gift was given after the death of the heres, but it might be given on the event of his death; it was also *inutile* if given in form on the day before the death of the testator, for which rule of law, says Gaius, there seems to be no good reason (*pretiosa ratio*). A legatum could not be left in the way of a penalty (*poenae nomine*), that is, for the purpose of compelling the heres to do or restraining him from doing any particular act. But Justinian made all such *legata* good, except those which were impossible, or forbidden by law or against *boni mores* (*probrosa*) (Inst. 2. tit. 2. a. 36). A legacy could not be left to an uncertain person (*incertus*

persona). The notion of an uncertain person was not of a person who could never be ascertained, for in several of the instances mentioned by Gaius, the person or persons would easily be ascertained (for instance "qui post testamentum consules designati erunt"); but the notion of the uncertainty was referred to the mind of the testator at the time of making his testament. Accordingly the *persona* was not considered *incerta*, where he was one of a certain class, such as *cognati*, though the individual of the class might be uncertain till the event happened which was to determine who out of the class was intended by the testator. Such a form of bequest was called a *certa demonstratio incertae personae*. (Gaius, ii. 238.) A *legatarius* must have the testamentary factio, and be under no legal incapacity. A legacy could not be left to a *postumus alienus*, nor could such a person be a *heres institutus*, for he was an *incerta persona*. It has been explained who is a *postumus* [HERES, p. 601, a]; a *postumus alienus* is one who when born cannot be among the *sui heredes* of the testator.

It was a question whether a legacy could be legally (*recte*) left to a person, who was in the power of another person who was made *heres* by the same will. The *Proculiani* denied that such a legacy could be left either pure or sub conditione. (Gaius, ii. 244.) But if a person who was in the power of another was made *heres*, a legacy might be left (*ab eo legari*) to the person in whose power he was; for if such latter person became *heres* thereby (*per eum*), the legacy was extinguished, because a man cannot owe a thing to himself; but if the son was emancipated, or the slave was manumitted or transferred to another, and so the son became *heres*, or so the slave made another person *heres*, the legacy was due to the father or former master.

Not only *Res singulae* could be given as a legacy, but also a part of a *universitas* of things (*universitatum rerum*) could be so given; thus the *heres* might be directed to share a half or any other part of the *hereditas* with another, which was called *partitio*. (Cic. de Leg. ii. 20, *pro Caelio*. 4; Ulp. Frag. tit. 24. a. 25.) By the *jus civile* there might be a legacy of a *usufructus* of those things which were capable of being used and enjoyed without detriment to the things. By a *senatusconsultum* there might be a legacy of the *abusus* of those things which were consumed in the use, as money, wine, oil, wheat, but the *legatarius* had to give security for the restoration of the same quantity or the same value, when his right to the enjoyment ceased. This technical meaning of *abusus*, that is, the use of things which are consumed in the use, is contrasted with *usufructus* by Cicero (*Top.* 3; *Ueber das alter des quasi-usufructus*, von Puchta, *Rheinisches Mus.* iii. p. 82, and Puchta, *Instit.* ii. § 255).

A legacy might be transferred to another person, or taken away (*adimi*) by another will or codicilli confirmed by a will; it might also be taken away by erasure of the gift from the will. Such a revocation of legacies (*ademptio legatorum*) seems to have been only effected in the way mentioned. The expression *ademption* of legacies in English law has a different meaning, and in the case of a specific thing corresponds to the Roman extinction of legacies, which took place if the testator disposed of the thing in his lifetime.

If a legatee died after the day on which the

legatum had become his (*post diem legati cedentem*), it passed to his *heres*; or to use a phrase of English law, the legacy was vested. The phrase "*dies legati cedit*" accordingly means "the time is come at which the legacy belongs to the legatee," though the time may not have come when he is entitled to receive it; and "*dies venit*" denotes the arrival of the day on which it can be demanded. (Dig. 50. tit. 16. a. 213.) If the legacy was left conditionally there was no vesting till the condition was fulfilled. By the old law, legacies which were left unconditionally or from a time named (*in diem certum*) were vested from the time of the testator's death; but by the *Lex Papia* they vested from the time of opening the will. The legacy might vest immediately on the death of the testator and yet the testator might defer the time of payment. (Dig. 36. tit. 2. a. 21.) A legacy might also be left on a condition of time only, as a legacy to Titius *when* or *if* he should attain the age of fourteen years, in which case the words *when* and *if* were considered equivalent, a decision which has been adopted in English law, in cases in which there is nothing in the will which gives the words "when" or "if" a different signification. (Dig. 36. tit. 2. a. 5, 22; Hanson v. Graham, 6 Ves. p. 243.)

(Gaius, ii. 191—245; Ulp. Frag. tit. xxiv. &c.; Dig. 30—32, &c.; Inst. ii. tit. 20—22; Paulus, S. R. iii. tit. 6.) [FIDUCIARIS.] [G. L.]

LEGATUS. Legati may be divided into three classes: 1. Legati or ambassadors sent to Rome by foreign nations; 2. Legati or ambassadors sent from Rome to foreign nations and into the provinces; 3. Legati who accompanied the Roman generals into the field, or the proconsuls and praetors into the provinces.

1. Foreign legati at Rome, from whatever country they came, had to go to the temple of Saturn and deposit their name with the quaestors, which Plutarch (*Quaest. Rom.* p. 275, b.) explains as a remnant of an ancient custom; for formerly, says he, the quaestors sent presents to all legati, which were called *lautia*, and if any ambassador was taken ill at Rome, he was in the care of the quaestors, who, if he died, had also to pay the expenses of his burial from the public treasury. When afterwards the number of foreign ambassadors increased in proportion as the republic became extended, the former hospitable custom was reduced to the mere formality of depositing the name with the keepers of the public treasury. Previous to their admission into the city, foreign ambassadors seem to have been obliged to give notice from what nation they came and for what purpose; for several instances are mentioned in which ambassadors were prohibited from entering the city, especially in case of a war between Rome and the state from which they came. (Liv. xxx. 21, xlii. 36, xlv. 22.) In such cases the ambassadors were either not heard at all, and obliged to quit Italy (Liv. xlii. 36), or an audience was given to them by the senate (*senatus legatis datur*) outside the city, in the temple of Bellona. (Liv. l. c.; xxx. 21.) This was evidently a sign of mistrust, but the ambassadors were nevertheless treated as public guests, and some public villa outside the city was sometimes assigned for their reception. In other cases, however, as soon as the report of the landing of foreign ambassadors on the coast of Italy was brought to Rome, especially if they were persons of great distinction, as the son of Masinissa (Liv. xlv. 13), or if they

came from an ally of the Roman people, some one of the inferior magistrates, or a legatus of a consul, was despatched by the senate to receive and conduct them to the city at the expense of the republic. When they were introduced into the senate by the praetor or consul, they first explained what they had to communicate, and then the praetor invited the senators to put their questions to the ambassadors. (Liv. xxx. 22.) The manner in which this questioning was frequently carried on, especially when the envoys came from a state with which the Romans were at war, resembled more the cross-questioning of a witness in a court of justice, than an inquiry made with a view to gain a clear understanding of what was proposed. (Liv. l. c. with Gronov's note.) The whole transaction was carried on by interpreters, and in the Latin language. [INTERPRET.] Valerius Maximus (ii. 2. § 3) states that the Greek rhetorician Molo, a teacher of Cicero, was the first foreigner who ever addressed the Roman senate in his own tongue. After the ambassadors had thus been examined, they were requested to leave the assembly of the senate, who now began to discuss the subject brought before them. The result was communicated to the ambassadors by the praetor. (Liv. viii. 1.) In some cases ambassadors not only received rich presents on their departure, but were at the command of the senate conducted by a magistrate, and at the public expense, to the frontier of Italy, and even further. (Liv. xlv. 14.) By the Lex Gabinia it was decreed that from the first of February to the first of March, the senate should every day give audience to foreign ambassadors. (Cic. ad Quint. Frat. ii. 11, 12, ad Fam. i. 4.) There was at Rome, as Varro (*De Ling. Lat.* v. 155, Müller) expresses it, a place on the right-hand side of the senate-house called *Graecostasis*, in which foreign ambassadors waited.

All ambassadors, whencesoever they came, were considered by the Romans throughout the whole period of their existence as sacred and inviolable. (Cic. c. *Ferr.* i. 33; Dionys. Hal. *Ant. Rom.* xi. 25; Tacit. *Ann.* i. 42; Liv. xxi. 10; Dig. 50. tit. 7. a. 17.)

II. Legati to foreign nations in the name of the Roman republic were always sent by the senate (Cic. c. *Vatin.* 15); and to be appointed to such a mission was considered a great honour which was conferred only on men of high rank or eminence; for a Roman ambassador, according to Dionysius, had the powers (*ἐξουσία καὶ δυνάμεις*) of a magistrate and the venerable character of a priest. If a Roman during the performance of his mission as ambassador died or was killed, his memory was honoured by the republic with a public sepulchre and a statue in the Rostra. (Liv. iv. 17; Cic. *Philipp.* ix. 2.) The expenses during the journey of an ambassador were, of course, paid by the republic; and when he travelled through a province, the provincials had to supply him with everything he wanted.

III. The third class of legati, to whom the name of ambassadors cannot be applied, were persons who accompanied the Roman generals on their expeditions, and in later times the governors of provinces also. Legati, as serving under the consuls in the Roman armies, are mentioned along with the tribunes at a very early period. (Liv. ii. 59, iv. 17.) These legati were nominated (*legabatur*) by the consul or the dictator under whom

they served (Sallust. *Jug.* 28; Cic. ad *Att.* xv. 11, ad *Fam.* vi. 6, pro *Leg. Manil.* 19), but the sanction of the senate (*senatusconsultum*) was an essential point without which no one could be legally considered a legatus (Cic. c. *Vatin.* l. c., pro *Seest.* 14); and from Livy (xliii. 1; compare xlv. 18) it appears that the nomination by the magistrates (consul, praetor, or dictator) did not take place until they had been authorised by a decree of the senate. The persons appointed to this office were usually men of great military talents, and it was their duty to advise and assist their superior in all his undertakings, and to act in his stead both in civil and military affairs. (Varro, *de Ling. Lat.* v. 87, Müller.) The legati were thus always men in whom the consul placed great confidence, and were frequently his friends or relations; but they had no power independent of the command of their general. (Caes. *de Bell. Civi.* ii. 17, iii. 51; Appian, *de Bell. Civi.* i. 38.) Their number varied according to the greatness or importance of the war, or the extent of the province: three is the smallest number we know of, but Pompey, when in Asia, had fifteen legati. Whenever the consuls were absent from the army, or when a proconsul left his province, the legati or one of them took his place, and then had the insignia as well as the power of his superior. He was in this case called *legatus pro praetore* (Liv. xxix. 9; Lydus, *de Magistr.* iii. 3; Caes. *de Bell. Gall.* i. 21), and hence we sometimes read that a man governed a province as a legatus without any mention being made of the proconsul whose vicergerent he was. (Sallust. *Cat.* 42.) During the latter period of the republic, it sometimes happened that a consul carried on a war, or a proconsul governed his province through his legati, while he himself remained at Rome, or conducted some other more urgent affairs.

When the provinces were divided at the time of the empire [PROVINCIAE], those of the Roman people were governed by men who had either been consuls or praetors, and the former were always accompanied by three legati, the latter by one. (Dion Cass. liii. 13; Dig. l. tit. 16.) The provinces of the emperor, who was himself the proconsul, were governed by persons whom the emperor himself appointed, and who had been consuls or praetors, or were at least senators. These viceregents of the emperor were called *legati Augusti pro praetore*, *legati praetorii*, *legati consulares*, or simply *legati*, and they, like the governors of the provinciae populi Romani, had one or three legati as their assistants. (Strabo, iii. p. 352; compare Dig. l. tit. 18. a. 7; Tacit. *Ann.* xii. 59, *Agricol.* c. 7; Spanheim, *de Usu et praes. Numism.* ii. p. 595.)

During the latter period of the republic it had become customary for senators to obtain from the senate the permission to travel through or stay in any province at the expense of the provincials, merely for the purpose of managing and conducting their own personal affairs. There was no restraint as to the length of time the senators were allowed to avail themselves of this privilege, which was a heavy burden upon the provincials. This mode of sojourning in a province was called *legatio libera*, because those who availed themselves of it enjoyed all the privileges of a public legatus or ambassador, without having any of his duties to perform. At the time of Cicero the privilege of

legatio libera was abused to a very great extent. Cicero, therefore, in his consulship endeavoured to put an end to it, but owing to the opposition of a tribune, he only succeeded in limiting the time of its duration to one year. (Cic. *de Leg.* iii. 8, *de Leg. Agr.* i. 8, *pro Placc.* 34, *Philipp.* i. 2.) Julius Caesar afterwards extended the time during which a senator might avail himself of legatio libera to five years (Cic. *ad Att.* xv. 11), and this law of Caesar (*Lex Julia*) seems to have remained in force down to a very late period. (Suet. *Tiber.* 31; Dig. 50. tit. 7. c. 14.) [L. S.]

LEGES. [LEX.]

LE'GIO. [EXERCITUS.]

LEGIS ACTIO. [ACTIO.]

LEGIS AQUILIAE ACTIO. [DAMNI INJURIA ACTIO.]

LEGITIMA ACTIO. [ACTIO.]

LEGITIMA HEREDITAS. [HERES.]

LEIPOMARTYRIOU DIKE (λεπομαρτυριών δίκη). [MARTYRIA.]

LEIPONAUTIOU GRAPHE (λεπονναυτίου γραφή). The indictment for desertion from the fleet was preferred before the tribunal of the strategi; and the court which under their superintendence sat for the trial of this and similar military offences was composed of citizens who had been engaged in the expedition in question. (Meier, *Att. Proc.* pp. 108, 133.) The penalty upon conviction seems to have been a fine, and the complete disfranchisement of the offender and his descendants. (Petit. *Leg. Att.* pp. 401, 667.) [J. S. M.]

LEIPOSTRATIOU GRAPHE (λεποστρατίου γραφή). The circumstances of the trial for desertion from the army and the penalties inflicted upon conviction were the same as in the case of desertion from the fleet [LEIPONAUTIOU GRAPHE], and the offence was also punishable by an eisangelia, which, Heraldus suggests, would be frequently adopted when the accuser was solicitous to impose silence upon a political opponent by procuring his disfranchisement, as this was a necessary consequence of judgment being given against the defendant, and prevented his speaking or appearing in public. The eisangelia in such case would be preferred before the assembly of the people, by which, if reasonable cause appeared, it would be submitted to the decision of one of the ordinary legal tribunals. (Herald. *Animad.* in *Salmas.* p. 242.) [J. S. M.]

LEIPOTAXIOU GRAPHE (λεποταξίου γραφή). [ANTRATHEIAS GRAPHE.]

LEITUR'GIA (leitourgia, from λείτων, Ion. λήϊτων, i. e. δημόσιον, α, according to others, πρυτανειόν), is the name of certain personal services which at Athens and in some other Greek republics, every citizen, who possessed a certain amount of property, had to perform towards the state. These personal services, which in all cases were connected with considerable expense, occur in the history of Attica as early as the time of the Peisistratids (Aristot. *Oeconom.* ii. 5), and were probably, if not introduced, at least sanctioned by the legislation of Solon. They were at first a natural consequence of the greater political privileges enjoyed by the wealthy, who, in return, had also to perform heavier duties towards the republic; but when the Athenian democracy was at its height, the original character of these liturgies became changed, for as every citizen now enjoyed the same rights and privileges as the wealthiest,

they were simply a tax upon property connected with personal labour and exertion (τοῖς χρήμασι καὶ τῷ σώματι λειτουργεῖν). Notwithstanding this altered character of the liturgies, we scarcely ever find that complaints were made by persons subject to them; many wealthy Athenians, on the contrary, ruined their estates by their ambitious exertions, and by the desire to gain the favour of the people. (Xen. *de Rep. Att.* i. 13; Demosth. *c. Everget.* p. 1155; compare Lys. *pro bon. Alcib.* p. 646 and 667; Isocrat. *de Big.* 15; Aristot. *Polit.* v. 7. p. 173, ed. Götting.) To do no more than the law required (ἀποποιεῖσθαι, Isaeus, *de Apollod.* c. 38) was at Athens considered as a disgrace, and in some cases a wealthy Athenian, even when it was not his turn, would volunteer to perform a liturgy. (Demosth. *c. Mid.* p. 519, 566, &c.; compare Böckh, *Pub. Econ. of Athens*, p. 448, &c., 2d ed.)

All liturgies may be divided into two classes: 1. ordinary or encyclic liturgies (ἐγκύκλιοι λειτουργία, Demosth. *c. Lept.* p. 463), and 2. extraordinary liturgies. The former were called encyclic, because they recurred every year at certain festive seasons, and comprised the χορηγία, γυμνασιαρχία, λαμπαδαρχία, ἀρχιθεωρία, and ἐστιάσις, which are all described in separate articles. [CHORÆGUS; GYMNASIUM; LAMPADOPHORIA; THEORIA; HÆSTIASIS.] Every Athenian who possessed three talents and above, was subject to them (Demosth. *c. Apolod.* p. 833; Isaeus, *de Pyrrh. herod.* c. 80), and they were undertaken in turns by the members of every tribe who possessed the property qualification just mentioned, unless some one volunteered to undertake a liturgy for another person. But the law did not allow any one to be compelled to undertake more than one liturgy at a time (Demosth. *c. Lept.* p. 462, *c. Polydet.* p. 1209), and he who had in one year performed a liturgy, was free for the next (ἐνιαυτὸν διαλείπον ἕκαστος λειτουργεῖν, Demosth. *c. Lept.* p. 459), so that legally a person had to perform a liturgy only every other year. Those whose turn it was to undertake any of the ordinary liturgies, were always appointed by their own tribe (Demosth. *c. Mid.* pp. 510, 519), or in other words, by the ἐπιμελητὰ τῶν φυλῶν (Tittmann, *Griech. Staaten.* p. 296, &c.), and the tribe shared praise as well as blame with its λειτουργός.

The persons who were exempt from all kinds of liturgies were the nine archons, heiresses, and orphans until after the commencement of the second year of their coming of age. (Lysias, *c. Diogenit.* p. 908; Demosth. *de Symmor.* p. 182.) Sometimes the exemption from liturgies (ἀτελεία) was granted to persons for especial merits towards the republic. (Demosth. *c. Lept.* p. 466, &c.)

The only kind of extraordinary liturgy to which the name is properly applied, is the trierarchy (τριηραρχία); in the earlier times, however, the service in the armies was in reality no more than an extraordinary liturgy. [See EISPHORA and TRIERARCHIA.] In later times, during and after the Peloponnesian war, when the expenses of a liturgy were found too heavy for one person, we find that in many instances two persons combined to defray the expenses of a liturgy (συντελεία). Such was the case with the choregia and the trierarchy. (Hermann, *Polit. Ant.* § 161. n. 12 and 13.)

Liturgies in regard to the persons by whom

they were performed were also divided into λειτουργία πολιτικά, such as were incumbent upon citizens, and λειτουργία τῶν μετοίκων. (Demosth. c. Lept. p. 462.) The only liturgies which are mentioned as having been performed by the μέτοικοι, are the choregia at the festival of the Lenaea (Schol. ad Aristoph. *Plut.* 954), and the ἐστίασις (Ulpian, ad Demosth. *Lept.* § 15), to which may be added the hydiaphoria and skiadephoria. [HYDRIAPHORIA.]

That liturgies were not peculiar to Athens, has been shown by Böckh (*Pub. Econ.* &c. p. 299), for choregia and other liturgies are mentioned at Siphnos (Isocrat. *Aeginet.* c. 17); choregia in Aegina even before the Persian war (Herod. v. 83); in Mytilene during the Peloponnesian war (Antiph. de *Caed.* Herod. p. 744); at Thebes in the time of Epaminondas (Plut. *Aristid.* 1); at Orchomenos, in Rhodes, and in several towns of Asia Minor. (Compare Wolf, *Prolegom.* in Demosth. *Lept.* p. lxxvi. &c.; Wachsmuth, vol. ii. p. 92, &c.) [L. S.]

LEMBUS, a skiff or small boat, used for carrying a person from a ship to the shore. (Plaut. *Mero.* i. 2. 81, ii. 1. 35.) The name was also given to the light boats which were sent ahead of a fleet to obtain information of the enemy's movements. (Isidor. *Orig.* xix. 1; Liv. xxxi. 45, xlv. 10.) Pliny (*H. N.* vii. 56. a. 57) attributes their invention to the inhabitants of Cyrene.

LEMNISCUS (ἀμνίσκος). This word is said to have originally been used only by the Syracusans. (Hezych. s. v.) It signified a kind of coloured ribbon which hung down from crowns or diadems at the back part of the head. (Fest. s. v.) The earliest crowns are said to have consisted of wool, so that we have to conceive the lemniscus as a ribbon wound around the wool in such a manner that the two ends of the ribbon, where they met, were allowed to hang down. See the representations of the corona obsidionalis and civica in p. 359, where the lemnisci not only appear as a means to keep the little branches of the crowns together, but also serve as an ornament. From the remark of Servius (ad *Aen.* v. 269) it appears that coronae adorned with lemnisci were a greater distinction than those without them. This serves to explain an expression of Cicero (*palma lemniscata*, pro *Rosc. Am.* 35) where palma means a victory, and the epithet lemniscata indicates the contrary of infamia, and at the same time implies an honourable as well as lucrative victory. (Comp. Auson. *Epist.* xx. 5.)

It seems that lemnisci were also worn alone and without being connected with crowns, especially by ladies, as an ornament for the head. (Plin. *H. N.* xxi. 3.) To show honour and admiration for a person, flowers, garlands, and lemnisci were sometimes showered upon him while he walked in public. (Cassaub. ad *Suet. Ner.* 25; Liv. xxxiii. 19.)

Lemnisci seem originally to have been made of wool, and afterwards of the finest kinds of bast (*philyrae*, Plin. *H. N.* xv. 14); but during the latter period of the republic the wealthy Crassus not only made the foliage or leaves of crowns of thin sheets of gold and silver, but the lemnisci likewise; and P. Claudius Pulcher embellished the metal lemnisci with works of art in relief and with inscriptions. (Plin. *H. N.* xxi. 3.)

The word lemniscus is used by medical writers in the signification of a kind of liniment applied to

wounds. (Celsus, vii. 28; Veget. *de Re Veter.* ii. 14 and 48, iii. 18.) [L. S.]

LEMURALIA or LEMU'RIA, a festival for the souls of the departed, which was celebrated at Rome every year in the month of May. It was said to have been instituted by Romulus to appease the spirit of Remus whom he had slain (Ovid. *Fast.* v. 473, &c.), and to have been called originally Remuria. It was celebrated at night and in silence, and during three alternate days, that is, on the ninth, eleventh, and thirteenth of May. During this season the temples of the gods were closed, and it was thought unlucky for women to marry at this time and during the whole month of May, and those who ventured to marry were believed to die soon after, whence the proverb, *mensis Maio malas subest*. Those who celebrated the Lemuralia, walked barefooted, washed their hands three times, and threw nine times black beans behind their backs, believing by this ceremony to secure themselves against the Lemures. (Varro, *Vita pop. Rom. Fragm.* p. 241, ed. Bipont; Servius, ad *Aen.* i. 276.) As regards the solemnities on each of the three days, we only know that on the second there were games in the circus in honour of Mars (Ovid. *Fast.* v. 597), and that on the third day the images of the thirty Argei, made of rushes, were thrown from the ponsublicus into the Tiber by the Vestal virgins. (Ovid. *Fast.* v. 621; Fest. s. v. *Depontatus*; compare ARGEI.) On the same day there was a festival of the merchants (*festum mercatorum*, Ovid. *Fast.* v. 670, &c.), probably because on this day the temple of Mercury had been dedicated in the year 495 B.C. (Liv. ii. 21.) On this occasion the merchants offered up incense, and by means of a laurel-branch sprinkled themselves and their goods with water from the well of Mercury at the Porta Capena, hoping thereby to make their business prosper. [L. S.]

LEMURES. See *Dict. of Gr. and Rom. Biography and Mythology*.

LENAEA. [DIONYSIA, p. 411, b.]

LENO, LENOCINIUM. Lenocinium is defined by Ulpian (Dig. 3. tit. 2. s. 4) to be the keeping of female slaves for prostitution and the profits of it; and it was also lenocinium if gain was made in the like way by means of free women. Some lenones kept brothels (*upanaria*) or open houses for prostitution. This trade was not forbidden, but the praetor's edict attached infamia to such persons [INFAMIA]. In the time of Caligula (Sueton. *Cal.* 40, and the notes in Burmann's ed.), a tax was laid on lenones. Theodosius and Valentinian endeavoured to prevent parents from prostituting their children and masters their female slaves by severe penalties; and they forbade the practice of lenocinium under pain of corporal punishment, and banishment from the city, and so forth. Justinian (Nov. 14) also attempted to put down all lenocinium by banishing lenones from the city, and by making the owners of houses, who allowed prostitution to be carried on in them, liable to forfeit the houses and to pay ten pounds of gold; those who by trickery or force got girls into their possession and gave them up to prostitution were punished with the "extreme penalties;" but it is not said what these extreme penalties were. This Novella contains curious matter.

The Lex Julia de Adulteris defined the lenocinium which that lex prohibited (Dig. 48. tit. 1

a. 2. § 2). It was lenocinium, if a husband allowed his wife to commit adultery in order to share the gain. The legislation of Justinian (Nov. 117. c. 9. § 3) allowed a wife a divorce, if her husband had attempted to make her prostitute herself; and the woman could recover the *dos* and the *donatio propter nuptias*. It was lenocinium in the husband if he kept or took back (comp. Sueton. *Domit.* 8) a wife whom he had detected in an act of adultery; or if he let the adulterer who was detected in the act, escape; or if he did not prosecute him.

With respect to other persons than the husband, it was lenocinium by the *lex Julia*, if a man married a woman who was condemned for adultery; if a person who had detected others in adultery, held his peace for a sum of money; if a man commenced a prosecution for adultery and discontinued it; and if a person lent his house or chamber for adulterium or stuprum. In all these cases, the penalty of the *lex Julia* was the same as for adulterium and stuprum. The *lex* in this as in other like instances of *leges*, was the groundwork of all subsequent legislation on lenocinium. Probably no part of the *lex Julia de adulteriis* was formally repealed, but it received additions, and the penalties were increased. (Rein, *Criminalrecht der Römer*, p. 883.) As to the uses of the words *Leno*, *Lenocinium*, in the classical writers, see the passages cited in *Facciolati, Lex.* [G. L.]

LENUS (ἄνδρς). [TORCULAR.]

LEONIDEIA (Λεονιδεΐα), were solemnities celebrated every year at Sparta in honour of Leonidas, who, with his 300 Spartans, had fallen at Thermopylae. Opposite the theatre at Sparta there were two sepulchral monuments, one of Pausanias and another of Leonidas, and here a funeral oration was spoken every year, and a contest was held, in which none but Spartans were allowed to take part. (Paus. iii. 14. § 1.) [L. S.]

LEPTON. [CHALCOUS; OBOLUS.]

LEPTURGI (Λεπτουργοί), a class of artificers, respecting whom there is some doubt. They are commonly supposed to be carvers of fine work in wood; but, on the authority of two passages (Plut. *Aemil. Paul.* 37; Diod. xvii. 115), in the former of which *τοπεύειν καὶ λεπτουργεῖν* are mentioned together, Raoul-Rochette supposes that the *Lepturgi* were those who beat out gold and silver in thin leaves to cover statues and furniture; and that they corresponded to the *Bractearii Artifices* among the Romans. (*Lettre à M. Schorn*, pp. 189, 191.) [P. S.]

LERIA. [LIMBUS; TUNICA.]

LERNAEA (Λερναία), were mysteries (τέλεται) celebrated at Lerna in Argolis, in honour of Demeter. (Paus. ii. 36. § 7.) They were said to have been instituted by Philammon. (Paus. ii. 37. § 3.) In ancient times the Argives carried the fire from the temple of Artemis Pyronia, on Mount Crathis, to the Lernaean. (Paus. viii. 15. § 4.) These mysteries were probably a remnant of the ancient religion of the Pelasgians, but further particulars are not known. [L. S.]

LESCHÆ (λέσχη), is an Ionic word, signifying council or conversation, and a place for council or conversation. There is frequent mention of places of public resort, in the Greek cities, by the name of *λέσχαί*, some set apart for the purpose, and others so called because they were so used by loungers; to the latter class belong the *agora* and its porticoes, the *gymnasia*, and the shops of vari-

ous tradesmen, especially those of the smiths, which were frequented in winter on account of their warmth, and in which, for the same reason, the poor sought shelter for the night. (Hom. *Od.* xviii. 329; Hes. *Op.* 491, 499.) In these passages, however, in which are the earliest examples of the use of the word, it seems to refer to places distinct from the smiths' workshops, though resorted to in the same manner; and we may gather from the grammarians, that there were in the Greek cities numerous small buildings or porticoes, furnished with seats, and exposed to the sun, to which the idle resorted to enjoy conversation, and the poor to obtain warmth and shelter, and which were called *λέσχαί*: at Athens alone there were 360 such. (Eustath. *ad Hom. l. c.*; Proclus, *ad Hes. l. c.*; Hesych., *Etym. Mag.*, s. v.; Kühn, *ad Ad. V. H.* ii. 54.) Suidas, referring to the passage in Hesiod, explains *λέσχη* by *κάμινος*.

By Aeschylus (*Æum.* 366) and Sophocles (*Ant.* 160) the word is used for a solemn council; but elsewhere the same writers, as well as Herodotus, employ it to signify common conversation.

In the Dorian states the word retained the meaning of a place of meeting for deliberation and intercourse, a council-chamber or club-room. At Sparta every phyle had its *lesche*, in which and in the gymnasium the elders passed the greater part of the day in serious and sportive conversation, and in which the new-born children were presented for the decision of the elders as to whether they should be brought up or destroyed. (Plut. *Lyc.* 16, 25; Müller, *Dor.* iii. 10. § 2, iv. 9. § 1.) Some of these Spartan *leschæ* seem to have been halls of some architectural pretensions: Pausanias mentions two of them, the *λέσχη Κροτανών*, and the *λέσχη ναυκλή* (iii. 14. § 2, 15. § 8). They were also used for other purposes. (Ath. iv. p. 138, c.)

There were generally chambers for council and conversation, called by this name, attached to the temples of Apollo, one of whose epithets was *Λεσχηρόπιος* (Harpocrat. s. v.; Plut. *de EI ap. Delph.* p. 385, b.; Müller, *Dor.* ii. 2. § 15, note). Of such *leschæ* the chief was that which was erected at Delphi by the Cnidians, and which was celebrated throughout Greece, even less for its own magnificence, than for the paintings with which it was adorned by Polygnotus. (Paus. x. 25; Böttiger, *Archäol. d. Malerei*, p. 296, &c.; *Dict. of Biog.* s. v. *Polygnotus*.) [P. S.]

LEUCA or LEUGA. [PSA.]

LEX. *Lex* is defined by Papinian (Dig. l. tit. 3. s. 1):—"Lex est commune præceptum, virorum prudentium consultum, delictorum, quas sponte vel ignorantia contrahuntur, coercitio, communis reipublicae sponsio." Cicero (*de Leg.* i. 6) defines it thus:—"Quae scripto sancit quod vult, aut jubendo, aut vetando." (See also *de Leg.* ii. 16.) A Law is properly a rule or command of the sovereign power in a state, published in writing, and addressed to and enforced upon the members of such state; and this is the proper sense of *Lex* in the Roman writers.

In the Institutes (l. tit. 2. s. 4) there is a definition of a *Lex*, which has a more direct reference to that power which is the source of law:—"Lex est quod Populus Romanus senatorio magistratu interrogante, veluti Consule, constituebat." The definition of Capito (Gell. x. 20) is "Generale jussum populi aut tibiis rogante magistratu;"

but this definition, as Gellius observes, will not apply to such cases as the Lex about the Imperium of Pompeius, or that about the return of Cicero, which related only to individuals, and were properly called *Privilegia*.

Of Roman *Leges*, viewed with reference to the mode of enactment, there were properly two kinds, *Leges Curiatae* and *Leges Centuriatae*. *Plebiscita* are improperly called *Leges*, though they were *Laws*, and in the course of time had the same effect as *Leges*.

Originally the *Leges Curiatae* were the only *Leges*, and they were passed by the *populus* in the *Comitia Curiata*. After the establishment of the *Comitia Centuriata*, the *Comitia Curiata* fell almost into disuse; but so long as the Republic lasted, and even under Augustus, a shadow of the old constitution was preserved in the formal conferring of the Imperium by a *Lex Curiata* only, and in the ceremony of *adrogation* being effected only in these *Comitia*. [ADOPTIO.]

Those *Leges*, properly so called, with which we are acquainted, were passed in the *Comitia Centuriata*, and were proposed (*rogabantur*) by a magistratus of senatorial rank. Such a *Lex* was also designated by the name *Populi Scitum*. (Festus, s. v. *Scitum Pop.*) As to the functions of the Senate in legislation, see *AUCTOR* and *SENATUS*.

A *Plebiscitum* was a law made in the *Comitia Tributa*, on the rogation of a Tribune: "*Plebiscitum est quod plebs plebeio magistratu interrogante, veluti Tribuno, constituebat.*" (Inst. l. tit. 2. s. 4.) "Accordingly," says Gaius (i. 3), "formerly the patricii used to say that they were not bound by *Plebiscita*, because they were made without their sanction (*sine auctoritate eorum*); but afterwards the *Lex Hortensia* was carried (b. c. 288), which provided that *Plebiscita* should bind the whole *populus* (in the larger sense of the word), and thus they were made of equal force with *Leges*." (Liv. viii. 12; Gell. xv. 27; *LEGES PUBLILIANAE*.)

When the *Comitia Tributa* were put on the same footing as the *Centuriata*, the name *Lex* was applied also to *Plebiscita*, and thus *Lex* became a generic term, to which was sometimes added the specific designation, as *Lex Plebeivescitum*, *Lex aive Plebiscitum est* [*PLEBISCITUM*].

Cicero, in his enumeration of the sources of Roman law (*Top.* 5), does not mention *Plebiscita*, which he undoubtedly comprehended under "*leges*." Various *Plebiscita* are quoted as *leges*, such as the *Lex Falcidia* (Gaius, ii. 227) and *Lex Aquilia* (Cic. *pro Tullio*, 8. 11.) In the Table of *Heracles* the words "*lege plebisvescito*" appear to refer to the same enactment; and in the *Lex Rubria* there occurs the phrase "*ex lege Rubria aive id plebiscitum est.*" (Savigny, *Zeitschrift*, &c. vol. ix. p. 355.)

The word *Rogatio* (from the verb *rogo*) properly means any measure proposed to the legislative body, and therefore is equally applicable to a proposed *Lex* and a proposed *Plebiscitum*. Accordingly there occur the expressions "*populum rogare*," to propose a *lex* to the *populus*; and "*legem rogare*," to propose a *lex*. (Festus, s. v. *Rogatio*.) A *Rogatio* then is properly a proposed *lex* or a proposed *plebiscitum*. The terms *Rogare*, *Rogatio* also apply to a person being proposed for a magistratus at the *Comitia*. (Sull. *Jug.* 29.) The form of a *Rogatio*, in the case of *Adrogatio*, which was

effected at the *Comitia Curiata* (*per populi rogationem*), is preserved by Gellius (v. 19): it begins with the words "*Velitis, jubeatis, &c.*," and ends with the words "*ita vos Quirites rogo.*" The corresponding expression of assent to the *Rogatio* on the part of the sovereign assembly was, *Uti Rogna*. The rejection of a *Rogatio* is expressed by *Antiquare Rogationem*. (Liv. xxxi. 6.) The term *Rogatio* therefore included every proposed *Lex*, *Plebiscitum*, and *Privilegium*, for without a *Rogatio* there could be no command (*jussum*) of the *Populus* or *Plebs*. But the words *Lex*, *Plebiscitum*, and *Privilegium* were often improperly used to express laws (Gell. x. 20); and *Rogationes*, after they had become laws, were still sometimes called *Rogationes*. The term *Rogationes* is often applied to measures proposed by the *Tribunes*, and afterwards made *Plebiscita*: hence some writers (improperly) view *Rogatio* as simply equivalent to *Plebiscitum*. Besides the phrase "*rogare legem*," there are the phrases "*legem ferre*," to propose a *Lex*, and "*rogationem promulgare*," to give public notice of the contents of a *Lex* which was intended to propose; the phrase "*rogationem accipere*" applies to the enacting body. "*Lex Rogata*" is equivalent to "*Lex Lata*." *Legem perferre* and *Lex perlati* apply to a *Rogatio* when it has become a *Lex*. (Dig. 35. tit. 2. s. 1. *Ad legem Falcidiam*.) The terms relating to legislation are thus explained by Ulpian (tit. 1. s. 3):—"A *Lex* is said either *rogari* or *ferri*; it is said *abrogari*, when it is repealed; it is said *derogari*, when a part is repealed; it is said *subrogari*, when some addition is made to it; and it is said *obrogari*, when some part of it is changed." A subsequent *lex* repealed or altered a prior *lex* which was inconsistent with it. It appears to have been also a principle among the Romans that a Law by long desuetude became of no effect. (Comp. Liv. xxi. 63, and Cic. *de Verr.* v. 18.)

As to their form, we can judge of the Roman style of legislation by the fragments which exist. The Romans seem to have always adhered to the old expressions, and to have used few superfluous words. Great care was taken with such clauses as were proposed to alter a former *lex*, and great care was also used to avoid all interference with a former *lex*, when no change in it was intended. The *Leges* were often divided into chapters (*capita*). (See the tablet of the *Lex de Gallia Cisalpina*; and Cic. *ad Att.* iii. 23.) The *Lex* was cut on bronze (*aes*) and deposited on the *Aerarium*. (Sueton. *Caes.* 28; Plutarch, *Cat. Min.* 17.) Probably the fixing of a *Lex* in a public place was generally only for a time. (Cic. *ad Att.* xiv. 12.) The title of the *lex* was generally derived from the gentile name of the magistratus who proposed it, as the *Lex Hortensia* from the dictator *Hortensius*. Sometimes the *lex* took its name from the two consuls or other magistrates, as the *Acilia Calpurnia*, *Aelia* or *Aelia Sentia*, *Papia* or *Papia Poppaea*, and others. It seems to have been the fashion to omit the word *et* between the two names, though instances occur in which it was used. [*JULIA LEX ET TITIA*.] A *lex* was also often designated, with reference to its object, as the *Lex Cincia* de *Donis et Muneribus*, *Lex Furia Testamentaria*, *Lex Julia Municipalis*, and many others. *Leges* which related to a common object, were often designated by a collective name, as *Leges Agrariae*, *Judiciariae*, and others. Some-

times a chapter of a lex was referred to under the title of the lex, with the addition of a reference to the contents of the chapter, as *Lex Julia de Fundo Dotali*, which was a chapter of the *Lex Julia de Adulteriis*. A lex sometimes took its name from the chief contents or its first chapter, as *Lex Julia de Maritandis Ordinibus*. Sometimes a lex comprised very various provisions, relating to matters essentially different, and in that case it was called *Lex Saturna*. [*LEX CERCILIA DIDIA*, *LEX JULIA MUNICIPALIS*.]

The terms in which a Lex was expressed were fixed by the person who proposed it; but in many cases probably he would require the assistance of some person who was acquainted with technical language. A Lex was proposed to the Comitia in its entire form for acceptance or rejection: there was no discussion on the clauses, and no alteration of them in the Comitia, and indeed discussion of details and alteration were impossible. The Sanctio of a Lex (*Rhet. ad Herenn.* ii. 10; Papi- nian, Dig. 48. tit. 19. s. 41) made a Lex which the Romans call *Perfecta*. In a *Lex Perfecta*, the act which is done contrary to the provisions of the Lex, is declared by the Lex to be null. If a Lex did not contain this Sanctio, it was called *Imperfecta*. A Lex was called minus quam perfecta, when the act which was done contrary to its provisions was not declared null, but the Lex imposed a penalty. (Savigny, *System*, &c. vol. iv. p. 549, &c.) This division of Leges into *Perfectae*, &c. is obviously only applicable to such Leges as referred to what the Romans called the department of *Privatum Jus*.

The number of Leges was greatly increased in the later part of the republican period (Tacit. *Ann.* iii. 25—28), and Julius Caesar is said to have contemplated a revision of the whole body. Under him and Augustus numerous enactments were passed, which are known under the general name of *Juliae Leges*. [*JULIAN LEGES*.] It is often stated that no Leges, properly so called, or *Plebiscita*, were passed after the time of Augustus; but this is a mistake. Though the voting might be a mere form, still the form was kept; and if this were not so, the passage of *Gaius* (i. 2, &c.), in which he speaks of leges and plebiscita as forms of legislation still in use, would not be correct. Besides, various leges are mentioned as having been passed under the Empire, such as the *Lex Visellia*, a *Lex Agraria* under Caligula, and a *Lex Claudia* on the tutela of women. (Gaius, i. 157, 171.) It does not appear when the ancient forms of legislation were laid aside, but they certainly long survived the popular elections to which alone the passage of *Tacitus* (*Ann.* i. 15) refers.

In the Digest a *Senatusconsultum* is sometimes referred to as a Lex (14. tit. 6. s. 9. § 4; s. 14); in which there was no great impropriety if we have regard to the time, for *Senatusconsulta* were then laws. Still a *Senatusconsultum*, properly so called, must not be confounded with a Lex properly so called; and there is no reason for supposing that the *Lex Claudia* of Gaius was a *Senatusconsultum*, for when he speaks of a *Senatusconsultum* of the time of Claudius, he calls it such (i. 84, 91). However there is no mention of any Lex being enacted later than the time of Nerva. (Dig. 47. tit. 21. s. 3. § 1.)

It remains further to explain the words *Rogatio* and *Privilegium*.

Rogatio is defined by Festus to be, a command of the *Populus* relating to one or more persons, but not to all persons; or relating to one or more things, but not to all. That which the *Populus* has commanded (*scivit*) with respect to all persons or things is a Lex; and Aelius Gallus says, *Rogatio* is a genus legis; that which is Lex is not consequently (*continuo*) *Rogatio*; but *Rogatio* must be Lex, if it has been proposed (*rogata*) at legal comitia (*justis comitiis*). According to this definition a *rogatio*, when enacted, is Lex; there is also Lex which is not *rogatio*; therefore we must assume a general name Lex, comprehending *Lex Proper* and *Rogatio*. The passage of Aelius Gallus is emended by Goettling (*Geschichte der Röm. Staatsr.* &c. p. 310); but his emendation is founded on mistaking the sense of the passage, and it converts the clear meaning of Gallus into nonsense. According to the definition of Gallus, *Rogatio* was equivalent to *Privilegium*, a term which occurred in the Twelve Tables (*Cic. de Leg.* iii. 19); and it signified, according to Gallus (*Festus*, s. v. *Rogatio*) an enactment that had for its object a single person, which is indicated by the form of the word (*privi-legium*), "*privae res*" being the same as "*singulae res*." The word *privilegium*, according to the explanation of Gallus, did not convey any notion of the character of the legislative measures: it might be beneficial to the party to whom it referred, or it might not. It is generally used by Cicero in the unfavourable sense (*pro Domo*, 17; *pro Sestio*, 30; *rogationem privilegii similem*, *Brut.* 23). Accordingly in the Republican period *Privilegia* were not general Laws or parts of the general Law: they bear the character of an exception to the general rule. In the *Corpus Juris* *Privilegium* is the common name for a *Jus Singulare*, the meaning of which is explained by Savigny (*System*, &c. i. p. 61).

The meaning of Lex, as contrasted with *Jus*, is stated in the article *Jus*.

Some other significations of Lex, which are not its proper significations, are easily explained; for instance, Lex is used to express the terms or conditions of a contract, apparently with reference to the binding force of all legal contracts. In English instruments which contain covenants, it is often expressed that it shall be "*lawful*" for one or more of the parties to do a certain act, by which is simply meant that the parties agree about something, which is legal, and which therefore makes a valid agreement. The work of Marcus Manilius (Cic. a. c. 149) on sales is quoted by Cicero (*de Or.* i. 58) as "*Manilianas venalium vendendorum leges*." (See Dig. 18. tit. 1. s. 40, where Lex means conditions of sale.) Accordingly we find the expression *Leges Censoriae* to express the conditions on which the censors let the public property to farm; and perhaps the term also signified certain standing regulations for such matters, which the censors were empowered to make. (*Frag. de jure Fisci*, s. 18; Dig. 50. tit. 16. s. 203.) In both the cases just referred to, the phrase *Lex Censoria* is used (in the singular number); and this Lex, whether a Law proper or not, seems to have been divided into chapters.

Lex simply sometimes signifies the laws of the Twelve Tables.

The extant authorities for the Roman Leges are the works of the classical Roman writers, of the Roman Jurists, and inscriptions. The most useful

modern collection is that in the *Onomasticon* of Orellius, intitled "Index Legum Romanarum quarum apud Ciceronem, ejusque Scholistas, item apud Livium, Velleium Paterculum, A. Gellium nominatim mentio fit." There are also extant fragments of several laws on bronze tablets, such as the *Lex Thoria*, which is a *Lex Agraria*, and is cut on the back of the same tablet which contains the *Lex Servilia*; the *Lex Rubria*; and some few other monuments.

The following is a list of the principal *Leges*:—
ACILIA DE COLONIS DEDUCENDIS (Liv. xxxii. 29).

ACILIA. [REPETUNDAR.]

ACILIA CALPU'RNIA. [AMBITUS.]

AEBUTIA, of uncertain date, which with two *Juliae Leges* put an end to the *Legis Actiones*, except in certain cases. [*JUDEX*; *ACTIO*.]

Another *Lex* of the same name prohibited the proposer of a *lex*, which created any office or power (*curatio ac potestas*), from having such office or power, and even excluded his collegae, cognati and affines. (Cic. *in Ru.* ii. 8, where he mentions also a *Lex Licinia*, and in the *pro Domo*, 20.)

AE'LIA. This *Lex* and a *Fufia Lex* passed about the end of the sixth century of the city, gave to all the magistrates the obnuntiatio or power of preventing or dissolving the comitia, by observing the omens and declaring them to be unfavourable. (Cic. *Phil.* ii. 32, *pro Sextio*, 15, *ad Att.* ii. 9.)

There is some difficulty in stating the precise nature of these two *Leges*; for it is most probable that there were two. The passages in which they are mentioned are collected in Orellii *Onomasticon*, *Index Legum*.

AE'LIA DE COLONIS DEDUCENDIS. (Liv. xxxiv. 53.)

AE'LIA SENTIA. This law which was passed in the time of Augustus (about A. D. 3), chiefly regulated the manumission of slaves; a matter that has been put under certain restrictions in modern slave states also.

By one provision of this law slaves who had been put in chains by their masters as a punishment, or branded, or subjected to the other punishments mentioned in the law (Gaius, i. 13), if they were afterwards manumitted either by the same master or another, did not become Roman citizens or even Latini, but were in the class of *Peregrini dediticii*. [*DEDITICIL*] The law also made regulations as to the age of slaves who might be manumitted. It enacted that slaves under thirty years of age who were manumitted, only became Roman citizens when they were manumitted by the *Vindicta*, and after a legal cause for manumission had been established before a *consilium*. What was a legal cause (*causa justa*), and how the *consilium* was constituted, are explained by Gaius (i. 19, 20). These *consilia* for the manumission of slaves were held at stated times in the provinces, and in Rome. A slave under thirty years of age could become a Roman citizen if he was made free and heres by the testament of a master, who was not solvent. (Gaius, i. 21.) The law also contained provisions by which those who were under thirty years of age at the time of manumission, and had become Latini in consequence of manumission, might acquire the Roman citizenship on certain conditions, which were these. They must have taken to wife a Roman citizen, or a Latina colonaria or a woman of the same class as

themselves, and must have had as evidence of that fact the presence of five Roman citizens of full age, and have begotten a son who had attained the age of one year. On showing these facts to the praetor at Rome, or to the governor in a province, and the magistrate declaring that the facts were proved, the man, his wife, and his child became Roman citizens. If the father died before he had proved his case before the magistrate, the mother could do it, and the legal effect was the same.

If a man manumitted his slave to defraud his creditors, or to defraud a patron of his patronal rights, the act of manumission was made invalid by this law. A person under the age of twenty years was also prevented from manumitting any slave, except by the process of *Vindicta*, and after establishing a legal cause before a *consilium*. The consequence was that though a male, who had completed his fourteenth year, could make a will, he could not by his will manumit a slave (Gaius, i. 37—40). A male under the age of twenty could manumit his slave so as to make him a Latinus, but this also required a legal cause to be affirmed by a *consilium*. The provisions of the *Lex Aelia Sentia*, as to manumitting slaves for the purpose of defrauding creditors, did not apply to *Peregrini*, until the provision was extended for their benefit by a *Setum* in the time of Hadrian. The other provisions of the *Lex* did not apply to *Peregrini*. The application of the principles of the Law is shown in other passages of Gaius (i. 66, 68, 70, 71, 80, 139, iii. 5, 73, 74). In a free state, when manumission must change the condition of slaves into that of citizens, the importance of limiting and regulating the manumitting power is obvious. Under the later Empire such regulations would be of little importance. This law was passed according to the constitutional forms in the time of Augustus, when the status of a *Civis* had not yet lost its value, and the semblance of the old constitution still existed (Ulpian, *Frags.* tit. i.; Dig. 28. tit. 5. a. 57, 60; 38, tit. 2. a. 33; Tacit. *Annal.* xv. 55.)

AEMI'LIA DE CENSORIBUS. A *Lex* passed in the Dictatorship of Mamerus Aemilius (B. C. 433), by which the Censors were elected for a year and a half, instead of a whole lustrum. (Liv. iv. 24, ix. 33.) After this *Lex* they had accordingly only a year and a half allowed them for holding the census and letting out the public works to farm.

AEMI'LIA BAE'HIA. [CORNELIA BARBIA.]
AEMI'LIA LE'PIDI, AEMI'LIA SCAURI.
[*SUMTUARIAE LEGES.*]

AGRA'RIAE. [AGRIARIAE LEGES; and LEX APULEIA; CASSIA; CORNELIA; FLAMINIA; FLAVIA; JULIA; LICINIA; MAMILIA; SEMPRONIA; SERVILIA; THORIA.]

A'MBITUS. [AMBITUS.]

A'MPIA, a *Lex* proposed by T. Ampius and T. Labienus, tr. pl. B. C. 64, by which Cn. Pompeius was allowed to wear a crown of bay at the *Ludi Cirenseae*, and the like. (Vell. Pat. ii. 40; Dion Cass. xxxvii. 21.)

ANNALES LEGES were those *Leges* which determined at what age a man might be a candidate for the several magistratus. (Cic. *Philipp.* v. 17.)

The first *Lex* which particularly determined the age at which a man might be a candidate for the several magistratus was the *Villia*. It was

proposed by L. Villius, tr. pl. a. c. 180 (Liv. xxv. 2, xl. 44.). According to this Lex a man might be elected quaestor at the age of thirty-one, and consul at forty-three. [VILLIA.]

There seems to have been also a Lex Pinaria on this subject. (Cic. *de Orat.* ii. 65.)

A'NTIA. [SUMTUARIAE LEGES.]

ANTONIA DE THERMENSIBUS, about B. C. 72, by which Thermessus in Pisidia was recognised as Libera. (Puchta, *Inst.* vol. i. § 69; Dirksen, *Bemerkungen über das Plebicium de Thermensibus.*)

ANTONIAE, the name of various enactments proposed or passed by the influence of M. Antonius, after the death of the Dictator J. Caesar, such as the Judiciaria. [JUDEX. p. 650, a.] Another lex that was promulgated allowed an appeal to the populus after conviction for Vis or Majestas. (Cic. *Phil.* i. 9.) Various other measures proposed by M. Antonius are mentioned by Cicero (*Phil.* i. 1, ii. 43, v. 3, 5), Dion Cassius (xlv. 51, xlv. 9, 20, 25, 34, xlv. 23, 24), and Appian (*Bell. Civ.* iii. 27, 30.)

APULEIA, gave a surety an action against his co-sureties for whatever he had paid above his share. [INTERCESSIO.]

APULEIA AGRA'RIA, proposed by the tribune L. Apuleius Saturninus, B. C. 101. (Liv. *Epit.* 69; Appian, *Bell. Civ.* i. 29; Cic. *pro Sestio*, 16, 47.)

APULEIA DE COLONIS DEDUCENDIS (Cic. *pro Balbo*, 21).

APULEIA FRUMENTARIA, proposed about the same time by the same tribune. (Auct. *ad Herenn.* i. 12.) [FRUMENTARIAE LEGES.]

APULEIA MAJESTATIS. [MAJESTAS.]

AQUILIA [DAMNI INJURIA ACTIO.]

ATERNIA TARPEIA, B. C. 455. This Lex empowered all magistratus to fine persons who resisted their authority; but it fixed the highest fine at two sheep and thirty oxen, or two oxen and thirty sheep, for the authorities vary in this. (Cic. *de Rep.* ii. 35; Dionys. x. 50; Gell. xi. 1; Festus, s. v. *Multam, Ovibus, Peculatus*, Niebuhr, *Hist. of Rome*, vol. ii. p. 300.)

ATIA DE SACERDOTIIS (B. C. 63), proposed by the tribune T. Atius Labienus, repealed the Lex Cornelia de Sacerdotiis. (Dion Cass. xxxvii. 37.)

ATYLIA MA'RCIA, enacted B. C. 312, empowered the populus to elect sixteen tribuni militum for each of four legions. (Liv. ix. 30.)

ATILIA. [JULIA LEX ET TITIA; TUTOR.]

ATINIA, allowed no usucapion in a stolen thing. (Gell. xvii. 7; Instit. 2. tit. 6. a. 2.) [FURTUM.]

ATINIA, of uncertain date, was a plebicium which gave the rank of senator to a tribune. (Gell. xiv. 8.) The measure probably originated with C. Atinius, who was tribune B. C. 130. (Plin. *H. N.* vii. 45; Cic. *pro Domo*, 47.)

AUFIDIA. [AMBITUS; SENATUSCONSULTUM.]

AURELIA JUDICIALIA. [JUDEX, p. 650, a.]

AURELIA TRIBUNICIA. [TRIBUNI.]

BAEBIA (B. C. 192), which enacted that four praetors and six praetors should be chosen in alternate years (Liv. xl. 44); but the law was not observed. (Meyer, *Orator. Roman. Fragm.* p. 90, 2nd ed.)

BAEBIA CORNELIA. [AMBITUS.]

CAECILIA DE CENSORIBUS or CENSORIA (B. C. 54), proposed by Metellus Scipio repealed a Clodia Lex (B. C. 58), which had prescribed certain regular forms of proceeding for the Censors in exercising their functions as inspectors of Mores, and had required the concurrence of both Censors to inflict the nota censoria. When a senator had been already convicted before an ordinary court, the lex permitted the Censors to remove him from the senate in a summary way. (Dion Cass. xl. 57, xxxviii. 13; Cic. *pro Sestio*, 25; Dig. 50. tit. 16. s. 203. *De Portoria.*)

CAECILIA DE VECTIGALIBUS (B. C. 62), released lands and harbours in Italy from the payment of taxes and dues (*portoria*). The only vectigal remaining after the passing of this lex was the Vicesima. (Dion Cass. xxxvii. 51; Cic. *ad Att.* ii. 16, *ad Quint.* i. 10.)

CAECILIA DIDIA (B. C. 98), forbade the proposing of a Lex Saturna, on the ground that the people might be compelled either to vote for something which they did not approve, or to reject something which they did approve, if it was proposed to them in this manner. This lex was not always operative. It also contained a provision that Leges must be promulgated "trinis nundinis" before they were proposed. (Cic. *Phil.* v. 3, *pro Domo*, 16, 20, *ad Att.* ii. 9.) [LEX and LUCINIA JUNIA.]

CAECILIA DE P. SULLA ET P. AUTRONIO (Orelli Onomasticon).

CAELIA TABELLA'RIA. [TABELLARIAE LEGES.]

CALIGULAE LEX AGRA'RIA. [MAMILIA.]

CALPU'RNA DE A'MBITU. [AMBITUS.]

CALPU'RNA DE CONDICTIONE. [PER CONDICTIONEM.]

CALPU'RNA DE REPETUNDIS. [REPETUNDAR.]

CANULEIA (B. C. 445), established connubium between the Patres and Plebs, which had been taken away by the law of the Twelve Tables. (Liv. iv. 1, 4; Cic. *de Rep.* ii. 37.)

CA'SSIA (B. C. 104), proposed by the tribune L. Cassius Longinus, did not allow a person to remain a senator who had been convicted in a Judicium Populi, or whose Imperium had been abrogated by the populus. (Ascon. in *Cic. Cornel.* p. 78, ed. Orelli.)

CA'SSIA (Tacit. *Ann.* xi. 25), which empowered the Dictator Caesar to add to the number of the Patricii, to prevent their extinction. (Compare Sueton. *Caes.* 41.) C. Octavius was made a patrician by this lex. (Sueton. *Aug.* 2.)

CA'SSIA AGRA'RIA, proposed by the consul Sp. Cassius, B. C. 486. (Liv. ii. 41; Dionys. viii. 76.)

CA'SSIA TABELLA'RIA. [TABELLARIAE LEGES.]

CA'SSIA TERENTIA FRUMENTARIA (B. C. 73) for the distribution of corn among the poor citizens and the purchasing of it. (Cic. *Verr.* iii. 70, v. 21.) [FRUMENTARIAE LEGES.]

CIN'CIA LEX, or MUNERA'LIS. This lex was a plebicium passed in the time of the tribune M. Cincius Alimentus (B. C. 204), and entitled *De Donis et Muneribus* (Cic. *de Orat.* ii. 71, *ad Att.* i. 20; Liv. xxxiv. 4.) One provision of this law, which forbade a person to take anything for his pains in pleading a cause, is recorded by Tacitus (*Ann.* xi. 5), *Ne quis ob causam orandam pecuniam*

W. B.
2

domum accipiat. In the time of Augustus, the lex Cincia was confirmed by a senatusconsultum (Dion Cass. liv. 18), and a penalty of four times the sum received was imposed on the advocate. This fact of confirmation will explain a passage in Tacitus (*Ann.* xiii. 42). The law was so far modified in the time of Claudius, that an advocate was allowed to receive ten sesteria; if he took any sum beyond that, he was liable to be prosecuted for *repetundae* (*repetundarum tenebatur*, Tacit. *Ann.* xi. 7; see also Sueton. *Nero*, 17, and the note in Burmann's edition). [*REPETUNDÆ*.] It appears that this permission was so far restricted in Trajan's time, that the fee could not be paid till the work was done. (Plin. *Ep.* v. 21).

So far the Cincian law presents no difficulty; but it appears that the provisions of the law were not limited to the case already stated. They applied also to gifts in general: or, at least, there were enactments which did limit the amount of what a person could give, and also required gifts to be accompanied with certain formalities; and it does not seem possible to refer these enactments to any other than the Cincian law. The numerous contradictions and difficulties which perplex this subject, are perhaps satisfactorily reconciled and removed by the following conjecture of Savigny (*Ueber die Lex Cincia*, *Zeitschrift*, &c. iv.):—"Gifts which exceeded a certain amount were only valid when made by *mancipatio*, in *jure cessio*, or by tradition: small gifts consequently were left to a person's free choice as before; but large gifts (except in the case of near relations) were to be accompanied with certain formalities." The object of the law, according to Savigny, was to prevent foolish and hasty gifts to a large amount; and consequently was intended among other things to prevent fraud. This was effected by declaring that certain forms were necessary to make the gift valid, such as *mancipatio* and in *jure cessio*, both of which required some time and ceremony, and so allowed the giver opportunity to reflect on what he was doing. These forms also could not be observed, except in the presence of other persons, which was an additional security against fraud. It is true that this advantage was not secured by the law in the case of the most valuable things, *res mancipi*, namely, money, for the transferring of which bare tradition was sufficient; but, on the other hand, a gift of a large sum of ready money is one that people of all gifts are least likely to make.

Savigny concludes, and principally from a passage in Pliny's letters (x. 3), that the Cincian law originally contained no exception in favour of relatives; but that all gifts above a certain amount required the formalities already mentioned. The emperor Antoninus Pius introduced an exception in favour of parents and children, and also of near collateral kinsmen. It appears that this exception was subsequently abolished (Cod. Hermog. vi. 1), but was restored by Constantine (A. D. 319) so far as it was in favour of parents and children; and so it continued as long as the provisions of the Cincian law were in force.

As to the amount beyond which the law forbade a gift to be made, except in conformity to its provisions, see Savigny, *Zeitschrift*, &c. iv. p. 36.

The matter of the lex Cincia is also discussed in an elaborate essay by Haase (*Rheinisches Museum*, 1827), and it is discussed by Puchta, *Inst.* vol. ii. § 206. These examinations of the subject, to-

gether with the essay of Savigny, will furnish the reader with all the necessary references and materials for investigating this subject.

CLAU'DIA, a Lex passed in the time of the emperor Claudius, took away the *agnatorum tutela* in the case of women. (Gaius, i. 171.)

CLAU'DIA DE SENATORIBUS, B. C. 218. The provisions of this Lex are stated by Livy (xxi. 63), and alluded to by Cicero (*in Verr.* v. 18) as antiquated and dead.

CLAU'DIA DE SOCIIS, B. C. 177. (Livy. xli. 8, 9.)

CLAU'DIA DE SENATU COOPTANDO HALBINORUM (Cic. *in Verr.* ii. 49).

CLO'DIAE, the name of various plebiscita, proposed by Clodius when tribune, B. C. 58.

CLODIA DE AUSPICIA, prevented the magistratus from dissolving the Comitia Tributa, by declaring that the auspices were unfavourable. This lex therefore repealed the Aelia and Fufia. It also enacted that a lex might be passed on the Dies Fasti. (Dion Cass. xxxviii. 13; Cic. *in Vatin.* 17, *in Pison.* 4, 5.) [AELIA LEX.]

CLODIA DE CENSORIBUS. [CAECILIA.]

CLODIA DE CIVIBUS ROMANIS INTEREMPTIS, to the effect that "qui civem Romanum indemnatum interemisset ei aqua et igni interdiceretur." (Vell. Pat. ii. 45.) It was in consequence of this lex that the interdict was pronounced against Cicero, who considers the whole proceeding as a privilege. (*Pro Domo*, 18, &c., *Post Rediit*, *in Sen.* 2, 5, &c.; Dion Cass. xxxviii. 14.)

CLODIA FRUMENTARIA, by which the corn, which had formerly been sold to the poor citizens at a low rate, was given. (Dion Cass. xxxviii. 13; Cic. *pro Domo*, 10.) [FRUMENTARIAE LEGES.]

CLODIA DE SODALITATIBUS OR DE COLLEGIIS restored the Sodalitia which had been abolished by a senatusconsultum of the year B. C. 80, and permitted the formation of new sodalitia. (Cic. *in Pis.* 4, *pro Sest.* 25, *ad Att.* iii. 15; Dion Cass. xxxviii. 13.)

CLODIA DE LIBERTINORUM SUFFRAGIIS (Cic. *pro Mil.* 12, 33).

CLODIA DE REGE PTOLEMAEO ET DE EXSULIBUS BYZANTINIS (Vell. Pat. ii. 45; Cic. *pro Domo*, 8, 20, *pro Sest.* 26; Dion Cass. xxxviii. 30; Plut. *Cat. Min.* 34).

There were other so-called Leges Clodiae, which were however Privilegia.

COE'LIA. [CAELIA.]

COMMISSORIA LEX. [COMMISSORIA LEX.]

CORNE'LIAE. Various leges passed in the dictatorship of Sulla and by his influence, are so called. (Livy. *Epit.* 89.)

AGRARIA, by which many of the inhabitants of Etruria and Latium were deprived of the complete civitas and retained only the commercium, and a large part of their lands were made Publicum and given to military colonists. (Cic. *in Rull.* ii. 28, iii. 2, 3.)

DE CIVITATE. (Livy. *Epit.* 86; Cic. *pro Domo*, 30, *pro Cuscia*, 33, 35; Sall. *Hist. Frag.* lib. 1. Orat. Lepidii.)

DE FALSIS. [FALSUM.]

DE INJURIIS. [INJURIA.]

JUDICIALIA. [JUDEX, p. 650, a.]

DE MAGISTRATIBUS (Appian, *Bell. Civ.* i. 100, 101), partly a renewal of old Plebiscita (Livy. vii. 42, x. 13).

MAJESTAS. [MAJESTAS.]

NUMMARIA. [FALSUM.]

DE PROSCRIPTIONE ET PROSCRIPTIS. [PROSCRIPTIO.]

DE PROVINCIIS ORDINANDIS (Cic. *ad Fam.* i. 9, iii. 6, 8, 10).

DE PARRICIDIO. [See below, LEX DE SICARIIS.]

DE REJECTIONE JUDICUM (Cic. *Verr.* ii. 31; and Orellii *Onomasticon*).

DE REPETUNDIS (Cic. *pro Rabir.* 4).

DE SACERDOTIIS. [SACERDOTIA.]

DE SENTENTIA FERENDA (Cic. *pro Cluent.* cc. 20, 27). This was probably only a chapter in a Lex Judiciaria.

DE SICARIIS ET VENEFCIIS. A law of the Twelve Tables contained some provision as to homicide (Plin. *H. N.* xviii. 3), but this is all that we know. It is generally assumed that the law of Numa Pompilius, quoted by Festus (s. v. *Parici Quaestores*), "Si quis hominem liberum dolo sciens morti duit paricida esto," was incorporated in the Twelve Tables, and is the law of homicide to which Pliny refers; but this cannot be proved. It is generally supposed that the laws of the Twelve Tables contained provisions against incantations (*malum carmen*) and poisoning, both of which offences were also included under parricidium: the murderer of a parent was sewed up in a sack (*culleus* or *culleus*) and thrown into a river. It was under the provisions of some old law that the senate by a consultum ordered the consuls P. Scipio and D. Brutus (a. c. 138) to inquire into the murder in the Silva Scantia (*Silva Sila*, Cic. *Brutus*, 22). The lex Cornelia de sicariis et veneficiis was passed in the time of the dictator Sulla, a. c. 82. The lex contained provisions as to death or fire caused by *dolus malus*, and against persons going about armed with the intention of killing or thieving. The law not only provided for cases of poisoning, but contained provisions against those who made, sold, bought, possessed, or gave poison for the purpose of poisoning; also against a magistratus or senator who conspired in order that a person might be condemned in a *judicium publicum*, &c. (Compare Cic. *pro Cluent.* c. 54, with Dig. 49. tit. 8.) To the provisions of this law was subsequently added a *senatusconsultum* against *mala sacrificia*, otherwise called *impia sacrificia*, the agents in which were brought within the provisions of this lex. The punishment inflicted by the law was the *interdictio aquae et ignis*, according to some modern writers. Marcian (Dig. 49. tit. 8. s. 8) says that the punishment was *deportatio in insulam* et *bonorum ademptio*. These statements are reconcilable when we consider that the *deportatio* under the emperors took the place of the *interdictio*, and the expression in the Digest was suited to the times of the writers or the compilers. Besides, it appears that the lex was modified by various *senatusconsulta* and imperial rescripts.

The Lex Pompeia de Parricidiis, passed in the time of Cn. Pompeius, extended the crime of parricide to the killing (*dolo malo*) of a brother, sister, uncle, aunt, and many other relations enumerated by Marcianus (Dig. 49. tit. 9. s. 1); this enumeration also comprises *vitricus*, *noverca*, *privignus*, *privigna*, *patronus*, *patrona*, an *avus* who killed a *nepos*, and a mother who killed a *filius* or *filia*; but it did not extend to a father. All privies to the crime were also punished by the law, and

attempts at the crime also came within its provisions. The punishment was the same as that affixed by the lex Cornelia de sicariis (Dig. l. c.), by which must be meant the same punishment that the lex Cornelia affixed to crimes of the same kind. He who killed a father or mother, grandfather or grandmother, was punished (more *maiorum*) by being whipped till he bled, sewn up in a sack with a dog, cock, viper, and ape, and thrown into the sea, if the sea was at hand, and if not, by a constitution of Hadrian, he was exposed to wild beasts, or, in the time of Paulus, to be burnt. The ape would appear to be a late addition. The murderers of a father, mother, grandfather, grandmother only were punished in this manner (Modest. Dig. 49. tit. 9. s. 9); other parricides were simply put to death. From this it is clear that the lex Cornelia contained a provision against parricide, if we are rightly informed as to the provisions de sicariis et veneficiis, unless there was a separate Cornelia lex de parricidiis. As already observed, the provisions of those two leges were modified in various ways under the emperors.

It appears from the law of Numa, quoted by Festus (s. v. *Parici Quaestores*), that a parricida was any one who killed another *dolo malo*. Cicero (*pro Rosc. Am.* c. 25) appears to use the word in its limited sense, as he speaks of the punishment of the *culleus*. In this limited sense there seems no impropriety in Catilina being called parricida, with reference to his country; and the day of the dictator Caesar's death might be called a parricidium, considering the circumstances under which the name was given. (Suet. *Caes.* c. 88.) If the original meaning of parricida be what Festus says, it may be doubted if the etymology of the word (*pater* and *caedo*) is correct; for it appears that parricida or parricida meant murderer generally, and afterwards the murderer of certain persons in a near relationship. If the word was originally patricida, the law intended to make all malicious killing as great an offence as parricide, though it would appear that parricide, properly so called, was, from the time of the Twelve Tables at least, specially punished with the *culleus*, and other murders were not. (Dig. 49. tit. 8, 9; Paulus, *Recept. Sentent.* v. tit. 24; Dirksen, *Uebersicht, &c. der Zwölftafelgesetze*. Leipzig.)

SUMTUARIAE. [SUMTUARIAE LEGES.]

TESTAMENTARIA. [FALSUM.]

TRIBUNICIA, which diminished the power of the Tribuni Plebis. (Vell. Pat. ii. 30; Appian, *Bell. Civ.* ii. 29; Caes. *Bell. Civ.* i. 7.)

UNCIAARIA, appears to have been a lex which lowered the rate of interest, and to have been passed about the same time with the Leges Sumtuarum de Sulla. (Festus, s. v. *Uniciaria*.)

DE VADIMONIO. [VADIMONIUM.]

DE VI PUBLICA. [VIS PUBLICA.]

There were other Leges Corneliae, such as that de Sponsoribus [INTERCESSIO], which may be Leges of L. Cornelius Sulla.

There were also Leges Corneliae which were proposed by the Tribune C. Cornelius about a. c. 67, and limited the Edictal power by compelling the Praetors Jus dicere ex edictis suis perpetuis. (Ascon. in Cic. *Cornel.* p. 58; Dion Cass. xxxvi. 23.) [EDICTUM.]

Another Lex of the same Tribune enacted that no one "legibus solveretur," unless such a measure was agreed on in a meeting of the Senate at which

688 LEX DUODECIM TABULARUM.

two hundred members were present and afterwards approved by the people; and it enacted that no Tribune should put his veto on such a *Senatusconsultum*. (*Ancon. in Cic. Cornel.* pp. 57, 58.)

There was also a *Lex Cornelia* concerning the wills of those Roman citizens who died in captivity (*apud hostes*). [*LEGATUM*, p. 676, b; *POST-LIMINIUM*.]

CORNELIA DE NOVIS TABELLIS, proposed by the Tribune P. Cornelius Dolabella, B.C. 47, and opposed by M. Antonius, *Magister Equitum*. (*Liv. Epit.* 113; *Dion Cass.* xlii. 32; *Plut. Anton.* 9.)

CORNELIA ET CAECILIA DE CN. POMPEIO, B.C. 57, gave Cn. Pompeius the superintendence over the *Res Frumentaria* for five years, with extraordinary powers. (*Cic. ad Att.* iv. 1; *Liv. Epit.* 104; *Dion Cass.* xxxix. 9; *Plut. Pomp.* 49.) [*FRUMENTARIAE LEGES*.]

CURIATA LEX DE IMPERIO. [*IMPERIUM*.]

CURIATA LEX DE ADOPTIONE. [*ADOPTIO*; and *Gell.* v. 19; *Cic. ad Att.* ii. 7; *Sueton. Aug.* 65; *Tacit. Hist.* i. 15.]

CORNELIA BAEVIA DE AMBITU, proposed by the consul P. Cornelius Cethegus and M. Baebius Tamphilus, B.C. 181. (*Liv.* xl. 19; *Schol. Bob. in Cic. pro Sulla*, p. 361, ed. Orelli.) This law is sometimes, but erroneously, attributed to the consuls of the preceding year, L. Aemilius and Cn. Baebius. [*AMBITUS*.]

DECEMVIRALIS. [*LEX DUODECIM TABULARUM*.]

DECIA DE DUUMVIRIS NAVALIBUS (*Liv.* ix. 30; see *ATILIA MARCIA*).

DIDIA. [*SUMTUARIAE LEGES*.]

DOMITIA DE SACERDOTIIS. [*SACERDOTIA*.]

DUILIA (B.C. 449), a plebiscitum proposed by the Tribune Duilius, which enacted "qui plebem sine tribunis reliquisset, quique magistratum sine provocations creasset, tergo ac capite puniretur." (*Liv.* iii. 55.)

DUILIA MAENIA DE UNCIARIO FOMORE B.C. 357. (*Liv.* ii. 16, 19.)

The same tribunes Duilius and Maenius carried a measure which was intended in future to prevent such unconstitutional proceedings as the enactment of a *Lex* by the soldiers out of Rome, on the proposal of the Consul. (*Liv.* vii. 16.)

DUODECIM TABULARUM. In the year B.C. 462 the Tribune C. Terentilius Arsa proposed a rogation that five men should be appointed for the purpose of preparing a set of laws to limit the Imperium of the consuls. (*Liv.* iii. 9.) The Patricians opposed the measure, but it was brought forward by the tribunes in the following year with some modifications: the new rogation proposed that ten men should be appointed (*legum latores*) from the plebs and the patricii, who were to make laws for the advantage of both classes, and for the "equalizing of liberty," a phrase the import of which can only be understood by reference to the disputes between the two classes. (*Liv.* ii. 10; *Dionys.* x. 3.) According to *Dionysius* (x. 52, 54) in the year B.C. 454 the Senate assented to a Plebiscitum, pursuant to which commissioners were to be sent to Athens and the Greek cities generally, in order to make themselves acquainted with their laws. Three commissioners were appointed for the purpose. On the return of the commissioners, B.C. 452, it was agreed that persons

LEX DUODECIM TABULARUM.

should be appointed to draw up the code of laws (*decemviri Legibus scribundis*), but they were to be chosen only from the Patricians, with a provision that the rights of the Plebeians should be respected by the decemviri in drawing up the laws. (*Liv.* iii. 32, &c.) In the following year (B.C. 451) the Decemviri were appointed in the *Comitia Centuriata*, and during the time of their office no other magistratus were chosen. The body consisted of ten Patricians, including the three commissioners who had been sent abroad: Appius Claudius, Consul designatus, was at the head of the body. The Ten took the administration of affairs in turn, and the Insignia of office were only used by him who for the time being directed the administration. (*Liv.* iii. 33.) Ten Tables of Laws were prepared during the year, and after being approved by the Senate were confirmed by the *Comitia Centuriata*. As it was considered that some further Laws were wanted, Decemviri were again elected B.C. 450, consisting of Appius Claudius and his friends: but the second body of Decemviri comprised three plebeians, according to *Dionysius* (x. 58), but *Livy* (iv. 3) speaks only of Patricians. Two more Tables were added by these Decemviri, which *Cicero* (*de Repub.* ii. 37) calls "*Duae tabulae iniquarum legum*." The provision which allowed no connubium between the Patres and the Plebs is referred to the Eleventh Table. (*Dirksen, Uebersicht*, &c., p. 740.) The whole Twelve Tables were first published in the consulship of L. Valerius and M. Horatius after the downfall of the Decemviri, B.C. 449. (*Liv.* iii. 54, 57.) This the first attempt to make a code remained also the only attempt for near one thousand years, until the legislation of Justinian. The Twelve Tables are mentioned by the Roman writers under a great variety of names: *Leges Decemvirales*, *Leges Decemvirales*, *Leges XII*, *Leges XII tabularum* or *Duodecim*, and sometimes they are referred to under the names of *Leges* and *Lex* simply, as being pre-eminently The Law.

The Laws were cut on bronze tablets and put up in a public place. (*Liv.* iii. 57; *Diod.* xii. 56.) *Pomponius* (*Dig.* i. tit. 2. a. 2. § 4) states that the first Ten Tables were on ivory (*tabulae eborae*): a note of *Zimmern* (*Gesch. des Röm. Privatrechts*, vol. i. p. 101) contains references to various authorities which treat of this disputed matter. After the burning of the city by the Gauls (*Liv.* vi. 1), an order was made to collect the old *foedera* and *leges*; for, as it has been well remarked, *Livy's* words, which are supposed to imply that the Twelve Tables were lost, and restored or reconstructed, may just as well mean that they were not lost. Indeed, the juster interpretation of the passage is, that they were looked for and were found. However this may be, neither the Romans of the age of *Cicero* nor at any time after had any doubt as to the genuineness of the collection which then existed.

The legislation of the Twelve Tables has been a fruitful matter of speculation and inquiry to modern historians and jurists, who have often handled the subject in the most uncritical manner and with utter disregard to the evidence. As to the mission to the Greek cities, the fact rests on as much and as good evidence as most other facts of the same age, and there is nothing in it improbable, though we do not know what the commissioners brought back with them. It is further said that

Hermodorus an Ephesian exile aided the Decemviri in drawing up the Twelve Tables, though his assistance would probably be confined to the interpretation of Greek laws, as it has been suggested (Strabo, p. 642, Casaub.; Pompon. *de Orig. Juris*, Dig. 1. tit. 2. s. 2. § 4). This tradition was confirmed by the fact of a statue having been erected in the Comitium at Rome in memory of Hermodorus; but it did not exist in the time of Pliny (Plin. *H. N.* xxxiv. 5.)

The Twelve Tables contained matters relating both to the *Jus Publicum* and the *Jus Privatum* (*res publicae privatorumque juris*, Liv. iii. 34). The *Jus Publicum* underwent great changes in the course of years, but the *Jus Privatum* of the Twelve Tables continued to be the fundamental law of the Roman State. Cicero speaks of learning the laws of the Twelve Tables (*ad carmen necessarium*) when a boy (*de Leg.* ii. 4, 23); but he adds that this practice had fallen into disuse when he wrote, the Edict having then become of more importance. But this does not mean that the fundamental principles of the Twelve Tables were ever formally repealed, but that the *Jus Honorarium* grew up by the side of them and mitigated their rigour or supplied their defects. There is indeed an instance in which positive legislation interfered with them, by the abolition of the *Legis actiones*; but the Twelve Tables themselves were never repealed. They became the foundation of the *Jus Civile*; and they continued to exist together with the unwritten Law. The Law which grew up in the course of time existed in harmony with the Twelve Tables, and was a development of their fundamental principles. It is a remarkable circumstance in the history of Roman Law and a proof of the practical skill of the Romans, that long before Jurisprudence was a science, the doctrine of *Successio per Universitatem* was so completely and accurately stated in the Law of the Twelve Tables, that the Jurists of the best period could find nothing to improve. (Cod. 3. tit. 36. s. 6; 10. tit. 2. s. 25. § 9. 13; 4. tit. 16. s. 7; 2. tit. 3. s. 26; Savigny's *System*, &c. i. p. 383.) The Roman writers speak in high terms of the precision of the enactments contained in the Twelve Tables, and of the propriety of the language in which they were expressed. (Cic. *de Rep.* iv. 8; Diodor. xii. 26.) That many of their provisions should have become obscure in the course of time, owing to the change which language undergoes, is nothing surprising; nor can we wonder if the strictness of the old law should often have seemed unnecessarily harsh in a later age. (Gell. xvi. 10.) So far as we can form a judgment by the few fragments which remain, the enactments were expressed with great brevity and archaic simplicity.

Sextus Aelius Paetus Catus in his *Tripartita* commented on the Twelve Tables, and the work existed in the time of Pomponius. [*JUS AELIANUM*.] Antistius Labeo also wrote a comment on the Tables, which is mentioned several times by Gellius. (i. 12, vii. 15, xx. 1.) Gaius also wrote a Comment on the Tables in six books (*ad legem XII. tabularum*), twenty fragments of which are contained in the Digest, and collected by Hommelius in his *Palingenesia*. (i. 117.) There were also other commentaries or explanations of the Laws of the Twelve Tables. (Cic. *de Leg.* ii. 23, 25.)

The notion which has sometimes been enter-

tained that the Twelve Tables contained a body of rules of law entirely new, is not supported by any evidence, and is inconsistent with all that we know of them and of Roman institutions. It is more reasonable to suppose that they fixed in a written form a large body of customary law, which would be a benefit to the Plebeians, inasmuch as the Patricians were the expounders of the law; and it would be to the Patricians a better security for their privileges. One of the two last tables contained a provision which allowed no *Connubium* between Patricians and Plebeians; but it is uncertain whether this was a new rule of law, or a confirmation of an old rule. The latter seems the more probable supposition; but in either case it is clear that it was not one of the objects of this legislation to put the two classes on the same footing. Modern writers often speak inaccurately of the Decemviral legislation, and of the Decemviri as enacting Laws, as if the Decemviri had exercised sovereign power; but they did not even affect to legislate absolutely, for the Ten Tables were confirmed by the *Comitia Centuriata*, or the sovereign people, or, as Niebuhr expresses it, "when the Decemviri had satisfied every objection they deemed reasonable, and their work was approved by the Senate, they brought it before the Centuries, whose assent was ratified by the Curies, under the presidency of the colleges of priests and the sanction of happy auspices." (Vol. ii. p. 313.) The two new Tables were confirmed in the same way, as we may safely conclude from the circumstances of the case. (Liv. ii. 37, 57.) It makes no difference that the Sovereign people did not vote on the several laws included in the Tables: such a mode of legislation would have been impracticable, and, as Niebuhr observes, was not conformable to the usage of ancient Commonwealths. How far the Decemviri really were able, by intrigue or otherwise, to carry such particular measures as they wished to insert in the Tables, is a different question: but in form their so-called legislation was confirmed, as a whole, by the sovereign, that is, the Roman people, and consequently the Decemviri are improperly called Legislators: they might be called code-makers.

It is consistent with the assumption that the Twelve Tables had mainly for their object the embodying of the customary law in writing, to admit that some provisions were also introduced from the laws of other states. Indeed, where the Roman law was imperfect, the readiest mode of supplying the defects would be by adopting the rules of law that had been approved by experience among other people, and were capable of being easily adapted to the Roman system. Gaius, in his Commentary on the Twelve Tables, where he is speaking of *Collegia* (Dig. 47. tit. 22. s. 4), says, that the members of *Collegia* may make what terms they please among themselves, if they thereby violate no *Publica Lex*; and he adds, this *Lex* seems to be taken from one of Solon's, which he quotes. And in another passage, when he is speaking of the *Actio finium regundorum* (Dig. 10. tit. 1. s. 13), he refers to a law of Solon as the source of certain rules as to boundaries. (See also Cicero, *de Leg.* ii. 25.) It is a possible case that the Romans had no written law before the enactment of the Twelve Tables, except a few *Leges*, and if this is so, the prudence of applying to those states which had bodies of written law, if it were only as samples and pat-

terms of the form of written law, is obvious. However, what was actually received of foreign law could not be more than a few rules of an arbitrary nature, which in no way depend on the peculiar system of law of any country. The *Jus Privatum* was hardly and indeed could hardly be affected by any rules of foreign law; and as to resemblance between Roman Law and the Law of any Greek states, that is no ground for a conclusion that the Roman rules are derived from the Greek.

The fragments of the Twelve Tables have often been collected, but the most complete essay on their history, and on the critical labours of scholars and jurists, is by Dirksen, *Uebersicht der bisherigen Versuche zur Kritik und Herstellung des Textes der Zwölf-Tafel-Fragmente*, Leipzig, 1824. Zimmern's *Geschichte*, &c. contains references to all the authorities on this subject; and Puchta's *Institutionen*, &c. i. § 54, 55, 73, 78, some valuable remarks on them.

FA'BIA DE PLAGIO. [PLAGIUM.]

FA'BIA DE NUMERO SECTATORUM (Cic. *pro Murena*, 34.)

FALCIDIA. [LEGATUM.]

FA'NNIA. [SUMTUARIAE LEGES.]

FA'NNIA. [JUNIA DE PEREGRINIS.]

FLAMINIA, was an Agraria Lex for the distribution of lands in Picenum, proposed by the tribune C. Flaminius, in B. C. 228 according to Cicero, or in B. C. 232 according to Polybius. The latter date is the more probable. (Cic. *Acad.* ii. 5, *de Senect.* 4; Polyb. ii. 21.)

FLAVIA AGGARIA, B. C. 60, for the distribution of lands among Pompeius' soldiers, proposed by the Tribune L. Flavius, who committed the Consul Caecilius Metellus to prison for opposing it. (Cic. *ad Att.* i. 18, 19; Dion Cass. xxxvii. 50.)

FRUMENTARIAE. [FRUMENTARIAE LEGES.]

FUFIA. [AELIA.]

FUFIA DE RELIGIONE, B. C. 61, was a privilegium which related to the trial of Clodius. (Cic. *ad Att.* i. 13, 16.)

FUFIA JUDICIALIA. [JUDEX, p. 650, a., and the remarks in Orellii *Onomasticon*.]

FURIA or FUSIA CANINIA, limited the number of slaves to be manumitted by testament. [MANUMISSIO.]

FURIA DE FENORE (Gaius, iii. 122.)

FURIA DE SPONSORIBUS. [INTERCESSIO.]

FURIA or FUSIA TESTAMENTARIA. [LEGATUM.]

GABINIA TABELLARIA. [TABELLARIAE.]

There were various Gabiniae Leges, some of which were Privilegia, as that (B. C. 67) for conferring extraordinary power on Cn. Pompeius for conducting the war against the pirates. (Cic. *pro Lega Manil.* 17; Vell. Pat. ii. 31; Dion Cass. xxxvi. 6; Plut. Pomp. 25.)

A Gabinia Lex, B. C. 58, forbade all loans of money at Rome to legations from foreign parts (*Salaminii cum Romae versuram facere vellet, non praterant, quod Lex Gabinia vetabat*, Cic. *ad Att.* v. 21, vi. 1, 2). The object of the lex was to prevent money being borrowed for the purpose of bribing the senators at Rome. There was a Lex Gabinia intitled *De Senatu legatis dando* (Cic. *ad Q. Fr.* ii. 13).

LEGES JULIAE.

GE'LLIA CORNELIA, B. C. 72, which gave to Cn. Pompeius the extraordinary power of conferring the Roman civitas on Spaniards in Spain, with the advice of his consilium (*de consilii sententia*, Cic. *pro Balb.* 8, 14).

GENU'CIA, B. C. 341, forbade altogether the taking of interest for the use of money. (Liv. vii. 42.) It is conjectured that Appian (*Bell. Civ.* i. 54) alludes to this law (Orellii *Onomasticon*). Other Plebiscita of the same year are mentioned by Livy (vii. 42).

GALLIAE CISALPINAЕ. [RUBRIA.]

HIERO'NICA was not a Lex properly so called. Before the Roman conquest of Sicily, the payment of the tenths of wine, oil, and other produce had been fixed by Hiero, and the Roman quaestors, in letting these tenths to farm, followed the practice which they found established. (Cic. *Verr.* ii. 13, 26, 60, iii. 6, &c.)

HIRTIA DE POMPERIANIS (Cic. *Phil.* xiii. 16.)

HORATIA, proposed by M. Horatius, made the persons of the Tribunes, the Aediles, and others sacrosancti. (Liv. iii. 55.) [VALERIAE ET HORATIAE.]

Another Lex Horatia mentioned by Gellius (vi. 7) was a privilegium.

HORTENSIA DE PLEBISCITIS. [PLEBISCITUM; PUBLILIAE LEGES.]

Another Lex Hortensia enacted that the nundinae, which had hitherto been Feriae, should be Dies Fasti. This was done for the purpose of accommodating the inhabitants of the country. (Macrob. i. 16; Plin. *H. N.* xviii. 3.)

HOSTILIA DE FURTIS is mentioned only in the Institutes of Justinian (iv. tit. 10).

ICILIA, intitled by Livy, *De Aventino Publicando*, was proposed by L. Icilius, tr. pl. B. C. 456. As to the object of this Lex, see the passages which are here referred to, and particularly Dionysius, and the article SUPERFICIES. (Liv. iii. 31, 32; Dionys. x. 32, 33; Niebuhr, *Hist. of Rome*, ii. p. 301; Puchta, *Inst.* ii. § 244.)

Another Lex Icilia, proposed by the Tribune Sp. Icilius B. C. 471, had for its object to prevent all interruption to the Tribunes while they were addressing the Plebs. In some cases the penalty was death. (Dionys. vii. 17; Cic. *pro Sestio*, 37; Niebuhr, ii. p. 231.)

JULIAE, leges, most of which were passed in the time of C. Julius Caesar and Augustus.

DE ADULTERIIS. [ADULTERIUM.]

AGGARIA is referred to by Suetonius (*Jul. Caesar*, c. 20), and in the Digest, *De Termino Moto* (47. tit. 21). But the lex of C. Caesar, referred to in the Digest, is probably a lex of Caligula. The Agraria lex of the dictator Caesar was passed B. C. 59, when he was consul. (Dion Cass. xxxviii. 1—7, &c.; Appian, *Bell. Civ.* ii. 10; Vell. Pat. ii. 44; Cic. *Phil.* ii. 39, *ad Att.* ii. 16, 18; Rudorff, *Lex Manilia de Coloniae, Zeitschrift*, vol. ix.)

DE AMBITU. [AMBITUS.]

DE ANNONA. (Dig. 48. tit. 1. a. 1.)

DE BONIS CREDENDIS. This lex provided that a debtor might escape all personal molestation from his creditors by giving up his property to them for the purpose of sale and distribution. (Gaius, iii. 78.) It is doubtful if this lex was passed in the time of Julius Caesar or of Augustus, though probably of the former. (Caesar, *Bell. Civ.* iii. 1; Sueton. *Cass.* 42; Tacit. *Ann.* vi. 16; Dion

N.B.
7

8

19

Cass. lvi. 21.) The beneficium of the lex was extended to the provinces by the imperial constitutions. (Cod. 7. tit. 71. a. 4.)

CADUCARIA is the same as the *LEX JULIA DE PAPIA POPPANA*.

DE CAEDE ET VENEFICIO (Sueton. *Nero*, a. 33), perhaps the same as the *Lex De Vi Publica*.

DE CIVITATE, was passed in the consulship of L. Julius Caesar and P. Rutilius Lupus, a. c. 90. [*CIVITAS*; *FORDERATAE CIVITATES*.]

DE FENORE, or rather *De Pecuniis Mutuis* or *Creditis* (B. C. 47), passed in the time of Julius Caesar (Sueton. *Caes.* c. 42; Caesar, *de Bell. Civil.* iii. 1). The object of it was to make an arrangement between debtors and creditors, for the satisfaction of the latter. The possessions and res were to be estimated at the value which they had before the civil war, and to be surrendered to the creditors at that value; whatever had been paid for interest was to be deducted from the principal. The result was that the creditor lost about one-fourth of his debt; but he escaped the loss, usually consequent on civil disturbance, which would have been caused by *Novae Tabulae*. (Compare Caesar, *de Bell. Civil.* iii. 1, with Sueton. *Caes.* c. 42.) A passage of Tacitus (*Ann.* vi. 16) is sometimes considered as referring to this lex, and sometimes to the *Lex de Bonis Cedendis*; but it does not seem to refer to either of them. The passage of Dion Cassius (lvi. 21. *Περὶ τῶν συμφολαίων*) seems to refer to this *Lex de Mutuis Pecuniis*.

DE FUNDO DOTALL. The provisions as to the *Fundus Dotalis* were contained in the *Lex Julia de Adulteriis*. (Gaius, ii. 63; Paulus, *S. R.* ii. tit. 21. a. 2; Dig. *De Fundo Dotali*, 23. tit. 5. a. 1, 2, 13.) This *Lex Julia* was commented on by Papinian, Ulpian, and Paulus. [*ADULTERIUM*.]

JUDICIARIAE. The lex referred to in the Digest (4. tit. 8. a. 41) by which a person under twenty years of age was not compelled to be a *judex*, is probably one of the *Leges Juliae Judiciariae*. (Gell. xiv. c. 2.) As to the other *Juliae Leges Judiciariae*, see *JUDEX*.

DE LIBERIS LEGATIONIBUS. (Cic. *ad Att.* xv. 11.) [*LEGATUS*.]

MAJESTATIS. (Cic. *Phil.* i. 91.) The *Lex Majestatis* of the Digest (48. tit. 4) is probably a lex of Augustus. [*MAJESTAS*.]

DE MARITANDIS ORDINIBUS. [*JULIA ET PAPIA POPPANA*.]

MUNICIPALIS, commonly called the Table of Heraclea. In the year 1732 there were found near the Gulf of Tarentum and in the neighbourhood of the ancient city of Heraclea, large fragments of a bronze tablet which contained on one side a Roman lex and on the other a Greek inscription. The whole is now in the Museo Borbonico at Naples. The lex contains various provisions as to the police of the city of Rome, and as to the constitution of communities of Roman citizens (*municipia, coloniae, praefecturae, fora, conciliabula civium Romanorum*). It was accordingly a lex of that kind which is called *Satura*.

It is somewhat difficult to determine the date of this lex, but there seem to be only two dates which can be assumed as probable; one is the time immediately after the Social War, or shortly after B. C. 89; the other is that which shortly followed the admission of the Transpadani to the civitas (a. c.

49). This latter date, in favour of which various considerations preponderate, seems to be fixed about the year B. C. 45 by a letter of Cicero (*ad Fam.* vi. 18). Compare the tablet l. 94, 104, as to persons whom the lex excluded from the office of *decurio*.

It seems that the lex of the year B. C. 49, which gave the civitas to the Transpadani, enacted that a Roman commissioner should be sent to all the towns for the purpose of framing regulations for their municipal organization. The *Lex Julia* empowered the commissioners to continue their labours for one year from the date of the lex, the terms of which were so extended as to comprise the whole of Italy. The lex was therefore appropriately called *Municipalis*, as being one which established certain regulations for all municipia; and this sense of the term *municipalis* must be distinguished from that which merely refers to the local usages or to the positive laws of any given place, and which is expressed by such terms as *Lex Municipii*, *Lex Civitatis*, and other equivalent terms.

The name *Lex Julia* rests mainly on the fact (assumed to be demonstrated) that this lex was passed when Julius Caesar was in the possession of full power, that it is the lex referred to by Cicero, and that it is improbable that it would have been called by any other personal appellation than that of *Julia*. It is further proved by a short inscription found at Padua in 1696, that there was a *Lex Julia Municipalis*; and the contents of the inscription (III vir aediliciae potestat. e lege Julia Municipali) compared with Cicero (eratque rumor de Transpadanis eos juunos III viros creare, *ad Att.* v. 2) render it exceedingly probable that the *Lex Julia Municipalis* of the inscription is the lex of the Table of Heraclea, and the *Lex Municipalis* of the Digest (50. tit. 9. a. 3; Cod. 7. tit. 9. a. 1; and Dig. 50. tit. 1. *Ad Municipalem et de Incolis*).

(Savigny, *Volkschluss der Tafel von Heraclea, Zeitschrift*, vol. ix. p. 300, and vol. xi. p. 50, as to the passage of Sueton. *Caesar*. 41. The tablet is printed in the work of Masochi, *Comm. in aeneas Tab. Herac.* p. 1, 2. Neap. 1754, 1755, fol., with a commentary which contains much learning, but no sound criticism).

JULIA ET PAPIA POPPANA. The history of this lex is not quite clear. Augustus appears to have caused a lex to be enacted about a. c. 18, which is cited as the *Lex Julia de Maritandis Ordinibus* (Dig. 38. tit. 11; 23. tit. 2), and is referred to in the *Carmen Seculare* of Horace, which was written in the year a. c. 17. The object of this lex was to regulate marriages as to which it contained numerous provisions; but it appears not to have come into operation till the year a. c. 13. Some writers conclude from the passage in Suetonius (*August.* 34) that this lex was rejected; and add that it was not enacted until A. D. 4. In the year A. D. 9, and in the consulship of M. Papius Mutilus and Q. Poppaeus Secundus (*consules suffecti*), another lex was passed as a kind of amendment and supplement to the former lex, and hence arose the title of *Lex Julia et Papia Poppaea* by which these two leges are often quoted; for it has been inferred from the two Leges being separately cited that they were not made into one. Various titles are used according as reference is made to the various provisions; sometimes the reference is to the *Lex Julia*, sometimes *Papia Pop-*

paes, sometimes Lex Julia et Papia, sometimes Lex de Maritandis Ordinibus, from the chapter which treated of the marriages of the senators (Gaius, i. 178; Ulp. *Frag.* xi. 20; Lex Marita, Hor. *Carm. Sec.*), sometimes Lex Caducaria, Decimaria, &c. from the various chapters. (Ulp. *Frag.* xxviii. tit. 7; Dion Cass. liv. 16, lvi. 1, &c.; Tacit. *Ann.* iii. 28.)

There were many commentaries on these leges or on this lex by the Roman jurists, of which considerable fragments are preserved in the Digest: Gaius wrote 15 books, Ulpian, 20, and Paulus 10 books at least on this lex. The lex contained at least 35 chapters (Dig. 22. tit. 2. a. 19); but it is impossible to say to which of the two leges included under the general title of Lex Julia et Papia Poppaea, the several provisions as now known to us, belong. Attempts have been made both by J. Gothofredus and Heineccius to restore the lex, on the assumption that its provisions are reducible to the two general heads of a Lex Maritalis and Lex Caducaria.

The provisions of this Lex or of these Leges forbade the marriage of a senator or a senator's children with a libertina, with a woman whose father or mother had followed an *Ars Ludicra*, and with a prostitute; and also the marriage of a libertinus with a senator's daughter. If an hereditas or a legatum was left to a person on condition of not marrying, or on conditions which in effect prevented marriage, the conditions were illegal, and the gift was unconditional. The condition, however, might be not to marry a certain specified person or certain specified persons; or it might be, to marry a particular person; but then the person must be such a one as would be a suitable match, otherwise the condition would be in effect a condition not to marry, and therefore void. (Dig. 35. tit. 1. a. 63.)

In order to promote marriage, various penalties were imposed on those who lived in a state of celibacy (*caelibatus*) after a certain age. Caelibes could not take an hereditas or a legacy (*legatum*); but if a person was caelebs at the time of the testator's death, and was not otherwise disqualified (*jure civili*), he might take the hereditas or legatum, if he obeyed the lex within one hundred days, that is, if he married within that time. (Ulp. *Frag.* xvii. 1.) If he did not comply with the lex, the gift became caducuum. [CADUCA.] The Lex Julia allowed widows a term of one year (*vacatio*) from the death of a husband, and divorced women a term (*vacatio*) of six months from the time of the divorce, within which periods they were not subject to the penalties of the lex: the Lex Papia extended these periods respectively to two years, and a year and six months. (Ulp. *Frag.* xiv.)

A man when he attained the age of sixty and a woman when she attained the age of fifty were not included within certain penalties of the lex (Ulpian, *Frag.* xvi.); but if they had not obeyed the lex before attaining those respective ages, they were perpetually bound by its penalties by a *Senatus-consultum Pernicianum*. A *Senatus-consultum Claudianum* so far modified the strictness of the new rule as to give to a man who married above sixty the same advantage that he would have had if he had married under sixty, provided he married a woman who was under fifty; the ground of which rule was the legal notion that a woman

under fifty was still capable of having children. (Ulp. *Frag.* xvi.; Sueton. *Claud.* 23.) If the woman was above fifty and the man under sixty, this was called *Impar Matrimonium*, and by a *Senatus-consultum Calvinianum* it was entirely without effect as to releasing from incapacity to take legata and dotes. On the death of the woman, therefore, the dos became caduca.

By the Lex Papia Poppaea a candidate who had several children was preferred to one who had fewer. (Tacit. *Ann.* xv. 19; Plin. *Ep.* vii. 16.) Freedmen who had a certain number of children were freed "operarum obligatione" (Dig. 38. tit. 1. *De Operis Libertorum*); and libertae, who had four children, were released from the tutela of their patrons. (Ulp. *Frag.* tit. 29.) Those who had three children living at Rome, four in Italy, and five in the provinces, were excused from the office of tutor or curator. (Inst. i. tit. 25; Dig. 27. tit. 1.) After the passing of this lex, it became usual for the senate, and afterwards the emperor (*princeps*) to give occasionally, as a privilege, to certain persons who had not children, the same advantage that the lex secured to those who had children. This was called the *Jus Liberorum*. Pliny says (*Ep.* ii. 13) that he had lately obtained from the emperor, for a friend of his, the *Jus Trium Liberorum*. (See also *Ep.* x. 95, 96; and Dion Cass. iv. 2, and the note of Reimar.) This privilege is mentioned in some inscriptions, on which the abbreviation I. L. H. (*jus liberorum habens*) sometimes occurs, which is equivalent to "jura parentis habere." The emperor M. Antoninus provided that children should be registered by name within thirty days after their birth with the *Præfectus Aerarii Saturni*. (Capitol. *M. Ant.* c. 9; compare Juvenal, *Sat.* ix. 84.)

The lex also imposed penalties on *orbi*, that is, married persons who had no children (*jus liberorum non habent*, Gaius, ii. 111) from the age of twenty-five to sixty in a man, and from the age of twenty to fifty in a woman. By the Lex Papia, *orbi* could only take one half of an hereditas or legatum which was left to them. (Gaius, ii. 286.) It seems that an attempt had been made to evade this part of the lex by adoptions, which a *Senatus-consultum Neronianum* declared to be ineffectual for the purpose of relieving a person from the penalties of the lex. (Tacit. *Ann.* xv. 19.)

As a general rule a husband and wife could only leave to one another a tenth part of their property; but there were exceptions in respect of children either born of the marriage or by another marriage of one of the parties, which allowed of the free disposal of a larger part. This privilege might also be acquired by obtaining the *Jus Liberorum*. (Ulp. *Frag.* tit. xv. xvi.)

As to some provisions of this Lex, see *PATRONUS*. *PRÆCULATUS*. [PRÆCULATUS.]

JULIA ET PLAUTIA, which enacted that there could be no usucapion in things obtained by robbery (*vi possessione*). The Twelve Tables had already provided that there could be no usucapion in stolen things. (Gaius, ii. 45; Inst. 2. tit. 6.) This lex was probably passed B. C. 89.

JULIA PAPIRIA. [PAPIRIA.] *DE PROVINCIIS*. (Dion Cass. xliii. 25; Orelli, *Onomasticon*, refers to this Lex Julia de Repe-tundiis the regulations de Provincialibus Sumptibus, which Ernesti considers to belong to the Lex Julia de Repe-tundiis.) [PROVINCIAE.]

DE PUBLICANIS (Cic. *ad Attic.* ii. 16, *pro Ca. Plancio*, c. 14, ed. Wunder; Appian, *Bell. Civ.* ii. 13.)

REPETUNDARUM. [REPETUNDAR.]

DE RESIDUIS. [PECULATUS.]

DE SACERDOTIIS. (Cic. *Ep. ad Brutum*, i. 5.)

DE SACRILEGIIS. [PECULATUS.]

SUMTUARIA, passed in the time of Julius Caesar (Dion Cass. xliii. 25) and one under Augustus. (Gell. ii. 24.) [SUMTUARIAE LEGES.]

THEATRALIS (Sueton. *Aug.* 40; Plin. xxxiii. 2), which permitted Roman equites, in case they or their parents had ever had a census equestris, to sit in the fourteen rows (*quatuordecim ordines*) fixed by the Lex Roscia Theatralis, a. c. 67.

JULIA ET TITIA (Inst. i. tit. 20) empowered the praeses of a province to appoint a tutor for women and pupilli who had none. (Ulp. *Frag.* xi. 18.) A Lex Atilia of earlier but uncertain date had given the same power at Rome to the praetor urbanus and the majority of the tribuni plebis; and the new lex was passed in order to extend the same advantages to the provinces. There are some reasons for supposing that there were two leges, a Julia and a Titia; and among those reasons, is the circumstance that it is not usual to unite by the word of the two names which belong to one lex, though this is done by Cicero (*Brut.* c. 16, *Pro Balbo*, c. 21) in speaking of the Lex Licinia and Mucia.

DE VI PUBLICA ET PRIVATA. [VIS.]

VICISSIMARIA. [VICISSIMA.]

JUNIA DE PEREGRINIS passed a. c. 126 by M. Junius Pennus a tribune, banished peregrini from the city.

A lex of C. Fannius, consul a. c. 122, contained the same provisions respecting the Latini and Italici, for we must assume that there was a Lex (Plut. *C. Gracchus*, 12): and a lex of C. Papilius, perhaps a. c. 65, contained the same respecting all persons who were not domiciled in Italy. (Cic. *De Off.* iii. 11, *Brut.* 26, 28, *de Leg. Agr.* i. 4; Festus, s. v. *Respublicas*; Meyer, *Orat. Rom. Fragm.* p. 229, 2nd ed.)

JUNIA LICINIA. [LICINIA JUNIA.]

JUNIA NORBANA of uncertain date, but probably about a. d. 19, enacted that when a Roman citizen had manumitted a slave without the requisite formalities, the manumission should not in all cases be ineffectual, but the manumitted person should have the status of a Latinus. (Gaius, i. 16, 17, 22, &c., iii. 56; Ulp. *Frag.* i. xx. 8, xxii. 3.) [LATINITAS; LIBERTUS; MANUMISSIO.]

A special clause in the Lex took away from these Latini Juniani, as they were called, the capacity of making a testament, taking under a testament, and being appointed tutores by a testament. Yet they had the other parts of the testamenti factio (Ulp. *Frag.* xx. 8). The condition of the Latini Juniani is the subject of an essay by C. A. von Vangerow, Marburg, 1833; see also the remarks of Puchta, *Inst.* ii. § 213, on the date of the Lex Junia; and also §§ 217, 218.

DE LIBERTINORUM SUFFRAGIIS. [CLODIA; MANUMISSIO.]

JUNIA PETRONIA or PATRONIA (Dig. 40. tit. 1. s. 24). It is doubtful whether this is the same as PETRONIA, or is another Lex.

JUNIA REPETUNDARUM. [REPETUNDAR.]

JUNIA VELLEIA, allowed a child who

was in the womb, and who, when born, would be the testator's *sui heres*, to be instituted heres, even if he should be born in the lifetime of the testator. It also so far modified the old law, that a person who by the death of a heres institutus after the testator had made his will, became a heres quasi agnascendo, did not break the will, if he was instituted heres. (Gaius, ii. 134; Ulp. *Frag.* xxii. 19, ed. Böcking.)

LAETORIA. [CURATOR.]

Sometimes the lex proposed by Volero for electing plebeian magistrates at the Comitia Tributa is cited as a Lex Laetoria. (Liv. ii. 56, 57.)

LICINIA. [AREUTIA.]

LICINIA DE LUDIS APOLLINARIIBUS (Liv. xxvii. 23).

LICINIA DE SACERDOTIIS (Cic. *Lael.* 25).

LICINIA DE SODALITIIS. [AMBITUS.]

LICINIA JUNIA, or, as it is sometimes called, Junia et Licinia, passed in the consulship of L. Licinius Murena and Junius Silanus, a. c. 62, enforced the Caecilia Didia, in connection with which it is sometimes mentioned. (Cic. *pro Sestio*, 64, *Phil.* v. 3, *ad Att.* ii. 9, iv. 16, in *Vatin.* 14.)

LICINIA MUCIA DE CIVIBUS REGUNDIS (probably REDGUNDIS), passed in the consulship of L. Licinius Crassus the orator, and Q. Mucius Scaevola Pontifex Maximus, a. c. 95, which enacted a strict examination as to the title to citizenship, and deprived of the exercise of civic rights all those who could not make out a good title to them. This measure partly led to the Mariac war. (Cic. *de Off.* iii. 11, *Brut.* 16, *pro Balb.* 21, 24, *pro Sest.* 13; Ascon. in *Cornel.* p. 67.)

LICINIA SUMTUARIA. [SUMTUARIAE LEGES.]

LICINIA. In the year a. c. 375 C. Licinius Stolo and L. Sertius being elected two of the Tribuni Plebis, promulgated various Rogationes, the object of which was to weaken the power of the Patricians and for the benefit of the Plebs. One Rogatio related to the debts, with which the Plebs was incumbered (Liv. vi. 34): and it provided that all the money which had been paid as interest should be deducted from the principal sum, and the remainder should be paid in three years by equal payments. The Second related to the Ager Publicus, and enacted that no person should occupy (*possideret*) more than 500 jugera. The Third was to the effect that no more Tribuni militum should be elected, but that consuls should be elected and one of them should be a Plebeian. The Patricians prevented these Rogationes from being carried by inducing the other tribunes to oppose their intercessio. C. Licinius Stolo and L. Sertius retaliated in the same way, and would not allow any comitia to be held except those for the election of Aediles and Tribuni Plebis. They were also re-elected Tribuni Plebis, and they persevered for five years in preventing the election of any Curule Magistratus.

In the year 368, the two tribunes were still elected, for the eighth time, and they felt their power increasing with the diminution of the opposition of their colleagues, and by having the aid of one of the Tribuni Militum, M. Fabius, the father-in-law of C. Licinius Stolo. After violent agitation, a new Rogation was promulgated to the

effect that instead of Duumviri sacris faciundis, Decemviri should be elected, and that half of them should be Plebeians. In the year a. c. 366, when Licinius and Sextius had been elected Tribuni for the tenth time, the law was passed as to the Decemviri, and five plebeians and five patricians were elected, a measure which prepared the way for the plebeians participating in the honours of the consulship. The Rogationes of Licinius were finally carried, and in the year a. c. 365 L. Sextius was elected consul, being the first Plebeian who attained that dignity. The Patricians were compensated for their loss of the exclusive right to the consulship by the creation of the office of Curule Aedile and of Prætor.

The law as to the settlement between debtor and creditor was, if Livy's text is to be literally understood, an invasion of the established rights of property. Niebuhr's explanation of this law is contained in his third volume, pp. 23, &c.

Besides the limitation fixed by the second Lex to the number of jugera which an individual might possess in the public land, it declared that no individual should have above 100 large and 500 smaller animals on the public pastures. Licinius was the first who fell under the penalties of his own law. The statement is that "he, together with his son, possessed a thousand jugera of the ager (publicus), and by emancipating his son had acted in fraud of the law." (Liv. vii. 16.) From this story it appears that the Plebeians could now possess the public land, a right which they may have acquired by the Law of Licinius, but there is no evidence on this matter. The story is told also by Columella (i. 3), Pliny (*Hist. Nat.* xviii. 3), and Valerius Maximus (viii. 6. § 3). The last writer not understanding what he was recording, says that in order to conceal his violation of the law, Licinius emancipated part of the land to his son. The facts as stated by Livy are not put in the clearest light. The son when emancipated would be as much intitled to possess 500 jugera as the father, and if he bona fide possessed that quantity of the Ager publicus, there was no fraud on the law. From the expression of Pliny (*substituta filii persona*) the fraud appears to have consisted in the emancipation of the son being effected solely that he might in his own name possess 500 jugera while his father had the actual enjoyment. But the details of this Lex are too imperfectly known to enable us to give more than a probable solution of the matter. As the object of the Lex was to diminish the possessions of the patricians, it may be assumed that the surplus land thus arising was distributed (*assignatus*) among the plebeians, who otherwise would have gained nothing by the change; and such a distribution of land is stated to have been part of the Lex of Licinius by Varro (*de Re Rust.* i. 2) and Columella (i. 3).

According to Livy (vi. 42) the Rogatio de Decemviris sacrorum was carried first, a. c. 366. The three other rogationes were included in one Lex, which was a Lex Saturna. (Liv. vii. 39; Dion Cass. *Frag.* 33.)

Besides the passages referred to, the reader may see Niebuhr, vol. iii. pp. 1—36, for his view of the Licinian Rogations; and Goettling, *Geschichte der Röm. Staatsverfassung*, p. 354, and the note on the passage of Varro (*de Re Rust.* i. 2). The Licinian Rogations have been the subject of much

discussion. See the Classical Museum, No. V. on the Licinian Rogation *De Modo Agri*; No. VI., *Ueber die Stelle des Varro, &c.*, *De Re Rust.* i. 2. § 9; and No. VII., Remarks on Professor Long's Paper on the Licinian Law *De Modo Agri*, by Professor Puchta; and on the passage in Appian's *Civil Wars*, i. 8, which relates to the Licinian Law by Professor Long.

LICINIA DE CREANDIS TRIUMVIRIS EPULO'NIBUS (Liv. xxxiii. 42; Orellii *Onomasticon*).

LI'VIAE were various enactments proposed by the Tribune M. Livius Drusus, a. c. 91, for establishing colonies in Italy and Sicily, distributing corn among the poor citizens at a low rate, and admitting the foederatae civitates to the Roman civitas. He is also said to have been the mover of a law for adulterating silver by mixing with it an eighth part of brass. (Plin. *H. N.* xxxiii. 3.) Drusus was assassinated, and the Senate declared that all his Leges were passed contra auspicia, and were therefore not Leges. (Cic. *Leg.* ii. 6, 12, *pro Domo*, 16; *Liv. Ep.* 71; Appian, *Bell. Civ.* i. 35; Ascon. in *Cic. Cornel.* p. 62.)

LUTATIA DE VI. [Vis.]

MAENIA LEX is only mentioned by Cicero (*Brutus*, 14), who says that M'. Curius compelled the Patres "ante auctores fieri" in the case of the election of a plebeian consul, "which," adds Cicero, "was a great thing to accomplish, as the Lex Maenia was not yet passed." The Lex therefore required the Patres to give their consent at least to the election of a magistratus, or in other words to confer or agree to confer the Imperium on the person whom the comitia should elect. Livy (i. 17) appears to refer to this law. It was probably proposed by the Tribune Maenius, a. c. 287. [AUCTORITAS.]

DE MAGISTRIS AQUARUM. (Haubold, Spangenbergh, *Mon. Leg.* p. 177.)

MAJESTATIS. [MAJESTAS.]

MAMILIA DE COLONIIS. The subject of this lex and its date are fully discussed by Rudorff (*Zeitschrift*, vol. ix.), who shows that the Lex Mamilia, Roecia, Peducaea, Alliena, Fabia is the same as the "Lex Agraria quam Gaius Caesar tulit" (Dig. 47. tit. 21. l. 3), and that this Gaius Caesar is the Emperor Caligula.

MAMILIA DE JUGURTHAE FAUTORIBUS. (Sal. *Jug.* c. 40; Orellii *Onomasticon*.)

MAMILIA FINIUM REGUNDORUM, enacted in a. c. 239, or according to another supposition, in a. c. 165, fixed at five or six feet the width of the boundary spaces which were not subject to Usucapio. (Rudorff, *Zeitschrift*, vol. x. p. 342, &c.)

MANILIA, proposed by the tribune C. Manilius a. c. 66, was a privilegium by which was conferred on Pompey the command in the war against Mithridates. The lex was supported by Cicero when prætor. (*De Leg. Manilia*; Plut. *Pomp.* 50; Dion Cass. xxxvi. 25.)

The Leges Manilianae, mentioned by Cicero (*De Or.* i. 58), were evidently not Leges Proper, but probably forms which it was prudent for parties to observe in buying and selling.

MANILIA DE LIBERTINORUM SUFFRAGIIS (Dion Cass. xxxvi. 25; Ascon. in *Cornel.* pp. 64, 65), is apparently the same as the Manlia De Lib. Suff.

MANLIA, also called LICINIA, a. c. 196,

created the triumviri epulones. (Liv. xxxiii. 42; Cic. *de Or.* iii. 19.) [LICINIA.]

MA'NLIA DE LIBERTINO'RU' SUF-FRA'GIS (B. C. 58; Ascon. in *Mil.* p. 46.)

MA'NLIA DE VICE'SIMA MANUMIS-SO'RUM. [MANUMISSIO.]

MA'RCIA probably about the year B. C. 352 "adversus feneratoros." (Gaius, iv. 23; Liv. vii. 21.)

MA'RCIA DE LIGU'RIBUS. (Liv. xlii. 22.)

MA'RCIA an agrarian law proposed by the tribune L. Marcus Philippus, B. C. 104. (Cic. *de Off.* ii. 21.)

MA'RIA proposed by Marius when tribune B. C. 119, for narrowing the pontes at elections. (Cic. *de Leg.* iii. 17; Plut. *Mar.* 4.)

ME'MMIA or RE'MMIA. [CALUMNIA.]

ME'NSIA. This lex enacted that if a woman who was a Roman citizen (*civis Romana*) married a peregrinus, the offspring was a peregrinus. If there was connubium between the peregrinus and the woman, the children, according to the principle of connubium, were peregrini, as the legal effect of connubium was that children followed the condition of their father (*liberi semper patrem sequuntur*). If there were no connubium, the children, according to another rule of law, by which they followed the condition of the mother, would have been Roman citizens; and it was the object of the lex to prevent this. (Gaius, i. 78; Ulp. *Frag.* v. 8.)

ME'SSIA. (Cic. *ad Att.* iv. 1.)

MET'LLIA. (Liv. xxii. 25; Plut. *Fabius*, c. 9.)

MINU'CIA, B. C. 216, created the triumviri mensarii. (Liv. xxiii. 21.)

NERVAE AGRA'RIA (Dig. 47. tit. 21. s. 3. § 1), the latest known instance of a Lex.

OCTA'VIA. [FRUMENTARIAN LEGES.]

OGU'LNIA, proposed by the tribunes B. C. 300, increased the number of Pontifices to eight and that of the augurs to nine; it also enacted that four of the Pontifices and five of the augurs should be taken from the plebes. (Liv. x. 6—9.)

O'PIA. [SUMTUARIAN LEGES.]

O'RCHIA. [SUMTUARIAN LEGES.]

OVI'NIA, of uncertain date, was a plebiscitum which gave the censors certain powers in regulating the lists of the senators (*ordo senatorius*): the main object seems to have been to exclude all improper persons from the senate, and to prevent their admission, if in other respects qualified. (Festus, s. v. *Prætoris Senatores*; Cic. *de Leg.* iii. 12.) The Lex Ovinia of Gaius (iv. 109), if the reading is right, was a different lex.

PA'PIA DE PEREGRINI'NIS. [JUNIA DE PEREGRINIS.]

PA'PIA POPPAEA. [JULIAE.]

A Lex Papia on the manner of choosing the Vestal Virgins is mentioned by Gellius (i. 12); but the reading appears to be doubtful, and perhaps it ought to be called Lex Popilia.

PAPI'RIA, or JU'LIA PAPI'RIA DE MULCTA'RUM AESTIMATIO'NE (B. C. 430) fixed a money value according to which fines were paid, which formerly were paid in sheep and cattle. (Liv. iv. 30; Cic. *de Rep.* ii. 35.) Gellius (xi. 1) and Festus (s. v. *Peculatus*) make this valuation part of the Aternian law [A'TERNIA TARPEIA], but in this they appear to have been mistaken according to Niebuhr. (*Hist. of Rome*, ii. p. 300.)

PAPI'RIA, by which the as was made semun-

cialis (Plin. *H. N.* xxxiii. 3), one of the various enactments which tampered with the coinage.

PAPI'RIA, B. C. 332, proposed by the Praetor Papirius, gave the Acerrani the civitas without the suffragium. It was properly a Privilegium, but is useful as illustrating the history of the extension of the Civitas Romana. (Liv. viii. 17.)

PAPI'RIA, of uncertain date, enacted that no aedes should be declared consecrated without a Plebiscitum (*injussu Plebis*, Cic. *pro Dom.* 49).

PAPI'RIA PLAUTIA, a Plebiscitum of the year B. C. 89, proposed by the tribunes C. Papirius Carbo and M. Plantius Silvanus, in the consulship of Cn. Pompeius Strabo and L. Porcius Cato, is called by Cicero (*pro Arrokia*, 4) a lex of Silvanus and Carbo. (See CIVITAS; FÖDERATAS CIVI-TATES; and Savigny, *Vollständiges der Tafel von Heraclea*, Zeitschrift, ix.)

PAPI'RIA POETE'LLIA. [POSTELLIA.]

PAPI'RIA DE SACRAMENTO (Festus, s. v. *Sacramentum*), proposed by L. Papirius, Tribunus Plebis, probably enacted that in the case of the Legis actio sacramento, the money should not be actually deposited, but security should be given for it. (Puchta, *Inst.* ii. 161, note 101.)

PAPI'RIA TABELLA'RIA. [TABELLARIAN LEGES.]

PE'DIA, related to the murderers of the Dictator Caesar. (Vell. Pat. ii. 69.)

PEDUCARA, B. C. 118, a Plebiscitum, seems to have been merely a Privilegium and not a general law against Incestum. (Cic. *de Nat. Deor.* iii. 30; Ascon. in *Cic. Mil.* p. 46.)

PESULA'NIA provided that if an animal did any damage, the owner should make it good or give up the animal. (Paul. *S. R.* l. tit. 15. s. 1. 3.) There was a general provision to this effect in the Twelve Tables (Dirksen, *Uebersicht*, &c. p. 532, &c.), and it might be inferred from Paulus that this Lex extended the provisions of the old law to dogs. The name of the lex may be uncertain. See the note in Arndt's edition of Paulus.

PETI'LLIA DE PECUNIA REGIS AN-TIOCHI. (Liv. xxxviii. 54.)

PETRE'IA, a Lex under this title, de decimatione militum, in case of mutiny, is mentioned by Appian (*de Bell. Civ.* ii. 47), according to the old editions. But the true reading is *warple rémp*.

PETRO'NIA, probably passed in the time of Augustus, and subsequently amended by various senatusconsulta, forbade a master to deliver up his slave to fight with wild beasts. If, however, the master thought that his slave deserved such a punishment, he might take him before the authorities (*judex*) who might condemn him to fight if he appeared to deserve it. (Dig. 48. tit. 8. s. 11. 18. tit. 1. s. 42; Gell. v. 14; Puchta, *Inst.* i. § 107, note 101; Savigny, *Zeitschrift*, ix. p. 374, on the inscription found on a wall of the amphitheatre of Pompeii.)

PINA'RIA (Gaius, iv. 15) related to the giving of a Judex within a limited time. (See Puchta, *Inst.* i. § 53.)

PINA'RIA. [ANNALES LEGES.]

PLAETO'RIA. [CURATOR.]

PLAETO'RIA DE PRAETO'RE UR-BA'NO. (Varro, *de Ling. Lat.* vi. 5; Censorinus, *de Die Natali*, c. 24.)

PLAUTIA or PLOTIA DE VI. [VIA.]

PLAUTIA or PLOTIA JUDICIA'RIA is mentioned by Asconius (in *Cic. Cornel.* p. 79) as

having enacted that fifteen persons should be annually elected by each tribe out of its own body to be placed in the *Album Judicum*.

PLAUTIA or PLOTIA DE RE'DITU LE-
PIDANORUM. (Sueton. *Caes.* 5; Gellius, xiii. 3.)

PLAUTIA PAPIRIA. [PAPIRIA PLAU-
TIA.]

POETE'LIA, B.C. 358, a Plebiscitum, was the first Lex against Ambitus. (Liv. vii. 15.)

POETE'LIA PAPI'RIA, A.C. 326, made an important change in the liabilities of the *Nexi*. (Liv. viii. 28.) [NEXI.]

POMPEIAE. There were various Leges so called.

POMPEIA, proposed by Cn. Pompeius Strabo, the father of Cn. Pompeius Magnus, probably in his consulship A.C. 89, gave the *Jus Latii* or *Latinitas* to all the towns of the *Transpadani*, and probably the *Civitas* to the *Cispadani*. (Savigny, *Volksrecht des Roms*, ix.)

DE AMBITU. [AMBITUS.]

DE IMPERIO CAESARI PROROGANDO. (Vell. Pat. ii. 46; Appian, B.C. ii. 18.)

JUDICIALIA. [JUDEX.]

DE JURE MAGISTRATUUM (Sueton. *Caes.* 28; Dion. *Caes.* xl. 56; Cic. *ad Att.* viii. 3) forbade a person to be a candidate for public offices (*petitio honorum*) who was not at Rome; but C. Julius Caesar was excepted. This was doubtless the old law, but it had apparently become obsolete.

DE PARRICIDII. [CORNELIA DE
SICARIIS.]

TRIBUNITIA (B.C. 70) restored the old *Tribunitia Potestas* which Sulla had nearly destroyed. (Sueton. *Caes.* 5; Vell. Pat. ii. 30; Cic. *de Leg.* iii. 9, 11, in *Verr. Act.* i. 15; Liv. *Epit.* 97.) [TRIBUNUS.]

DE VI was a Privilegium, and only referred to the case of Milo. (Cic. *Phil.* ii. 9; Ascon. and Schol. Bob. in *Argum. Milon.*)

POPULIA. [PAPLIA.]

PORCIAE DE CAPITE CIVIUM or DE PROVOCATIONE enacted that a Roman citizen should not be scourged or put to death. (Liv. x. 9; Cic. *de Rep.* ii. 31, *pro Rabir.* 3, 4; Sall. *Catil.* 51.)

PORCIA DE PROVINCIIS (about A.C. 198). The passage in Livy (xxii. 27. "Sumtus quos in cultum praetorum," &c.) is supposed to refer to a Porcia Lex, to which the Plebiscitum de Thermensibus refers; and the words quoted by Cicero (*Verr.* ii. 4, 5. "Ne quis emat mancipium") are taken, as it is conjectured, from this Porcia Lex.

PUBLICIA permitted betting at certain games which required strength, as running and leaping. (Dig. 11. tit. 5.)

PUBLILIA DE SPONSO'RIBUS. [INTER-
CESSIO.]

PUBLILIA LEX was proposed by Publius Volero, a tribune plebis, and enacted A.C. 471. The terms of the Rogatio were "ut plebei magistratus tributis comitiis fierent" (Liv. ii. 56). The object of the Lex was to take these elections from the *Comitia Centuriata*, in which the patricians could determine the result of the elections by the votes of their clients. The Rogatio became a Lex after much opposition, the history of which is given in Livy. According to some authorities, the number of tribunes was also increased from two to five (Liv. ii. 58); and this must therefore have

been provided by the Lex. In A.C. 457 (Liv. iii. 30) ten tribunes, two from each class, were elected for the first time; but it is not said under what legislative provision. Dionysius (*Antiq. Rom.* ix. 43) gives a more complete account of this Lex. After Publius failed in his first attempt to carry his Rogatio, he added a new chapter, which gave the election of the aediles (plebeian) to the *Comitia Tributa*, and enabled the *Tributa* to deliberate and decide upon any matter which could be deliberated and decided upon in the *Comitia Centuriata*. From the time of the enactment of this Lex, says Dionysius (ix. 49) "up to my time, the election of tribunes and aediles was made without birds (sacral ceremonies), and all the rest of the religious forms in the *Comitia Tributa*." Dionysius says nothing here of the other matter which the additional chapter contained (ix. 43).

PUBLILIAE LEGES of the Dictator Q. Publilius Philo, which he proposed and carried A.C. 339 (Liv. viii. 12). The purport of these Leges is thus expressed by Livy: "tres leges secundissimas plebei, adversas nobilitati tulit: unam ut plebiscita omnes Quirites tenerent; alteram, ut legum quae comitiis centuriatis ferrentur, ante initum suffragium Patres auctores fierent; tertiam ut alter utique ex plebe, quum eo ventum sit ut utrumque plebeium consulem fieri liceret, censor crearetur." The provision of the first lex seems to be the same as that of the Lex Hortensia, A.C. 286 "ut plebiscita universum populum tenerent" (Gaius, i. 3). Some critics suppose that the first Lex enacted that a Plebiscitum should be a Lex without being confirmed by the *Comitia Centuriata*, but that it would still require the confirmation of the Senate, or, as some suppose, of the *Comitia Curiata*. The Lex Hortensia, it is further supposed, did away with the confirmation of the Curiae, or, as some suppose, of the Senate. But the expression "omnes Quirites" of Livy clearly has some reference, and, according to correct interpretation, must be taken to have some reference, to the extent of the effect of a Plebiscitum. There is no difficulty in giving a consistent meaning to Livy's words. The first Lex enacted that Plebiscita should bind all the Quirites; which means nothing else than that a Plebiscitum should have the effect of a Lex passed at the *Comitia Centuriata*. It is not here said whether the *Comitia Tributa* could legislate on all matters on which the *Comitia Centuriata* could [PUBLILIA LEX]; and nothing is said as to the dispensing with any form for the confirming of a Lex passed at these *Comitia*. And that Livy did not suppose that the first Lex contained any regulations as to matter of form, is made clear by what he says of the second Lex, which did regulate the form of legislation. This is the clear meaning of Livy's words: it may not be the true import of the first Lex; but it is somewhat difficult to prove any thing about a matter beyond what the evidence shows. [PLEBISCITUM.]

The simplest meaning of the second Lex, according to the words, is, that no Rogatio should be proposed at the *Comitia Centuriata*, until the Patres had approved of it, and had given it their auctoritas. If we knew who were meant by the Patres, the meaning of the Lex would be tolerably clear. It is now generally supposed that Livy means the *Comitia Curiata*, and that their veto on the measures of the *Comitia Centuriata* was

taken away. If *Patres* means the Senate, then the purport of the Lex is this, that no measure must be proposed at the *Centuriata Comitia*, without a *SCtum* first authorising it. (Comp. *Liv.* xlv. 21.)

The meaning of the third Lex is plain enough. Puchta shows or tries to show that the first Lex *Publilia* simply rendered unnecessary the confirmation of a *Plebiscitum* by the *Comitia Centuriata*; and therefore there remained only the confirmation of the Senate. Accordingly, the effect of the first Lex was to make the *Comitia Tributa* cease to have merely the initiative in legislation; henceforth, *Plebiscita* did not require the confirmation of a Lex *Centuriata*, but only that of the Senate; and we may, probably, from this time date the use of the expression: "*Lex sive id Plebiscitum est.*"

He considers the second Lex to have simply declared the old practice, that the *Comitia Centuriata* should pass no *Rogation* without the authority of a previous *Senatusconsultum*. The two *Leges* then had this relation to one another: the first Lex provided, that a Lex passed at the *Comitia Tributa*, which before this time was confirmed by a *Senatusconsultum*, and finally ratified by the *Comitia Centuriata*, should not require the ratification of the *Comitia Centuriata*; the second Lex declared that the old practice as to the *Comitia Centuriata* should be maintained, that the *Leges* passed there should have the previous authorisation (*auctoritas*) of the Senate.

On the subject of these *Leges*, see *Zachariæ Sulla*, i. p. 26, note; Puchta, *Inst.* i. § 59; and Niebahr, vol. iii. p. 147, &c. *Engl. Tr.*: and see *VALERIAN LEGES*.

PUPPIA, mentioned by Cicero (*ad Quinct.* ii. 13, *ad Fam.* i. 4) seems to have enacted that the senate could not meet on *Comitiales Dies*.

QUINTIA was a lex proposed by T. Quintus Crispinus, consul B.C. 9, and enacted by the *Populus* for the preservation of the *Aqueductus*. The Lex is preserved by Frontinus (*de Aqueduct Roman.*).

REGIA, properly *LEX DE IMPERIO PRINCIPIS*. The nature of the *Imperium* and the mode of conferring it have been explained under *IMPERIUM*. Augustus, by virtue of uniting in his own person the *Imperium*, the *Tribunitia Potestas*, the *Censorian power*, and the office of *Pontifex*, was in fact many magistrates in one; and his title was *Princeps*. These various powers were conferred on the earliest *Principes* (emperors) by various *leges*; but finally the whole of this combined authority was conferred by a Lex *Imperii* or Lex *de Imperio*. (Dion Cassius, liii. 18; his remarks on the power of Augustus, and the notes of Reimarus.) By this Lex the Imperial authority, as we may call it, was conferred on the *Princeps* (*cum ipse Imperator per legem Imperium accipiat*, Gaius, i. 5), and legislative power. By this Lex the *Princeps* was also made "*solutus legibus*," that is, many restrictive enactments were declared not to apply to him, either in his private or his magisterial capacity (Dion Cass. liii. 18, 28): for instance, Caligula was released by a *Senatusconsultum*, which was probably followed by a Lex as a matter of form, from the Lex *Julia et Papia*. (Dion Cass. lix. 15; compare Ulpian, Dig. 1. tit. 3. s. 31.) This Lex *De Imperio* was preceded by a *Senatusconsultum*. (Tacit. *Hist.* i. 47, iv. 3, 6.) A considerable frag-

ment of the Lex *De Imperio Vespasiani* is still preserved at Rome. (Haubold, Spangenberg, *Monum. Legal.* p. 221.) It is sometimes incorrectly called a *Senatusconsultum*, but on the fragment itself it is called a Lex. It is true that a *Senatusconsultum* preceded the Lex, and the enactment of the Lex was a mere form. This Lex empowers Vespasian to make treaties, to originate *Senatusconsulta*, to propose persons to the people and the Senate to be elected to magistracies, to extend the *Pomoerium*, to make constitutions or edicts which should have the force of law, and to be released from the same laws from which Augustus, Tiberius, and Claudius were released; and all that he had done before the enactment of this lex (*ante legem rogatam*) was to have the same effect as if it had been done by the command of the people.

This Lex *de Imperio Principis* is several times named Lex *Regia* in the *Corpus Juris* (*Inst.* 1. tit. 2. s. 6.; Dig. 1. tit. 4. s. 1.; Cod. 1. tit. 17. 187). There is no evidence that the Lex *de Imperio Principis* was ever called Lex *Regia* under the early emperors. Under the later emperors there is nothing surprising in the name *Regia* being adopted as a common expression. When the emperor was called *Dominus*, a title which was given even to Trajan, the Lex *de Imperio* might well be called *Regia*. To deny the existence of a Lex *de Imperio* would show a very imperfect knowledge of the history and constitution of Rome and a want of critical judgment. (Puchta, *Inst.* i. § 88.)

REGIAE. [*JUS CIVILE PAPIRIANUM*.] *W. H.*

REMMIA. [*CALUMNIA*.]

REPETUNDA/RUM. [*REPETUNDAR*.]

RHODIA. The Rhodians had a maritime code which was highly esteemed. Some of its provisions were adopted by the Romans, and have thus been incorporated into the maritime law of European states. Strabo (p. 652. Casaub.) speaks of the wise laws of Rhodians and their admirable policy, especially in naval matters; and Cicero (*pro Leg. Manil.* c. 18) to the same effect. The Digest (14. tit. 2) contains so much of the Lex *Rhodiensis* as relates to jactus or the throwing overboard of goods in order to save the vessel or remainder of the cargo. This Lex *Rhodiensis de Jactu*, is not a Lex in the proper sense of the term.

ROSCIA THEATRALIS, proposed by the tribune L. Roscius Otho, B.C. 67, which gave the *Equites* a special place at the public spectacles in fourteen rows or seats (*in quatuordecim gradibus sive ordinibus*) next to the place of the senators, which was in the orchestra. This Lex also assigned a certain place to spendthrifts (*decoctores*, Cic. *Phil.* ii. 18). The phrase "*sedere in quatuordecim ordinibus*," is equivalent to having the proper *Census Equestris* which was required by the Lex. There are numerous allusions to this Lex (Dion. xxxvi. 25; Vell. Pat. ii. 32; Liv. *Epit.* 99; Cic. *pro Murena*, 19), which is sometimes simply called the Lex of Otho (Juv. xiv. 324), or referred to by his name. (Hor. *Epod.* iv. 16.) This law caused some popular disturbance in the consulship of Cicero, B.C. 63, which he checked by a speech. (Cic. *ad Att.* ii. 1; Plut. Cic. c. 13.) [*JULIA THEATRALIS*.]

RUBRIA. The province of Gallia Cisalpine ceased to be a Provincia, and became a part of Italia about the year B.C. 48. When this change took place, it was necessary to provide for the

administration of justice, as the usual modes of provincial administration would cease with the determination of the provincial form of government. This was effected by a Lex, the name of which is unknown, but a large part of it, on a bronze tablet, is preserved in the Museum at Parma. This Lex arranged the judiciary establishment of the former provincia, and appointed ii. viri and iv. viri juri dicundo: a Praefectus Mutinensis is also mentioned in the lex. In two passages of this Lex (c. xx. l. 29. 38) a Lex Rubria is mentioned, which, according to some, is an earlier lex by which Mutina was made a Praefectura; and according to others, the Lex Rubria is this very Lex de Gallia Cisalpina. This subject is discussed by Savigny (*Zeitschrift*, ix.) and by Puchta (*Zeitschrift*, x. *Ueber den Inhalt der Lex Rubria de Gallia Cisalpina*).

This Lex has been published several times; the latest edition is "Tavola legislativa della Gallia Cisalpina ritrovata in Veleia et restituita alla sua vera lezione da D. Pietro de Lama, Parma 1820." We only possess the end of the nineteenth chapter of this Lex, which treats of the Novi Operis Nuntiatio; the twentieth chapter on the Damnum Infectum is complete: the twenty-first treats of Pecunia Certa Credita, but only of Execution; the twenty-second treats in like manner of similar actions; there is only the beginning of the twenty-third, which treats of the division of an hereditas (*quod de familia hereditaria dividenda iudicium sibi dari reddere, &c. postulaverint, &c.*). The matter of this lex therefore, so far as we know it, purely concerns procedure, as Puchta remarks.

RUPILIAE (a. c. 131), were the regulations established by P. Rupilius, and ten legati, for the administration of the province of Sicily, after the close of the first servile war. They were made in pursuance of a consultum of the senate. Cicero (*in Verr.* ii. 13, 15, 16, 37) speaks of these regulations as a Decretum of Rupilius (*quod is de decem legatorum sententia statuit*), which he says they call Lex Rupilia; but it was not a Lex proper. The powers given to the commissioners by the Lex Julia Municipalis were of a similar kind. There was also a Lex Rupilia de Cooptando Senatu Heracleiotarum (*In Verr.* ii. 50); and De Re Frumentaria (*In Verr.* iii. 40).

SACRA/TAE, mentioned by Livy (ii. 54) and by Cicero (*de Off.* iii. 33). Leges were properly so called which had for their object to make a thing or person sacer, as in Livy (ii. 8, *de sacramento cum bonis capitis ejus qui, &c.*). The consecratio was in fact the sanction by which a Lex was to be enforced. (Livy. iii. 55.) In the latter case it was the opinion of the juriconsulti (*juris interpretes*) that the Lex did not make "sacrosancti" the persons for whose protection it was designed, but that it made "sacer" (*sacrum canis*) any one who injured them; and this interpretation is certainly consistent with the terms of the Lex. (Festus, s. v. *Sacrosancti leges*.) Compare Livy. ii. 33; Dion Hal. *Rom. Antig.* vi. 39; and the passage referred to in Orellii *Onomasticon*.

A Lex Sacrata Militaris is also mentioned by Livy (vii. 41); but the sanction of the Lex is not stated.

SAE'NIA DE PATRICIORUM NUMERO AUGENDO, enacted in the fifth consulship of Augustus. (Tacit. *Ann.* xi. 25; *Mon. Ancy.* Pilae prioris Tab. 2; see CASSIA.)

SAT'URA. [Lex, p. 683, a.]

SCANTI'NIA, proposed by a tribune: the date and contents are not known, but its object was to suppress unnatural crimes. It existed in the time of Cicero. (Anson. *Epig.* 89; Juv. ii. 44; Cic. *ad Fam.* viii. 12, 14.) The Lex Julia de Adulteriis considered this offence as included in Stuprum and it was punishable with a fine; but by the later Imperial constitutions the punishment was death. (Sueton. *Dom.* 8; Paulus, *S. R.* ii. tit. 26. a. 13.)

SCRIBO'NIA. The date and whole import of this Lex are not known; but it enacted that a right to servitudes should not be acquired by usucapion (Dig. 41. tit. 3. a. 4. § 29), from which it appears that the law was once different as to certain servitudes at least: and these appear to be the servitudes praediorum urbanorum, which, according to this Lex, could not be acquired by usucapion. In the case of servitudes praediorum rusticorum, and of personal servitudes, the impossibility of usucapion arose out of the nature of the thing. A "libertas servitutium" could be gained by usucapion or rather disuse, for the Lex only applied to that usucapion which established a servitus (*servitutem constituebatur*) and not to that so-called usucapion which took away the right (*extulit servitutem*). It is perhaps doubtful if the passage of Cicero (*pro Caecio*, 26) should be alleged in proof of this usucapion formerly existing.

SCRIBONIA VIARIA OR DE VIIS MUNIENDIS, proposed by C. Scribonius Curio, tr. pleb. b. c. 51. (Orellii *Onomasticon*.)

SEMPRONIAE LEGES, were leges proposed by Tiberius and C. Gracchus respectively, while they were tribuni plebis.

AGRARIA of Tib. Gracchus was proposed by him during his tribunate b. c. 133. The nature of this measure is explained by Appian. (*Bell. Civ.* i. 10, &c.) It was an Agraria Lex, the object of which was the distribution of the Public Land among the poorer citizens. [AGRARIAR LEGES.] Tib. Gracchus with the advice of P. Licinius Crassus, Pontifex Maximus, P. Mucius Scaevola, afterwards Pontifex Maximus, and Appius Claudius (Plut. *Tib. Gracchus*, 9), proposed that no person should hold more of the Ager Publicus than 500 jugera (comp. LICINIAR LEGES), but that for every son he might hold 250 more. The poor who were to be provided with land out of what remained after the large possessions were reduced, were not to have the power of alienating their own lots; and they were to pay the tenths. The law was enacted and the execution of it was intrusted to three persons (tres viri), who were Tiberius himself, his brother Caius, and Appius Claudius. The execution of the law was attended with great difficulty, because the public land which had been held for many generations by private persons, had been dealt with like private property, had often changed hands by sale, and had been improved and built upon. It was first proposed to indemnify the Possessors for all improvements, but it appears that when they made opposition to the measure, this proposal was withdrawn.

Other measures were designed by Tiberius, but his premature death stopped them. The execution of the Agraria Lex of Tiberius was impeded by a Senatusconsultum, which put an end to the commission. The Lex was revived by Caius Gracchus, trib. pl. in b. c. 123. The senate ruined the cause of Gracchus by engaging the tribune M. Livius Drusus to propose measures of a character

even more popular than those of Gracchus. The legislation about the Roman Public Land requires a history in itself.

DE CAPITRE CIVIUM, proposed by C. Gracchus B. C. 123, enacted that the caput or condition of a Roman citizen could not be affected without a trial and vote of the people. (Cic. *pro Rabir.* c. 4; and Cicero's disingenuous exposition, *In Cat.* iv. 5). Plutarch (*C. Gracchus*, 4) appears to allude to this Lex; but if he does, he has mistaken its purport.

FRUMENTARIA. [**FRUMENTARIAE LEGES.**]

JUDICIARIA proposed by C. Gracchus, had for its object to deprive the senate of the power which they derived from supplying the Judges in *Judicia Publica* from their body (Plut. *C. Gracchus*, 5). Plutarch's account of this Lex is probably incorrect. Compare Appian (*Bell. Civ.* i. 22); and *JUDEX*, p. 649, b.

DE PROVINCIIS CONSULARIBUS proposed by C. Gracchus, B. C. 123, enacted, that in every year, before the Comitia for electing the consuls, the senate should determine the two provinces which the consuls should have; and the consuls were to settle between themselves by lot, or otherwise, which province each should have. (Sallust, *Jug.* c. 27, and the note of Curtius; Cic. *de Prov. Cons.* c. 2.)

There may have been other measures proposed and carried by C. Gracchus; but it is not easy to distinguish between all that was proposed and carried, and what was simply proposed. The Lives of Tiberius and C. Gracchus by Plutarch, translated with notes by G. Long, give some information on the legislation of the Gracchi, which should be compared with Appian. (*Bell. Civ.* i. 10, &c.)

SEMPRONIA DE FENORE, B. C. 193, was a Plebiscitum proposed by a tribune M. Sempronius (*Liv.* xxxv. 7), which enacted that the law (*lex*) about money lent (*pecunia credita*) should be the same for the *Socii* and *Latini* (*Socii ac Nomen Latini*) as for Roman citizens. The object of the Lex was to prevent Romans from lending money in the name of the *Socii* who were not bound by the Fenebres Leges. The Lex could obviously only apply within the jurisdiction of Rome.

SERVILIA AGRA'RIA, proposed by the tribune P. Servilius Rullus in the consulship of Cicero, B. C. 63, was a very extensive Agraria Rogatio. It was successfully opposed by Cicero (*In Rullum*); but it was in substance carried by Julius Caesar B. C. 59 [**JULIA LEX AGRARIA**], and is the Lex called by Cicero *Lex Campana* (*ad Att.* ii. 18), from the public land called *Ager Campanus* being assigned under this Lex.

SERVILIA GLAUCIA DE REPETUNDIS. [**REPETUNDAR.**]

SERVILIA JUDICIARIA, proposed by the consul Q. Servilius Caepio, B. C. 106. See the article *JUDEX*, p. 649, b, and the various passages in Cicero (*Brut.* 43, 44, 63, 86). It is assumed by some writers that a Lex of the tribune Servilius Glauca repealed the *Servilia Judiciaria* two years after its enactment. (Cic. *Brut.* 62; Orellii *Onomasticon*.)

SILIA. (Gaius, iv. 19.) The *Legis Actio* called *Condictio* was established by this Lex in the case when the demand was a determinate sum of money (*certa pecunia*).

SILIA, a plebiscitum proposed by P. and M.

Sillii tribuni plebis related to Publica Pondera. (Festus, *Publica Pondera*, where the Lex is given; and the notes in the Delphin edition.)

SILVA'NI ET CARBO'NIS. [**PAPIRIA PLAUTIA.**]

SULPICIAE, proposed by the tribune P. Sulpicius Rufus, a supporter of Marius, B. C. 88, enacted the recall of the exiles, the distribution of the new citizens and the libertini among the thirty-five tribes, that the command in the Mithridatic war should be taken from Sulla and given to Marius, and that a Senator should not contract debt to the amount of more than 2000 denarii. (Plut. *Sull.* 8.) The last enactment may have been intended to expel persons from the senate who should get in debt. All these Leges were repealed by Sulla. (App. *Bell. Civ.* i. 55, 59; *Liv. Epit.* 77; *Vell. Pat.* ii. 18.)

SULPICIA SEMPRONIA, B. C. 304. No name is given to this Lex by Livy (ix. 46), but it was probably proposed by the consuls. It prevented the dedication of a templum or altar without the consent of the senate or a majority of the tribunes. (Compare Gaius, ii. 5—7.)

SUMTUARIAE. [**SUMTUARIAE LEGES.**]

TABELLARIAE. [**TABELLARIAE LEGES.**]

TARPEIA ATER'NIA. [**ATER'NIA TARPEIA.**]

TERENTILIA, proposed by the tribune C. Terentilius, B. C. 462, but not carried, was a rogatio which had for its object an amendment of the constitution, though in form it only attempted a limitation of the *Imperium Consulare*. (*Liv.* iii. 9, 10, 31; *Dionys. Rom. Antiq.* x. 1, &c.) This rogatio probably led to the subsequent legislation of the Decemviri.

TESTAMENTARIAE. Various leges, such as the Cornelia, Falcidia, Furia, and Voconia, regulated testamentary dispositions.

THO'RIA. This Agraria Lex is the subject of a very elaborate essay by Rudorff, "Das Ackerengesetz des Spurius Thorius, Zeitschrift, vol. x."

This Lex was engraved on the back part of the same bronze tablet which contained the *Servilia* Lex which applied to the *Judicia de Repetundis*. The tablet was broken at some unknown time, and the lower which was perhaps the larger part is now lost. Seven fragments of the upper part were preserved, which as the tablet is written on both sides, make fourteen inscriptions, which were published by Fulvius Ursinus: the first five of the inscriptions, as they are numbered by him, belong to the Lex Thoria, and the seven last to the Lex Servilia. The largest and most important of the fragments are now in the Museo Borbonico. Their history is traced and their present condition described by Rudorff with great minuteness. Two of the fragments were copied by Sigonius when they were in the Museum of Cardinal Bembo; and the copy of the two fragments of the Lex Thoria, and also the copy of the two fragments of the Lex Servilia, are printed in the work of Sigonius, *De Antiquo Jure Populi Romani Libri Undecim*, Bononiae, 1574.

The title of this Lex does not appear from the mutilated inscription, but Rudorff shows that the Lex belongs to the period between the consulship of P. Cornelius Scipio Nasica and L. Calpurnius Piso Bestia, B. C. 111, and that of L. Julius Caesar, B. C. 90, within which space of twenty-two years

five Agrarian laws were enacted, Boria, Thoria, Marcia, Apuleia, and Titia. It further appears from comparing two passages of Cicero (*de Or.* ii. 70; and *Brutus*, 36), in which he speaks of the Lex Thoria, with the fragments of this Lex whose title is lost, that the fragments are those of the Lex Thoria. Now the date of the Lex Thoria is fixed by Rudorff at the year of the city 643 or a. c. 111, which is consequently the date of the Lex on the bronze tablet, thus identified with the Lex Thoria. Proceeding on the assumption that the fragmentary Lex was the Plebiscitum, called the Lex Thoria, Sigonius restored the beginning of it according to the usual form of Roman Plebiscita: Sp. Thoriv . . . F. Tr. Pl. Plebem ivre rog. Plebesque ivre scivit Tribvs . . . Principiv fvit pro tribv Q. Fabiv. Q. F. primvs scivit.

The history of this inscription is curious. It was not cut on the rough back of the bronze tablet till after the other side, which is smooth, had been occupied by the Servilia Lex. The Servilia Lex is certainly not of earlier date than the year of the city 648, or a. c. 106, and consequently the Thoria could not have been cut on this tablet before the year 648. It seems that the tablet was large enough for the Lex Servilia, for which it was intended, but much too small for the Agrarian Law: "consequently, the characters of the Agrarian side of the tablet are remarkably small, the lines narrow, the abbreviations numerous, and the chapters only separated by two or three points, whereas on the other side the letters are uniform, large, and well made, the lines wide, the words written at full length, and the chapters of the Lex separated by superscriptions. Further, the lines (of the Agrarian Lex) are often so oblique that they cross the straight lines on the opposite side, which are cut very deep and consequently are visible on the side on which the Agrarian Lex is cut." (Rudorff.)

The subject-matter of this Lex cannot be stated without entering into detail: the whole is examined by Rudorff with great care. The main subject of the Lex to which the first eighteen chapters or forty-three lines refer, is the Public land in Italy as far as the rivers Rubico and Macra. The second part of the Lex begins with the nineteenth chapter and the forty-fourth line, and extends to the fiftieth chapter and the ninety-sixth line: this part of the Lex relates to the Public and Private land in the Province of Africa. The third and last part of the Lex, from the fiftieth chapter and the ninety-sixth line to the end of the inscription, relates to the Roman Public land in the territory of Corinth.

Rudorff concludes that the Lex applied to other land also; and for two reasons. First, the Roman Agrarian Laws of the seventh century of the city, related to all the provinces of the empire, of which we have an example in the case of the Lex Servilia of Rullus. Secondly, the fragment of the Lex Thoria, which is preserved, is so broad compared with the height that we may conclude that the complete tablet contained three times as much as it does now; for nearly all the bronze tablets on which Roman laws are cut, are of an oblong form, with the height much greater than their width. Of the two-thirds of the tablet which it is concluded have been lost, not a trace has yet been discovered.

The essay of Rudorff contains a copy of the inscription, with the restoration of the passages that

are defaced. The value of this attempt can only be estimated by an investigation as complete as that of the author.

TI'TIA, similar in its provisions to the Lex Publicia. (Dig. 11. tit. 5. a. 3.)

TI'TIA DE TUTORIBUS (see JULIA LEX ET TITIA, and Gaius i. 195).

TREBONIA, a plebiscitum proposed by L. Trebonius, a. c. 448, which enacted that if the ten tribunes were not chosen before the Comitia were dissolved, those who were elected should not fill up the number (*co-optare*), but that the Comitia should be continued till the ten were elected. (Liv. iii. 65, v. 10.)

TREBONIA DE PROVINCIIS CONSULARIBUS. (Plut. *Cat. Min.* 43; Liv. *Epit.* 105; Dion Cass. xxxix. 33.)

TRIBUNITIA. [TRIBUNUS.]

TULLIA DE AMBITU. [AMBITUS.]

TULLIA DE LEGATIONE LIBERA.

[LEGATUS, p. 679, a.] W. V.

VALE'RIAE LEGES. In a. c. 508, the consul P. Valerius proposed and carried various leges, the purpose of which was to relieve himself from the suspicion of aiming at kingly power, and to increase his popularity. The chief were a Lex which gave an appeal (provocatio) to the populus against magistratus, and one which declared to be accursed, and devoted the man and his property, who should form a design to seize the kingly power (Liv. ii. 8). Owing to these popular measures, the consul received the cognomen of Publicola, by which he is generally known. This statement of the law on Provocatio by Livy is very brief and unsatisfactory. Cicero (*de Rep.* ii. 31) states more distinctly that this Lex was the first that was passed at the Comitia Centuriata, and that the provisions were "ne quis magistratus civem Romanum adversus provocationem necaret neve verberaret." The Lex, therefore, secured the right of appeal to all Roman cives; and it is consistent with this, that some of the Roman cives, the patricians, as Niebuhr states, had already the provocatio to their curiae. This right of provocatio only applied to Rome and a mile round the city, for the Imperium of the consuls beyond this boundary was unlimited (Liv. iii. 20, neque enim provocationem esse longius ab urbe mille passuum). Conformably to this, the Judicia quae Imperio continentur comprised among other cases those where the Judicium was beyond the limits of the mille passus. The substance of the two Leges is stated by Dionysius (*Antiq. Rom.* v. 19, 70) with more precision and apparently in accordance with the terms of the Leges. The right of provocatio was intended to protect persons against the summary jurisdiction of the consuls, by giving them an appeal to the δῆμος, and until the πᾶθος decided on their case, no punishment could be inflicted. (c. 70.) In c. 19 it is said that the appeal was also to the δῆμος; and this measure made Publicola popular with the δημοτικοί, whom we must take to be the Plebs (comp. Dionys. ix. 39). Dionysius generally uses δῆμος to signify Plebs; but he also uses πᾶθος in the same sense (vii. 65, viii. 70, 71, x. 40).

VALE'RIAE ET HORATIAE LEGES were proposed by the consuls L. Valerius and M. Horatius a. c. 449. (Liv. iii. 55.) One of these Leges which was passed at the Comitia Centuriata was "ut quod tributum plebes jussisset populum

teneret," the import of which is not easy to distinguish from the later *Pubilia Lex* (Liv. viii. 12), "ut plebiscita omnes Quirites tenerent." [PLEBISCITUM; *PUBLILIA LEX*.]

A second *Lex* was intended to secure the principle of the *Lex Valeria De Provocatione*; "that if any person appointed (*creasset*) a magistratus without appeal, it was lawful to kill such person." *Creasset* has here a technical meaning. (Liv. iii. 55, iv. 13; Cic. *de Rep.* ii. 31; "ne qui magistratus sine provocatione crearetur.") This *Lex* was enacted again B. C. 300 (Liv. x. 9) on the proposal of M. Valerius, consul; and the sanction of the *Lex* was more carefully expressed (*diligentius sanctam*). This, says Livy, was the third time that this *Lex* was enacted since the expulsion of the kings: "the cause of its being enacted several times I take to be no other than this, that the power of a few was greater than the liberty of the plebs." This is a plain and intelligible account of the matter, and may be safely accepted. The Great Charter of England was ratified more than once. A *Lex Duilia* (Liv. iii. 55) which immediately followed these *Valeriae*, again enacted, among other things, severe penalties against him "qui magistratum sine provocatione creasset." The plebs thought they were never safe enough against the nobility, and they had good grounds to be suspicious.

A third *Lex* of these consuls was to protect the persons of the tribuni plebis, aediles, judices, decemviri. Any person who violated their personality was sacer, "devoted," and his familia, liberi liberaeque, were to be sold. It is not known who are meant by judices and decemviri in this passage. The context shows that they were persons of the plebeian class or in the plebeian interest. Niebuhr's conjecture that the judices may be the Centumviri is ingenious and probable. All conjectures about the decemviri are vague.

W-A. VALE'RIA HORA'TIA. [PLEBISCITUM.]
VA'RIA. [MAJESTAS.]

VATI'NIA DE PROVINCIIS was the enactment by which Julius Caesar obtained the province of Gallia Cisalpina with Illyricum for five years, to which the senate added Gallia Transalpina. This Plebiscitum was proposed by the tribune P. Vatinius, B. C. 59. (Dion Cass. xxxviii. 8; Appian. *Bell. Civ.* ii. 13; Sueton. *Caes.* 22; Vell. Pat. ii. 44.) A Trebonia *Lex* subsequently prolonged Caesar's Imperium for five years.

VATI'NIA. [REPETUNDAR.]

VATI'NIA DE COLO'NIS, under which the Latina Colonia [LATINITAS] of Novum-Comum in Gallia Cisalpina was planted B. C. 59. (Sueton. *Caes.* 28.)

VATI'NIA DE REJECTIONE JUDICUM (Cic. *in Patis.* c. 11; *Schol. Bob.* 321, 323.)

LEGES DE VI. [VIS.]

VIA'RIA. A *Lex* that was talked of (Cic. *ad Fam.* viii. 6) is only worth mention on account of the name. Such a *Lex* might be De Vitis Muniendis.

Some modern writers speak of *Leges Viariae*, but there do not appear to be any *Leges* properly so called. The provisions as to roads (*viae*) in many of the Agrarian laws were parts of such *leges*, and had no special reference to roads. (Frontinus, or, as he is often called, Pseudo-Frontinus, *De Colonis Libellis*.)

VICESIMA'RIA. [VICESIMA.]

VI'LLIA ANNA'LIS. [ANNALES, p. 684, b. and the Essay of Wex on the *Leges Annales* of the Romans, translated in the Classical Museum, No. X.]

VISE'LLIA made a man liable to a criminal prosecution who, being a Latinus, assumed to exercise the rights of an Ingenuus. (Cod. ix. tit. 21.)

VOCO'NIA, was enacted on the proposal of Q. Voconius Saxa, a Tribuns Plebis. In the "De Senectute" of Cicero, Cato the elder is introduced as saying that he spoke in favour of the *Lex* when he was sixty-five years of age, and in the consulship of Caepio and Philippus. (A. C. 169.) Gellius also speaks of the oration in which Cato recommended this *Lex*. (Cic. *pro Balbo*, 8, *Cato Major*, 5; Gellius, vii. 13, xvii. 6.)

One provision of the *Lex* was that no person who should be included in the census, after the census of that year (*post eos censores*; the Censors of that year were A. Postumius and Q. Fulvius), should make any female (*virginem neve mulierem*) his heres. (Cic. *in Verrem*, i. 41, 42.) Cicero does not state that the *Lex* fixed the census at any sum; but it appears from Gaius (ii. 274) that a woman could not be made heres by any person who was rated in the census at 100,000 asses or upwards (*centum millia aëris*), though she could take the hereditas per fideicommissum. Dion Cassius (lvi. 10) names the sum as 25,000 drachmae, which is 100,000 aëstertii. The *Lex* allowed no exceptions even in favour of an only daughter. (Augustin. *de Civit. Dei*, iii. 21.) The *Lex* only applied to testaments, and therefore a daughter or other female could inherit ab intestato to any amount. The Vestal Virgins could make women their heredes in all cases, which was the only exception to the provisions of the *Lex*. (Cic. *de Rep.* iii. 10; Gell. i. 12.)

If the terms of the *Lex* are correctly reported by Cicero, a person who was not *census* might make a woman his heres, whatever was the amount of his property, and so Cicero understands the *Lex* (*in Verrem*, ii. 41). Still there is a difficulty about the meaning of *census*. If it is taken to mean that a person whose property was above 100,000, and who was not included in the census, could dispose of his property as he pleased by testament, the purpose of the *Lex* would be frustrated; and further "the not being included in the census" (*neque census esset*) seems rather vague. Still, according to the terms of the *Lex*, any person who had ever been included in the census, would be affected by this legal incapacity. Sometimes it is assumed that the last census is meant. The Edict extended the rule of the Voconia *Lex* to the Bonorum Possessio. (Dig. 37. tit. 1. s. 12.)

Another provision of the *Lex* forbade a person, who was census, to give more in amount in the form of a legacy or a donatio mortis causa, to any person than the heres or heredes should take. This provision secured something to the heres or heredes, but still the provision was ineffectual, and the object of this *lex* was only accomplished by the *Lex Falcidia*. [LEGATUM.] Gaius (ii. 226), in quoting this provision of the *Lex*, does not mention the condition of being census, but this is stated by Cicero (*in Verrem*, i. 48).

Some writers suppose that this *Lex* also contained a provision by which a testator was forbidden to give a woman more than half of his property by way of legacy; and it appears from Cicero that

the Lex applied to legacies (*de mulierum legatis et hereditatibus*, Cic. *de Repub.* iii. 10). But this provision is not allowed by some of the best critics to have been a part of the Lex. Quintilian (*Declam.* 264) states that by the Lex (Voconia) a woman could not take by testament more than half of a person's property; but Quintilian says nothing of the provisions of this Lex, which incapacitated women altogether from taking under a will in certain cases, and in the passage referred to he is speaking of two women being made *heredes* of a property in equal shares. The dispute between the cognati and the two women turned on the words of the Lex, "ne liceat mulieri plusquam dimidiam partem bonorum suorum relinquere," the cognati contending that the Lex did not allow the whole property to be thus given to two women in equal shares, though it was admitted that if half of the property had been given to one woman, there would have been no ground for dispute. It is quite consistent that the Lex might have allowed a woman to take half of a man's property in certain cases, and in others to take none, though the object of the Lex, which was to prevent large properties from coming into women's hands, would have been better secured by other provisions than those of the Lex as they are known to us; for it appears from Quintilian, that a woman might take by will one half of as many properties as there were testators. It might be conjectured that the clause of the Lex which forbade a woman being made *heres*, signified sole *heres*, and then the clause which forbade her taking more than half would be fitly framed to prevent an evasion of the law by making a woman *heres ex deinceps*, for instance, and giving the rest to another person. And this conjecture derives some support from the provision of the Lex Voconia which prevented the giving nearly all the property in legacies to the detriment of the *heres*; which provision, however, it must be observed, does not apply to women only (Gaius, ii. 226). The case of Fadia, mentioned by Cicero (*de Fin.* ii. 17), shows that there was a provision in the Lex by which, in certain cases at least, a woman might take something; and it also shows that the Lex prevented a man from making even his own daughter *sole heres*.

According to Gaius and Pliny (*Paneg.* 42), the provisions of the Voconia Lex were in force at the time when they were writing, though Gellius (xx. 1) speaks of them as being either obsolete or repealed. The provisions of the Lex Julia et Papia Poppaea may have repealed some of the clauses of the Voconia Lex.

The subject of the Voconia Lex is one of considerable difficulty, owing to the imperfect statements that remain of its contents and provisions, which were probably numerous. The chief modern authorities on the matter are referred to by Rein (*Das Röm. Privat. Recht*, p. 367, &c.), and in Orellii *Onomasticon*. The latest essay on it that the writer has seen is "Die Lex Voconia &c." by Dr. J. J. Bachofen, Basel, 1843; but the essay does not settle all the difficulties.

This list of Leges may not be quite complete, and the dates of some of them and the statement of their purport may not be perfectly accurate. Still it contains all the Leges that are of any importance for the understanding of Roman History and Jurisprudence. Those which are not specially noticed here, are referred to their proper heads,

particularly when there are many Leges relating to one subject, as Ambitus, Repetundae, &c. Several of the Roman Leges were modified by *Senatusconsulta*. The *Senatusconsulta*, which are properly laws, are enumerated under *SENATUSCONSULTUM*.

LEXIARCHI (λεξιάρχαι). [ECCLESIA, p. 441, a.]

LEXIARCHICON (λεξιάρχικόν). [DEMUS.]
LEXIS (λῆξις). [DIKE.]

LIBELLA, instruments. [LIBRA.]

LIBELLA, a small Roman silver coin, which is mentioned by Varro (*L. L.* v. 36, p. 68, Müller) as having existed in the early age of the city, but which in his time, and apparently for a considerable period before, was no longer coined. The name, however, was retained especially as a proverbial expression for a very small value. (Plaut. *Pseud.* ii. 2. 34, *Capt.* v. 1. 27; Cic. *Verr.* ii. 2, *pro Rosc. Com.* 4.) It was equal in value to the *as* (whence its name), and, in the system of silver money, it was the tenth part of the *denarius*. (Varr. *L. c.*; Plin. *H. N.* xxxiii. 3. s. 13.) The words of Varro and Pliny clearly imply that the *libella* was equal in value to the old full-weight *as*; and it seems most probable that the coin ceased being struck at the time of the reduction of the *as*, on account of the inconveniently small size which it would have assumed. The *libella* was subdivided into the *sempella*, its half, and the *teruncius*, its quarter. Cicero (*ad Att.* vii. 12) uses these words to express fractions of an estate, with reference to the *denarius* as the unit, the *libella* signifying 1-10th, and the *teruncius* 1-40th of the whole (Böckh, *Métrol. Unter such.* p. 453, &c.). [P. S.]

LIBELLUS, is the diminutive form of *liber*, and signifies properly a little book. A *libellus* was distinguished from other kinds of writings, by being written like our books by pages, whereas other writings were written *transversa charta*. (Suet. *Cass.* 56.) A *libellus*, however, did not necessarily consist of several pages. It was used by the Romans as a technical term in the following cases:—

1. *Libelli accusatorum* or *accusatori* were the written accusations which in some cases a plaintiff, after having received the permission to bring an action against a person, drew up, signed, and sent to the judicial authorities, viz., in the city to the praetor, and in a province to the proconsul. (Cod. 9. tit. 2. s. 8; Dig. 48. tit. 5. s. 2. 17. 29; 47. tit. 2. s. 74; compare *ACTIO*.) The form in which a *libellus accusatorius* was to be written, is described by Ulpian in a case of adultery. (Dig. 48. tit. 2. s. 3.) The accuser had to sign the *libellus*, and if he could not write, he was obliged to get somebody else to do it for him. If the *libellus* was not written in the proper legal form, it was invalid, but the plaintiff had still the right to bring the same action again in its legal form. (Juv. vi. 244, &c.; Tacit. *Ann.* iii. 44; Plin. *Epist.* vii. 27; compare Brisson. *de Form.* v. c. 187, &c.)

2. *Libelli famosi* were what we call libels or *pasquinades*, intended to injure the character of persons. A law of the Twelve Tables inflicted very severe punishments on those who composed defamatory writings against any person. (Cic. *de Re Pub.* iv. 10; Arnob. iv. p. 151.) During the latter part of the republic this law appears to have been in abeyance, for Tacitus (*Ann.* i. 72) says that previous to the time of Augustus libels had never

been legally punished (compare Cic. *ad Fam.* iii. 11), and that Augustus provoked by the audacity with which Cassius Severus brought into disrepute the most illustrious persons of the age, ordained, by a lex majestatis, that the authors of libelli famosi should be brought to trial. On this occasion Augustus, who was informed of the existence of several such works, had a search made at Rome by the aediles, and in other places by the local magistrates, and ordered the libelli to be burnt; some of the authors were subjected to punishment. (Dion. Casa. lvi. 27.) A law quoted by Ulpian (Dig. 47. tit. 10. s. 5) ordained that the author of a libellus famosus should be intestabilis, and during the later period of the empire we find that capital punishment was not only inflicted upon the author, but upon those persons in whose possession a libellus famosus was found, or who did not destroy it as soon as it came into their hands. (Cod. 9. tit. 86.) For further information on this subject see Rein, *Das Criminalrecht der Römer*, pp. 378, &c. 531.

3. *Libellus memorialis*, a pocket or memorandum book. (Suet. *Caes.* 56.) The libellus, from which Cicero (*ad Att.* vi. 1. § 5) communicates a memorandum of Brutus, appears to have been a book of this kind.

4. *Libellus* is used by the Roman jurists as equivalent to *Oratio Principis*. [ORATIONES PRINCIPUM.]

5. The word libellus was also applied to a variety of writings, which in most cases probably consisted of one page only:—

a. To short letters addressed to a person for the purpose of cautioning him against some danger which threatened his life (Sueton. *Caes.* 81, *Calig.* 15); and to any short letters or reports addressed to the senate or private individuals. (Suet. *Caes.* 56, *August.* 84; Cic. *ad Fam.* xi. 11.)

b. To the bills called *libelli gladiatorii*, or *munerarii*, which persons who gave gladiatorial exhibitions distributed among the people. [GLADIATORUM, p. 574, b.]

c. To petitions to the emperors. (Suet. *Aug.* 53; *Mart.* viii. 31. 3, 82. 1.) The emperors had their especial officers or secretaries who attended to all petitions (*libellis praeffectus*, Dig. 20. tit. 5), and who read and answered them in the name of the emperor. (Suet. *Domit.* 14.) Such a libellus is still extant. See Gruter, *Inscript.* p. DCVII. 1.

d. To the bill of appeal called *libellus appellatorius*, which a person who did not acquiesce in a judicial sentence, had to send in after the lapse of two or three days. (Dig. 40. tit. 1.)

e. To the bills stuck up in the most frequented parts of the city, in case of a debtor having absconded. (Cic. *pro Quint.* 6, 15, 19; Rein, *Röm. Privat.* p. 499.) Such bills were also stuck upon the estates of such a debtor, and his friends who wished to pay for him sometimes pulled down such bills. (Senec. *de Benef.* iv. 12.)

f. To bills in which persons announced to the public that they had found things which had been lost, and in which they invited the owner to claim his property. (Plaut. *Rud.* v. 2. 7, &c.; Dig. 47. tit. 2. s. 44.) The owner gave to the finder a reward (*obrepas*) and received his property back. Sometimes the owner also made known to the public by a libellus what he had lost, stated his name and residence, and promised to give a reward to the person who found his property, and brought it back to him. (Propert. iii. 21. 21, &c.) [L. S.]

LIBER (*βιβλίον*) a book. The most common material on which books were written by the Greeks and Romans, was the thin coats or rind (*liber*, whence the Latin name for a book) of the Egyptian papyrus. This plant was called by the Egyptians *byblos* (*βύβλος*), whence the Greeks derived their name for a book (*βιβλίον*). It formed an article of commerce long before the time of Herodotus (v. 58), and was extensively used in the western part of Europe, as is proved by the number of rolls of papyri found at Herculaneum. In the sixth century of the Christian aera the duty on imported papyrus was abolished by Theodoric the Great, on which occasion Cassiodorus wrote a letter (xi. 38), in which he congratulates the world on the cessation of a tax so unfavourable to the progress of learning and of commerce. The papyrus-tree grows in swamps to the height of ten feet and more, and paper was prepared from the thin coats or pellicles which surround the plant in the following manner according to Pliny (xiii. 23):—The different pieces were joined together by the turbid Nile water, as it has a kind of glutinous property. A layer of papyrus (*acheda* or *philyra*) was laid flat on a board, and a cross layer put over it; and being thus prepared, the layers were pressed and afterwards dried in the sun. The sheets were then fastened or pasted together, the best being taken first and then the inferior sheets. There were never more than twenty in a scapus or roll. The papyri found in Egyptian tombs differ very much in length, but not much in breadth, as the breadth was probably determined by the usual length of the strips taken from the plant. The length might be carried to almost any extent by fastening one sheet to another. The writing was in columns with a blank slip between them. (*Egyptian Antiquities*, vol. ii. ch. 7. Lond. 1836.) The form and general appearance of the papyri rolls will be understood from the following woodcut taken from paintings found at Pompeii. (Gell. *Pomp.* vol. ii. p. 187.)

The paper (*akarta*) made from the papyrus was of different qualities. The best was called after Augustus, the second after Livia, the third, which was originally the best, was named Hieratica, because it was appropriated to the sacred books. The finest paper was subsequently called Claudia, from the emperor Claudius. The inferior kinds were called *Amphitheatrica*, *Saitica*, *Lenotica*, from the places in Egypt where it was made, and also *Fanniana*, from one Fannius, who had a celebrated manufactory at Rome. The kind called *Emporetica* was not fit for writing, and was chiefly used by merchants for packing their goods, from which circumstance it obtained its name. (Plin. xiii. 28, 24.)

Next to the papyrus, parchment (*membrana*) was the most common material for writing upon.

It is said to have been invented by Eumenes II. king of Pergamus, in consequence of the prohibition of the export of papyrus from Egypt, by Ptolemy Epiphanes. (Plin. xiii. 21.) It is probable, however, that Eumenes introduced only some improvement in the manufacture of parchment, as Herodotus mentions writing on skins as common in his time, and says that the Ionians had been accustomed to give the name of skins (*δερμάτια*) to books (v. 58). Other materials are also mentioned as used for writing on, but books appear to have been almost invariably written either upon papyrus or parchment.

The ancients wrote usually on only one side of the paper or parchment, whence Juvenal (i. 5) speaks of an extremely long tragedy as

"Summi plena jam margine libri
Scriptus et in tergo necdum finitus Orestes."

Such works were called *Opistographi* (Plin. Ep. iii. 5), and are also said to be written in *œneas charta*. (Mart. viii. 62.)

The back of the paper, instead of being written upon, was usually stained with saffron colour or the cedrus. (Lucian, *πρὸς Ἀντισθ.* 16. vol. iii. p. 113; *crocœas membranas tabellas*, Juv. vii. 28; Pers. iii. 10.) We learn from Ovid that the cedrus produced a yellow colour. (Ovid, *Trist.* iii. 1. 13.)

As paper and parchment were dear, it was frequently the custom to erase or wash out writing of little importance, and to write upon the paper or parchment again, which was then called *Palimpsestus* (*παλινψήστος*). This practice is mentioned by Cicero (*ad Fam.* vii. 18), who praises his friend Trebatius for having been so economical as to write upon a palimpsest, but wonders what those writings could have been which were considered of less importance than a letter. (Compare Catull. xxii. 5; Martial, xiv. 7.)

The paper or parchment was joined together so as to form one sheet; and when the work was finished, it was rolled on a staff, whence it was called a *volumen*; and hence we have the expression *evolvere librum*. (Cic. *ad Att.* ix. 10.) When an author divided a work into several books, it was usual to include only one book in a volume or roll, so that there were generally the same number of volumes as of books. Thus Ovid (*Trist.* i. 1. 117) calls his fifteen books of *Metamorphoses* "*mutatæ ter quinque volumina formæ*." (Compare Cic. *Tusc.* iii. 3, *ad Fam.* xvii. 17.) When a book was long, it was sometimes divided into two volumes; thus Pliny (*Ep.* iii. 5) speaks of a work in three books "*in sex volumina propter amplitudinem divisi*."

In the papyri rolls found at Herculaneum, the stick on which the papyrus is rolled does not project from the papyrus, but is concealed by it. Usually, however, there were balls or bosses, ornamented or painted, called *umbilici* or *cornua*, which were fastened at each end of the stick and projected from the papyrus. (Martial, iii. 2, v. 6, 15; Tibull. iii. 1. 14; Ovid, *Trist.* i. 1. 8.) The ends of the roll were carefully cut, polished with pumice-stone and coloured black; they were called the *geminae frontes*. (Ovid, *l. c.*)

To protect the roll from injury it was frequently put in a parchment case, which was stained with a purple colour or with the yellow of the Lutum. Martial (x. 93) calls such a covering a *purpurea toga*. Something of the same kind is meant by

the Greek *στυβάς* (*στυβάς*, Cic. *ad Att.* iv. 5), which Hesychius explains by *δερμάτιναι στολαί*.

The title of the book (*titulus index*) was written on a small strip of papyrus or parchment with a light red colour (*occum* or *minium*). Winkemann supposed that the title was on a kind of ticket suspended to the roll, as is seen in the paintings at Herculaneum (see woodcut), but it was most probably stuck on the papyrus itself. (Compare Tibull. *l. c.*) We learn from Seneca (*de Tranq. An.* 9) and Martial (xiv. 186) that the portraits of the authors were often placed on the first page of the work.

As the demand for books increased towards the end of the Roman republic, and it became the fashion for the Roman nobles to have a library, the trade of booksellers naturally arose. They were called *Librarii* (Cic. *de Leg.* iii. 20), *Bibliopolas* (Mart. iv. 71, xiii. 3), and by the Greek writers *βιβλίον κάπηλοι* or *βιβλιοκάπηλοι*. Their shop was called *taberna libraria* (Cic. *Phil.* ii. 9). These shops were chiefly in the Argiletum (Mart. i. 4), and in the Vicus Sandalarius (Gell. xviii. 4). On the shop door, or the pillar, as the case might be, there was a list of the titles of books on sale: allusion is made to this by Horace (*Sat.* i. 4. 71, *Art. Poët.* 372) and Martial (i. 118). The price at which books were sold, seems to have been moderate. Martial says (*l. c.*) that a good copy of the first book of his epigrams might be had for five denarii. In the time of Augustus, the Sotii appear to have been the great booksellers at Rome. (Hor. *Ep.* i. 20. 2, *Art. Poët.* 345; see also Becker, *Gallus*, vol. i. p. 163, &c.) Compare the articles ATRAMENTUM, BIBLIOTHECA, CALAMUS, CAPRA, STYLUS.

LIBER, LIBERTAS. The Roman writers divide all men into Liberi and Servi [SERVUS]; and men were either born Liberi, in which case they were called by the Romans Ingenui [INGENUI], or they became Liberi after being Servi, in which case they were called Libertini [LIBERTUS]. Libertus is defined in the Institutes of Justinian (1. tit. 1), to be "the natural faculty to do that which a man pleases, except he be in any thing hindered by force or law." Accordingly the Romans considered Libertas as the natural state or condition of men [SERVUS]. A man might either be born a slave, or he might become a slave by loss of freedom. Libertas was the first essential of the three which determined status or condition: the other two were Civitas and Familia. Without Libertas there could be no status. Civitas implied Libertas; but Libertas did not necessarily imply Civitas, for a man might be Liber without being Civi[s]. [CIVIS.] Familia implies both Libertas and Civitas, and he only who is Civi[s] has Familia. [FAMILIA.] Thus, Familia necessarily includes Civitas, but Civitas does not necessarily include Familia in one sense; for familia may be changed, while libertas and civitas remain (cum et libertas et civitas retinetur, familia tantum mutatur minimam esse capitis diminutionem constat: Dig. 4. tit. 5. a. 11). But Civitas so far necessarily implied Familia, that no Civi[s] Romanus was permanently without Familia. [G. L.]

LIBERA FUGA. [EXSILIUM.]

LIBERA'LIA. [DIONYSIA, p. 414, a.]

LIBERA'LIS CAUSA. [ASSERTIO.]

LIBERA'LIS MANUS. [MANUS.]

LIBERA'LITAS. [AMBITUS.]

LIBERO-RUM JUS. [LEX JULIA ET PAPIA POPPANA.]

LIBERTUS (ἀπελευθερος), a freedman. 1. GREEK. It was not unfrequent for a master at Athens to restore a slave to freedom. A private person, it appears, might liberate his slave without any particular formality; sometimes the state would emancipate a slave, but then the purchase money had to be restored to his master. (Plat. *de Leg.* xi. p. 914.) The state into which a slave thus entered was called ἀπελευθερία, and he was said to be καθ' αὐτόν. (Demosth. *pro Phorm.* p. 945.) It is not quite certain whether those persons who are termed of *χωρὶς οἰκόντες* (Demosth. *Philipp.* i. p. 50) were likewise freedmen, as the grammarians assert, or whether they were persons yet in slavery, but living separated from their masters' household; but in Demosthenes (*c. Euryg. et Mnesib.* p. 1161) the expression *χωρὶς φκεῖ* is evidently used as synonymous with "he has been emancipated." A slave when manumitted entered into the status of a *μετοικὸς* [METOIKUS], and as such he had not only to pay the *μετοίκιον*, but a triobolus in addition to it. This triobolus was probably the tax which slave-holders had to pay to the republic for each slave they kept, so that the triobolus paid by freedmen was intended to indemnify the state, which would otherwise have lost by every manumission of a slave. (Böckh, *Publ. Econ. of Athens*, p. 331, &c., 2d edit.) The connection of a freedman with his former master was however not broken off entirely on his manumission, for he had throughout his life to regard him as his patron (προστάτης), and to fulfil certain duties towards him. In what these duties consisted beyond the obligation of showing gratitude and respect towards his deliverer, and of taking him for his patron in all his affairs, is uncertain, though they seem to have been fixed by the laws of Athens. (Meier and Schöm. *Att. Proc.* p. 473, &c.; Petit. *Leg. Att.* ii. 6. p. 261; compare Plato, *de Leg.* xi. p. 915.) Whether the relation existing between a person and his freedman descended to the children of the latter, is likewise unknown. That a master, in case his freedman died, had some claims to his property, is clear from Isaeus (*de Nicostrat. hered.* c. 9; Rhetor. ad Alex. i. 16; compare Bunsen, *De Jur. hered. Ath.* p. 51). The neglect of any of the duties which a freedman had towards his former master, was prosecuted by the ἀποστασίον δίκη. [APOSTASIION DIKE.]

The Spartans likewise restored their slaves sometimes to freedom, but in what degree such freedmen partook of the civic franchise is not known. That they could never receive the full Spartan franchise is expressly stated by Dion Chrysostomus (*Orat.* xxxvi. p. 448, b), but Müller (*Dor.* iii. 3. § 5) entertains the opinion that Spartan freedmen, after passing through several stages, might in the end obtain the full franchise; this opinion however is more than doubtful. Spartan freedmen were frequently used in the armies and in the fleet, and were, according to Myro (*ap. Athen.* vi. p. 271), designated by the names of ἀφέτοι, ἀδέσποτοι, ἐρκετήρες, δεσποτινοῦνται, and νεοδαμώδεις.

[L. S.]

2. ROMAN. Freemen (*liberi*) were either Ingenui [INGENUI] or Libertini. Libertini were those persons who had been released from legal servitude (*qui ex justa servitute manumissi sunt*, Gaius, i. 11). A manumitted slave was Libertus

(that is, liberatus) with reference to his master; with reference to the class to which he belonged after manumission, he was Libertinus. According to Suetonius, libertinus was the son of a libertus in the time of the censor Appius Claudius, and for some time after (*Claud.* c. 24); but this is not the meaning of the word in the extant Roman writers.

There were three modes of Legitima manumissio, the vindicta, the census, and the testamentum: if the manumitted slave was above thirty years of age, if he was the Quiritarian property of his master, and if he was manumitted in proper form (*legitime, justa et legitima manumissione*) he became a Civis Romanus: if any of these conditions were wanting, he became a Latinus; and in some cases only a Dediticius. [MANUMISSIO.] Thus there were, as Ulpian observes, three kinds of Liberti: Cives Romani, Latini Juniani, and Dediticii.

The Status of a Civis Romanus and that of a Dediticius, have been already described. [CIVITAS; DEDITICI.] As to the political condition of Libertini under the republic, who were Cives Romani, see MANUMISSIO.

Originally slaves who were so manumitted as not to become Cives Romani, were still slaves; but the Praetor took them under his protection, and maintained their freedom, though he could not make them Cives Romani. The Lex Junia gave them a certain status, which was expressed by the phrase Latini Juniani: they were called Latini, says Gaius (i. 22, iii. 56), because they were put on the same footing as the Latini Coloniarum, and Juniani because the Junia Lex gave them freedom, whereas before they were by strict law (*ex Jure Quiritium*) slaves. Gaius (iii. 56) says that the Lex Junia declared such manumitted persons to be as free as if they had been Roman citizens by birth (*cives Romani ingenui*), who had gone out from Rome to join a Latin colony, and thereby had become Latini Coloniarum: this passage, which is not free from difficulty, is remarked on by Savigny (*Zeitschrift*, ix. p. 320).

A Latinus could attain the Civitas in several ways. (Gaius, i. 28, &c.; Ulp. *Frag.* tit. 3; LATINITAS.) As the patria potestas was a Jus peculiar to Roman citizens, it followed that a Latinus had not the (Roman) patria potestas over his children. If, however, he had married either a Latina and had begotten a child, who would of course be a Latinus, or had married a Roman civis, and had begotten a child, which, by a senatusconsultum of Hadrian, would be a Romanus Civis, he might, by complying with the provisions of the Lex Aelia Sentia, in the former case obtain the civitas for himself, his wife, and child, and in both cases acquire the patria potestas over his child just as if the child had been born in justae nuptiae. (Gaius, i. 30, 66.)

In considering the legal condition of Libertini, it is necessary to remember that even those who were Cives Romani were not Ingenui, and that their patroni had still certain rights with respect to them. The Latini Juniani were under some special incapacities; for the Lex Junia which determined their status, neither gave them the power of making a will, nor of taking property under a will, nor of being named Tutores in a will. They could not therefore take either as heredes or legatarii, but they could take by way of fidei-commissum. (Gaius, i. 24.) The sons of libertini were ingenui, but they could not have gentile rights;

and the descendants of libertini were sometimes taunted with their servile origin. (Hor. *Serm.* i. 6, 46.)

The law which concerns the property (*bona*) of Libertini may be considered under PATRONUS; see also INGENUI and LEX JUNIA. [G. L.]

LIBITINARI. [FUNUS, p. 558, a.]

LIBRA or AS, a pound, the unit of weight among the Romans and Italians. Many ancient specimens of this weight, its parts and multiples, have come down to us; but of these some are imperfect, and the rest differ so much in weight that no satisfactory conclusion can be drawn from them. The difference between some of these specimens is as much as two ounces. An account of some of the most remarkable of them is given by Hussey (*Ancient Weights, &c.* ix. § 3), and Böckh (*Metrolog. Untersuch.* p. 170). This variety is to be accounted for partly by the well-known carelessness of the Romans in keeping to their standards of weight, and partly by the fact that many of the extant weights are from provincial towns, in which this carelessness was notoriously greater than in the metropolis.

The computation of the weight of the *libra* has been attempted in two ways, which are more fully discussed under PONDERRA. The method which has been followed by most writers is that of deducing it from the weights of the silver coins—a process which gives, according to Hussey, 5040 grains, and according to Wurm and Böckh, a little more than 5053. The other plan is that of weighing the quantity of water held by the Congius of Vespasian, which originally contained 10 Roman pounds, which gives a result of about 5200 grains. According to the former computation, it was somewhat less than 11½, according to the latter, somewhat more than 11½ ounces avoirdupois; and, according to either, its value may be roughly stated as a little less than 3-4th of a pound avoirdupois.

The uncial division, which has been noticed in speaking of the coin AS, was also applied to the weight. (See the Tablea.) The divisions of the ounce are given under UNCIA. Where the word *pondo*, or its abbreviations P. or POND., occur with a simple number, the weight understood is the *libra*.

The name *libra* was also given to a measure of horn divided into twelve equal parts (*unciae*) by lines marked on it, and used for measuring oil. (Suet. *Caes.* c. 38; Galen, *de Comp. Med. Gen.* i. 17, vi. 8; Horat. *Sat.* ii. 2. 59—61.) [P. S.]

LIBRA, *dim.* LIBELLA (σταβμός), a balance, a pair of scales. The principal parts of this instrument were, 1. The beam [JUGUM], whence anything which is to be weighed is said *ἐντὶ ζυγὸν ἀναβλήσθαι*, literally, "to be thrown under the beam." (Aelian, *V. H.* x. 6.) 2. The two scales, called in Greek *τάλαντα* (Hom. *Il.* viii. 69, xii. 433, xvi. 659, xix. 223, xxii. 209; Aristoph. *Ranæ*, 809) and *πλάστιγγες* (Aristoph. *Ranæ*, 1425), and in Latin *lances* (Virg. *Aen.* xii. 725; Pers. iv. 10; Cic. *Acad.* iv. 12). [LANX.] Hence the verb *ταλαντεύω* is employed as equivalent to *σταβμῶ*, and to the Latin *libro*, and is applied as descriptive of an eagle balancing his wings in the air. (Philostat. *Jun. Imag.* 6; Welcker, *ad loc.*) The beam was made without a tongue, being held by a ring or other appendage (*ligula*, *βίμα*), fixed in the centre. (See the woodcut.) Specimens of

bronze balances may be seen in the British Museum and in other collections of antiquities, and also of the steel-yard [STATERA], which was used for the same purposes as the *libra*. The woodcut to the article CATENA shows some of the chains by which the scales are suspended from the beam. In the works of ancient art, the balance is also introduced emblematically in a great variety of ways. The annexed woodcut is taken from a beautiful bronze patera, representing Mercury and Apollo engaged in exploring the fates of Achilles and Memnon, by weighing the attendant genius of the one against

that of the other. (Winckelmann, *Mon. Ined.* 133; Millin, *Peintures de Vases Ant.* i. pl. 19. p. 39.) A balance is often represented on the reverse of the Roman imperial coins; and to indicate more distinctly its signification, it is frequently held by a female in her right hand, while she supports a cornucopia in her left, the words *ÆQUITAS AVGVSTI* being inscribed on the margin, so as to denote the justice and impartiality with which the emperors dispensed their bounty.

The constellation Libra is placed in the Zodiac at the equinox, because it is the period of the year at which day and night are equally balanced. (Virg. *Georg.* i. 208; Plin. *H. N.* xviii. 69; Schol. in *Arat.* 89.)

The mason's or carpenter's level was called *libra* or *libella* (whence the English name), on account of its resemblance in many respects to a balance. (Varro, *de Re Rust.* i. 6; Columella, iii. 13; Plin. *H. N.* xxxvi. 52.) Hence the verb *libro* meant to level as well as to weigh. The woodcut to the article CIRCINUS shows a *libella fabrilis* having the form of the letter A (Veget. iii. 20), and the line and plummet (*perpendicularum*) depending from the apex. [J. Y.]

LIBRAMENTUM, LIBRATIO AQUARUM. [AQUADUCTUS, p. 113, b.]

LIBRARIJ, the name of slaves, who were employed by their masters in writing or copying in any way. They must be distinguished from the Scribes publici, who were freemen [SCRIBÆ], and also from the booksellers [LIBRÆ], to both of whom this name is occasionally applied. The slaves, to whom the name of librarii was given, may be divided into three classes:—

1. *Librarii* who were employed in copying books, called *Scriptores Librarii* by Horace (*Art Poët.* 354). These librarii were called in later times *antiquarii*. (Cod. 12. tit. 19. s. 10; Cod. Theod. 4. tit. 8. s. 2; Isid. *Orig.* vi. 14.) Isidore

(*l.c.*) says that the librarii copied both old and new books, while the antiquarii copied only old books. Becker (*Gallus*, vol. i. p. 164), however, thinks that, when the cursive character came into general use, the name of antiquarii was applied to the copyists who transcribed books in the old uncial character. The name of librarii was also given to those who bound books (*Cic. ad Att. iv. 4*), and to those who had the care of libraries.

2. *Librarii a studiis* were slaves who were employed by their masters when studying to make extracts from books, &c. (*Orell. Inscr. 719*; *Suet. Claud. 28*; *Cic. ad Fam. xvi. 21*.) To this class the *notarii*, or short-hand writers, belonged, who could write down rapidly whatever their masters dictated to them. (*Plin. Ep. iii. 5*; *Martial. xiv. 208*.) [NOTARIJ.]

3. *Librarii ab epistolis*, whose principal duty was to write letters from their master's dictation. (*Orelli, Inscr. 2437, 2997*, &c.; *Becker, Gallus*, vol. i. p. 180.) To this class belonged the slaves called *ad manum*, *a manu*, or *amanuenses*. [AMANUENSIS.]

LIBRATOR is in general a person who examines things by a LIBRA; but the name was, in particular, applied to two kinds of persons.

1. *Librator aquae*, a person whose knowledge was indispensable in the construction of aqueducts, sewers, and other structures for the purpose of conveying a fluid from one place to another. He examined by a hydrostatic balance (*libra aquaria*) the relative heights of the places from and to which the water was to be conducted. Some persons at Rome made this occupation their business, and were engaged under the *curatores aquarum*, though architects were also expected to be able to act as libratores. (*Plin. Epist. x. 50*; *Frontin. de Aquaed. 105*; compare *Vitruv. viii. 6*; *Cod. 10. tit. 66. s. 1*.)

2. *Libratores* in the armies were probably soldiers who attacked the enemy by hurling with their own hands (*librando*) lances or spears against them. (*Tacit. Ann. ii. 20, xiii. 39*; in both these passages some MSS. have *libritores*.) *Lipsius (ad Tacit. Ann. l. c.)* thinks that the libratores were men who threw darts or stones against the enemy by means of machines, *tormenta* (compare his *Poëtiæ*, iv. 3). But this supposition can scarcely be supported by any good authority. During the time of the republic libratores are not mentioned in the Roman armies. [L. S.]

LI'BRIPENS. [MANCIPATIO.]

LIBURNA, LIBURNICA. [NAVIS.]

LICHAS (Λίχης). [PES.]

LICIA, LICIATORIUM. [TELA.]

LICTOR, a public officer, who attended on the chief Roman magistrates. The number which waited on the different magistrates is stated in the article FASCES.

The office of lictor is said to have been derived by Romulus from the Etruscan. (*Liv. i. 8*.) The etymology of the name is doubtful; *Gellius (xii. 3)* connects it with the verb *ligare*, because the lictors had to bind the hands and feet of criminals before they were punished. The lictors went before the magistrates, one by one in a line; he who went last or next to the magistrate was called *proximus lictor*, to whom the magistrate gave his commands (*Liv. xxiv. 44*; *Sall. Jug. 12*; *Cic. Ferr. v. 54, de Dio. i. 28*; *Orelli, Inscr. 3218*), and as this lictor was always the principal one, we

also find him called *primus lictor* (*Cic. ad Quint. i. 1. § 7*), which expression some modern writers have erroneously supposed to refer to the lictor who went first.

The lictors had to inflict punishment on those who were condemned, especially in the case of Roman citizens (*Liv. ii. 5, viii. 7*); for foreigners and slaves were punished by the *carnifex*; and they also probably had to assist in some cases in the execution of a decree or judgment in a civil suit. The lictors also commanded (*animadverterunt*) persons to pay proper respect to a magistrate passing by, which consisted in dismounting from horseback, uncovering the head, standing out of the way, &c. (*Liv. xxiv. 44*; *Sen. Ep. 64*.)

The lictors were originally chosen from the plebs (*Liv. ii. 55*), but afterwards appear to have been generally freedmen, probably of the magistrate on whom they attended. (*Comp. Tacit. Ann. xiii. 27*.)

Lictors were properly only granted to those magistrates who had the Imperium. Consequently the tribunes of the plebs never had lictors (*Plut. Quæst. Rom. 81*), nor several of the other magistrates. Sometimes, however, lictors were granted to persons as a mark of respect or for the sake of protection. Thus by a law of the Triumvirs every Vestal virgin was accompanied by a lictor, whenever she went out (*Dion Cass. xlvii. 19*), and the honour of one or two lictors was usually granted to the wives and other female members of the Imperial family. (*Tacit. Ann. i. 14, xiii. 2*.)

There were also thirty lictors called *Lictores Curiati*, whose duty it was to summon the curiae to the comitia curiata; and when these meetings became little more than a form, their suffrages were represented by the thirty lictors. (*Gell. xv. 27*; *Cic. Agr. ii. 12*; *Orelli, Inscr. 2176, 2922, 3240*.)

LIGO (δίκελλα or μέγελλα) was a hatchet formed either of one broad iron or of two curved iron prongs, which was used by the ancient husbandmen to clear the fields from weeds. (*Ovid, ex Pont. i. 8. 59*; *Mart. iv. 64*; *Stat. Theb. iii. 589*; *Column. x. 89*.) The ligo seems also to have been used in digging the soil and breaking the clods. (*Hor. Carm. iii. 6. 38, Epist. i. 14. 27*; *Ovid, Amor. iii. 10. 31*; compare *Dickson, On the Husbandry of the Ancients*, i. p. 415.) [L. S.]

LI'GULA, a Roman measure of fluid capacity, containing one-fourth of the CYATHUS. (*Columnella, R. R. xii. 21*; *Plin. H. N. xx. 5. s. 18*.)

It signifies a spoonful, like *cochlear*; only the *ligula* was larger than the *cochlear*. The spoon which was called *ligula*, or *lingula* (dim. of *lingua*) from its shape, was used for various purposes, especially to clean out small and narrow vessels, and to eat jellies and such things. (*Cato, R. R. 84*; *Column. ix. 5*; *Plin. H. N. xxi. 14. s. 49*; *Martial. viii. 33. 23. 71. 9, xiv. 120*; *Becker, Gallus, ii. p. 156*.) The word is also used for the leather tongue of a shoe (*Pollux, ii. 109, vii. 80*; *Festus s. v*.) [P. S.]

LIMA, a file, was made of iron or steel, for the purpose of polishing metal or stone, and appears to have been of the same form as the instruments used for similar purposes in modern times. (*Plin. H. N. xxxvii. 8. s. 32, ix. 35. s. 54, xxviii. 9. s. 41*; *Plaut. Menæch. i. 1. 9*.) [L. S.]

LIMBUS (ἡραυφή), the border of a tunic (*Corippus, de Laud. Just. ii. 117*) or a scarf. (*Virg.*

Aen. iv. 137; *Serv. in loc.*) This ornament, when displayed upon the tunic, was of a similar kind with the CYCLAS and INSTITA (*Servius in Virg. Aen.* ii. 616), but much less expensive, more common and more simple. It was generally woven in the same piece with the entire garment of which it formed a part, and it had sometimes the appearance of a scarlet or purple band upon a white ground; in other instances it resembled foliage (*Virg. Aen.* i. 649; *Ovid, Met.* vi. 127), or the scrolls and meanders introduced in architecture. A very elegant effect was produced by bands of gold thread interwoven in cloth of Tyrian purple (*Ovid, Met.* v. 51), and called *ἄνποι* or *leria*. (*Festus, s. v.*; *Bruck, Anal.* i. 483.) Demetrius Poliorcetes was arrayed in this manner (*χρυσοπαρφοῖς ἀλουργίσ, Plut. Demet.* 41). Virgil (*Aen.* v. 251) mentions a scarf enriched with gold, the border of which was in the form of a double meander. In illustration of this account examples of both the single and the double meander are introduced at the top of the annexed woodcut. The other eight specimens of limbi are selected to show some of the principal varieties of this ornament, which present themselves on Etruscan vases and other works of ancient art.

The use of the limbus was almost confined to the female sex among the Greeks and Romans; but in other nations it was admitted into the dress of men likewise.

An ornamental band, when used by itself as a fillet to surround the temples or the waist, was also called limbus. (*Stat. Theb.* vi. 367, *Achill.* ii. 176; *Claud. de Cons. Mallii Theod.* 118.) Probably the *limbolarii* mentioned by Plautus (*Aulul.* iii. 5. 45), were persons employed in making bands of this description. [J. Y.]

LIMEN. [JANUA.]

LINTEA'MEN, LYNTEUM. [PALLIUM.]

LITHOSTROTA. [DOMUS; PICTURA, *sub fin.*]

LITIS CONTESTATIO. "Contestari" is when each party to a suit (*utroque reus*) says, "Testes estote." Two or more parties to a suit (*adversarii*) are said contestari litem, because when the Judicium is arranged (*ordinato judicio*) each party is accustomed to say, "Testes estote." (*Festus, s. v. Contestari.*) The Litis Contestatio was therefore so called because persons were called on by the parties to the suit to "bear witness," "to be witnesses." It is not here said what they were to be witnesses of, but it may be inferred

from the use of the words contestatio and testatio in a similar sense in other passages (*Dig.* 28. tit. 1. s. 20; *Ulp. Frag.* xx. s. 9) that this contestatio was the formal termination of certain acts of which the persons called to be witnesses were at some future time to bear record. Accordingly the Contestatio, spoken of in the passage of Festus, must refer to the words *ordinato judicio*, that is, to the whole business that has taken place In Jure and which is now completed. This interpretation seems to be confirmed by the following considerations.

When the Legis Actiones were in force, the procedure consisted of a series of oral acts and pleadings. The whole procedure, as was the case after the introduction of the Formulae, was divided into two parts, that before the Magistratus or In Jure, and that before the Judex or In Judicio. That before the Magistratus consisted of acts and words by the parties, and by the Magistratus, the result of which was the determination of the form and manner of the future proceedings In Judicio. When the parties appeared before the Judex, it would be necessary for him to be fully informed of all the proceedings In Jure; this was effected in later times by the Formula, a written instrument under the authority of the Praetor, which contained the result of all the transactions In Jure in the form of instructions for the Judex. But there is no evidence of any such written instructions having been used in the time of the Legis Actiones; and this must therefore have been effected in some other way. The Litis Contestatio then may be thus explained: the whole proceedings In Jure took place before witnesses, and the Contestatio was the conclusion of these proceedings; and it was the act by which the litigant parties called on the witnesses to bear record before the Judex of what had taken place In Jure.

This, which seems a probable explanation of the original meaning of Litis Contestatio, may be compared to some extent with the apparently original sense of Recorder and Recording in English law. (*Penny Cyclopaedia*, art. Recorder.)

When the Formula was introduced, the Litis Contestatio would be unnecessary, and there appears no trace of it in its original sense in the classical jurists. Still the expressions Litis Contestatio and Lis Contestata frequently occur in the Digest, but only in the sense of the completion of the proceedings In Jure, and this is the meaning of the phrases, *Ante litem contestatam*, *Post litem contestatam*. (*Gaius*, iii. 180, iv. 114.) The expression *Lis Contestata* in a passive sense is used by Cicero (*pro Rosc. Com.* c. 11, 12, *pro Flacco*, c. 11, and in the *Lex Rubria* of Gallia Cisalpina, col. i. l. 48, "quos inter id judicium accipietur levis contestabitur"). As the Litis Contestatio was originally and properly the termination of the proceedings In Jure, it is easily conceivable that after this form had fallen into disuse, the name should still be retained to express the conclusion of such proceedings. When the phrase *Litem Contestari* occurs in the classical jurists, it can mean nothing more than the proceedings by which the parties terminate the procedure In Jure and so prepare the matter in dispute for the investigation of the Judex.

It appears from the passage in Festus that the phrase Contestari litem was used, because the words "Testes estote" were uttered by the parties after the Judicium Ordinatum. It was therefore the uttering of the words "Testes estote" which

gave rise to the phrase *Litis Contestatio*; but this does not inform us what the *Litis Contestatio* properly was. Still as the name of a thing is derived from that which constitutes its essence, it may be that the name here expresses the thing, that is, that the *Litis Contestatio* was so called, for the reason which Festus gives, and that it also consisted in the litigant parties calling on the witnesses to bear record. But as it is usual for the whole of a thing to take its name from some special part, so it may be that the *Litis Contestatio*, in the time of the *Legis Actiones*, was equivalent to the whole proceedings in *Jure*, and that the whole was so called from that part which completed it.

The time when the proper *Litis Contestatio* fell into disuse cannot be determined, though it would seem that this must have taken place with the passing of the *Aebutia Lex* and the two *Leges Juliae* which did away with the *Legis Actiones*, except in certain cases. It is also uncertain if the proper *Litis Contestatio* still existed in those *Legis Actiones*, which were not interfered with by the *Leges* above mentioned; and if so, whether it existed in the old form or in a modified shape.

This view of the matter is by Keller, in his treatise "Ueber *Litis Contestation* und Urtheil nach Classischen Römischen Recht," Zürich, 1827. Other opinions are noticed in his work. The author labours particularly to show that the expression *Litis Contestatio* always refers to the proceedings *In Jure* and never to those *In Judicio*.

Savigny (*System*, &c. vi. § 256—279) has also fully examined the *Litis Contestatio*. He shows that in the *Extraordinaria Judicia* [*JUDICIUM*] which existed at the same time with the process of the formula, and in which there was neither *Judex* nor formula, and in which the whole legal dispute was conducted before a magistratus, the *Litis Contestatio* means the time when the parties had fully declared their several claims and answers to such claims before the magistratus. This was substantially the same as the *Litis Contestatio*, and the difference lay simply in the external form. (Comp. Cod. 3. tit. 9. a. 1, Rescript of Severus and Antoninus.) At a later period, when all actions had become changed into *extraordinaria judicia*, that which was before the exception now became the rule, and *Lis Contestata* in the system of Justinian consisted in the statements made by the parties to a suit before the magistrate respecting the claim or demand, and the answer or defence to it. When this was done, the cause was ready for hearing. [G. L.]

LITRA (*λίτρα*), a word which was used by the Greeks of Sicily in their system of weights and money, and which occurs as early as in the fragments of Simonides and Epicharmus, is evidently another form of the Italian word *libra*, as we are told by Festus (*s. v. Lues*, "*λίτρα enim libra est*"). It was the unit of an uncial system similar to that used in the Roman and Italian weights and money [As; *LIBRA*], its twelfth part being called *ὀγκία* (the Roman *uncia*), and six, five, four, three, and two of these twelfth parts being denominated respectively *ἡμίλιτρον*, *πεντόγκιον*, *τετράς*, *τριάς*, and *ἑξάς*. As a coin, the *λίτρα* was equal in value to the Aeginetan obol; and hence the origin of the word may be explained, by supposing that the Greeks of Sicily, having brought with them the Aeginetan obol, afterwards assimilated their system of coinage to that used by their

Italian neighbours, making their obol to answer to the *libra*, under the name of *λίτρα*. In the same way a Corinthian stater of ten obols was called in Syracuse a *δεκάλιτρον*, or piece of ten *litrae*. (Aristot. *ap. Pollux*, iv. 24, 173, ix. 6, 80; Müller, *Dor.* iii. 10. § 12.) See **NUMMUS** and **PONDERA**.

The *cotyla*, used for measuring oil, which is mentioned by Galen [*COTYLA*], is also called by him *λίτρα*. Here the word is only a Greek form of *libra*. [See *LIBRA*, *sub fin.*] [P. S.]

LITUUS. Müller (*Die Etrusker*, iv. 1. 5) supposes this to be an Etruscan word signifying crooked. In the Latin writers it is used to denote

1. The crooked staff borne by the augurs, with which they divided the expanse of heaven when viewed with reference to divination (*templum*), into regions (*regiones*); the number of these according to the Etruscan discipline, being sixteen, according to the Roman practice, four. (Müller, iii. 6. 1; Cic. *de Div.* ii. 18.) Cicero (*de Div.* i. 7) describes the lituus as "incurvum et leviter a summo inflexum bacillum;" and Livy (i. 18) as "baculum sine nodo aduncum." It is very frequently exhibited upon works of art. The figure in the middle of the following illustrations is from a most ancient specimen of Etruscan sculpture in the possession of Inghirami (*Monumenti Etruschi*, tom. vi. tav. P. 5. 1), representing an augur; the two others are Roman denarii.

2. A sort of trumpet slightly curved at the extremity. (Festus, *s. v.*; Gell. v. 8.) It differed both from the *tuba* and the *cornu* (Hor. *Carm.* ii. 1. 17; Lucan, i. 237), the former being straight while the latter was bent round into a spiral shape. Lydus (*de Mens.* iv. 50) calls the lituus the sacerdotal trumpet (*ιερατικὴν σάλπιγγα*), and says that it was employed by Romulus when he proclaimed the title of his city. Acro (*ad Horat. Carm.* i. 1. 23) asserts that it was peculiar to infantry, while the *tuba* belonged to infantry. Its tones are usually characterised as harsh and shrill (*stridor lituum*, Lucan, i. 237; *sonitus acutos*, Ennius, *apud Fest.* *s. v.*; Stat. *Theb.* vi. 228, &c.). See Müller, *Die Etrusker*, iv. 1. 5. The following representation is from Fabretti. [W. R.]

LIXAE. [CALONRS.]

LOCATI ET CONDUCTI ACTIO. [LOCATIO.]

LOCATIO, CONDUCTIO, is one of those contracts which are made merely by consent, without the observation of any peculiar form. The contract might be either a locatio conductio rerum, or a locatio conductio operarum. In the locatio conductio rerum, he who promises the use of the thing, is locator, he who promises to give a sum of money for the use is conductor: if the thing is a dwelling-house, the conductor is called inquilinus; if it is cultivable land, he is called colonus. The locatio conductio operarum consists either in giving certain services for a fixed price, or giving that which is the result of labour, as an article of furniture, or a house. He for whom the service is done, or the thing is made, is called locator: he who undertakes to produce the thing is conductor or redemptor. (Hor. Carm. iii. 1.)

The determination of a fixed price or sum of money (*merces, pensio*) is an essential part of the contract. When lands were let, the merces might consist in a part of the produce. (Dig. 4. tit. 65. s. 21.) When the parties have agreed about the object and the price, the contract is completed; and the parties have severally the actiones locati et conducti for enforcing the obligatio. (Dig. 19. tit. 2.)

This being the nature of the contract of locatio et conductio, it was a matter of doubt sometimes whether a contract was locatio et conductio or something else: when a man made a pair of shoes or suit of clothes for another, it was doubted whether the contract was emtio et venditio, or locatio et conductio. The better opinion, and that which is conformable to the nature of the thing, was that if a man furnished the materials to the tailor or shoemaker, it was a contract of locatio et conductio: if the tailor or shoemaker furnished the materials, it was a contract of emtio et venditio. (Gaius, iii. 142, &c.; Inst. 3. tit. 24. s. 3, 4.) A doubt also arose as to the nature of the contract when a thing was given to a man to be used, and he gave the lender another thing to be used. Sometimes it was doubted whether the contract was Locatio et Conductio or Emtio et Venditio; as in the case where a thing was let (*locata*) for ever, as was done with lands belonging to municipia, which were let on the condition that so long as the rent (*vectigal*) was paid, neither the conductor nor his heres could be turned out of the land: but the better opinion was in favour of this being a contract of Locatio et Conductio. [EMPHYTEUSIS.] [G. L.]

LOCHUS (Λόχος). 1. Spartan [see p. 483]. 2. Athenian [p. 486]. 3. Macedonian [p. 488].

LO'CLUS. [FONUS, p. 559, b.]

LOCUPLETES or ASSIDUI, was the name of the Roman citizens who were included in the five classes of the Servian constitution, and was opposed to the *Proletarii*. The term assidui seems to have been the older appellation; but the etymology of both words is very uncertain. (Cic. Top. 2, de Rep. ii. 22; Plin. H. N. xviii. 3; Festus, s. v. *Assiduus, Locupletes*; Becker, Röm. Alterth. vol. ii. pt. i. pp. 211, 212.)

LODIX, *dim.* LODICULA (λόγιον), a small shaggy blanket. (Juv. vii. 66.) Sometimes two lodices sewed together were used as the coverlet of a bed. (Mart. xiv. 148.) The Emperor Augustus occasionally wrapt himself in a blanket of this description on account of its warmth. (Sueton. Aug.

83.) It was also used as a carpet (*ancilla lodicæ lam in pavimento diligenter extendit*, Petron. Sat. 20). The Romans obtained these blankets from Verona. (Mart. xiv. 152). Their lodix was nearly, if not altogether, the same as the *sagulum* worn by the Germans. (Tac. Germ. 6.) [SAGUM.] [J. Y.]

LOGISTAE (λογισταί). [EUTHYNE.]

LOGOGRAPHI (λογογράφοι), is a name applied by the Greeks to two distinct classes of persons.

1. To the earlier Greek historians previous to Herodotus, though Thucydides (i. 21) applies the name logographer to all historians previous to himself, and thus includes Herodotus among the number. The Ionians were the first of the Greeks who cultivated history; and the first logographer, who lived about Olymp. 60, was Cadmus, a native of Miletus, who wrote a history of the foundation of his native city. The characteristic feature of all the logographers previous to Herodotus is, that they seem to have aimed more at amusing their hearers or readers than at imparting accurate historical knowledge. They described in prose the mythological subjects and traditions which had previously been treated of by the epic and especially by the cyclic poets. The omissions in the narratives of their predecessors were probably filled up by traditions derived from other quarters, in order to produce, at least in form, a connected history. In many cases they were mere collections of local and genealogical traditions. (Thirlwall, *Hist. of Greece*, ii. p. 127, &c.; Müller, *Hist. of Greek Lit.* i. p. 206, &c.; Wachsmuth, *Hellen. Alterth.* ii. 2. p. 443, &c.)

2. To persons who wrote judicial speeches or pleadings and sold them to those who were in want of them. These persons were called *λογιστοί* as well as *λογογράφοι*. Antiphon, the orator, was the first who practised this art at Athens, towards the close of the Peloponnesian war. (Plut. Vit. Dec. Orat. p. 832, ed. Frankf.; Aristot. Rhet. i. 33.) After this time the custom of making and selling speeches became very general, and though the persons who practised it were not very highly thought of and placed on a par with the sophists (Demosth. de Fals. Leg. pp. 417, 420; Plat. Phædr. p. 257, c; Anaxim. Rhet. xxxvi. 22 and 24; compare Plat. Euthydem. p. 272, a, 289, d, 305, a), yet we find that orators of great merit did not scruple to write speeches of various kinds for other persons. Thus Lysias wrote for others numerous *λόγους εις δικαστήρια τε και βουλὰς και προς ἐκκλησίας εὐθέτους*, and besides *πανηγυρικούς, ἐρωτικούς, και ἐπιστολικούς*. (Dionys. Hal. Lys. p. 82, ed. Sylburg; compare Meier and Schömann, *Att. Proc.* p. 707.) [L. S.]

LOIDORIAS DIKE (λοιδορίας δίκη) [KAKEGORIAS DIKE.]

LONCHIE (λόγχη). [HASTA.]

LOPE (λάπη, also *λάπος, dim. λώπιον*), the ancient Greek name of the *AMICTUS*, whether consisting of the hide of an animal or of cloth. Having fallen into disuse as a colloquial or prosaic term (Phryn. Ecl. p. 461, ed. Lobbeck), it was retained, though employed very sparingly, by the poets. (Hom. Od. xii. 224; Apoll. Rhod. ii. 32; Schol. in loc.; Anacreon, Frag. 79; Theocrit. xiv. 66; Brünck, *Anal.* i. 230, ii. 185.) We also find it retained in *λωποδύτης*, literally *one who puts on the amictus*, a term properly applicable to those persons who frequented the *thermae* in

order to steal the clothes of the bathers (Schol. in *Hom. l. c.*), but used in a more general sense to denote thieves and highwaymen of all classes. From the same root was formed the verb *ἐκλωπί-ζειν*, meaning, to take off the amictus, to denude. (Soph. *Trachin.* 925.) [J. Y.]

LPHOS (λόφος). [GALBA.]

LORARII. [FLAGRUM.]

LORICA (δώραξ), a cuirass. The epithet *λευσθήρης*, applied to two light-armed warriors in the *Iliad* (ii. 529, 830; Schol. *ad loc.*), and opposed to *χαλκοχιτών*, the common epithet of the Grecian soldiers, indicates the early use of the linen cuirass. It continued to be worn to much later times among the Asiatics, especially the Persians (Xen. *Cyrop.* vi. 4. § 2; Plut. *Alex.* p. 1254, ed. Steph.), the Egyptians (Herod. ii. 182, iii. 47), the Phoenicians (Paus. vi. 19. § 4), and the Chalybes. (Xen. *Anab.* iv. 7. § 15.) Iphicrates endeavoured to restore the use of it among the Greeks (Nepos, *Iphic.* i. 4), and it was occasionally adopted by the Romans, though considered a much less effectual defence than a cuirass of metal. (Sueton. *Galba*, 19; Arrian, *Tact.* p. 14, ed. Blancardi.)

A much stronger material for cuirasses was horn, which was applied to this use more especially by the Sarmatae and Quadi, being cut into small pieces, which were planed and polished and fastened, like feathers, upon linen shirts. (Amm. Marcell. xvii. 12. ed. Wagner.) Hoofs were employed for the same purpose. Pausanias (i. 21. § 8) having made mention of a thorax preserved in the temple of Aesculapius at Athens, gives the following account of the Sarmatians:—Having vast herds of horses, which they sometimes kill for food or for sacrifice, they collect their hoofs, cleanse and divide them, and shape them like the scales of a serpent (*φολίσιν*); they then bore them and sew them together, so that the scales overlap one another, and in general appearance they resemble the surface of a green fir-cone. This author adds, that the loricae made of these horny scales are much more strong and impenetrable than linen cuirasses, which are useful to hunters, but not adapted for fighting. The annexed woodcut, taken from Meyrick's *Critical Inquiry into Ancient Armour* (plate iii.) exhibits an Asiatic cuirass exactly corresponding to this description. It consists of slices of some animal's hoof, which are stitched together, overlapping each other in perpendicular rows, without being fastened to any under garment. The projection nearest the middle must be

supposed to have been worn over the breast, and the other over the back, so as to leave two vacant spaces for the arms.

This invention no doubt preceded the metallic scale armour. The Rhoxaleni, a tribe allied to the Sarmatians, defended themselves by wearing a dress consisting of thin plates of iron and hard leather. (Tacit. *Hist.* i. 79.) The Persians wore a tunic of the same description, the scales being sometimes of gold (Herod. vii. 61; *δώρακα χρύσειον λευκιδωτόν*, ix. 22); but they were commonly of bronze (*thoraca indutus aënis squamis*, Virg. *Aen.* xi. 487). The basis of the cuirass was sometimes a skin, or a piece of strong linen to which the metallic scales, or "feathers," as they are also called, were sewed. (Virg. *Aen.* xi. 770; Serv. *in loc.*; Justin, xli. 2. 10.)

The epithet *λευκιδωτός*, as applied to a thorax, is opposed to the epithet *φολιδωτός*. (Arrian, *Tact.* p. 13, 14.) The former denotes a similitude to the scales of fish (*λεπίσιν*), the latter to the scales of serpents (*φολίσιν*). The resemblance to the scales of serpents, which are long and narrow, is exhibited on the shoulders of the Roman soldier in the woodcut at page 136. These scales were imitated by long flexible bands of steel, made to fold one over another according to the contraction of the body. They appear very frequently on the Roman monuments of the times of the emperors, and the following woodcut places in immediate contrast a *δώραξ λευκιδωτός* on the right and *φολιδωτός* on the left, both taken from Bartoli's *Arcus Triumphales*.

The Roman hastati wore cuirasses of chain-mail, i. e. hauberks or habergeons (*ἀλυσιδωτοὺς δώρακας*, Polyb. vi. 21; Athen. v. 22; Arrian, *l. c.*). Virgil several times mentions hauberks in which the rings, linked or hooked into one another, were of gold (*loricam consertam hamis, auroque trilitem*, Virg. *Aen.* iii. 467, v. 259, vii. 639).

In contradistinction to the flexible cuirasses, or coats of mail, which have now been described, that commonly worn by the Greeks and Romans, more especially in the earlier ages, was called *δώραξ σταδῖος*, or *στατός*, because, when placed upon the ground on its lower edge, it stood erect. In consequence of its firmness it was even used as a seat to rest upon. (Paus. x. 27. § 2.) It consisted principally of the two *γύαλα*, viz. the breast-plate (*pectoralis*) made of hard leather or of bronze, iron, or sometimes the more precious metals, which covered the breast and abdomen (Hom. *Il.* v. 99, xiii. 507, 587, xvii. 814); and of the correspond-

ing plate which covered the back. (Paus. x. 26. 2 ; Hom. *Il.* xv. 530.) Both of these pieces were adapted to the form of the body, as may be per-

ceived in the representation of them in the woodcuts at pages 135, 196. The two figures here introduced are designed to show the usual dif-

ference of form and appearance between the antique Greek thorax and that worn by the Roman emperors and generals. The right-hand figure is from one of Mr. Hope's fictile vases (*Costumes of the Ancients*, i. 102), and bears a very strong resemblance to a Greek warrior painted on one of Sir W. Hamilton's (i. 4). The figure on the left hand is taken from a marble statue of Caligula found at Gabii. (Visconti, *Mon. Gab.* No. 38.) The gorgon's head over the breast, and the two griffins underneath it, illustrate the style of ornament which was common in the same circumstances. (Mart. vii. l. 1—4.) [*Αξοίς*.] The execution of these ornaments in relief was more especially the work of the Corinthians. (Cic. *Verr.* iv. 44.)

The two plates were united on the right side of the body by two hinges, as seen in the equestrian statue of the younger Balbus at Naples, and in various portions of bronze cuirasses still in existence. On the other side, and sometimes on both sides, they were fastened by means of buckles (*περόναι*, Paus. l. c.). [*FIBULA*.] In Roman statues we often observe a band surrounding the waist and tied before. The breast-plate and the back-plate were further connected together by leathern straps passing over the shoulders, and fastened in front by means of buttons or of ribands tied in a bow. In the last woodcut both of the connecting ribands in the right-hand figure are tied to a ring over the navel. The breast-plate of Caligula has a ring over each breast, designed to fulfil the same purpose.

Bands of metal often supplied the place of the leathern straps, or else covered them so as to become very ornamental, being terminated by a lion's head, or some other suitable figure appearing on

each side of the breast. The most beautiful specimens of enriched bronze shoulder-bands now in existence are those which were found A. D. 1820, near the river Siris in S. Italy, and which are preserved in the British Museum. They were originally gilt, and represent in very salient relief two Grecian heroes combating two Amazons. They are seven inches in length, and belong to the description of bronzes called *ἔργα σφυρήλατα*, having been beaten into form with wonderful skill by the hammer. Brøndsted (*Bronzes of Siris*, London, 1836) has illustrated the purpose which they served, by showing them in connection with a portion of another lorica, which lay upon the shoulders behind the neck. This fragment was found in Greece. Its hinges are sufficiently preserved to show most distinctly the manner in which the shoulder-bands were fastened to them (see woodcut).

"Around the lower edge of the cuirass," observes Brøndsted, "were attached straps, four or five inches long, of leather, or perhaps of felt, and

covered with small plates of metal. These straps served in part for ornament, and partly also to protect the lower region of the body in concert with the belt (*ζώνη*) and the band (*μύτρα*). They are well shown in the preceding figure of Caligula.

Instead of the straps here described, which the Greeks called *πτερυγες* (Xen. *de Re Equest.* xii. 4), the Chalybes, who were encountered by Xenophon on his retreat (*Anab.* iv. 7. § 15), had in the same situation a kind of cordage. Appendages of a similar kind were sometimes fastened by hinges to the lorica at the right shoulder, for the purpose of protecting the part of the body which was exposed by lifting up the arm in throwing the spear or using the sword. (Xen. *de Re Equest.* xii. 6.)

Of Grecian cuirasses the Attic were accounted the best and most beautiful. (Aelian, *V. H.* iii. 24.) The cuirass was worn universally by the heavy-armed infantry and by the horsemen, except that Alexander the Great gave to the less brave of his soldiers breast-plates only, in order that the defenceless state of their backs might decrease their propensity to flight. (Polyaen. iv. 3. 13.) These were called half-cuirasses (*ἡμιθώρακία*). The thorax was sometimes found to be very oppressive and cumbersome. (Tac. *Ann.* i. 64.) [J. Y.]

LORICA, LORICA'TIO, in architecture. [MURUS; TACTORIUM OPUS.]

LOUTRON (λουτρόν). [BALNEAR.]

LUCAR. [HISTRIO, p. 613, a.]

LU'CERES. [PATRICII.]

LUCERNA (λύχνος), an oil lamp. The Greeks and Romans originally used candles; but in later times candles were chiefly confined to the houses of the lower classes. [CANDELA.] A great number of ancient lamps has come down to us; the greater part of which are made of terra cotta (*τροχίλαροι*, Aristoph. *Ecol.* 1), but also a considerable number of bronze. Most of the lamps are of an oval form, and flat upon the top, on which there are frequently figures in relief. (See the woodcuts, pp. 143, 395, 464.) In the lamps there are one or more round holes according to the number of wicks (*ellyphnia*) burnt in it; and as these holes were called from an obvious analogy, *μύκτιπες* or *μύξαι*, literally nostrils or nozzles, the lamp was also called *Monomyxos*, *Dimyxos*, *Trimyxos*, or *Polymyxos*, according as it contained one, two, three, or a greater number of nozzles or holes for the wicks. The following example of a *dimyxos lucerna*, upon which there is a winged boy with a goose, is taken from the *Museo Borbonico*, vol. iv. pl. 14.

The next woodcut, taken from the same work (vol. i. pl. 10), represents one of the most beautiful bronze lamps which has yet been found. Upon it is the figure of a standing Silenus.

The lamps sometimes hung in chains from the ceiling of the room (Virg. *Aen.* i. 726; Petron. 30), but generally stood upon a stand. [CANDELABRUM.] Sometimes a figure holds the lamp, as in the annexed woodcut (*Museo Borbon.* vol. vii. pl. 15), which also exhibits the needle or instrument which served to trim the wick, and is attached to the figure by means of a chain. (Comp. Virg. *Mor.* 11. "Et product ac stupas humore carentes.")

We read of *lucernae cubiculares, balneares, tricliniaries, sepulchrales*, &c.; but these names were only given to the lamps on account of the purposes to which they were applied, and not on account of a difference in shape. The *lucernae cubiculares* were burnt in bed-chambers all night. (Mart. xiv. 39, x. 38.)

Perfumed oil was sometimes burnt in the lamps. (Petron. 70; Mart. x. 38. 9.)

(Passeri, *Lucernae fictiles*; Böttiger *Die Silenus-lampen*, Amalth. vol. iii. p. 168, &c.; Becker, *Charikles*, vol. ii. p. 215, &c., *Gallus*, vol. ii. p. 201, &c.)

LUCTA, LUCTATIO (πάλη, πάλασμα, παλαισμὸς ἢ καταθλητική), wrestling. The word *πάλη* is sometimes used in a wider sense, embracing all gymnastic exercises with the exception of dancing, whence the schools of the athletes were called *palaestrae*, that is, schools in which the *πάλη* in its widest sense was taught. (Plat. *de Leg.* vii. p. 795; Herod. ix. 33.) [PALAESTRA.] There are also many passages in ancient writers in which *πάλη* and *παλαίειν* are used to designate any particular species of athletic games besides wrestling, or a combination of several games. (See Krause, p. 400. note 2.)

The Greeks ascribed the invention of wrestling to mythical personages, such as *Palaestra*, the daughter of *Hermes* (Apollod. ii. 4. § 9), *Antaeus* and *Cercyon* (Plat. *de Leg.* vii. p. 796), *Phorbas* of *Athens*, or *Theseus*. (Schol. ad *Pind. Nem.* v. 49.) *Hermes*, the god of all gymnastic exercises,

also presided over the *πάλη*. Theseus is said by Pausanias (i. 39. § 3) to have been the first who reduced the game of wrestling to certain rules, and to have thus raised it to the rank of an art; whereas before his time it was a rude fight, in which bodily size and strength alone decided the victory. The most celebrated wrestler in the heroic age was Heracles. In the Homeric age wrestling was much practised, and a beautiful description of a wrestling match is given in the *Iliad* (xxiii. 710, &c.; compare *Od.* viii. 103, 126, 246; Hesiod, *Scut. Herc.* 302, where μάχευν ἐλκεῖδον signifies the *πάλη*). During this period wrestlers contended naked, with the exception of the loins, which were covered with the *περίσσωμα* (*Il.* xxiii. 700), and this custom remained throughout Greece until O. 15, from which time the perizoma was no longer used, and wrestlers fought entirely naked. (Thucyd. i. 6, with the Schol.; Paus. i. 44. § 1; Dionys. vii. 72.) In the Homeric age the custom of anointing the body for the purpose of wrestling does not appear to have been known, but in the time of Solon it was quite general, and was said to have been adopted by the Cretans and Lacedaemonians at a very early period. (Thucyd. l. c.; Plat. *de Re Publ.* v. p. 452.) After the body was anointed, it was strewn over with sand or dust, in order to enable the wrestlers to take a firm hold of each other. At the festival of the Sthenia in Argos the *πάλη* was accompanied by flute-music. [STHENIA.]

When two *athletae* began their contest, each might use a variety of means to seize his antagonist in the most advantageous manner, and to throw him down without exposing himself (Ovid. *Met.* ix. 33, &c.; Stat. *Theb.* vi. 831, &c.; Heliodor. *Aethiop.* x. p. 235); but one of the great objects was to make every attack with elegance and beauty, and the fight was for this as well as for other purposes regulated by certain laws. (Plat. *de Leg.* viii. p. 834; Cic. *Orat.* 68; Lucian, *Anach.* 24; Aelian. *V. H.* xi. 1.) Striking, for instance, was not allowed, but pushing an antagonist backward (*ᾠδισμός*) was frequently resorted to. (Plut. *Symp.* ii. 5; Lucian, *Anach.* 1. 24.) It is probably on account of the laws by which this game was regulated, and the great art which it required in consequence, that Plutarch (*Symp.* ii. 4) calls it the *τεχνικώτατον καὶ πανουργώτατον τῶν ἀθλημάτων*. But notwithstanding these laws, wrestling admitted of greater cunning and more tricks and stratagems than any other game, with the exception of the *pancratium* (Xen. *Cyrop.* i. 6. § 32); and the Greeks had a great many technical terms to express the various stratagems, positions, and attitudes in which wrestlers might be placed. Numerous scenes of wrestlers are represented on ancient works of art. (Krause, p. 412, &c.; see woodcut in *PANCRATIUM*.)

The contest in wrestling was divided by the ancients into two parts, viz. the *πάλη ὀρθή* or *ὀρθία* (*ὀρθοστάδην παλαίειν*), that is, the fight of the *athletae* as long as they stood upright, and the *ἀλνδῆσις* or *κύλισις* (*lucta volutatoria*), in which the *athletae* struggled with each other while lying on the ground. Unless they contrived to rise again, the *ἀλνδῆσις* was the last stage of the contest, which continued until one of them acknowledged himself to be conquered. The *πάλη ὀρθή* appears to have been the only one which was fought in the times of Homer, as well as afterwards in the great national games of the Greeks; and as soon as one

athlete fell, the other allowed him to rise and continue the contest if he still felt inclined. (Plat. *de Legg.* vii. p. 796; Corn. Nep. *Epam.* 2; Lucian, *Lexiph.* 5.) But if the same athlete fell thrice, the victory was decided, and he was not allowed to go on. (Senec. *de Benef.* v. 3; Aeschyl. *Agam.* 171; *Anthol. Gr.* vol. ii. p. 406, ed. Jacobs.) The *ἀλνδῆσις* was only fought in later times, at the smaller games, and especially in the *pancratium*. The place, where the wrestlers contended, was generally soft ground, and covered with sand. (Xen. *Anab.* iv. 8. § 26; Lucian, *Anach.* 2.) Effeminate persons sometimes spread large and magnificent carpets on the place where they wrestled. (Athen. xii. p. 539.) Each of the various tribes of the Greeks seem to have shown its peculiar and national character in the game of wrestling in some particular trick or stratagem, by which it excelled the others.

In a diætaetic point of view the *ἀλνδῆσις* was considered beneficial to the interior parts of the body, the loins, and the lower parts in general, but injurious to the head; whereas the *πάλη ὀρθή* was believed to act beneficially upon the upper parts of the body. It was owing to these salutary effects that wrestling was practised in all the gymnasia as well as in the palaestrae, and that in O. 37 wrestling for boys was introduced at the Olympic games, and soon after in the other great games, and at Athens in the Eleusinia, and Thesea also. (Paus. v. 8. § 3, iii. 11. § 6; Pind. *Ol.* viii. 68; Gell. xv. 20; Plut. *Symp.* ii. 5.) The most renowned of all the Greek wrestlers in the historical age was Milon of Croton, whose name was known throughout the ancient world. (Herod. iii. 137; Strab. vi. p. 262, &c.; Diodor. xii. 9.) Other distinguished wrestlers are enumerated by Krause (p. 135, &c.), who has also given a very minute account of the game of wrestling and every thing connected with it, in his *Gymnastik und Agon.* d. Hell. pp. 400—439. [L. S.]

LUDI is the common name for the whole variety of theatrical exhibitions, games and contests, which were held at Rome on various occasions, but chiefly at the festival of the gods; and as the ludi at certain festivals formed the principal part of the solemnities, these festivals themselves are called ludi. Sometimes, however, ludi were also held in honour of a magistrate or of a deceased person, and in this case the games may be considered as ludi privati, though all the people might take part in them.

All ludi were divided by the Romans into two classes, viz. *ludi circenses* and *ludi scenici* (Cic. *de Leg.* ii. 15), accordingly as they were held in the circus or in the theatre; in the latter case they were mostly theatrical representations with their various modifications; in the former they consisted of all or of a part of the games enumerated in the articles *CIRCUS* and *GLADIATORES*. Another division of the ludi into *statii*, *imperativi*, and *votivi*, was made only with regard to religious festivals, and is analogous to the division of the *feriae*. [FERIAE.]

The superintendence of the games and the solemnities connected with them was in most cases intrusted to the aediles. [AEDILES.] If the lawful rites were not observed in the celebration of the ludi, it depended upon the decision of the pontiffs whether they were to be held again (*inducurari*) or not. An alphabetical list of the principal ludi is subjoined. [L. S.]

LUDI APOLLINARES were instituted at Rome during the second Punic war, four years after the battle of Cannae (B.C. 212), at the command of an oracle contained in the books of the ancient seer Marcius (*carmina Marciana*, Liv. xxv. 12; Macrobian. *Sat.* i. 17). It was stated by some of the ancient annalists that these ludi were instituted for the purpose of obtaining from Apollo the protection of human life during the hottest season of summer; but Livy and Macrobius adopt the account founded upon the most authentic document, the *carmina Marciana* themselves, that the Apollinarian games were instituted partly to obtain the aid of Apollo in expelling the Carthaginians from Italy, and partly to preserve, through the favour of the god, the republic from all dangers. The oracle suggested that the games should be held every year under the superintendence of the praetor urbanus, and that ten men should perform the sacrifices according to Greek rites. The senate complying with the advice of the oracle made two *senatusconsulta*; one that, at the end of the games, the praetor should receive 12,000 aasses to be expended on the solemnities and sacrifices, and another that the ten men should sacrifice to Apollo, according to Greek rites, a bull with gilt horns and two white goats also with gilt horns, and to Latona a heifer with gilt horns. The games themselves were held in the Circus Maximus, the spectators were adorned with chaplets, and each citizen gave a contribution towards defraying the expenses. (Festus, s. v. *Apollinares*.) The Roman matrons performed supplications, the people took their meals in the *propatulum* with open doors, and the whole day—for the festival lasted only one day—was filled up with ceremonies and various other rites. At this first celebration of the ludi Apollinares no decree was made respecting the annual repetition suggested by the oracle, so that in the first year they were simply ludi votivi or indictivi. The year after (B.C. 211) the senate, on the proposal of the praetor Calpurnius, decreed that they should be repeated, and that in future they should be vowed afresh every year. (Liv. xxvi. 23.) The day on which they were held varied every year according to circumstances. A few years after, however (B.C. 208), when Rome and its vicinity were visited by a plague, the praetor urbanus, P. Licinius Varus, brought a bill before the people to ordain that the Apollinarian games should in future always be vowed and held on a certain day (*dies status*), viz. on the 6th of July, which day henceforward remained a *dies solennis*. (Liv. xxvii. 23.) The games thus became votivi et stativi, and continued to be conducted by the praetor urbanus. (Cic. *Phil.* ii. 13.) But during the empire the day of these solemnities appears again to have been changed, for Julius Capitolinus (*Marim. et Balbin.* c. 1) assigns them to the 26th of May. [L.S.]

LUDI AUGUSTALES. [AUGUSTALES.]

LUDI CAPITOLINI were said to have been instituted by the senate, on the proposal of the dictator M. Furius Camillus, in the year B.C. 387, after the departure of the Gauls from Rome, as a token of gratitude towards Jupiter Capitolinus, who had saved the Capitol in the hour of danger. The decree of the senate at the same time intrusted the superintendence and management of the Capitoline games to a college of priests to be chosen by the dictator from among those who resided on the Capitol and in the citadel (*in arce*), which can only

mean that they were to be patricians. (Liv. v. 50, 52.) These priests were called Capitolini. (Cic. *ad Quint. Frat.* ii. 5.) One of the amusements at the Capitoline games, a solemnity which was observed as late as the time of Plutarch, was that a herald offered the Sardiani for public sale, and that some old man was led about, who, in order to produce laughter, wore a toga praetexta, and a bulla puerilis which hung down from his neck. (Plut. *Quaest. Rom.* p. 277; Fest. s. v. *Sardi venales*, &c.) According to some of the ancients this ceremony was intended to ridicule the Veientes, who were subdued, after long wars with Rome, and numbers of whom were sold as slaves, while their king, represented by the old man with the bulla (such was said to have been the costume of the Etruscan kings), was led through the city as an object of ridicule.

The Veientes, it is further said, were designated by the name Sardiani or Sardi, because they were believed to have come from Lydia, the capital of which was Sardes. This specimen of ancient etymology, however, is opposed by another interpretation of the origin of the ceremony given by Sennius Capito. According to this author, the name Sardiani or Sardi had nothing to do with the Veientes, but referred to the inhabitants of Sardinia. When their island was subdued by the Romans in B.C. 238, no spoils were found, but a great number of Sardinians were brought to Rome and sold as slaves, and these proved to be slaves of the worst kind. (Fest. l. c.; Aurel. Vict. *de Vir. Illust.* c. 57.) Hence arose the proverb, *Sardi venales*; *alius alio nequior* (Cic. *ad Fam.* vii. 24), and hence also the ceremony at the Capitoline games. At what time or at what intervals these ludi were celebrated is not mentioned. During the time of the empire they seem to have fallen into oblivion, but they were restored by Domitian, and were henceforth celebrated every fifth year under the name of agones Capitolini. (See Jos. Scaliger, *Auson. Lect.* i. 10.) [L.S.]

LUDI CIRCENSES ROMA'NI or MAGNI, were celebrated every year during several days, from the fourth to the twelfth of September, in honour of the three great divinities, Jupiter, Juno, and Minerva (Cic. *c. Ferr.* v. 14), or according to others, in honour of Jupiter, Consus, and Neptunus Equestris. They were superintended by the curule aediles. For further particulars see CIRCUS, p. 286, &c. [L.S.]

LUDI COMPITALI'CII. [COMPITALIA.]

LUDI FLORA'LES. [FLORALIA.]

LUDI FUNEBRES were games celebrated at the funeral pyre of illustrious persons. Such games are mentioned in the very early legends of the history of Greece and Rome, and they continued with various modifications until the introduction of Christianity. It was at such a ludus funebris that in the year B.C. 264 gladiatorial fights were exhibited at Rome for the first time, which henceforward remained the most essential part in all ludi funebres. [GLADIATORES, p. 574, a.] The duration of these games varied according to circumstances. They lasted sometimes for three and sometimes for four days, though it may be supposed that in the majority of cases they did not last more than one day. On one occasion 120 gladiators fought in the course of three days, and the whole forum was covered with triclinia and tents, in which the people feasted. (Liv. xxii. 30, xxxi.

50, xxxix. 46; Plin. *H. N.* xxxv. 7.) It was thought disgraceful for women to be present at these games, and Publius Sempromnius separated himself from his wife because she had been present without his knowledge at ludi funebres. (Plut. *Quaest. Rom.* p. 267, 8; Val. Max. vi. 3. § 12; compare Suet. *Aug.* 44.) These ludi, though on some occasions the whole people took part in them, were not ludi publici, properly speaking, as they were given by private individuals in honour of their relations or friends. Compare FUNUS, p. 562. [L. S.]

LUDI HONORARIII are expressly mentioned only by Suetonius (*Aug.* 32), who states that Augustus devoted thirty days, which had been occupied till that time by ludi honorarii, to the transaction of legal business. What is meant by ludi honorarii, is not quite certain. According to Festus (*s. v. Honorarios ludos*) they were the same as the Liberalia. Scaliger, however, in his note on Suetonius, has made it appear very probable that they were the same as those which Tertullian (*De Spect.* c. 21) says were given for the purpose of gaining honours and popularity, in contradistinction to other ludi which were intended either as an honour to the gods, or as *dona* for the dead. At the time of Augustus this kind of ludi which Tacitus (*Agric.* 6) seems to designate by the name *inania honoris*, were so common that no one obtained any public office without lavishing a considerable portion of his property on the exhibition of games. Augustus therefore wisely assigned thirty of the days of the year, on which such spectacles had been exhibited previously, to the transaction of business, i. e. he made these 30 days *fasti*. (Compare Ernesti and F. A. Wolf, *ad Sueton.* l. c.) [L. S.]

LUDI JUVENA'LES. [JUVENALES.]

LUDI LIBERA'LES. [DIONYSIA, p. 414.]

LUDI MARTIA'LES were celebrated every year on the first of August, in the Circus, and in honour of Mars, because the temple of Mars had been dedicated on this day. (Dion Cass. ix. 5; Sueton. *Claud.* 4.) The ancient calendaria mention also other ludi martiales which were held in the Circus on the 12th of May. [L. S.]

LUDI MEGALENSES. [MEGALESIA.]

LUDI NATALITII are the games with which the birth-day of an emperor was generally celebrated. They were held in the Circus, whence they are sometimes called circenses. (Capitol. *Antonin. Pius*, 5; Spartian. *Hadrian*, 7.) They consisted generally of fights of gladiators and wild beasts. On one occasion of this kind Hadrian exhibited gladiatorial combats for six days, and one thousand wild beasts. [L. S.]

LUDI PALATINI were instituted by Livia in honour of Augustus, and were held on the Palatine. (Dion Cass. lvi. *sub fin.*) According to Dion Cassius they were celebrated during three days, but according to Josephus (*Antiq. Jud.* xix. 1) they lasted eight days, and commenced on the 27th of December. (See Suet. *Calig.* 56, with Scaliger's note.) [L. S.]

LUDI PISCATORI were held every year on the sixth of June, in the plain on the right bank of the Tiber, and were conducted by the praetor urbanus on behalf of the fishermen of the Tiber, who made the day a holiday. (Ovid. *Fast.* vi. 235, &c.; Fest. *s. v. Piscat. ludi*.) [L. S.]

LUDI PLEBEII were, according to the

Pseudo-Asconius (*ad Verr.* i. p. 143, Orelli), the games which had been instituted in commemoration of the freedom of the plebeians after the banishment of the kings, or after the secession of the plebes to the Aventine. The first of these accounts is not borne out by the history of the plebeian order, and it is more probable that these games were instituted in commemoration of the reconciliation between the patricians and plebeians after the first secession to the mons sacer, or, according to others, to the Aventine. They were held on the 16th, 17th, and 18th of November, and were conducted by the plebeian aediles. (Liv. xxviii. 10, xxxix. 7.) It is sufficiently clear from the ancient calendaria that the ludi plebei were not, as some have supposed, the same as, or a part of, the ludi Romani. [L. S.]

LUDI PONTIFICA'LES were probably nothing but a particular kind of the ludi honorarii mentioned above. They were for the first time given by Augustus, when, after the death of Lepidus, he obtained the office of pontifex maximus. (Sueton. *Aug.* 44.) [L. S.]

LUDI QUAESTORII were of the same character as the preceding games. They were instituted by the emperor Claudius (Suet. *Claud.* 24; Tacit. *Ann.* ii. 22), who decreed that all who obtained the office of quaestor should, at their own expense, give gladiatorial exhibitions. Nero did away with this obligation for newly appointed quaestors (Tacit. *Ann.* xiii. 5), but it was revived by Domitian. (Sueton. *Domit.* c. 4.) [L. S.]

LUDI ROMANI or MAGNI. [MEGALESIA.]

LUDI SAECULA'RES. If we were to judge from their name, these games would have been celebrated once in every century or saeculum; but we do not find that they were celebrated with this regularity at any period of Roman history, and the name ludi saeculares itself was never used during the time of the republic. In order to understand their real character we must distinguish between the time of the republic and of the empire, since at these two periods these ludi were of an entirely different character.

During the time of the republic they were called *ludi Tarentini*, *Terentini*, or *Taurii*, while during the empire they bore the name of *ludi saeculares*. (Fest. *s. v. Saecul. ludi* and *Taurii ludi*; Val. Max. ii. 4. § 5.) Their origin is described by Valerius Maximus, who attributes their institution to the miraculous recovery of three children of one Valerius, who had been attacked by a plague raging at the time in Rome, and were restored to health by drinking some water warmed at a place in the Campus Martius, called Tarentum. Valerius afterwards offered sacrifices in the Tarentum to Dis and Proserpina, to whom the recovery of his children was supposed to be owing, spread lectisternia for the gods, and held festive games for three successive nights, because his three children had been saved. The account of Valerius Maximus agrees in the main with those of Censorinus (*De Die Nat.* c. 17) and of Zosimus (ii. 3), and all appear to have derived their information from the ancient annalist, Valerius Antias. While according to this account the Tarentine games were first celebrated by Valerius, another legend seems to consider the fight of the Horatians and Curiatians as connected with their first celebration. A third account (Festus, *s. v. Taurii ludii*; Serv. *ad Aen.* ii. 140) ascribes their first institution to the reign of Tarquinius Superbus.

A fearful plague broke out, by which all pregnant women were affected in such a manner that the children died in the womb. Games were then instituted to propitiate the infernal divinities, and sacrifices of sterile cows (*taureae*) were offered up to them, whence the games were called ludi Taurii. These games and sacrifices took place in the Circus Flaminius, that the infernal divinities might not enter the city. Festus (*s. v. Saec. ludi*) and Censorinus ascribe the first celebration to the consul Valerius Poplicola. This account admits that the worship of Dis and Proserpina had existed long before, but states that the games and sacrifices were now performed for the first time to avert a plague, and in that part of the Campus Martius which had belonged to the last king Tarquinius, from whom the place derived its name Tarentum. Valerius Maximus and Zosimus, who knew of the celebration of these games by Valerius Poplicola, endeavour to reconcile their two accounts by representing the celebration of Poplicola as the second in chronological order. Other less important traditions are mentioned by Servius (*ad Aen. ii. 140*) and by Varro (*ap. Censorin.*).

As regards the names Tarenti or Taurii, they are perhaps nothing but different forms of the same word, and of the same root as Tarquinius. All the accounts mentioned above, though differing as to the time at which and the persons by whom the Tarentine games were first celebrated, yet agree in stating that they were celebrated for the purpose of averting from the state some great calamity by which it had been afflicted, and that they were held in honour of Dis and Proserpina. From the time of the consul Valerius Poplicola down to that of Augustus, the Tarentine games were only held three times, and again only on certain emergencies, and not at any fixed time, so that we must conclude that their celebration was in no way connected with certain cycles of time (*saecula*). The deities in whose honour they were held during the republic, continued, as at first, to be Dis and Proserpina. As to the times at which these three celebrations took place, the commentarii of the quindecimviri and the accounts of the annalists did not agree (Censorin. *l. c.*), and the discrepancy of the statements still extant shows the vain attempts which were made in later times to prove that during the republic the games had been celebrated once in every saeculum. All these misrepresentations and distortions arose in the time of Augustus. Not long after he had assumed the supreme power in the republic, the quindecimviri announced that according to their books ludi saeculares ought to be held, and at the same time tried to prove from history that in former times they had not only been celebrated repeatedly, but almost regularly once in every century. The games of which the quindecimviri made this assertion, were the ludi Tarentini.

The celebrated jurist and antiquary Ateius Capito received from the emperor the command to determine the ceremonies, and Horace was requested to compose the festive hymn for the occasion (*carmen saeculare*), which is still extant (Zosim. *ii. 4*). But the festival which was now held, was in reality very different from the ancient Tarentine games; for Dis and Proserpina, to whom formerly the festival belonged exclusively, were now the last in the list of the divinities in honour of whom the ludi saeculares were celebrated. A description of

the various solemnities is given by Zosimus. Some days before they commenced, heralds were sent about to invite the people to a spectacle which no one had ever beheld, and which no one would ever behold again. Hereupon the quindecimviri distributed, upon the Capitol and the Palatine, among the Roman citizens, torches, sulphur, and bitumen, by which they were to purify themselves. In the same places, and on the Aventine in the temple of Diana, the people received wheat, barley, and beans, which were to be offered at night-time to the Parcae, or, according to others, were given as pay to the actors in the dramatic representations which were performed during the festive days. The festival took place in summer, and lasted for three days and three nights. On the first day the games commenced in the Tarentum, and sacrifices were offered to Jupiter, Juno, Neptune, Minerva, Venus, Apollo, Mercury, Ceres, Vulcan, Mars, Diana, Vesta, Hercules, Latona, the Parcae, and to Dis and Proserpina. The solemnities began at the second hour of the night, and the emperor opened them by the river side with the sacrifice of three lambs to the Parcae upon three altars erected for the purpose, and which were sprinkled with the blood of the victims. The lambs themselves were burnt. A temporary scene like that of a theatre was erected in the Tarentum, and illuminated with lights and fires.

In this scene festive hymns were sung by a chorus, and various other ceremonies, together with theatrical performances, took place. During the morning of the first day the people went to the Capitol to offer solemn sacrifices to Jupiter; thence they returned to the Tarentum to sing choruses in honour of Apollo and Diana. On the second day the noblest matrons, at an hour fixed by an oracle, assembled on the Capitol, performed supplications, sang hymns to the gods, and also visited the altar of Juno. The emperor and the quindecimviri offered sacrifices which had been vowed before, to all the great divinities. On the third day Greek and Latin choruses were sung in the sanctuary of Apollo by three times nine boys and maidens of great beauty whose parents were still alive. The object of these hymns was to implore the protection of the gods for all cities, towns, and officers of the empire. One of these hymns was the *carmen saeculare* by Horace, which was especially composed for the occasion, and adapted to the circumstances of the time. During the whole of the three days and nights, games of every description were carried on in all the circuses and theatres, and sacrifices were offered in all the temples.

The first celebration of the ludi saeculares in the reign of Augustus took place in the summer of the year B.C. 17 (Tacit. *Ann. xi. 11.*); the second took place in the reign of Claudius, A.D. 47 (Suet. *Claud. 21*); the third in the reign of Domitian, A.D. 88 (Suet. *Domit. 4*, with Ernesti's note); and the last in the reign of Philippus A.D. 248, and, as was generally believed, just 1000 years after the building of the city. (Jul. Capitol. *Gord. Tert. c. 33*; compare Scaliger, *De Emend. Tempor. p. 486*; Hartung, *Die Religion der Römer*, vol. ii. p. 92, &c., and the commentators *ad Horat. Carm. Saec.*) [L.S.]

LUPATUM. [FRENUM.]

LUPERCALIA, one of the most ancient Roman festivals, which was celebrated every year in honour of Lupercus, the god of fertility. All the ceremonies with which it was held, and all we know of its history, shows that it was originally a shepherd-festival. (Plut. *Caes.* 61.) Hence its introduction at Rome was connected with the names of Romulus and Remus, the kings of shepherds. Greek writers and their followers among the Romans represent it as a festival of Pan, and ascribe its introduction to the Arcadian Evander. This misrepresentation arose partly from the desire of these writers to identify the Roman divinities with those of Greece, and partly from its rude and almost savage ceremonies, which certainly are a proof that the festival must have originated in the remotest antiquity. The festival was held every year, on the 15th of February, in the Lupercal, where Romulus and Remus were said to have been nurtured by the she-wolf; the place contained an altar and a grove sacred to the god Lupercus. (Aurel. Vict. *de Orig. Gent. Rom.* 22; Ovid. *Fast.* ii. 267.) Here the Luperci assembled on the day of the Lupercalia, and sacrificed to the god goats and young dogs, which animals are remarkable for their strong sexual instinct, and thus were appropriate sacrifices to the god of fertility. (Plut. *Rom.* 21; Servius *ad Aen.* viii. 343.) Two youths of noble birth were then led to the Luperci, and one of the latter touched their foreheads with a sword dipped in the blood of the victims; other Luperci immediately after wiped off the bloody spots with wool dipped in milk. Hereupon the two youths were obliged to break out into a shout of laughter. This ceremony was probably a symbolical purification of the shepherds. After the sacrifice was over, the Luperci partook of a meal, at which they were plentifully supplied with wine. (Val. Max. ii. 2. 9.) They then cut the skins of the goats which they had sacrificed, into pieces; with some of which they covered parts of their body in imitation of the god Lupercus, who was represented half naked and half covered with goat-skin. The other pieces of the skins they cut into thongs, and holding them in their hands they ran through the streets of the city, touching or striking with them all persons whom they met in their way, and especially women, who even used to come forward voluntarily for the purpose, since they believed that this ceremony rendered them fruitful, and procured them an easy delivery in childbearing. This act of running about with thongs of goat-skin was a symbolical purification of the land, and that of touching persons a purification of men, for the words by which this act is designated are *februare* and *lustrare*. (Ovid. *Fast.* ii. 31; Fest. s. v. *Februarius*.) The goat-skin itself was called *februum*, the festive day *dies februata*, the month in which it occurred *Februarius*, and the god himself *Februus*.

The act of purifying and fertilizing, which, as we have seen, was applied to women, was without doubt originally applied to the flocks, and to the people of the city on the Palatine. (Varro, *de Ling. Lat.* v. p. 60, Bip.) Festus (s. v. *Crepus*) says

LUPERCI.

that the Luperci were also called *crepi* or *creppa*, from their striking with goatskins (*a crepitu pellicularum*), but it is more probable that the name *crepi* was derived from *crepa*, which was the ancient name for goat. (Fest. s. v. *Caprae*.)

The festival of the Lupercalia, though it necessarily lost its original import at the time when the Romans were no longer a nation of shepherds, was yet always observed in commemoration of the founders of the city. Antonius, in his consulship, was one of the Luperci, and not only ran with them half-naked and covered with pieces of goat-skin through the city, but even addressed the people in the forum in this rude attire. (Plut. *Caes.* 61.) After the time of Caesar, however, the Lupercalia seem to have been neglected, for Augustus is said to have restored it (Suet. *Aug.* 31), but he forbade youths (*imberbes*) to take part in the running. The festival was henceforth celebrated regularly down to the time of the emperor Anastasius. Lupercalia were also celebrated in other towns of Italy and Gaul, for Luperci are mentioned in inscriptions of Velitrae, Praeneste, Nemausus, and other places. (Orelli, *Inscr.* n. 2251, &c.) (Compare LUPERCUS; and Hartung, *Die Relig. der Römer*, vol. ii. p. 176, &c.) [L. S.]

LUPERCI, were the priests of the god Lupercus. They formed a college (*sodalitas, traupla*), the members of which were originally youths of patrician families, and which was said to have been instituted by Romulus and Remus. (Plut. *Rom.* 21.) The college was divided into two classes, the one called Fabii or Fabiani, and the other Quinctilii or Quinctiliani. (Fest. s. v. *Quinctiliani Luperci* and *Fabiani*.) These names, which are the same as those with which the followers of Romulus and Remus were designated in the early Roman legends, seem to show that the priesthood was originally confined to certain gentes. (Ovid. *Fast.* ii. 378, who, however, confounds the Potitii and Pinarii with the Quinctilii and Fabii.) But if such actually was the case, this limitation does not seem to have existed for a very long time, though the two classes retained their original names, for Festus says, that in course of time the number of Luperci increased, "Quia honoris gratia multi in Lupercis adscribebantur." What was the original number of Luperci, and how long their office lasted, is unknown; but it is stated in inscriptions (Orelli, n. 2256 and n. 4920) that a person held the office of Lupercus twice, and another three times, and this fact shows at least that the priests were not appointed for life. Julius Caesar added to the two classes of the college a third with the name of Julii or Juliani (Dion Cass. xlv. 6; Suet. *Caes.* 76), and made Antonius their high priest. He also assigned to them certain revenues (*vectigalia*), which were afterwards withdrawn from them. (Cic. *Philipp.* iii. 15, with the note of P. Manutius.) But it is uncertain whether Caesar assigned these revenues to the whole college, or merely to the Julii. From this time the two ancient classes of the Luperci are sometimes distinguished from the new one by the name of Luperci veteres. (Orelli, n. 2253.) Although in early times the Luperci were taken only from noble families, their strange and indecent conduct at the Lupercalia was offensive to the more refined Romans of a later age (Cic. *Philipp.* ii. 34), and Cicero (*pro Coel.* 11) characterises the college as a "Fera quaedam sodalitas et plane pastoricia atque agrestia, quorum coitio illa silvestris ante est

institutum quam humanitas atque leges." Respecting the rites with which they solemnised the Lupercalia see LUPERCALIA. [L. S.]

LUPUS FERREUS, the iron wolf used by the besieged in repelling the attacks of the besiegers, and especially in seizing the battering-ram and diverting its blows. [ARIES.] (Liv. xxxviii. 3; Veget. *de Re Mil.* ii. 25, iv. 23.) [J. Y.]

LUSTRATIO (*καθαρσις*), was originally a purification by ablution in water. But the lustrations, of which we possess direct knowledge, are always connected with sacrifices and other religious rites, and consisted in the sprinkling of water by means of a branch of laurel or olive, and at Rome sometimes by means of the aspergillum (*χέριψ*), and in the burning of certain materials, the smoke of which was thought to have a purifying effect. Whenever sacrifices were offered, it seems to have been customary to carry them around the person or thing to be purified. Lustrations were made in ancient Greece, and probably at Rome also, by private individuals when they had polluted themselves with any criminal action. Whole cities and states also sometimes underwent purifications to expiate the crime or crimes committed by a member of the community. The most celebrated purification of this kind was that of Athens, performed by Epimenides of Crete, after the Cylonian massacre. (Diog. Laërt. i. 10. § 3.) Purifications also took place when a sacred spot had been unhallowed by profane use, as by burying dead bodies in it, such as was the case with the island of Delos. (Thucyd. i. 8, iii. 104.)

The Romans performed lustrations on many occasions, on which the Greeks did not think of them; and the object of most Roman lustrations was not to atone for the commission of crime, but to obtain the blessing of the gods upon the persons or things which were lustrated. Thus fields were purified after the business of sowing was over (Ovid. *Fast.* i. 669), and before the sickle was put to the corn. [ARVALES FRATRES.] The manner in which sheep were lustrated every year at the festival of the Palilia, is described by Ovid (*Fast.* iv. 735, &c.). The shepherd towards evening sprinkled his flock with water, adorned the fold with branches and foliage, burnt pure sulphur and various herbs, and offered sacrifices to Pales. The object of this lustration was to preserve the flock from disease, contagion, and other evils. (Cato, *de Re Rust.* c. 141.) All Roman armies before they took the field were lustrated (Dion. Cass. xlvii. 38; Appian, *Hisp.* c. 19, *Civil.* iv. 89, et passim), and as this solemnity was probably always connected with a review of the troops, the word lustratio is also used in the sense of the modern review. (Cic. *ad Att.* v. 20. § 2.) The rites customary on such occasions are not mentioned, but they probably resembled those with which a fleet was lustrated before it set sail, and which are described by Appian (*Civil.* v. 96). Altars were erected on the shore, and the vessels manned with their troops assembled in order close to the coast. Every body kept profound silence, and priests standing close by the water killed the victims, and carried the purifying sacrifices (*καθάρσια*) in small boats three times around the fleet. On these rounds they were accompanied by the generals, who prayed to the gods to preserve the armament from all dangers. Hereupon the priests divided the sacrifices into two parts, one of which was thrown into

the sea, and the other burnt upon the altars, while the multitude around prayed to the gods. (Compare Liv. xxxvi. 42, and xxix. 27, where also a prayer is recorded such as generals used to offer on these occasions.) When a Macedonian army was lustrated, a dog was cut in two pieces in the place where the army was to assemble, and one half of the dog was thrown at a distance on the right and the other to the left. The army then assembled in the place between the spots where the pieces had fallen. (Liv. xl. 6; Curt. x. 9. § 12.) But to return to the Romans. The establishment of a new colony was always preceded by a lustratio with solemn sacrifices. (Cic. *de Divin.* i. 45; Barth, *ad Stat. Theb.* iv. p. 1073.) The city of Rome itself, as well as other towns within its dominion, always underwent a lustratio, after they had been visited by some great calamity, such as civil bloodshed, awful prodigies, and the like. (Appian, *Civil.* i. 26; Liv. xxxv. 9, xlii. 20.) A regular and general lustratio of the whole Roman people took place after the completion of every lustrum, when the censor had finished his census and before he laid down his office. The lustratio (also called lustrum, Fest. s. v.) was conducted by one of the censors (Cic. *de Divin.* i. 45), and held with sacrifices called Suovetaurilia (Liv. i. 44; Varro, *de Re Rust.* ii. 1), because the sacrifices consisted of a pig (or ram), a sheep, and an ox. This lustratio, which continued to be observed in the days of Dionysius, took place in the Campus Martius, where the people assembled for the purpose. The sacrifices were carried three times around the assembled multitude. (Dionys. *Ant. Rom.* iv. 22.) Another regular lustration which was observed every year in the month of February, was said to have been instituted because the god Februus was believed to be *potens lustrationum*, and because in this month the solemnities in honour of the dii manes took place. (Macrob. *Sat.* i. 13; compare Hartung, *Die Religion der Römer*, i. p. 198, &c.) [L. S.]

LUSTRUM (from luo, Gr. *λύω*), is properly speaking a lustration or purification of the whole Roman people performed by one of the censors in the Campus Martius, after the business of the census was over. [CENSOR; LUSTRATIO.] As this purification took place only once in five years, the word lustrum was also used to designate the time between two lustra. Varro (*de Ling. Lat.* vi. 11, ed. Müll.) erroneously derives the word lustrum from luo (I pay), because the vectigalia and tributa were paid every five years to the censors. The first lustrum was performed in B. C. 566 by king Servius, after he had completed his census (Liv. i. 44; Dionys. iv. 22), and afterwards it is said to have taken place regularly every five years after the census was over. In the earliest period of the republic the business of the census and the solemnities of the lustrum were performed by the consuls. The first censors were appointed in B. C. 443, and from this year down to B. C. 294 there had, according to Livy (x. 47), only been 26 pairs of censors, and only 21 lustra, or general purifications, although if all had been regular, there would have been 30 pairs of censors and 30 lustra. We must therefore conclude, that sometimes the census was not held at all, or at least not by the censors. We also learn from this statement that the census might take place without the lustrum, and indeed two cases of this kind are recorded (Liv. iii. 22, xxiv.

43) which happened in B. C. 459 and 214. In these cases the lustrum was not performed on account of some great calamities which had befallen the republic.

The time when the lustrum took place has been very ingeniously defined by Niebuhr (*Hist. of Rom.* I. p. 277). Six ancient Romulan years of 304 days each were, with the difference of one day, equal to five solar years of 365 days each, or the six ancient years made 1824 days, while the five solar years contained 1825 days. The lustrum, or the great year of the ancient Romans (Censorin. *de Die Nat.* 18), was thus a cycle, at the end of which, the beginning of the ancient year nearly coincided with that of the solar year. As the coincidence however was not perfect, a month of 24 days was intercalated in every eleventh lustrum. Now it is highly probable that the recurrence of such a cycle or great year was, from the earliest times, solemnized with sacrifices and purifications, and that Servius Tullius did not introduce them, but merely connected them with his census, and thus set the example for subsequent ages, which however, as we have seen, was not observed with regularity. At first the irregularity may have been caused by the struggles between the patricians and plebeians, when the appointment of censors was purposely neglected to increase the disorders; but we also find that similar neglects took place at a later period, when no such cause existed. (Sueton. *Aug.* 37, *Claud.* 16.) The last lustrum was solemnized at Rome, in A. D. 74, in the reign of Vespasian. (Censorin. *l. c.*)

Many writers of the latter period of the republic and during the empire, use the word lustrum for any space of five years, and without any regard to the census (Ovid. *Fast.* ii. 183, iv. 701, *Amor.* iii. 6. 27; Horat. *Carm.* ii. 4. 24, iv. 1. 6), while others even apply it in the sense of the Greek pentacteteris or an Olympiad, which only contained four years. (Ovid. *ex Pont.* iv. 6. 5, &c.; Mart. iv. 45.) Martial also uses the expression lustrum ingens for saeculum.

(Compare Scaliger, *de Emend. Tempor.* p. 183; Ideler, *Handb. der Chronol.* ii. p. 77, &c.) [L. S.] LYCAEA (Λύκαια), a festival with contests, celebrated by the Arcadians in honour of Zeus surnamed Λυκαῖος. It was said to have been instituted by the ancient hero Lycaon, the son of Pelasgus. (Paus. viii. 2. § 1; Strab. viii. p. 388.) He is also said, instead of the cakes which had formerly been offered to the god, to have sacrificed a child to Zeus, and to have sprinkled the altar with its blood. It is not improbable that human sacrifices were offered in Arcadia to Zeus Lycaeus down to a very late period in Grecian history. (Porphyr. *de Abst.* ii. 27.) No further particulars respecting the celebration of the Lycaea are known, with the exception of the statement of Plutarch (*Caes.* 61), that the celebration of the Lycaea in some degree resembled that of the Roman Lupercalia. [L. S.]

LYCHNU'CHUS. [CANDELÁBRUM.]

LYRA (λύρα, Lat. *fides*), a lyre, one of the most ancient musical instruments of the stringed kind. There can scarcely be any doubt that this and similar instruments were used by the Eastern nations and by the Egyptians, long before the Greeks became acquainted with them, and that they were introduced among the Greeks from Asia Minor. (Wilkinson's *Manners and Cust. of the Anc. Egypt.* ii. pp. 272, 288, &c.) The Greeks them-

selves however attributed the invention of the lyre to Hermes, who is said to have formed the instrument of a tortoise-shell, over which he placed gut-strings. (Hom. *Hymn. in Merc.*; Apollod. iii. 10. § 2; Diodor. v. 75; Serv. *ad Virg. Georg.* iv. 464.) As regards the original number of the strings of a lyre, the accounts of the ancients differ so widely, that it is almost impossible to arrive at any definite conclusion. Diodorus (i. 16) states that Hermes gave his lyre three strings, one with an acute, the other with a grave, and the third with a middle sound. Macrobius (*Sat.* i. 19) says that the lyre of Mercury had four strings, which symbolically represented the four seasons of the year; while Lucian (*Deor. Dial.* 7), Ovid (*Fast.* v. 106), and others, assume that the lyre from the first had seven strings. All ancient writers who mention this invention of Hermes, apply it to the name lyra, though its shape in this description of Apollodorus and Servius rather resembles that of the instrument which in subsequent times was designated by the name cithara (κίθαρα or κίθαρις), and in some degree resembled a modern guitar, in as far as in the latter the strings were drawn across the sounding bottom, whereas in the lyra of later times they were free on both sides. In the Homeric poems the name λύρα does not occur, with the exception of the Homeric hymn to Hermes; and from the expression which occurs in this hymn (423), *λόρη κίθαριζεν*, it appears that originally there was very little or no difference between the two instruments, that is to say, the instrument formerly used was a cithara in the later sense of the word.

The instruments which Homer mentions as used to accompany songs are the φόρμιγγις and κίθαρις. (*Il.* i. 603, *Od.* viii. 248 and 261.) Now that the φόρμιγγις and the κίθαρις were the same instrument, appears to be clear from the expression φόρμιγγι κίθαριζεν, and κίθαρι φόρμιγγεν. (*Od.* i. 153, &c.) The lyra is also called χέλυσ, or χελώνη, and in Latin *testudo*, because it was made of a tortoise-shell.

The obscurity which hangs over the original number of strings of the lyre, is somewhat removed by the statement made by several ancient writers, that Terpander of Antissa (about B. C. 650) added to the original number of four strings three new ones, and thus changed the tetrachord into a heptachord. (Euclid. *Introd. Harm.* p. 19; Strab. xiii. p. 618; Clem. Alex. *Strom.* vi. p. 814, ed. Potter),

though it cannot be denied that there existed lyres with only three strings. (Blanchini, *De Tribus Generibus Instrumentorum Musicarum Veterum Organicarum Dissertatio*, tab. iv.) The preceding representation of a tetrachord and the following one of a heptachord are both taken from the work of Blanchini.

The heptachord introduced by Terpander henceforth continued to be most commonly used by the Greeks as well as subsequently by the Romans, though in the course of time many additions and improvements were made which are described below. In the ancient tetrachord

the two extreme strings stood to each other in the relation of a fourth (*διὰ τεσσάρων*), i.e. the lower string made three vibrations in the time that the upper one made four. In the most ancient arrangement of the scale, which was called the diatonic, the two middle strings were strung in such a manner, that the three intervals between the four strings produced twice a whole tone, and one semi-tone. Terpander in

forming his heptachord, in reality added a new tetrachord to the ancient one, but left out the third string of the latter, as there was between it and the fourth only an interval of a semi-tone. The heptachord thus had the compass of an octave, or, as the ancients called it, a diapason (*διὰ πασῶν*). The intervals between the seven strings in the diatonic scale were as follow:—between one and two a whole tone, between two and three a whole tone, between three and four a whole tone and a semi-tone; between four and five and five and six a whole tone each, between six and seven a semi-tone. The seven strings themselves were called, beginning from the highest, *νήτη, παρανήτη, παραμέση, μέση, λυγρός, παραλύτη, ὑπάτη*. (Böckh, *de Metris Pindari*, p. 205, &c.) Pindar himself made use of the heptachord, though in his time an eighth string had been added. In the time of Philip and Alexander the number of strings was increased to eleven by Timotheus of Miletus (Suidas, s. v. *Τιμόθεος*; Müller, *Dor.* iv. 6. § 3), an innovation which was severely censured by the Spartans, who refused to go beyond the number of seven strings. (Cic. *de Leg.* ii. 15; Athen. xiv. p. 636.) It is however clear that the ancients made use of a variety of lyres, and in the representations which we still possess, the number of strings varies from three to eleven. About the time of Sappho and Anacreon several stringed instruments, such as *magadis*, *barbiton*, and others, were used in Greece, and especially in Lesbos. They had been introduced from Asia Minor, and their number of strings far exceeded that of the lyre, for we know that some had a compass of

two octaves, and others had even twenty strings, so that they must have more resembled a modern harp than a lyre. (Bode, *Gesch. der Lyrisch. Dichtkunst der Hellenen*, vol. i. p. 382, &c.; compare Quintil. xii. 10.)

It has been remarked above that the name lyra occurs very seldom in the earliest Greek writers, and that originally this instrument and the cithara were the same. But about the time of Pindar innovations seem to have been introduced by which the lyra became distinct from the cithara, the invention of which was ascribed to Apollo, and hence the name of the former now occurs more frequently. (Pind. *Ol.* x. 113, *Nem.* iii. 19, xi. 8, *Pyth.* viii. 42, et passim.) Both however had in most cases no more than seven strings. The difference between the two instruments is described above; the lyre had a great and full-sounding bottom, which continued as before to be made generally of a tortoise-shell, from which, as Lucian (*Dial. Mor.* 1) expresses it, the horns rose as from the head of a stag. A transverse piece of wood connecting the two horns at or near their top-ends served to fasten the strings, and was called *ὄργανον*, and in Latin *transtillum*. The horns were called *κῆρυκες* or *cornua*. (Schol. Venet. ad *Iliad.* ii. 293; Hesych. s. v. *ὄργανον*; Cic. *de Nat. Deor.* ii. 59.) These instruments were often adorned in the most costly manner with gold and ivory. (Cic. *ad Heren.* iv. 47; Ovid. *Met.* xi. 167.) The lyre was considered as a more manly instrument than the cithara, which, on account of its smaller-sounding bottom, excluded full-sounding and deep tones, and was more calculated for the middle tones. The lyre when played stood in an upright position between the knees, while the cithara stood upon the knees of the player. Both instruments were held with the left hand, and played with the right. (Ovid. *Metam.* xi. 168.) It has generally been supposed that the strings of these instruments were always touched with a little staff called plectrum (*πλῆκτρον*) (see woodcut under *MENSA*), but among the paintings discovered at Herculaneum we find several instances where the persons play the lyre with their fingers. (See also Ovid. *Heroid.* iii. 118.) The lyre was at all times only played as an accompaniment to songs.

The Latin name *fides*, which was used for a lyre as well as a cithara is probably the same as the Greek *πίστις*, which, according to Hesychius (s. v.), signifies gut-string; but Festus (s. v.) takes it to be the same as *fides* (faith), because the lyre was the symbol of harmony and unity among men.

The lyre (cithara or phorminx) was at first used in the recitations of epic poetry, though it was probably not played during the recitation itself, but only as a prelude before the minstrel commenced his story, and in the intervals or pauses between the several parts. The lyre has given its name to a species of poetry called lyric; this kind of poetry was originally never recited or sung without the accompaniment of the lyre, and sometimes also of an appropriate dance. (Compare the article *MUSICA*; Plutarch, *de Musica*; Böckh, *de Metris Pindari*; Drieberg, *Musikalische Wissenschaften der Griechen*; and by the same author *Aufschlüsse über die Musik der Griechen*; Burney, *History of Music*; Hawkins, *History of Music*; Krüger, *De Musica Græc.* *Organis circa Pindari tempora florentibus*, Göttingen, 1840; Müller, *Hist. of Greek Lit.* p. 148, &c.) [L. S.]

M.

MACELLUM (ὀψωνία, Athen. i. 9; ὀψωναλεῖον, κρεπωλεῖον), a provision-market, frequented by cooks, fishermen, poulterers, confectioners, butchers, and men of similar occupations. (Varro, *de Re Rust.* iii. 2. 17, *de Ling. Lat.* v. 32. pp. 147, 148. ed. Spengel; Plant. *Aulul.* ii. 8. 3; Ter. *Eun.* ii. 2. 24; Hor. *Sat.* ii. 3. 229, *Epist.* i. 15. 31; Seneca, *Epist.* 78.) [FORUM.] From *macellum*, a provision-merchant was called *macellarius* (ὀψωνάλης, κρεπωάλης). (Sueton. *Jul.* 26. *Vespas.* 19; Varro, *de Re Rust.* iii. 2. 4.) The Athenians called their macellum *eis τοῦτον*, just as they called their slave-markets *eis τὰ ἀνδράποδα*, their wine-market *eis τὸν οἶνον*, and other markets by the name of the commodities sold in them. (Poll. ix. 47; x. 19; Harpocr. s.v. Δεῖγμα.) [J.Y.]

MACHINAE (μηχαναί), and **ORGANA** (ὄργανα). The object of this article is to give a brief general account of those contrivances for the concentration and application of force, which are known by the names of *instruments*, *mechanical powers*, *machines*, *engines*, and so forth, as they were in use among the Greeks and Romans, especially in the time of Vitruvius, to whose tenth book the reader is referred for the details of the subject.

The general, but loose, definition which Vitruvius gives of a *machine* (x. 1. § 1), is a wooden structure, having the virtue of moving very great weights. A *machine* differs from an *organon*, inasmuch as the former is more complex and produces greater effects of power than the latter: perhaps the distinction may be best expressed by translating the terms respectively *machine* or *engine* and *instrument*. Under the latter class, besides common tools and simple instruments, as the plough for example, Vitruvius appears to include the simple *mechanical powers*, which, however, when used in combination, as in the crane and other machines, become *machinae*. Thus Horace uses the word for the machines used to launch vessels (*Carm.* i. 4. 2), which appears to have been effected by the joint force of ropes and pulleys drawing the ship, and a screw pushing it forwards, aided by rollers (φάλαγγες) beneath it. The word *organon* was also used in its modern sense of a musical instrument. [See HYDRAULA.]

The Greek writers, whom Vitruvius followed, divided machines into three classes, the (*genus*) *σπαστικόν* or *ἀκροβατικόν* (respecting which see Vitruvius and his commentators), the *σπιρταλό* or *πνευματικόν* [HYDRAULA], and the *tractatorium* or *βαρούλιον* (or *βάνανον* according to the reading of the old editions) for moving heavy weights. The information which he gives us may perhaps, however, be exhibited better under another classification.

I. Mechanical Engines.

1. *The Simple Mechanical Powers* were known to the Greek mechanicians from a period earlier than can be assigned, and their theories were completely demonstrated by Archimedes. Vitruvius (x. 3. a. 8) discourses of the two modes of raising heavy weights, by *rectilinear* (εὐθείαν) and *circular* (κυκλωτήν) motion. He explains the action of the *lever* (*ferreus vectis*), and its three different sorts, according to the position of the fulcrum (πομολύγιον), and some of its applications, as in the

steelyard (*tristina, statera*), and the oars and rudder-oars of a ship; and alludes to the principle of *virtual velocities*. The *inclined plane* is not spoken of by Vitruvius as a *machina*, but its properties as an aid in the elevation of weights are often referred to by him and other writers; and in early times it was, doubtless, the sole means by which the great blocks of stone in the upper parts of buildings could be raised to their places.

Under the head of circular motion, Vitruvius makes a passing allusion to the various forms of wheels and screws, *plastrata, rhedae, tympana, rotas, cochleae, scorpiones, balistae, prela*, about which see the respective articles. It is worth while, also, to notice the methods adopted by Chersiphron and his son Metagenes, the architects of the temple of Artemis at Ephesus, and by later architects, to convey large blocks of marble from the quarries, by supporting them in a cradle between wheels, or enclosing them in a cylindrical frame-work of wood (Vitruv. x. 6. a. 2); and also the account which Vitruvius gives of the mode of measuring the distance passed over by a carriage or a ship, by an instrument attached to the wheel of the former, or to a sort of paddle-wheel projecting from the side of the latter (c. 9. a. 14). What he says of the *pulley* will be more conveniently stated under the next head.

2. *Compound Mechanical Powers, or Machines for raising heavy weights (machinae tractoriae)*. Of these Vitruvius describes three principal sorts, all of them consisting of a proper erect frame-work (either three beams, or one supported by ropes); from which hang *pulles*, the rope of which is worked either by a number of men, or by a windlass (*maula*), or by a large drum (*tympanum, ἀμφίπεσσις, περιτρόχιον*) moved as a tread-wheel, only from within. He describes the different sort of pulleys, according to the number of *sheaves* (*orbiculi*) in each block (*trochlea* or *reclamas*), whence also the machine received special names, such as *tripastos*, when there were three sheaves, one in the lower block and two in the upper; and *pentapastos*, when there were five sheaves, two in the lower block, and three in the upper (x. 2—5).

II. *Military Engines*. (Vitruv. x. 15—22; Vegetius and the other writers *de Re Militari*; ARIES; HELLEPOLIS; TESTUDO; TORMENTUM; TURRIS, &c.)

III. Theatrical Machines. [THEATRUM.]

IV. Hydraulic Engines.

1. *Conveyance and delivery of water through pipes and channels*. [AQUAEDUCTUS; EMISSARIUM; FISTULA; FONS.] It has been shown, under the articles referred to, that the ancients well knew, and that they applied in practice, the hydrostatic law, that water enclosed in a bent pipe rises to the same level in both arms. It also appears, from the work of Frontinus, that they were acquainted with the law of hydraulics, that the quantity of water delivered by an orifice in a given time depends on the size of the orifice and on the height of the water in the reservoir; and also, that it is delivered faster through a short pipe than through a mere orifice of equal diameter.

2. *Machines for raising water*. The ancients did not know enough of the laws of atmospheric pressure to be acquainted with the common sucking pump; but they had a sort of forcing pump, which is described by Vitruvius (x. 12), who ascribes the invention to Ctesibius. For raising water a small

height only they had the well-known screw of Archimedes, an instrument which, for this particular purpose, has never been surpassed. (Vitruv. x. 11; COCHLEA.) But their pumps were chiefly on the principle of those in which the water is lifted in buckets, placed either at the extremity of a lever, or on the rim of a wheel, or on a chain working between two wheels. (Vitruv. x. 9; ANTLIA; TYMPANUM.)

3. *Machines in which water is the moving power.* (Vitruv. x. 10; MOLA.)

4. Other applications of water, as to the measurement of time, and the production of musical sounds, in the *clepsydra* and the *hydraulic organ*. (Vitruv. ix. 5, 6, x. 13; HOROLOGIIUM; HYDRAULA.) [P. 8.]

MAENIA'NUM, signified, originally, a projecting balcony, which was erected round the Roman forum, in order to give more accommodation to the spectators of the gladiatorial combats, by the censor, C. Maenius, B. C. 318 (Festus, s. v. p. 135, ed. Müller; Isidor. *Orig.* xv. 3. § 11); and hence balconies in general came to be called *maeniana*. Many allusions to such structures, and to the regulations which were found necessary to keep them within due bounds, are found in the ancient writers (Cic. *Acad.* iv. 22; Non. p. 83. s. 65, Müll.; Sueton. *Catig.* 18; Vitruv. v. 1; Plin. *H. N.* xxxv. 10. s. 37; Val. Max. ix. 12. § 7; Cod. Just. viii. 2. 20, 10. 11, xliii. 8. 2. § 6, l. 16. 242. § 1; Amm. Marc. xxvii. 9, 10; see also AMPHITHEATRUM, p. 88, and CIRCUS, p. 286, a.) [P. 8.]

MAGADIS. [LYRA, p. 721, a; MUSICA.]

MAGISTER, which contains the same root as *magis* and *mag-nus*, was applied at Rome to persons possessing various kinds of offices, and is thus explained by Festus (s. v. *Magisteratus*):—"Magisteratus, moderari. Unde magistri non solum doctores artium, sed etiam pægorum, societatum, vicorum, collegiorum, equitum dicuntur; quia omnes hi magis ceteris possunt." Paulus (Dig. 50. tit. 16. s. 57) thus defines the word:—"Quibus præcipua cura rerum incumbit, et qui magis quam ceteri diligentiam et sollicitudinem rebus, quibus præsent, debent, hi magistri appellantur." The following is a list of the principal magistri:—

MAGISTER ADMISSIONUM. [ADMISSIONALES.]

MAGISTER ARMORUM appears to have been the same officer as the Magister Militum. (Amm. Marc. xvi. 7, xx. 9.)

MAGISTER AUCTIONIA. [BONORUM EMPTIO.]

MAGISTER BIBENDI. [SYMPOSIUM.]

MAGISTER COLLEGII was the president of a collegium or corporation. [COLLEGIUM.]

MAGISTER EPISTOLARUM answered letters on behalf of the emperor. (Orelli, *Inscr.* 2352.)

MAGISTER EQUITUM. [DICTATOR, p. 407, b.]

MAGISTER LIBELLORUM was an officer or secretary who read and answered petitions addressed to the emperors. [LIBELLUS, 4. c.] He is called in an inscription "Magister Libellorum et Cognitionum Sacrarum." (Orelli, l. c.)

MAGISTER MEMORIAL, an officer whose duty it was to receive the decision of the emperor on any subject and communicate it to the public or the persons concerned. (Amm. Marc. xv. 5, xxvii. 6.)

MAGISTER MILITUM, the title of the two officers, to whom Constantine intrusted the command of all the armies of the empire. One was placed over the cavalry, and the other over the infantry.

On the divisions of the empire their number was increased, and each of them had both cavalry and infantry under his command. In addition to the title of *Magistri militum*, we find them called *Magistri armorum, equitum et pedum, utriusque militiae* (Zosim. ii. 33, iv. 27; Vales. *ad Amm. Marc.* xvi. 7.) In the fifth century, there were in the Eastern empire two of these officers at court, and three in the provinces; in the western empire, two at court, and one in Gaul. Under Justinian, a new magister militum was appointed for Armenia and Pontus. (Walter, *Geschichte des Römischen Rechts*, § 342, 2d ed.)

MAGISTER NAVIS. [EXERCITORIA ACTIO.]

MAGISTER OFFICIORUM, was an officer of high rank at the imperial court, who had the superintendence of all audiences with the emperor, and also had extensive jurisdiction over both civil and military officers. (Cod. l. tit. 31; 12. tit. 16; Cod. Theod. l. tit. 9; 6. tit. 9; Amm. Marc. xv. 5; xx. 2, xxii. 3; Cassiod. *Varior.* vi. 6.)

MAGISTER POPULLI [DICTATOR.]

MAGISTER SCRINIORUM, had the care of all the papers and documents belonging to the emperor. (Cod. 12. tit. 9; Spartian. *Ael. Ver.* 4; Lamprid. *Alex. Sev.* 26.)

MAGISTER SOCIETATIS. The equites, who farmed the taxes at Rome, were divided into companies or partnerships; and he who presided in such a company was called Magister Societatis. (Cic. *Verr.* ii. 74, *ad Fam.* xiii. 9, *pro Plancio*, 13.)

MAGISTER VICORUM. Augustus divided Rome into certain regiones and vici, and commanded that the people of each vicus should choose magistri to manage its affairs. (Suet. *Aug.* 30, *Tib.* 76; Orelli, *Inscr.* 5, 813, 1530.) From an inscription on an ancient stone referred to by Pitsiscus (*Lexicon*, s. v.) it appears that there were four such magistri to each vicus. They were accustomed to exhibit the Ludi Compitalitii dressed in the prætexta. (Ascon. in Cic. *Pison.* p. 7, ed. Orelli.)

MAGISTRATUS. A definition of Magistratus may be collected from Pomponius, *De Origine Juris* (Dig. l. tit. 2). Magistratus are those "qui juri dicundo præsent." The King was originally the sole Magistratus; he had all the Potestas. On the expulsion of the Kings, two Consuls were annually appointed and they were Magistratus. In course of time other Magistratus were appointed, so that Pomponius enumerates as the Magistratus of his time "qui in civitate jura reddebant," ten tribuni plebis, two consuls, eighteen praetors, and six aediles. He adds that the Praefecti Annonae et Vigilum were not Magistratus. The Dictator was also a Magistratus; and the Censors; and the Decemviri litibus judicandia. The governors of Provinces with the title of Proprætor or Proconsul were also Magistratus. Gaius attributes the Jus Edicendi to the Magistratus Populi Romani, without any restriction; but he says that the chief edictal power was possessed by the Praetor Urbanus and the Praetor Peregrinus, whose jurisdictio in the provinces was exercised by the Praesides of Provinces; and also by the Curule Aediles whose jurisdiction in the Provinciae Populi Romani was exercised by the Quaestors of those Provinces.

The word Magistratus contains the same element as mag(ister) and mag(nus); and it signifies both the persons and the office, as we see in the phrase "se magistratu abdicare," which signifies to give up the office before the time at which it regularly

expired. (On the abdicatio, see Rubino, *Römische Staatsverfassung*, p. 88; and Plut. *Cic.* 19). (Liv. vi. 1, xxiii. 23.) According to Festus, a magistratus was one who had "judicium auspicumque."

According to M. Messala the augur, quoted by Gellius (xiii. 15), the Auspicia Maxima belonged to the Consuls, Praetors, and Censors, and the Minora auspicia to the other Magistratus; accordingly the Consuls, Praetors, and Censors were called Majores, and they were elected at the Comitia Centuriata; the other Magistratus were called Minores. The Magistratus were also divided into Curules and those who were not Curules: the Magistratus Curules were the dictator, consul, praetors, censors, and the curule aediles, who were so called, because they had the Jus Sellae Curulis. The magistrates were chosen only from the Patricians in the early Republic, but in course of time the Plebeians shared these honours, with the exception of that of the Interrex: the Plebeian Magistratus properly so called were the Plebeian Aediles and the Tribuni Plebis.

The distinction of Magistratus into Majores who had the Imperium, and the Minores who had not, had a reference to Jurisdiction also. The former term comprised Praetors and governors of Provinces; the latter, in the Republican time, comprised Aediles and Quaestors, and, under the Empire, the numerous body of Municipal Magistratus. The want of the Imperium limited the power of the Magistratus Minores in various matters which came under their cognizance, and the want of it also removed other matters entirely from their jurisdiction (taking the word in its general sense). Those matters which belonged to Jurisdiction in its limited sense were within the competence of the Magistratus Minores [JURISDICTION]; but those matters which belong to the Imperium, were for that reason not within the competence of the Magistratus Minores. As proceeding from the Imperium we find enumerated the praetoriae stipulationes, such as the cautio damni infecti, and ex novi operis nunciatio; and also the Missio in possessionem, and the In integrum restitutio. Thus it appears that the limited jurisdiction was confined to the Ordo judiciorum privatorum, and all the proceedings Extra ordinem were based on the Imperium: consequently a Minor Magistratus could not exercise Cognitio, properly so called, and could not make a Decretum. This consideration explains the fact of two Praetors for questions as to fideicommissa being appointed under Claudius: they had to decide such matters for all Italy, inasmuch as such matters were not within the competence of the municipal magistratus. The jurisdiction of the municipal magistratus of Cisalpine Gaul was limited in many cases to a certain sum of money; and this limitation was afterwards extended to all Italy. Added to this, these magistratus had not the Imperium, which, as already observed, limited their Jurisdiction.

The Magistratus Minores could take cognizance of matters which were not within their jurisdiction, by delegation from a superior Magistratus. Thus in the case of Damnum Infectum, inasmuch as delay might cause irreparable mischief, the Praetor could delegate to the Municipal Magistratus, who were under him, the power of requiring the Cautio. (Dig. 39. tit. 2. s. 4.)

It became necessary to re-organize the administration of Gallia Cisalpina, on its ceasing to be a

Province; and as the Jurisdictio was placed in the hands of Municipal Magistratus, who had no Imperium, it was further necessary to determine what should be the form of procedure before these Magistratus in all matters that were extra ordinem, that is, in such matters as did not belong to their competence because they were Magistratus Minores, but were specially given to them by a Lex. The determining of this form of procedure was the object of the Lex Rubria. [LEX RUBRIA.] (Puchta, *Zeitschrift*, x. p. 195.)

The case of Adoption (properly so called) illustrates the distinction of Magistratus into Majores and Minores, as founded on the possessing or not possessing the Imperium. (Gaius, i. 99.) This adoption was effected "Imperio Magistratus," as for instance before the Praetor at Rome: in the Provinciae the same thing was effected before a Proconsul or Legatus, both of whom therefore had the Imperium. The Municipal Magistratus, as they had not the Imperium, could not give validity to such an act of adoption. [G. L.]

MAJESTAS is defined by Ulpian (Dig. 48. tit. 4. s. 1) to be "crimen illud quod adversus Populum Romanum vel adversus securitatem ejus committitur." He then gives various instances of the crime of Majestas, some of which pretty nearly correspond to treason in English law; but all the offences included under Majestas comprehend more than the English treason. One of the offences included in Majestas was the effecting, aiding in, or planning the death of a magistratus Populi Romani or of one who had Imperium or Potestas. Though the phrase "crimen majestatis" was used, the complete expression was "crimen laesae, imminutae, diminutae, minutae, majestatis." [G. L.]

The word Majestas consistently with its relation to *mag* (nus) signifies the magnitude or greatness of a thing. "Majestas," says Cicero (*Part.* 30) "est quaedam magnitudo Populi Romani;" "Majestas est in Imperii atque in nominis Populi Romani dignitate." Accordingly the phrases "Majestas Populi Romani," "Imperii Majestas" (*Hor. Carm.* iv. 15) signify the whole of that which constituted the Roman State; in other words the sovereign power of the Roman State. The expression "minuere majestatem" consequently signifies any act by which this majestas is impaired; and it is thus defined by Cicero (*de Invent.* ii. 17), "Majestatem minuere est de dignitate, aut amplitudine, aut potestate Populi aut eorum quibus Populus potestatem dedit, aliquid derogare." (See *Cic. ad Fam.* iii. 11. "Majestatem auxiati.") The phrase Majestas Publica in the Digest is equivalent to the Majestas Populi Romani. In the Republican period the term Majestas Laesa or Minuta was most commonly applied to cases of a general betraying or surrendering his army to the enemy, exciting sedition, and generally by his bad conduct in administration impairing the Majestas of the State. (Tacit. *Ann.* i. 72.)

The Laws of the Twelve Tables punished with death a person who stirred up an enemy against Rome or surrendered a Roman citizen to an enemy. (Dig. 48. tit. 4. s. 3.) The Leges Majestatis seem to have extended the offence of Majestas generally to all acts which impaired the Majestas Publica; and several of the special provisions of the Lex Julia are enumerated in the passage just referred to.

Like many other leges the Lex Julia was modified

by *Senatusconsulta* and Imperial Constitutions; and we must not conclude from the title in the Digest, "Ad Legem Juliam Majestatis," that all the provisions enumerated under that title were comprehended in the original Lex Julia. It is stated by Marcianus, as there cited, that it was not Majestas to repair the statues of the Caesar which were going to decay; and a Rescript of Severus and his son Antoninus Caracalla declared that if a stone was thrown and accidentally struck a statue of the Emperor, that also was not Majestas; and they also graciously declared that it was not Majestas to sell the statues of the Caesar before they were consecrated. Here then is an instance under the title *ad Legem Juliam Majestatis* of the Imperial rescripts declaring what was not Majestas. There is also an extract from Saturninus De Judiciis, who says that if a person melted down the statues or *imagines* of the Emperor which were already consecrated, or did any similar act, he was liable to the penalties of the Lex Julia Majestatis. But even this also does not prove that this provision was a part of the Lex Julia, as originally passed, for a Lex after being amended by *Senatusconsulta* or Imperial Constitutions still retained its name. In the time of Tiberius it was a matter of charge against a man that in selling a garden he had included a statue of Augustus; which Tiberius declared to be no offence. (Tacit. *Ann.* i. 73.)

The old punishment of Majestas was perpetual interdiction from fire and water; but now, says Paulus (*S. R. v.* 39), that is, in the later Imperial period, persons of low condition are thrown to wild beasts, or burnt alive; persons of better condition are simply put to death. The property of the offender was confiscated and his memory was infamous.

In the early times of the Republic every act of a citizen which was injurious to the State or its peace was called *Perduellio*, and the offender (*perduellus*) was tried before the *populus* (*populi iudicio*), and, if convicted, put to death. (Liv. ii. 41, vi. 20.) The earliest trial and form of procedure is that which is given by Livy (i. 26); after the overthrow of the kingly power the notion of *Perduellio* and the process were in some degree changed. Numerous offences against the state were comprehended under *Perduellio*. For instance Cn. Fulvius (Liv. xxvi. c. 3.) was charged with the offence of *perduellio* for losing a Roman army; but in course of time, and probably after the passing of the Lex Porcia, though it does not appear that this Lex applied to *Perduellio*, the punishment was *aque et ignis interdictio*. According to Gaius "*perduellus*" originally signified "*hostis*" (Dig. 50. tit. 16. s. 234); and thus the old offence of *perduellio* was equivalent to making war on the Roman State. The trial for *perduellio* (*perduellionis iudicium*) existed to the later times of the Republic; but the name seems to have almost fallen into disuse, and various *leges* were passed for the purpose of determining more accurately what should be Majestas.

These *Leges* were a Lex Apuleia, probably passed in the fifth consulship of Marius, the exact contents of which are unknown (Cic. *de Or.* ii. 25, 49), a Lex Varia B. c. 91 (Appian, *Bell. Civ.* i. 37; Cic. *Brut.* 89; Valer. Maxim. viii. 6. § 4), a Lex Cornelia passed by L. Cornelius Sulla (Cic. in *Pis.* 21, *pro Cluent.* 35), and the Lex Julia already mentioned, and which continued under

the Empire to be the fundamental enactment on this subject. This Lex Julia is by some attributed to C. Julius Caesar, and assigned to the year B. c. 48, and this may be the Lex referred to in the Digest; some assume a second Lex Julia, under Augustus. That a Lex de Majestate was passed in Caesar's time appears from Cicero. (*Philipp.* i. 9.)

Under the Empire the term Majestas was applied to the person of the reigning Caesar, and we find the phrases Majestas Augusta, Imperatoria, and Regia. It was however nothing new to apply the term to the Emperor, considered in some of his capacities, for it was applied to the magistratus under the Republic, as to the consul and praetor. (Cic. *Philipp.* xiii. 9, in *Pisonem*, 11.) Horace even addresses Augustus (*Ep.* ii. l. 288) in the terms "*majestas tua*," but this can hardly be viewed otherwise than as a personal compliment, and not as said with reference to any of the offices which he held. The extension of the penalties to various new offences against the person of the Emperor belongs of course to the Imperial period. Augustus availed himself of the Lex for prosecuting the authors of *famosi libelli* (*cognitionem de famosis libellis, species legis ejus, tractavit*, Tacit. *Ann.* i. 72; Dion Cass. lvi. 27; Sueton. *Octav.* 55); the proper inference from the passage of Tacitus is that the *Leges Majestatis* (for they all seem to be comprised under the term "*Legem Majestatis*,") did not apply to words or writings, for these were punishable otherwise. The passage of Cicero (*ad Fam.* iii. 11) is manifestly corrupt, and as it stands, inconsistent with the context; it cannot be taken as evidence that the Lex Majestatis of Sulla contained any provisions as to libellous words, as to which there were other sufficient provisions. [*INJURIA*.] Sigonius has attempted to collect the capita of the Lex Majestatis of Sulla. Under Tiberius the offence of Majestas was extended to all acts and words which might appear to be disrespectful to the Princeps, as appears from various passages in Tacitus (*Ann.* i. 73, 74, ii. 50, iii. 38, 66, 67, &c.). The term *Perduellio* was still in use under the Empire, and seems to have been equivalent to Majestas at that period.

An inquiry might be made into an act of Majestas against the Emperor even after the death of the offender; a rule which was established (as we are informed by Paulus) by M. Aurelius in the case of Druncianus or Druncanus, a senator who had taken part in the outbreak of Cassius, and whose property was claimed by the fisci after his death. (Perhaps the account of Capitolinus, *M. Ant. Phil.* c. 26, and of Vulcatius Gallicanus, *Avi-dius Cassius*, c. 9, is not inconsistent with the statement of Paulus: on the case of Druncanus, see Tillemont, *Histoire des Empereurs*, vol. ii. p. 382.) A constitution of S. Severus and Antoninus Caracalla declared that from the time that an act of Majestas was committed, a man could not alienate his property or manumit a slave, to which the great (*magnum*) Antoninus (probably Caracalla is still meant), added that a debtor could not after that time lawfully make a payment to him. In the matter of Majestas slaves could also be examined by torture in order to give evidence against their master: this provision, though comprehended in the Code under the title *Ad Legem Juliam Majestatis*, was perhaps not contained in the ori-

ginal law, for Tiberius sold a man's slaves to the actor publicus (*Ann.* iii. 67) in order that they might give evidence against their master, who was accused of Repetundae and also of Majestas. Women were admitted as evidence in a case of Laesa Majestas, and the case of Fulvia is cited as an instance. (*Dig.* 48. tit. 4; *Cod.* ix. tit. 8.)

As to the phrase Patria Majestas, see PATRIA POTESTAS. (The history of Majestas is given with great minuteness by Rein, *Das Criminalrecht der Römer*. A brief view of the subject is very difficult to give.) [G. L.]

MAJO'RES. [INFANS.]

MA'LLEUS, *dim.* MALL'OLUS (*μαλλήολος*; *σφύρα*, *dim.* *σφύριον*), a hammer, a mallet, was used much for the same purposes in ancient as in modern times. When several men were striking with their hammers on the same anvil, it was a matter of necessity that they should strike in time, and Virgil accordingly says of the Cyclopes, "Inter se brachia tollunt in numerum." (*Georg.* iv. 174; *Aen.* viii. 452.) The scene which he describes is represented in the annexed woodcut, taken from an ancient bas-relief, in which Vulcan, Brontes, and Steropes, are seen forging the metal, while the third Cyclops, Pyracmon, blows the bellows. (*Aen.* viii. 425.) Beside the anvil-stand [INCUS] is seen the vessel of water, in which the hot iron or bronze was immersed. (*Ib.* v. 450, 451.)

But besides the employment of the hammer upon the anvil for making all ordinary utensils, the smith (*χαλκεύς*) wrought with this instrument figures called *ἔργα σφυρήλατα* (or *δλοσφύρητα*, Brunn, *Anal.* ii. 222), which were either small and fine, some of their parts being beaten as thin as paper and being in very high relief, as in the bronzes of Siris [LORICA], or of colossal proportions, being composed of separate plates, rivetted together: of this the most remarkable example was the statue of the sun of wrought bronze (*σφυρήλατος κολοσσός*, Theocrit. xii. 47; *ραιοτηροκοπία*, Philo, *de 7 Spectac.* 4. p. 14, ed. Orell.), seventy cubits high, which was erected in Rhodes. Another remarkable production of the same kind was the golden statue of Jupiter (Strabo, viii. 6. 20; Plat. *Phaedr.* p. 252, Heindorf), which was erected at Olympia by the sons of Cypselus.

By other artificers the hammer was used in conjunction with the chisel [DOLABRA], as by the carpenter (*pulsans malleus*, Coripp. *de Laud. Justin.* iv. 47; woodcut, p. 98) and the sculptor.

The term *malleolus* denoted a hammer, the transverse head of which was formed for holding

pitch and tow; which, having been set on fire, was projected slowly, so that it might not be extinguished during its flight, upon houses and other buildings in order to set them on fire; and which was therefore commonly used in sieges together with torches and falaricae. (*Liv.* xxxviii. 6; Non. Marcellus, p. 556, ed. Lips; Festus, s. v.; *Cic. pro Mil.* 24; Veget. *de Re Mil.* iv. 18; Vitruv. x. 16. 9. ed. Schneider.)

MALUS. [NAVIS.]

MALUS OCULUS. [FASCINUM.]

MANCEPS has the same relation to Mancipium that Auspex has to Auspicium. It is properly qui manu capit. But the word has several special significations. Mancipes were they who bid at the public lettings of the censors for the purpose of farming any part of the public property. (Festus, s. v. *Manceps*; *Manceps* dicitur qui quid a populo emit conductive, quia, &c.; *Cic. pro Planc.* c. 26, ed. Wunder.) Sometimes the chief of the Publicani generally are meant by this term, as they were no doubt the bidders and gave the security, and then they shared the undertaking with others or underlet it. (*Ascon. in Dio. Verr.* c. 10.) The Mancipes would accordingly have distinctive names according to the kind of revenue which they took on lease, as Decumani, Portitores, Pecuarii. Suetonius (*Vesp.* 1, and the note in Burmann's edition) says that the father of Petro was a manceps of labourers (*operas*) who went yearly from Umbria to Sabinum to cultivate the land; that is, he hired them from their masters and paid so much for the use of them; as is now often done in slave countries. The terms Mancipes Thermarum et Salinarum occur in the Theodosian Code (14. tit. 5. s. 3). [G. L.]

MANCIPATIO. [MANCIPIUM.]

MANCIPI RES. [DOMINIUM.]

MANCIPII CAUSA. The three expressions by which the Romans indicated the status in which a free person might be with respect to another, were In Potestate, In Manu, and In Mancipio ejus esse. (Gaius, i. 49.) In consequence of his Potestas a father could mancipate his child to another person, for in the old times of the republic his Patria Potestas was hardly distinguished from property. A husband had the same power over a wife In Manu, for she was "filiae loco." Accordingly a child in Potestate and a wife in Manu were properly Res Mancipi; and they were said to be In Mancipio. Still such persons, when mancipated, were not exactly in the relation of slaves to the persons to whom they were mancipated; but they occupied a status between free persons and slaves, which was expressed by the words Mancipii causa. Such persons as were in Mancipii causa were not Sui juris (Gaius, i. 48—50); and all that they acquired, was acquired for the persons to whom they were mancipated. But they differed from slaves in not being possessed; they might also have an injuriarum actio for ill-treatment from those who had them In Mancipio, and they did not lose the rights of Ingenui, but these rights were only suspended. As to contracts, the person with whom they contracted might obtain the sale of such property (*bona*) as would have been theirs, if they had not been in mancipii causa; as Gaius expresses it (iv. 80). Persons In mancipii causa might be manumitted in the same way as slaves, and the limitations of the Lex Aelia Sentia and Furia Caninia did not apply to such manumissions. The per-

son who effected the manumission thereby acquired a kind of paternal right, which was of some importance in the matters of hereditas and tutela. (Savigny, *System*, &c. i. 360.)

The strict practice of Mancipatio, as applied to children, had fallen into disuse in the time of Gaius, and probably still earlier, and it had then become a mere legal form by which the Patria Potestas was dissolved [EMANCIPATIO]; except a person was mancipated ex noxali causa. In case of delicts by the son, the father could mancipate him (*ex noxali causa mancipio dare*), and one act of mancipatio was considered sufficient (Gaius, iv. 75—78; Liv. viii. 28; but the son had a right of action for recovering his freedom, when he had worked out the amount of the damage. (Mos. et Rom. Leg. Coll. ii. 3.) Justinian put an end to the noxae datio in the case of children, which indeed before his time had fallen into disuse. (Inst. 4. tit. 8. s. 7.)

In his time, Gaius remarks (i. 141), that men were not kept in mancipii causa (*in eo jure*) for any long time, the form of mancipatio being only used (except in the case of a noxalis causa) for the purpose of emancipation. But questions of law still arose out of this form; for the three mancipationes, which were necessary in the case of a son, might not always have been observed. Accordingly a child begotten by a son who had been twice mancipated, but born after the third mancipation of his father, was still in the power of his grandfather. A child begotten by a son who was in his third mancipation, came into his father's power if he was manumitted after that mancipation; but if the father died in mancipio, the child became sui juris. (Gaius, i. 135.)

Coemptio, by which a woman came in manum, was effected by mancipatio, and the coemptio might be either matrimonii causa, or fiduciae causa. The fiduciae causa coemptio was a ceremony which was necessary when a woman wished to change her tutores, and also when she wished to make a will; but a senatusconsultum of Hadrian dispensed with the ceremony in the latter case. (Gaius, i. 115, &c.)

Dion Cassius (xlviii. 44) says that Tiberius Nero transferred or gave (*ἐξέθηκε*) his wife to Octavianus, as a father would do; and the transfer of his wife Marcia by the younger Cato to Quintus Hortensius (Plut. *Cat. Min.* c. 25) is a well-known story. If in both these cases the wife was In Manu, she must have been mancipated. Mancipatio in such case would be equivalent to a divorce; at any rate, in both the cases which have been mentioned, the second marriage must have been preceded by a consent to dissolve the marriage, which would be sufficient if the wife was not in manu, and would require the form of mancipatio if she was in manu. (Gaius, i. 137.)

The situation of a debtor who was adjudicated to his creditor resembled that of a person who was In mancipii causa. [G. L.]

MANCIPIUM. The etymology of this word is the same as that of the word Mancipatio, of which Gaius (i. 121) says, "Mancipatio dicitur quia manu res capitur." The term Mancipium then is derived from the act of corporeal apprehension of a thing; and this corporeal apprehension is with reference to the transfer of the ownership of a thing. It was not a simple corporeal apprehension, but one which was accompanied with certain forms described by Gaius (i. 119):—"Mancipatio is effected in the presence of not less

than five witnesses, who must be Roman citizens and of the age of puberty (*puberes*), and also in the presence of another person of the same condition, who holds a pair of brazen scales and hence is called Libripens. The purchaser (*qui mancipio accipit*), taking hold of the thing, says: I affirm that this slave (*homo*) is mine Ex Jure Quiritium, and he is purchased by me with this piece of money (*ass*) and brazen scales. He then strikes the scales with the piece of money, and gives it to the seller as a symbol of the price (*quasi pretii loco*)." The same account of the matter is given more briefly by Ulpian (*Frag.* xix.). This mode of transfer applied to all Res Mancipi whether free persons or slaves, animals or lands. Lands (*praedia*) might be thus transferred, though the parties to the mancipation were not on the lands; but all other things, which were objects of mancipatio, were only transferable in the presence of the parties, because corporeal apprehension was a necessary part of the ceremony. The purchaser or person to whom the mancipatio was made did not acquire the possession of the mancipatio; for the acquisition of possession was a separate act. (Gaius, iv. 131.) Gaius calls Mancipatio "imaginaria quaedam venditio," for though the law required this form for the transfer of the Quiritarian ownership, the real contract of sale consisted in the agreement of the parties as to the price. The party who transferred the ownership of a thing pursuant to these forms was said "mancipio dare;" he who thus acquired the ownership was said "mancipio accipere." (Plaut. *Trinumm.* ii. 4. 18.) The verb "mancipare" is sometimes used as equivalent to "mancipio dare." Horace (*Ep.* ii. 2. 159) uses the phrase "mancipat usus," which is not an unreasonable licence: he means to say that "usus" or usucapion has the same effect as mancipatio, which is true; but usus only had its effect in the case of Res Mancipi, where there had been no Mancipatio or In Jure Cessio. Both Mancipatio and In Jure Cessio existed before the Twelve Tables (*Frag. Vat.* 50).

Mancipatio is used by Gaius to express the act of transfer, but in Cicero the word Mancipium is used in this sense. (Cic. *de Off.* iii. 16, *de Orat.* i. 39.)

The division of things into Res Mancipi and Nec Mancipi, had reference to the formalities requisite to be observed in the transfer of ownership. It is stated in the article DOMINIUM, what things were things Mancipi. To this list may be added children of Roman parents, who were according to the old law Res Mancipi. [MANCIPII CAUSA.] The Quiritarian ownership of Res Mancipi could only be immediately transferred by Mancipatio or In Jure Cessio; transfer by tradition only made such things In bonis. The Quiritarian ownership of Res nec mancipi was acquired by tradition only, when there was a justa causa. Quiritarian ownership is called mancipium by the earlier Roman writers: the word dominium is first used by later writers, as for instance Gaius. Mancipatio could only take place between Roman citizens or those who had the commercium; which indeed appears from the words used by the purchaser. (Gaius, i. 119; Ulp. *Frag.* xix. 3.)

The only word then by which this formal transfer of ownership was made was Mancipium, which occurs in the Twelve Tables. (Dirksen, *Uebersicht*, &c. p. 395.) The word nexum or nexus is also sometimes used in the same sense. Cicero (*Top.*

5) defines "Abalienatio" to be "ejus rei quae mancipi est;" and this is effected either by "traditio alteri nexu aut in jure cessio inter quos ea jure civili fieri possunt." According to this definition "Abalienatio" is of a Res Mancipi, a class of things determinate; and the mode of transfer is either by "traditio nexu" or by "in jure cessio." These two modes correspond respectively to the "mancipatio" and "in jure cessio" of Gaius (ii. 41), and accordingly mancipatio or the older term mancipium is equivalent to "traditio nexu;" in other words mancipium was a nexum or nexum. Cicero (*De Harusp. respons.* c. 7) uses both words in the same sentence, where he speaks of various titles to property, and among them he mentions the Jus mancipii and Jus nexi. He may mean here to speak of the Jus mancipii in its special sense as contrasted with the Jus nexi which had a wider meaning; in another instance he uses both words to express one thing. (*Ad Fam.* iv. 30.) According to Aelius Gallus, everything was "nexum" "quodcumque per aes et libram geritur;" and as mancipatio was effected per aes et libram, it was consequently a nexum. The form of mancipatio by the aes and libra continued probably till Justinian abolished the distinction between Res Mancipii and Res Nec Mancipi. It is alluded to by Horace (*Ep.* ii. 2. 158), and the libra, says Pliny (xxxiii. 3), is still used in such forms of transfer.

When things were transferred by mancipatio under a contract of sale, the vendor was bound to warranty in double of the amount of the thing sold. (Paul. *S. R. ii.* a. 16.) A vendor therefore who had a doubtful title would not sell by mancipium, but would merely transfer by delivery, and leave the purchaser to obtain the Quiritarian ownership of the thing by usucapion. (Plaut. *Cure.* iv. 2. 9, *Persa*, iv. 3. 55.) Accordingly Varro observes (*De Re Rustica*, ii. 10) that if a slave was not transferred by mancipium, the seller entered into a stipulatio dupli to be enforced by the buyer in the case of eviction; when the transfer was by mancipium, this stipulation was not necessary. The terms of the contract were called Lex Mancipii, but it is not necessary to infer from the passage of Cicero (*De Or.* i. 39), that the Lex or terms contained the penalty, but merely that it contained what the seller warranted. (See *Pro Murena*, c. 2.)

As to the application of Mancipatio to Testaments, see TESTAMENTUM.

It appears from what has been said that mancipium may be used as equivalent to complete ownership, and may thus be opposed to usus as in a passage of Lucretius that has been often quoted (iii. 985), and to Fructus (Cic. *ad Fam.* vii. 29, 30). Sometimes the word mancipium signifies a slave, as being one of the Res Mancipi: this is probably the sense of the word in Cicero (*Top.* 5) and certainly in Horace (*Ep.* i. 6. 39). Sometimes mancipia is used generally for Res mancipi (Ulp. tit. xi. 27), unless Rem mancipi is the right reading in that passage. Mancipation no longer existed in the code of Justinian, who took away all distinction between Res Mancipi and Nec Mancipi. The ownership of all corporeal things was made transferable by Traditio with a justa causa.

The subject of Mancipium and Mancipatio is discussed by Corn. Van Bynkershoek, *Opusculum de Rebus Mancipi et Nec Mancipi*; and Puchta, *Inst.* ii. § 238. [G. L.]

MANDATI ACTIO. [MANDATUM.]

MANDATUM. It is a contract of mandatam when one person commissions another to do something without reward, and that other person undertakes to do it: and generally it may be stated that whenever a man commissions another to do something without pay, which, if the thing were to be done for pay (*merces*), would make the transaction a contract of locatio and conductio, the contract of mandatam exists; as if a man gives clothes to a fullo to be furnished up and cleaned, or to a tailor (*sarcinator*) to mend. The person who gave the commission was the mandans or mandator: he who received it, was the mandatarius. The mandatam might be either on the sole account of the mandator, or on another person's account, or on the account of the mandator and another person, or on account of the mandator and mandatarius or on the account of the mandatarius and another person. But there could be no mandatam on the account (*gratia*) of the mandatarius only; as if a man were to advise another to put his money out to interest, and it were lost, the loser would have no mandati actio against his adviser. If the advice were to lend the money to Titius, and the loan had the like result, it was a question whether this was a case of mandatam; but the opinion of Sabinus prevailed, that it was, and the mandatam thus became security for Titius. It was not mandatam if the thing was contra bonos mores, or in other words, if the object of the mandatam was an illegal act. A mandatam might be general or special; and the mandatarius was bound to keep within the limits of the mandatam. The mandator had an utilis actio against such persons as the mandatarius contracted with; and such persons had the like action against the mandator; and a directa actio against the mandatarius. The mandator and mandatarius had also respectively a directa actio against one another in respect of the mandatam: the actio of the mandatarius might be for indemnity generally in respect of what he had done bona fide. If the mandatarius exceeded his commission, he had no action against the mandator; but the mandator in such case had an action for the amount of damage sustained by the non-execution of the mandatam, provided it could have been executed. The mandatam might be recalled by the mandans, or renounced by the mandatarius, "dum adhuc integra res sit," that is, no loss must accrue to either party in consequence of the contract being rescinded. The contract was dissolved by the death of either party; but if the mandatarius executed the mandatam after the death of the mandator, in ignorance of his death, he had his action against the heres, which was allowed "utilitatis causa." According to Cicero a mandati judicium was "non minus turpe quam furti" (*Pro Rosc. Amer.* c. 38); which however would obviously depend on circumstances. [INFAMIA.]

Mandatam is sometimes used in the sense of a command from a superior to an inferior. Under the empire the Mandata Principum were the commands and instructions given to governors of provinces and others. (See the letter of Plinius to Trajanus, and the emperor's answer, Plin. *Ep.* x. 111, 112.) Frontinus (*De Aquaeduct.*) classes the Mandata Principum with Lex and Senatusconsulta. (See Puchta, *Inst.* i. 110.)

(Gaius, iii. 155—162, iv. 83, 84; Inst. 3. tit. 26; Dig. 17. tit. 1; Cod. 4. tit. 35; Vangerow *Pandekten*, &c. iii. 469.) [G. L.]

MANDRAE. [LATRUNCUL]

MANDYAS (μανδύας). [LACERNA.]

MANES. See *Dict. of Greek and Rom. Biography and Mythology*.

MANGONES. [SERVUS.]

MA'NICA, a sleeve. Besides the use of sleeves sewed to the tunic, which, when so manufactured, was called *chiridota* or *manicata tunica* (Curt. iii. 7. p. 12, ed. Zumpt), sleeves were also worn as a separate part of the dress. Palladius (*de Re Rust.* i. 43) mentions the propriety of providing *ocreas manicasque de pellibus*, i. e. leggins and sleeves made of hides, as useful both to the huntman and to the agricultural labourer. The Roman gladiators wore, together with greaves, a sleeve of an appropriate kind on the right arm and hand (Juv. vi. 255), as is exhibited in the woodcuts at p. 576.

These parts of dress are mentioned together even as early as the Homeric age (see *Od.* xxiv. 228, 229). In this passage the *manicae* (χειρῖδες) seem to be mittens, worn on the hands to protect them from briars and thorns: and Eustathius, in his commentary on the passage, distinguishes between simple mittens, such as our labourers use in hedging, and gloves, which he calls χειρῖδες δακτυλάται (p. 1960. *iml.*).

Gloves with fingers (*digitalia*, Varro, *de Re Rust.* i. 55) were worn among the Romans for the performance of certain manual operations. Pliny the younger refers also to the use of *manicae* in winter to protect the hands from cold (*Epist.* iii. 5). Those used by the Persians were probably made of fur, perhaps resembling muffs: the Persians also wore gloves in winter (δακτυλῆρας, Xen. *Cyrop.* viii. 3. § 17). In an enumeration of the instruments of torture used in the fourth century of the Christian era we observe "the glove" (Synes. *Epist.* 58); but its construction or material is not described.

Handcuffs were called *manicae*. (Virg. *Georg.* iv. 439, *Aen.* ii. 146; Plaut. *Asin.* ii. 2. 38, *Capt.* iii. 5. 1, *Mos.* v. 1. 17; Non. Marcellus, s. v. *Manicae*.) [J. Y.]

MANI'PULUS; MANIPULA'RES; MANIPULA'RIL. [EXERCITUS, p. 500, b.]

MA'NSIO (σταθμός), a post-station at the end of a day's journey. The great roads, which were constructed first by the kings of Persia and afterwards by the Romans, were provided, at intervals corresponding to the length of a day's journey, with establishments of the same kind with the khans or caravanseras which are still found in the East. There were 111 such stations on the road from Sardes to Susa (Herod. v. 52, 53, vi. 118), their average distance from one another being something less than 20 English miles. The khan, erected at the station for the accommodation of travellers, is called by Herodotus κατάνυκτις and καταγυγί. To stop for the night was καταλύειν. (Xen. *Anab.* i. 8; Aelian, *V. H.* i. 32.) As the ancient roads made by the kings of Persia are still followed to a considerable extent (Heeren, *Ideen*, vol. i. pt. ii. pp. 193—203, 713—720), so also there is reason to believe that the modern khan, which is a square building, enclosing a large open court, surrounded by balconies with a series of doors entering into plain unfurnished apartments, and having a fountain in the centre of the court, has been copied by uninterrupted custom from the Persian καταλύσις, and that, whether on occasion of the arrival of armies or of caravans, they have always served to

afford a shelter during the night both to man and beast.

The Latin term *mansio* is derived from *manere*, signifying to pass the night at a place in travelling. On the great Roman roads the mansiones were at the same distance from one another as on those of the Persian empire. They were originally called *castra*, being probably mere places of encampment formed by making earthen entrenchments. In process of time they included, not only barracks and magazines of provisions (*horrea*) for the troops, but commodious buildings adapted for the reception of travellers of all ranks, and even of the emperor himself, if he should have occasion to visit them. At those stations the *cisarii* kept gigs for hire and for conveying government despatches. [CISIVM; ESSIVM.] The *mansio* was under the superintendence of an officer called *mansionarius*.

Besides the post-stations at the end of each day's journey, there were on the Roman military ways others at convenient intervals, which were used merely to change horses or to take refreshment, and which were called *mutationes* (ἀλλαγαι). There were four or five mutationes to one *mansio*. The *Itinerarium a Burdigala Hierusalem usque*, which is a road-book drawn up about the time of Constantine, mentions in order the mansiones from Bourdeaux to Jerusalem with the intervening *mutationes*, and other more considerable places, which are called either *civitates*, *vici*, or *castella*. The number of leagues (*leugae*) or of miles between one place and another is also set down. [J. Y.]

MANTE'LE (χειρόμακτον, χειρεκμαγεῖον), a napkin. The circumstance, that forks were not invented in ancient times, gave occasion to the use of napkins at meals to wipe the fingers (Xen. *Cyrop.* i. 3. § 51); also when the meal was finished, and even before it commenced, an apparatus was carried round for washing the hands. A basin, called in Latin *lavatorium* (Festus, s. v.), and in Greek χέρνιβ, χέρνιβον, or χερσίνιππον, was held under the hands to receive the water, which was poured upon them out of a ewer (*urocolus*). Thus Homer describes the practice, and according to the account of a recent traveller, it continues unchanged in the countries to which his description referred. (Fellow's *Journal*, 1838, p. 153.) The boy or slave who poured out the water, also held the napkin or towel for wiping the hands dry. The word *mappa*, said to be of Carthaginian origin (Quintil. i. 5. § 57), denoted a smaller kind of napkin, or a handkerchief, which the guests carried with them to table. (Hor. *Sat.* ii. 4. 81, ii. 8. 63.) The *mantele*, as it was larger than the *mappa*, was sometimes used as a table-cloth. (Martial, xii. 29, xiv. 138.)

The napkins thus used at table were commonly made of coarse unbleached linen (ἀμολίνον, Athen. ix. 79). Sometimes, however, they were of fine linen (ἐκτρίμματα λαμπρά σινδωνοφῆ, Philoxenus, *ap. Athen.* ix. 77). Sometimes they were woollen with a soft and even nap (*tonsia mantelia villis*, Virg. *Georg.* iv. 377, *Aen.* i. 702). Those made of Asbestos must have been rare. The Romans in the time of the emperors used linen napkins embroidered or interwoven with gold (Lamprid. *Heliogab.* 27, *Al. Severus*, 37, 40), and the traveller already quoted informs us that this luxury still continues in the East. Napkins were also worn by women as a head-dress, in which case they were of fine materials and gay colours. (Athen. ix.

79.) These were no doubt put on in a variety of elegant ways, resembling those which are in use among the females of Italy, Greece, and Asia Minor, at the present day.

MANTIKE (μαντική.) [DIVINATIO.]

MANU'BIÆ. [SPOLIA.]

MANUM, CONVENTIO IN. [MATRIMONIUM.]

MANUMISSIO was the form by which slaves and persons in Mancipii causa were released from those conditions respectively.

There were three modes of effecting a Justa et Legitima Manumissio, namely, Vindicta, Census, and Testamentum, which are enumerated both by Gaius and Ulpian (*Frag.* i.) as existing in their time. (Compare Cic. *Top.* 2, and Plautus, *Cas.* ii. 8. 68.) Of these the Manumissio by Vindicta is probably the oldest, and perhaps was once the only mode of manumission. It is mentioned by Livy as in use at an early period (ii. 5), and indeed he states that some persons refer the origin of the Vindicta to the event there related, and derive its name from Vindicus; the latter part, at least, of the supposition is of no value.

The ceremony of the Manumissio by the Vindicta was as follows:—The master brought his slave before the magistratus, and stated the grounds (*causa*) of the intended manumission. The lictor of the magistratus laid a rod (*festuca*) on the head of the slave, accompanied with certain formal words, in which he declared that he was a free man ex Jure Quiritium, that is, "vindicavit in libertatem." The master in the meantime held the slave, and after he had pronounced the words "hunc hominem liberum volo," he turned him round (*momento turbinis erit Marcus Dama*, Persius, *Sat.* v. 78) and let him go (*emitit e manu*, or *misit manu*, Plaut. *Capt.* ii. 3. 48), whence the general name of the act of manumission. The magistratus then declared him to be free, in reference to which Cicero (*ad Att.* vii. 2) seems to use the word "addicere." The word Vindicta itself, which is properly the *res vindicata*, is used for *festuca* by Horace (*Sat.* ii. 7. 76). Plautus (*Mil. Glor.* iv. 1. 15) uses *festuca*.

It seems highly probable that this form of Manumissio was framed after the analogy of the In jure vindicatione (Gaius, iv. 16); and that the lictor in the case of manumission represented the opposite claimant in the vindicatio. (Unterholzner, *Von den Formen der Manumissio per Vindictam und Emancipatio*, *Zeitschrift*, vol. ii. p. 139.)

As for the explanation of the word Vindicta see VINDICIÆ and VINDICATIO.

The Manumissio by the Census is thus briefly described by Ulpian: "Slaves were formerly manumitted by census, when at the lustral census (*lustralis census*) at Rome they gave in their census (some read *nomen* instead of *census*) at the bidding of their masters." Persons in Mancipio might also obtain their manumission in this way. (Gaius, i. 140.) The slave must of course have had a sufficient Peculium, or the master must have given him property.

In the absence of decisive testimony as to the origin of these two modes of manumissio, modern writers indulge themselves in a variety of conjectures. It may be true that originally the manumission by Vindicta only gave libertas and not civitas; but this opinion is not probable. It may easily be allowed that in the earliest period the

civitas could only be conferred by the sovereign power, and that therefore there could be no effectual manumission except by the same power. But the form of the Vindicta itself supposes, not that the person manumitted was a slave, but that he was a free person, against whose freedom his master made a claim. The proceeding before the magistratus was in form an assertion of the slave's freedom (*manu asserere liberali causa*, Plaut. *Poen.* iv. 2. 83, &c.), to which the owner made no defence, but he let him go as a free man. The proceeding then resembles the In Jure Cessio, and was in fact a fictitious suit in which freedom (*libertas*) was the matter in issue. It followed as a consequence of the fiction, that when the magistratus pronounced in favour of freedom Ex jure Quiritium, there could be no dispute about the Civitas.

In the case of the Census the slave was registered as a citizen with his master's consent. The assumption that the Vindicta must have originally preceded the Census, for which there is no evidence at all, is inconsistent with the nature of the proceeding, which was a registration of the slave, with his master's consent, as a citizen. A question might arise whether he should be considered free immediately on being entered on the censor's roll, or not until the lustrum was celebrated (Cic. *de Or.* i. 40); and this was a matter of some importance, for his acquisitions were only his own from the time when he became a free man.

The law of the Twelve Tables confirmed freedom which was given by will (*testamentum*). Freedom (*libertas*) might be given either *directo*, that is, as a legacy, or by way of fideicommissum. The slave who was made free *directo*, was called *orcinus libertus* (or *horcinus*, as in Ulp. *Frag.*), for the same reason perhaps that certain senators were called *Orcini*. (Sueton. *Octav.* 35.) He who received his libertas by way of fideicommissum, was not the *libertus* of the testator, but of the person who was requested to manumit him (*manumissor*): if the heres, who was requested to manumit, refused, he might be compelled to manumit on application being made to the proper authority. Libertas might be given by fideicommissum to a slave of the testator, of his heres, or of his legatee, and also to the slave of any other person (*extraneus*). In case of libertas being thus given to the slave of any other person, the gift of libertas was extinguished, if the owner would not sell the slave at a fair price. A slave who was made conditionally free by testament, was called *Statu liber*, and he was the slave of the heres until the condition was fulfilled. If a *Statu liber* was sold by the heres, or if the ownership of him was acquired by usucapion, he had still the benefit of the condition: this provision was contained in the Law of the Twelve Tables. If a slave was made free and heres by the testator's will, on the death of the testator he became both free and heres, whether he wished it or not. (Gaius, ii. 153; Ulp. *Frag.* xxi. 11.) [HERES.]

A manumission by adoption is spoken of, but nothing is known of it. (Gell. v. 19; Inst. i. tit. 11. s. 12.)

The Lex Aelia Sentia laid various restrictions on manumission [LEX AELIA SENTIA], particularly as to slaves under thirty years of age. The ceremony of manumitting slaves above thirty years of age had become very simple in the time of Gaius (i. 20): it

might be in the public road (*in fronsitu*), as when the praetor or proconsul was going to the bath or the theatre. It was not the place which determined the validity of such an act, but it was the circumstance of its being done before a competent authority.

The Lex Furia or Fusia Caninia fixed limits to the number of slaves who could be manumitted by will. The number allowed was a half, one third, one fourth, and one fifth of the whole number that the testator possessed, according to a scale fixed by the lex. As its provisions only applied to cases where a man had more than two slaves, the owner of one slave or of two slaves was not affected by this lex. It also provided that the slaves to whom freedom was given, should be named. This lex only applied to manumission by testament. It was passed about A. D. 7, and several *senatusconsulta* were made to prevent evasions of it. (Sueton. *Octav.* 40; Gaius, i. 42—46.) This lex was repealed by Justinian. (Cod. 5. tit. 5. *De lege Fus. Cas. tollenda.*)

A form of manumission "*inter amicos*" is alluded to by Gaius. This was in fact no legal manumission, but it was a mere expression of the master's wish, which would have been sufficient in the absence of all positive law. This might be done by inviting the slave to table, writing him a letter, or in any other less formal way. It is stated that originally such a gift of freedom could be recalled, as to which there can be no doubt, as it was not legal freedom; but ultimately the praetor took persons who had been made free in this manner under his protection, and the Lex Junia Norbana gave them the status called *Latinitas*. [LEX JUNIA NORBANA; LATINI.]

A *Manumissio sacrorum causa* is sometimes mentioned as a kind of manumission, whereas the words *Sacrorum causa* point rather to the grounds of the manumission: the form might be the usual form. (Festus, s. v. *Manumitti*, Puri; Savigny, *Zeitschrift*, vol. iii. p. 402.)

Besides the due observance of the legal forms, it was necessary in order to effect a complete manumission that the manumissor should have the Quiritarian ownership of the slave. If the slave was merely *In bonis*, he only became a *Latinus* by manumission. A woman in *tutela*, and a *pupillus* or *pupilla* could not manumit. If several persons were joint owners (*socii*) of a slave, and one of them manumitted the slave in such form as would have effected complete manumission, if the slave had been the sole property of the manumissor, such manumissor lost his share in the slave which accrued to the other joint owner or joint owners. Justinian enacted that if only one joint owner was willing to manumit a slave, the others might be compelled to manumit on receiving the price fixed by law for their shares. If one person had the usufructus and another the property of a slave, and the slave was manumitted by him who had the property, he did not become free till the usufructus had expired: in the meantime, however, he had no legal owner (*dominus*).

The act of manumission established the relation of Patronus and Libertus between the manumissor and the manumitted. [LIBERTUS.] When manumitted by a citizen, the Libertus took the praenomen and the gentile name of the manumissor, and became in a sense a member of the Gens of his patron. To these two names he added some other

name as a cognomen, either some name by which he was previously known, or some name assumed on the occasion: thus we find the names L. Cornelius Chrysoگونus, M. Tullius Tiro, P. Terentius Afer, and other like names. If he was manumitted by the state as a *Servus publicus*, he received the civitas and a praenomen and gentile name, or he took that of the magistratus before whom he was manumitted. The slave also assumed the toga or dress of a Roman citizen, shaved his head and put on a *pileus*: this last circumstance explains the expression "*servos ad pileum vocare*" (Liv. xxiv. 32), which means to invite the slaves to join in some civil disturbance by promising them liberty. The relation between a Patronus and Libertus is stated under PATRONUS.

At the time when Gaius wrote, the peculiar rights of Roman citizens were of less importance than they had been under the republic. He states that all slaves who were manumitted in the proper form and under the proper legal conditions, became complete Roman citizens. But this could not have been so in the earliest ages. The liberti of the plebeians, for instance, before their masters obtained the honores, could not be in a better condition than those who manumitted them, and their masters had not then the complete civitas. The want of ingenuitas also affected their status; but this continued to be the case even under the empire. [INGENUUS]

According to Dionysius (iv. 22), Servius Tullius placed the libertini in the four Urbanae Tribus. In A. C. 311, the censor Appius Claudius gave the libertini a place in all the tribes. (Plut. *Poplicol.* 7; Liv. ix. 46; Diod. xx. 36.) In the year A. C. 304, they were again placed in the four tribus urbanae (Liv. ix. 46); but it seems that the libertini did not keep to their tribus, for in A. C. 220 they were again placed in the four urbanae tribus. (Liv. *Epit.* xx.) In the censorship of Tiberius Gracchus, A. C. 169, they were placed in one of the tribus urbanae determined by lot (Liv. xlv. 15; compare Dionys. iv. 22), or as Cicero (*de Or.* i. 9) expresses it, the father of Tiberius and Caius Sempronius transferred the libertini (*utis atque verbo*) into the tribus urbanae. Subsequently by a law of Aemilius Scaurus, about A. C. 116, they were restored to the four city tribes, and this remained their condition to the end of the republic, though various attempts were made to give them a better suffrage. As to the attempt of the tribune, C. Manilius A. C. 58, to give the libertini votes in all the tribes, see Dion Cassius (xxxvi. 25), and the note of Reimar. As to the distribution of the libertini in the tribus, see Becker, *Handbuch der Röm. Alterthümer*.

A tax was levied on manumission by a Lex Manlia, A. C. 357: it consisted of the twentieth part of the value of the slave, hence called *Vicesima*. (Liv. vii. 16, xxvii. 10; Cic. *ad Att.* ii. 16.)

As to Manumissio, see Becker, *Handbuch der Röm. Alterthümer*, 2te Th. late Abth.; Dig. 40. tit. 1. *De Manumissionibus*. [G. L.]

MANUS. [AES MANUARIUM.]

MANUS FERREA. [HARPAZO.]

MANUS INJECTIO is one of the five modi or forms of the *Legis Actio* according to Gaius (iv. 12). It was in effect in some cases a kind of execution. The *judicati manus injectio* was given by the Twelve Tables. The plaintiff (*actor*) laid hold of the defendant, using the formal words "*Quod tu mihi judicatus sive damnatus es seester-*

tium x milia quae dolo malo non solviati ob eam rem ego tibi sestertium x milia iudicati manus injicio." The defendant who had been condemned in a certain sum, had thirty days allowed him to make payment in, and after that time he was liable to the manus injectio. The defendant was not permitted to make any resistance, and his only mode of defence was to find some responsible person (*vindex*) who would undertake his defence (*pro eo lege agere*). If he found no *vindex*, the plaintiff might carry the defendant to his house and keep him in confinement for sixty days, during which time his name and the amount of his debt were proclaimed at three successive *nundinae*. If no one paid the debt, the defendant might be put to death or sold. (Gell. *xx. 1.*) According to the words of the Twelve Tables, the person must be brought before the Praetor (*in jus*), which of course means that he must be seized first: if when brought before the praetor, he did not pay the money (*si iudicatum solvi*) or find a *vindex*, he might be carried off and put in chains, apparently without the formality of an *addictio*. The Lex Publilia, evidently following the analogy of the Twelve Tables, allowed the manus injectio in the case of money paid by a sponsor, if the sponsor was not repaid in six months. The Lex Furia de Sponsu allowed it against him who had exacted from a sponsor more than his just proportion (*virilis pars*). These and other leges allowed the manus injectio *pro iudicato*, because in these cases the claim of the plaintiff was equivalent to a claim of a res iudicata. Other leges granted the manus injectio pura, that is, non *pro iudicato*, as the Lex Furia Testamentaria and the Marcia adversus feneratores. But in these cases the defendant might withdraw himself from the manus injectio (*manum sibi depellere*), and defend his cause; but it would appear that he could only relieve himself from this seizure, by actually undertaking to defend himself by legal means. Accordingly, if we follow the analogy of the old law, it was in these cases an execution if the defendant chose to let it be so; if he did not, it was the same as serving him with process to appear before the Praetor. A lex, the name of which is obliterated in Gaius, allowed the person seized to defend his own cause except in the case of a "judicatus," and "is pro quo depensus est;" and consequently in the two latter cases even after the passing of this lex, a man was bound to find a *vindex*. This continued the practice so long as the Legis Actiones were in use; "whence," says Gaius (*iv. 25*), "in our time a man 'cum quo iudicati depensive agitur' is compelled to give security 'iudicatum solvi.'" From this we may conclude that the *vindex* in the old time was liable to pay, if he could find no good defence to the plaintiff's claim; for as the *vindex* could "lege agere," though the defendant could not, we must assume that he might show, if he could, that the plaintiff had no ground of complaint; as, for instance, that he had been paid; and that if he had no good defence, he must pay the debt himself. The subject of the manus injectio is discussed by Puchta, *Inst. ii. § 160, 162, 179, iii. § 269*.

[G. L.]
MAPPA. [MANTELE.]

MARIS (μάρις, μέρη, Hesych. *μάριστον*), a Greek measure of capacity, which, according to Pollux (*x. 184*) and Aristotle (*Hist. An. viii. 9*), contained 6 cotylae, or nearly 3 pints. Polyasius

(*iv. § 32*) mentions a much larger measure of the same name, containing 10 congii, or nearly 8 gallons. [P. S.]

MARSUPIUM (μαρσῦπιον, βαλδντιον), a purse. (Non. Marcellus, *s. v.*; Varro, *de Re Rust. iii. 17*; Plaut. *Men. ii. 1. 29, ii. 3. 33, 35, v. 7. 47, Poes. iii. 5. 37, Rud. v. 2. 26*; Xen. *Conviv. iv. 2.*)

The purse used by the ancients was commonly a small leathern bag, and was often closed by being drawn together at the mouth (σύνσπαστα βαλδντια, Plat. *Conviv. p. 404, ed. Bekker*). Mercury is commonly represented holding one in his hand, of which the annexed woodcut from an intaglio in the Stosch collection at Berlin, presents an example.

[J. Y.]

MA'RTIA LE'GIO. [EXERCITUS, p. 492, b.]

MARTIA' LIS FLAMEN. [FLAMEN.]

MARTIA' LES LUDI. [LUDI MARTIALES.]

MARTY'RIA (μαρτυρία), signifies strictly the deposition of a witness in a court of justice, though the word is applied metaphorically to all kinds of testimony. We shall here explain—1, what persons were competent to be witnesses at Athens; 2, what was the nature of their obligation; 3, in what manner their evidence was given; 4, what was the punishment for giving false evidence.

None but freemen could be witnesses. The incapacity of women may be inferred from the general policy of the Athenian law, and the absence of any example in the orators where a woman's evidence is produced. The same observation applies to minors.

Slaves were not allowed to give evidence, unless upon examination by torture (βάσανος). There appears to have been one exception to this rule, viz., that a slave might be a witness against a freeman in case of a charge of murder (Antiph. *de Mortis Her. 728*), though Platner (*Att. Proc. p. 215*) thinks this only applied to the giving information. The party who wished to obtain the evidence of a slave belonging to his opponent challenged him to give up the slave to be examined (λέγει τον δοῦλον). The challenge was called πρόκλησις. The owner, if he gave him up, was said ἐκδοῦναι or παραδοῦναι. But he was not obliged so to do, and the general practice was to refuse to give up slaves, which perhaps arose from humanity, though the opponent always ascribed it to a fear lest the truth should be elicited. The orators affected to consider the evidence of slaves, wrung from them by torture, more valuable and trustworthy than that of freemen; but it must be observed, they always use this argument when the slave had not been examined. (Demosth. *c. Aphob. 848, c. Onet. 874*; Hudtwalcker, *Ueber die Dialekten*, p. 44, &c.)

Citizens who had been disfranchised (ἀτιμωμένοι) could not appear as witnesses (any more than as jurors or plaintiffs) in a court of justice; for they had lost all honourable rights and privileges. (Demosth. *c. Neaer. 1353*; Wachsmuth, vol. ii. pt. i. p. 244.) But there was no objection to alien freemen. (Demosth. *c. Lacr. 927, 929*; Aeschin. *de Fals. Leg. 49, ed. Steph.*) We learn from Harpocration (*s. v. Διαμαρτυρία*) that in actions against freemen for neglect of duty to their

patrons (*ἀποσταίου δικαί*) foreigners were not allowed to put in an affidavit, that the action was not maintainable (*μὴ εἰσαγόμενον εἶναι*). But this can hardly be considered an exception, for such affidavits gave an undue advantage to the party for whom they were made.

Neither of the parties to a cause was competent to give evidence for himself, though each was compelled to answer the questions put by the other. The law declared *τοὺν ἀντιδικούντων ἐπ' ἀνάγκης εἶναι ἀποκρίνασθαι ἀλλήλοις τὸ ἐρωτώμενον, μαρτυρεῖν δὲ μὴ*. (Demosth. c. *Steph.* 1131.) That the friends of the party, who pleaded for him (called *συνήγοροι*), were not incompetent to give evidence, appears from the fragment of *Isaeus*, *pro Euphila*, and also from *Aeschines*, who, on his trial for misconduct in the embassy, calls Phocion to assist him both as a witness and an advocate. (*De Fals. Leg.* pp. 51, 53, ed. Steph.)

The obligation to attend as a witness, both in civil and criminal proceedings, and to give such evidence as he is able to give, arises out of the duty which every man owes to the state; and there is no reason to believe that any persons (except the parties themselves) were exempted from this obligation. The passages which Platner (*Att. Proc.* p. 217) and Schömann (*Att. Proc.* p. 671) cite in support of the contrary view, prove nothing more than that the near relations of a party were *reluctant* to give evidence against him; whereas the fact that they were bound by law to give evidence may be inferred from Demosthenes (c. *Aphob.* 849, 850, 855).

The party who desired the evidence of a witness, summoned him to attend for that purpose. The summons was called *πρόσκλησις*. (Demosth. c. *Timoth.* 1194.) If the witness promised to attend and failed to do so, he was liable to an action called *δίκη λεπτομαρτυρίου*. Whether he promised or not, he was bound to attend, and if his absence caused injury to the party, he was liable to an action (*δίκη βλάβης*). This is the probable distinction between these forms of action, as to which there has been much doubt. (Meier and Schömann, *Att. Proc.* p. 387; Platner, *Att. Proc.* p. 221.)

The attendance of the witness was first required at the *ἀνέκρισις*, where he was to make his deposition before the superintending magistrate (*ἡγεμὸν δικαστηρίου*). The party in whose favour he appeared, generally wrote the deposition at home upon a whitened board or tablet (*λευκωμένον γραμματεῖον*), which he brought with him to the magistrate's office, and, when the witness had deposited thereto, put into the box (*ἐχίτρος*) in which all the documents in the cause were deposited. If the deposition were not prepared beforehand, as must always have been the case when the party was not exactly aware what evidence would be given, or when any thing took place before the magistrate which could not be foreseen, as for instance a challenge, or question and answer by the parties; in such a case it was usual to write down the evidence upon a waxen tablet. The difference between these methods was much the same as between writing with a pen on paper, and with a pencil on a slate; the latter could easily be rubbed out and written over again if necessary. (Demosth. c. *Steph.* 1132.) If the witness did not attend, his evidence was nevertheless put into the box, that is, such evidence as the party intended him

to give, or thought he might give, at the trial. For all testimonial evidence was required to be in writing, in order that there might be no mistake about the terms, and the witness might leave no subterfuge for himself when convicted of falsehood. (Demosth. c. *Steph.* 1115, 1130.) The *ἀνέκρισις* might last several days, and, so long as it lasted, fresh evidence might be brought, but none could be brought after the last day, when the box was sealed by the magistrate, and kept so by him till the day of trial. (Demosth. c. *Aphob.* 836, c. *Boeot. de Nom.* 999, c. *Emerg. et Mnec.* 1143, c. *Conon.* 1265.)

The form of a deposition was simple. The following example is from Demosthenes (c. *Laer.* 927):—"Archenomides son of Archedamas of Anagyrus testifies, that articles of agreement were deposited with him by Androcles of Sphettus, Nausicrates of Carystus, Artemon and Apollodorus both of Phaselus, and that the agreement is still in his hands." Here we must observe that whenever a document was put in evidence at the trial, as an agreement, a will, the evidence of a slave, a challenge, or an answer given by either party at the *ἀνέκρισις*, it was certified by a witness, whose deposition was at the same time produced and read. (Demosth. *pro Phorm.* 946, 949, 957, c. *Phaeacipp.* 1046, c. *Steph.* 1120.)

The witness, whether he had attended before the magistrate or not, was obliged to be present at the trial, in order to confirm his testimony. The only exception was, when he was ill or out of the country, in which case a commission might be sent to examine him. [ECMARTYRIA.] All evidence was produced by the party during his own speech, the *κλεισθῆρα* being stopped for that purpose. (*Isaeus*, *de Pyrr. her.* 39, ed. Steph.; Demosth. c. *Eubul.* 1305.) The witness was called by an officer of the court, and mounted on the raised platform (*βῆμα*) of the speaker, while his deposition was read over to him by the clerk; he then signified his assent, either by express words, or bowing his head in silence. (*Lys.* *de Erato.* *Mort.* 94, ed. Steph.; *Aesch.* *de Fala.* *Leg.* 49, ed. Steph.; Demosth. c. *Mid.* 560, c. *Phorm.* 913, c. *Steph.* 1109, c. *Eubul.* 1305.) In the editions that we have of the orators we see sometimes *Μαρτυρία* written (when evidence is produced) and sometimes *Μάρτυρες*. The student must not be deceived by this, and suppose that sometimes the deposition only was read, sometimes the witnesses themselves were present. The old editors merely followed the language of the orators, who said "call the witnesses," or "mount up witnesses," or "the clerk shall read you the evidence" or something to the same effect, varying the expression according to their fancy. (See *Lys.* *pro Mantich.* 147, ed. Steph.; *Isaeus*, *de Pyrr. her.* 45, ed. Steph.; Demosth. c. *Callipp.* 1256, c. *Neaer.* 1352.)

If the witness was hostile, he was required either to depose to the statement read over to him, or to take an oath that he knew nothing about it (*μαρτυρεῖν ἢ ἐξομνεῖν*). One or the other he was compelled to do, or if he refused, he was sentenced to pay a fine of a thousand drachms to the state, which sentence was immediately proclaimed by the officer of the court, who was commanded *κλητεύειν* or *ἐκκλητεύειν αὐτόν*, i. e. to give him notice that he was in contempt and had incurred the fine. (Demosth. c. *Aphob.* 850, c. *Neaer.* 1373,

c. *Theocr.* 1324; Aesch. c. *Timarch.* 10, ed. Steph.; Isæus, de *Astyph.* her. 76, ed. Steph., c. *Loocr.* 150, ed. Steph.; Meier and Schömann, *Att. Proc.* p. 672; Platn. *Att. Proc.* p. 219.)

An oath was usually taken by the witness at the *ἀνδρείσις*, where he was sworn by the opposite party at an altar (*πρὸς τὸν βωμὸν ἐξωρισθῆναι*). If he had not attended at the *ἀνδρείσις*, he might be sworn afterwards in court; as was always the case when a witness took the oath of denial (*ἐξώμοσε*). In the passage just cited from Lycurgus, the expression *λαβόντας τὰ ἑρὰ* means nothing more than touching the altar or its appurtenances, and has no reference to victims. (Valckenaer, *Opusc. Philol.* vol. i. pp. 37—39.) Whether the witness was always bound to take an oath, is a doubtful point. (See Demosth. c. *Coron.* 1265, c. *Steph.* 1119, c. *Eubul.* 1305; Aesch. de *Fals. Leg.* 49, ed. Steph.; Schömann, *Att. Proc.* p. 675.)

The oath of the witness (the ordinary νόμιμος ὅρκος) must not be confounded with the oath taken by one of the parties, or by some friend or other person out of court, with a view to decide the cause or some particular point in dispute. This was taken by the consent of the adversary, upon a challenge given and accepted; it was an oath of a more solemn kind, sworn by (or upon the heads of) the children of the party swearing (*κατὰ τῶν παίδων*), or by perfect or full-grown victims (*κατ' ἑρῶν τελείων*), and often with curses upon himself or his family (*κατ' ἐξωλείας*), and sometimes was accompanied with peculiar rites, such as passing through fire (*διὰ τοῦ πυρός*). The mother, or other female relation of the party (who could not be a witness) was at liberty to take this oath. (Demosth. c. *Aphob.* 852, c. *Boeot. de Dote*, 1011, c. *Timoth.* 1203, c. *Callipp.* 1240, c. *Conon.* 1269, c. *Næser.* 1365; Wachsmuth, vol. ii. pt. i. p. 335; Hudtwalcker, pp. 52—57.)

On some extraordinary occasions we find that freemen were put to the torture by a special decree of the people or the senate; as on the occasion of the mutilated Hermes busts (Thirlwall, *Hist. of Greece*, c. 25. p. 393); and they were less scrupulous about aliens than about citizens; but (as a general rule) it is certain that freemen could not be tortured in courts of justice, and even an emancipated slave, Demosthenes says it would be an act of impiety (*οὐδ' ὅσιον*) to give up for such a purpose. (Demosth. c. *Aphob.* 856, c. *Timoth.* 1200; Meier, *Att. Proc.* p. 684.)

With respect to hearsay evidence see ΕΣΜΑΡΤΥΡΙΑ: and with respect to the affidavit called *διαμαρτυρία*, see ΗΕΒΕΑ, p. 597, a.

We have hitherto spoken only of causes which came before the dicasts in the ordinary way, and have said nothing of those which were decided by the public arbitrators. The above remarks, however, will equally apply to the latter, if the reader will bear in mind that the arbitrator performed the duties of the magistrate at the *ἀνδρείσις* as well as those of the *δικασταὶ* at the trial. He heard the witnesses and received the depositions from day to day, as long as he sat, and kept the *ἐχίρος* open until the last day (*κυρίαν ἡμέραν*). (See Demosth. c. *Mid.* 541, c. *Timoth.* 1199; Meier and Schömann, *Att. Proc.* p. 676.)

If the witness in a cause gave false evidence, the injured party was at liberty to bring an action against him (*δίκη ψευδομαρτυρίων*) to recover compensation. The proceeding was sometimes called

ἐπισκεψίς, and the plaintiff was said *ἐπισκεψάμενος τῇ μαρτυρίᾳ* or *τῇ μάστιγι* (Isæus, de *Pyrr.* her. 39, de *Dicaeog.* her. 52, ed. Steph.; Demosth. c. *Aphob.* 846, 856; Harpocr. s. v. *Ἐπισκεψάμενος*). This cause was probably tried before the same presiding magistrate as the one in which the evidence was given. (Meier, *Att. Proc.* p. 45.) The form of the plaintiff's bill, and of the defendant's plea in denial, will be found in Demosthenes (c. *Steph.* 1115). From the same passage we also learn that the action for false testimony was a *τιμητὸς ἀγὼν*, in which the plaintiff laid his own damages in the bill; and from Demosthenes (c. *Aphob.* 849, 859), it appears that the dicasts had power not only to give damages to the plaintiff, but also to inflict the penalty of *ἀτιμία* by a *προστίμιση*. (See also Isæus, de *Dicaeog.* her. 52.) A witness who had been a third time convicted of giving false testimony was *ipso jure* disfranchised. (Meier, *Att. Proc.* p. 883.) The main question to be tried in the cause against the witness was, whether his evidence was true or false; but another question commonly raised was, whether his evidence was material to the decision of the previous cause. (Demosth. c. *Euryg.* et *Mnes.* 1139, 1161, c. *Aphob.* 853—856, c. *Steph.* 1117; Platner, *Att. Proc.* vol. i. p. 400, &c.)

When a witness, by giving false evidence against a man upon a criminal trial, had procured his conviction, and the convict was sentenced to such a punishment (for instance, death or banishment) as rendered it impossible for him to bring an action, any other person was allowed to institute a public prosecution against the witness, either by a *γραφὴ*, or perhaps by an *εἰσαγγελία* or *προβολή*. (Andoc. de *Myst.* 4; Platner, *Att. Proc.* p. 411; Meier, *Att. Proc.* p. 382.)

After the conviction of the witness, an action might be maintained against the party who suborned him to give false evidence, called *δίκη κακοτεχνούν*. (Demosth. c. *Timoth.* 1201, c. *Euryg.* et *Mnes.* 1139.) And it is not improbable that a similar action might be brought against a person, who had procured false evidence to be given of a defendant having been summoned, after the conviction of the witness in a *γραφὴ ψευδοκλητείας*. (Meier, *Att. Proc.* p. 759.)

It appears that in certain cases a man who had lost a cause was enabled to obtain a reversal of the judgment (*δίκη ἀνδίκος*), by convicting a certain number of the adverse witnesses of false testimony. Thus in inheritance causes the law enacted *ἐὰν ἀλλ' τις τῶν ψευδομαρτυρίων, πάλιν ἐξ ἀρχῆς εἶναι περὶ αὐτῶν τὰς λήξεις*. (Isæus, de *Hagn.* her. 88, ed. Steph., de *Dicaeog.* her. 50, 51.) This was the more necessary, on account of the facility afforded to the parties to stop the progress of these causes by affidavits, and also because no money could compensate an Athenian for the loss of an inheritance. The same remedy was given by the law to those who had been convicted in a *δίκη ψευδομαρτυρίων* or in a *γραφὴ ξενίας*. In the last case the convicted person, who proceeded against the witness, was compelled to remain in prison until the determination of his suit. (Demosth. c. *Timocr.* 741.) We are informed that these are the only cases in which a judgment was allowed to be reversed in this way; but whether there were not more cases than these has been justly doubted by Schömann (*Att. Proc.* 761). The Scholiast on Plato (*Leg.* xi. 14) is evidently wrong

in supposing that it was necessary under the Athenian law to convict more than half the number of the witnesses. This appears from the passage above cited from Isaeus on the estate of Hagnias.

We conclude by noticing a few expressions. *Μαρτυρεῖν τι* is to testify in favour of a man, *καταμαρτυρεῖν τινα* to testify against. *Μαρτύρεσθαι* to call to witness (a word used poetically), *διαμαρτύρεσθαι* and sometimes *ἐπιμαρτύρεσθαι*, *τοὺς πάντας*, to call upon those who are present to take notice of what passes, with a view to give evidence. (Demosth. c. *Euryg. et Mnes.* 1150.) *Ψευδομαρτυρεῖν* and *ἐπιμαρτυρεῖν* are never used indifferently, which affords some proof that testimony was not necessarily on oath. The *μάγιστρος* (witness in the cause) is to be distinguished from the *κλητήρ* or *κλητήρ*, who merely gave evidence of the summons to appear. [C. R. K.]

MAST'ERES (μαστήρες). [ΖΕΥΤΕΛΑΙ.]

MASTIG'IA. [FLAGRUM.]

MASTIGOPHORI or MASTIGONOMI (μαστιγοφόροι or μαστιγονόμοι), the name of the lower police officers in the Greek states, who carried into execution the corporal punishments inflicted by the higher magistrates. Thus Lycurgus assigned mastigophori to the Paedonomus at Sparta, who had the general superintendence of the education of the boys. (Xen. *Rep. Lac.* ii. 2, iv. 6; Plut. *Lyc.* 17.) In the theatre the mastigophori preserved order, and were stationed for this purpose in the orchestra, near the thymele. (Schol. ad *Plat.* p. 99, Ruhnken; Lucian, *Pisc.* 33.) In the Olympic games the *παῖδοὺχοι* performed the same duties. At Athens they were discharged by the public slaves, called bowmen (*τοξόται*), or Scythians (*Σκύθαι*). [DEMOSIL.]

MATARA. [HASTA, p. 589, a.]

MATERFAMILIAS. [MATRIMONIUM.]

MATHEMATICI. [ASTROLOGIA.]

MATRA'LIA, a festival celebrated at Rome every year on the 11th of June, in honour of the goddess Mater Matuta, whose temple stood in the Forum Boarium. It was celebrated only by Roman matrons, and the sacrifices offered to the goddess consisted of cakes baked in pots of earthenware. (Varro, *de Ling. Lat.* iv. p. 31, Bip.; Ovid. *Fast.* vi. 475, &c.) Slaves were not allowed to take part in the solemnities, or to enter the temple of the goddess. One slave, however, was admitted by the matrons, but only to be exposed to a humiliating treatment, for one of the matrons gave her a blow on the cheek and then sent her away from the temple. The matrons on this occasion took with them the children of their sisters, but not their own, held them in their arms, and prayed for their welfare. (Plut. *Camil.* 5, *Quaest. Rom.* p. 267.) The statue of the goddess was then crowned with a garland, by one of the matrons who had not yet lost a husband. (Tertull. *Monogam.* c. 17.) The Greek writers and their Roman followers, who identify the Mater Matuta with Leucothea or Ino, explain the ceremonies of the Matralia by means of the mythological stories which relate to these Greek goddesses. But the real import of the worship of the Mater Matuta appears to have been to inculcate upon mothers the principle, that they ought to take care of the children of their sisters as much as of their own, and that they should not leave them to careless slaves, the contempt for whom was symbolically expressed by the infliction of a blow on the cheek of the one

admitted into the temple. (Compare Hartung, *Die Relig. der Römer*, vol. ii. p. 75.) [L. S.]

MATRIMONIUM, NUPTIAE (γάμος), marriage. 1. GREEK. The ancient Greek legislators considered the relation of marriage as a matter not merely of private, but also of public or general interest. This was particularly the case at Sparta, where the subordination of private interests and happiness to the real or supposed exigencies of the state was strongly exemplified in the regulations on this subject. For instance, by the laws of Lycurgus, criminal proceedings might be taken against those who married too late (*γραφὴ ὀψιγαμίου*) or unsuitably (*γραφὴ κακογαμίου*), as well as against those who did not marry at all (*γραφὴ ἀγαμίου*). (Pollux, viii. 40; Plut. *Lycurg.* 15.) These regulations were founded on the generally recognised principle, that it was the duty of every citizen to raise up a strong and healthy progeny of legitimate children to the state. (Müller, *Dorians*, iv. 4. § 3.) So entirely, in fact, did the Spartans consider the *τεκνοποία*, or the production of children, as the main object of marriage, and an object which the state was bound to promote, that whenever a woman had no children by her own husband, she was not only allowed, but even required by the laws, to cohabit with another man. (Xen. *de Rep. Lac.* i. 8.) On the same principle, and for the purpose of preventing the extinction of his family, the Spartan king, Anaxandrides, was allowed to cohabit with two wives, for whom he kept two separate establishments: a case of bigamy, which, as Herodotus (vi. 39, 40) observes, was not at all consistent with Spartan nor indeed with Hellenic customs. Thus the heroes of Homer appear never to have had more than one *κουρίδι* ἄλοχος (Buttmann, *Leviathan*, 73); though they are frequently represented as living in concubinage with one or more *παλλακαί*. Solon also seems to have viewed marriage as a matter in which the state had a right to interfere, for we are told that his laws allowed of a *γραφὴ ἀγαμίου*, though the regulation seems to have grown obsolete in later times; at any rate there is no instance on record of its application. (Platner, *Process*, &c. vol. ii. p. 248.) Plato too may be quoted to prove how general was this feeling, for according to his laws (*Leg.* iv. p. 721), any one who did not marry before he was thirty-five was punishable not only with *ἀτιμία*, but also with pecuniary penalties: and he expressly states that in choosing a wife every one ought to consult the interests of the state, and not his own pleasure. (*Leg.* vi. p. 773.)

But independent of any public considerations there were also private or personal reasons (peculiar to the ancients) which made marriage an obligation. Plato (*L. c.*) mentions one of these, viz. the duty incumbent upon every individual to provide for a continuance of representatives to succeed himself as ministers of the Divinity (*τῷ Θεῷ ὑπηρέτας ἀπὸ αὐτοῦ παραδιδόναι*). Another was the desire felt by almost every one, not merely to perpetuate his own name, but also to prevent his "heritage being desolate, and his name being cut off" (*ὅπως μὴ ἐξηρημώσῃ τοὺς σφετέρων αὐτῶν οἴκους*), and to leave some one who might make the customary offerings at his grave (*ἀλλ' ἔσται τις καὶ ὁ ἐνταῦθα, Isaeus de Apoll. Herod.* p. 66, Bek.). We are told that with this view childless persons sometimes adopted children.

The choice of a wife among the ancients was but rarely grounded upon affection, and scarcely ever could have been the result of previous acquaintance or familiarity. In many cases a father chose for his son a bride whom the latter had never seen, or compelled him to marry for the sake of checking his extravagances. Terence (*Andria*, i. 5) thus illustrates the practice:—

“Pater praeteriens modo
Mihi apud forum, uxor tibi ducenda est, Pamphile,
hodie inquit: para.”

In Plautus (*Trinumm.* v. 2. 59) a son promises his father that he will marry in these words:—

“Ego ducam, pater: etiam si quam aliam jubebis.”

Representations of this sort may indeed be considered as exaggerations, but there must have been scenes in real life to which they in some measure correspond. Nor was the consent of a female to a match proposed for her generally thought necessary: she was obliged to submit to the wishes of her parents, and receive from them, it might be a stranger for her husband and lord. Sophocles thus describes the lot of women in this respect:—
“When we are grown up (he makes a female say) we are driven away from our parents and paternal gods.”

καὶ ταῦτ', ἐπειδὴν εὐφροσύνη ζεῦξέρ μιν,
χρεὼν ἔπαινεῖν, καὶ δοκεῖν καλὰς ἔχειν.

Frag. Terent.

So also in Euripides (*Androm.* 951) Hermione declares that it is her father's business to provide a husband for her. The result of marriages contracted in this manner would naturally be a want of confidence and mutual understanding between husband and wife, until they became better acquainted with, and accustomed to, each other. Xenophon (*Oecom.* 7. §10.) illustrates this with much naïveté in the person of Ischomachus, who says of his newly married wife:—“When at last she was manageable (*χειροθήνη*), and getting tame so that I could talk with her, I asked her,” &c., &c. By the Athenian laws a citizen was not allowed to marry with a foreign woman, nor conversely, under very severe penalties (Demosth. *c. Neaer.* p. 1350); but proximity by blood (*ἀγχιστεία*), or consanguinity (*συγγένεια*), was not, with some few exceptions, a bar to marriage in any part of Greece; direct lineal descent was. (Isaens, *de Orom. her.* p. 72.) Thus brothers were permitted to marry with sisters even, if not *δμομήτριοι*, or born from the same mother, as Cimon did with Elpinice, though a connection of this sort appears to have been looked on with abhorrence. (Becker, *Charities*, vol. ii. p. 448.) In the earlier periods of society, indeed, we can easily conceive that a spirit of caste or family pride, and other causes such as the difficulties in the way of social intercourse would tend to make marriages frequent amongst near relations and connections. (Compare *Numbers*, c. xxxvi.) At Athens, however, in the case of a father dying intestate, and without male children, his heiress had no choice in marriage; she was compelled by law to marry her nearest kinsman not in the ascending line; and if the heiress were poor (*θῆσσα*) the nearest unmarried kinsman either married her or portioned her suitably to her rank. When there were several coheiresses, they were respectively married to their kinsmen, the nearest having the first choice. [ΕΠΙΓΛΑΦΑ.] The

heiress in fact, together with her inheritance, seems to have belonged to the kinsmen of the family, so that in early times a father could not give his daughter (if an heiress) in marriage without their consent. (Müller, *Dorians*, ii. 10. §4.) But this was not the case according to the later Athenian law (Demosth. *c. Steph.* p. 1134), by which a father was empowered to dispose of his daughter by will or otherwise; just as widows also were disposed of in marriage, by the will of their husbands, who were considered their rightful guardians (*κύριοι*). (Demosth. *c. Apob.* p. 814.)

The same practice of marrying in the family (*οἶκος*), especially in the case of heiresses, prevailed at Sparta; thus Leonidas married the heiress of Cleomenes, as being her *ἀγχιστεῖς*, or next of kin, and Anaxandrides his own sister's daughter. Moreover, if a father had not determined himself concerning his daughter, it was decided by the king's court, who among the privileged persons or members of the same family should marry the heiress. (Herod. vi. 57; Müller, *l. c.*) A striking resemblance to the Athenian law respecting heiresses is also found in the Jewish code, as detailed in *Numbers* (c. xxvii. 1—11), and exemplified in *Ruth* (c. iv.).

But match-making among the ancients was not, in default of any legal regulations, entirely left to the care and forethought of parents, for we read of women who made a profession of it, and who were therefore called *προμηστριαί* or *προμηστορίδες*. (Pollux, iii. 31.) The profession, however, does not seem to have been thought very honourable nor to have been held in repute, as being too nearly connected with, or likely to be prostituted to, *προσγύγεια*. (Plato, *Theat.* 2. p. 150.)

Particular days and seasons of the year were thought auspicious and favourable for marriage amongst the Greeks. Aristotle (*Polit.* vii. 15) speaks of the winter generally as being so considered, and at Athens the month *Γαμηλιών*, partly corresponding to our January, received its name from marriages being frequently celebrated in it. Hesiod (*Oper.* 800) recommends marrying on the fourth day of the month,

Ἐν δὲ τετάρτῃ μηνὸς ἀγεσθαι ἐς οἶκον ἄκοιτιν,
but whether he means the fourth from the beginning or end of the month is doubtful. Euripides (*Iphig. in Aul.* 707) speaks as if the time of the full moon were thought favourable,

ὅταν σελήνης εὐτυχὴς ἔλθῃ κύκλος,

in which he is confirmed by the expression *διχομήνιδες ἑσπεραι*, or the full-moon nights in Pindar. (*Isth.* vii. 45.) That this prepossession, however, was not general and permanent appears from Proclus (*ad Hesiod. Oper.* 782), who informs us that the Athenians selected for marriages the times of new moon (*τὰς πρὸς σύνοδον ἡμέρας*), i. e. when the sun and moon were in conjunction.

There was also some difference of opinion, on which it is not worth while to dilate, about the proper age for marrying; but generally speaking men were expected to marry between 30 and 35, and women about 20 or rather before. (Plato, *Ley.* vi. p. 785.)

We proceed now to explain the usual preliminaries and accompaniments of marriage in various parts of Greece. The most important preliminary

at Athens was the *Engysis* (ἐγγύσις) or betrothal, which was in fact indispensable to the complete validity of a marriage contract. It was made by the natural or legal guardian (ὁ κύριος) of the bride elect, and attended by the relatives of both parties as witnesses. The law of Athens ordained, that all children born from a marriage legally contracted in this respect should be γνήσιοι (Demosth. c. *Steph.* p. 1134), and consequently, if sons, *ισόμοιροι*, or intitled to inherit equally or in gavel-kind. It would seem, therefore, that the issue of a marriage without espousals would lose their heritable rights, which depended on their being born ἐξ ὁσότης καὶ ἐγγυητῆς γυναικός : i. e. from a citizen and a legally betrothed wife. The wife's dowry was also settled at the espousals. (Meier and Schömann, p. 415.)

But there were also several ceremonies observed either on or immediately before the day of marriage. The first of these were the *προτέλεια γάμων* or *προγάμεια* (Pollux, iii. 38), and consisted of sacrifices or offerings made to the θεοὶ γαμήλαιοι or divinities who presided over marriage. They are generally supposed to have been made on the day before the γάμος or marriage; but there is a passage in Euripides (*Iphig. in Aul.* 642) which makes it probable that this was not always the case. The sacrificer was the father of the bride elect; the divinities to whom the offering was made were, according to Pollux (iii. 381), Hera and Artemis, and the Fates, to whom the brides elect then dedicated the ἀπαρχαί of their hair. According to Diodorus Siculus (v. 73) they were Zeus and Hera τελέια (Juno pronuba); but they probably varied in different countries, and were sometimes the θεοὶ ἐγχώριοι or local deities. The offerings to Artemis were probably made with a view of propitiating her, as she was supposed to be averse to marriage. [BRAURONIA.] We may also observe that Pollux uses *προγάμεια* as synonymous with *προτέλεια*, making γάμος identical with τέλεος, as if marriage were the τέλεος or perfection of man's being: whence τέλειος connected with or presiding over marriage or a married person, and δόμος ἡμιτέλης a house without a husband or incomplete. (Hom. *Il.* ii. 701.) Another ceremony of almost general observance on the wedding day, was the bathing of both the bride and bridegroom in water fetched from some particular fountain, whence, as some think, the custom of placing the figure of a λουτροφόρος or "water-carrier" over the tombs of those who died unmarried. [BALNEAE, p. 185, b.] At Athens the water was fetched from the fountain Callirrhoe, at the foot of the Acropolis (Thuc. ii. 15.). After these preliminaries the bride was generally conducted from her father's to the house of the bridegroom at nightfall, in a chariot (ἐφ' ἁμάξης) drawn by a pair of mules or oxen, and furnished with a κλίνη or kind of a couch as a seat. On either side of her sat the bridegroom, and one of his most intimate friends or relations, who from his office was called *παρόνυμφος* or *νυμφευτής*: but as he rode in the carriage (ὄχημα) with the bride and bridegroom, he was sometimes called the *πάροχος* (ὁ ἐκ τρίτου ὁ παροχούμενος πάροχος ἐκλήθη, Harpocr. s. v.). Hence Aristophanes (*Aves*, 1735) speaks of the "blooming Love guiding the supple reins," when Zeus was wedded to Hera, as the *Ζεὺς πάροχος γάμων τῆς τ' εὐδαίμονος Ἥρας*. The nuptial procession was probably accom-

panied, according to circumstances, by a number of persons, some of whom carried the nuptial torches (ὄβες νυμφικαί, Aristoph. *Pax*, 1318); and in some places, as in Boeotia, it was customary to burn the axle of the carriage on its arrival at the bridegroom's house, as a symbol that the bride was to remain at home and not go abroad. (Plut. *Quaest. Rom.* p. 111.) If the bridegroom had been married before, the bride was not conducted to his house by himself, but by one of his friends, who was therefore called *νυμφάγωγός*. (Hesych. s. v.; Pollux, iii. 40.)

Both bride and bridegroom (the former veiled) were of course decked out in their best attire, with chaplets on their heads (Becker, *Charikles*, vol. ii. p. 467), and the doors of their houses were hung with festoons of ivy and bay. (Plut. *Amat.* 10. p. 27.) As the bridal procession moved along, the Hymenaean song was sung to the accompaniment of Lydian flutes, even in olden times, as beautifully described by Homer (*Il.* xviii. 490; Hes. *Scut. Hero.* 273), and the married pair received the greetings and congratulations of those who met them. (Aristoph. *Pax*, 1316.) After entering the bridegroom's house, into which the bride was probably conducted by his mother bearing a lighted torch (Eurip. *Phoen.* v. 311), it was customary to shower sweetmeats upon them (καταχύματα) as emblems of plenty and prosperity. (Schol. ad Aristoph. *Plut.* 768.)

After this came the γάμος or nuptial feast, the *δοῦνὴ γαμικῇ*, which was generally (Becker, *Charikles*, vol. ii. p. 469) given in the house of the bridegroom or his parents; and besides being a festive meeting, served other and more important purposes. There was no public right whether civil or religious connected with the celebration of marriage amongst the ancient Greeks, and therefore no public record of its solemnisation. This deficiency then was supplied by the marriage feast, for the guests were of course competent to prove the fact of a marriage having taken place; and Demosthenes (c. *Onat.* p. 869) says they were invited partly with such views. To this feast, contrary to the usual practice amongst the Greeks, women were invited as well as men; but they seem to have sat at a separate table, with the bride still veiled amongst them. (Lucian, *Conviv.* 8; Athen. xiv. p. 644.) At the conclusion of this feast she was conducted by her husband into the bridal chamber; and a law of Solon (Plut. *Solon*, c. 20) required that on entering it they should eat a quince together, as if to indicate that their conversation ought to be sweet and agreeable. The song called the *Epithalamium* (ἐπιθαλάμιον, sc. μέλος) was then sung before the doors of the bridal chamber, as represented by Theocritus in his 18th Idyl, where, speaking of the marriage of Helen, he says—

Twelve Spartan virgins, the Laconian bloom,
Choir'd before fair Helen's bridal room—
To the same time with cadence true they beat
The rapid round of many twinkling feet,
One measure tript, one song together sung,
Their hymenean all the palace rung.

CHAPMAN.

On which passage the Scholiast remarks that Epithalamia are of two kinds; some sung in the evening, and called *κατακοιμητικὰ*, and others in the morning (*δρῆρια*), and called *διεγερτικὰ*.

The day after the marriage, the first of the

bride's residence in her new abode, was called the *ἐπαύλια*: on which their friends sent the customary presents to the newly married couple. On another day, the *ἀπαύλια*, perhaps the second after marriage, the bridegroom left his house to lodge apart from his wife at his father's-in-law, and the bride presented him with a garment called *ἀπαυλιστήρια*, in connection with which, Pollux (iii. 39) observes, that the gifts made to the bride after the marriage were called *ἀπαύλια*. Some of the presents made to the bride by her husband and friends were called *ἀνακαλυπτήρια*, as being given on the occasion of the bride first appearing unveiled (Harpocr. s. v.); they were probably given on the *ἐπαύλια*, or day after the marriage.

Another ceremony observed after marriage was the sacrifice which the husband offered up on the occasion of his bride being registered amongst his own phratres (γαμηλιαί, scil. *δυσίαν τοῖς φράτρῳσιν εἰσέθενγκεν*, Demosth. c. *Eubul.* pp. 1312, 1320; Isaeus, *de Pyrr. her.* p. 45).

The statement above made of the solemnities connected with marriage cannot of course be considered as applicable to all ages and circumstances, but rather as a representation of the customs generally observed at Athens in later times.

At Sparta the betrothal of the bride by her father or guardian (*κύριος*) was requisite as a preliminary of marriage, as well as at Athens. (Müller, *Dorians*, ii. 4. § 2.) Another custom peculiar to the Spartans, and a relic of ancient times, was the seizure of the bride by her intended husband (see Herod. vi. 65), but of course with the sanction of her parents or guardians. (Plut. *Lycur.* 15; Xen. *de Rep. Lac.* i. 5.) She was not, however, immediately domiciled in her husband's house, but cohabited with him for some time clandestinely, till he brought her, and frequently her mother also, to his home. (Müller, *Dorians*, l. c.) A similar custom appears to have prevailed in Crete, where, as we are told (Strabo, x. p. 482), the young men when dismissed from the *ἀγελή* of their fellows, were immediately married, but did not take their wives home till some time afterwards. Müller suggests that the children of this furtive kind of intercourse were called *παρθένιοι*.

We subjoin some particulars concerning the relation between man and wife amongst the ancient Greeks, prefacing them with a description of domestic married life, from Lysias (*de Caedis Eratos.* p. 92). The speaker there says, "I have a small two-story house, of equal dimensions on the basement and first floor, both in the male and female apartments (*κατὰ τὴν γυναικωνῆτιν κ. τ. λ.*). Now after our little boy was born, his mother used to suckle it, and that she might not meet with any accident in going down the ladder (*ἢ κλίμαξ*), whenever she wanted to wash, I lived up stairs, and the women below. And it was usual for my wife to leave me very frequently and sleep down stairs with the child, to give it the breast and keep it from crying. And one day after dinner the little fellow cried and fretted, and I told my wife to go and suckle it; now at first she would not, but at last I got angry with her, and ordered her to go: 'yes,' said she, 'that you may play with the servant maid,' &c.

Now, though the wife, as appears by this tale, usually took her meals with her husband, she did not go out with him to dinner, nor sit at table with

his guests when he had company. (Isaeus, *de Pyrr. her.* p. 139; Demosth. c. *Neser.* p. 1352.)

The duties of a good housewife are summed up by Plato (*Leg.* vii. p. 805) under the heads of *ταμεία*, *δεσφαιεία*, and *παιδοτροφία*. The first of these included the domestic arrangements of the house and superintendence of the furniture, provisions, cookery, and servants; in fact every thing that came under the name of housekeeping. (Becker, *Charikles*, vol. ii. p. 476.) But a trust of this kind was not reposed in a young wife till she had gained some experience; for what, says Xenophon (*Oecon.* 7. § 4), could a wife, married at fifteen, be likely to know, who had lived in complete seclusion, and had only been taught by her mother to conduct herself virtuously (*σοφρονεῖν*)? The *δεσφαιεία* included the attendance upon the sick inmates of the house, whether free or slaves. (Xen. *Oecon.* 7. § 37.) The *παιδοτροφία* was the physical education of the children, on which Plutarch (*de Educat. Puer.* 5. p. 9) observes that mothers ought themselves to nurture and suckle their children, though frequently female citizens were hired as wet-nurses. (Demosth. c. *Eubul.* p. 1309.) The Spartan nurses were so famous, that they were engaged even in foreign states; thus Alcibiades we are told was suckled by a Laconian nurse. (Plut. *Lycourg.* 16.) It is scarcely necessary to remark that we have been speaking of the household of a citizen in good circumstances, to which only our observations can apply.

The consideration in which women were held by their husbands, and the respect paid to them in ancient Greece, would naturally depend, in some degree, on their intellectual and moral character; but generally speaking the Greeks entertained comparatively little regard for the female character. They considered women, in fact, as decidedly inferior to men, qualified to discharge only the subordinate functions in life, and rather necessary as help-mates, than agreeable as companions. To these notions female education for the most part corresponded, and in fact confirmed them; it did not supply the elegant accomplishments and refinement of manners which permanently engage the affections, when other attractions have passed away. Aristotle (*de Rep.* i. 2) states, that the relation of man to woman is that of the governor to the subject; and Plato (*Meno*, p. 71), that a woman's virtue may be summed up in a few words, for she has only to manage the house well, keeping what there is in it, and obeying her husband. Nor is it unimportant to remark, that Athenians, in speaking of their wives and children, generally said *τέκνα καὶ γυναῖκας*, putting their wives last: a phrase which indicates very clearly what was the tone of feeling on this subject. Moreover, before marriage Grecian women were kept in a state of confinement, which amounted to little short of a deprivation of liberty, so that they are even said to have been watched and guarded in strong apartments,

δχυροῖσι παρθενῶσι φρουροῦνται καλῶς

(Eurip. *Iphig. in Aulid.*), nor was it thought becoming in them to be seen in public (Eurip. *Orest.* 108), except on some particular occasions, when they appeared as spectators of, or participants in religious processions; of which, young men desirous of being married would naturally avail themselves to determine the object of their choice. Even after marriage the restrictions imposed upon young women of the middle and higher classes

were of a very jealous and almost Oriental character. They occupied, as is well known, a separate part of the house, and in the absence of their husband it was thought highly improper for a man even to enter where they were. (Demosth. c. *Euerg.* pp. 1157, 1150.) From various passages of the Attic comedians it would also seem that married women were required to keep at home (*οικουμένη*), and not allowed to go out of doors without the permission of their husbands. Thus, in a fragment of Menander (Meineke, p. 87), we are told that married women are not allowed to pass the gate of the court-yard of the house,

—πέρas γάρ αἰλίος δῦρα
ἔλευθέρῃ γυναικὶ νενόμιστ' οἴκλας :

and Aristophanes (*Thesm.* p. 790) speaks of their husbands forbidding them to go out. Again, on occasions of great public alarm (e.g., when the news of the defeat at Chæroneia reached Athens), the women are spoken of, not as leaving their houses, but standing at their doors and inquiring after the fate of their husbands, a circumstance which is described as being creditable to themselves and the city (*ἀναξίων αὐτῶν καὶ τῆς πόλεως*, Lycurg. c. *Leocr.* p. 53, Bek.). From a passage in Plutarch (*de Gen. Socr.* 33) it appears that on this subject there was the same feeling at Thebes as well as at Athens; and the same writer (*Solon*, 21) informs us that one of Solon's laws specified the conditions and occasions upon which women were to be allowed to leave their houses. In later times there were magistrates at Athens (the *γυναικονόμοι*), charged, as their name denotes, with the superintendence of the behaviour of women. [GYNÆCONOMI.]

But we must observe that the description given above of the social condition and estimation of women in Greece, does not apply to the Heroic times as described by Homer, nor to the Dorian state of Sparta. With respect to the former, we have only space to remark, that the women of the Homeric times enjoyed much more freedom and consideration than those of later ages, and that the connection between the sexes was then of a more generous and affectionate character than afterwards. For another important distinction see *DOR* (GREEK). (Becker, *Charikles*, vol. ii. p. 415.)

Among the Dorians generally, and in Sparta especially, the relation of the wife to the husband, and the regard paid to women, was for the most part the same as that represented by Homer to have prevailed universally amongst the ancient Greeks; and as such, presented a strong contrast to the habits and principles of the Ionic Athenians, with whom the ancient custom of Greece, in this respect, was in a great measure supplanted by that of the East. At Sparta, for instance, the wife was honoured with the title of *δέσποινα* or "mistress," an appellation not used unmeaningly or ironically, and which was common amongst the Thesalians and other nations of northern Greece. (Müller, ii. 4. § 4.) Moreover, the public intercourse permitted by the Dorians between the sexes was (comparatively at least) of so free and unrestricted a character, as to have given occasion for the well known charges of licentiousness (*ἀνεκεία*) against the Spartan women. (Eurip. *Androm.* 586.) The influence, too, which the Lacedæmonian women enjoyed was so great that the Spartans were blamed for submitting to the

yoke of their wives; and even Aristotle (*Pol.* ii. 6) thought it necessary to account for the circumstance, by the supposition that Lycurgus had failed in his attempt to regulate the life and conduct of the Spartan women as he had wished. In short there was a great contrast and difference between the treatment of women in the Dorian and Ionian states of Greece, which is well described by Müller (*l. c.*) in the following words:—"Amongst the Ionians women were merely considered in an inferior and sensual light, and though the Æolians allowed their feelings a more exalted tone, as is proved by the amatory poetesses of Lesbos, the Dorians, as well at Sparta as in the south of Italy, were almost the only nation who considered the higher attributes of the female mind as capable of cultivation." In Sparta, too, the unmarried women lived more in public than the married. The former appeared with their faces uncovered, the latter veiled; and at Sparta, in Crete, and at Olympia, virgins were permitted to be spectators of the gymnastic contests, and married women only were excluded. The reverse of this was the case in Ionia. (Müller, ii. 2. § 2.)

The preceding investigation will have prepared the reader for the fact, that the strictest conjugal fidelity was required under very severe penalties from the wife [*ADULTERIUM*], while great laxity was allowed to the husband. The general practice is thus illustrated by Plautus (*Mercat.* iv. 6. 2):—

"Nam si vir scortum duxit clam uxorem suam,
Id si rescivit uxor, impune est viro.
Uxor viro si clam domo egressa eat foras,
Viro fit causa, exigitur matrimonio."

In cases of adultery by the wife, the Athenian law subjected the husband to *ἀτιμία*, if he continued to cohabit with her; so that she was *ipso facto* divorced. (Demosth. c. *Neær.* p. 1374.) But a separation might be effected in two different ways: by the wife leaving the husband, or the husband dismissing the wife. If the latter supposed her husband to have acted without sufficient justification in such a course, it was competent for her after dismissal, or rather for her guardians, to bring an action for dismissal (*δικὴ ἀποπέμψεως* or *ἀποκομῆς*): the corresponding action, if brought by the husband, was a *δικὴ ἀπολείψεως*. If, however, a wife were ill-used in any way by her husband, he was liable to an action called a *δικὴ κακώσεως*, so that the wife was not entirely unprotected by the laws: a conclusion justified by a fragment in Athenæus (xiii. p. 559) in which married women are spoken of as relying on its protection. But a separation, whether it originated from the husband or wife, was considered to reflect discredit on the latter (*ὁ γὰρ διαυλὸς ἐστὶν αἰσχύνῃ ἔχων*, *Frag. apud Stob.* p. 67, Gaisford) independent of the difficulties and inconveniences to which she was subjected by it. At Sparta barrenness on the part of a wife seems to have been a ground for dismissal by the husband (Herod. vi. 61); and from a passage in Dion Chrysostom (*Orat.* xv. p. 447) it has been inferred that women were in the habit of imposing supposititious children with a view of keeping (*κατασχεῖν*) their husbands: not but that the word admits of, if indeed it does not (from the tense) require, a different interpretation.

This article has been mainly composed from Becker's *Charikles* (vol. ii. p. 415). The duties of

an Athenian wife are stated somewhat in detail by Xenophon (*Oeconom. ad init.*). [R. W.]

2. ROMAN. A Roman marriage was called *Iustae Nuptiae*, *Iustum Matrimonium*, *Legitimum Matrimonium*, as being conformable to *Jus Civile* or to Roman Law. A marriage was either *Cum conventione uxoris in manum viri*, or it was without this conventio. In both cases there must be *connubium* between the parties, and consent: the male must also be *pubes*, and the woman *viripotens*. The legal consequences as to the power of the father over his children were the same in both. Opposed to the *Legitimum Matrimonium* was the *Matrimonium Juris Gentium*.

A Roman marriage may be viewed, First with reference to the conditions required for a *Iustum Matrimonium*; Secondly, with reference to the forms of the marriage; Thirdly, with reference to its legal consequences.

Unless there was *connubium* there could be no Roman marriage. *Connubium* is defined by Ulpian (*Frag. v. 3*) to be "*uxoris jure ducendae facultas*," or the faculty by which a man may make a woman his lawful wife. But in truth this is no definition at all, nor does it give any information. *Connubium* is merely a term which comprehends all the conditions of a legal marriage. Accordingly, the term is explained by particular instances: "Roman men citizens," says Ulpian, "have *connubium* with Roman women citizens (*Romanae cives*); but with *Latinae* and *Peregrinae* only in those cases where it has been permitted. With slaves there is no *connubium*."

Sometimes *connubium*, that is the faculty of contracting a Roman marriage, is viewed with reference to one of its most important consequences, namely, the *Patria Potestas*: "for," says Gaius, "since it is the effect of *Connubium* that the children follow the condition of their father, it results that when *Connubium* exists, the children are not only Roman citizens, but are also in the power of their father." Generally, it may be stated that there was only *connubium* between Roman citizens: the cases in which it at any time existed between parties, not both Roman citizens, were exceptions to the general rule. Originally, or at least at one period of the Republic, there was no *Connubium* between the Patricians and the Plebeians; but this was altered by the *Lex Canuleia* which allowed *Connubium* between persons of those two classes.

There was no *connubium* between many persons with respect to one another, who had severally *connubium* with respect to other persons. Thus there were various degrees of consanguinity within which there was no *connubium*. There was no *connubium* between parent and child, whether the relation was natural or by adoption; and a man could not marry an adopted daughter or granddaughter, even after he had emancipated her. There was no *connubium* between brothers and sisters, whether of the whole or of the half blood: but a man might marry a sister by adoption after her emancipation, or after his own emancipation. It became legal to marry a brother's daughter after Claudius had set the example by marrying Agrippina; but the rule was not carried further than the example, and in the time of Gaius it remained unlawful for a man to marry his sister's daughter. (Gaius, i. 62; Tacit. *Ann.* xii. 5; Sueton. *Claud.* 26.)

There was no *connubium* also between persons within certain relations of affinity, as between a man and his *socrus*, *nurus*, *privigna*, and *noverca*.

Any illegal union of a male and female, though affecting to be, was not a marriage: the man had no legal wife, and the children had no legal father; consequently they were not in the power of their reputed father. These restrictions as to marriage were not founded on any enactments: they were a part of that large mass of Roman law which belongs to *Jus Moribus Constitutum*.

The marriage of Domitius, afterwards the emperor Nero, with Octavia the daughter of Claudius, seems at first sight somewhat irregular. Nero was adopted by Claudius by a *Lex Curia* (Tacit. *Ann.* xii. 26), but he was already his son-in-law; at least the *sponsalia* are mentioned before the adoption. (Tacit. *Ann.* xii. 9.) There seems to be no rule of law which would prevent a man from adopting his son-in-law; though if the adoption took place before the marriage, it would be illegal, as stated by Gaius.

Persons who had certain bodily imperfections, as eunuchs, and others who from any cause could never attain to puberty, could not contract marriage; for though *pubertas* was in course of time fixed at a positive age [*IMPUBES*], yet as the foundation of the notion of *pubertas* was physical capacity for sexual intercourse, there could be no *pubertas* if there was a physical incapacity.

The essence of marriage was consent, and the consent, says Ulpian, "both of those who come together, and of those in whose power they are;" and "marriage is not effected by sexual union, but by consent." Those then who were not *sui juris*, had not, strictly speaking, *connubium*, or the "*uxoris jure ducendae facultas*;" though in another sense, they had *connubium* by virtue of the consent of those in whose power they were, if there was no other impediment. (Dig. 23. tit. 1. s. 11—13.)

The *Lex Julia et Papia Poppaea* placed certain restrictions on marriage as to the parties between whom it could take place. [*JULIA ET PAPIA POPPAEA; INFAMIA.*]

A man could only have one lawful wife at a time; and consequently if he were married, and divorced his wife, a second marriage would be no marriage, unless the divorce were effectual.

The marriage *Cum conventione in manum* differed from that *Sine conventione*, in the relationship which it effected between the husband and the wife; the marriage *Cum conventione* was a necessary condition to make a woman a *materfamilias*. By the marriage *Cum conventione*, the wife passed into the familia of her husband, and was to him in the relation of a daughter, or as it was expressed, "*in manum convenit*." (Cic. *Top.* 3; filiae loco est, Gaius, ii. 169.) In the marriage *Sine conventione*, the wife's relation to her own familia remained as before, and she was merely *Uxor*. "*Uxor*," says Cicero (*Top.* 3), "is a genus of which there are two species; one is *materfamilias*, 'quae in manum convenit'; the other is *uxor* only." Accordingly a *materfamilias* is a wife who is in manum, and in the familia of her husband, and consequently one of his *sui heredes*; or in the manus of him in whose power her husband is. A wife not in manum was not a member of her husband's familia, and therefore the term could not apply to her. Gellius (xviii. 6) also states that this

was the old meaning of *materfamilias*. *Matrona* was properly a wife not in manu, and equivalent to Cicero's "*tantummodo uxor*;" and she was called *matrona* before she had any children. But these words are not always used in these their original and proper meanings. (See *Ulp. Frag.* iv.)

No forms were requisite in marriage; the best evidence of marriage was cohabitation *matrimonii causa*. The *matrimonii causa* might be proved by various kinds of evidence. A marriage *Cum* conventions might be effected by *Usus*, *Farreum*, and *Coemptio*.

If a woman lived with a man for a whole year as his wife, she became in *manu viri* by virtue of this matrimonial cohabitation. The consent to live together as man and wife was the marriage: the *usus* for a year had the *manus* as its result; and this was by analogy to *Usucapion* of movables generally, in which *usus* for one year gave ownership. The Law of the Twelve Tables provided that if a woman did not wish to come into the *manus* of her husband in this manner, she should absent herself from him annually for three nights (*trinoctium*) and so break the *usus* of the year. (*Gell.* iii. 2; *Gaius*, i. 111.) The Twelve Tables probably did not introduce the *usus* in the case of a woman cohabiting with a man *matrimonii causa*, any more than they probably did in the case of other things; but as in the case of other things they fixed the time within which the *usus* should have its full effect, so they established a positive rule as to what time should be a sufficient interruption of *usus* in the case of matrimonial cohabitation, and such a positive rule was obviously necessary in order to determine what should be a sufficient legal interruption of *usus*.

Farreum was a form of marriage, in which certain words were used in the presence of ten witnesses, and were accompanied by a certain religious ceremony in which *panis farreus* was employed; and hence this form of marriage was also called *Confarreatio*. This form of marriage must have fallen generally into disuse in the time of *Gaius*, who remarks (i. 112) that this legal form of marriage (*hoc ius*) was in use even in his time for the marriages of the *Flamines Majores* and some others. This passage of *Gaius* is defective in the MS., but its general sense may be collected from comparing it with *Tacitus* (*Ann.* iv. 16) and *Servius* (*ad Aeneid.* iv. 104, 374). It appears that certain priestly offices, such as that of *Flamen Dialis*, could only be held by those who were born of parents who had been married by this ceremony (*confarreati parentes*). Even in the time of *Tiberius*, the ceremony of *confarreatio* was only observed by a few. As to divorce between persons married by *confarreatio*, see *DIVORTIUM*.

The *confarreatio* is supposed to have been the mode of contracting marriage among the patricians, and it was a religious ceremony which put the wife in *manu viri*.

Coemptio was effected by *Mancipatio*, and consequently the wife was in *mancipio*. (*Gaius*, i. 118.) A woman who was cohabiting with a man as *uxor*, might come into his *manus* by this ceremony, in which case the *coemptio* was said to be *matrimonii causa*, and she who was formerly *uxor* became *apud maritum filiae loco*. If the *coemptio* was effected at the time of the marriage, it was still a separate act. The other *coemptio* which was called *fiduciae causa* and which was between a

woman and a man not her husband, is considered under *TESTAMENTUM* and *TUTELA*. If, however, an *uxor* made a *coemptio* with her husband, not *matrimonii causa*, but *fiduciae causa*, the consequence was that she was in *manu*, and thereby acquired the rights of a daughter. It is stated by a modern writer, that the reason why a woman did not come in *mancipium* by the *coemptio*, but only in *manum*, is this, that she was not *mancipata*, but *mancipata* herself, under the authority of her father if she was in his power, and that of her tutors, if she was not in the power of her father; the absurdity of which is obvious, if we have regard to the form of *mancipatio* as described by *Gaius* (i. 119), who also speaks (i. 118, a) of *mancipatio* as being the form by which a parent released his daughter from the *patria potestas* (*e suo iure*), which he did when he gave his daughter in *manum viri*. The *mancipatio* must in all cases have been considered as legally effected by the father or the tutors.

In the course of time, marriage without the *manus* became the usual marriage. The *manus* by *usus* fell into desuetude. (*Gaius*, i. 111.)

Sponsalia were not an unusual preliminary of marriage, but they were not necessary. "*Sponsalia*," according to *Florentinus* (*Dig.* 23. tit. 1 a. 1) "*sunt mentio et repositio nuptiarum futurarum*." *Gellius* has preserved (iv. 4) an extract from the work of *Servius Sulpicius Rufus De Dotibus*, which, from the authority of that great jurist, may be considered as unexceptionable. (Compare *Varro, de Ling. Lat.* vi. 70.) *Sponsalia*, according to *Servius*, was a contract by stipulations and sponsiones, the former on the part of the future husband, the latter on the part of him who gave the woman in marriage. The woman who was promised in marriage was accordingly called *Sponsa*, which is equivalent to *Promissa*; the man who engaged to marry was called *Sponsus*. The *Sponsalia* then were an agreement to marry, made in such form as to give each party a right of action in case of non-performance, and the offending party was condemned in such damages as to the *Judex* seemed just. This was the law (*ius*) of *Sponsalia*, adds *Servius*, to the time when the *Lex Julia* gave the *Civitas* to all *Latium*; whence we may conclude that alterations were afterwards made in it.

The *Sponsalia* were of course not binding, if the parties consented to waive the contract; and either party could dissolve the contract as either could dissolve a marriage. If a person was in the relation of double *sponsalia* at the same time, he was liable to *Infamia*. [*INFAMIA*.] Sometimes a present was made by the future husband to the future wife by way of earnest (*arra, arrha sponsalitia*), or as it was called *propter nuptias donatio*. (*Cod.* 5. tit. 3.) *Sponsalia* might be contracted by those who were not under seven years of age. The regulation of *Augustus*, which was apparently comprised in the *Lex Julia et Papia*, which declared that no *sponsalia* should be valid if the marriage did not follow within two years, was not always observed. (*Sueton.* *Aug.* c. 34; *Dion Cass.* liv. 16, and the note of *Reimar.*) [*INFANS*; *IMPUBES*.]

The consequences of marriage were—

1. The power of the father over the children of the marriage, which was a completely new relation, an effect indeed of marriage, but one which had no

influence over the relation of the husband and wife. [PATRIA POTESTAS.]

2. The liabilities of either of the parties to the punishments affixed to the violation of the marriage union. [ADULTERIUM; DIVORTIUM.]

3. The relation of husband and wife with respect to property, to which head belong the matters of *Dos*, *Donatio inter virum et uxorem*, *Donatio propter nuptias*, &c. Many of these matters, however, are not necessary consequences of marriage, but the consequence of certain acts which are rendered possible by marriage.

In the later Roman history we often read of marriage contracts which have reference to *Dos*, and generally to the relation of husband and wife viewed with reference to property. A title of the Digest (23. tit. 4) treats *De Pactis Dotibus*, which might be made either before or after marriage.

The Roman notion of marriage was this:—it is the union of male and female, a consortium for the whole of life, the inseparable consuetude of life, an intercommunism of law, sacred and not sacred. (Dig. 23. tit. 2. s. 1.) But it is not meant that marriage was to this extent regulated by law, for marriage is a thing which is, to a great extent, beyond the domain of law. The definition or description means that there is no legal separation of the interests of husband and wife in such matters in which the separation would be opposed to the notion of marriage. Thus the wife had the *sacra*, the domicile, and the rank of the husband. Marriage was established by consent, and continued by dissent; for the dissent of either party, when formally expressed, could dissolve the relation. [DIVORTIUM.]

Neither in the old Roman law nor in its later modifications, was a community of property an essential part of the notion of marriage; unless we assume that originally all marriages were accompanied with the *conventio in manum*, for in that case, as already observed, the wife became *filiae-familias loco*, and passed into the familia of her husband; or if her husband was in the power of his father, she became to her husband's father in the relation of a granddaughter. All her property passed to her husband by a universal succession (Gaius, ii. 96, 98), and she could not thenceforward acquire property for herself. Thus she was entirely removed from her former family as to her legal status and became as the sister to her husband's children. In other words, when a woman came in *manum*, there was a blending of the matrimonial and the filial relation. It was a good marriage without the relation expressed by in *manu*, which was a relation of parent and child superadded to that of husband and wife. The *manus* was terminated by death, loss of *Civitas*, by *Diffareatio*, and we may assume by *Mancipatio*. It is a legitimate consequence that the wife could not divorce her husband, though her husband might divorce her, and if we assume that the marriage accompanied by the *cum conventione* was originally the only form of marriage (of which, however, we believe, there is no proof) the statement of Plutarch [DIVORTIUM] that the husband alone had originally the power of effecting a divorce, will consist with this strict legal deduction. It is possible, however, that, even if the marriage *cum conventione* was once the only marriage, there might have been legal means by which a wife in

manu could be released from the *manus*; for the will alone would be sufficient to release her from the marriage. In the time of Gaius (i. 137), a woman, after the repudium was sent, could demand a *remancipatio*.

When there was no *conventio*, the woman remained a member of her own familia: she was to her husband in the same relation as any other Roman citizen, differing only in this that her sex enabled her to become the mother of children who were the husband's children and citizens of the state, and that she owed fidelity to him so long as the matrimonial cohabitation continued by mutual consent. But her legal status continued as it was before: if she was not in the power of her father, she had for all purposes a legal personal existence independently of her husband, and consequently her property was distinct from his. It must have been with respect to such marriages as these, that a great part at least of the rules of law relating to *Dos* were established; and to such marriages all the rules of law relating to marriage contracts must have referred, at least so long as the marriage *cum conventione* existed and retained its strict character.

When marriage was dissolved, the parties to it might marry again; but opinion considered it more decent for a woman not to marry again. A woman was required by usage (*mos*) to wait a year before she contracted a second marriage, on the pain of *Infamia*.

At Rome, the *matrimonium juris civilis* was originally the only marriage. But under the influence of the *Jus Gentium*, a cohabitation between *Peregrini*, or between *Latini*, or between *Peregrini* and *Latini* and *Romani*, which, in its essentials, was a marriage, a consortium *omnis vitae* with the *affectio maritalis*, was recognised as such; and though such marriage could not have all the effect of a Roman marriage, it had its general effect in this, that the children of such marriage had a father. Thus was established the notion of a valid marriage generally, which marriage might be either *Juris Civilis* or *Juris Gentium*. Certain conditions were requisite for a valid marriage generally, and particular conditions were necessary for a Roman marriage. In the system of Justinian, the distinction ceased, and there remained only the notion of a valid marriage generally; which is the sense of *Justae nuptiae* in the Justinian system. This valid or legal marriage is opposed to all cohabitation which is not marriage; and the children of such cohabitation have no father. (Puchta, *Inst.* iii. § 287.) [INFAMIA.]

The above is only an outline of the Law of Marriage, but it is sufficient to enable a student to carry his investigations farther. [G. L.]

It remains to describe the customs and rites which were observed by the Romans at marriages (*ritus nuptiales* or *nuptiarum solemnia justa*, τὰ νομιζόμενα τῶν γάμων). After the parties had agreed to marry and the persons in whose potestas they were had consented, a meeting of friends was sometimes held at the house of the maiden for the purpose of settling the marriage-contract, which was called *sponsalia*, and written on tablets (*tabulae legitimae*), and signed by both parties. (Juven. Sat. ii. 119, &c., vi. 25, 200; Gellius, iv. 4.) The woman after she had promised to become the wife of a man was called *sponsa*, *pacta*, *dicta*, or *operata*. (Gell. l. c.; Plaut. *Trinumm.* ii. 4. 99; Nonius, iv. p. 213.) From Juvenal (Sat. vi. 27) it appears

that, at least during the imperial period, the man put a ring on the finger of his betrothed, as a pledge of his fidelity. This ring was probably, like all rings at this time, worn on the left hand, and on the finger nearest to the smallest. (Macrob. *Sat.* vii. 13.) The last point to be fixed was the day on which the marriage was to take place. Towards the close of the republic it had become customary to betroth young girls when they were yet children; Augustus therefore limited the time during which a man was allowed to continue betrothed to a girl (Suet. *Aug.* 34), and forbade men to be betrothed to girls before the latter had completed their tenth year, so that the age of puberty being twelve years, a girl might not be compelled to be betrothed longer than two years. (Dion Cass. liv. p. 609, Steph.)

The Romans believed that certain days were unfortunate for the performance of the marriage rites, either on account of the religious character of those days themselves, or on account of the days by which they were followed, as the woman had to perform certain religious rites on the day after her wedding, which could not take place on a dies ater. Days not suitable for entering upon matrimony were the Calends, Nones, and Ides of every month, all dies atri, the whole months of May (Ovid. *Fast.* v. 490; Plut. *Quaest. Rom.* p. 284) and February, and a great number of festivals. (Macrob. *Sat.* i. 15; Ovid. *Fast.* ii. 557.) Widows, on the other hand, might marry on days which were inauspicious for maidens. (Macrob. *Sat.* l. a.; Plut. *Quaest. Rom.* p. 289.)

On the wedding-day, which in the early times was never fixed upon without consulting the auspices (Cic. *de Div.* i. 16; Val. Max. ii. 1. § 1), the bride was dressed in a long white robe with a purple fringe or adorned with ribands. (Juv. ii. 124.) This dress was called tunica recta (Plin. *H. N.* viii. 48), and was bound round the waist with a girdle (*corona, cingulum, or zona*, Fest. s. v. *Cingulo*), which the husband had to untie in the evening. The bridal veil, called flammæum, was of a bright-yellow colour (Plin. *H. N.* xxi. 8; Schol. ad Juv. vi. 225), and her shoes likewise. (Catull. lxii. 10.) Her hair was divided on this occasion with the point of a spear. (Ovid. *Fast.* ii. 560; Arnob. *adv. Gent.* ii. p. 91; Plut. *Quaest. Rom.* p. 285.)

The only form of marriage which was celebrated with solemn religious rites, was that by confarreatio; the other forms being mere civil acts, were probably solemnised without any religious ceremony. In the case of a marriage by confarreatio, a sheep was sacrificed, and its skin was spread over two chairs, upon which the bride and bridegroom sat down with their heads covered. (Serv. ad *Aen.* iv. 374.) Hereupon the marriage was completed by pronouncing a solemn formula or prayer, after which another sacrifice was offered. A cake was made of *far* and the *mola salsa* prepared by the Vestal virgins (Serv. ad *Virg. Ecol.* viii. 82), and carried before the bride when she was conducted to the residence of her husband. It is uncertain whether this cake is the same as that which is called *mastaceum* (Juv. *Sat.* vi. 201), and which was in the evening distributed among the guests assembled at the house of the young husband.

The bride was conducted to the house of her husband in the evening. She was taken with ap-

parent violence from the arms of her mother, or of the person who had to give her away. On her way she was accompanied by three boys dressed in the praetexta, and whose fathers and mothers were still alive (*patrini et matrimi*). One of them carried before her a torch of white thorn (*spina*) or, according to others, of pine wood; the two others walked by her side supporting her by the arm. (Fest. s. v. *Patrini et matrimi*; Varro, *ap. Charisium*, i. p. 117; Plin. *H. N.* xvi. 18.) The bride herself carried a distaff and a spindle with wool. (Plin. *H. N.* viii. 48; Plut. *Quaest. Rom.* p. 271.) A boy called camillus carried in a covered vase (*camera, cumerum, or comillum*) the so called utensils of the bride and playthings for children (*crepundia*, Fest. s. v. *Cumerum*; Plant. *Cistell.* iii. 1. 5). Besides these persons who officiated on the occasion, the procession was attended by a numerous train of friends both of the bride and the bridegroom, whose attendance was called *officium* and *ad officium venire*. (Suet. *Calig.* 25, *Claud.* 26.) Plutarch (*Quaest. Rom.* init.) speaks of five wax-candles which were used at marriages; if these were borne in the procession, it must have been to light the company which followed the bride; but it may also be that they were lighted during the marriage ceremony in the house of the bride.

When the procession arrived at the house of the bridegroom, the door of which was adorned with garlands and flowers, the bride was carried across the threshold by *promoti*, i. e. men who had only been married to one woman, that she might not knock against it with her foot, which would have been an evil omen. (Plut. *Quaest. Rom.* p. 271, c; Plant. *Cas.* iv. 4. 1.) Before she entered the house, she wound wool around the door-posts of her new residence, and anointed them with lard (*adeps suillus*) or wolf's fat (*adeps lupinus*, Serv. ad *Aen.* iv. 19; Plin. *H. N.* xxviii. 9). The husband received her with fire and water, which the woman had to touch. This was either a symbolic purification (for Serv. ad *Aen.* iv. 104, says that the newly married couple washed their feet in this water), or it was a symbolic expression of welcome, as the interdicere aqua et igni was the formula for banishment. The bride saluted her husband with the words: *ubi tu Caia, ego Caia*. (Plut. *Quaest. Rom.* l. a.) After she had entered the house with distaff and spindle, she was placed upon a sheep-skin, and here the keys of the house were delivered into her hands. (Fest. s. v. *Clavis*.) A repast (*coena nuptialis*) given by the husband to the whole train of relatives and friends who accompanied the bride, generally concluded the solemnity of the day. (Plaut. *Curo.* v. 2. 61; Suet. *Calig.* 25.) Many ancient writers mention a very popular song, Talasius or Talassio, which was sung at weddings (Plut. *Quaest. Rom.* l. a.; Liv. i. 9; Dionys. *Ant. Rom.* ii. 31; Fest. s. v. *Talassionem*); but whether it was sung during the repast or during the procession is not quite clear, though we may infer from the story respecting the origin of the song, that it was sung while the procession was advancing towards the house of the husband.

It may easily be imagined that a solemnity like that of marriage did not take place among the merry and humorous Italians without a variety of jests and raileries, and Ovid (*Fast.* iii. 675) mentions obscene songs which were sung before the door of the bridal apartment by girls, after the company had left. These songs were probably the

old Fescennina [FESCENNINA], and are frequently called *Epithalamia*. At the end of the repast the bride was conducted by matrons who had not had more than one husband (*prænubas*), to the lectus genialis in the atrium, which was on this occasion magnificently adorned and strewed with flowers. On the following day the husband sometimes gave another entertainment to his friends, which was called *reposita* (Fest. s. v.; Horat. Sat. ii. 2. 60), and the woman who on this day undertook the management of the house of her husband, had to perform certain religious rites (Macrob. Sat. i. 15), on which account, as was observed above, it was necessary to select a day for the marriage which was not followed by a dies ater. These rites probably consisted of sacrifices to the dii Penates. (Cic. de Republ. v. 5.)

The rites and ceremonies which have been mentioned above, are not described by any ancient writer in the order in which they took place, and the order adopted above rests in some measure merely upon conjecture. Nor is it, on the other hand, clear which of the rites belonged to each of the three forms of marriage. Thus much only is certain, that the most solemn ceremonies and those of a religious nature belonged to confarreatio.

The position of a Roman woman after marriage was very different from that of a Greek woman. The Roman presided over the whole household; she educated her children, watched over and preserved the honour of the house, and as the matrifamilias she shared the honours and respect shown to her husband. Far from being confined like the Greek women to a distinct apartment, the Roman matron, at least during the better centuries of the republic, occupied the most important part of the house, the atrium. (Compare Lipsius, *Elect.* i. 17; Böttiger, *Aldobrandina. Hockzeit*, p. 124, &c.; Brissonius, *De Ritu Nuptiarum, de Jure Connubii*, Paris, 1564. 12mo.) [L.S.]

MATRONA. [MATRIMONIUM, p. 741, a.]
MATRONALIA, also called MATRONALES FERIAE, a festival celebrated by the Roman matrons on the 1st of March in honour of Juno Lucina. From the many reasons which Ovid gives why the festival was kept on this day, it is evident that there was no certain tradition on the subject; but the prevailing opinion seems to have been that it was instituted in memory of the peace between the Romans and Sabines, which was brought about by means of the Sabine women. At this festival wives used to receive presents from their husbands, and at a later time girls from their lovers; mistresses also were accustomed to feast their female slaves. Hence we find the festival called by Martial the Saturnalia of women. (Ov. Fast. iii. 229, &c.; Plant. Mil. iii. 1. 97; Tibull. iii. 1; Hor. Carm. iii. 8; Mart. v. 84. 11; Suet. Vesp. 19; Tertull. Idol. 14; comp. Hartung, *Die Religion der Römer*, vol. ii. p. 65.)

MAUSOLEUM (*Μαυσολεῖον*), which signified originally the sepulchre of Mausolus, was used by the Romans as a generic name for any magnificent sepulchral edifice. (Paus. viii. 16. § 3. a. 8, and the Latin Lexicons.)

The original building was the production of the piety of a wealthy queen, and the skill of the great artists of the later Ionian and Attic schools of architecture and sculpture. Mausolus, the dynast of Caria, having died in a.c. 353, his queen Artemisia evinced her sorrow by

observing his funeral rites with the most expensive splendour, and by commencing the erection of a sepulchral monument to him, at Halicarnassus, which should surpass any thing the world had yet seen. (See *Dict. of Biog. arts. Artemisia, Mausolus*.) She entrusted its erection to the architects Phileus (or Phiteus, or Pytheus) and Satyrus, who wrote an account of the work and its sculptural decorations; and to four of the greatest artists of the new Attic school, Scopas, Bryaxis, Leochares, and either Timotheus or Praxiteles, for respecting this name, Vitruvius tells us, the authorities varied. These artists worked in emulation with one another, each upon one face of the building, and upon the death of Artemisia, who only survived her husband two years, they continued their work as a labour of love. Pliny mentions a fifth artist, Pythis, who made the marble quadriga on the summit of the building. (Vitruv. vii. Praef. § 12; Plin. H. N. xxxvi. 5. a. 4. § 9; *Dict. of Biog.* under the names of the artists.)

It was chiefly, Pliny tells us, on account of the works of these artists that the Mausoleum became celebrated as one of the seven wonders of the world. Unfortunately, however, the ancient authors, who have celebrated its magnificence, have furnished us with such scanty details of its construction, that the restoration of its plan is almost hopeless. (Strabo, xiv. p. 656; Cic. *Tusc. Disp.* iii. 31; Gell. x. 18; Val. Max. iv. 6. ext. 1; Propert. iii. 2. 19; Suid. Harpocr. s. v. Ἀρτεμισία, Μαυσολός.) There are, indeed, coins which give a representation of it; but they are modern forgeries. (Rasche, s. v.; Eckhel, vol. ii. p. 597.) The edifice has so entirely vanished, that even its site is doubtful, although some precious fragments of its sculptures survive, and are now in our own possession.

Pliny is the only writer who gives any thing like a complete description of the edifice; but even in this account there are considerable difficulties. The building, he tells us, extended 63 feet from north to south, being shorter on the fronts, and its whole circuit was 411 feet (or, according to the Bamberg MS. 440); it rose to the height of 25 cubits (37½ feet); and was surrounded by 36 columns. This part of the building was called *Pteron*. It was adorned with sculptures in relief, on its eastern face by Scopas, on the northern by Bryaxis, on the southern by Timotheus, on the western by Leochares. Above this *pteron* was a pyramid equal to it in height, diminishing by 24 steps to its summit, which was surmounted by the marble quadriga made by Pythis. The total height, including this ornament, was 140 feet.

The limits of this article do not admit of a discussion of the various proposed restorations of the plan of the edifice. They will be found enumerated and carefully examined by Mr. Charles Newton, in a very valuable essay *On the Sculptures from the Mausoleum at Halicarnassus* in the *Classical Museum* for July, 1847, vol. v. pp. 170, foll., with a chart of Halicarnassus, a restoration of the Mausoleum, and other illustrations.

Thus much is clear enough from Pliny's account; that the edifice was composed of an oblong quadrangular *cella* (the *pteron*), surrounded by a peristyle of columns (which were in all probability of the Ionic order), and elevated on a basement (for this supposition presents the only means of

reconciling the discrepancy between the total and partial heights), which *peron* was surmounted by the pyramid; the sculptures were of course on the frieze of the order. The other apparent discrepancy between the lengths of the sides and fronts and the total circuit of the building can only be satisfactorily explained by supposing that it stood within an enclosure, or upon a platform of the larger dimensions, namely, 440 feet in perimeter. When we come to the details of the arrangement of the parts, we find most writers giving the simple explanation, which most readers of Pliny would probably adopt at first sight, that the 36 columns, of which Pliny speaks, formed a single peristyle all round the building. (See, for example, the restoration in Hirt's *Gesch. d. Baukunst*, Pl. x. fig. 14, Pl. xxx. fig. 14.) To this view there are very formidable objections; and another, which has not only the merit of being exceedingly ingenious, but the authority of a most accomplished architect, is proposed by Mr. Cockerell, in Mr. Newton's Essay. Taking on the one hand Pliny's 63 feet as the length of the longer side of the peristyle, and on the other hand, calculating the dimensions of the order from the existing fragments of the frieze (which, in the case of a work of that period of Greek art, an architect can do with as much certainty as that with which Professor Owen can construct a *di-normis* from a single thigh-bone), Mr. Cockerell arrives at the conclusion that the 36 pillars were arranged, in a single row of six columns on each front, and in a double row of eight on each side, at intercolumniations of 6 feet 8 inches, around a long narrow *cella*, corresponding in length to six of the columns of the peristyle, and in width to two. (See the plan and elevation in the *Classical Museum*, l. c.)

The researches of the latest travellers furnish a strong hope that good elements for reconstructing the plan of the Mausoleum may be found among the fragments of columns which are scattered about the city of *Budrum*, and worked into its walls.

The building was still standing in the latter part of the fourth century after Christ (Gregor. Naz. *Epigr.* cxviii.), and even as late as the tenth; but it shared at length, with Halicarnassus itself, in the almost total destruction which fell upon the cities of Asia Minor. For its subsequent history, the question of its site, and the chain of evidence which proves that the marbles now in the British Museum are the very reliefs with which Scopas and his rivals adorned the sepulchre of Mausolus, the reader is referred to the very interesting account of these matters given in Mr. Newton's Essay. All that can here be stated is, that when the knights of Rhodes built the citadel of Halicarnassus (*Budrum*), in the fifteenth century, or more probably when they strengthened its fortifications in 1522, they used materials obtained from the ruins of the Mausoleum, and, among the rest, they worked into the inner wall of their fortress some of the sculptured slabs which had formed its frieze. Various travellers, from Thevenot to the present time, have described these marbles, of which there is a sketch in the *Ionian Antiquities* of the Dilletanti Society (vol. ii. Supp. Pl. ii.). At length our ambassador at Constantinople, Sir Stratford Canning, obtained the permission of the Porte for their removal, and in February, 1846, they were taken down and conveyed to England,

and are now deposited in the British Museum, under the name of the *Budrum Marbles*. They consist of thirteen slabs, of the uniform height of 3 feet including the mouldings, or 2 feet 5½ inches without them, and varying in length from 2 feet 8 inches to 6 feet 11 inches. Their total length is 64 feet 11 inches, which is nearly the same as that of each longer side of the building; but they are evidently from different faces of it, as they cannot all be arranged in one continuous composition, though some of them are continuous, and they show traces of the hands of various artists. Their subject is the battle of Greek warriors with Amazons, which was as favourite a myth in Ionia and Caria as it was in Attica. Their style is considered by competent judges to be inferior to what we might have expected from artists of the school of Scopas and Praxiteles; but their close resemblance to another bas-relief of the same school, that of the choragic monument of Lysicrates, is admitted; and the points in which they are alleged to be deficient are just those in which we recognise the inferiority of the later Attic school to the perfect art of Pheidias. The suggestion of Mr. Newton, that accident may have preserved to us, out of the whole frieze, the inferior works of Bryaxia, Leochares, and Timotheus, and not the better productions of Scopas or Praxiteles, is not only inconsistent, as he himself remarks, with Pliny's statement that the sculptures were regarded as of equal merit; but also, it is one of those gratuitous suppositions made to escape from a difficulty, which cannot be admitted without some positive proof.

In the Roman *Mausolea* the form chiefly employed was that of a succession of terraces in imitation of the *regius*. Of these the most celebrated were those of Augustus and of Hadrian; the latter of which, stripped of its ornaments, still forms the fortress of modern Rome (the Castle of S. Angelo); but of the other, which was on a still larger scale, and which was considered as one of the most magnificent buildings of Augustus, there are only some insignificant ruins. (Strabo, v. p. 236; Suet. *Aug.* 100; Nardini, *Roma Antica*, vol. iii. p. 75, ed. Nibby; Hirt, *Lehre d. Gebäude*, pp. 349—351, and restoration of the monuments in Pl. xxx. fig. 21, 23.) [P. S.]

MAZO'NOMUS (μαζονόμος, *dim.* μαζονόμιος, Athen. v. 30, 34), from μάζα, a loaf, or a cake; properly a dish for distributing bread: but the term is applied also to any large dish used for bringing meat to table. (Varro, *de Re Rust.* iii. 4.) These dishes were made either of wood (Pollux, vii. 87), of bronze (Athen. iv. 31), or of gold (Athen. v. 27). [J. Y.]

MEDIASTINI, the name given to slaves, used for any common purpose, and are said by the Scholiast upon Horace (*Ep.* i. 14. 14) to be those "qui in medio stant ad quævis imperata parati." The name is chiefly given to certain slaves belonging to the familia rustica (Cic. *Cat.* ii. 3; Colum. i. 9, ii. 13), but it is also applied sometimes to slaves in the city. (Dig. 4. tit. 9. s. 1. § 5, 7. tit. 7. s. 6.)

MEDICINA (*ἰατρική*), the name of that science which, as Celsus says (*de Medic.* lib. i. Præfat.), "Sanitatem aegris promittit," and whose object Hippocrates defines (*de Arte*, vol. i. p. 7, ed. Kühn) to be "the delivering sick persons from their disease, and the diminishing the force of

sicknesses, and the not undertaking the treatment of those who are quite overcome by sickness, as we know that medicine is here of no avail." For other definitions of the art and science of Medicine given by the ancients, see Pseudo-Galen (*Introd. Sev Medicus*, c. 6. vol. xiv. pp. 686—8, ed. Kühn). The invention of medicine was almost universally attributed by the ancients to the gods. (Hippocr. *de Prisca Medic.* vol. i. p. 39; Pseudo-Galen, *Introd.* cap. i. p. 674; Cic. *Tusc. Dis.* iii. 1. Plin. *H. N.* xxix. 1.) Another source of information was the observing the means resorted to by animals when labouring under disease. Pliny (*H. N.* viii. 41) gives many instances in which these instinctive efforts taught mankind the properties of various plants, and the more simple surgical operations. The wild goats of Crete pointed out the use of the Dictamnus and vulnerary herbs; dogs when indisposed sought the *Triticum repens*, and the same animal taught to the Egyptians the use of purgative, constituting the treatment called Symmaim. The hippopotamus introduced the practice of bleeding, and it is affirmed that the employment of clysters was shown by the ibis. (Compare Pseudo-Galen, *Introd.* c. 1, p. 675.) Sheep with worms in their liver were seen seeking saline substances, and cattle affected with dropsey anxiously looked for chalybeate waters. We are told (Herod. i. 197; Strab. xvi. c. 1, ed. Tauchn.; Pseudo-Galen, *Introd.* l. c.) that the Babylonians and Chaldeans had no physicians, and in cases of sickness the patient was carried out and exposed on the highway, that any persons passing by who had been affected in a similar manner, might give some information respecting the means that had afforded them relief. Shortly afterwards, these observations of cures were suspended in the temples of the gods, and we find that in Egypt the walls of their sanctuaries were covered with records of this description. The priests of Greece adopted the same practice, and some of the tablets suspended in their temples are of a curious character, which will illustrate the custom. The following votive memorials are given by Hieron. Mercurialis (*de Arte Gymnast.* Amstel. 4to. 1672, pp. 2, 3):—"Some days back a certain Caius, who was blind, learned from an oracle that he should repair to the temple, put up his fervent prayers, cross the sanctuary from right to left, place his five fingers on the altar, then raise his hand and cover his eyes. He obeyed, and instantly his sight was restored amidst the loud acclamations of the multitude. These signs of the omnipotence of the gods were shown in the reign of Antoninus." "A blind soldier named Valerius Apes, having consulted the oracle, was informed that he should mix the blood of a white cock with honey, to make up an ointment to be applied to his eyes, for three consecutive days: he received his sight, and returned public thanks to the gods." "Julian appeared lost beyond all hope from a spitting of blood. The god ordered him to take from the altar some seeds of the pine, and to mix them with honey, of which mixture he was to eat for three days. He was saved, and came to thank the gods in presence of the people."

With regard to the medical literature of the ancients, "When" (says Littre, *Oeuvres Complètes d'Hippocrate*, vol. i. *Introd.* ch. i. p. 3) "one searches into the history of medicine and the commencement of the science, the first body of

doctrine that one meets with is the collection of writings known under the name of the works of Hippocrates. The science mounts up directly to that origin and there stops. Not that it had not been cultivated earlier, and had not given rise to even numerous productions; but every thing that had been made before the physician of Cos has perished. We have only remaining of them scattered and unconnected fragments; the works of Hippocrates have alone escaped destruction; and by a singular circumstance there exists a great gap after them, as well as before them. The medical works from Hippocrates to the establishment of the school of Alexandria, and those of that school itself, are completely lost, except some quotations and passages preserved in the later writers; so that the writings of Hippocrates remain alone amongst the ruins of ancient medical literature." The Asclepiadae, to which family Hippocrates belonged, were the supposed descendants of Aesculapius (*Ἀσκληπιός*), and were in a manner the hereditary physicians of Greece. They professed to have among them certain secrets of the medical art, which had been handed down to them from their great progenitor, and founded several medical schools in different parts of the world. Galen mentions (*De Meth. Med.* i. l. vol. x. pp. 5, 6) three, viz., Rhodes, Cnidos, and Cos. The first of these appears soon to have become extinct, and has left no traces of its existence behind. From the second proceeded a collection of observations called *Κνιδίου Γνώμαι*, "Cnidian Sentences," a work of much reputation in early times, which is often mentioned by Hippocrates (*de Rat. Vict. in Morb. Acut.*), and which appears to have existed in the time of Galen. (*Comment. in Hippocr. lib. cit.* vol. xv. p. 427.) The school of Cos, however, is by far the most celebrated, on account of the greater number of eminent physicians that sprang from it, and especially from having been the birth-place of the great Hippocrates. We learn from Herodotus (iii. 131) that there were also two celebrated medical schools at Crotona in Magna Græcia, and at Cyrene in Africa, of which he says that the former was in his time more esteemed in Greece than any other, and in the next place came that of Cyrene. In subsequent times the medical profession was divided into different sects; but a detailed account of their opinions is foreign to the object of the present work. The oldest, and perhaps the most influential of these sects was that of the *Dogmatici*, founded about a.c. 400 by Thessalus, the son, and Polybus, the son-in-law of Hippocrates, and thence called also the *Hippocratici*. These retained their influence till the rise of the *Empirici*, founded by Serapion of Alexandria, and Philinus of Cos, in the third century a.c., and so called, because they professed to derive their knowledge from experience only; after which time every member of the medical profession during a long period ranged himself in one of these two sects. In the first century a.c., Themison founded the sect of the *Methodici*, who held doctrines nearly intermediate between those of the two sects already mentioned. About two centuries later the Methodici were divided into numerous sects, as the doctrines of particular physicians became more generally received. The chief of these sects were the *Pneumatici* and the *Eclectic*; the former founded by Athenæus about the middle or end of the first century a.d.; the latter about the same time

either by Agathinus of Sarta, or his pupil Archigenes.

It only remains to mention the principal medical authors after Hippocrates whose works are still extant, referring for more particulars respecting their writings to the articles in the *Dictionary of Biography*. Celsus is supposed to have lived in the Augustan age, and deserves to be mentioned more for the elegance of his style, and the neatness and judiciousness of his compilation, than for any original contributions to the science of Medicine. Dioscorides of Anazarba, who lived in the first century after Christ, was for many centuries the greatest authority in *Materia Medica*, and was almost as much esteemed as Galen in Medicine and Physiology, or Aristotle in Philosophy. Aretaeus, who probably lived in the time of Nero, is an interesting and striking writer, both from the beauty of his language, and from the originality of his opinions. The next in chronological order, and perhaps the most valuable, as he is certainly the most voluminous, of all the medical writers of antiquity, is Galen, who reigned supreme in all matters relating to his art till the commencement of modern times. He was born at Pergamus A. D. 131, came early in life to Rome, where he lived in great honour, and passed great part of his days, and died A. D. 201. After him the only writers deserving particular notice are Oribasius of Pergamus, physician to the emperor Julian in the fourth century after Christ; Aëtius of Amida, who lived probably in the sixth century; Alexander Trallianus, who lived something later; and Paulus Aegineta who belongs to the end of the seventh. [W. A. G.]

MEDICUS (*ἰατρός*), the name given by the ancients to every professor of the healing art, whether physician or surgeon, and accordingly both divisions of the medical profession will here be included under that term. In Greece and Asia Minor physicians seem to have been held in high esteem; for, not to mention the apotheosis of Aesculapius, who was considered as the father of it, there was a law at Athens that no female or slave should practise it (Hyginus, *Fab.* 274); Aelian mentions one of the laws of Zaleucus among the Epizephyrian Locrians, by which it was ordered that if any one during his illness should drink wine contrary to the orders of his physician, even if he should recover, he should be put to death for his disobedience (*Var. Hist.* ii. 37); and, according to Mead, there are extant several medals struck by the people of Smyrna in honour of different persons belonging to the medical profession. (*Dissertatio de Nummis quibusdam a Smyrnaeis in Medicorum Honorem percussis*, 4to. Lond. 1724.) If the decree of the Athenians (published among the letters of Hippocrates) be genuine, and if Soranus (*in Vita Hippocr.*) can be depended on, the same honours were conferred upon that physician as had before been given to Hercules; he was voted a golden crown, publicly initiated into the Eleusinian mysteries, and maintained in the Prytaneum at the state's expense. (Compare Plin. *H. N.* vii. 37.)

As there were no hospitals among the ancients, the chief places of study for medical pupils were the *Ἀσκληπείαι*, or temples of Aesculapius, where the votive tablets furnished them with a collection of cases. The Asclepiadae [*ΜΕΔΙΚΙΝΑ*] were very strict in examining into and overlooking the

character and conduct of their pupils, and the famous Hippocratic oath (which, if not drawn up by Hippocrates himself, is certainly almost as ancient) requires to be inserted here as being the most curious medical monument of antiquity. "I swear by Apollo the physician, by Aesculapius, by Hygeia, and Panacea, and all the gods and goddesses, calling them to witness that I will fulfil religiously, according to the best of my power and judgment, the solemn promise and the written bond which I now do make. I will honour as my parents, the master who has taught me this art, and endeavour to minister to all his necessities. I will consider his children as my own brothers, and will teach them my profession, should they express a desire to follow it, without remuneration or written bond. I will admit to my lessons, my discourses, and all my other methods of teaching, my own sons, and those of my tutor, and those who have been inscribed as pupils and have taken the medical oath; but no one else. I will prescribe such a course of regimen as may be best suited to the condition of my patients, according to the best of my power and judgment, seeking to preserve them from anything that might prove injurious. No inducement shall ever lead me to administer poison, nor will I ever be the author of such advice: neither will I contribute to an abortion. I will maintain religiously the purity and integrity both of my conduct and of my art. I will not cut any one for the stone, but will leave that operation to those who cultivate it. Into whatever dwellings I may go, I will enter them with the sole view of succouring the sick, abstaining from all injurious views and corruption, especially from any immodest action, towards women or men, freemen or slaves. If during my attendance, or even unprofessionally in common life, I happen to see or hear of any circumstances which should not be revealed, I will consider them a profound secret, and observe on the subject a religious silence. May I, if I rigidly observe this my oath, and do not break it, enjoy good success in life, and in [the practice of] my art, and obtain general esteem for ever; should I transgress and become a perjurer, may the reverse be my lot."

Some idea of the income of a physician in those times may be formed from the fact mentioned by Herodotus (iii. 131) that the Aeginetans (about the year B. C. 532) paid Democedes from the public treasury one talent per annum for his services, i. e. (if we reckon, with Hussey, *Ancient Weights and Money*, &c., the Aeginetan drachma to be worth 1s. 3½d.) not quite 344*l.*; he afterwards received from the Athenians one hundred minae, i. e. (reckoning, with Hussey, the Attic drachma to be worth 9½d.) rather more than 406*l.*, and he was finally attracted to Samos by being offered by Polycrates a salary of two talents, i. e. (if the Attic standard be meant) 487*l.* 10*s.* It should however be added, that Valckenaer doubts the accuracy of this statement of Herodotus with respect to the Aeginetans and Athenians (and apparently with reason) on the ground that the latter people, at the time of their greatest wealth, only allowed their ambassadors two drachmae (or 1*s.* 7½d.) per day, i. e. somewhat less than thirty pounds per annum. (Aristoph. *Acharn.* v. 66.) A physician, called by Pliny both Erasistratus (*H. N.* xxix. 3) and Cleombrotus (*H. N.* vii. 37), is said

by him to have received one hundred talents for curing king Antiochus, which (if we suppose the Attic talents of the standard of Alexander's coinage to be meant, which, according to Hussey, was worth 243*l.* 15*s.*) would amount to 24,375*l.** It seems to have been not uncommon among the Greeks in those times (as afterwards in the later Roman empire, see ARCHIATER) for states to maintain physicians, who were paid at the public cost (Xen. *Mem.* iv. 2 § 5; Plato, *Gorg.* § 23; Strabo, iv. p. 125; Diod. Sic. xii. 13); and these again had attendants, for the most part slaves, who exercised their calling among people of low condition. (Plato, *De Leg.* iv. p. 720, ed. Steph.)

The Romans derived their knowledge of medicine at first from the Etruscans, and afterwards from the Greeks. One of the most ancient customs at Rome in order to ward off epidemic diseases, and to appease the anger of the gods, was the interrogating the books bought by Tarquin of the Sibyl. In the earlier times of the Roman republic physicians are said by Pliny to have been unknown (*H. N.* xxix. 5); and for some time afterwards the exercise of the profession was in a great measure confined to persons of servile rank; for the richer families having slaves who were skilled in all sorts of trades, &c., generally possessed one or more that understood medicine and surgery. (Middleton's *Essay, De Medicorum apud Romanos degentium Conditione*, Cantab. 1726, 4to. and the various answers to it that appeared on its publication.) To this practice, however, there were many exceptions, e.g. the physician who was taken prisoner with Julius Caesar by the pirates at the island of Pharmacusa (Sueton. *J. Caes.* 4), and who is called his friend by Plutarch (see Casaubon's note on Sueton.); Archagathus, who being the first foreign surgeon that settled at Rome, had a shop bought for him at the public expense, and was presented with the Jus Quiritium B. C. 219 (Cassius Hemina, *ap. Plin.* *H. N.* xxix. 6); Artorius, who is known to have been a physician (Cael. Aurel. *De Morb. Acut.* iii. 14. p. 224), and who is called the friend of Augustus (Plut. *Brut.* 41), where, however, it should be noticed that some editions read *Ἀπρίπιος* instead of *Ἀπρίπιος*; Asclapo, whom Cicero calls his friend (*ad Fam.* xiii. 20); Asclepiades, the friend of Crassus the orator (Cic. *de Orat.* i. 14); Eudemus, who is called by Tacitus (*Annal.* iv. 3) the friend and physician of Livra; and others. The hatred borne by Cato the Censor against the Greek physicians as well as the Greek philosophers at Rome is well known; but it is not true that he caused them to be expelled from Rome. (See Sprengel, *Hist. de la Méd.*) With respect to the income made by eminent physicians in the early times of Rome, the writer is not aware of any data for ascertaining it; at the beginning of the empire, we learn from Pliny (*H. N.* xxix. 5) that Albutius, Arruntius, Calpetanus, Cassius, and Rubrius gained 250,000 sesterces per annum, i. e. (reckoning with Hussey the mille nummi (*sestertium*) to be worth, after the reign of Augustus, 7*l.* 16*s.* 3*d.*) 1953*l.* 2*s.* 6*d.*; that Q. Stertinius made it a favour that he was content to receive

* If, however, the Alexandrian standard, which is found in the coins of the Ptolemies, be meant, it would amount (reckoning the drachma as 1*s.* 3*d.*) to 39,875*l.*; an almost incredible sum.

from the emperor 500,000 sesterces per annum (or 3906*l.* 5*s.*), as he might have made 600,000 sesterces (or 4687*l.* 10*s.*) by his private practice; and that he and his brother, who received the same annual income from the emperor Claudius, left between them at their death, notwithstanding large sums that they had spent in beautifying the city of Naples, the sum of thirty millions of sesterces (or 234,375*l.*).

Of the previous medical education necessary to qualify a physician at Rome for the legal practice of his profession in the early times, we know nothing; afterwards, however, this was under the superintendence of the archiatri. [ARCHIATER.]

Two other medical titles that we meet with under the emperors were *Iatroscopista* (see the word) and *Actuarius*, Ἀκτουδριος. The latter was a title at the court of Constantinople, given apparently only to physicians, and quite distinct from the use of the word found in the earlier Latin authors. (See Du Cange, *Gloss. Graec.* vol. i. p. 46, and Possini, *Gloss. ad Pachymer. Hist. Andronici*, vol. i. p. 366, &c. and vol. ii. pp. 468, 469.) Besides Joannes the son of Zacharias, who is better known by his title of Actuarius than by his real name, several other physicians are recorded as having arrived at this dignity. [W. A. G.]

MEDIMNUS (μέδιμνος or μέδιμνος σιτηρός), the principal dry measure of the Greeks. It was used especially for measuring corn. It contained 6 *hectes*, 12 *hemiecta*, 48 *choenices*, 96 *sestae* (*sestarii*), 192 *cotylae*, and 1152 *cyathi*. The Attic medimnus was equal to six Roman modii, or two amphorae (Nepos, *Ath.* 2; Cic. *in Verr.* iii. 45, 46, 49; Suidas, s. v.; Rhemni. Fann. v. 64.)

Suidas makes the medimnus = 108 litrae, confounding it apparently with the metrete, the chief Greek fluid measure, which was three quarters of the medimnus. The medimnus contained nearly 12 imperial gallons, or 1½ bushel. This was the Attic medimnus; the Aeginetan and Ptolemaic was half as much again, or in the ratio of 3 : 2 to the Attic. For the values of the subdivisions of the medimnus see the Tables. (Böckh, *Mérol. Untersuch.* pp. 202—204.) [P. S.]

MEDITRINALIA was one of the festivals connected with the cultivation of vineyards. It took place on the eleventh of October, on which day the people of Latium began to taste their new wine (*mustum*), and to offer libations of it to the gods. In drinking the new wine it was customary to pronounce the words: "vetus novum vinum bibo, novo veteri morbo meo." (Varro, *de Ling. Lat.* vi. 21; Festus, s. v. *Meditritinalia*.) Varro derives the name of the festival from the healing power of the new wine, but Festus speaks of a goddess Meditritna. [L. S.]

MEDIX TUTICUS, the name of the supreme magistrate among the Oscan people. *Medix* appears to have signified a magistrate of any kind (*medix apud Oscos nomen magistratus est*, Festus, s. v. p. 123, ed. Müller), and *tuticus* to have been equivalent to *magnus* or *summus*. Livy, therefore, in calling the medix tuticus the *summus magistratus*, gives a literal translation of the word. In the time of the second Punic war, the Campanians were governed by the medix tuticus, who seems to have been elected annually (Liv. xxiii. 35, xxiv. 19, xxvi. 6); and we may infer from a line of Ennius (*apud Fest.* s. v.), "Summus ibi capitur medix, occiditur alter," that there was another

magistrate of the same name under him, who perhaps took his place in case of death, or of his being incapacitated by illness or other causes from discharging his duties. In Oscan inscriptions the name occurs in the form of *meddies tótika*; so that the orthography of Festus is more correct than that of Livy, which is placed at the head of this article. (Lepsius, *Inscr. Umbr. et Osc.*)

MEGALE'SIA, MEGALENSIA, or MEGALENSES LUDI, a festival with games celebrated at Rome in the month of April and in honour of the great mother of the gods (Cybele, *μεγάλη θεός*, whence the festival derived its name). The statue of the goddess was brought to Rome from Pessinus in the year 203 B.C., and the day of its arrival was solemnised with a magnificent procession, lectisternia, and games, and great numbers of people carried presents to the goddess on the Capitol. (Varro, *de Ling. Lat.* vi. 15; Liv. xxix. 14.) The regular celebration of the Megalesia, however, did not begin till twelve years later (191 B.C.), when the temple which had been vowed and ordered to be built in 203 B.C., was completed and dedicated by M. Junius Brutus. (Liv. xxxvi. 36.) But from another passage of Livy (xxxiv. 54) it appears that the Megalesia had already been celebrated in 193 B.C. The festival lasted for six days, beginning on the 4th of April. The season of this festival, like that of the whole month in which it took place, was full of general rejoicings and feasting. It was customary for the wealthy Romans on this occasion to invite one another mutually to their repasts, and the extravagant habits and the good living during these festive days were probably carried to a very high degree, whence a *senatusconsultum* was issued in 161 B.C., prescribing that no one should go beyond a certain extent of expenditure. (Gellius, ii. 24; compare xviii. 2.)

The games which were held at the Megalesia were purely scenic, and not circenses. They were at first held on the Palatine in front of the temple of the goddess, but afterwards also in the theatres. (Cic. *de Harusp. Resp.* 11, &c.) The first ludi scenici at Rome were, according to Valerius Antias, introduced at the Megalesia, i.e. either in 193 or 191 B.C. The day which was especially set apart for the performance of scenic plays was the third of the festival. (Ovid. *Fast.* iv. 377; Ael. Spartian. *Antonin. Carac.* c. 6.) Slaves were not permitted to be present at the games, and the magistrates appeared dressed in a purple toga and praetexta, whence the proverb, *purpura Megalensis*. The games were under the superintendence of the curule aediles (Liv. xxxiv. 54), and we know that four of the extant plays of Terence were performed at the Megalesia. Cicero (*de Harusp. Resp.* 12), probably contrasting the games of the Megalesia with the more rude and barbarous games and exhibitions of the circus, calls them *maxime casti, solennes, religiosi*. (See Ovid. *Fast.* iv. 179—372; P. Manutius, *ad Cic. ad Famil.* ii. 11.) [L. S.]

MELLEIREN (*μελλεῖρην*). [EIREN.]

MEMBRANA. [LIBER.]

MENELAEIA (*μενελαεία*), a festival celebrated at Therapnae in Laconia, in honour of Menelaus and Helena, who were believed to be buried there. (Paus. iii. 19. § 9.) Menelaus was to the Lacedaemonians what Nestor was to the Messenians, a model of a wise and just king, and hence they raised him to the rank of one of the great gods (Isocrat. *Panath.*

p. 247, &), and honoured him and Helena with annual and solemn sacrifices at Therapnae, which continued to be offered in the days of Isocrates. (*Helen. Encom.* p. 218, D.) These solemnities are sometimes called *Ἑλένια*. (See Creuzer, *Symbol.* iii. p. 38.) [L. S.]

MENZA (*τράπεζα*), a table. The simplest kind of table was one with three legs, round, called *cilliba* (Festus, s. v.; Varro, *de Ling. Lat.* v.

25. p. 123, ed. Spengel; Hor. *Sat.* i. 3. 13; Ovid. *Met.* viii. 662), and in Greek *τράπεζα*. (Xen. *Anab.* vii. 3. § 10; Athen. iv. 21, 35, v. 28.) It is shown in the drinking-scene painted on the wall of a wine-shop at Pompeii. (Gell's *Pompeiana*, 1832, vol. ii. p. 11.) (See woodcut.) The term *τράπεζα*, though commonly used in Greek for a table of any kind, must, according to its etymology, have denoted originally a four-legged table. Accordingly, in paintings on vases, the tables are usually represented with four legs, of which an example is given in the annexed cut. (Millin,

Peintures de Vases Antiques, vol. i. pl. 59.) Horace used at Rome a dining-table of white marble, thus combining neatness with economy. (*Sat.* i. 6. 116.) For the houses of the opulent, tables were made of the most valuable and beautiful kinds of wood, especially of maple (*σφερδαμύνη*, Athen. ii. 32; *acorna*, Hor. *Sat.* ii. 8. 10; Mart. xiv. 90), or of the citrus of Africa, which was a species of cypress or juniper. (*Οἰτρεα*, Cic. *Verr.* iv. 17; Mart. ii. 43, xiv. 89; Plin. *H. N.* xiii. 29.) For this purpose the Romans made use of the roots and tubers of the tree, which, when cut, displayed the greatest variety of spots, beautiful waves, and curling veins. The finest specimens of tables so adorned were sold for many thousand pounds. (Plin. *H. N.* xiii. 29, xvi. 26, 84; Tertull. *de Pallio*, *sub fin.*; A. Aikin, *On Ornamental Woods*, pp. 23, 24.) Besides the beauty of the boards (*ἐπιθήματα*) the legs of these tables were often very tasteful, being carved in imitation of lion's or tiger's feet, and made of ivory. (Athen. l. c.; Mart. ii. 43. 9.)

One of the principal improvements was the in-

vention of the *monopodium*, a round table (*orbis*) supported by a single foot; this, with other elegant kinds of furniture, was introduced into Rome from Asia Minor by Cn. Manlius. (Plin. *H.N.* xxxiv. 8.) Under the Roman emperors semi-circular tables were introduced, called *mensae lunatae* from comparing them to the half-moon, and *sigmata*, because they had the form of that letter, C. (Lamprid. *Hel.* 25, 29.) This lunate table was surrounded by a sofa of the same form, called *stibadium*, which was adapted to hold seven or eight persons. (Mart. x. 48, xiv. 87.)

As the table was not very large, as we see from the preceding cut, it was usual to place the dishes and the various kinds of meat upon it, and then to bring it thus furnished to the place where the guests were reclining: hence such phrases as *mensam apponere* or *opponere* (Plaut. *Asin.* v. 1. 2, *Most.* i. 3. 150; Cic. *ad. Att.* xiv. 21; Ovid. *Met.* viii. 570), and *mensam auferre* or *removere*. (Plaut. *Amphit.* ii. 2. 175; Virg. *Aen.* i. 216.) As the board of the table is called by a distinct name *ἐπιθήκη* (Athen. *L. c.*; Pollux, x. 81), it appears that it was very frequently made separate from the tripod or other stand (*κλίσας*) on which it was fixed.

Among the Greeks the tables were not covered with cloths at meals, but were cleansed by the use of wet sponges (Hom. *Od.* i. 111, xx. 151; Mart. xiv. 144), or of fragrant herbs. (Ovid. *Met.* viii. 665.) The Romans used for the same purpose a thick cloth with a long woolly nap (*gausape*, Hor. *L. c.*; Heindorf *in loc.*)

Under the influence of the ideas of hospitality, which have prevailed universally in the primitive states in society, the table was considered sacred. (Juv. ii. 110.) Small statues of the gods were placed upon it. (Arnob. *contra Gentes*, lib. ii.) On this account Hercules was worshipped under the title *τραπέσιος* and *ἐπιτραπέσιος*. The Cretans ate in public; and in the upper part of their *ἀνδρείον*, or public dining-room, there was a constant table set apart for strangers, and another sacred to Jupiter, called *τραπέα ἑρῆα*, or *Δίος ἑρῆον*. (Athen. iv. 22; Höck's *Kreta*, vol. iii. pp. 120—128.)

The two principal courses of a *δειπνον* and *coena*, or a Greek and Roman dinner, were called respectively *πρώτη τράπεζα*, *δεύτερα τράπεζα*, and *mensa prima*, *mensa secunda*. [COENA.]

The name of *τράπεζα* or *mensa* was given to a square tomb-stone (Becker, *Charities*, vol. ii. pp. 191, 193) [FUNUS, p. 556, b.]; and the same name was also given to square altars. Every curia at Rome had an altar, called *mensa*, which was sacred to Juno Curitis. (Dionys. ii. 50; Festus, pp. 49, 64, 156, ed Müller; Macrobi. *Sat.* iii. 11; Becker, *Röm. Alterth.* vol. ii. pt. i. p. 34.) [J. Y.]

MENSARII, MENSULARII, or NUMULARII, were a kind of public bankers at Rome who were appointed by the state; they were distinct from the argentarii, who were common bankers and did business on their own account. (Dig. 2. tit. 13. a. 6.) The mensarii had their banks (*mensae*) like ordinary bankers around the forum, and in the name of the aerarium they offered ready money to debtors who could give security to the state for it. Such an expediency was devised by the state only in times of great distress. The first time that mensarii (*quinqueviri mensarii*) were appointed was in 352 a. c., at the

time when the plebeians were so deeply involved in debt, that they were obliged to borrow money from new creditors in order to pay the old ones, and thus ruined themselves completely. (Liv. vii. 21; compare FENUS (ROMAN) and ARGENTARIUS.) On this occasion they were also authorized to ordain that cattle or land should be received as payment at a fair valuation. Such bankers were appointed at Rome at various times and whenever debts weighed heavily upon the people, but with the exception of the first time they appear during the time of the republic to have always been *triumviri mensarii*. (Liv. xxiii. 21, xxvi. 36.) One class of mensarii, however (perhaps an inferior order), the *mensularii* or *numularii*, seem to have been permanently employed by the state, and these must be meant when we read that not only the aerarium but also private individuals deposited in their hands sums of money which they had to dispose of. (Tacit. *Annal.* vi. 17; Dig. 16. tit. 3. a. 7; 42. tit. 5. a. 24.) As Rome must have often been visited by great numbers of strangers, these public bankers had also, for a certain percentage, to exchange foreign money and give Roman coinage instead, and also to examine all kinds of coins whether they were of the proper metal and genuine or not. (Dig. 46. tit. 3. a. 39.) During the time of the empire such permanent mensarii were under the control of the praefectus urbi and formed a distinct corporation. (Dig. 1. tit. 12. a. 1; Cod. Theod. 16. tit. 4. a. 5.)

Bankers appointed by the state also existed in other ancient towns, and Cicero (*pro Flacc.* 19) mentions mensarii at Temnos in Asia Minor who were appointed by the people. [L. S.]

MENSIS. [CALENDARIUM.]

MENSORES, measurers or surveyors. This name was applied to various classes of persons whose occupation was the measurement of things.

1. It was applied to land-surveyors who measured and defined the extent of fields, and appear to have been the same as the *agrimensores*. (Colum. v. 1; compare AGRIMENSORES.)

2. To persons who measured in the Roman camps the space to be occupied by the tents. They must be distinguished from the *metatores*, who selected the place for a camp. (Veget. *de Re Milit.* ii. 7.)

3. To a class of officers during the time of the empire who provided quarters for the soldiers in the towns through which they passed and where they made a temporary stay. They not only assigned to each soldier the house in which he was to be quartered, but also wrote the name of the occupant upon the door-post, and he who effaced or destroyed this name was punished as a *falsi reus*. (Cod. Theod. 7. tit. 8. a. 4.)

4. *Mensor aedificiorum* is sometimes applied to architects, or more especially to such architects as conducted the erection of public buildings, the plans of which had been drawn up by other architects. (Plin. *Epist.* x. 28 and 29.)

5. *Mensores frumentarii* was the name of officers who had to measure the corn which was conveyed up the Tiber for the public granaries. (Dig. 27. tit. 1. a. 26; Cod. Theod. 14. tit. 9. a. 9; and tit. 15. a. 1.) They were stationed in the port near Ostia, and were employed under the praefectus annonae. Their name is mentioned in various ancient inscriptions. [L. S.]

MENSURA (*μέτρον*), measure, in its widest

sense, signifies the application of number to quantity; or, to speak more specifically, the comparison of different quantities by means of the standard of number. So long as we regard quantity apart from number, we can only compare two quantities by the test of coincidence, by which we ascertain whether they are equal or unequal, and, if the latter, which of the two is the greater; as, for instance, in the case of two lines. The next step is the comparison of one magnitude with certain definite parts, or multiples, of the other, its half or double, third or triple, and so forth. The last step, by which we attain to a complete method of expressing magnitude numerically, is the choice of some fixed magnitude, or UNIT, with which we may compare all other magnitudes of the same kind, so as to ascertain what multiple, part, or parts of the unit each of them is, if they are commensurable, and, if not, as nearly as we please. Thus the unit, in itself, or in its parts, forms a Measure of all magnitudes of the same kind as itself. A set of fixed measures, one for each kind of quantity, with their subdivisions, forms a Metrical System.

The notions which lie at the foundation of mathematical and mechanical science determine of themselves the foundation of every metrical system. Those notions are *Extension* and *Force*; the former in its various kinds, the *line*, the *surface*, the *solid*, and the *angle*; the latter in that manifestation of it which we call *weight*. Now, since extension, whether linear, superficial, or solid, can be estimated by means of one straight line; or by means of two straight lines which form a fixed angle with one another, and which, together with two other lines drawn parallel to them, enclose a surface; or by means of three straight lines, the planes passing through which form a fixed solid angle, and, together with three other planes drawn parallel to them, form a solid:—it follows that all these three kinds of magnitude may be estimated numerically by fixing upon units which are respectively a straight line, a parallelogram having two adjacent sides and an angle fixed, and a parallelepiped having three adjacent edges and an angle fixed; or, simplifying the two latter cases by making the fixed sides equal and the fixed angles right angles, the units are (1) a straight line of fixed length, (2) the square of which that straight line is a side, and (3) the cube of which that line is the edge. Thus we obtain a metrical system for length, surface, and capacity.

For the measurement of angular magnitude, or, which is the same thing, of distance reckoned along the circumference of a circle, one unit is sufficient, namely, a fixed angle, which will exactly measure the sum of four right angles, or a fixed arc of a fixed circle, which will exactly measure the circumference of the circle. Thus we obtain a metrical system for all angular magnitudes, including Time.

Again, with respect to *Force*, of which the test is *weight*, since all forces may be compared, either directly, or through the calculation of the velocities which they produce, with the force of gravity. There are two ways of estimating weight. Either its measure may be deduced from the measure of capacity; for, as the weight of a body depends on the quantity of matter in a given space, estimated by the effect which the force of gravity exerts upon it, we may take the quantity of a fixed kind of matter (water for example) which will exactly fill

the unit of capacity, as the unit of weight. Or we may take a bulk of any substance, without measuring it, as the unit of weight. In the latter case it is evident that, by measuring the solid content either of the unit of weight, or of an equal weight of some other substance, we might derive from our system of weights a system of measures, first, of capacity, and thence of surface, and thence of linear distance; just as by the opposite process we pass from the line to the surface, thence to capacity, and thence to weight.

The statement of these elementary principles, in as brief a form as is consistent with clearness, has appeared necessary, in order to the complete understanding of the metrical systems of the Greeks and Romans, the explanation of which is the object of this article.

I. Origin of Measures.

1. *Of Length.*—The first step in the construction of a metrical system is obviously that of fixing upon the unit of length; and nature itself suggests the choice, for this purpose, of some familiar object, of nearly uniform length, and which is constantly at hand to be referred to. These conditions are fulfilled by various parts of the human body; from which accordingly we find that not only the unit of length, but all the measures of length, except those which are too small or too large to be measured by parts of the body, are derived in every metrical system, except the latest formed of all, the modern French system, which is founded on the measurement of the earth. In support of the general statement now made we have, besides the antecedent argument from the nature of the case, the testimony of all writers, the names of the measures, and the general agreement of their lengths with the parts of the body whose names they bear. (Hom. *Il.* vi. 819, xv. 678, *Od.* xi. 310; Vitruv. iii. 1. § 2—9, with Schneider's Notes; Hero, *Geom.* in *Anacl. Græc.* Paris, 1688, vol. i. pp. 308—315, 388; Diog. Laërt. ix. 51; Ukert, *Geog. d. Græch.* s. *Röm.* vol. i. pt. 2, p. 54.) The chief of such measures, with their Greek and Roman names, are the following: the breadth of a finger (*δάκτυλος*, *digitus*) or thumb (*pollex*); the breadth of the hand, or palm (*πλαιστή*, *palmus*); the span, that is, the distance from the tip of the thumb to the tip of the little finger, when spread out as wide as possible (*σπιθαμή*)*; the length of the foot (*πούς*, *pes*); the cubit, or distance from the elbow to the tip of the middle finger (*πῆχυς*, *cubitus*); a step (*βῆμα*, *gradus*); a double step, or pace (*passus*); and the distance from extremity to extremity of the outstretched arms (*ὀργυρία*). With reference to the last two measures, it will be observed that the Romans derived them from the legs, the Greeks from the arms, the *passus* being one foot shorter than the *ὀργυρία* of the other, and the former (5 feet) belonging to the decimal system, the latter (6 feet) to the duodecimal. The higher measures of length will be referred to presently. Comp. Pollux, ii. 157, 158; who also mentions some less important measures; namely, the *δοχμή* or *δακτυλοδόχη* or *δάρων*, which was the same as the *πλαιστή*; the *ὀρθόδωρον*, or the length of the

* This measure was not in the Roman system. When they wished to express the Greek span, the proper word was *dodrans*, that is, three quarters (of the foot).

whole hand from the wrist to the tips of the fingers; the *λῆξ* or distance from the tip of the thumb to the tip of the forefinger (*λῆξανός*) when extended, the *lesser span*; the *πύγων* and *πυγμή* were modifications of the *πῆχυς*, the *πύγων* being the distance from the elbow to the fingers *when bent*, that is, to the knuckle joints, the *πυγμή* from the fingers *when shut*, that is, to the joints at their base. Other writers mention the *κόνδυλος*, *knuckle*, as equal to two *δάκτυλοι*.

In practical use, such a system as this is sufficient for many ordinary purposes, and every one is familiar with examples of the use of such measures in their plain physical sense. But, to make a system definite, two things are required; namely, to fix upon a precise invariable standard for the unit, or principal measure in the system, for which the foot was naturally chosen; and, secondly, to determine the precise relations which the several measures bear to the foot and to one another. The former of these points we reserve for the present, merely observing that the foot in each system was not very far from ours; the latter was accomplished according to the following system, which will be found to express, not only the relations actually adopted by the Greeks and Romans, but also very nearly those which really exist between the parts in a well-made man, especially according to the standard of the Roman foot. It is worth while also to observe the general accordance, which results from this method of invention, between the metrical systems of all nations.

The Greek and Roman systems are identical in their modes of connecting the measures which are common to the two; but, to avoid confusion, they are exhibited separately.

1. In the Greek system —

4 digits	make	a palm.
3 palms	"	a span.
4 palms	"	a foot.
1½ spans	"	a foot.
2 spans	"	a cubit.
1½ feet	"	a cubit.
2½ feet	"	a step.
4 cubits	"	an <i>ὀργυρία</i> or <i>fathom</i> .*
6 feet	"	an <i>ὀργυρία</i> or fathom.

2. In the Roman system —

4 digits	make	a palm.
4 palms	"	a foot.
1½ feet	"	a cubit.
2½ feet	"	a step.
5 feet	"	a pace.

It will be observed that in this account of the Greek and Roman systems nothing has been said of the *inch*. It was not a measure derived from the human body, but a subdivision which the Romans made of their foot, as they were accustomed to subdivide any unit whatsoever, according to the analogy of the uncial division of the *As*. A more complete view of the Greek and Roman measures of length, with their values, reduced to our system, will be found in the Tables appended to this work.

2. *Itinerary Measures*. — For the higher measures of length, although the continuity of the system was preserved by making them exact mul-

tiples of a foot, yet it is obvious that convenience would demand higher denominations, one of which would be regarded as a new unit. Nay, these higher measures may be viewed, with respect to their origin, as in some sense independent of those smaller measures, with which they were afterwards made to agree. For, just as we have seen that the smaller measures of length are taken from natural objects, so we shall find that, at an early period, the larger measures were not derived artificially from the smaller, but were taken from distances which occur in nature and in ordinary life. Thus, Homer expresses distances by the cast of a stone (*Il.* ii. 12; and so even in later times, Thuc. v. 65, Polyb. v. 6), of a quoit (*Il.* xxiii. 431), and of a spear (*Il.* x. 357, xv. 358, xxiii. 529), and by the still more indefinite description, "as far as a man is heard clearly when he shouts" (*Od.* vi. 294, v. 400, *et alib.*), and again by a standard derived from agriculture, which it is important to notice in comparison with the Roman *actus* (*Il.* x. 352; see below.) Of still longer distances time was made the measure; the journey of a day, or of a day and night, on foot, with a horse, or with a ship; a system too frequently employed now, as well as in ancient times, to need the citation of examples for its illustration. (Comp. Ukert, *Geog. d. Griech. u. Röm.* vol. i. pt. 2, pp. 54, 55.) The system of measurement by *stations* or *posts* should probably be referred to this head, as it is most likely that such distances would be fixed according to the strength of man or horse before the trouble was taken actually to measure them out. Another plan was that which Herodotus several times adopts, and which is also familiar to all ages, the description of one distance by comparing it with another, which was well known. It is true that in many cases this method is evidently only general and indefinite, as when Herodotus describes the length of the Nile as equal to that of the Danube, but there are other cases in which the method was definite; and especially one case, in which it actually formed the foundation of the common system of itinerary measures among the Greeks. We refer, of course, to the length of the *Olympic foot-race-course*, or *STADIUM*, after which all the other Greek stadia were measured out, and which thus formed a universally familiar standard of reference for itinerary measurements. Whether the Olympic stadium was originally measured out precisely equal to 600 feet, or whether, having been accidentally (or at least loosely) assumed, it was found to be so nearly equal to 600 feet, that the measure derived from it was taken at *exactly* 600 feet, it is now impossible to determine. We think the latter more probable; but, whichever may be the truth, the point now insisted upon is not affected, namely, that when an early Greek writer expressed a distance in stadia, he did not mean to suggest to his readers the idea of so many times 600 feet, but of so many times the length of the actual objective Olympic stadium, with which they were all familiar. The corresponding feature in the Roman system furnishes an interesting illustration of the differences of national character. The military notions, which lie at the basis of so many of their institutions, are at once recognised in their *mile*, the *thousand paces* of a foot-march.

3. *Land Measures*. — Another distinct source of the greater measures of length is to be found in the necessity which arises at an early period in

* This word is used as being about the *value* of the measure, for want of an English word to express its *meaning*.

every civilised community for determining the boundaries of land. Herodotus (ii. 109) mentions a tradition, which assigned the invention of geometry to such a necessity which arose in Egypt in the reign of Sesostris. Of course this tradition is now referred to merely as an illustration, not as expressing an historical fact. As in the other cases, the origin of the system lies far back beyond the reach of history; and all that can be done is to trace, with some probability, its successive steps, as indicated by the nature of the case, by the names of the measures, and by the statements of ancient writers. Here too, as in the itinerary distances, the original unit of the system was probably not a specific number of feet, but some natural quantity, which was afterwards brought into accordance with the standard of the smaller measures. Also it is to be observed, that these measures are, from the nature of the case, measures of surface, although in practice they were often used merely as measures of length. The precise fact seems to be that the first natural measure of the sort was one of a considerable length and a very moderate breadth; that then, this measure came to be used as a measure of length alone; and then, for the measure of surface connected with it, they did not revert to the original narrow strip, but took the square of its length. This seems to follow from what the ancient writers tell us of the *actus*, which was the base of the Roman system of land measures, and which is thus defined by Pliny: *Actus vocabatur in quo bores agerentur cum aratro uno impetu iusto* (H. N. xviii. 3); by which he seems to mean the distance which a yoke of oxen could draw a plough at one effort, that is, a *single furrow*: this, he adds, is 120 feet in length. So also Homer (*Il.* x. 351, 352) describes a distance as being "as far as are the furrows of mules." We have, as analogous measures, the *versus*, or length of a furrow before the plough was turned, by which, Varro tells us (*R. R.* i. 10), they measured in Campania, the *jugum* (yoke of oxen) by which, he says, they measured in further Spain, and the Greek *ἀρουρα*, a *furrow*; though the *jugum* was perhaps never any thing else but a measure of surface, for it is defined as the quantity of land which a yoke of oxen could plough in a day. Even with respect to the *actus* itself, a doubt as to its origin is suggested by the use of the word in Roman law for the right of driving cattle through a field (*Cic. p. Cæcili.* 26), and also for the path reserved between fields for the passage of cattle (*Dig.*) just as we also use the word *drove*. Possibly, in the *actus*, as determined in length at 120 feet, and in width at 4, we may have both senses of the word combined. The length of this *actus*, squared, gave the *actus quadratus* of 14,400 square feet, which, with its double, the *jugurum* of 28,800 square feet, formed the base of the Roman system of land measures. Two *jugera*, which, according to Varro (*l. c.*), formed originally the birth-right of every Roman citizen, were thence called *heredium*; 100 *heredia* made a *centuria* of 5,760,000 square feet, or the square of 2400; 4 *centuriae*, arranged as a square, made a *salus*. In this system, the smallest subdivision, and that which connected the system with the foot, was the area of 100 square feet, or the square of ten feet, which was the length of the pole [*DECEMPEDA*; *PERTICA*] used in measuring land. To the *jugurum*, which gradually superseded the *actus* as the unit of the system, the uncial division was

applied, the square of the *decempeda* (or 100 square feet) being its *scrupulum* or 288th part. Also 36 *scrupula* made one *clima*, and 4 *climata* one *actus quadratus*. In the longitudinal *actus* of 120 feet, the oblong *actus* of 120×4 (or 480), square feet, and the *actus quadratus*, with its double the *jugurum*, we also see the connection of the duodecimal system with the decimal.

In the corresponding part of the Greek system, the *πλεθρον* answers to the *actus*, but with just the difference between the decimal and duodecimal systems. As a measure of length, it is 100 feet (10×10 instead of 12×10); and as a measure of surface, it is the square of 100, or 10,000 square feet. The *ἀρουρα* was the quarter of it, that is, 2500 square feet, or the square of 50 feet. A measuring rod of 10 feet, *κλαμος*, appears also in the Greek system, and of this the *πλεθρον* was the square. Also, 6 *καλαμοί* or 10 *ἀργυροί* or 40 *πῆχες* made one *ἄμμα* or *chain*. This system was connected with the itinerary measures by reckoning 6 *plethra* or 100 *ἀργυροί* to the *stadion*. (Herod. ii. 149.) For a complete view of the Greek and Roman measures of length and surface, see the Tables; and, respecting the Roman land measures, compare *ACTUS*, *AGRIMENSORES*, *DECEMPEDA*, *JUGURUM*, and Niebuhr's *Essay On the Roman Mode of partitioning Landed Property, History of Rome*, vol. ii. app. i.

4. *Measures of Capacity.*—The measures of capacity seem to have been arranged on a similar principle to those already noticed; that is, by which they were not derived by a definite process of calculation from the measures of length; but were originally nothing more than the names of different sized vessels of no very definite capacity, which, when the metrical system came to be definitively constituted, were brought into harmony, on the one hand with the measures of length, on the other with those of weight.

The question still remains, which of the three kinds of measures was the one first constructed, and the one from which the others were derived.

II. Whence were the Greek and Roman Measures derived?

In all that we have said about the origin of measures of length, it has neither been stated nor implied that those measures, as definitely fixed by the precise determination of their unit, were obtained in the manner and order that has been described. All that has been said may be true, as we believe it is, and yet the question, *WHAT was the foot, and whence was it derived*, still remains unanswered. To this question we now proceed.

Our limits quite forbid the full discussion of the various opinions which have been put forward on this subject, or even the elaborate development of that view which we believe to be the correct one; and which is, in the main, that which has been put forward by Böckh in his very careful and learned work entitled, *Metrologische Untersuchungen über Gewichte, Münzfüsse und Masse des Alterthums in ihrem Zusammenhange*, Berlin, 1838, 8vo., and to the principal points in which Mr. Grote assents, in his review of Böckh's work in the *Classical Museum* for 1844, vol. i. p. 1. The two chief questions involved in the discussion are these:—1. Whence were the Greek and Roman metrical systems derived? 2. In each of those

systems, which of the three kinds of measure formed the foundation, from which the other two were deduced, length, capacity, or weight?

On the first of these questions our space allows us to do little more than refer the reader to Böckh's elaborate exposition of the opinion, in which few competent readers of his work will fail to coincide, that *the basis of the Greek and Roman metrical systems was that which had prevailed from very early times among the Chaldeans at Babylon, from which or from some common original the Egyptians derived their metrical system; and which was carried by the commerce of the Phoenicians into Greece, whence it passed over into Italy.* On the second question, his researches, as well as the arguments of other writers, may safely be said to have established the position that *weights were determined before measures, and that measures were derived from weights.*

It will be convenient here to give Böckh's own compendium of the main results which he undertakes to establish, with Mr. Grote's statement of the points in which he differs from Böckh. We adopt Mr. Grote's translation of the passage, only substituting *Aeginetan* for *Aeginæan*. "If" (Böckh says, iii. 4. p. 26) "we regard this relation of the weights and measures", based upon a given weight of water, which is the key-stone of the Roman system—and if we carry the application of this water-weight backwards to the chief measures of the ancient world—we shall find a connection really and truly organic between the systems of the different people of antiquity, and we shall arrive at last at the fundamental unity (unit) of weight and measure in the Babylonian system; so that this supposition is found to be verified in all its consequences and details. To give some preliminary intimation of this—I shall show that the Grecian (or, more accurately, the Aeginetan) and the Roman pound are in the ratio of 10 : 9; the Aeginetan pound is half the Aeginetan mina; but the cubical measures stood normally in the ratio of the weights; and therefore the Grecian cubic foot was to the Roman as 10 : 9, and, as the Roman cubic foot weighs 80 pounds of rain-water, so also the Grecian cubic foot weighs 80 Grecian or Aeginetan pounds, equal to 40 Aeginetan minae. The unity (unit) of weight (in Greece) however is, not 40 minae, but 60 minae, or a talent. In the original institutions of the people of antiquity everything has its reason, and we find scarcely anything purely arbitrary: nevertheless, this unity (unit) of weight, the talent, does not coincide with the unity of measure—neither with the cubic foot, nor with any other specific cubical denomination. But the coincidence reveals itself at once, as soon as we discover that the Babylonian cubic foot, standing as it does in the ratio of 3 : 2 to the Grecian + cubic foot, weighs 60 Aeginetan minae (= 60 Babylonian minae = 1 Babylonian talent) of rain-water." (*Class. Mus.* vol. i. p. 4.)

Upon this Mr. Grote remarks: "M. Böckh here promises more than his volume will be found to realise. He does, indeed, satisfactorily show that the Babylonian talent was identical with, and was the original prototype of, the Aeginetan talent, and that the standard and scale of weight was strikingly

and curiously similar in Asia, in Egypt, and in Greece. But he has not, I think, made out the like with regard to the Grecian measures, either of length or capacity, and his proof of the ratio of 3 : 2 between the Babylonian and the Grecian foot will be found altogether defective. Nor has he produced adequate evidence to demonstrate, either the ratio of 10 : 9 between the Grecian or Aeginetan pound and the Roman pound, or that of 1 : 2 between the Aeginetan pound and the Aeginetan mina; the ratio between the Grecian cubic foot and the Roman cubic foot, too, as also that between the Grecian cubic foot and any given Grecian weight, is, as he proposes it, inadmissible. In fact, there is no such thing (properly speaking), as an Aeginetan pound weight: nor is there any fixed normal relation between Grecian weight and Grecian measures, either of length or of capacity, though there is a fixed normal relation between Babylonian weight and Babylonian measures, as also between Roman weight and Roman measures." (*Ibid.* pp. 4, 5: we have introduced the italics to call the reader's attention to the chief points in which Mr. Grote agrees with, and differs from, M. Böckh).

These extracts furnish a pretty good idea of the present position of ancient metrical science. It is impossible here to discuss the points at issue between these two great scholars; but we must remark that, if Böckh has sometimes failed to observe his own distinction between *exact* and *approximate* ratios (see Grote, p. 2), and if he has erred through attempting to establish some ratios which are either fanciful or mere results of an over-strained calculation, or which are too strange to be true,—Mr. Grote has also pressed the other side of the argument in a manner which, if sound, would prevent the establishment of any exact ratio between any two systems, and, in stating that *there is no fixed normal relation between Grecian weight and Grecian measures*, he has put forward a proposition, which he does not sufficiently sustain by proof, which is very improbable in itself, and which is hardly consistent with the acknowledged derivation of the Greek weights from the Babylonian; for it is very unlikely that the Greeks should have taken *their weights and not their measures* from the Babylonians, especially when it is remembered that the Roman system, which was probably derived from the Greek, agreed with the Babylonian *both in weights and measures*, and not only so, but also bore, in its measures of capacity, a definite ratio to the Greek; and, moreover, there appears to be the same inconsistency in the attempt to disconnect the Greek and Roman weights, while admitting the derivation of both from the Babylonian. Be this as it may, we have no hesitation in affirming that the researches of Böckh are so important, that they must be regarded as the starting-point of all future investigations into the subject. The fact also deserves notice, that several of Böckh's conclusions, which Mr. Grote questions as exact and designed ratios, are admitted by him to be very near the truth; and they may therefore, at all events, be useful to us for the purpose of assisting the memory. The rest of this part of the subject, so far at least as our space permits us to notice it, will be found under PONDERA.

The question still remains, *how to determine the Greek and Roman measures* in terms of our own, which can be done, without reference to the doubtful points involved in the foregoing discussion.

* Namely, that between the Roman pound and the Roman amphora or quadrantal.

† By a curious misprint, Mr. Grote has *German*.

III. Determination of the Greek and Roman Measures.

1. *Measures of length.* — Before we can attempt to fix the Greek and Roman foot, we must examine the question, whether the former people (for no one pretends it of the latter) had different standards of length. We think that Ukert has satisfactorily shown that they had not different standards, but always used the Olympic stadium and the foot corresponding to it. (Ukert, *Ueber die Art der Griechen und Römer die Entfernungen zu bestimmen, und über das Stadium*, Weimar, 1813, 8vo.; *Geog. d. Griech. u. Römer*, vol. i. pt. 2, pp. 55, &c.) It is only possible here to give a brief statement of the argument.

It has been supposed by some authors that there were other stadia in use in Greece besides the Olympic. The most ancient writers never either say or hint at such a thing; but when we compare the distances between places, as stated by them in stadia, with the real distances, they are found almost invariably too great if estimated by the Olympic stadium, never too small. Hence the conclusion has been drawn, that the Greeks used for itinerary measurements a stade much smaller than the Olympic. Major Rennell, who analyses several of these statements, gives 505½ feet for the value of the itinerary stade. (*Geography of Herodotus*, sec. 2.) It is, however, scarcely credible that these authors, some of whom expressly inform us that the stade contained 600 feet, should reckon distances by another stade, without giving any intimation of the fact; especially as they usually warn their readers when they speak of measures differing from the common standard. (Herod. ii. 3, 17, 89, 95; Plin. *H. N.* vi. 26. s. 30.) The real cause of the excess in the itinerary distances of the Greeks is explained by Ukert in a way which seems decisive of the question. The most ancient mode of reckoning distances among the Greeks, as among most other nations, was by the number of days required to perform the journey. When the stadium was brought into use, the distances were still computed by days' journeys, but transferred into stadia by reckoning a certain number of stadia to a day's journey. (Herod. iv. 85, 86.) It is evident that nearly all the distances given by the ancient Greek writers were computed, not measured. The uncertainties attending this mode of computation are obvious, and it is equally obvious that, as a general rule, the results would be above the truth. At sea the calculation was made according to the number of stadia which could be sailed over in a day by a good ship, in good order, and with a fair wind. Any failure in these conditions (and some such there must always have been) would increase the number of days' sail, and therefore the calculated distance when reduced to stadia. Similarly by land a day's journey was reckoned equal to the number of stadia which a good traveller (*ἀνὴρ ἐκὼρος*) could perform in a day, which for obvious reasons would generally exceed the space passed over under ordinary circumstances. Even the Greeks themselves are not agreed as to the number of stadia in a day's journey. Herodotus (iv. 86) gives 700 stadia for the voyage of a sailing ship by day, 600 by night. Most commonly 1000 stadia were reckoned as a 24 hours' voyage, but under unfavourable circumstances scarcely 800 were performed. (Marin. *Tyr. op.*

Ptolem. Geog. i. 17.) Allowance must also be made for the windings of the coast, the difficulties of the navigation, the currents of the sea, the varying skill of the seamen, and other circumstances.

A day's journey by land was reckoned at 200 or 180 stadia (Herod. iv. 101; Pausan. x. 33; Ptol. i. 9), or for an army 150 stadia. (Herod. v. 53, 54.) And here also delays would often occur. The ancients themselves differ widely in their accounts of distances, not only as compared with the true distances, but with one another, a fact which the theory of a separate itinerary stade cannot account for, but which is a natural result of their mode of reckoning, as explained above.

The following testimonies are advanced in support of the view of different stadia. Censorinus, who lived in the time of Alexander Severus, after speaking of the astronomical measurements of Eratosthenes and Pythagoras, says that by the stadium used in them we must understand "the stadium which is called Italic, of 625 feet, for there are others besides this, of different lengths, as the Olympic, which consists of 600 feet, and the Pythian, of 1000." (*De Die Natali*, c. 13.) This passage is evidently a complication of blunders. The "Italic stadium," unknown elsewhere, is manifestly the same as the Olympic, but reckoned in Roman feet of which it contained 625. The "Olympic of 600 feet" is the same in Greek feet. The value given for the Pythian stadium is clearly wrong, for the Olympic race-course was the longest in Greece (as appears from the passage of Gellius quoted below), and besides Censorinus obviously confounds the extreme length of the race-courses with the portion of them measured out for the race, the same name, *stadium*, being applied to both; for it is very possible that the former were of different lengths, though the latter never varied.

Aulus Gellius (i. 1) quotes from Plutarch to the effect that Hercules measured out the stadium at Olympia with his own feet, making it 600 feet long; and that when afterwards other stadia were established in Greece, containing the same number of feet, these were shorter than the Olympic in the proportion by which the foot of Hercules exceeded that of other men. But whatever there is of truth in this story is probably the obscure remnant of an ancient tradition respecting the existence of a standard of length greater than the common one, at some distant period: a matter which will be presently referred to.

Attempts have been made, especially by Romé de l'Isle and Gosselin, to prove the existence and to determine the lengths of different stadia from the different lengths assigned by ancient writers to a great circle of the earth. But surely it is far more just and reasonable to take these different values as a proof (among various others) that the ancients did not know the real length of a great circle, than, first assuming that they had such knowledge, to explain them as referring to different standards.

On the whole, therefore, there seems no reason to suppose that different stadia existed before the third century of the Christian era.

From this period, however, we do find varieties of the stade, the chief of which are those of 7 and 7½ to the Roman mile. (Wurm, *de Pond. &c.* § 58.)

The following table of supposed varieties of the stadium is from Hussey's *Ancient Weights, &c.*

	Yards	Feet.	Inches.
Stade assigned to Aristotle's measurement of the earth's surface	109	1	2-26992
Mean geographical stade computed by Major Rennell	168	1	6
Olympic Stade	202	0	9
Stade of $7\frac{1}{4}$ to the Roman mile	215	2	2-4
Stade of 7 to the Roman mile	231	0	5-124

But, although the *stadium* and the foot connected with it were single definite measures throughout Greece, yet we find, in the Eastern countries, Babylon, Syria, and Egypt, and in some neighbouring Greek states, feet longer than the Olympic (not shorter, as Rennell's itinerary stadium would require), the origin of which is to be explained by the co-existence, in the Babylonian system, of a royal or sacred and a common foot and cubit, which were so related to one another that the royal cubit was three finger-breadths longer than the common. (Herod. i. 178: see further under Psa.)

In proceeding to determine the Greek and Roman foot, the most convenient plan is first to fix the latter, and then to derive the former from it.

I. *The Roman foot.* There are five different ways of determining the length of the Roman foot. These are, 1. From ancient measures still in existence, including feet laid down on sepulchral monuments, and foot rules found in the ruins of various cities of the Roman empire; 2. From measurements of known distances along roads, both between mile stones and between places; 3. From measurements of buildings and obelisks; 4. From the contents of certain measures of capacity; and 5. From measurements of a degree on the earth's surface. (For a full historical account of these systems, see the treatises of Wurm, Hussey, and Böckh.)

1. It might appear, at first thoughts, that ancient measures in actual existence would at once give the required information. But these measures are found to differ among themselves. They are of two kinds, foot-measures cut upon grave-stones, and brass or iron measures intended in all probability for actual use. From the nature of the case the latter would probably be more exact than the former, and in fact the measures on the grave-stones are rudely cut, and their subdivisions are of unequal length, so that they have no pretensions to minute accuracy; but on the other hand, it would be absurd to suppose that they would have been made very far wrong. We may safely conclude that they would have about as much accuracy as a measure hastily cut on stone by a mason from the foot-rule used by him in working. Four such measures are preserved in the capitol at Rome. They are called the Statilian, Comutian, Aebutian, and Capponian feet. They have been repeatedly measured, but unfortunately the different measurements gave different results. The brass and iron foot-rules, of which several exist, do not precisely agree in length. There was anciently a standard foot-measure kept in the capitol, called the *pes monetalis*, which was probably lost at the burning of the capitol under Vitellius or Titus.

2. The itinerary measurements are of two kinds, according as they are obtained by measuring the distance from one place to another, or the distance from one mile-stone to another on a Roman road. Both methods have the advantage of the diminution of error which always results from determining a lesser magnitude from a greater, but both are subject to uncertainty from turnings in the road, and from the improbability of the mile-stones having been laid down with minute accuracy; and two other serious objections apply to the former mode, namely, the difficulty of determining the points where the measurement began and ended, and the changes which may have taken place in the direction of the road. Both methods, however, have been tried; the former by Cassini, who measured the distance from Nîmes to Narbonne, and by Riccioli and Grimaldi, who measured that between Modena and Bologna, and the latter by Cassini, between Aix and Arles.

3. The measurement of buildings is rather a verification of the value of the foot as obtained from other sources than an independent evidence. It very seldom happens that we know the number of ancient feet contained in the building measured. We have one such example in the Parthenon, which was called Hecatompedon (hundred-footed, Plutarch, *Pericli*. 13, *Cato*, 5) from the width of its front; but even in this case we cannot tell exactly, till we know something of the length of the Greek foot, to what precise part of the front this measurement applies. Again, there is the obelisk in the Piazza del Popolo at Rome, and the Flaminian obelisk, the heights of which are given by Pliny (*H. N.* xxxvi. 9. s. 14). But the actual heights of these obelisks, as compared with Pliny, would give a value for the foot altogether different from that obtained from other sources. Indeed the numbers in Pliny are undoubtedly corrupt, and, as they stand, it is only the difference of height between the two that can be of any service, and even this gives a result by no means satisfactory. An ingenious emendation by Stuart would remove the difficulty; but it is obvious that a passage which requires a conjectural emendation cannot be taken as an independent authority. There is another mode of deducing the value of the foot from buildings, of the dimensions of which we have no information. The building is measured, and the length thus obtained is divided by the supposed value of the ancient foot (as derived from other evidence), and if a remainder be left, this value of the foot is corrected so that there may be no remainder. It is assumed in this process that no fractions of feet were allowed in the dimensions of the building, and also that the plans were worked out with the most minute exactness, both of which assumptions are not very probable. In fact these measurements have given different values for the foot. "Modern architects," says Mr. Hussey, "do not allow that such calculations could be depended on in modern buildings, for determining the true length of the measures by which they were planned. Nor are the dimensions of the parts of buildings of the middle ages in our own country, as Gothic churches and cathedrals, found to agree exactly, so as to give whole numbers of the standard measure." On the other hand, these measurements, like those on roads, have the advantage of involving, in all probability, very small errors, and of the diminution of the error by division.

4. Villalpando and Eisanschmidt have attempted to deduce the length of the Roman foot from the solid content of the congius of Vespasian. [CONGIUS.] Since the congius was the eighth of the amphora, and the content of the amphora was a cubic foot [QUADRANTAL], the process is to multiply the content of the congius by 8, and extract the cube root of the product. But this process is very uncertain. First, there is a doubt about the content of the congius itself [PONDERA], then it is hardly to be supposed that the content of the congius was actually adapted with perfect accuracy to the length of the foot, and lastly, there is a further risk of error in reversing this process.

5. Some French geographers, and especially M. Gosselin, have supposed that the ancient astronomers were acquainted with the dimensions of a great circle of the earth, and that they founded their whole system of measures on the subdivisions of such a circle. The results of M. Gosselin's calculations agree well with those derived from other sources. But we need better evidence than this agreement to convince us that both the Greeks and Romans, at a very early period, formed a system of measures on such scientific principles; and it is incredible that, if such a system had really existed, there should be no allusion to it in any of the ancient geographers.

The average values of the Roman foot, obtained from these various sources, in terms of the English foot, are the following:—

1. From ancient measures	·9718
2. From itinerary measurements . . .	·97082
3. From measurements of buildings . .	·96994
4. From the congius	·9832
5. From the length of a degree	·9724

of which the first three are the most to be depended on; and of those three the average is ·9708, or 11·6496 inches or 11½·1496 inches; which we may take as the probable value of the Roman foot.

Cagnazzi, whose researches are said by Niebuhr to have placed the true value of the Roman foot beyond a doubt (*Hist. of Rome*, ii. p. 407), gives it a greater length than the above, namely ·29624 of a metre = ·9722 of a foot: but this calculation is objected to by Böckh, as being derived, by a process not perfectly true, from the value of the pound, and as being confirmed only by one existing measure, and also as being at variance with the value of the Greek foot, obtained from independent sources. (*Metrol. Untersuch.* p. 197.) Böckh's own calculation, which agrees with that of Wurm, who follows Raper, gives a value very little less than the above, namely 131·15 Paris lines = ·9704649 of the English foot = 11·6456 inches. As the general result we may take the Roman foot at 11·65 inches, English, or, rather more than ⅔ of an inch less than ours. (The writer of an excellent article *Weights and Measures* in the *Penny Cyclopaedia*, gives 11·62 inches for the value of the Roman foot. He also gives the following rule as representing the ratio far within the limits of probable error:—61 English feet make 63 Roman feet.) For the other measures of length see the Tables.

Some have concluded from the measurements of buildings that the foot was slightly reduced about the time of Domitian, which Wurm accounts for by supposing that the *pes monetalis*, after being destroyed in the fire under Titus, was restored

by Domitian in a careless manner. Both the fact and the explanation, however, appear to be very doubtful.

II. *The Greek foot.* We have no ancient measures by which to determine the length of the Greek foot; but we have the general testimony of ancient writers that it was to the Roman in the ratio of 25:24. The Greek stadium, which contained 600 Greek feet, is said by Roman writers to contain 625 Roman feet; and also a Roman mile, or 5000 feet, was reckoned equal to 8 Greek stadia, or 4800 feet; both of these calculations give the above ratio of 25:24. (Plin. *H.N.* ii. 23. a. 21, 108. a. 112; Colum. v. 1; Polyb. iii. 39; Strab. vii. p. 322.) If therefore the Roman foot was ·9708 of the English, the Greek foot was equal to 1·01125 English feet, or 12·135 inches.

This value is confirmed by the measurement of the Parthenon. "Stuart" (*Antiq. Ath.* ii. p. 8), says Mr. Hussey, "measured the upper step of the basement of the Parthenon, which is the platform on which the pillars stand, and is exactly that part of the building where we should expect that the measure would have been taken, if the name Hecatompedon was really given it on account of the dimensions. He found the width of the front to be 101 feet 1·7 inches, the length of the side 227 feet 7·05 inches; and since these two quantities are very nearly in the ratio of 100 to 225, he inferred that the two sides really contained these two numbers of feet. From this he calculated the value of the foot, from the front 12·137 inches, from the side 12·138 inches: of which the greatest exceeds the value given above by only ·003 of an inch." Other measurements of the Parthenon and of other buildings at Athens tend to the same result.

Strabo, however (*l.c.*) quotes from Polybius a calculation which would make the Greek and Roman foot equal, but it is perfectly clear that there is a mistake in this statement. Plutarch again (*C. Gracch.* 7) says expressly that the mile is a little less than 8 stadia, which would give a rather smaller ratio than that of 24:25 for the ratio of the Roman to the Greek foot. It is on the authority of this passage that Böckh gives the value above mentioned for the Roman foot. If, according to the supposition already noticed, a slight diminution took place in the Roman foot, this would account for the difference. But perhaps we ought not to consider this solitary passage of sufficient weight to influence the calculation.

As the general result, we may take the Greek foot at 12·135 English inches, that is, rather more than 1·10th of an inch greater than the English foot. For the other measures see the Tables.

2. *Measures of Surface.*—These are easily derived from the measures of length. See the Tables.

3. *Measures of Capacity.*—The determination of the measures of capacity is so inseparably connected with the question of the settlement of the Greek and Roman weights, that it is better to speak of them under PONDERA, to which article also the reader is referred for the literature of the whole subject.

4. *Angular and Circular Measures.*—The chief, and almost the only importance of this part of the subject is in its application to the measurement of circles and degrees on the earth's surface, and to the measures of time. The former class of measures will be treated of in the *Dictionary of*

Greek and Roman Geography. Respecting the measures of time, see ANNUS, HORA, &c. [P.S.]

ME'NSTRUUM. [SERVUS.]

ME'NUSIS (μήνσις). [ECCLESIA, p. 443, a.]

MERCENARII (μισθοφόροι, μισθοφόροι, more commonly ξένοι), mercenary troops. At an early period there was no such thing as a standing army, or mercenary force, in the Greek republics. The former would have excited jealousy, lest it should oppress the people, as the chosen band did at Argos (Pausan. ii. 20. § 2; Thucyd. v. 81); and for the latter there was rarely any occasion. The citizens of every state formed a national militia for the defence of their country, and were bound to serve for a certain period at their own expense, the higher classes usually serving in the cavalry, or heavy-armed infantry, the lower classes as light-armed troops. Foreigners were rarely employed; the Carians, Cretans, and Arcadians, who served as mercenaries (Herod. i. 171; Pausan. iv. 8. § 3, 10. § 1, 19. § 4; Wachsmuth, *Hell. Alterth.* vol. i. pt. i. p. 30; Schömann, *Ant. jur. pub. Gr.* p. 159), are an exception to the general rule. In the Persian war we find a small number of Arcadians offering to serve under Xerxes (Herod. viii. 26); and they seemed to have used themselves to such employment down to a much later period. (Xenoph. *Hellen.* vii. 1. § 23; Schömann, *Id.* p. 409.) The practice of maintaining a standing force was introduced by the tyrants, who kept guards and soldiers in their pay (δορυφόροι, μισθοφόροι) to prevent insurrections of the people, and preserve their influence abroad. As it was unsafe to trust arms in the hands of their own subjects, they usually employed foreigners. (Thucyd. vi. 55; Diod. xi. 67, 72; Xenoph. *Hier.* v. 3.) Hence, and because citizen soldiers used to fight without pay, ξένοι came to signify mercenaries. (Harpoer. s. v. ξενενομένους.) We must distinguish, however, between those who fought as auxiliaries, whether for pay or otherwise, under commission from their own country, and those who did not. The former were ἐπικουροί, not ξένοι. (Herod. i. 64, iii. 45, v. 63; Thucyd. i. 60, ii. 70, iii. 34, iv. 80.) The terms ξένοι and ξενικόν implied that the troops were independent of, or severed from, their own country.

The first Grecian people who commenced the employment of mercenaries on a large scale, were the Athenians. While the tribute which they received from the allies placed a considerable revenue at their disposal, the wars which their ambition led them into compelled them to maintain a large force, naval and military, which their own population was unable to supply. Hence they swelled their armies with foreigners. Thucydides makes the Corinthian ambassador at Sparta say, ὡνητὴ ἡ Ἀθηναίων δύναμις. (i. 121.) They perceived also the advantage of employing men of different nations in that service, for which from habit they were best qualified; as, for instance, Cretan archers and slingers, Thracian peltastæ. (Thucyd. vi. 25, vii. 27; Aristoph. *Acharn.* 159.) At the same time the practice of paying the citizens was introduced; a measure of Pericles, which was indeed both just and unavoidable (for no man was bound by law, or could be expected, to maintain himself for a long campaign); but which tended to efface the distinction between the native soldier and the foreigner. Other Greek nations soon imitated the Athenians (Thucyd. iv. 76), and the appetite for

pay was greatly promoted by the distribution of Persian money among the belligerents. (Thucyd. viii. 5, 29, 45; Xenoph. *Hellen.* i. 5. § 3.) At the close of the Peloponnesian war, large numbers of men who had been accustomed to live by war were thrown out of employment; many were in exile or discontented with the state of things at home; all such persons were eager to engage in a foreign service. Hence there arose in Greece a body of men who made arms their profession, and cared little on which side they fought, provided there were a suitable prospect of gaining distinction or emolument. Conon engaged mercenaries with Persian money. Agesilaus encouraged the practice, and the Spartans allowed the members of their confederacy to furnish money instead of men for the same purpose. (Xenoph. *Hell.* iii. 4. § 15, iv. 3. § 15, v. 2. § 21.) The Greeks who followed Cyrus in his expedition against Artaxerxes, were mercenaries. (Xenoph. *Anab.* i. 3. § 21.) So were the famous peltastæ of Chabrias and Iphicrates. (Harpoer. s. v. ξενικόν ἐν Κορίνθῳ; Aristoph. *Plut.* 173.) The Phocians, under Philomelus, Onomarchus, and Phayllus, carried on the sacred war by the aid of mercenaries, paid out of the treasures of the Delphian temple. (Diod. xvi. 30, &c.) But higher pay and richer plunder were in general to be found in Asia, where the disturbed state of the empire created continued occasions for the services of Greek auxiliaries, whose superior discipline and courage were felt and acknowledged by the Barbarians. Even the Spartans sent their king Agesilaus into Egypt, for the sake of obtaining Persian gold. Afterwards we find a large body of Greeks serving under Darius against Alexander. It is proper here to notice the evil consequences that resulted from this employment of mercenaries, especially to Athens, which employed them more than any other Greek state. It might be expected that the facility of hiring trained soldiers, whose experience gave them great advantages, would lead to the disuse of military service by the citizens. Such was the case. The Athenian citizens stayed at home and became enervated and corrupted by the love of ease and pleasure; while the conduct of wars, carried on for their benefit, was entrusted to men over whom they had little control. Even the general, though commonly an Athenian, was compelled frequently to comply with the humours, or follow the example of his troops. To conciliate them, or to pay them their arrears, he might be driven to commit acts of plunder and outrage upon the friends and allies of Athens, which thus found enemies where she least expected. It was not unusual for the generals to engage in enterprises foreign to the purposes for which they were sent out, and unconnected with the interests of their country, whose resources they wasted, while they sought their own advantage. The expeditions of Chabrias and Iphicrates to Egypt are examples of this. But the most signal example is the conduct of the adventurer Charidemus. Upon all these matters we may refer the reader more particularly to Demosthenes, whose comments upon the disastrous policy pursued by his countrymen were no less just than they were wise and statesmanlike. (Demosth. *Philip.* i. p. 46, c. *Aristocr.* pp. 666, 671; περὶ τοῦ στεφ. τῆς τριμ. p. 1232, &c.; Athen. xii. 43; Thirlwall, *Hist. of Greece*, vol. v. p. 210; Wachsmuth, vol. i. pt. ii. p. 309.) The Romans at a comparatively early time introduced

the practice of paying their own citizens for their service in the army [STIPENDIUM], but mercenary troops, in the usual acceptance of the term, were unknown among them till at a very late period. [C. R. K.]

MERENDA. [CORNIA, p. 306, b.]

MERIDIANI. [GLADIATORES, p. 575, b.]

METAE. [CIRCUS, p. 284, a.]

METAGEITNIA (*μεταγειτνία*), a festival celebrated by the Attic demos Melite, in honour of Apollo Metageitnios. The chief solemnities consisted in offering sacrifices, and the festival was believed to commemorate the emigration (*γείτνιασις πρὸς ἑτέρους*) of the inhabitants of Melite to Diomia. (Plut. *de Exil.* p. 601, b.; comp. Suidas, and Harpocrat. s. v. *Μεταγειτνίων*.) [L. S.]

METALLUM (*μέταλλον*). The Greek word originally signified a *pit* or *cave*, where anything is sought for by digging, hence a *mine*, and hence any mineral found in a mine, especially *metal*. In Latin, the word means both a *mine* and *metal*, the latter sense, however, preponderating in use. The object of this article is to give a brief general view of the acquaintance which the Greeks and Romans had with the metals, and the uses to which they applied them.

The metals which have been more or less known from the earliest period of which we have any information are those which were long distinguished as the seven principal metals, namely, gold, silver, copper, tin, iron, lead, and mercury. (Some very interesting information, which does not fall within the province of this work, may be read in Beckmann's *History of Inventions*, by Johnston, vol. ii. pp. 23, &c. 4th ed.) If to this list we add the compound of gold and silver called *electrum*, the compound of copper and tin called *χαλκός* and *aes* (bronze), and steel, we have, in all probability, a complete list of the metals known to the Greeks and Romans, with the exception of zinc, which they do not seem to have known as a metal, but only in its ore, and of brass, which they regarded as a sort of bronze. (See below.)

The early Greeks were no doubt chiefly indebted for a supply of the various metals to the commerce of the Phoenicians, who procured them principally from Arabia and Spain, and tin from our own island and the East. In the Homeric poems we find an allusion to this traffic as one in which the Greeks of the western coast were already engaged; where Athena personates Menetes, the ruler of the Taphians, carrying shining iron to Temesa in Cyprus, to exchange it for copper. (*Od.* i. 184, comp. Nitzsch's note.) The Homeric poems furnish ample proofs of how much more plentiful copper was than iron. The former is the common material of arms, instruments, and vessels of various sorts [AES]; the latter is mentioned much more rarely, and is distinguished by an epithet implying the difficulty of working it (*πολύκιμπος*, *Il.* vi. 48), and its adjective is frequently used metaphorically to express the greatest stubbornness (*Od.* v. 191, &c.: see Seiler and Jacobitz, s. v. *σιδήρεος* and *σιδήρεος*). Hesiod carried us back to a period when iron was unknown (*Op. et Di.* 150, 151):

τοῖς δ' ἦν χαλκεαὶ μὲν τεύχεα, χαλκεοὶ δὲ τε οἶκοι,
χαλκῷ δ' εἰργάζοντο μέλας δ' οὐκ ἔσκε σιδήρεος,

and though the period thus described is mythical, yet the idea of it was clearly connected with the belief that iron had been the last discovered of all

the metals. (See Höckh, *Creta*, vol. i. p. 260; Millin, *Minéralogie Homérique*.) The importance of hardening the copper used for arms and armour, and so forth, is a presumption in favour of the knowledge and use of tin; but we have also definite mention of this metal (*κασσίτερος*) several times in the Iliad; and it seems not improbable than then, as now, it was generally plated on another metal. (See Liddell and Scott, and Seiler and Jacobitz, s. v.; Beckmann, vol. ii. p. 206, foll.) The art of hardening copper by the admixture of tin was known before the historical period. (Comp. AES.) With respect to steel, it is a much disputed point whether this metal is the proper sense of the word *κράνος* in Homer (*Il.* xi. 24, 35, *Od.* vii. 87) and Hesiod (*Som.* 143), but at all events it is highly probable that this is the meaning of *ἀδάμας* in Hesiod (*Som.* 231, *Theog.* 161; see the lexicographers, s. v.), the commentators on Homer and Hesiod, in *Il.*, and Beckmann, vol. ii. p. 324). It would appear from the manner in which Aeschylus refers to the Chalybes, taken in connection with the traditions respecting the early intercourse of the Greeks with the shores of the Baltic, that the iron and steel works of that people were known at a very early period, and that it was from them chiefly that the Greeks procured their iron and steel. (Aesch. *Prom.* 720; Apollon. Rhod. ii. 1000; Xen. *Anab.* v. 5. § 1; Ritter, *Erkunde*, vol. ii. p. 776; Höckh, *Creta*, vol. i. p. 294.) Enough has already been said respecting the early knowledge of the precious metals, separately and in combination, under ARGENTUM, AURUM, and ELECTRUM. In drawing inferences, however, from Homer's allusions to these and the other materials of the useful and fine arts, we must be on our guard not to make the poet's imagination our standard of their actual abundance. (See further, concerning the real or supposed knowledge of metals and metallurgy in the earliest times, Plin. *H. N.* vii. 56, s. 57.)

If we turn from the metals themselves to the art of working them, still taking the poems of Homer and Hesiod for our guide, we find the Greeks of that early period perfectly acquainted with the processes of smelting the metal from the ore and of forging heated masses into the required shapes, by the aid of the hammer and tongs. It may, indeed, be doubted whether the *χάρατοι*, into which Hephaestus throws the materials of the shield of Achilles, and which are worked by the blast of twenty pairs of bellows (*φύσαι*) are smelting-furnaces or mere smith's forges (*Il.* xviii. 470), but the former sense seems to be required in the passage of Hesiod. (*Theog.* 863.) Both Homer and Hesiod refer to the smith's workshop (*χαλκήϊος δόμος*, *χαλκείος δῶκος*) as a common lounge and as a place of shelter to which the poor resorted for its warmth. (*Od.* xviii. 328, *Op. et Di.* 491.) The whole of Homer's description of the workshop of Hephaestus deserves careful study (*Il.* xviii. 369, &c.). The smith's instruments were the anvil (*ἀκμων*) with the block on which it rested (*ἀκμόθετον*), the tongs (*πυράγρη*), and the hammer (*βαυστήρ*, *σφίρα*, *Il.* i. c., *Od.* iii. 433—435). [INCUS, FORCEPS, MALLEUS.] The arts of casting metals into moulds, and of welding, or even of soldering pieces of metal together, were as yet unknown. In large works, hammered plates were united by mechanical fastenings, nails, pins, rivets, cramps, or dovetails (*δεσμοί*, *ῥοιοί*, *περόναι*, *κέντρα*), and specimens of this sort of work in the bronze statues

of the earliest period were still to be seen in the time of Pausanias (*Il.* xi. 634, xviii. 379; *Paus.* x. 16. § 1). The art of embossing, or fastening pieces of one metal on to the surface of another (*ἐμψαστική τέχνη*), is referred to several times in Homer (*Il.* xi. 24, 35; Lobeck, *ad Soph. Aj.* 846, &c.). Gilding was commonly practised: one interesting example is the gilding of the horns of an ox about to be sacrificed. (*Od.* iii. 425, &c.) This passage furnishes a striking instance of the use of words connected with *χαλκός* for working in any kind of metal: thus, the artificer is called by the generic term, *χαλκεύς* (432), as well as by the specific name, *χρυσόχοδος* (425), and his tools are the *δύο χαλκήϊα, οἷόν τε χρυσὸν εἰργάετο* (v. 433, 435). Lastly, the image used to describe the hissing of the burning stake when plunged in the eye of Polyphemus, shows an acquaintance with the process of dipping red-hot iron in water to harden it. (*Od.* xi. 391, comp. *Soph. Aj.* 720.)

The advances made in the art of metallurgy in subsequent times are chiefly connected with the improvements in the art of statuary. The method of working, as described in Homer, seems to have long prevailed, namely by beating out lumps of the material into the form proposed, and afterwards fitting the pieces together by means of pins or keys. It was called *σφυρήλατος*, from *σφύρα*, a hammer. Pausanias (iii. 17. § 6) describes this process in speaking of a very ancient statue of Jupiter at Sparta, the work of Learchus of Rhegium. With respect to its supposed antiquity, Pausanias can only mean that it was very ancient, and of the archaic style of art. The term *σφυρήλατος* is used by Diodorus (ii. 9) in describing a very ancient golden table which was said to have decorated the celebrated gardens of the palace of Ninus and Semiramis, at Babylon. Pliny (*H. N.* xxxiii. 4. s. 24.) mentions a golden statue of Diana Anaitis worked in the same way, which he calls *holosphyraton*. A statue of Dionysius by Onassimedes, of solid bronze, is mentioned by Pausanias (ix. 12. § 3) as existing at Thebes in his time. The next mode, among the Greeks, of executing metal works seems to have been by plating upon a nucleus, or general form, of wood—a practice which was employed also by the Egyptians, as is proved by a specimen of their art preserved in the British Museum. The subject is a small head of Osiris, and the wood is still remaining within the metal. It is probable that the terms *holosphyraton* and *sphyraton* were intended to designate the two modes of hammer-work; the first on a solid mass, and the other hammering out plates. (Comp. *MALLEUS*.)

It is extremely difficult to determine at what date the casting of metal was introduced. That it was known at a very early period there can be no doubt, although it may not have been exercised by statuary in European Greece till a comparatively late date. The art of founding may be divided into three classes or stages. The first is the simple melting of metals either from the solid form, or from the ore; the second, casting the fused metals into prepared forms or moulds; and the third, casting into a mould, with a core or internal nucleus, by which the metal may be preserved of a determined thickness. The first stage must have been known at a period of which we have no record beyond a passage in the book of Job (xxviii. 1, 2), which establishes the fact that some of the processes of metallurgy, such as the reduction of

gold, silver, iron, and copper from their ores, were well known when that book was composed. The casting of metal into moulds must also have been practised very early. There are no means of knowing of what material or composition the forms or moulds were made, but in all probability clay (dried, and then perhaps baked) was employed for the purpose. The circumstance of a spot where clay abounded having been chosen for the founding of the bronze works for the temple of Solomon supports this supposition. (1 Kings, vii. 46). Of course all the earliest works produced in this stage of the art must have been solid. The third process, that of casting into a mould with a core, was an important step in the statuary's art. Unfortunately there is no better record of the time, nor of the mode in which this was effected by the ancients, than the statements of Pausanias and Pliny, according to whom the art of casting in bronze and in iron was invented by Rhoecus and Theodorus of Samos, who probably lived in the sixth and fifth centuries before our era. (*Paus.* iii. 12. § 8, viii. 14 § 5; *Plin. H. N.* xxxv. 12. s. 43; *Dict. of Biog.* s. *vv.* *Rhoecus, Theodorus*.)

The ancients used something answering the purpose of a solder for fastening the different pieces of metal together; but it is difficult to determine whether the term *κόλλησις* means a solder or only a species of glue. Pausanias distinctly speaks of it as something different from nails or cramps, and gives us the name of its inventor, Glaucus of Chios, who appears to have lived earlier than the Samian artists just referred to (Herod. i. 25; *Paus.* x. 16. § 1; *Plut. de Def. Or.* 47, p. 436; *Dict. of Biog.* s. *v.*). Pliny in like manner speaks of a solder under the title of *plumbum argentarium* (*H. N.* xxxiv. 17. s. 48). Many of the works in the British Museum, as well as in other collections, are composed of pieces of metal which have been joined together, but whether by clamps, rivets, or soldering, it is now impossible to determine accurately, on account of the rust about the edges of the plates. The modern practice of welding pieces of metal together seems to have been altogether unknown to the ancients.

Respecting the supply and use of metals in the historical period, little remains to be added to what has been said under *ÆS*, *ARGENTUM*, *AURUM*, *CÆLATURA*, *ELECTRUM*, *STATUARIA*, &c. Iron was found chiefly in Laconia and on the shores of the Black Sea, and was brought especially from Sinope. Stephanus Byzantinus, who mentions this fact, states the purposes for which the two sorts of iron were considered respectively better fitted (*s. v.* *Λακονδαίων*). The whole subject of metals and metal-work is treated of by Pliny in the thirty-third and thirty-fourth books of his *Historia Naturalis*.

One point not yet noticed is the question, whether the ancients possessed a knowledge of *zinc*. That they rarely if ever used it as an alloy of copper is proved by the analysis of existing specimens of their bronze [*ÆS*]; but that they were absolutely ignorant of it can easily be disproved. One of the most important passages on the subject is in Strabo (xiii. p. 610), who says that "in the neighbourhood of Andeira (in the Troas) there is a certain stone which, on being burnt, becomes iron; then, on being smelted with a certain earth, it distils *ψευδάργυρος*, and with the addition of copper it becomes what is called *κράμα* (which may mean

either an alloy in general, or a particular kind of alloy), which some call *δρείχαλκος*; and *ψευδάργυρος* is also found about *Imolus*." In all probability the *stone* here mentioned is the common zinc ore called calamine, which Pliny and other writers call *cadmium*. If so, *ψευδάργυρος* must be metallic zinc, and *δρείχαλκος* brass. For a further discussion of this subject, into which we have not space to enter, the reader is referred to Beckmann, vol. ii. pp. 32, &c.

Respecting the use of metals for money, see NUMMUS.

Only a few words are necessary on the word *metallum* in its other sense. Nearly all that is known on the subject of the Greek mines, the mode of working them, and the revenues derived from them is contained in Böckh's *Essay on the Silver Mines of Laurion* appended to his *Public Economy of Athens*. Respecting the Roman mines, see VENTIGALIA. [P. 8.]

METATORES. [CASTRA, p. 246, a.]

METOECI (*μέτοικοι*), is the name by which, at Athens and in other Greek states, the resident aliens were designated, and these must be distinguished from such strangers as made only a transitory stay in a place, for Harpocration (*s. v.*) expressly mentions as a characteristic of a *μέτοικος*, that he resided permanently in the place. No city of Greece perhaps had such a number of resident aliens as Athens, as none afforded to strangers greater advantages and conveniences, or a more agreeable mode of living. In the census instituted by Demetrius Phalereus (309 a. c.), the number of resident aliens at Athens was 10,000, in which number women and children were probably not included. (Athen. vi. p. 272.) These aliens were persons from all parts of Greece, as well as from barbarous countries, such as Lydians, Phrygians, and Syrians, or Attic freedmen [LIBERTUS (GREEK)], and these people had chosen Athens as their adoptive country, either on account of its resources for amusement and instruction, or on account of the facilities it afforded for carrying on mercantile business. The latter class of persons seems to have been by far the most numerous. The jealousy with which the citizens of the ancient Greek republics kept their body clear of intruders, is also manifest in their regulations concerning aliens. However long they might have resided in Athens, they were always regarded as strangers, whence they are sometimes called *ξένοι*, and to remind them of their position they had on some occasions to perform certain degrading services to the Athenian citizens. These services [HYDRIAPHORIA] were however in all probability not intended to hurt the feelings of the aliens, but were simply acts symbolical of their relation to the citizens.

Aliens were not allowed to acquire landed property in the state they had chosen for their residence, and were consequently obliged to live in hired houses or apartments (Demosth. *pro Phorm.* p. 946; Xen. *de Vectig.* ii. 2; Aristot. *Oecon.* ii. 2, 3; compare Böckh's *Publ. Econ.* i. § 24), and hence the letting of houses was a subject of much speculation and profit at Athens. As the aliens did not constitute a part of the state, and were yet in constant intercourse and commerce with its members, every alien was obliged to select a citizen for his patron (*προσδάτης*), who was not only the mediator between them and the state, through whom alone they could transact any legal business

whether private or public, but was at the same time answerable (*εγγυητής*) to the state for the conduct of his client. (Etymol. M. s. v. *Ἀπροστασίου*.) On the other hand, however, the state allowed the aliens to carry on all kinds of industry and commerce under the protection of the law; in fact at Athens nearly all business was in the hands of aliens, who on this account lived for the most part in the Peiræus. (Xen. *de Vectig.* c. 2, *de Rep. Ath.* i. 12.)

Each family of aliens, whether they availed themselves of the privilege of carrying on any mercantile business or not, had to pay an annual tax (*μετοίκιον* or *ξενικά*) of twelve drachmæ, or if the head of the family was a widow, of only six drachmæ. (Böckh, *Publ. Econ.* iii. § 7; Isæus *op. Harpocrat.* s. v. *Μετοίκιον*.) If aliens did not pay this tax, or if they assumed the right of citizens, and probably also in case they refused to select a patron, they not only forfeited the protection of the state, but were sold as slaves. [AFROSTASIOU ΔΙΚΗ.] In some cases, however, though they are of rare occurrence, aliens without having the isopolity, might become exempt from the *μετοίκιον* (*ἀτέλεια μετοίκιον*) as well as from other obligations. (Demosth. c. *Aristocrat.* p. 691; Plut. *Vit. dec. Orat.* p. 842; Demosth. c. *Aristog.* p. 787; Suidas, s. v. *Μετοίκιον*.) Extraordinary taxes and liturgies (*ελοφοπά* and *λειτούργια*) devolved upon aliens no less than upon citizens (Demosth. c. *Androt.* p. 612), though there must have been a difference between the liturgies performed by citizens and those performed by aliens. In what this difference consisted is nowhere expressly mentioned, but we have reason to believe that with the exception of the trierarchy and gymnasiarchy, all other liturgies might devolve upon aliens, though perhaps only on certain occasions, as the choregia at the festival of the Lenææ. (Schol. ad *Aristoph. Plut.* 954; compare Böckh, *Publ. Econ.* iv. § 10.) The extraordinary taxes (*ελοφοπά*) which aliens had to pay, seem also in some degree to have differed from those paid by citizens; and it is clear from Demosthenes (c. *Androt.* p. 609 and 612), that they were taxed higher than citizens of the same census. The aliens were also obliged, like citizens, to serve in the regular armies and in the fleet, both abroad and at home, for the defence of the city. (Xen. *de Vectig.* l. c.; Thucyd. ii. 13, iv. 90; Demosth. c. *Philip.* i. p. 50; Thucyd. i. 143, iii. 16.) Respecting those *μέτοικοι* who had obtained the *ισοτέλεια*, see CIVITAS (GREEK). The heirs of a *μέτοικος* who died in Attica, were under the jurisdiction of the polemarch. (Demosth. c. *Steph.* ii. p. 1135.)

The preceding account of the condition of the aliens at Athens applies with very few modifications to most other parts of Greece. (Compare Petitus, *Legg. Att.* ii. 5. p. 246, &c.; F. A. Wolf, *Proleg. ad Leptia.* p. lxi. &c.; Hermann, *Polit. Ant.* § 115.) [L. 8.]

METOPA or METOPE (*μετόπη*), the name applied to each of the spaces between the triglyphs in the frieze of the Doric order, and by metonymy to the sculptured ornament with which those spaces were filled up. In the original significance of the parts the triglyphs represent the ends of the cross-beams or joists which rested on the architrave; the beds of these beams were called *ὀκρά*, and hence the spaces between them *μετόπαι*. (Vitruv. iv. 2. § 4.) Originally they

were left open; next they were filled up with plain slabs, as in the propylaea at Eleusia, and many other buildings, and lastly, but still at an early period, they were adorned with sculptures either in low or high relief. The earliest existing examples of sculptured metopes are probably those of the middle temple on the acropolis of Selinus, which had metopes only on its east front, and in which the style of the sculptures is so rude as almost to remind one of some Mexican works of art. The date is probably between 620 and 580 a.c. The next in antiquity are those from the middle temple on the eastern side of the lower city of Selinus, in which there is a marked improvement, but which still belong to the archaic style. Their date is in the former half of the 6th century a.c. A still further progress may be observed in the metopes of the southern temple on the eastern hill, which belongs to the second half of the same century. In these the ground is tufa and the figures marble; the others are entirely of tufa. (See figures of the Selinuntine metopes in the *Atlas zu Kugler's Kunstgeschichte*, pt. ii. pl. 5. figs. 1—4; comp. Müller, *Archäol. d. Kunst*, § 90, n. 2). Thus these Selinuntine metopes, with the works of the epoch of perfect art, namely the metopes of the temple of Theseus and of the Parthenon, form an interesting series of illustrations of the progress of Grecian sculpture. The metopes from the Parthenon, now in the British Museum, are too well known to need description: but it is important to notice the marked difference in their style; some show evident traces of the archaic school, while others are worthy of the hand of Pheidias himself. In the later orders the metopes are not seen, the whole frieze being brought to one surface. This is the case even in some ancient specimens of the Doric order. (Comp. COLUMNA, and the plates of the order in Mauch, *Architekton. Ordnungen*.) [P.S.]

METRETES (μετρητής), or **AMPHORA METRETES** (ἀμφορεύς μετρητής, the standard amphora), was the principal Greek liquid measure. It contained 12 choes, 48 choenices, 72 sextas (sestertii), and 144 cotylae. It was 3-4ths of the medimnus, the chief dry measure. The Attic metretes was half as large again as the Roman amphora quadrantal, and contained a little less than 9 gallons. (See the Tables.) If we take, according to Böckh's views, the Greek cubic foot as equal to 53½ Roman sestertii, then, since the Attic metretes contained 72 sestertii, we have the ratio of the metretes to the cubic foot as 72 : 53½ or as 27 : 20, or as 135 : 100, or as 1.35 to 1, or nearly as 4 : 3.

The Aeginetan metretes was to the cubic foot (still following Böckh's calculations) in the ratio of 9 : 4, and to the Attic metretes in the ratio of 5 : 3, so that the Aeginetan measure was 2-5ths greater than the Attic; and since the Attic contained 72 sestertii, the Aeginetan contained 120, which is precisely the content assigned by Cleopatra, Galen, and Didymus, to the Babylonian, Syrian, or Antiochean metretes, which belonged to the same system as the Eginetan. [MENSURA, PONDERA].

The Macedonian metretes is inferred to have been much smaller than the Attic, from the circumstance mentioned by Aristotle (*Hist. Anim.* viii. 9) of an elephant's drinking 14 of them at once; but this is doubtful. [P.S.]

METRO'NOMI (μετρονόμοι) were officers at Athens belonging to that class which we might term police-officers. They were, like all officers of this kind, appointed by lot. Their number is stated differently: some say that there were fifteen (ten for the Peiraeus and five for the city); some say twenty-four (fifteen for the Peiraeus, and nine for the city); and others state that there were only ten, five for the Peiraeus and five for the city. (Harpocrat., Suidas, Phot. and Lex. Seg. s. v. Μετρονόμοι.) Böckh (*Publ. Econ.* i. § 9. n. 193) would alter all these passages of the grammarians so as to make them say, that the whole number of metronomi was fifteen, and that ten were for the city and five for the Peiraeus, because the sitophylaces were distributed in the same manner. But there does not appear sufficient ground for such a bold alteration, and it seems at any rate probable that the number of these officers, as the grammarians state, was necessarily greater in the port-town than in the city, for there must have been more business for them in the Peiraeus than at Athens, which was not the case with the sitophylaces. The duties of the metronomi were to watch that the weights and measures used by tradesmen and merchants should have the size and weight prescribed by law, and either to punish offenders or to receive complaints against them, for the real nature of the jurisdiction of the metronomi is not known. (Meier and Schömann, *Att. Proc.* p. 93, &c.) [L.S.]

METROPOLIS. [COLONIA, p. 313, b.]

MILLIARE, **MILLIARIUM**, or **MILLE PASSUUM** (μῖλιον), the Roman mile, consisted of 1000 paces (passus) of 5 feet each, and was therefore = 5000 feet. Taking the Roman foot at 11.6496 English inches, the Roman mile would be 1618 English yards, or 142 yards less than the English statute mile. By another calculation, in which the foot is taken at 11.62 inches, the mile would be a little more than 1614 yards. [MENSURA.] The number of Roman miles in a degree of a large circle of the earth is a very little more than 75. The Roman mile contained 8 Greek stadia. The most common term for the mile is *mille passuum*, or only the initials M. P.; sometimes the word *passuum* is omitted. (Cic. *ad Att.* iii. 4; Sallust, *Jug.* c. 114.)

The mile-stones along the Roman roads were called *milliaria*. They were also called *lapides*; thus we have *ad tertium lapidem* (or without the word *lapidem*) for 3 miles from Rome, for Rome is to be understood as the starting-point when no other place is mentioned. Sometimes we have in full *ab Urbe*, or *a Roma*. (Plin. *H. N.* xxxiii. 12. s. 56; Varro, *R. R.* iii. 2.) The laying down of the mile-stones along the Roman roads is commonly ascribed to C. Gracchus, on the authority of a passage in Plutarch (*Gracch.* 6, 7), which only proves that Gracchus erected mile-stones on the roads which he made or repaired, without at all implying that the system had never been used before. There are passages in the historians, where mile-stones are spoken of as if they had existed much earlier; but such passages are not decisive; they may be anticipatory anachronisms. (Liv. v. 4; Flor. ii. 6; comp. Justin. xxii. 6. § 9.) A more important testimony is that of Polybius (iii. 39), who expressly states that, in his time, that part of the high road from Spain to Italy, which lay in Gaul, was provided with mile-stones.

The system was brought to perfection by A-

gastus, probably in connection with that measurement of the roads of the empire, which was set on foot by Julius Caesar, and the results of which are recorded in the so-called *Antonine Itinerary*. Augustus set up a gilt marble pillar in the forum at Rome, to mark the central point from which the great roads diverged to the several gates of Rome (Dion Cass. liv. 8; Plut. *Galb.* 24). It was called the *Milliarium Aureum*; and its position is defined as being in *capite Romani Fori* (Plin. *H.N.* 5. s. 9), *sub aedem Saturni* (Tac. *Hist.* i. 27). Some remains of it still exist, close to the Arch of Septimius Severus, consisting of a round base and a piece of fine marble 4½ feet in diameter, the whole being about 10 feet high. (Platner u. Bunsen, *Beschreib. d. Stadt Rom.* vol. iii. pt. 1. p. 73, pt. 2. p. 102; Platner u. Ulrichs, *Beschreib. Roms.* p. 20.) It seems that the marble pillar was covered, on each of its faces, with tablets of gilt bronze; but whether the information engraved upon them consisted simply of a list of the chief places on each road, with their distances, or whether there was a sort of map of each set of roads with the distances marked upon them, is now unknown. It is also uncertain whether the miles began to be reckoned from the pillar itself, or from the city gates. (See De la Nauze, in the *Mém. de l'Acad. des Inscrip.* vol. xxviii. p. 388, &c.; Ideler, in the *Abhandl. d. Berl. Acad.* 1812, pp. 134, 164.)

The *Milliarium Aureum* at Byzantium, erected by Constantine in imitation of that of Augustus, was a large building in the forum Augusteum, near the church of S. Sophia. (See Buchholz, in the *Zeitschrift für Alterthumswissenschaft*, 1845, No. 100, &c.)

London also had its *Milliarium Aureum*, a fragment of which still remains, namely, the celebrated London Stone, which may be seen affixed to the wall of St. Swin's Church in Cannon Street.

From this example it may be inferred that the chief city of each province of the empire had its *Milliarium Aureum*.

The ordinary *milliaria* along the roads were blocks or pillars of stone, inscribed with some or all of the following points of information: (1) the distance, which was expressed by a number, with or without M. P. prefixed; (2) the places between which the road extended; (3) the name of the constructor of the road, and of the emperor to whose honour the work was dedicated. Several of these inscriptions remain, and are collected in the following works: Gruter, *C. I.* pp. cli. &c.; Muratori, *Theat.* vol. i. pp. 447, &c.; Orelli, *Inscr. Lat. Sel.* No. 1067, 3330, 4877; and especially Bergier, *Hist. des grands Chemins des Rom.* vol. ii. pp. 757, &c., Bruxelles, 1728, 4to.

On some of these mile-stones, which have been found in Gaul, the distances are marked, not only in Roman miles, but also in Gallic *Leugae*, a measure somewhat greater than the Roman mile. (For some further details respecting these extant mile-stones, see the article *Milliarium* in the *Real-Encyclop. d. Class. Alterth.*, to which the foregoing article is considerably indebted.) [P. S.]

MIMUS (*μῖμος*) is the name by which, in Greece and at Rome, a species of the drama was designated, though the Roman *mimus* differed essentially from the Greek *μῖμος*.

The Greek *mimus* seems to have originated among the Greeks of Sicily and southern Italy,

and to have consisted originally of extempory representations or imitations of ridiculous occurrences of common life at certain festivals, like the Spartan *deicelistae*. At a later period these rude representations acquired a more artistic form, which was brought to a high degree of perfection by Sophron of Syracuse (about 420 B.C.). He wrote his pieces in the popular dialect of the Dorians and a kind of rhythmical prose. (Quintil. i. 8.) The mimes of Sophron are designated as *μῖμοι σπουδαῖοι*, which were probably of a more serious and ethical character, and *μῖμοι γέλοιοι*, in which ridiculous buffoonery preponderated. Such mimes remained after the time of Sophron a favourite amusement of the Greeks, and Philition of Magnesia, a contemporary of Augustus, was a celebrated actor in them. (See Müller, *Dor.* iv. 7. § 5.)

Among the Romans the word *mimus* was applied to a species of dramatic plays as well as to the persons who acted in them. It is certain that the Romans did not derive their *mimus* from the Greeks in southern Italy, but that it was of native growth. The Greek mimes were written in prose, and the name *μῖμος* was never applied to an actor, but if used of a person it signified one who made grimaces. The Roman mimes were imitations of foolish and mostly indecent and obscene occurrences (Ovid, *Trist.* ii. 515; Valer. Max. ii. 6. § 7, x. 11), and scarcely differed from comedy except in consisting more of gestures and mimicry than of spoken dialogue, which was not the case in the Greek mimes. The dialogue was, indeed, not excluded from the Roman mimes, but was only interspersed in various parts of the representation, while the mimic acting continued along with it and uninterrupted from the beginning to the end of a piece. At Rome such mimes seem originally to have been exhibited at funerals, where one or more persons (*mimi*) represented in a burlesque manner the life of the deceased. If there were several *mimi*, one of them, or their leader, was called *archimimus*. (Suet. *Vespas.* 19; Gruter, *Inscript.* 1089. 6.)

During the latter period of the republic such farces were also represented in theatres; but it appears that they did not attain any high degree of perfection before the time of Caesar, for it is not until then that writers of mimes are mentioned: Cn. Matius, Decius Laberius, and Publ. Syrus were the most distinguished among them. (Gellius, xv. 25; Suet. *Caes.* 39; Cic. *ad Fam.* xii. 18.) These coarse and indecent performances, of which Sulla was very fond, had greater charms for the Romans than the regular drama: hence they were not only performed on the stage, but even at repasts in the houses of private persons. On the stage they were performed as farces after tragedies, and during the empire they gradually supplanted the place of the *Atellanæ*. The exact time, however, when the *Atellanæ* yielded to the mimes is uncertain. It was peculiar to the actors in these mimes, neither to wear masks, nor the *cothurnus*, nor the *soccus*, whence they are sometimes called *planipedes*. (Dion. c. iii. 487; Gellius, i. 11; Macrobi. *Sat.* ii. 1.) As the mimes contained scenes taken from common life, such as exhibited its most striking features, their authors are sometimes called *biologi* or *ethologi* (Cic. *pro Rabir.* 12, *de Orat.* ii. 59), and the works themselves were distinguished for their richness in moral sentences. That distinguished and living persons were sometimes exposed to ridicule in these mimes, is clear

from J. Capitolinus (*M. Ant. Philos.* c. 29). (Compare Reuvens, *Collectan. Literar.* i. p. 51, &c.; Oann, *Analect. crit.* i. p. 67, &c.; Ziegler, *De Mimis Romanorum*, Götting, 1788). [L.S.]

MISTHO'PHORI (μισθοφόροι). [MERCE-MARIL.]

MISTHOS EOS DIKE (μισθώσεως δίκη), also called μισθώσεως οίκου δίκη, is the action brought against a guardian for either having neglected to make profitable use of the property of his ward, or for having made no use of it at all. Use might be made of such property either by letting it, if it consisted of lands or houses, or by putting it out to interest, if it consisted of capital. The δίκη μισθώσεως must have been of a twofold character, either public or private, that is, it might be brought against the guardian, during the minority of his ward, by any person who took an interest in the welfare of the orphan, or it was brought by the orphan himself after his coming of age. Complaints of this kind were brought before the first archon. In cases where the guardian would not or could not occupy himself with the administration of the property of his ward, he might request the archon to let the whole substance of his ward's property to the highest bidder, provided the testator had not expressly forbidden this mode of acting in his will. (Demosth. c. *Aphob.* p. 837; compare 853, 857; *Lys. c. Diogit.* p. 906.) The letting of such property took place by auction, and probably in the presence of a court of justice, for we read that the court decided in cases where objections were made against the terms of letting the property. (Isaeus, *de Philoctem. hered.* p. 141, &c.) The person who took the property had to pay an annual percentage for the right of using it, and this percentage frequently amounted to more than 12 per cent. per annum. If one man alone was unwilling to take the whole property on such conditions, it might be divided and let to several persons separately. (Isaeus, *de Menec.* hered. p. 13.) The tenant or tenants of the property of an orphan had to give security (ἀποτιμῆμα) for it, and to mortgage (ἀποτιμῆν) his own estate, and the archon sent especial persons, ἀποτιμηταί, to value his property, and to ascertain whether it was equivalent to that of the orphan. (Suidas, s. v. Ἀποτιμηταί.) The technical term for letting the property of an orphan, whether it was done by the guardian himself or by the archon, was μισθόειν, and those who took it were said μισθοῦσθαι τὸν οἶκον (οἶκος here signifies the whole substance of the property). The tenants of the estate of an orphan had the right and perhaps the obligation to protect it against any other person. (Isaeus, *de Hagn.* hered. p. 289.) It is not clear what resource was open to an orphan against a tenant who did not fulfil his obligations, but it is probable, that if any disputes arose, the guardian or the archon alone were answerable and had to procure justice to the orphan.

(Meier and Schömann, *Att. Proc.* pp. 295, 532; Böckh, *Publ. Econ.* p. 355, &c., 2d ed.) [L.S.]

MISTHOU DIKE (μισθοῦ δίκη or μισθώσεως δίκη) is the name of a private action which might be brought against persons who refused to pay for

services which had been performed for them, provided it had been agreed that they should be paid for; and, secondly, against persons who either had not or had imperfectly performed the services for which they were paid. It made no difference whether the service was performed by physical or intellectual powers, as teachers, sophists, actors, authors, and similar persons were paid at Athens (Böckh, *Publ. Econ.* i. § 21), and it is natural to suppose that these persons, like others, made agreements, either written or by word of mouth, respecting the remuneration to be given to them. In case either party thought themselves wronged they might bring the μισθοῦ δίκη against the other. Protagoras had written a book called δίκη ὑπὲρ μισθοῦ, and an instance is recorded of an action of this kind in which he demanded payment of one of his pupils. (Diog. Laërt. ix. 8. § 8.) It is not improbable that his work contained an account of this law-suit. (Meier and Schömann, *Att. Proc.* p. 534, &c.) [L.S.]

MITRA (μίτρα), signified in general a band of any kind, and was used specifically to indicate, 1. A belt or girdle worn by warriors round the waist. [ZONA.] 2. A broad band of cloth worn round the head, to which the name of *anadema* was sometimes given. [COMA, p. 329, b.] 3. In later times, a band worn round the bosom by women, which the Greeks usually called ἀπὸδῆμος, and the Romans *fascia pectoralis* or *strophium*. (Becker, *Charikles*, vol. ii. p. 329.) [FASCIA; STROPHIUM.]

MIXTA ACTIO. [ACTIO.]

MNA (μνα). [TALENTUM.]

MNEMATA, MNEMEIA (μνήματα, μνήμεια). [FUNUS, p. 556, a.]

MNOIA (μνοία). [COSMIL]

MOCHLUS (μοχλός). [JANUA.]

MODIOLUS, the diminutive of MODIUS, is used for various kinds of small vessels; among others, for the buckets on the edge of the *tympaenum*, by which water was raised (Vitruv. x. 10), and generally for any kind of bucket or small cistern in hydraulic machinery (*Ib.* 12, 13); for the well of an oil press (*Cat. R. R.* 20); for the box of a wheel (Plin. *H. N.* ix. 4. a. 3; Vitruv. x. 14); and for other kinds of sockets (Vitruv. x. 18). [P.S.]

MODIUS, the principal dry measure of the Romans, was equal to one-third of the amphora (Volusius Maecianus, Festus, Priscian, *ap. Wurm*, § 67), and was therefore equal to nearly two gallons English. It contained 16 *sextarii*, 32 *heminae*, 64 *quartarii*, 128 *acetabula*, and 192 *cyathi*. Compared with the Greek dry measure, it was 1-6th of the ΜΕΔΙΜΝΟΣ. Its contents weighed, according to Pliny, 20 pounds of Gallic wheat, which was the lightest known at Rome. Farmers made use of vessels holding 3 and 10 modii (Colum. xii. 18. § 5). The third part of the jugerum was sometimes called *modius*. [P.S.]

MODULUS (μέδωλος), the standard measure used in determining the parts of an architectural order. It was originally the lower diameter of the column; but Vitruvius takes, in the Doric order, the lower semidiameter for the module, retaining the whole diameter in the other orders. Modern architects use the semidiameter in all the orders. The system of dividing the module into minutes was not used by the ancient architects, who merely used such fractional parts of it as were convenient. The absolute length of the module

dependa, of course, on the dimensions of the edifice: thus Vitruvius directs that, in a Doric tetra-style portico, 1-28th, and in a hexastyle 1-44th of the whole width should be taken as the module, if diastyle, or 1-23rd and 1-35th respectively, if systyle. (Vitruv. i. 2, iv. 3, v. 9). [P.S.]

MOENIA. [MURUS.]

MOICHEIAS GRAPHE. [ADULTERIUM.]

MOLA (μύλος), a mill. All mills were anciently made of stone, the kind used being a volcanic trachyte or porous lava (*pyrites*, Plin. *H. N.* xxxvi. 30; *silex*, Virg. *Mor.* 23—27; *pumiceas*, Ovid. *Fast.* vi. 318), such as that which is now obtained for the same purpose at Mayen and other parts of the Eifel in Rhenish Prussia. This species of stone is admirably adapted for the purpose, because it is both hard and cavernous, so that, as it gradually wears away, it still presents an infinity of cutting surfaces.

Every mill consisted of two essential parts, the upper mill-stone, which was moveable (*catillus*, *βλος*, τὸ ἐπιμόλιον, Deut. xxiv. 6), and the lower, which was fixed and by much the larger of the two. Hence a mill is sometimes called *molas* in the plural. The mills mentioned by ancient authors are the following:—

I. The hand-mill, or quern, called *mola mansuaria*, *versatilis*, or *truscatilis*. (Plin. *H. N.* xxxvi. 29; Gell. iii. 3; Cato, *de Re Rust.* 10.)

The islanders of the Archipelago use in the present day a mill, which consists of two flat round stones about two feet in diameter. The upper stone is turned by a handle (κάπη, Schol. in *Theocrit.* iv. 58) inserted at one side, and has a hole in the middle into which the corn is poured. By the process of grinding the corn makes its way from the centre, and is poured out in the state of flour at the rim. (Tournefort, *Voyage*, Lett. 9.) The description of this machine exactly agrees with that of the Scottish quern, formerly an indispensable part of domestic furniture. (Pennant, *Tour in Scotland*, 1769, p. 281; and 1772, p. 328.) There can be no doubt that this is the flour-mill in its most ancient form. In a very improved state it has been discovered at Pompeii. The annexed woodcut shows two which were found standing in the ruins of a bakehouse. In the left-hand figure the lower millstone only is shown. The most essential part of it is the cone, which is surmounted by a projection containing originally a strong iron pivot. The upper millstone, seen in its place on the right hand of the woodcut, approaches the form of an

hour-glass, consisting of two hollow cones, jointed

together at the apex, and provided at this point with a socket, by which the upper stone was suspended upon the iron pivot, at the same time touching on all sides the lower stone, and with which it was intended to revolve. The upper stone was surrounded at its narrowest part with a strong band of iron; and two bars of wood were inserted into square holes, one of which appears in the figure, and were used to turn the upper stone. The uppermost of the two hollow cones served the purpose of a hopper. The corn with which it was filled, gradually fell through the neck of the upper stone upon the summit of the lower, and, as it proceeded down the cone, was ground into flour by the friction of the two rough surfaces, and fell on all sides of the base of the cone into a channel formed for its reception. The mill here represented is five or six feet high.

The hand-mills were worked among the Greeks and Romans by slaves. Their *pistrinum* was consequently proverbial as a place of painful and degrading labour; and this toil was imposed principally on women. (Hom. *Od.* vii. 104; Exod. xi. 5; Matt. xxiv. 41.)

In every large establishment the hand-mills were numerous in proportion to the extent of the family. Thus in the palace of Ulysses there were twelve, each turned by a separate female, who was obliged to grind every day the fixed quantity of corn before she was permitted to cease from her labour. (*Od.* xx. 105—119; compare Cato, *de Re Rust.* 56.)

II. The cattle-mill, *mola asinaria* (Cato, *de Re Rust.* 10; Matt. xviii. 6) in which human labour was supplied by the use of an ass or some other animal. (Ovid, *Fast.* vi. 318.) The animal devoted to this labour was blind-folded. (Apol. *Met.* ix.) The mill did not differ in its construction from the larger kinds of hand-mill.

III. The water-mill (*mola aquaria*, ὀδράτης). The first water-mill, of which any record is preserved, was connected with the palace of Mithridates in Pontus. (Strabo, xii. 3. § 30.) That water-mills were used at Rome is manifest from the description of them by Vitruvius (x. 5. ed. Schneider). A cogged wheel, attached to the axis of the water-wheel, turned another which was attached to the axis of the upper mill-stone: the corn to be ground fell between the stones out of a hopper (*infundibulum*), which was fixed above them. (See also Brunck, *Anal.* ii. 119; Pallad. *de Re Rust.* i. 42.) Ausonius, as quoted below, mentions their existence on the Ruwer near Treves; and Venantius Fortunatus, describing a castle built in the sixth century on the banks of the Moselle, makes distinct mention of a tail-race, by which "the tortuous stream is conducted in a straight channel." (*Poem.* iii. 10.)

IV. The floating-mill. When Rome was besieged by the Goths, A. D. 536, and when the stoppage of the aqueducts rendered it impossible to use the public corn-mills (οἱ τῆς πόλεως μύλαιοι) in the Janiculum, so that the citizens were in danger of starvation, Belisarius supplied their place by erecting floating-mills upon the Tiber. Two boats being moored at the distance of two feet from each other, a water-wheel, suspended on its axis between them, was turned by the force of the stream, and put in motion the stones for grinding the corn, by which the lives of the besieged were preserved. (Procop. *de Bello Gothico*, i. 15.)

V. The saw-mill. Ausonius mentions mills

situated on some of the streams falling into the Moselle, and used for cutting marble into slabs. (*Mosella*, 362, 363.)

VI. The pepper-mill. A mill for grinding pepper, made of boxwood, is mentioned by Petronius (*molea buxus piper trivit*, *Sat.* 74). [J. Y.]

MONARCHIA (*μοναρχία*), a general name for any form of government in which the supreme functions of political administration are in the hands of a single person. The term *μοναρχία* is applied to such governments, whether they are hereditary or elective, legal or usurped. In its commonest application, it is equivalent to *βασιλεία*, whether absolute or limited. But the rule of an *ασυνμετες* or a *tyrant* would equally be called a *μοναρχία*. (*Arist. Pol.* iii. 9, 10, iv. 8; *Plato, Polit.* p. 291, c. e. p. 302, d. e.) Hence Plutarch uses it to express the Latin *dictatura*. It is by a somewhat rhetorical use of the word that it is applied now and then to the *δημος*. (*Eurip. Suppl.* 352; *Arist. Pol.* iv. 4.) For a more detailed examination of the subject the reader is referred to the article *Rex*, *Archon*, *Tyrannus*, *Prytania*, *Asynmetes*, *Tagus*. [C. P. M.]

MONETA, the mint or the place where money was coined. The mint of Rome was a building on the Capitoline, and attached to the temple of Juno Moneta, as the aerarium was to the temple of Saturn. (*Liv.* vi. 20.) This temple was vowed by Camillus, and dedicated in 344 B.C. on the spot where the house of M. Manlius Capitolinus had once been standing. (*Liv.* vii. 28; *Or. Fast.* vi. 183.) Some writers describe the art of coining as having been known to the Italians from the earliest times, and assign its invention to Janus (*Macrobius Sat.* i. 7; *Athen.* xv. p. 692); but this and similar accounts are nothing more than fables. The statement of Pliny (*H. N.* xxxiii. 3), who assigns the invention of coining to Servius Tullius, has somewhat more of an historical aspect; and he derives the name *pecunia* from the circumstance that the coins were originally marked with the image of some animal. The earliest Roman coins were of *aes* [*Aes*], and not struck, but cast in a mould. (See the representation of such a mould on page 545.) The moulds, however, were sometimes without any figure and merely shaped the metal, and in this case, the image as well as the name of the gens, &c., were struck upon it by means of a hammer upon an anvil on which the form was fixed. As the strokes of the hammer were not always equal, one coin though equal in value with another might differ from it in thickness and shape. Greater equality was produced at the time when the Romans began to strike their money; but when this custom became general, is not known. Respecting the changes which were introduced at Rome at various times in the coinage see *Aes*, *As*, *Argentum*, *Aurum*, and *Nummus*.

In the early times of the republic we do not read of any officers who were charged with the superintendence of the mint; and respecting the introduction of such officers we have but a very vague statement of Pomponius. (*Dig.* i. tit. 2. § 30.) Their name was *triumviri monetales*, and Niebuhr (*Hist. of Rome*, iii. p. 646) thinks that they were introduced at the time when the Romans first began to coin silver, i. e. 269 B.C. The *triumviri monetales* had the whole superintendence of the mint, and of the money that was coined in it. A great number of coins, both of gold and

silver, is signed by these *triumviri* in the following manner:—III. VIR. AAAFF, that is, *triumvir auro, argento, aers flando feriundo* (*Cic. de Leg.* iii. 3; P. Manut. ad *Cic. ad Fam.* vii. 13) or III. VIR. A.P.F. that is, *ad pecuniam feriundam*. Other coins on the other hand do not bear the signature of a *triumvir monetalis*, but the inscription CUR. X. FL. S. C. i. e. *curator denariorum flandorum ex senatusconsulto*, or are signed by praetors, aediles, and quaestors. Caesar not only increased the number of the *triumviri monetales* to four; whence some coins of his time bear the signature IIII. VIR. A.P.F., but entrusted certain slaves of his own with the superintendence of the mint. (*Suet. Caes.* 76; compare *Cic. Philip.* vii. 1.) The whole regulation and management of the Roman mint and its officers during the time of the republic is involved in very great obscurity.

The coining of money at Rome was not a privilege belonging exclusively to the state, but from the coins still extant we must infer that every Roman citizen had the right to have his own gold and silver coined in the public mint, and under the superintendence of its officers. The individual or gens who had their metal coined, stated its name as well as the value of the coin. This was a kind of guarantee to the public, and nearly all the coins of the republican period coined by a gens or an individual bear a mark stating their value. As long as the republic herself used pure silver and gold, bad money does not seem to have been coined by any one; but when, in 90 B.C., the tribune Livius Drusus suggested the expediency of mixing the silver which was to be coined with one-eighth of copper, a temptation to forgery was given to the people, and it appears henceforth to have occurred frequently. As early as the year 86 B.C. forgery of money was carried to such an extent, that no one was sure whether the money he possessed was genuine or false, and the praetor M. Marius Gratidianus saw the necessity of interfering. (*Cic. de Off.* iii. 20.) He is said to have discovered a means of testing money and of distinguishing the good from the bad denarii. (*Plin. H. N.* xxxiii. 46.) In what this means consisted is not clear; but some method of examining silver coins must have been known to the Romans long before this time. (*Liv.* xxxii. 2.) Sulla inflicted heavy punishment upon the coiners of false money; his law remained in force during the empire, and not only false coining, but any crime connected with the deterioration of money, was gradually made to come under it. In the latest times of the empire false coining was treated as a *crimen majestatis*. All Roman money was generally coined at Rome, but in some particular cases the mints of other Italian towns, as in the provinces, were used; for we must remember, that during the time of the republic, subject countries and provinces were not deprived of the right of coining their own money. This right they even retained under the empire for a long time, though with some modifications; for while some places were allowed to coin their money as before, others were obliged to have upon their coins the head of the emperor, or of some member of his family. Silver and gold, however, were coined only in places of the first rank. When all Italy received the Roman franchise, all the Italians used the Roman money, and in consequence lost the right to coin their own.

It has been stated above, that probably every

Roman citizen had the right to have his gold and silver coined, but none had the right to put his own image upon a coin, and not even Sulla ventured to act contrary to this custom. The coins apparently of the republican period with the portraits of individuals, were, according to Eckhel, coined at a later time, and by the descendants of those persons whose portraits are given. Caesar was the first to whom this privilege was granted, and his example was followed by many others, as we see from the coins of Sext. Pompeius. The emperors assumed the right to put either their own images or those of members of their families upon their coins.

From the time of Augustus, the triumviri, generally speaking, no longer put their names on any coin, and it became the exclusive privilege of the emperor to coin silver and gold. The senate entrusted with the administration of the *aerarium* retained only the right of coining copper, whence almost all copper coins of this period are marked with S. C. or EX S. C. But this lasted only till the time of Gallienus, when the right of coining all money became the exclusive privilege of the emperors. As, however, the vast extent of the empire rendered more than one mint necessary, we find that in several provinces, such as Gaul and Spain, Roman money was coined under the superintendence of quaestors or proconsuls. Roman colonies and provinces now gradually ceased to coin their own money. In the western parts of the empire this must have taken place during the first century of our aera, but in the East the Roman money did not become universal till after the time of Gallienus. From the time of the emperor Aurelian a great number of cities of the empire possessed mints in which Roman money was coined, and during the latter period of the empire the superintendents of mints are called *procuratores* or *praepositi monetarum*.

The persons who were employed as workmen in a mint were called *monetarii*. Their number at Rome appears to have been very great during the latter period of the empire, for in the reign of Aurelian they nearly produced a most dangerous rebellion. (Aurel. Vict. *de Caes.* 35; Vopisc. *Aurel.* 38.) They seem generally to have been freedmen. (Murat. *Inscript.* 968. n. 5.)

In Greece every free and independent city had the right to coin its own money. Sparta and Byzantium are said to have only coined iron money (Pollux, vii. 106), but no ancient iron coin has ever been found. Respecting the time when money was first coined in Greece, see ARGENTUM and NUMMUS. The Greek term for money was *νόμισμα*, from *νόμος*, because the determination of its value was fixed by law or contract. (Aristot. *Ethic.* v. 8.)

The mint at Athens was called *ἀργυροκομειον*. [ARGYROCOPEION.] We do not hear of any officers connected with the management or the superintendence of the Athenian mint. How far the right of coining money was a privilege of the central government of Attica is unknown. But the extant coins show that at least some demes of Attica had the right of coining, and it is probable that the government of Athens only watched over the weight and the purity of the metal, and that the people in their assembly had the right of regulating everything concerning the coining of money. (Aristoph. *Eccles.* 810, &c.) The Attic gold and silver coins were always of very pure metal, and

we have only one instance in which the state at a time of great distress used bad metal. This was in the archonship of Antigones and Callias, B. C. 407 and 406. (Aristoph. *Ras.* 673, with the Schol., and 678.) Individuals who coined bad money were punished with death. (Demosth. *c. Lept.* p. 508; NOMISMATOS DIAPHORAS DIME.) The place where money was coined is always indicated on Greek coins; either the name of the place is stated, or some symbolical representation of the place, as the owl on Athenian and a peacock on Samian coins. These symbols are generally of a religious nature, or connected with the worship of the gods or heroes.

For further information on this subject see Eckhel, *Doctrina Numorum Veterum*, and especially the Prolegomena generalia in vol. i.; Dureau de la Malle, *Economie Politique des Romains*.

MONETA'RII, [MONETA.]

MONILE (σμνος), a necklace. Necklaces were worn by both sexes among the most polished of those nations which the Greeks called barbarous, especially the Indians, the Egyptians, and the Persians. [ARMILLA.] Greek and Roman females adopted them more particularly as a bridal ornament. (Lucan, ii. 361; Claud. *de vi. cons. Honor.* 527.)

The simplest kind of necklace was the *monile bacantum*, or bead necklace (Virg. *Aen.* i. 657; Lamprid. *Al. Sev.* 41), which consisted of berries, small spheres of glass, amethyst, &c., strung together. This is very commonly shown in ancient paintings. (See woodcut, p. 136.) The head of Minerva at page 566, exhibits a frequent modification of the bead necklace, a row of drops hanging below the beads. These drops, when worn, arrange themselves upon the neck like rays proceeding from a centre. To this class of necklaces belongs one in the Egyptian collection of the British Museum (see the annexed woodcut), in which small golden lizards alternate with the drops. The figure in the

woodcut immediately underneath this exhibits the central portion of a very ancient and exquisitely wrought necklace, which was found at S. Agatha, near Naples, in the sepulchre of a Greek lady. It has 71 pendants. Above them is a band consisting of several rows of the close chain-work, which we now call Venetian. [CATENA.] We also give here the central portions, exhibiting the patterns of three splendid gold necklaces, purchased from the Prince of Canino for the British Museum. These were found in Etruscan tombs. The ornaments consist of circles, lozenges, rosettes, ivy-leaves, and hippocampi. A heart depends from the centre of one of the necklaces.

The necklace was sometimes made to resemble a serpent coiled about the neck of the wearer, as was the case with that given as a nuptial present by Venus to Harmonia, which was ornamented in so elaborate a manner, that Nonnus devotes 50 lines of his *Diomysiaca* (v. 125, &c.) to its description. This same necklace afterwards appears in the mythology as the bribe by Eriphyle was tempted to betray her husband. (Apollodor. iii. 4. § 2, iii. 6. §§ 2—6; Diod. iv. 65, v. 49; Serv. in *Aen.* vi. 445.)

The beauty and splendour, as well as the value of necklaces, were enhanced by the insertion of pearls and precious stones, which were strung together by means of linen thread, silk, or wires and links of gold. For this purpose emeralds, or other stones of a greenish hue (*amaragdi*), were often employed (*virides gemmae*, Juv. vi. 363). Amber necklaces are mentioned in the *Odyssey* (xv. 459, xviii. 295). Some account of the various kinds of links is given in the article CATENA. The hooks or clasps for fastening the necklace behind the neck were also various, and sometimes neatly and ingeniously contrived. Besides a band encircling the neck, there was sometimes a second or even a third row of ornaments, which hung lower down, passing over the breast. (Hom. *Hymn.* ii. in *Ven.* 11; *longa monilia*, Ovid. *Met.* x. 264; Böttiger, *Sabina*, vol. ii. p. 129.)

Very valuable necklaces were sometimes placed, as dedicated offerings, upon the statues of Minerva, Venus, and other goddesses (Sueton. *Galb.* 18), and this was in accordance with the description of their attire given by the poets. (Hom. *Hymn.* i. in *Ven.* 88.) Horses and other favourite animals were also adorned with splendid necklaces (*aurea*, Virg. *Aen.* vii. 278; *gemmae monilia*, Ovid. *Met.* x. 113; Claudian, *Epig.* xxxvi. 9; A. Gell. v. 5). MONUMENTUM. [FUNUS, p. 561, a.]

MORA. The fact of an obligation not being discharged at the time when it is due, is followed by important consequences, which either may depend on the nature of the contract, or may depend on rules of positive law. After such delay the creditor is empowered to use all legal means to obtain satisfaction for his demand: he may bring his action against his debtor or against those who have become securities for him, and, in the case of pledge, he may sell the thing and pay himself out of the proceeds of the sale. For particular cases there are particular provisions: for instance, the purchaser of a thing after receiving it, must pay interest on the purchase-money, if there is delay in

paying it after the time fixed for payment. (Dig. 19. tit. 1. a. 13. § 20.) The rule is the same as to debts due to the Fiscus, if they are not paid when they are due. If a colonus was behind in payment of his rent for two years, the owner (locator) might eject him (Dig. 19. tit. 2. a. 54. § 1); and a man lost the right to his *emphyteusis*, if he delayed the payment of what was due (canon) for three years.

These were cases of delay in which there was simply a non-fulfilment of the obligation at the proper time; and the term *Mora* is sometimes applied to such cases. But that which is properly *Mora* is when there is delay on the part of him who owes a duty, and culpa can be imputed to him. Some modern writers are of opinion that all delay in a person discharging an obligation is *Mora*, except there be some impediment which is created by causes beyond the debtor's control. But there are many reasons for the opinion that *Mora* in its proper sense always implied some culpa on the part of the debtor. This is proved by the general rule as to the necessity of *interpellatio* or demand of the creditor (si *interpellatus opportunum loco non solverit, quod apud judicem examinabitur*); by the rules about *excusationes a mora*, which only have a meaning on the supposition that real *mora* is not always to be imputed to a man, though there may be delay in the discharge of an obligation. That this is the true meaning of *Mora* is also shown by the terms used with reference to it (*per eum stetit, per eum factum est quominus, &c.*). This view is confirmed also by the rule that in every case of *Mora* the particular circumstances are to be considered, a rule which plainly implies that the bare fact of delay is not necessary to constitute *Mora*. In a passage of Papinian (Dig. 12. tit. 1. a. 5) the doctrine that bare delay does not constitute legal *Mora* is clearly expressed.

When *Mora* could be legally imputed to a man, he was liable to loss in many cases when he otherwise would not be liable: as if a man was bound to give a thing and it was lost or destroyed, he was to bear the loss, if the fault was his, that is, if real *culpa* *mora* could be imputed to him. (Dig. 12. tit. 1. a. 5.) In cases where a man did not pay money when he ought, he was liable to pay interest if legal *Mora* could be imputed to him. In *bonae fidei contractus* interest (*usurae*) was due if there was legal *mora*. (Vangerow, *Pandekten*, &c. iii. p. 188; Thibaut, *System*, &c. i. § 96, &c.; Dig. 22. tit. 1.) [G. L.]

MORA. [EXERCITUS, p. 483.]

MORTARIUM, also called PILA and PILUM (Plin. *H. N.* xviii. 3; xxxiii. 26), (ἀμφοι: ἑρῆν, Schol. in *Hes. Op. et Dies*, 421; ἑρῆς, apparently from the root of *icere*, to strike), a mortar.

Before the invention of mills [MOLA] corn was pounded and rubbed in mortars (*pistum*), and hence the place for making bread, or the bake-house, was called *pistrinum*. (Serv. in *Virg. Aen.* i. 179.) Also long after the introduction of mills this was an indispensable article of domestic furniture. (Plaut. *Aul.* i. 2. 17; Cato, *de Re Rust.* 74—76; Colum. *de Re Rust.* xii. 55.) Hesiod (*l. c.*), enumerating the wooden utensils necessary to a farmer, directs him to cut a mortar three feet, and a pestle (ἄρορον, κοράρον, *pistillum*) three cubits long. Both of these were evidently to be made from straight portions of the trunks or branches of trees, and the thicker and shorter of them was to be hollowed. They might then be used in the

manner represented in a painting on the tomb of Remeses III. at Thebes (see woodcut, left-hand figure taken from Wilkinson, vol. ii. p. 383); for there is no reason to doubt that the Egyptians and the Greeks fashioned and used their mortars in the same manner. (See also Wilkinson, vol. iii. p. 181, showing three stone mortars with metal pestles.) In these paintings we may observe the thickening of the pestle at both ends, and that two men pound in one mortar, raising their pestles alternately as is still the practice in Egypt. Pliny (*H. N.* xxxvi. 43) mentions the various kinds of stone selected for making mortars, according to the purposes to which they were intended to serve. Those used in pharmacy were sometimes made, as he says, "of Egyptian alabaster." The annexed woodcut shows the forms of two preserved in the

Egyptian collection of the British Museum, which exactly answer to this description, being made of that material. They do not exceed three inches in height: the dotted lines mark the cavity within each. The woodcut also shows a mortar and pestle, made of baked white clay, which were discovered, A. D. 1831, among numerous specimens of Roman pottery in making the northern approaches to London-bridge (*Archæologia*, vol. xxiv. p. 199, plate 44.)

Besides the uses already mentioned, the mortar was employed in pounding charcoal, rubbing it with glue, in order to make black paint (*atramentum*, Vitruv. vii. 10. ed. Schneider); in making plaster for the walls of apartments (Plin. *H. N.* xxxvi. 65); in mixing spices and fragrant herbs and flowers for the use of the kitchen (Athen. ix. 70; Bruck, *Anak.* iii. 51); and in metallurgy, as in triturating cinnabar to obtain mercury from it by sublimation. (Plin. *H. N.* xxxiii. 41, xxxiv. 22.) [J. Y.]

 MUNUS. [GLADIATORES, p. 574, a.]
 MUNYCHIA (μουνύχια), a festival celebrated in honour of Artemis Munychia. Plutarch (*de Glor. Ath.* p. 349, r.) says that it was instituted to commemorate the victory over the Per-

sians at Salamis, and that it was held every year on the sixteenth of Munychion. (Compare Suidas and Harpocrat. s. v. Μουνύχιδον.) The sacrifices which were offered to the goddess on this day consisted of cakes called ἀμφιπόρρες, either because at this season the full moon was seen in the west at the moment the sun rose in the east, or, as is more probable, and also confirmed by most authorities, because these cakes were adorned all round with burning candles. (Athen. xiv. p. 645; Suidas, s. v. Ἀρδοράτοι: Hesych. and Etymol. Mag. s. v. Ἀμφιπόρην.) Eustathius (*ad Iliad.* xviii.) says that these cakes were made of cheese. [L. S.]

MURA'LIS CORO'NA. [CORONA.]

MUREX. [TRIBULUS.]

MU'RIES. [VESTALEÆ.]

MU'RRHINA VASA, or MU'RREA VASA, were first introduced into Rome by Pompey, who dedicated cups of this kind to Jupiter Capitolinus. (Plin. *H. N.* xxxvii. 7.) Their value was very great. (Sen. *de Benef.* vii. 9, *Epist.* 119; Martialis, iii. 82. 25; Dig. 33. tit. 10. s. 3. § 4.) Pliny (*l. c.*) states that 70 talents were given for one holding three sextarii, and speaks of a murrhine trulla, which cost 300 talents. Nero gave even 300 talents for a capis or drinking cup.

Pliny (xxxvii. 8) says that these murrhine vessels came from the East, principally from places within the Parthian empire, and chiefly from Carmania. He describes them as made of a substance formed by a moisture thickened in the earth by heat, and says that they were chiefly valued on account of their variety of colours. Modern writers differ much respecting the material of which they were composed. Some think that they were variegated glass, and others that they were made of onyx, since that stone presents a variety of colours; but the latter conjecture is overthrown by a passage of Lampridius (*Heliogab.* 32), who speaks of onyx and murrhine vases. Most recent writers, however, are inclined to think that they were true Chinese porcelain, and quote in support of their opinion the words of Propertius (iv. 5. 26):—

"Murraque in Parthis pocula cocta focia."

This opinion would be rendered still more probable if we could place dependence on the statement of Sir W. Gell (*Pompeiana*, vol. i. pp. 98, 99), "that the porcelain of the East was called Mirra di Smyrna to as late a date as 1555." (Becker, *Gallus*, vol. i. p. 143.)

MURUS, MOENIA (τείχος), the wall of a city, in contradistinction to PARIES (τοίχος), the wall of a house, and Maceria, a boundary wall. Both the Latin and Greek words appear to contain, as a part of their root meaning, the idea of a firm, strong wall; and they are nearly always used for walls of stone or some other massive construction. *Murus* and *τείχος* are also used for the outer wall of a large building.

We find cities surrounded by massive walls at the earliest periods of Greek and Roman history, of which we have any records. Homer speaks of the chief cities of the Argive kingdom as "the walled Tiryns" and "Mycenae the well-built city" (*Il.* ii. 559, 569), not only thus, as in other passages, proving the common use of such structures in the Homeric period, but also attesting the great antiquity of those identical gigantic walls which still stand at Tiryns and Mycenae, and other cities of Greece and Italy. In Epirus, is

Etruria, and in Central Italy, especially in the valleys at the foot of the Apennines on their western side, we find numerous remains of walls, which are alike, inasmuch as they are composed of immense blocks of stones put together without cement of any kind, but which differ from one another in the mode of their construction. Three principal species can be clearly distinguished:—

1. That in which the masses of stone are of irregular shape and are put together without any attempt to fit them into one another, the interstices being loosely filled in with smaller stones; as in the walls of the citadel of Tiryns, a portion of which is shown in the following engraving:—

Another specimen of the buildings at Tiryns, of much more regular construction, may be seen at p. 125.

2. In other cases we find the blocks still of irregular polygonal shapes, but of a construction which shows a considerable advance upon the former. The stones are no longer unhewn (*ἀργολισθοί*), but their sides are sufficiently smoothed to make each fit accurately into the angles between the others, and their faces are cut so as to give the whole wall a tolerably smooth surface. Examples of this sort of work are very common in Etruria. The engraving is taken from the walls of Larissa in Argolis.

3. In the third species, the blocks are laid in horizontal courses, more or less regular (sometimes indeed so regular, that none of the horizontal joints are continuous), and with vertical joints either perpendicular or oblique, and with all the joints more or less accurately fitted. The walls of Mycenæ present one of the ruder examples of this sort of structure; and the following engraving of the "Lion Gate," of that fortress (so called from the rudely sculptured figures of lions) shows also the manner in which the gates of these three species of walls were built, by supporting an immense block of stone, for the lintel, upon two others, for jambs, the latter inclining inwards, so as to give more space than if they were upright. A very large number of interesting examples of these con-

structions will be found engraved in some of the works presently referred to. We have only space for these three characteristic specimens, one of each class. Neither is it here possible, or at all necessary, to discuss the opinions of ancient writers, most of whom were content with the popular legend which assigned these works to the Cyclopes, nor the theories of modern scholars and antiquarians, who (with some of the ancients) have generally referred them to the Pelasgians. The principal conclusions to which Mr. Bunbury has come, from a thorough examination of the whole subject, may be safely regarded as correct: namely, that while in such works as the walls of Tiryns we have undoubtedly the earliest examples of mural architecture, it is quite a fallacy to lay down the general principle, that the unhewn, the polygonal, the more irregular and the more regular rectangular constructions, always indicate successive steps in the progress of the art; and that it is also erroneous to assign these works to any one people or to any one period; that, while such massive structures would of course be built by people comparatively ignorant of the art of stone-cutting or of the tools proper for it, they might be and were also erected in later times simply on account of their adaptation to their purpose, and from the motive of saving unnecessary labour; and that the difference between the polygonal and rectangular structures is generally to be ascribed not to a difference in the skill of the workmen, but to the different physical characters of the materials they employed,—the one sort of structure being usually of a species of limestone, which easily splits into polygonal blocks, and the other a sandstone, the natural cleavage of which is horizontal. (Bunbury, *Cyclopean Remains in Central Italy*, in the *Classical Museum*, 1845, vol. ii. pp. 147, &c.; Müller, *Archäol. d. Kunst*, §§ 45, 166, and the works there quoted; Stieglitz, *Archäol. d. Baukunst*, vol. i. pp. 95—98; Hirt, *Gesch. d. Baukunst*, vol. i. pp. 195, &c., and plate vii. from which the foregoing cuts are taken; *Atlas zu Kugler's Kunstgeschichte*, Pt. ii. Pl. 1; Götting in the *Rhein. Mus.* 1843, vol. iv. pp. 321, 480, and in the *Archäologische Zeitung*, No. 26; *Pompeii*, vol. i. c. 4, with several woodcuts of walls; Abeken, *Mittelaltien vor den Zeiten römischer Herrschaft*, a most important work, with numerous engravings of walls).

The examples of the foregoing class lead us gradually to the regular mode of construction which prevailed in Greece after the time of the Persian Wars, and which had been adopted in the walls of temples much earlier. In the long walls of

Athens, and the walls of Peiræus, the massiveness of the Cyclopean works was united with perfect regularity of construction. The stones, which were so large that each was a cart-load (*ἀμαξίατοι*) were accurately fitted to one another (*ἐν τοῦσι ἑγγύωτοι*), and held together, without cement by metal clamps soldered with lead into sockets cut into the blocks of stone. (Thuc. i. 93). The walls of the Parthenon, and the other great edifices of the period, were of similar construction. Sometimes wooden plugs were used instead of metal clamps. It is unnecessary to describe here the details of the modes in which the joints were arranged in this regular and massive masonry. So perfect was the workmanship at this period of the art, that the joints often appeared like a thread; and Pliny mentions a temple at Cyzicus, in the interior wall of which a fine thread of gold was actually inserted in the joints of the masonry. (*H. N.* xxxvi. 15. a. 22.)

The materials employed at this period were various sorts of stone, and, in some of the most magnificent temples, marble. The practice of putting a facing of marble over a wall of a commoner material was introduced in the next period of architectural history. The first example of it, according to Pliny (*H. N.* xxxvi. 6. a. 6), was in the palace of Mausolus, the walls of which were of brick, faced with slabs (*crustæ*) of Proconnesian marble (about a. c. 360). Vitruvius (ii. 8) also states this fact, and adds that brick walls, when perfectly perpendicular, are quite as durable as those of stone, and, in proof of this, he mentions several examples of very ancient brick buildings, both in Greece and Italy. (Comp. Vitruv. i. 42; Paus. i. 42, ii. 27, v. 5, x. 4, 35; LATER.)

For buildings of a common sort, the materials employed were smaller stones, rough or squared, or flints, as well as bricks: the latter, however, were not nearly so much used by the Greeks as by the Romans. The different methods of construction will be described presently.

The walls of smaller quarried stones or bricks were bound together with various kinds of mortar or cement, composed of lime mixed with different sands and volcanic earths. The most durable of these was the cement formed by mixing two parts of *Terra Puteolana* (*Puzzolana*, a volcanic product, which is found in various parts of Italy, besides Puteoli) with one part of mortar: this cement had the property of hardening rapidly under water: it was much used in aqueducts, cisterns, and such works. (For further details on cements, see Vitruv. ii. 5, 6, v. 12, vii. 2; Plin. *H. N.* xxxvi. 23. s. 52, 55; Pallad. i. 10, 14; Strab. v. p. 245; Dioscor. v. 133).

The history of Roman masonry is not very different from that of the Greek. The Cyclopean remains of Italy have been already noticed. The most ancient works at Rome, such as the *Carcer Mamertinus*, the *Cloaca Maxima*, and the Servian Wall, were constructed of massive quadrangular hewn stones, placed together without cement. [*CLOACA.*] In most of the remains, the stones are twice as long as they are high. Canina (*Arch. Antiq.*) distinguishes five species of Roman masonry; namely, (1) when the blocks of stone are laid in alternate courses, lengthwise in one course, and crosswise in the next; this is the most common; (2) when the stones in each course are laid alternately along and across; this construction was usual when

the walls were to be faced with slabs of marble; (3) when they are laid entirely lengthwise; (4) entirely crosswise; and (5) when the courses are alternately higher and lower than each other, as in the round temple (of Vesta, so called) upon the Tiber. This temple also affords us an example of what is called *rustic-work*, in which the stones are bevelled at their joints, the rest of their surfaces being generally left rough. This style of work originated, in the opinion of some, from the desire to save the trouble of smoothing the whole face of the stones; but it is more probable that it was adopted in order to give a bolder and firmer appearance to the structure. Examples of it are found in the remains of several Roman fortifications in Germany, and in the substructions of the bridge over the Moselle at Coblenz (*Rhein. Mus.* 1836, vol. iv. p. 310; Witzschel, in the *Real-Encyclop. d. class. Alterth.* art. *Muri*). As by the Greeks, so by the Romans, walls of a commoner sort were built of smaller quarried stones (*caementa*) or of bricks. Vitruvius (ii. 8) and Pliny (*H. N.* xxxvi. 22. a. 51) describe the following kinds of masonry, according to the mode in which the small stones (*caementa*) were put together. (The woodcut is copied from the *Abbildungen zu Winckelmann's Werke*, Donaueschingen, 1835, fig. 10.)

Besides the large square blocks of stone (O), they used smaller quadrangular stones arranged in regular courses of equal and of unequal heights; the former was called *isodorum* (M), the latter *pseudisodorum* (L); in another sort of work, called *emplecton* (G), the outer faces of the walls only were of wrought stones, the intermediate parts being filled up with rough stones, but these, in the Greek method of construction, were well bedded in mortar, and arranged with overlapping joints, and the wall was bonded together with stones laid across at intervals, which were called *diadromi* (F); but the workmen of the time of Vitruvius were in the habit, for the sake of despatch, of running up the outer walls separately, and then filled the middle space with loose rubbish, a sort of work which Pliny calls *diamicton*. The excellence of the cement which the Romans used enabled them to construct walls of very small rough stones, not laid in courses, but held together by the mortar; this structure was called *opus incertum* (N). An improvement upon it in appearance, but inferior in stability, was the *opus reticulatum*, of which there were two kinds, the *like* (K) and the *unlike* (I). This sort of work was composed of stones or bricks, from six to nine inches long, and about three inches square at the end, which formed the faces of the

wall, the interior being filled in with mortar and small rough stones. Vitruvius complains of these walls as being apt to split, on account of their having neither horizontal courses nor covered joints. Another structure of which the Romans made great use, and which was one of the most durable of all, was that composed of courses of flat tiles (H.). Such courses were also introduced in the other kinds of stone and brick walls, in which they both served as bond-courses, and, in the lower part of the wall, kept the damp from rising from the ground. Brick walls covered with stucco were exceedingly common with the Romans: even columns were made of brick covered with stucco; we have an example in the columns of the basilica at Pompeii, the construction of which is explained in *Pompeii*, vol. i. p. 136. In hot countries, as in Africa and Spain, walls were built of earth rammed in between two faces or moulds (*tabulae, formae*), which were removed when it hardened; they were called *parietes formacei*; and Pliny mentions watch-towers of this construction, built by Hannibal, on the mountains of Spain, which still stood firm. (*H.N.* xxxv. 14. s. 48.) Walls of turf were chiefly used in the ramparts of camps (*AGGER, VALLUM*) and as embankments for rivers.

With respect to the use of walls as fortifications, we have not space to say much. The Cyclopean walls of Tiryns, &c., had no towers; but Homer refers to towers on the walls of Troy; and in the historical period we find that it was the practice to furnish walls with towers at regular intervals. Some writers on military affairs recommend them to be placed at salient angles of the walls, in order to command the intervening spaces, whilst others object to this position on account of the increased exposure of the tower itself to the battering ram. The account which Thucydides gives, in his second book, of the siege of Plataeae, is an interesting exhibition of the state of the science of fortification and attack at the period of the Peloponnesian war. Much was done to advance it by the architects and engineers of the time of Alexander and his successors. The rules which have been established by the time of the Roman emperors may be seen exhibited in detail by Vitruvius (i. 5), and the writers on military affairs, and illustrated by the remains of the walls of Pompeii. (*Pompeii*, vol. i. pp. 66, &c.) The system may be described in a few words as a broad terrace of earth (*agger*) enclosed between two battlemented walls and furnished with towers, two, three, or more stories high, communicating by arched doorways with the *agger*, and also having a sally-port. These towers were at distances, on the average, of the cast of a javelin, but varying according to the greater or less exposure of each part of the wall. Respecting the gates, see *PORTA*. [P.S.]

MUSCULUS was, according to the description of Vegetius (*de Re Milit.* iv. 16), one of the smaller military machines, by which soldiers in besieging a town were protected while engaged in filling up the ditches round the besieged place, so that the moveable towers (*turres ambulatoriae*) of the besiegers might be able to approach the walls without obstacle. A minute description of a musculus is given by Caesar (*de Bell. Civ.* ii. 10, &c.). The one which he describes was nine feet long, and was constructed in the following manner:—Two beams of equal length were placed upon the ground at the distance of four feet from

each other, and upon them were fixed little pillars five feet high. Their top-ends were joined by transverse beams, which formed a gentle slope on either side of the roof of which they formed the frame-work. The roof was then entirely covered with pieces of wood, two feet broad, which were fastened with metal plates and nails. Around the edge of this roof square pieces of wood, four cubits broad, were fixed for the purpose of keeping together the bricks and mortar with which the musculus was then covered. But that these materials, which were intended to protect the musculus against fire, might not suffer from water, the bricks and mortar were covered with skins; and that these skins again might not suffer from the fire or stones which the besieged might throw upon the musculus, the whole was covered with rags of cloth. The whole of this machine was constructed under the cover of a vine, and close by the Roman tower. At a moment when the besieged were least expecting any attack, the musculus was moved on against the wall of the town. The men engaged under it immediately began to undermine the wall and thus to make a breach in it; and while this work was going on, the besiegers kept up a lively fight with the besieged in order to prevent them from directing their attacks against the musculus. (Compare *Caes. de Bell. Civ.* iii. 80, *de Bell. Alex.* l.) The musculus described by Caesar was evidently designed for different purposes than the one mentioned by Vegetius, and the former appears to have been only a smaller but a more indestructible kind of vinea than that commonly used. (Lipsius, *Poliore.* i. 9; Guichard, *Mémoires Milit.* ii. p. 58. tab. 2.) [L.S.]

MUSEIA (*Μοῦσεια*), a festival with contests celebrated at Thespiae in Boeotia in honour of the Muses. (Paus. ix. 31. § 3.) It was held every fifth year and with great splendour. (Plut. *Amator.* p. 748, F.) From Aeschines (c. *Timarch.*) it appears that there was also a festival called *Muscia*, which was celebrated in schools. [L.S.]

MUSEUM (*Μουσείον*) signified in general a place dedicated to the Muses, but was specially the name given to an institution at Alexandria, founded by Ptolemy Philadelphus, about a.c. 280, for the promotion of learning and the support of learned men. (Athen. v. p. 203.) We learn from Strabo (xviii. p. 794) that the museum formed part of the palace, and that it contained cloisters or porticos (*περίπατος*), a public theatre or lecture-room (*ἐκθέτρα*), and a large hall (*ὄλκος μέγας*), where the learned men dined together. The museum was supported by a common fund, supplied apparently from the public treasury; and the whole institution was under the superintendence of a priest, who was appointed by the king, and after Egypt became a province of the Roman empire, by the Caesar. (Strabo, l. c.) Botanical and zoological gardens appear to have been attached to the museum. (Philostr. *Apollon.* vi. 24; Athen. xiv. p. 654.) The emperor Claudius added another museum to this institution. (Suet. *Claud.* 42, with Casaubon's note.)

MUSICA (*ἡ μουσική*), signified in general any art over which the Muses presided, but is sometimes employed to indicate *Music* in the modern acceptation of the term. 1. *GREEK*. In compiling the following article little more has been attempted than to give an outline of facts which rest upon positive evidence, and at the same time to present them

in such a form as to serve for an introduction to the original sources. Hence it necessarily consists in a great measure of technical details, which, however, can present no difficulty to persons acquainted with the first elements of the modern theory; and nothing has been said in the way of deduction, except in one or two cases where the interest of the subject and the apparent probability of the conclusions seemed to permit it.

The term *Ἀρμονική* was used by the Greek writers to denote what is now called the Science of Music; *μουσική* having, as has been already remarked, a much wider signification. *Ἀρμονική* ἔστιν ἐπιστήμη θεωρητικὴ καὶ πρακτικὴ τῆς τοῦ ἡρμωσμένου φύσεως. Ἡρμωσμένον δὲ ἔστιν τὸ ἐκ φθόγγων καὶ διαστημάτων, ποῖαν τάξιν ἔχοντων, συγκείμενον. (Euclid. *Int. Harm.* p. 1.)

The following sevenfold division of the subject, which is adopted by the author just quoted, as well as by others, will be partly adhered to in the present article: — I. Of Sounds (*περὶ φθόγγων*). II. Of Intervals (*περὶ διαστημάτων*). III. Of Genera (*περὶ γένων*). IV. Of Systems (*περὶ συστημάτων*). V. Of Modes (*περὶ τόνων*). VI. Of Transition (*περὶ μεταβολῆς*). VII. Of Composition (*περὶ μελοποιίας*).

A sound is said to be *musical* when it has a determinate *pitch* (*τάξις*). When two sounds differ in pitch, one is said to be more *acute* (*ἄξής*), the other more *grave* (*βαρὺς*); or, in common language, one is called higher and the other lower. The term *ἡμελής* applied to a sound either signifies *simply*, that it is capable of being used in a melody; or *relatively*, that it is capable of being used in the *same melody* with some other sound or system of sounds; the latter is its most common meaning.

An Interval is the difference or rather distance between two sounds of different pitch. When we compare the intervals between two pairs of sounds, we judge them in certain cases to be similar, or *equal*. If the more acute sound of one of them be then raised, that interval is said to become greater than the other. It is this property of intervals (their being comparable in respect of magnitude) which enables us to classify them, and enumerate their several kinds.

Intervals are either *consonant* (*σύμφωνα*) or *dissonant* (*διάφωνα*), according as the two sounds may or may not be heard at the same time without offending the ear. (Eucl. p. 8.) Strictly speaking it is impossible to define the limit between the two classes, and this seems to be acknowledged by the later writers, who distinguish various degrees of consonance and dissonance. Originally, the only intervals reckoned consonant were the Octave or eighth (*διὰ πασῶν*), the Fifth (*διὰ πέντε* or *δὲ ἑξῶν*), the Fourth (*διὰ τεσσάρων* or *συλλαβῆς*), and any interval produced by adding an octave to one of these. But all intervals less than the fourth, or intermediate between any two of those just enumerated (as the sixth, tenth, &c.), were considered as dissonant. The principal intervals, less

than the fourth, employed in Greek music were the double tone (*δίτονον*), nearly equal to the modern major third; the tone and half (*τρημιτόνιον*), nearly the same as the minor third; the tone (*τόνος*), equal to the modern major tone; the half tone (*ἡμιτόνιον*) and the quarter tone (*τέταρτος*). (Eucl. p. 8.) Other writers speak of *ὁμοφωνία* or unison, *ἀντιφωνία* or the consonance of the octave, and *παρὰφωνία* or the consonance of the fourth and fifth. See Arist. *Probl.* xix. 39, and Gaudentius, p. 11. The latter author considers *παρὰφωνία* to be intermediate between consonance and dissonance, and mentions the tritone or sharp fourth as an example of it.

If two strings, perfectly similar except in length, and stretched by equal tensions, be made to vibrate, the number of vibrations performed in a given time by each is inversely proportional to its length; and the *interval* between the sounds produced is found to depend only on the *ratio of the lengths*, i. e. of the numbers of vibrations. Thus

if the ratio be $\frac{1}{2}$ the interval is an octave,

if " $\frac{2}{3}$ " a fifth,

if " $\frac{3}{4}$ " a fourth,

if " $\frac{4}{5}$ " a major tone.

The discovery of these ratios is attributed, probably with truth, to Pythagoras. But the accounts of the experiments by which he established them (see Nicomachus, p. 10) are plainly false, since they contradict the known fact that when similar and equal strings are stretched by *different* tensions, the number of vibrations are as the *square roots* of the tensions. (See Whewell's *Dynamics*, part ii. p. 331, ed. 1834.)

The *τόνος* or tone was defined to be the difference between the fourth and fifth; so that the corresponding ratio would be determined either by experiment, or by simply dividing $\frac{3}{4}$ by $\frac{2}{3}$.

It is remarkable that each of the four ratios enumerated above is *superparticular**; i. e. the two terms of each differ from one another by unity. And all the intervals employed in the modern theory are either such as correspond to superparticular ratios, or are produced from such by compounding them with the octave. Thus the ratio corresponding to the

major third is $\frac{4}{3}$

minor third " $\frac{5}{4}$

minor tone " $\frac{7}{6}$

major semitone " $\frac{8}{7}$

It seems therefore extraordinary, that analogy should not have led at once to the discovery at least of the major and minor third, as soon as the connection between intervals and ratios had been observed. However no such discovery was then made, or if made it was neglected; and this affords at once an explanation of the fact that intervals less than the fourth were reckoned dissonant: for the *δίτονον*, or double major tone, is greater than the true consonant major third (which consists of a major and minor tone) by an interval expressed by the ratio $\frac{4}{3}$; a difference quite sufficient to de-

* *Τόνος* is used in several different senses. First it signifies *degrees of tension*, and so *pitch*, whence its application to denote *mode*, the modes being scales which differed in pitch: and then it is taken for *result of tension*; whence its meaning as the name of an interval, *tone*, because a tone is the interval through which the voice is most naturally raised at one effort. (See Aristid. p. 22; Eucl. 19.)

* Euclid seems to consider no intervals consonant except such as correspond to superparticular (*ἐπιμόριος*) or multiple (*πολλαπλασιῶν*) ratios; the latter being such as $\frac{3}{2}$, $\frac{4}{3}$, $\frac{5}{2}$, &c. On this theory the octave and fourth ($\frac{2}{1}$) would be dissonant, but the octave and fifth ($\frac{3}{1}$) consonant. (See Eucl. *Sect. Can.* p. 24.)

stroy the consonance of the interval. In fact, when a keyed instrument is tuned according to the equal temperament, the major thirds are too great by an interval little more than half of this ($\frac{1}{4}\frac{1}{2}$ nearly), and yet are only just tolerable. This subject is important, because it bears immediately upon the question whether harmony was used in the Greek music.

An aggregate of two or more intervals, or rather a series of sounds separated from one another by intervals, constituted a system. Systems were named from the number of sounds which they comprehended. Thus an octachord was a system of eight sounds, a pentachord of five, and so on: and usually, though not necessarily, the number of sounds corresponded to the interval between the two extreme sounds.

The fundamental system in ancient music was the *tetrachord*, or system of four sounds, of which the extremes were at an interval of a fourth. In modern music it is the octachord, and comprehends an octave between the extremes. The important and peculiar property of the latter system, namely, the *completeness* of its scale, was fully understood, as the name of the interval *διὰ πασῶν* sufficiently indicates (see also Aristides, pp. 16, 17), but it was not taken in theory for the foundation of the scale; or at any rate was considered as made up of two tetrachords.

The *Genus* of a system depended upon the distribution of the two intermediate sounds of the tetrachord. The Greek musicians used three Genera:—

I. The Diatonic, in which the intervals between the four sounds were (ascending), semitone, tone, tone:—

II. The Chromatic; semitone, semitone, tone, and half:—

III. The Enharmonic; diesis, diesis, double tone:—

(The second note is meant to represent a sound half way between E and F, for which the modern system supplies no notation.)

Of these genera the Diatonic was allowed to be the most ancient and natural, and the Enharmonic the most modern and difficult; the latter however seems soon to have become the favourite with theorists at least, for Aristoxenus complains that all writers before his time had devoted their treatises almost entirely to it, to the neglect of the two others. (Aristox. pp. 2 and 19.)

The only difference between the ancient and modern Diatonic is, that in the former all the tones are major tones, whereas in the latter, according to the theory generally admitted, major and minor

tones occur alternately. (See Crotch's *Elements of Musical Composition*, chap. ix.) The interval called a semitone in the above descriptions is therefore strictly neither equal to the modern major semitone, nor to half a major tone, but the ear would hardly appreciate the difference in *melody*.

Besides these genera, certain *Colours* (*χρῶαι*) or specific modifications of them are enumerated. (Eucl. p. 10.)

The Enharmonic had only one *χρῶα*, namely, the genus itself as described above: it is commonly called simply *ἁρμονία*.

The Chromatic had three: 1st. *χρῶμα τονιαῖον*, or simply *χρῶμα*, the same as the genus; 2nd. *χρῶμα ἡμιόλιον*, in which intervals of three-eighths of a tone were substituted for the two semitones; 3rd. *χρῶμα μαλακόν*, in which intervals of one third of a tone were similarly employed.

The Diatonic had two *χρῶαι*: 1st. *διὰτονον σύντονον*, or simply *διὰτονον*, the same as the genus; 2nd. *διὰτονον μαλακόν*, in which an interval of three-fourths of a tone was substituted for the second semitone (ascending).

The following table will exhibit at one view the intervals between the sounds of the tetrachord, taken in the ascending order, according to each of these *χρῶαι*, the tone being represented by unity, and two tones and a half being supposed to make up a fourth, a supposition which is not exactly true, but is commonly adopted by the ancient writers as sufficiently accurate for their purpose. (See Eucl. *Sectio Canonis Theor.* xv.)

I. Diatonic . . .	1. <i>διὰτονον (σύντονον)</i> . . .	$\frac{1}{2}$, 1, 1.
	2. <i>διὰτονον μαλακόν</i> . . .	$\frac{1}{2}$, $\frac{2}{3}$, $\frac{1}{2}$.
II. Chromatic . .	1. <i>χρῶμα (τονιαῖον)</i> . . .	$\frac{1}{2}$, $\frac{1}{2}$, $\frac{1}{2}$.
	2. <i>χρῶμα ἡμιόλιον</i> . . .	$\frac{3}{8}$, $\frac{1}{2}$, $\frac{1}{4}$.
	3. <i>χρῶμα μαλακόν</i> . . .	$\frac{1}{3}$, $\frac{1}{3}$, $\frac{1}{3}$.
III. Enharmonic .	<i>ἁρμονία</i>	$\frac{1}{2}$, $\frac{1}{2}$, 2.

There seems to be little evidence that any of the *χρῶαι* were practically used, except the three principal ones, *διὰτονον*, *χρῶμα*, *ἁρμονία*. But it would be wrong to conclude hastily that the others would be impossible in practice, or necessarily unpleasant. In the *soft* Diatonic for instance, the interval which is roughly described as five-fourths of a tone would be greater than a major tone, but less than a minor third; now there are two intervals of this kind corresponding to the *superparticular* ratios $\frac{5}{4}$ and $\frac{7}{4}$, which ought therefore by analogy to be consonant, or at any rate capable of being employed as well as the tone and semitone; and although they are not used in modern music, or at least not admitted in theory*, nothing but experiment can determine how far the ear might become accustomed to them. If this view be correct, the intervals of the tetrachord in the *διὰτονον μαλακόν* would probably correspond to the ratios $\frac{1}{2}$, $\frac{1}{3}$, $\frac{2}{3}$, and similar considerations might be applied to the other *χρῶαι*.

The four sounds of the tetrachord were distinguished by the following names: *σπάτη* (sc. *χαρσθή*) was the *lowest*; *νήτη* or *ρετή* the highest; *μεση-*

* See Smith's *Harmonics*, sect. iv. art. 10. These intervals exist in the natural scales of the horn, trumpet, &c., and are in fact used, instead of the minor third and tone, in the harmony of the dominant seventh, both by stringed instruments and voices when unaccompanied by *tempered* instruments.

πάτη the lowest but one, and παραπάτη the highest but one. Παραπάτη was also frequently called λιχανός, probably because in some ancient instrument the corresponding string was struck by the forefinger; and παρυνπάτη was afterwards called τρίτη in certain cases. These names were used in all the genera; but the name of the genus was commonly added to λιχανός (thus λιχανός διάτονος, χρωματική or ἐναρμόνιος), perhaps because the position of this sound with respect to ὑπάτη and νήτη is what chiefly determines the character of the genus. When the two lowest intervals of the tetrachord taken together were less than the remaining one, those two were said to form a *condensed interval* (πυκνόν). Thus the interval between ὑπάτη and λιχανός is πυκνόν in the Enharmonic and Chromatic genera. The three sounds of the πυκνόν were sometimes called βαρυπυκνός, μεσοπυκνός and ὀξυπυκνός, and sounds which did not belong to a πυκνόν were called ἀπυκνοί.

It is not to be supposed that the tetrachord could long continue to furnish the entire scale used in practice, though it was always considered as the element of the more comprehensive systems which gradually came into use. The theory of the genera, as has been seen, required only the tetrachord for its full development, though it certainly could not have been invented till after the enlargement of the scale.

Terpander is said to have invented the seven-stringed lyre (Eucl. p. 19), which seems not to have been obsolete in Pindar's time (*Pyth.* ii. 70); its scale consisted of an octave with one sound omitted. (Arist. *Prob.* xix. 7, 25, 32.) The addition of this omitted sound (attributed to Lycæon

or Pythagoras), would give an octachordal lyre with a complete octave for its scale. And an instrument called *magadis*, which must have had a still greater compass, was very early known, and is said to have had twenty strings as used by Anacreon. (See Böckh, *de Metr. Pind.* lib. iii. cap. 7, 11.)

When two tetrachords were joined so that the highest sound of one served also for the lowest of the other, they were said to be *conjunct* (συνημμένα). But if the highest sound of one were a tone lower than the lowest of the other, they were called *disjunct* (διεzeugμένα), thus

BCDEFGA conjunct.

EFGABCD disjunct.

In the latter case the tone (between A and B) which separates them was called *τόνος διαzeugτικός*. (Eucl. p. 17.)

A hendecachordal system, consisting of three tetrachords, of which the middle one was conjunct with the lower but disjunct from the upper, thus

BCDEFGABCD E,

is supposed to have been used about the time of Pericles. (Böckh.) In such a system the lowest tetrachord was called (τετράχορδον) ὑπατῶν, the middle μέσων, and the highest διεzeugμένον. Afterwards a single sound (called προσλαμβανόμενος) was added at an interval of a tone below the lowest of ὑπατῶν, and a conjunct tetrachord (called ὑπερβολαίων) was added above. And thus arose a system of two complete octaves,

which was called the *greater perfect system*. Another system, called the *smaller perfect system*, was composed of three conjunct tetrachords, called

ὑπατῶν, μέσων, and συνημμένων, with προσλαμβανόμενος, thus,

and these two together constituted the *immutable system* (σύστημα ἀμετέδωλον) described by all the writers later than Aristoxenus, and probably known to him. (Eucl. p. 17.)

The sounds in these systems were named in the way before described, the names of the tetrachord only being added, and μέση and παραμέση being substituted for νήτη μέσων and ὑπάτη διεzeugμένων respectively. Thus, taking the sounds in the ascending order,

- | | | |
|---|------------------|-----------------------|
| A | προσλαμβανόμενος | |
| B | ὑπάτη ὑπατῶν | |
| C | παρυνπάτη ὑπατῶν | } τετράχορδον ὑπατῶν. |
| D | λιχανός ὑπατῶν | |
| E | ὑπάτη μέσων | |
| F | παρυνπάτη μέσων | } τ. μέσων. |
| G | λιχανός μέσων | |
| A | μέση | |

So far the sounds are common to the greater and smaller systems. Then follow, in the greater,

- | | | |
|---|-----------------------|--------------------|
| B | παραμέση | } τ. διεzeugμένον. |
| C | τρίτη διεzeugμένον | |
| D | παραπάτη διεzeugμένον | |
| E | νήτη διεzeugμένον | |
| F | τρίτη ὑπερβολαίων | |
| G | παραπάτη ὑπερβολαίων | } τ. ὑπερβολαίων. |
| A | νήτη ὑπερβολαίων | |

The interval between μέση and παραμέση is a tone. But in the smaller system μέση serves also for the lowest sound of the tetrachord συνημμένων, which terminates the scale, thus

- | | |
|----|----------------------|
| A | μέση |
| δB | τρίτη συνημμένων. |
| C | παραπάτη συνημμένων. |
| D | νήτη συνημμένων. |

In adapting the modern notation to these scales, we have represented them in the Diatonic genus; but the same arrangement of the tetrachords was adopted in the others. Those sounds of the immutable system which were the same in all the genera, namely, *προσλαμβανόμενοι, ὑπάτη ὑπατῶν, ὑπάτη μέσων, μέση, παραμέση, νήτη συνημμένων, νήτη διεζυγμένων, and νήτη υπερβολαίων*, were called fixed (*ἱστώτες*), being in fact, except the first, the extreme sounds of the several tetrachords. The rest, being the intermediate sounds, on the position of which the genus depended, were called movable (*κινούμενοι*).

Μέση was certainly considered a sort of key note to the whole system (see Arist. *Probl.* xix. 20), and *προσλαμβανόμενος* was added to complete the octave below *μέση*. (Aristides, p. 10.) This addition is supposed to have been made later than the time of Plato, but earlier than Aristoxenus. (Böckh.)

The greater of the two systems thus described appears to have superseded the other in practice;

Indeed Plutarch relates, on the authority of Aristoxenus, that Olympus was led to the invention of this genus by observing that a peculiar and beautiful character was given to melody when certain notes of the scale, and particularly *λιχάνος*, were left out. (See Plutarch's *Dialogue on Music; Mém. de l'Acad. des Inscriptions*, vol. x. 126.) It is therefore most probable that this was the original form of the Enharmonic scale, and that it was more ancient than the highly artificial Chromatic. In this form it would be both natural and easy. But afterwards, when additional sounds were interposed between B and C, E and F, it would of course become, as it is always described, the most difficult of all the Genera, without however ceasing to be natural: for these additional sounds could certainly be neither used by a composer nor executed by a singer as *essential* to the melody, but must rather have been introduced as passing or ornamental notes, so that the general effect of the genus would remain much the same as before. The assertion of Aristoxenus (see pp. 28, 53) that no voice could execute more than two quarter tones in succession, evidently supports this view.* Thus the Enharmonic would derive its distinctive character more from the largeness of the highest interval of the tetrachord than from the smallness of the two others. Aristoxenus (p. 23) expressly mentions the important influence which the magnitude of the interval between *λιχάνος* and *νήτη* had upon the character of the genus, and blames the musicians of his own time for their propensity to diminish this interval for the sake of *sweetness* (*ταύτου δ' ἄστιον τὸ βούλεσθαι γλυκαίνειν δεῖ*). That a peculiar character really is given to a melody by the occurrence of a larger interval than usual between certain sounds of the scale, is a well known fact, exemplified in many national airs, and

in fact it is evidently the most natural of the two. But it must not be supposed that it was necessarily used in its complete form as the scale of any instrument; it was rather a theoretical canon by which the scales really employed were constructed. With regard to its *fitness* for use, it may be observed that in the Diatonic genus the effect of such a system would not perceptibly differ, so long as *melody* only was required, from that of the corresponding notes (given above) as played on a modern instrument with or without temperament. The Chromatic scale is quite unlike* anything now employed; and though it was not considered the most difficult, was certainly the least natural. (*Τεχνικῶτατον δὲ τὸ χρώμα*, Aristides, p. 19.) But it is impossible to form a decided judgment of its merits, without a much greater knowledge of the rules of composition than seems now attainable. The effect of the Enharmonic must have been nearly the same as that of the Diatonic, supposing *λιχάνος* to be left out in each tetrachord, thus:

easily proved by the popular experiment of playing on the black keys only of a pianoforte.†

The Genus of a system was determined, as has been explained, by the *magnitude* of certain of its intervals. The *species* (*εἶδος*) depended upon the order of their succession. Hence, supposing no system to be used which was not similar to some part of the *σύστημα ἀμετάβολον*, every system would have as many species as it had intervals, and no more. (Eucl. p. 14.)

The tetrachord, for example, had three species in each genus thus (Diatonic),

1st. $\frac{1}{2}$, 1, 1. 2nd. 1, $\frac{1}{2}$, 1. 3rd. 1, 1, $\frac{1}{2}$.
(where 1 stands for a tone).

The species of a system was often described by indicating two sounds of the *σύστημα ἀμετάβολον* between which a similar one might be found. Of the seven species of the Octachord, the first was exemplified by the octave comprehended between *ὑπάτη ὑπατῶν* and *παραμέση*: the second by that between *παρυπάτη ὑπατῶν* and *τρίτη διεζυγμένων*; and so on. The order of the intervals in these seven species would be as follows in the Diatonic genus (ascending):

1st.	$\frac{1}{2}$,	1,	1,	$\frac{1}{2}$,	1,	1,	1
2nd.	1,	1,	$\frac{1}{2}$,	1,	1,	1,	$\frac{1}{2}$
3rd.	1,	$\frac{1}{2}$,	1,	1,	1,	$\frac{1}{2}$,	1

* The modern minor scale, A, B, C, D E, \sharp F, \sharp G, A, can hardly be considered an exception to this assertion, for its essential character, as now used, depends so little upon the Chromatic interval between F and \sharp G, that this peculiarity is usually got rid of in melody by raising the F or lowering the \sharp G, according to circumstances. Hence the popular but incorrect way of representing the ascending and descending minor scales. (See Dehn, *Theoretisch-praktische Harmonielehre*, pp. 67, 68.)

† See Burney, vol. i. p. 27, on the *Old Enharmonic*.

* Compare what is said (Aristid. p. 28) of the rare use of intervals of *three* and *five* quarter tones.

4th.	$\frac{1}{2}$	1,	1,	1,	$\frac{1}{2}$	1,	1
5th.	1,	1,	1,	$\frac{1}{2}$	1,	1,	$\frac{1}{2}$
6th.	1,	1,	$\frac{1}{2}$	1,	1,	$\frac{1}{2}$	1
7th.	1,	$\frac{1}{2}$	1,	1,	$\frac{1}{2}$	1,	1

This distinction of species is important, because it formed *originally* the chief difference between the *modes* (τόνοι). Unfortunately there are no means of determining what was the real difference between *melodies* written in these several scales; and the difficulty of forming any probable hypothesis on this subject is increased by what is said of μέση in the passage quoted above from the Aristotelic Problemata. Πάντα γὰρ τὰ χρηστὰ μέλη πολλάκις τῇ μέσῃ χρῆται, καὶ πάντες οἱ ἀγαθοὶ ποιηταὶ πυκνὰ πρὸς τὴν μέσῃ ἀπαντῶσι, κὰν ἀπέλωσι, ταχὺ ἐπανέρχονται, πρὸς δὲ ἄλλην οὕτως οὐδεμίαν. For since the position of μέση was determined (Euclid. p. 18) by the intervals adjacent to it, any series of sounds *beginning or ending with μέση* would give a system always of the same species. Possibly the author of the Problemata does not use the term μέση in the same sense as Euclid.

However it is certain that the seven species of the Octachord above described were anciently (ὅτε τῶν ἀρχαίων, Euclid. p. 15) denoted by the names Mixolydian, Lydian, Phrygian, Dorian, Hypolydian, Hypophrygian, and Hypodorian; and it seems likely that they always differed in pitch as well as species, the Mixolydian being the highest, and the Hypodorian the lowest. Hence it is conjectured that there were originally only three modes, corresponding to the three species of tetrachord, and that these were the Dorian, Phrygian, and Lydian; because the Octachord in each of these three modes is made up of two similar disjunct tetrachords, which are of the first species in the Dorian, the second in the Phrygian, and the third in the Lydian.

Aristides describes also six *enharmonic* modes of very ancient origin (ὡς οἱ πᾶν παλαιότατοι πρὸς τὰς ἁρμονίας κέχρηται, p. 21) consisting of different species of octachords, and quotes the well known passage in Plato (*Rep.* iii. c. 10) as referring to them. The order of the intervals is given as follows (see the notes of Meibomius upon the passage):—

Lydian	.	$\frac{1}{2}$	2,	1,	$\frac{1}{2}$	$\frac{1}{2}$	2,	$\frac{1}{2}$
Dorian	.	1,	$\frac{1}{2}$	$\frac{1}{2}$	2,	1,	$\frac{1}{2}$	2.
Phrygian	.	1,	$\frac{1}{2}$	$\frac{1}{2}$	2,	1,	$\frac{1}{2}$	1.
Iastian	.	$\frac{1}{2}$	$\frac{1}{2}$	2,	1 $\frac{1}{2}$,	1,		
Mixolydian	.	$\frac{1}{2}$	$\frac{1}{2}$	1,	1,	$\frac{1}{2}$	$\frac{1}{2}$	3.
Syntonolydian		$\frac{1}{2}$	$\frac{1}{2}$	2,	1 $\frac{1}{2}$,	2,		

It will be observed that these scales do not all comprehend exactly an octave; and none of them except the Lydian is coincident with any part of the σύστημα ἀμετάβολον.* None of them is decidedly unnatural, except perhaps the Mixolydian. Of course it is impossible to recognise their characters as described by Plato, in the absence of examples of their application in actual melody. Their principal interest therefore consists in the evidence which they afford of the antiquity of *enharmonic systems*, i. e. of systems formed by omitting certain sounds of the diatonic scale. For unless we take

* That systems were not *always* restricted to the *immutable* form is proved by what Euclid says of *compound systems*, with more than one μέση.

this view of them, and consider the quarter tones as unessential additions, it seems quite impossible to understand how they could be used at all.

The difference of species, considered as the characteristic distinction of modes, is evidently spoken of as a thing antiquated and obsolete, not only by Aristides (who was certainly later than Cicero, see p. 70), but also by Euclid. As to Aristoxenus, the fragments which remain of his writings contain no allusion to such a distinction at all. In his time it appears that the number of modes was thirteen; and later writers reckon fifteen. (Euclid. p. 19; Aristid. pp. 23, 24.) The descriptions of these fifteen modern modes are very scanty, but they indicate pretty plainly that they were nothing more than transpositions of the *greater perfect system*; their names were Hypodorian, Hypoianian, Hypophrygian, Hypoaeolian, Hypolydian, Dorian, Iastian, Phrygian, Aeolian, Lydian, Mixolydian, Hyperianian, Hyperphrygian, Hyperaeolian, Hyperlydian. The Hypodorian was the lowest in pitch, and the προσλαμβανόμενοι of the others were successively higher by a semitone; and only that part of each scale was used which was within the compass of the voice. It seems likely that the ancient modes mentioned by Euclid, and described above, consisting of octachords taken, as regards their *species*, from different parts of the σύστημα ἀμετάβολον, would, as regards *pitch*, be each so placed as to lie between ὁδοὶ μέσων and ῥήγη διεξυγμένων of the modern mode of the same name. For they certainly did always differ in pitch, as the name τόνος shows; and there is no reason to believe that their relative position was ever changed: the system of notation, moreover, confirms this supposition. But for details on this subject we must refer to the dissertation of Böckh (iii. 8), where it is treated at length. The only important results, however, are, first, that the modes did anciently differ in *species*; secondly, that in process of time this difference either disappeared entirely, or ceased to be their distinguishing mark; and, thirdly, that their general *pitch* was always different. The ideas conveyed by these general assertions of the real character and effect of the Greek music are excessively vague and unsatisfactory; but an examination into particulars does not tend to make them at all more definite or clear.

There can be little doubt that different rhythms and degrees of slowness or quickness, as well as different metres and styles of poetry, would soon be appropriated to the modes, so as to accord with their original musical character; and these differences would in time naturally supersede the old distinction of species, and come to be looked on as their characteristic marks; so that at length all the species might even be used in each mode, for the sake of additional variety. With regard to the poetry, indeed, it is certain that particular measures were considered appropriate to different modes (Plat. *Leg.* ii. p. 670), and it has even been attempted to divide Pindar's Odes into Dorian, Aeolian, and Lydian. (Böckh, iii. 15.) The rhythm of the music must have depended chiefly, if not entirely, upon that of the words, or else have been of a very simple and uniform character, since there is no mention of a notation for it as distinct from the metre of the poetry. Probably, therefore, nothing like the modern system of musical rhythm existed; and if so, this

must have formed one of the most essential points of difference between the ancient and modern music. How the rhythm of mere *instrumental* music was regulated, or what variety it admitted, does not appear. There is no reason, however, to believe that music without words was practised to any extent, though it was certainly known; for Plato speaks with disapprobation of those who used μέλος καὶ ῥυθμὸν ἀνευ ῥημάτων, ψίλη καθαρίσει τε καὶ αὐλήσει προσχρόμενοι (*Leg.* ii. p. 669), and others mention it. (Böckh, iii. 11.)

On the two last of the heads enumerated in dividing the whole subject, very little real information can be obtained. In fact they could not be intelligibly discussed without *examples*, a method of illustration which unfortunately is never employed by the ancient writers. Μεταβολή was the transition from one genus to another, from one system to another (as from disjunct to conjunct or *vice versa*), from one mode to another, or from one style of melody to another (Euclid. 20), and the change was made in the same way as in modern *modulation* (to which μεταβολή partly corresponds), viz. by passing through an intermediate stage, or using an element common to the two extremes between which the transition was to take place. (See Euclid. 21.)

Μελοποιία, or composition, was the application or use of all that has been described under the preceding heads. This subject, which ought to have been the most interesting of all, is treated of in such a very unsatisfactory way that one is almost forced to suspect that only an *exoteric* doctrine is contained in the works which have come down to us. On composition *properly* so called, there is nothing but an enumeration of different kinds of *sequence* of notes, viz.: — 1. ἀνωγῆ, in which the sounds followed one another in a regular ascending or descending order; 2. πλοκή, in which intervals were taken alternately ascending and descending; 3. περτά, or the repetition of the same sound several times successively; 4. τωή, in which the same sound was sustained continuously for a considerable time. (Eucl. 22.) Besides this division, there are several classifications of melodies, made on different principles. Thus they are divided according to *genus*, into Diatonic, &c.; according to *mode*, into Dorian, Phrygian, &c.; according to *system*, into grave, acute, and intermediate (ὕπατοις, ὑψηλοῖς, μεσοῖς). This last division seems merely to refer to the general pitch of the melody; yet each of the three classes is said to have a distinct *turn* (τρόπος), the grave being *tragic*, the acute *comic* (γυμνικός), and the intermediate *dithyrambic*. Again melody is distinguished by its *character* (ἦθος), of which three principal kinds are mentioned, διασταλτικόν, συσταλτικόν, and ἡσυχαστικόν, and these terms are respectively explained to mean aptitude for expressing a magnanimous and heroic, or low and effeminate, or calm and refined character of mind. Other subordinate classes are named, as the erotic, epithalamian, comic, and encomiastic. (Euclid. 21; Aristid. 29.) No account is given of the *formal* peculiarities of the melodies distinguished by these different characters, so that what is said of them merely excites our curiosity without tending in the least to satisfy it.

The most ancient system of notation appears to have consisted merely in the appropriation of the letters of the alphabet to denote the different sounds of the scale; and the only alteration made

in it was the introduction of new signs formed by accenting letters, or inverting, distorting, and mutilating them in various ways, as the compass of the scale was enlarged. A great, and seemingly unnecessary, complexity was caused by the use of two different signs for each sound; one for the voice, and the other for the instrument. These two signs were written one above the other immediately over the syllable to which they belonged. They are given by several of the Greek writers, but most fully by Alypius. The instrumental signs appear to have been chosen arbitrarily; at least no law is now discoverable in them: but the vocal (which were probably more ancient) follow an evident order. The sounds of the middle part of the scale are denoted by the letters of the Ionian alphabet (attributed to Simonides) taken in their natural order; and it is remarkable that these signs would be just sufficient for the sounds comprised in the six modes supposed to be the most ancient, if the compass of each were an octave and they were pitched at intervals of a semitone above one another. Accented or otherwise altered letters are given to the higher and lower sounds. To learn the system perfectly must have required considerable labour, though its difficulty has been much exaggerated by some modern writers. (See Böckh, iii. 9.) A few specimens of Greek melody expressed in the ancient notation have come down to us. An account of them may be found in Burney (vol. i. p. 83), where they are given in modern notes with a conjectural rhythm. The best of them may also be seen in Böckh (iii. 12) with a different rhythm. It is composed to the words of the first Pythian, and is supposed by Böckh to be certainly genuine, and to belong to a time earlier than the fifteen modes. Its merits have been very variously estimated; probably the best that can be said of it is that no certain notion can now be obtained of its real effect as anciently performed.

It has long been a matter of dispute whether the ancients practised *harmony*, or music in parts. We believe there are no sufficient grounds for supposing that they did. The following are the facts usually appealed to on each side of the question. In the first place, the writers who professedly treat of music make no mention whatever of such a practice; this omission constitutes such a very strong *prima facie* evidence against it, that it must have settled the question at once but for supposed positive evidence from other sources on the other side. It is true that μελοποιία, which might have been expected to hold a prominent place in a theoretical work, is dismissed very summarily; but still when the subjects which *ought* to be explained are enumerated, μελοποιία is mentioned with as much respect as any other, whilst *harmony* is entirely omitted. In fact there seems to be no Greek word to express it; for ἁρμονία signifies a well ordered *succession* of sounds (see Burney, i. 131), and συμφωνία only implies the concord between a single pair of sounds, without reference to succession. That the Greek musicians were acquainted with συμφωνία is proved by many passages, though we are not aware that they ever mention the concord of *more* than two sounds. But the subject of concord, so long as succession is not introduced, belongs rather to acoustics than to music. There is, however, a passage (Arist. *Probl.* xix. 18), where succession of concords is mentioned: — Διὰ τί ἡ διὰ πᾶσιν συμφωνία ἔδεται μόνῃ; μαγαλίζουσα

γὰρ ταύτην, ἄλλην δὲ οὐδεμίαν. Μαγαδίσειν signified the singing or playing in two parts at an interval of an octave; and the word is derived from *μαγάdis*, the name of a stringed instrument which had sufficient compass to allow a succession of octaves to be played on it. (This practice of *magadizing* could not fail, of course, to arise as soon as men and women attempted to sing the same melody at once.) The obvious meaning of the passage then is, that since no interval except the octave could be *magadized* (the effect of any other is well known to be intolerable), *therefore* no other interval was employed at all; implying that no other kind of counterpoint than *magadizing* was thought of. But the words are certainly capable of a somewhat milder interpretation.

In the next place, the constitution of the scale was, as has been seen, very unfit for harmony, the beauty of which depends so essentially upon the use of *thirds*. The true major third was either not discovered or not admitted to be consonant till a very late period, Ptolemy being the earliest extant author who speaks of the *minor tone* (Burney, vol. i. p. 448); a fact which is so extraordinary and so contrary to all that could have been anticipated, as to destroy all confidence in any *a priori* reasonings on the subject, and to exclude all but actual evidence on either side. The positive evidence is *favour* of the existence of counterpoint consists chiefly in certain indications of two modes having been sometimes used at once. Thus the expression in Horace (*Epod.* ix. 5),

"Sonante mistum tibiis carmen lyra
Hac Dorian, illis barbarum,"

is interpreted to mean that the lyre was played in the Dorian mode, and the *tibiae* in the *Lydian*; so that if the *ancient* Dorian and Lydian octave were employed, the former being of the fourth species, while the latter was of the second, and pitched two tones higher, the series of intervals heard would consist of fourths and major thirds, or rather double tones.

Again, there are passages such as —

Ἀλοεὺς ἔβαινε Δωρίαν κέλευθον ὀρνύην

(quoted from Pindar by the Scholiast on *Pyth.* ii. 127), which are supposed to indicate that poetry written in one mode and sung accordingly, was accompanied by instruments in another. For a view of the most that can be made of such arguments, see Böckh, iii. 10. Our knowledge of the real use of the modes is so very imperfect, that not much reliance can be placed on them; and at any rate they would only prove the existence of a kind of *magadizing*, modified by taking scales of different (instead of the same) species for the two parts, so as to avoid the succession of intervals absolutely the same. This would certainly be the very lowest kind of counterpoint; but if any thing more had been practised, it would be absolutely impossible to account for the utter silence of the theoretical writers, which is all but fatal even to such a limited hypothesis. It is only necessary to add that the influence of *instruments* upon the development of the art ought to be kept in view in considering this question. The Greeks had only two kinds of instrumental music, *αὐλὴσις* and *κιθάρισις*. The *αὐλὸς* was always a pipe pierced with holes, so as to have an artificial scale. The simple tube or trumpet does not appear to have been used as a musical instrument, so that the scale of natural

harmonics was probably unknown; and this may partly account for the major third escaping observation. And anything like the *modern* system of harmony could probably no more have been invented without the assistance of keyed instruments than the Elements of Euclid could have been composed in the total absence of drawing materials. For a fuller account of ancient musical instruments see Böckh, iii. 11.

The chief authorities on the subject of this article are the "Antiquae Musicae Auctores Septem," viz.: Aristoxenus, Euclid, Nicomachus, Alypius, Gaudentius, Bacchius, Aristides, Quintilianus, and Martinus Capella, edited by Meibomius, in one volume (Amsterdam, 1652), to the pages of which the preceding quotations refer; the Harmonics of Ptolemy (with an Appendix by Wallis, *Op. Mathemat.* vol. iii.); the Dialogue of Plutarch; and a section of the Aristotelic Problemata; Burney, *History of Music*; Böckh, *de Metris Pindari*; Drieberg, *Musikalische Wissenschaften der Griechen*; and *Aufsätze über die Musik der Griechen*; Bode, *Gesch. der Lyrisch. Dichtkunst der Hellenen*; Fortlage, *Das Musikalische System der Griechen*, Leipzig, 1847. [W. F. D.]

2. ROMAN. It may well be believed that in music as in the other arts, the genius of Greece had left little for Romans to do, but admire and imitate. Yet we must not forget that another element had been introduced into the arts of Rome, as well as into her language and government; one which was derived from Etruria, and partook of an Oriental character. Every species of musical instrument found on Greek works of art is found also on Etruscan. No doubt the early Roman music was rude and coarse, still from the most ancient times mention is made of hymns and flutes in their triumphal processions: so Servius Tullius in his comitia made two whole centuries of *cornicines* and *tibicines*; and the Twelve Tables allowed at funerals ten players on the flute, and enjoined that "the praises of great men should be sung in mournful songs (*neniae*) accompanied by the flute."

The year B.C. 365 marks an era in Roman music by its adaptation to theatrical amusements. It is in this year we find mention of a *lectisternium*, at which actors were first brought from Etruria, who, without verses, danced in dumb show to the sound of the flute. Some time later Livy (ix. 30) mentions a curious tale of the desertion of certain Roman flute-players, who were only brought back by an amusing stratagem. We learn from Valerius Maximus (ii. 5) that the Roman flute-players were incorporated into a college, and Ovid (*Fast.* vi. 657), speaking of their ancient importance, says —

"Temporibus veterum tibicinis usus avorum
Magnus, et in magno semper honore fuit
Cantabat fania, cantabat tibia ludis,
Cantabat moestis tibia funeribus."

Nero, as Suetonius (*Nero*, 24) tells us, played on the flute, and came in a sort of triumphal procession through Italy, bearing the spoils he had won in 1800 musical contests. The same writer informs us that the emperor, to preserve his voice, used to lie on his back with a thin plate of lead on his stomach; that he took frequent emetics and cathartics, and at last transacted all business in writing.

There does not appear to be any trace of a

Roman musical system entirely distinct from the Greek. A passage in Cicero would lead us to suppose that the laws of contrast, of light and shade, of loud and soft, of swelling and diminishing, were understood by the Romans (*de Orat.* iii. 44), and another passage from Apuleius decidedly proves that the Romans had instrumental music distinct from their vocal; on both of which points there is not the same clear evidence to decide the question with reference to the Greeks. Still the Roman musical writers, as St. Augustin, Macrobius, Martianus Capella, Cassiodorus, and Boethius (all of whom flourished between the fourth and sixth centuries of the Christian era), did nothing to improve the science of music, and were little more than copyists of their Greek predecessors. The great improvement which the Romans introduced (rather a practical than a theoretical one) was a simplification of the musical nomenclature, effected by rejecting the arbitrary signs in use among the Greeks, and substituting for them the first fifteen letters of the Roman alphabet. (Hawkins, vol. i. p. 279.) This simplification they were enabled to make by a reduction of the modes: indeed it seems very probable that this complicated system had in practice entirely fallen into disuse, as we know that the diatonic *genus* had usurped the place of the two other *genera*.

Of all Latin authors Boethius gives the most profound account of the subject. His work is a carrying out of the old Pythagorean system, and is a mere abstract speculation on the nature of music, which, viewed as one of the *quadrivium* or four mathematical sciences, has its foundation in number and proportion. A full analysis of the work may be seen in Hawkins (i. p. 338). It contains, 1st, an investigation into the ratios of consonances; 2nd, a treatise on several kinds of proportion; 3rd, a declaration of the opinions of different sects with respect to the division of the monochord and the general laws of harmony.

Before this time St. Ambrose had introduced the practice of antiphonal singing in the church at Milan. Of the nature of the Ambrosian chant we only know that it consisted in certain progressions, corresponding with different species of the diapason. It is described as a kind of recitation, more like reading than singing.

It was by St. Gregory the Great that the octave was substituted for the tetrachord as the fundamental division of the scale. The first octave he denoted by capital letters A, B, C, &c., the second by small letters a, b, c, &c., and when it became necessary to extend the system, marked the third by small letters doubled, aa, bb, &c. There is no proof that the Romans, any more than the Greeks, had any notation with reference to time. Where vocal music was united with instrumental, the time was marked by the metre of the song: the want of a notation of time would make us doubt whether any but a very simple style of merely instrumental music prevailed among them. (Hawkins's *History of Music*, vol. i.; Burney's *History of Music*, vol. i.)

For a general account of ancient music the reader is referred to the previous article. [B. J.]

MUSIVUM OPUS. [DOMUS, p. 431; PICTURA, No. XV.]

MUSTAX (μύσταξ), moustaches. The different parts of the beard [BARBA] had different names, which also varied with its age and appearance. The young beard, first appearing on the upper

lip, was called *ὠθήνη* or *ὠθήνη πύρνη* (Diod. v. 28, Philostr. *Sen. Imag.* i. 30, ii. 7, 9), and the youth just arrived at puberty, who was graced with it, was *πύρρον ὠθήνης*. (Hom. *Il.* xxiv. 348, *Od.* x. 279; Schol. in *loc.*; Bruck, *Anal.* iii. 44; Aelian, *V. H.* x. 18.) By its growth and development it produced the moustaches, which the Greeks generally cherished as a manly ornament. (Theocrit. xiv. 4; Antiphanes, *ap. Athen.* iv. 21; Pollux, ii. 80, x. 120.) To this practice, however, there seems to have been one exception. The Spartan EPHORI, when they were inducted, made a proclamation requiring the people "to shave their moustaches and obey the laws." For what reason they gave the former command does not appear. (Plut. *de Sera Num. Vind.* p. 976, ed. Steph.; Proclus in *Hes. Op. et Dies*, 722; Müller, *Dor.* iii. 7. § 7, iv. 2. § 5; Becker, *Charities*, vol. ii. p. 391.) [J. Y.]

MUSTUM. [VINUM.]

MUTATIONES. [MANSIO.]

MUTUUM. The *Mutui datio* is mentioned by Gaius as an instance of an obligatio "quae re contrahitur." It exists when things "quae pondere, numero, mensurae constant," as coined money, wine, oil, corn, aes, silver, gold, are given by one man to another so as to become his, but on the condition that an equal quantity of the same kind shall be returned. The difference in the thing which is lent constitutes one of the differences between this contract and commodatum. In the *mutui datio*, inasmuch as the thing became the property of the receiver, the Roman jurists were led to the absurdity of saying that *mutuum* was so called for this reason (*quod ex meo tuum fit*). This contract gave the lender the action called *condictio*, provided he was the owner of the things, and had the power of alienation: otherwise he had no action till the things were consumed. If the borrower lost the things by any accident as fire, shipwreck, &c., he was still bound: the reason of which clearly was, that by the *Mutui datio* the things became his own. It was a *stricti juris actio*, and the lender could have no interest for a loan of money, unless interest had been agreed on. The borrowing by way of *Mutuum* and at interest are opposed by Plautus (*Arim.* i. 3. 95). The *Senatusconsultum Macedonianum* did not allow a right of action to a lender against a *filiusfamilias* to whom he had given money "mutua," even after the death of the father. [SENATUSCONSULTUM MACEDONIANUM.] (Gaius, iii. 90; Inst. 3. tit. 14; Dig. 12. tit. 1. *De Rebus Creditis*; Cod. 4. tit. 1; Vangerow, *Pandekten*, &c. iii. § 623.) [G. L.]

MY'RII (μυριοί), the name given to the popular assembly of the Arcadians, which was established after the overthrow of the Spartan supremacy by the battle of Leuctra, and which used to meet at Megalopolis in order to determine upon matters affecting the whole people. (Xen. *Hell.* vi. 5. § 6, vii. 1. § 38, vii. 4. § 2; Diod. xv. 59; Dem. *de Fala. Leg.* p. 344; Aeschin. *de Fala. Leg.* p. 257; Paus. viii. 32. § 1; Harpocrat. *Suid. Phot.* s. v.; Schömann, *Antiq. Jur. Publ. Gr.* p. 410.)

MY'SIA (μύσια), a festival celebrated by the inhabitants of Pellene in Achaia, in honour of Demeter Mysia. The worship of this goddess was introduced at Pellene from a place called Mysia in the neighbourhood of Argos. (Paus. ii. 18. § 3.) The festival of the Mysia near Pellene lasted for seven days, and the religious solemnities

took place in a temple surrounded by a beautiful grove. The first two days men and women took part in the celebration together; on the third day the men left the sanctuary, and the women remaining in it performed during the night certain mysterious rites, during which not even male dogs were allowed to remain within the sacred precincts. On the fourth day the men returned to the temple, and men and women now received each other with shouts of laughter and assailed each other with various railleries. (Paus. vii. 27. § 4; Cornutus, *de Nat. Deor.* 28.) Other particulars are not known.

MYSTAE, MYSTAGO'GUS (μύσται, μυσταγωγός). [ELEUSINIA.]

MYSTÉ'RIA (μυστήρια). As each mystery or mystic festival is described in a separate article, a few general observations only will be required under this head. The names by which they were designated in Greece, are μυστήρια, τελεταί, and δργια. The name δργια (from ὄργα) originally signified only sacrifices accompanied by certain ceremonies, but it was afterwards applied especially to the ceremonies observed in the worship of Dionysus, and at a still later period to mysteries in general. (Lobeck, *Aglaopham.* i. p. 305.) Τελετή signifies in general a religious festival (Aristot. *Rhet.* ii. 24; Pind. *Nem.* x. 63), but more particularly a lustration or ceremony performed in order to avert some calamity either public or private. (Plato, *de Rep.* ii. p. 264, κ.) Μυστήριον signifies, properly speaking, the secret part of the worship, but it was also used generally in the same sense as τελετή, and for mystic worship.

Mysteries in general may be defined as sacrifices and ceremonies which took place at night or in secret within some sanctuary, which the uninitiated were not allowed to enter. What was essential to them, were objects of worship, sacred utensils, and traditions with their interpretations, which were withheld from all persons not initiated. We must however distinguish between mysteries properly so called, that is, such in which no one was allowed to partake unless he had undergone a formal initiation, and the mystic ceremonies of certain festivals, the performance of which, though confined to particular classes of persons, or to a particular sex, yet did not require a regular initiation. Our attention in this article will be confined to the mysteries properly so called.

It appears to have been the desire of all nations of antiquity to withhold certain parts of their religious worship from the eyes of the multitude in order to render them the more venerable. (Strabo, p. 717.) But that the ancient mysteries were nothing but impositions of priests, who played upon the superstitious and ignorant, is an opinion, which, although entertained by Limburg-Brouwer, the latest writer on the subject (*Histoire de la Civilisation Morale et Relig. des Grecs*, vol. iv. p. 199), certainly cannot satisfy those who are accustomed to seek a more solid and vital principle in all religious institutions that have ever had any lasting influence upon mankind. The persons united and initiated to celebrate the mysteries in Greece were neither all priests, nor did they belong to the ignorant and superstitious classes of society, but they were on the contrary frequently the most distinguished statesmen and philosophers. It has been remarked under ELEUSINIA (p. 454, b) that it is far more probable that the mysteries in the

various parts of Greece were remains of the ancient Pelasgian religion. The associations of persons for the purpose of celebrating them must therefore have been formed at the time when the overwhelming influence of the Hellenic religion began to gain the upper hand in Greece, and when persons who still entertained a reverence for the worship of former times, united together with the intention of preserving and upholding among themselves, as much as possible of the religion of their forefathers. It is natural enough that they formed themselves for this purpose into societies, analogous to the brotherhoods in the church of Rome (Porphyry, *de Abstin.* iv. 5), and endeavoured to preserve against the profanation of the multitude that which was most dear to them. Hence the secrecy of all the Greek mysteries, and hence the fact that they were almost invariably connected with the worship of the ancient Pelasgian divinities. The time when mysteries were established as such, must have been after the great changes and disturbances produced by the Dorian migration, although tradition referred their institution to Orpheus, the Curetes, the Idaean Dactyles, Dionysus, &c., who belong to a much earlier period. These traditions, however, may in so far be regarded as true, as the mysteries were only a continuation and propagation of the ancient religion. But it must be admitted that in subsequent times new elements were added to the mysteries, which were originally foreign to them. The development of philosophy, and more especially the intercourse with the East and with Egypt, appear to have exercised a considerable influence upon their character.

The most celebrated mysteries in Greece were those of Samothrace and Eleusis. [CABEIRIA; ELEUSINIA.] But several other places and divinities had their peculiar mysteries, e.g. the island of Crete those of Zeus (Strabo, p. 718; Athen. ix. 18); Argolis those of Hera (Paus. ii. 38. § 2); Athens those of Athena and Dionysus (Plut. *Alcib.* 34; DIONYSIA); Arcadia those of Artemis (Paus. viii. 23. § 3), and Aegina those of Hecate. (Paus. ii. 30. § 2). But not only the worship of the great gods, but also that of some ancient heroes was connected with mysteries. (Paus. iv. 34. § 6, ii. 1, ii. 30. § 5; Herod. v. 83.)

The benefits which the initiated hoped to obtain were security against the vicissitudes of fortune, and protection from dangers both in this life and in the life to come. The principal part of the initiation, and that which was thought to be most efficacious in producing the desired effects, were the lustrations and purifications, whence the mysteries themselves are sometimes called καθάρσια or καθαρμοί.

Offences against and violations of the mysteries were at Athens under the jurisdiction of the archon king, and the court in such cases only consisted of persons who were themselves initiated (μεμυρμένοι), and were selected from the heliastae for the purpose. (Pollux, viii. 141.) Even in cases which were brought before an ordinary court, the judges were only initiated persons, if the case had any connection with the mysteries. (Andocid. *de Myst.* p. 14.) That no one but the initiated might hear the transactions in such a case, the court was surrounded by public slaves to keep all profane persons at a distance. (Pollux, viii. 123.)

The Roman religion had no such mysteries as that of the Greeks, but only mystic rites and cere-

monies connected with the celebration of certain festivals. The Bacchanalia were of foreign origin, and of short duration. [DIONYSIA.]

A very full account of the Greek mysteries is given by Limburg-Brouwer, *Hist. de la Civilisat. Mor. et Relig. des Grecs*, vol. iv. p. 180—415, and chapter xxvi. of the same work contains a useful survey of the various opinions upon the subject which have been entertained by modern scholars and philosophers. [L. S.]

MYSTILE (μυστίλη). [CORNA, p. 305, a.]

MYSTRUM (μύστρον), a Greek liquid measure, of which there were two sizes, called the large and small mystrum. The small, which was the more common of the two, was $\frac{1}{4}$ of the cotyla, and $\frac{1}{2}$ of the cyathus, and therefore contained about 1-50th of an English pint. (Galen, *Frag.* c. 15.) Galen adds that the smaller mystrum contained 2½ drachms, that the larger was $\frac{1}{2}$ of the cotyla, and contained 3½ drachms; but that the most exact mystrum (τὸ δικαιοτάτον μύστρον) held 8 scruples, that is, 2½ drachms. According to this, the small mystrum would be $\frac{2}{3}$ of the larger. But in the 13th chapter of the same fragment he makes the large mystrum = $\frac{1}{2}$ of the cotyla and the small mystrum $\frac{1}{4}$ of the large. In c. 4 he makes the large mystrum = 3 oxybapha, and the small = 1½. Cleopatra makes the large = $\frac{1}{4}$ of the cotyla, the small = $\frac{1}{16}$. (Wurm, *de Pond.* p. 130.) [P. S.]

NAVA'LES DUUMVIRI. [DUUMVIRI.]

NAVA'LES SO'CII. [EXERCITUS, p. 509, b.]

NAVA'LIA, were docks at Rome where ships were built, laid up, and refitted. They were attached to the emporium outside of the Porta Trigemina, and were connected with the Tiber. (Liv. xxxv. 10, xl. 51, xlv. 2.) The emporium and navalia were first included within the walls of the city by Aurelian. (Vopisc. *Aurel.* 21.)

The docks (νεώσοικοι or νέωρια) in the Peiræus at Athens cost 1000 talents, and having been destroyed in the anarchy were again restored and finally completed by Lycurgus. (Isocr. *Areopag.* 25; Böckh, *Publ. Econ.* p. 201, 2nd ed.) They were under the superintendence of regular officers called ἐπιμεληταὶ τῶν νεωρίων. [EPIMELETAE, No. 5.]

NAVA' LIS CORONA. [CORONA, p. 360.]

NAVARCHUS (ναύαρχος) is the name by which the Greeks designated both the captain of a single ship, and the admiral of a fleet. The office itself was called ναρχία. The admiral of the Athenian fleet was always one of the ten generals (στρατηγοί) elected every year, and he had either the whole or at least the principal command of the fleet. (Plut. *Themist.* 18.) The chief officers who served under him were the trierarchs and the pentecontarcha, each of whom commanded one vessel; the inferior officers in the vessels were the κυβερνήται or helmsmen, the κελενστὰι or commanders of the rowers, and the προρῆται who must have

NAUCRARIA.

been employed at the prow of the vessels. (Xenoph. *de Republ. Ath.* 1, 2. § 20; compare ΣΤΡΑΤΗΓΕΥΣ.)

Other Greek states who kept a navy had likewise their navarcha. A Spartan navarchus is mentioned by Xenophon (*Hellen.* ii. 1. § 7), and under him served an officer called ἐπιστολεύς. (Pollux, i. 96; Sturz, *Lex. Xenoph.* ii. p. 321.) The navarchia of Sparta however was an innovation of later times, when the Spartans had acquired a fleet and possessions in foreign countries. The office was distinct from that of the kings, and Aristotle (*Polit.* ii. 6. p. 69, ed. Götting) calls it σχεδὸν ἐτέρα βασιλεία. (See Weber, *De Gytheo et Laedaemoniorum Reb. Navalib.* p. 73, &c.)

The navarchus in Rhodes seems to have been their chief military officer. We find him authorized to conclude treaties with foreign nations (Polyb. xvii. 1), and sent on embassies in the name of the republic. (Polyb. xxx. 8; Liv. xlv. 25.) [L. S.]

NAUCRA'RIA (ναυκράρια) is the name of a division of the inhabitants of Attica. The four Attic phylæ were each divided into three phratriæ, and each of these twelve phratriæ into four naucrariæ, of which there were thus forty-eight. This division is ascribed to Solon (Photius, s. v. *Ναυκράρια*), but Herodotus (v. 71) in relating the insurrection of Cylon mentions magistrates at Athens called πρυτάνεις τῶν ναυκράρων, so that the naucrariæ must have existed long before Solon. There is, however, some difficulty connected with this passage of Herodotus, inasmuch as Thucydides (i. 126) in relating the same event mentions the nine archons instead of the prytanes of the naucrariæ. Wachsmuth (*Hellen. Ath.* vol. i. p. 366, 2d ed.) endeavours very ingeniously to reconcile Herodotus and Thucydides, by supposing that the prytanes of the naucrariæ were the same as the trittyrarchæ, the assessors of the first archon, and were thus identified by Thucydides with the archons themselves. What the naucrariæ were previous to the legislation of Solon is not stated anywhere, but it is not improbable that they were political divisions similar to the demes in the constitution of Cleisthenes, and were made perhaps at the time of the institution of the nine archons for the purpose of regulating the liturgies, taxes, or financial and military affairs in general. (Böckh, *Publ. Econ.* ii. § 21.) Tittmann (*Griech. Staatsv.* p. 269) moreover supposes with some probability, that they were, like the demes of Attica, local divisions. Hence the grammarians inform us that ναύκαρος, or the chief officer of every naucraria, was the same as the demarch. At any rate, however, the naucrariæ before the time of Solon can have had no connection with the navy, for the Athenians then had no navy, and the word ναύκαρος cannot be derived from ναύς, a ship, but from ναῖς, and ναύκαρος is only another form for ναύκληρος in the sense of a householder, as ναῦλον was used for the rent of a house. (Pollux, x. 20; Wachsmuth, *Hellen. Ath.* vol. i. p. 367; Thirlwall, *Hist. of Gr.* vol. ii. p. 52.)

Solon in his legislation thus only retained the old institution of the naucrariæ. His innovation probably was that he charged each of them with the equipment of one trireme and with the mounting of two horsemen. (Pollux, viii. 108.) All military affairs, as far as regards the defraying of expenses, probably continued as before to be regu-

lated according to naucrarias. Cleisthenes in his change of the Solonian constitution retained the division into naucrarias for military and financial purposes (Phot. l. c.), but he increased their number to fifty, making five of each of his ten tribes, so that now the number of their ships was increased from forty-eight to fifty, and that of horse-men from ninety-six to one hundred. The statement of Herodotus (vi. 89) that the Athenians in their war against Aegina had only fifty ships of their own, is thus perfectly in accordance with the fifty naucrarias of Cleisthenes. The functions of the former ναύκαραι, as the heads of their respective naucrarias, were now transferred to the demarcha. [DEMARCHI.] (Harpocrat. s. v. Δήμαρχος.) The obligation of each naucrary to equip a ship of war for the service of the republic may be regarded as the first form of trierarchy. (Lex. Rhetor. p. 283.) As the system of trierarchy became developed and established, this obligation of the naucrarias appears to have gradually ceased and to have fallen into disuse. (Compare TRIERARCHIA.) [L. S.]

NAUCRARUS. [NAUCRARIA.]

NAVIS (ναῦς). The beginning of the art of ship-building and of navigation among the Greeks must be referred to a time much anterior to the ages of which we have any record. Even in the earliest mythical stories long voyages are mentioned, which are certainly not altogether poetical fabrications, and we have every reason to suppose that at that early age ships were used which were far superior to a simple canoe, and of a much more complicated structure. The time, therefore, when boats consisted of one hollow tree (*Monoxyla*), or when ships were merely rafts (*Rates*, σχεδια) tied together with leathern thongs, ropes, and other substances (Plin. H. N. vii. 57), belongs to a period of which not the slightest record has reached us, although such rude and simple boats or rafts continued occasionally to be used down to the latest times, and appear to have been very common among several of the barbarous nations with which the Romans came in contact. (CODEX; compare Quintil. x. 2; Flor. iv. 2; Fest. s. v. *Schedia*; Liv. xxi. 26.) Passing over the story of the ship Argo and the expedition of the Argonauts, we shall proceed to consider the ships as described in the Homeric poems.

The numerous fleet, with which the Greeks are said to have sailed to the coast of Asia Minor, must on the whole be regarded as sufficient evidence of the extent to which navigation was carried on in those times, however much of the detail in the Homeric description may have arisen from the poet's own imagination. In the Homeric catalogue it is stated that each of the fifty Boeotian ships carried 120 warriors (*Il.* ii. 510), and a ship which carried so many cannot have been of very small dimensions. What Homer states of the Boeotian vessels applies more or less to the ships of other Greeks. These boats were provided with a mast (*ιστρός*) which was fastened by two ropes (*πρόροι*) to the two ends of the ship, so that when the rope connecting it with the prow broke, the mast would fall towards the stern, where it might kill the helmsman. (*Od.* xii. 409, &c.) The mast could be erected or taken down as necessity required. They also had sails (*ιστία*), but no deck; each vessel however appears to have had only one sail, which was used in favourable wind; and the principal means of pro-

pulling the vessel lay in the rowers, who sat upon benches (*καλῆδες*). The oars were fastened to the side of the ship with leathern thongs (*τροπὸν δευμάτων*, *Od.* iv. 782), in which they were turned as a key in its hole. The ships in Homer are mostly called black (*μέλαιναί*), probably because they were painted or covered with a black substance, such as pitch, to protect the wood against the influence of the water and the air; sometimes other colours, such as *μίλτος*, *missium* (a red colour), were used to adorn the sides of the ships near the prow, whence Homer occasionally calls ships *μυλοπάρροι*, i. e. red-cheeked (*Il.* ii. 637, *Od.* ix. 125); they were also painted occasionally with a purple colour (*φοινικοπάρροι*, *Od.* xi. 124). Herodotus says (iii. 58) that all ships were painted with *μίλτος*. When the Greeks had landed on the coast of Troy, the ships were drawn on land, and fastened at the poop to large stones with a rope which served as anchors (*Il.* i. 436, xiv. 77, *Od.* ix. 137, xv. 498; Moschopol. *ad Il.* i. 436). The Greeks then surrounded the fleet with a fortification to secure it against the attacks of the enemy. This custom of drawing the ships upon the shore, when they were not used, was followed in later times also, as every one will remember from the accounts in Caesar's Commentaries. There is a celebrated but difficult passage in the *Odyssey* (v. 243, &c.), in which the building of a boat is described, although not with the minuteness which an actual ship-builder might wish for. Odysseus first cuts down with his axe twenty trees, and prepares the wood for his purpose by cutting it smooth and giving it the proper shape. He then bores the holes for nails and hooks, and fits the planks together and fastens them with nails. He rounds the bottom of the ship like that of a broad transport vessel, and raises the bulwark (*ἱκρία*), fitting it upon the numerous ribs of the ship. He afterwards covers the whole of the outside with planks, which are laid across the ribs from the keel upwards to the bulwark; next the mast is made, and the sail-yard attached to it, and lastly the rudder. When the ship is thus far completed, he raises the bulwark still higher by wickerwork which goes all around the vessel, as a protection against the waves. This raised bulwark of wickerwork and the like was used in later times also. (Eustath. *ad Od.* v. 256.) For ballast Odysseus throws into the ship *ὄλῃ*, which according to the Scholiast consisted of wood, stones, and sand. Calypso then brings him materials to make a sail of, and he fastens the *ὑπέραι* or ropes which run from the top of the mast to the two ends of the yard, and also the *κάλοι* with which the sail is drawn up or let down. The *πόδες* mentioned in this passage were undoubtedly, as in the later times, the ropes attached to the two lower corners of the square sail. (Comp. Nitzsch, *Anmerk. z. Odys.* vol. ii. p. 35, &c.; Ukert, *Bemerk. über Hom. Geogr.* p. 20.) The ship of which the building is thus described was a small boat, a *σχεδια* as Homer calls it; but it had like all the Homeric ships a round or flat bottom. Greater ships must have been of a more complicated structure, as ship-builders are praised as artists. (*Il.* v. 60, &c.) Below, under *Ceruchi*, a representation of two boats is given which appear to bear great resemblance to the one of which the building is described in the *Odyssey*. (Comp. Thirlwall, *Hist. of Greece*, vol. i. p. 219.)

It is a general opinion that in the Homeric age sailors did not venture out into the open sea, but that such was really done is clear from the fact, that Homer makes Odysseus say that he had lost sight of land, and saw nothing but the sky and water (*Od.* xii. 403; comp. xiv. 302; Virg. *Aen.* iii. 192, &c.), although on the whole it may be admitted, that even down to the historical times the navigation of the ancients was confined to coasting along the shore. Homer never mentions engagements at sea. The Greeks most renowned in the heroic ages as sailors were the Cretans, whose king Minos is said to have possessed a large fleet, and also the Phaeacians. (Thucyd. i. 4; Hom. *Od.* viii. 110, &c.)

After the times of the Trojan war, navigation, and with it the art of ship-building, must have become greatly improved, on account of the establishment of the numerous colonies on foreign coasts, and the increased commercial intercourse with these colonies and other foreign countries. The practice of piracy, which was during this period carried on to a great extent not only between Greeks and foreigners, but also among the Greeks themselves, must likewise have contributed to the improvement of ships and of navigation, although no particulars are mentioned. In Greece itself the Corinthians were the first who brought the art of ship-building nearest to the point at which we find it in the time of Thucydides, and they were the first who introduced ships with three ranks of rowers (*τρίηρες*, *Triremes*). About the year 700 B.C. Ameinocles the Corinthian, to whom this invention is ascribed, made the Samians acquainted with it (Thucyd. i. 13; Plin. *H. N.* vii. 57); but it must have been preceded by that of the *Biremes*, that is, ships with two ranks of rowers, which Pliny attributes to the Erythraeans.* These innovations however do not seem to have been generally adopted for a long time; for we read that about the time of Cyrus the Phocaeans introduced long sharp-keeled ships called *πεντηκόντοροι*. (Herod. i. 163.) These belonged to the class of long war-ships (*νῆες μακράς*), and had fifty rowers, twenty-five on each side of the ship, who sat in one row. It is further stated that before this time vessels called *στρογγύλαι*, with large round or rather flat bottoms, had been used exclusively by all the Ionians in Asia. At this period most Greeks seem to have adopted the long ships with only one rank of rowers on each side; their name

* Biremes are sometimes called by the Greeks *διππορα* (Cic. *ad Att.* xvi. 4; Hirt. *Bell. Alex.* 47.) The name biremis is also applied to a little boat managed by only two oars. (Horat. iii. 29. 62; Lucan, viii. 562, x. 56.)

varied accordingly as they had fifty (*πεντηκόντοροι*), or thirty (*τριακόντοροι*), or even a smaller number of rowers. A ship of war of this class is represented in the previous woodcut, which is taken from Montfaucon, *l'Antiq. Expliq.* vol. iv. part 2 pl. 142.

The following woodcut contains a beautiful fragment of a Bireme with a complete deck. (Winckelmann, *Momum. Antich. inedit.* pl. 207.) Another specimen of a small Bireme is given further on.

The first Greek people whom we know to have acquired a navy of importance were the Corinthians, Samians, and Phocaeans. About the time of Cyrus and Cambyses the Corinthian Triremes were generally adopted by the Sicilian tyrants and by the Corcyraeans, who soon acquired the most powerful navies among the Greeks. In other parts of Greece and even at Athens and in Aegina the most common vessels about this time were long ships with only one rank of rowers on each side. Athens, although the foundation of its maritime power had been laid by Solon [*NAUCRARIA*], did not obtain a fleet of any importance until the time of Themistocles, who persuaded them to build 200 Triremes for the purpose of carrying on the war against Aegina. But even then ships were not provided with complete decks (*καταστρώματα*) covering the whole of the

vessel. (Thucyd. i. 14; Herod. vii. 144.) Ships with only a partial deck or with no deck at all, were called *ἄπικτοι* *νῆες*, and in Latin *naves apertae*. A fine representation of such a one is figured above from a coin of Corcyra. The ships described in Homer had no decks, and were all *ἄπικτοι* (Thucyd. i. 10), and the only protection for the men consisted of the *ἱκία* or bulwark. (Hom. *Od.* xii. 229.) Even at the time of the Persian war, the Athenian ships were without a complete deck. (Thucyd. i. 14.) Ships which had a complete deck were called *κατάπικτοι*, and the deck itself *καταστρώμα*. Their invention is ascribed by Pliny to the Thasians. At the time when Themistocles induced the Athenians to build

a fleet of 200 sails, he also carried a decree, that every year twenty new Triremes should be built from the produce of the mines of Laurium. (Polyæn. i. 30; Plut. *Themist.* 4; comp. Böckh, *Publ. Econ.* p. 249, 2d edit.) After the time of Themistocles as many as twenty Triremes must have been built every year both in times of war and of peace, as the average number of Triremes which was always ready amounted to between three and four hundred. Such an annual addition was the more necessary, as the vessels were of a light structure and did not last long. The whole superintendence of the building of new Triremes was in the hands of the senate of the Five Hundred (Demosth. c. *Androt.* p. 598), but the actual business was entrusted to a committee called the *τριηροποιοί*, one of whom acted as their treasurer, and had in his keeping the money set apart for the purpose. In the time of Demosthenes a treasurer of the *τριηροποιοί* ran away with the money, which amounted to two talents and a half. During the period after Alexander the Great the Attic navy appears to have become considerably diminished, as in 307 B.C. Demetrius Poliorcetes promised the Athenians timber for 100 new Triremes. (Diod. xx. 46; Plut. *Demetr.* 10.) After this time the Rhodians became the greatest maritime power in Greece. The navy of Sparta was never of great importance.

Navigation remained for the most part what it had been before: the Greeks seldom ventured out into the open sea, and it was generally considered necessary to remain in sight of the coast or of some island, which also served as guides in daytime: in the night the position, rising and setting of the different stars answered the same purpose. In winter navigation generally ceased altogether. In cases where it would have been necessary to coast around a considerable extent of country, which was connected with the main land by a narrow neck, the ships were sometimes drawn across the neck of land from one sea to the other, by machines called *δακροί*. This was done most frequently across the isthmus of Corinth. (Herod. vii. 24; Thucyd. viii. 1, iii. 15, with the Schol.; Strab. viii. p. 380; Polyb. iv. 19, v. 101.)

Now as regards the various kinds of ships used by the Greeks, we might divide them with Pliny according to the number of ranks of rowers employed in them, into *Moneres*, *Biremes*, *Triremes*, *Quadriremes*, *Quinqueremes*, &c., up to the enormous ship with forty ranks of rowers, built by Ptolemæus Philopator (Plin. l. c.; Athen. v. p. 203, &c.) But all these appear to have been constructed on the same principle, and it is more convenient to divide them into *ships of war* and *ships of burden* (*πορρικὰ, φορτηγοί, δολιχες, πλοῖα, στρογγύλαι, ναυες ονερταίαι, ναυες αχτωαίαι*). Ships of the latter kind were not calculated for quick movement or rapid sailing, but to carry the greatest possible quantity of goods. Hence their structure was bulky, their bottom round, and although they were not without rowers, yet the chief means by which they were propelled were their sails.

The most common ships of war in the earlier times were the *pentecontori* (*πεντηκόντοροι*), but afterwards they were chiefly *Triremes*, and the latter are frequently designated only by the name *νῆες*, while all the others are called by the name indicating their peculiar character. *Triremes* however were again divided into two classes: the one con-

sisting of real men-of-war, which were quick-sailing vessels (*ταχέαι*), and the other of transports either for soldiers (*στρατιώταιδες* or *δολιταγωγοί*) or for horses (*ἵππηγοί, ἵππαγωγοί*). Ships of this class were more heavy and awkward, and were therefore not used in battle except in cases of necessity. (Thucyd. i. 116.) It seems to have been a common practice to use as transports for soldiers and horses such *Triremes* as had become useless as men-of-war. The ordinary size of a war galley may be inferred from the fact that the average number of men engaged in it, including the crew and marines, was two hundred, to whom on some occasions as much as thirty *epibatae* were added. (Herod. viii. 17, vii. 184; comp. *ΕΠΙΒΑΤΑΙ* and Böckh, *Publ. Econ.* p. 278, &c.) The rapidity with which these war galleys sailed may be gathered from various statements in ancient writers, and appears to have been so great, that even we cannot help looking upon it without astonishment, when we find that the quickness of an ancient trireme nearly equalled that of a modern steam-boat. Among the war-ships of the Athenians their sacred state-vessels were always included (*ΠΑΛΛΑΔΕΣ*; comp. Böckh, *Urkunden über d. Seewesen des Ath. Staats*, p. 76, &c.); but smaller vessels, such as the *πεντηκόντοροι* or *τριακόντοροι*, are never included when the sum of men-of-war is mentioned, and their use for military purposes appears gradually to have ceased.

Vessels with more than three ranks of rowers on each side were not constructed in Greece till about the year 400 B.C., when Dionysius I., tyrant of Syracuse, who bestowed great care upon his navy, built the first *Quadriremes* (*τετράρεις*), with which he had probably become acquainted through the Carthaginians, since the invention of these vessels is ascribed to them. (Plin. *H. N.* vii. 57; Diodor. xiv. 41, 42.) Up to this time no *Quinqueremes* (*πεντήρεις*) had been built, and the invention of them is likewise ascribed to the reign of Dionysius. Mnesigeiton (*ap. Plin. l. c.*) ascribes the invention of *Quinqueremes* to the Salaminians, and if this statement is correct, Dionysius had his *Quinqueremes* probably built by a Salaminian ship-builder. In the reign of Dionysius II. *Hexeres* (*ἑξήρεις*) are also mentioned, the invention of which was ascribed to the Syracusans. (Aelian, *V. H.* vi. 12, with the note of Perizonius; Plin. l. c.) After the time of Alexander the Great the use of vessels with four, five, and more ranks of rowers became very general, and it is well known from Polybius (i. 63, &c.) that the first Punic war was chiefly carried on with *Quinqueremes*. Ships with twelve, thirty, or even forty ranks of rowers (Plin. l. c.; Athen. v. p. 204, &c.), such as they were built by Alexander and the Ptolemies, appear to have been mere curiosities, and did not come into common use. The Athenians at first did not adopt vessels larger than *Triremes*, probably because they thought that with rapidity and skill they could do more than with large and unwieldy ships. In the year B.C. 356 they continued to use nothing but *Triremes*; but in 330 B.C. the republic had already a number of *Quadriremes*, which was afterwards increased. The first *Quinqueremes* at Athens are mentioned in a document (in Böckh's *Urkunden*, N. xiv. litt. K.) belonging to the year B.C. 325. Herodotus (vi. 87), according to the common reading, calls the *theoria*, which in Ol. 72 the Aeginetans took from the Athenians, a *πεντήρης*:

but the reading in this passage is corrupt, and *πεντηρης* should be written instead of *πεντήρης*. (Böckh, *Urkunden*, p. 76.) After the year 330 the Athenians appear to have gradually ceased building Triremes, and to have constructed Quadriremes instead.

Among the smaller vessels we may mention the *ἄκατος* or *ἀκάτιον*, which seems to have been sometimes used as a ship of burden. (Herod. vii. 186; comp. Pind. *Pyth.* xi. 62, *Nem.* v. 5.) The *acatus* must generally have been very small, and the same as a *scapha*, for Suetonius (*Caes.* 64) in describing Caesar's escape from Alexandria, says that he jumped into a *scapha*, which Plutarch, in narrating the same event, calls an *acation*. From Thucydides (iv. 67) with the remark of the Scholiast, we must infer that it was a small boat in which every person sailing in it managed two oars, one with each hand. The name *Scapha* (*σκάφη*) denotes a small skiff or life-boat, which was commonly attached to merchantmen for the purpose of saving the crew in danger. (*Act. Apost.* xvii. 30.)

Liburna, or *Liburnica*, in Greek *λιβυρνίς* or *λιβυρνόν*, is a name given apparently to every war-ship, from a bireme up to those with six lines of rowers on each side (Lucian, vol. v. p. 262, ed. Bip.; Flor. iv. 2; Sueton. *Aug.* 17); but in the time of Augustus, *liburnae* even with six lines of rowers were considered small and swift in comparison with the unwieldy ships of Antony at Actium. (Horat. *Epod.* i. 1.) Pliny (x. 32) informs us that they were constructed sharp in the bows to offer the least possible resistance to the water. They were usually provided with a beak, whence a *navis rostrata* is generally the same as a *Liburna*. They were first constructed by the Liburnians (whence they derived their name), and first used by the Romans in the battle of Actium. (Comp. Gell. xvii. 3; Plin. *H. N.* ix. 5, xvii. 3; Appian, *de Bell. Illyr.* 3; Juven. iii. 240.)

Every vessel at Athens, as in modern times, had a name given to it, which was generally of the feminine gender, whence Aristophanes (*Eg.* 1313) calls the Triremes *παρθένους*, and one vessel, the name of which was Nauphante, he calls the daughter of Nauaso. (Böckh, *Urk.* p. 81, &c.; and a list of names in p. 84, &c.) The Romans sometimes gave to their ships masculine names. The Greek names were either taken from ancient heroines such as *Nausicaa*, or they were abstract words such as *Εὐπλοία*, *Θεραπεία*, *Πρόνοια*, *Σώφρονα*, *Ἥγεμόνη*, &c. In many cases the name of the builder also was added.

We now proceed to describe the principal parts of ancient vessels.

1. The *prou* (πρόρα or μέτωπον, *prora*) was generally ornamented on both sides with figures, which were either painted upon the sides or laid in. It seems to have been very common to represent an eye on each side of the prow. (Böckh, *Urk.* p. 102; Becker, *Charikles*, vol. ii. p. 60.) Upon the prow or fore-deck there was always some emblem (*παράσημον*, *insigne*, *figura*) by which the ship was distinguished from others. At the head of the prow there projected the *στόλος*, and its extremity was termed *ἀκροστόλιον*, which was frequently made in the shape of an animal or a helmet. It appears to have been sometimes covered with brass and to have served as an embolus (*ἐμβολή*) against the enemy's vessels. (Aeschyl. *Pers.* 414.) The *ἀκροστόλιον* is sometimes designated by the

name of *χηλίσκος* (from *χῆρ*, a goose), because it was formed in the shape of the head or neck of a goose or swan, as in the accompanying woodcut (*Etym. Magn.* s. v.) The *cheniscus* was often gilt and made of bronze. (Lucian, *Ver. Hist.* 41, *Sup. Trag.* 14.) A *cheniscus* of bronze is preserved in the Royal Library at Paris. (Millin, *Dict. des beaux Arts.*) [INSIGNE.] Just below

the prow and projecting a little above the keel was the *Rostrum* (*ἔμβολος*, *ἐμβολον*) or beak, which consisted of a beam, to which were attached sharp and pointed irons, or the head of a ram and the like. This *ἔμβολος* was used for the purpose of attacking another vessel and of breaking its sides. It is said to have been invented by the Tyrrhenian Pisaeus. (Plin. *l. c.*) These beaks were at first always above the water and visible; afterwards they were attached lower, so that they were invisible, and thus became still more dangerous to other ships. (Diodor. xi. 27, xiv. 60, 75; Polyb. i. 28, xvi. 5, viii. 6.) The annexed woodcuts, taken from Montfaucon (*L'Antiq. Explic.* iv. 2. tab. 133), represent three different beaks of ships.

Connected with the *ἔμβολος* was the *προεμβολίς*, which according to Pollux (i. 85) must have been a wooden part of the vessel in the prow above the beak, and was probably the same as the *ἐπιπρίδης*, and intended to ward off the attack of the *ἔμβολος* of a hostile ship. The command in the prow of a vessel was exercised by an officer called *πρωρεύς*, who seems to have been next in rank to the steersman, and to have had the care of the gear, and the command over the rowers. (Xenoph. *Oecon.* vii. 14.)

2. The stern (*πρόμνη, puppis*) was generally above the other parts of the deck, and in it the helmsman had his elevated seat. It is seen in the representations of ancient vessels to be rounder than the prow, though its extremity is likewise sharp. The stern was, like the prow, adorned in various ways, but especially with the image of the tutelary deity of the vessel (*tutela*). In some representations a kind of roof is formed over the head of the steersman, and the upper part of the stern frequently has an elegant ornament called *aplustre*, and in Greek *ἐφλαστον*, which constituted the highest part of the poop. It formed a corresponding ornament to the *ἀκροστόλιον* at the prow. At the junction of the aplustre with the stern on which it was based, we commonly observe an ornament resembling a circular shield: this was called *ἀσπίδειον* or *ἀσπίδισκον*. It is seen on the two aplustria here represented. (Comp. Apol-

lon. Rhod. i. 1089, ii. 601; Apollod. i. 9. § 22; Hom. *Il.* xv. 716; Herod. vi. 114.) The aplustre rose immediately behind the gubernator, and served in some degree to protect him from wind and rain. Sometimes there appears, beside the aplustre, a pole, to which a fillet or pennon (*ραυρία*) was attached, which served both to distinguish and adorn the vessel, and also to show the direction of the wind. In the column of Trajan, a lantern is suspended from the aplustre so as to hang over the deck before the helmsman. The aplustre commonly consisted of thin planks, and presented a broad surface to the sky. In consequence of its conspicuous place and beautiful form, the aplustre was often taken as the emblem of maritime affairs: it was carried off in triumph by the victor in a naval engagement (Juven. x. 135), and Neptune is

sometimes represented on medals holding the aplustre in his right hand, as in the annexed woodcut; and in the celebrated Apotheosis of Homer, now in the British Museum, the female personating the *Odyssey* exhibits the same emblem in reference to the voyages of *Odysseus*.

3. The *τράφηξ* is the bulwark of the vessel, or rather the uppermost edge of it. (Hesych. s. v.) In small boats the pegs (*σκαλμοί, scalmi*) between which the oars move, and to which they are fastened by a thong (*τροπήτης*), were upon the *τράφηξ*. (Böckh, *Urhand.* p. 103.) In all other vessels the oars passed through holes in the side of the vessel (*ὀφθαλμοί, τρήματα, or τρυπήματα*). (Schol. *Aristoph. Acharn.* 97, &c.)

4. The middle part of the deck in most ships of war appears to have been raised above the bulwark or at least to a level with its upper edge, and thus enabled the soldiers to occupy a position from which they could see far around and hurl their darts against the enemy. Such an elevated deck appears in the annexed woodcut representing a *Moneris*. In this instance the flag is standing upon the hind-deck. (Mazois, *Pomp.* Part 1. tab. xxii. fig. 2.)

5. One of the most interesting, as well as important parts in the arrangements of the Biremes, Triremes, &c., is the position of the ranks of rowers, from which the ships themselves derive their names. Various opinions have been entertained by those who have written upon this subject, as the information which ancient writers give upon it is extremely scanty. Thus much, however, is certain, that the different ranks of rowers, who sat along the sides of a vessel, were placed one above the other. This seems at first sight

very improbable, as the common ships in later times must have had five ordines of rowers on each side, and since even the lowest of them must have been somewhat raised above the surface of the water, the highest ordo must have been at a considerable height above it, and consequently required very long oars: the apparent improbability is still more increased, when we hear of vessels with thirty or forty ordines of rowers above one another. But that such must have been the arrangement is proved by the following facts: First, In works of art, in which more than one ordo of rowers is represented, they appear above one another, as in the biremes given on pp. 784, a, 791, a, and in several others figured by Montfaucon. Secondly, The Scholiast on Aristophanes (*Acharn.* 1106; compare Aristoph. *Ran.* 1105) states that the lowest rank of rowers having the shortest oars and consequently the easiest work, received the smallest pay, while the highest ordo had the longest oars, and consequently had the heaviest work and received the highest pay. Thirdly, In the monstrous τεσσαρακοντήρης of Ptolemaeus Philopator, the description of which by Callixenus (*op. Athen.* v. p. 203, &c.) is as authentic as it well can be, the height of the ship from the surface of the water to the top of the prow (ἀκροστόδιον) was 48 cubits, and from the water to the top of the stern (ὀφλαστρα) 53 cubits. This height afforded sufficient room for forty ranks of rowers, especially as they did not sit perpendicularly above one another, but one rower, as may be seen in the above representation of a Bireme, sat behind the other, only somewhat elevated above him. The oars of the uppermost ordo in this huge vessel were 38 cubits long.

In ordinary vessels from the Moneris up to the Quinqueremis each oar was managed by one man, which cannot have been the case where each oar was 38 cubits long. The rowers sat upon little benches attached to the ribs of the vessel, and called ἰδώλια, and in Latin *fori* and *transstra*. The lowest row of rowers was called θαλάμιοι, the rowers themselves, θαλαμίται or θαλάμιοι. (Schol. ad Aristoph. *Acharn.* 1106.) The uppermost ordo of rowers was called ὀψώνιοι, and the rowers themselves ὀψωνίται. (Thucyd. vi. 31.) The middle ordo or ordines of rowers were called ζυγά, ζύγιοι or ζυγίται. (Pollux, i. 9.) Each of this last class of rowers had likewise his own seat, and did not, as some have supposed, sit upon benches running across the vessel. (Böckh, *Urktand.* p. 103, &c.)

We shall pass over the various things, which were necessary in a vessel for the use and maintenance of the crew and soldiers, as well as the machines of war which were conveyed in it, and confine ourselves to a brief description of things belonging to a ship as such. All such utensils are divided into *wooden* and *hanging gear* (σκεύη ξύλινα, and σκεύη κρεμαστά, Pollux, x. 13; Athen. i. p. 27). Xenophon (*Oecon.* viii. 12) adds to these the σκεύη πλεκτά, or the various kinds of wickerwork, but these are more properly comprehended among the κρεμαστά.

I. Σκεύη ξύλινα.

1. *Oars* (κάραι, *remi*). The collective term for oars is ταβρός, which properly signified nothing but the blade or flat part of the oar (Herod. viii. 12; Pollux, i. 90), but was afterwards used as a collective expression for all the oars with the exception of

the rudder. (Eurip. *Iph. Taur.* 1346, *Hel.* 1554; Polyb. xvi. 3.) The oars varied in size accordingly as they were used by a lower or higher ordo of rowers, and from the name of the ordo by which they were used, they also received their special names, viz. κάραι, θαλάμιοι, ζύγιοι, and ὀψωνίται. Böckh (*Urk.* p. 119) has calculated, that each Trireme on an average had 170 rowers. In a Quinquereme during the first Punic war, the average number of rowers was 300 (Polyb. i. 26); in later times we even find as many as 400. (Plin. xxxii. 1.) The great vessel of Ptolemaeus Philopator had 4000 rowers (Athen. v. p. 204), and the handle of each oar (ἐγχειρίδιον) was partly made of lead, that the shorter part in the vessel might balance in weight the outer part, and thus render the long oars manageable. The lower part of the holes through which the oars passed, appear to have been covered with leather (δερμάμα), which also extended a little way outside the hole. (Aristoph. *Acharn.* 97, with the Schol.; Schol. ad *Ran.* 367; Suidas, s. v. Ἀσκήματα and διαθήρα; compare Böckh, *Urk.* 106, &c.) The ταβρός also contained the περίεσος, which must consequently be a particular kind of oars. They must have derived their name, like other oars, from the class of rowers by whom they were used. Böckh supposes that they were oars which were not regularly used, but only in case of need, and then by the Epibatae. Their length in a Trireme is stated at from 9 to 9½ cubits, but in what part of the vessel they were used is unknown. Respecting oars in general see the Appendix in Arnold's *Thucyd.* vol. ii. p. 461, &c.

2. *The rudder* (πηδάλιον, *gubernaculum*). Before the invention of the rudder, which Pliny (*H. N.* vii. 57) ascribes to Tiphys, the pilot of the ship Argo, vessels must have been propelled and guided by the oars alone. This circumstance may account for the form of the ancient rudder, as well as for the mode of using it. It was like an oar with a very broad blade, and was commonly placed on each side of the stern, not at its extremity. The annexed woodcut presents examples of its appearance as it is frequently exhibited on gems, coins, and other works of art. The figure in the centre is from one of Bartoli's lamps (*Lac. Ant.* i. 5), and shows a Triton blowing the buccina, and holding a rudder over his shoulder. The left-hand figure in the same woodcut is from a cameo in the Stosch collection. It represents a rudder with its helm or tiller crossed by the cornucopia. In the third figure taken from another cameo in

the same collection, Venus leans with her left arm upon a rudder to indicate her origin from the sea. The rudder was managed by the gubernator (κυβερνήτης), who is also called the ractor navis as distinguished from the magister. A ship had sometimes one, but more commonly two rudders (Aelian, *V. H.* ix. 40; Heliod. *Aethiop.* v. p. 241, ed. Comm.; *Acts* xxvii. 40), and they were distinguished as the right and left rudder (Hygin. *Fab.* 14); but they were managed by the same steersman to prevent confusion. (Bartoli, *l. c.* iii. 31.) In larger ships the two rudders were joined by a pole which was moved by the gubernator and kept the rudders parallel. The contrivances for attaching the two rudders to one another and to the sides of the ship, are called (εὐγύαι (Eurip. *Helen.* 1556) or ζευκτηλαί (*Acts*, xxvii. 40). The famous ship of Ptolemaeus Philopator had four rudders, each 30 cubits in length. (Athen. v. p. 204; comp. Tac. *Ann.* ii. 6.)

3. *Ladders* (κλιμακίδες, *scales*). Each Trireme had two wooden ladders, and the same seems to have been the case in τριακόντοροι. (Böckh, p. 125.)

4. *Poles* or punt poles (κοῦροι, *contis*). Three of these belonged to every Trireme, which were of different lengths, and were accordingly distinguished as κοῦρος μέγας, κοῦρος μέσος, and κοῦρος μέσος. Triacontores had probably always four punt poles. (CONTUS; Böckh, p. 125, &c.)

5. *Παραστῆσαι* or supports for the masts. They seem to have been a kind of props placed at the foot of the masts. (Isidor. *Orig.* xix. 2. 11.) The mast of a Trireme, as long as such props were used, was supported by two. In later times they do not occur any longer in Triremes, and must have been supplanted by something else. The Triacontores on the other hand retained their παραστῆσαι. (Böckh, p. 126, &c.)

6. The *mast* (λόφος, *malus*). The ancients had vessels with one, two or three masts. From Böckh's *Urkunden* we learn that two masts were issued at Athens from the νεώριον for every trireme. The foremast was called ἀκτέριος, while the mainmast was called λόφος μέγας. A triacometer, or a vessel with 30 rowers, had likewise two masts, and the smaller mast here as well as in a trireme was near the prow. In three-masted vessels the largest mast was nearest the stern. The masts as well as the yards were usually of fir. (Plin. *H. N.* xvi. 76.) The invention of masts in navigation is attributed to Daedalus (Plin. *H. N.* vii. 56.) The part of the mast immediately above the yard (άντεννα), formed a structure similar to a drinking cup, and bore the name of *carchesium* (καρχήσιον). Into it the mariners ascended in order to manage the sail, to obtain a distant view, or to discharge missiles. (Eurip. *Hecub.* 1237, with the Schol.; Lucil. *Sat.* 3.) The ceruchi or other tackle may have been fastened to its lateral projections which corresponded to the hands of a cup. (Comp. Pind. *Nem.* v. 94.) The carchesia of the three-masted ship built for Hiero II. by Archimedes were of bronze. Three men were placed in the largest, two in the next, and one in the smallest. Breastworks (θωράκια) were fixed to these structures, so as to supply the place of defensive armour; and pulleys (τροχὴλαι, *trochleae*) for noisting up stones and weapons from below. (Athen. v. 43.) The continuation of the mast above the carchesium was called the "distaff" (ήλακάνη), corresponding to our top-

mast or top-gallant mast. (Apollon. Rhod. i. 565; Athen. xi. 49.) The carchesium was sometimes made to turn upon its axis, so that by means of its apparatus of pulleys, it served the purpose of a crane. (Vitruv. x. 2, 10, with Schneider's note.)

7. The *yards* (κέρας, *keras, antenna*). The mainyard was fastened to the top of the mast by ropes termed *ceruchi*, as seen in the annexed woodcut.

To the mainyard was attached the mainsail, which was hoisted or let down as the occasion might require. For this purpose a wooden hoop was made to slide up and down the mast, as we see it represented in an antique lamp, made in the form of a ship. (Bartoli, *l. c.* iii. 31; comp. Isid. *Orig.* xx. 15.) In the two extremities of the yard (*cornua, ἀκροκέραιαι*), ropes (*ceruchi, κηρούχοι*) were attached, which passed to the top of the mast; and by means of these ropes and the pulleys connected with them, the yard and sail, guided by the hoop, were hoisted to the height required. (Caes. *de Bell. Gall.* iii. 14; Lucan, viii. 177; Val. Flacc. i. 469.) There are numerous representations of ancient ships in which the antenna is seen, as in the two woodcuts here appended. In the second of them, there are ropes hanging down from the antenna, the object of which was to enable the sailors to turn the antenna and the sail according to the wind.

II. Σκέη κρεμαστά.

1. *ῥωσώματα*. This part of an ancient vessel was formerly quite misunderstood, as it was believed to be the boards or planks covering the outside of a ship and running along it in the direction from poop to prow. But Schneider (*ad Vitruv.* x. 15. 6) has proved that the word means cordage or tackling, and this opinion, which is supported by many ancient authors, is confirmed by the documents published by Böckh, where it is reckoned among the σκεή κρεμαστά. The ῥωσώματα were thick and broad ropes which ran in a horizontal direction around the ship from the stern to the prow, and were intended to keep the whole fabric

together. They ran round the vessel in several circles, and at certain distances from one another. The Latin name for *ὄροσμα* is *tormentum*. (Isidor. *Orig.* xix. 4. 4; Plato, *de Re Publ.* x. p. 616.) The length of these tormenta varied accordingly as they ran around the higher or lower part of the ship, the latter being naturally shorter than the former. Their number varied according to the size of the ship. The Tassaractores of Ptolemaeus Philopator had twelve *ὄροσματα*, each 600 cubits long. (Athen. v. p. 204.) Such *ὄροσματα* were always ready in the Attic arsenals, and were only put on a vessel when it was taken into use. Sometimes also they were taken on board when a vessel sailed, and not put on till it was thought necessary. (*Act. Apost.* xxvii. 17.) The act of putting them on was called *ὄροσύνναι* or *διασύνναι*, or *σύναι*. (Polyb. xxvii. 3; Appian, *B. C.* v. 91; Apoll. *Iliod. Argon.* i. 368.) A Trireme required four *ὄροσματα*, and sometimes this number was even increased, especially when the vessel had to sail to a stormy part of the sea. (Böckh, pp. 133—138.)

2. *ἱστίον* (*volum*), sail. Most ancient ships had only one sail, which was attached with the yard to the great mast. In a Trireme too one sail might be sufficient, but the trierarch might nevertheless add a second. As each of the two masts of a Trireme had two sail-yards, it further follows that each mast might have two sails, one of which was placed lower than the other. The two belonging to the main-mast were called *ἱστία μεγάλα*, and those of the fore-mast *ἱστία ἀκρέια*. (Xenoph. *Hellen.* vi. 2. § 27; Bekker, *Anecd.* pp. 19, 10.) The former were used on ordinary occasions, but the latter probably only in cases when it was necessary to sail with extraordinary speed. The sails of the Attic war-galleys, and of most ancient ships in general, were of a square form, as is seen in numerous representations on works of art. Whether triangular sails were ever used by the Greeks, as has been frequently supposed, is very doubtful. The Romans, however, used triangular sails, which they called *Sappara*, and which had the shape of an inverted Greek Δ (▽), the upper side of which was attached to the yard. Such a sail had of course only one *πόβς* (*pes*) at its lower extremity. (Schol. *ad Lucan. Phars.* v. 429; Isidor. *Orig.* xix. 3, 4; Böckh, pp. 138—143.)

3. *τοῦςια*, cordage. This word is generally explained by the grammarians as identical with *σχουρία* or *κάλαι*; but from the documents in Böckh it is clear that they must have been two distinct classes of ropes, as the *τοῦςια* are always mentioned after the sails, and the *σχουρία* before the anchors. The *σχουρία* (*funes*) are the strong ropes to which the anchors were attached, and by which a ship was fastened to the land; while the *τοῦςια* were a lighter kind of ropes and made with greater care, which were attached to the masts, yards, and sails. Each rope of this kind was made for a distinct purpose and place (*τόπος*, whence the name *τοῦςια*). The following kinds are most worthy of notice:—*α. καλῆδια* or *κάλαι*. What they were is not quite clear, though Böckh thinks it probable that they belonged to the standing tackle, i. e. that they were the ropes by which the mast was fastened to both sides of the ship, so that the *πρόστρον* in the Homeric ships were only an especial kind of *καλῆδια*, or the *καλῆδια* themselves differently placed. In later times the

πρόστρον was the rope which went from the top of the mainmast (*καρχήσιον*) to the prow of the ship, and thus was what is now called the main-stay. *δ. ἰμάρτες* and *κεροῦχοι* are probably names for the same ropes which ran from the two ends of the sail-yard to the top of the mast. In more ancient vessels the *ἰμάρτες* consisted of only one rope; in later times it consisted of two, and sometimes four, which uniting at the top of the mast, and there passing through a ring, descended on the other side, where it formed the *ἐλπίτρον*, by means of which the sail was drawn up or let down. (Böckh, pp. 148—152.) Compare the lower woodcut at p. 789, which shows a vessel with two ceruchi, and the upper woodcut p. 789, which shows one with four ceruchi. *ε. ἄγκουια*, Latin *anquilla* (Isid. *Orig.* xix. 4. 7), was the rope which went from the middle of a yard to the top of the mast, and was intended to facilitate the drawing up and letting down of the sail. The *ἄγκουια διπλή* of Quadriremes undoubtedly consisted of two ropes. Whether Triremes also had them double, is uncertain. (Pollux, *L. c.*; Böckh, p. 152.) *δ. ἰδδές* (*pedes*) were in later times as in the poems of Homer the ropes attached to the two lower corners of a square sail. These *ῥόδες* ran from the ends of the sail to the sides of the vessel towards the stern, where they were fastened with rings attached to the outer side of the bulwark. (Herod. ii. 36.) Another rope is called *πρόστρον*, *propes* (Isidor. *Orig.* xix. 4. 3), which was probably nothing else than the lower and thinner end of the *ῥόδς*, which was fastened to the ring. *ε. ῥῶραι* were the two ropes attached to the two ends of the sail-yard, and thence came down to a part of the ship near the stern. Their object was to move the yard according to the wind. In Latin they are called *opifera*, which is, perhaps, only a corruption of *hypera*. (Isidor. *Orig.* xix. 4. 6.) The last among the *τοῦςια* is the *χαλινός*, or bridle, the nature of which is quite unknown. (Böckh, p. 154, &c.)

4. *παράρβματα*. The ancients as early as the time of Homer had various preparations raised above the edge of a vessel, which were made of skins and wicker-work, and which were intended as a protection against high waves, and also to serve as a kind of breast-work behind which the men might be safe against the darts of the enemy. These elevations of the bulwark are called *παράρβματα*, and in the documents in Böckh they are either called *τρίχινα*, made of hair, or *λευκά*, white. They were probably fixed upon the edge on both sides of the vessel, and were taken off when not wanted. Each galley appears to have had several *παράρβματα*, two made of hair and two white ones, these four being regularly mentioned as belonging to one ship. (Xenoph. *Hellen.* i. 6. § 19; Böckh, p. 159, &c.)

5. *κατάβλημα* and *ὀρόβλημα*. The former of these occurs in Quadriremes as well as in Triremes, the latter only in Triremes. Their object and nature are very obscure, but they appear to have been a lighter kind of *παράρβματα*. (Polyaen. *Strat.* iv. 11, 13; Böckh, p. 160, &c.)

6. *σχουρία* are the stronger and heavier kinds of ropes. There were two kinds of these, viz. the *σχουρία ἀγκύρεια*, to which the anchor was attached, and *σχουρία ἐπὶ γινὰ* or *ἐπὶ γινὰ* (*retinacula*), by which the ship was fastened to the shore or drawn upon the shore. Four ropes of each of these two kinds is the highest number that is mentioned as belonging to one ship. The thick ropes were made

of several thinner ones. (Aristoph. *Pas.* 36; Varro, *de Re Rust.* i. 135; Böckh, pp. 161—166.)

7. The anchor (*ἀγκύρα*, *ancora*.) We have already remarked that in the Homeric age, anchors were not known, and large stones (*elval*, *slopers*) used in their stead. (Hom. *Il.* i. 436, xiv. 77, *Od.* ix. 137, xv. 498.) According to Pliny (*H. N.* 57), the anchor was first invented by Eupalamus and afterwards improved by Anacharsis. Afterwards, when anchors were used, they were generally made of iron, and their form, as may be seen from the annexed figure, taken from a coin, resembled that of a modern anchor. (Comp. Virg. *Æn.* i. 169,

vi. 3.) Such an anchor was often termed *bidentis*, διπλῆ, ἀμφίβολος or ἀμφίστομος, because it had two teeth or flukes; but sometimes it had only one, and was then called *ἑτεροστόμος*. The technical expressions in the use of the anchor are: *ancoram solvere*, ἀγκύραν χαλᾶν, to loose the anchor; *ancoram jacere*, ἀγκύραν βάλλειν or βίπτειν, to cast anchor; and *ancoram tollere*, ἀγκύραν αἶρειν or ἀναρπessθαι, to weigh anchor, whence αἶρειν by itself means "to set sail," ἀγκύραν being understood. The following figure, taken from a marble at Rome, shows the cable (*funis*), passing through a hole in the prow (*oculus*). Each

ship of course had several anchors; the one in which St. Paul sailed had four (*Act.* xxvii. 29), and others had eight. (Athen. v. 43.) The last or most powerful anchor, "the last hope," was called *ἑσπέρη*, *sacra*, and persons trying their last hope were said *sacram solvere*. To indicate where the anchor lay, a bundle of cork floated over it on the surface of the waters. (Paus. viii. 12; Plin. *H. N.* xvi. 8.)

The preceding account of the different parts of the ship will be rendered still clearer by the drawing on the following page, in which it is attempted to give a restoration of an ancient ship.

The Romans in the earlier period of their history never conceived the idea of increasing their power by the formation of a fleet. The time when

they first appear to have become aware of the importance of a fleet, was during the second Samnite war, in the year a. c. 311. Livy (ix. 30), where he mentions this event, says: *duumviri navales classis ornandas reficiendaeque causa* were then for the first time appointed by the people. This expression suggests that a fleet had been in existence before, and that the duumviri navales had been previously appointed by some other power. [DUUMVIRI.] But Niebuhr (*Hist. of Rome*, iii. p. 282) thinks that the expression of Livy only means, that at this time the Romans resolved to build their first fleet. The idea of founding a navy was probably connected with the establishment of a colony in the Pontian islands, as the Romans at this time must have felt that they ought not to be defenceless at sea. The ships which the Romans now built were undoubtedly Triremes, which were then very common among the Greeks of Italy, and most of them were perhaps furnished by the Italian towns subject to Rome. This fleet, however insignificant it may have been, continued to be kept up until the time when Rome became a real maritime power. This was the time of the first Punic war. That their naval power until then was of no importance, is clear from Polybius (i. 20), who speaks as if the Romans had been totally unacquainted with the sea up to that time. In the year a. c. 260, when the Romans saw that without a navy they could not carry on the war against Carthage with any advantage, the senate ordained that a fleet should be built. Triremes would now have been of no avail against the high-bulwarked vessels (Quinqueremes) of the Carthaginians. But the Romans would have been unable to build others had not fortunately a Carthaginian Quinquereme been wrecked on the coast of Bruttium, and fallen into their hands. This wreck the Romans took as their model, and after it built 120 (Polyb. l. c.), or according to others (Oros. iv. 7) 130 ships. According to Polybius one hundred of them were *πεντήρεις*, and the remaining twenty *τρήρεις*, or, as Niebuhr proposes to read, *τετρήρεις*. This large fleet was completed within sixty days after the trees had been cut down. (Plin. *H. N.* xvi. 74.) The ships, built of green timber in this hurried way, were very clumsily made, and not likely to last for any time; and the Romans themselves, for want of practice in naval affairs, proved very unsuccessful in their first maritime undertaking, for seventeen ships were taken and destroyed by the Carthaginians off Messina. (Polyb. i. 21; Polyæn. *Strat.* vi. 16; Oros. iv. 7.) C. Duilius, who perceived the disadvantage with which his countrymen had to struggle at sea, devised a plan which enabled them to change a sea fight, as it were, into a fight on land. The machine, by which this was effected, was afterwards called *corvus*, and is described by Polybius (i. 22; comp. Niebuhr, iii. p. 678, &c.; CORVUS). From this time forward the Romans continued to keep up a powerful navy. Towards the end of the Republic they also increased the size of their ships, and built war vessels of from six to ten ordines of rowers. (Florus, iv. 11; Virg. *Æn.* viii. 691.) The construction of their ships, however, scarcely differed from that of Greek vessels; the only great difference was that the Roman galleys were provided with a greater variety of destructive engines of war than those of the Greeks. They even erected turrets and tabulata upon the decks of their great men-of-

BIREMIS.

Jal, *Archéologie Navale*, Paris, 1840; and for the Attic navy especially, Böckh's *Urkunden über das Seewesen des Attischen Staates*, Berlin, 1840; K. Haltaus, *Geschichte Roms im Zeitalter der Punischen Kriege*, Leipzig, 1846, p. 607, &c.) [L. S.]

NAUMA'CHIA, was the name given to the representation of a sea-fight among the Romans, and also to the place where such engagements took place. These fights were sometimes exhibited in the Circus or Amphitheatre, sufficient water being introduced to float ships, but more generally in buildings especially devoted to this purpose. The first representation of a sea-fight on an extensive scale was exhibited by Julius Caesar, who caused a lake to be dug for the purpose in a part of the Campus Martius, called by Suetonius the "Lesser Codeta" (Dion Cass. xliii. 23; Suet. *Jul. Caes.* 39); this lake was afterwards filled up in the time of Augustus on account of the malaria arising from the stagnant water in it. (Dion Cass. xlv. 17.) Augustus also dug a lake (*stagnum*) near the Tiber for the same purpose, and planted around it a grove of trees (*nemus*). (Suet. *Aug.* 43; Tacit. *Ann.* xii. 56, xiv. 15.) This *naumachia* was the first per-

manent one; it continued to be used after others had been made, and was subsequently called the "vetus naumachia." (Suet. *Tib.* 7; Dion Cass. lvi. 25; Ernesti, *ad Suet. Tib.* 72.) Claudius exhibited a magnificent sea-fight on the lake Fucinus. (Tacit. *Ann.* xii. 56; Suet. *Claud.* 21; Dion Cass. lx. 33.) Nero appears to have preferred the amphitheatre for these exhibitions. (Dion Cass. lxi. 9, lxii. 15.) Domitian made a new naumachia, and erected a building of stone around it, in which the spectators might sit to see the engagement. (Dion Cass. lxvi. 8; Suet. *Dom.* 4, 5.) Representations of naumachiae are sometimes given on the coins of the emperors. (Scheffer, *de Militia Navali*, iii. 2, pp. 189, 191.)

The combatants in these sea-fights, called *Naumachiarii* (Suet. *Claud.* 21), were usually captives (Dion Cass. lxviii. 19) or criminals condemned to death (Dion Cass. lx. 33), who fought as in gladiatorial combats, until one party was killed, unless preserved by the clemency of the emperor. The ships engaged in the sea-fights were divided into two parties, called respectively by the names of different maritime nations, as Tyrians and Egyptians (Suet. *Jul.* 31), Rhodians and Sicilians (Suet. *Claud.* 21; Dion Cass. lx. 33), Persians and Athenians (Dion Cass. lxi. 9), Corcyraeans and Corinthians, Athenians and Syracusans, &c. (Id. lxvi. 25.) These sea-fights were exhibited with the same magnificence and lavish expenditure of human life as characterised the gladiatorial combats and other public games of the Romans. In Nero's naumachia there were sea-monsters swimming about in the artificial lake (Suet. *Nero.* 12; Dion Cass. lxi. 9), and Claudius had a silver Triton placed in the middle of the lake Fucinus, who was made by machinery to give the signal for attack with a trumpet. (Suet. *Claud.* 21.) Troops of Nereids were also represented swimming about. (Martian, *de Spect.* 26.) In the sea-fight exhibited by Titus there were 3000 men engaged (Dion Cass. lxvi. 25), and in that exhibited by Domitian the ships were almost equal in number to two real fleets (*paene justae classes*, Suet. *Dom.* 4). In the battle on the lake Fucinus there were 19,000 combatants (Tacit. *Ann.* xii. 56), and fifty ships on each side. (Dion Cass. lx. 33.)

NAUTA. [EXERCITORIA ACTIO.]

NAUTICON (*ναυτικόν*). [FENUS, p. 525, b.]

NAUTO'DICAE (*ναυτοδίκαι*), are called *ἀρχαί* or magistrates by most of the ancient grammarians (Harpocrat. Suidas, Lex. Rhet. s. v. *Ναυτοδίκαι*), while a few others call them *δικασταί*. (Hesych. s. v.) The concurrent authority of most of them, together with a passage of Lysias (*de Pecun. Publ.* p. 189, Bremi), the only Attic orator who mentions the nautodicae, renders it more than probable that they were a magistracy. This can be the less doubtful as the words *δικάζειν* and *δικαστής* are sometimes used of magistrates in their capacity of *εἰσαγγεῖς*. (Meier, *Att. Proc.* p. 28; see EISA-GOGES.) All testimonies of the ancients moreover agree that the nautodicae had the jurisdiction in matters belonging to navigation and commerce, and in matters concerning such persons as had entered their names as members of a phratría without both their parents being citizens of Athens, or in other words, in the *δικαί ἐμπόρων* and *δικαί ξηλίας*. The time when nautodicae were first instituted is not mentioned, but the fact that they had the jurisdiction in cases where a person had assumed the

rights of a phrator without his father and mother being citizens, shows that their institution must belong to a time when it was sufficient for a man to be a citizen if only his father was a citizen, whatever his mother might be, that is, previous to the time of Pericles (Plut. *Pericl.* 37; compare CRYPTAS, p. 289), and perhaps as early as the time of Cleisthenes. The nautodicae were appointed every year by lot in the month of Gamelion, and probably attended to the *δικαί ἐμπόρων* only during the winter, when navigation ceased, whereas the *δικαί ξηλίας* might be brought before them all the year round.

It is a well known fact that the two actions (*δικαί ἐμπόρων* and *δικαί ξηλίας*) which we have here assigned to the nautodicae, belonged, at least at one time, to the thesmothetae. (Meier, *Att. Proc.* p. 64, &c.) Several modern writers, such as Böckh, Baumstark, and others, have therefore been led to suppose that all the grammarians who call the nautodicae *ἀρχαί* are mistaken, and that the nautodicae were not *εἰσαγγεῖς* in the cases above mentioned, but *δικασταί*. But this mode of settling the question does not appear to us to be as satisfactory as that adopted by Meier and Schömann. (*Att. Proc.* p. 85, &c.) In all the speeches of Demosthenes no trace occurs of the nautodicae, and in the oration against Laccritus (p. 940), where all the authorities are mentioned before whom such a case as that of Laccritus might be brought, the orator could scarcely have failed to mention the nautodicae, if they had still existed at the time. It is therefore natural to suppose that the *δικαί ἐμπόρων* at the time of Philip of Macedonia, when they became *δικαί ἐμμενί δικαί*, [ΕΜΜΕΝΙ ΔΙΚΑΙ], were taken from the nautodicae and transferred to the thesmothetae. And as the republic could not now think it any longer necessary to continue the office of nautodicae, merely on account of the *δικαί ξηλίας*, these latter were likewise transferred to the thesmothetae, and the office of the nautodicae was abolished. The whole period during which nautodicae existed at Athens would thus comprehend the time from the legislation of Cleisthenes or soon after, to Philip of Macedonia. One difficulty however yet remains, for nautodicae are mentioned by Lucian (ii. p. 203, ed. Bip.) in a dialogue which the author represents as having taken place after the death of Alexander. Those who are unwilling to believe that Lucian here, as in other places, has been guilty of an anachronism, must suppose that the nautodicae were after their abolition restored for a time, of which however there is no other evidence. (Compare Böckh, *Publ. Econ.* i. § 9; Baumstark, *De Curatoribus Emporii et Nautodicis apud Athenienses*, pp. 65—78.) [L. S.]

NEBRIS, a fawn's skin (from *νεβρίς*, a fawn; see *ΑΝΘΙΣ*), worn originally by hunters and others as an appropriate part of their dress, and afterwards attributed to Dionysus (Eurip. *Bacch.* 99, 125, 157, 790, ed. Matt.; Aristoph. *Ran.* 1209; Dionys. *Perieg.* 702, 946; Rufus Festus Avien. 1129), and consequently assumed by his votaries in the processions and ceremonies which they observed in honour of him. [DIONYSIA.] The annexed woodcut, taken from Sir Wm. Hamilton's *Vases* (i. 37), shows a priestess of Bacchus in the attitude of offering a nebris to him or to one of his ministers. The works of ancient art often show it as worn not only by male and female bacchantes, but also by Pans and Satyrs. It was

commonly put on in the same manner as the aegis, or goat-skin, by tying the two fore legs over the right shoulder so as to allow the body of the skin to cover the left side of the wearer. (Ovid. *Met.* vi. 593.) [J. Y.]

NEFASTI DIES. [DIES.]

NEGATIV'A, NEGATORIA ACTIO. [CON-FESSORIA ACTIO.]

NEGLIGENTIA. [CULPA.]

NEGOTIORUM GESTORUM A'CTIO.

This was an action which a man might have against another who had managed his affairs for him in his absence, without being commissioned to do so (*sine mandato*). The action was not founded either on contract or delict, but was allowed for convenience sake (*utilitatis causa*). The person whose business was transacted by another, and the person who transacted the business, might severally have an action against one another in respect of that which "ex bona fide alterum alteri praestare oportet." The dominus negotii had a negotiorum gestorum actio directa. The action of the self-constituted agent (gestor) was sometimes called Contraria, by analogy to similar actions in other cases. He was bound to make good any loss that was incurred during his administration by dolus or culpa, and in some instances even loss that had been incurred by casus. On the other hand, he had his action for all expenses properly incurred, and in some cases, even if the result was unfortunate to the absent person; as if he paid for medical attendance on a sick slave, and the slave died notwithstanding all his care: but various difficulties might easily be suggested as to such cases as these (Dig. 3. tit. 5. s. 10), and the rule must be qualified by the condition of the thing undertaken being a thing necessary (to the owner) to be undertaken, though the result might be unprofitable. It was also necessary that the gestor should have undertaken the business not with the

view of doing it for nothing, but with the intention of establishing a right against the negotii dominus, though that might not be the *immediate* motive to undertaking the thing (Savigny, *System*, &c. iii. p. 6, note 9.) There was, however, no negotiorum gestorum actio contraria, if the gestor had done the acts that he did, with the clear intention of doing an act of Liberalitas or Pietas. The edict allowed a man to recover the expenses that he had been put to about another man's interment, though he had no direct authority for looking after it. The reason of the rule was, that persons might not be prevented from attending to so necessary a matter as the interment of a corpse, if there was no person present to whom the duty belonged. (Dig. 11. tit. 7. De Relig. et Sumptibus funerum.)

It was a much disputed question what was the effect of Ratihabitio on the negotiorum gestio, whether it was thereby turned into a Mandatum. (See Vangerow, *Pandekten*, &c. iii. p. 483.) The dominus was not bound by the negotiorum gestio, except when the acts done were such as were necessary to prevent some imminent loss or damage to his property, as already observed. But he might, if he pleased, confirm the negotium, though it was male gestum.

(Inst. 3. tit. 27. s. 3, &c.; Dig. 44. tit. 7. s. 5; Dig. 3. tit. 5. De Negotiis Gestis; Cod. 2. tit. 19; Vangerow, *Pandekten*, &c. iii. p. 479.) [G. L.]

NEGOTIATOR'ES, signified especially during the later times of the republic Roman citizens settled in the provinces, who lent money upon interest or bought up corn on speculation, which they sent to Rome as well as to other places. Their chief business however was lending money upon interest, and hence we find the words *negotia*, *negotiatio*, and *negotiarum* used in this sense. The *negotiatores* are distinguished from the *publicani* (Cic. ad Att. ii. 16, "malo negotiatoribus satisfacere, quam publicanis"; comp. Cic. Verr. ii. 3, pro Flacc. 16, pro Leg. Manil. 7), and from the *mercatores* (Cic. pro Plana. 26, "negotiatoribus comis, mercatoribus justus"). That the word negotiatores was, during the later times of the republic, always used in the signification above given is amply proved by Ernesti in the treatise quoted below, and is also sufficiently clear from the following passages (Cic. pro Flacc. 29, Verr. iii. 60, ad Q. Fr. i. 1, pro Flacc. 36; Hirt. B. Afr. 36). Hence the *negotiatores* in the provinces corresponded to the *argentarii* and *feneratores* at Rome; and accordingly we find Cicero giving the name of *feneratores* to certain persons at Rome, and afterwards calling the very same persons *negotiatores* when they are in the provinces (Cic. ad Att. v. 21, vi. 1—3). Compare Ernesti, *De Negotiatoribus* in his *Opuscula Philologica*.

NEMEA (νῆμεα, νημεία or νημαία), one of the four great national festivals of the Greeks. It was held at Nemea, a place near Cleonae in Argolis. The various legends respecting its origin are related in the arguments of the Scholiasts to the Nemea of Pindar, with which may be compared Pausanias (ii. 15. § 2, &c.), and Apollodorus (iii. 6. § 4). All these legends, however, agree in stating that the Nemea were originally instituted by the Seven against Thebes in commemoration of the death of Ophelteia, afterwards called Archemorus. When the Seven arrived at Nemea, and were very thirsty, they met Hypeipile, who was carrying Ophelteia, the child of the priest of Zeus

and of Eurydice. While she showed to the heroes the way to the nearest well, she left the child behind lying in a meadow, which during her absence was killed by a dragon. When the Seven on their return saw the accident, they slew the dragon and instituted funeral games (*ἀγὼν ἐπιτάφιος*) to be held every third year (*τριετηρικός*). Other legends attribute the institution of the Nemean games to Heracles, after he had slain the Nemean lion; but the more genuine tradition was that he had either revived the ancient games, or at least introduced the alteration by which they were from this time celebrated in honour of Zeus. That Zeus was the god in honour of whom the games were afterwards celebrated is stated by Pindar (*Nem.* iii. 114, &c.). The games were at first of a warlike character, and only warriors and their sons were allowed to take part in them; subsequently, however, they were thrown open to all the Greeks (*δημοτικὸν πᾶσι θεοῖς συνέδραμα*). The games took place in a grove between Cleonae and Phlius. (Strabo, viii. p. 377.) The various games, according to the enumeration of Apollodorus (*l. c.*), were horse-racing, running in armour in the stadium (Paus. ii. 15. § 2), wrestling, chariot-racing and discus, boxing, throwing the spear and shooting with the bow, to which we may add musical contests. (Paus. viii. 50. § 3; Plut. *Philop.* 11.) The Scholiasts on Pindar describe the agon very imperfectly as *ἰππικός* and *γυμνικός*. The prize given to the victors was at first a chaplet of olive-branches, but afterwards a chaplet of green parsley. When this alteration was introduced is not certain, though it may be inferred from an expression of Pindar (*Nem.* vi. 71), who calls the parsley (*σέλινον*) the *βόρωνα λεόντος*, that the new prize was believed to have been introduced by Heracles. The presidency at these games and the management of them belonged at different times to Cleonae, Corinth, and Argos, and from the first of these places they are sometimes called *ἀγὼν Κλεωναίος*. The judges who awarded the prizes were dressed in black robes, and an instance of their justice, when the Argives presided, is recorded by Pausanias (viii. 40. § 3).

Respecting the season of the year at which the Nemean games were celebrated, the Scholiast on Pindar (*Argum. ad Nem.*) merely states that they were held on the 12th of the month of Panemus, though in another passage he makes a statement which upsets this assertion. Pausanias (ii. 15. § 2) speaks of winter Nemea, and manifestly distinguishes them from others which were held in summer. It seems that for a time the celebration of the Nemea was neglected, and that they were revived in Ol. 53. 2, from which time Eusebius dates the first Nemead. Henceforth it is certain that they were for a long time celebrated regularly twice in every Olympiad, viz. at the commencement of every second Olympic year in the winter, and soon after the commencement of every fourth Olympic year in the summer. This has been shown by Böckh in an essay *über die Zeitverhältnisse der Demosth. Rede gegen Midias*, in the transactions of the Berlin Acad. 1818, 1819. *Hist. Philol. Klasse*, p. 92, &c.; compare Ideler, *Handb. der Chronol.* ii. p. 606, &c. About the time of the battle of Marathon it became customary in Argolis to reckon according to Nemeada.

In 208 B. C. Philip of Macedonia was honoured by the Argives with the presidency at the Nemean

games (Liv. xxvii. 30, &c.; Polyb. x. 26), and Quintus Flamininus proclaimed at the Nemea the freedom of the Argives. (Liv. xxxiv. 41; Polyb. x. 26.) The emperor Hadrian restored the horse-racing of boys at the Nemea, which had fallen into disuse. But after his time they do not seem to have been much longer celebrated, as they are no longer mentioned by any of the writers of the subsequent period. (See Vilhoison, *Histoire de l'Acad. des Inscrip. et Bell. Lett.* vol. xxxviii. p. 29, &c.; Schümann, *Platarchi Agis et Cleomenes*, &c. § x.) [L. S.]

NENIA. [FUNUS, p. 559, a.]

NEO'CORI (*νεωκόροι*), signified originally temple-sweepers (Hesych. and Suid. s. v.), but was applied even in early times to priestly officers of high rank, who had the supreme superintendence of temples and their treasures. (Plat. vi. p. 759; Xen. *Anab.* v. 3. § 6.) Under the Roman emperors the word was especially applied to those cities in Asia, which erected temples to the Roman emperors, since the whole city in every such case was regarded as the guardian of the worship of the emperor. Accordingly we frequently find on the coins of Ephesus, Smyrna, and other cities, the epithet *Neωκόροι*, which also occurs on the inscriptions of these cities. None of these cities, however, was allowed to assume this honour without obtaining the permission of the Roman senate, as we learn from inscriptions. (Comp. also Tac. *Ann.* iv. 55, 56.) For further information on this subject, see Krause, *NEΩΚΟΡΟΙ, Civitates Neocorae sive Aedificae*, Lips. 1844. [AEDIFUL]

NEODAMO'DEIS (*νεοδαμόδεις*). [HELOTES, p. 592.]

NEPTUNA'LIA, a festival of Neptune, celebrated at Rome, of which very little is known. (Varro, *de Ling. Lat.* vi. 19.) The day on which it was held, was probably the 23d of July. In the ancient calendaria this day is marked as *Nept. Iudi et feriae*, or *Nept. Iudi*, from which we see that the festival was celebrated with games. Respecting the ceremonies of this festival nothing is known, except that the people used to build huts of branches and foliage (*umbræ*, Fest. s. v. *Umbræ*), in which they probably feasted, drank, and amused themselves. (Horat. *Carm.* iii. 28. 1, &c.; Tertull. *De Spect.* 6.) [L. S.]

NERO'NIA. [QUINQUENNALIA.]

NEXI. [NEXUM.]

NEXUM is defined by Manilius to be "omne quod per libram et aes geritur, in quo sint Mancipia." Mucius Scaevola has a different definition: "quae per aes et libram fiant ut obligentur, praeter quae mancipio dentur." Varro (*de Ling. Lat.* vii. 105, ed. Müller) who has preserved both these definitions, prefers the latter, as being consistent with the etymology of the word: "quod obligatur per libram, neque aum sit, inde Nexum dictum." As an illustration he adds: "Liber qui suas operas in servitutem pro pecunia quadam debebat, dum solveret, nexus vocatur, ut ab aere obscuratus." The difference in these definitions arises solely from the different aspect under which the Nexum is viewed. Every Nexum was in the form of a sale, and consequently, viewed as to its formal part, Nexum comprehended Mancipium. The Testamenti factio was also included under Nexum. Viewed as to its object and legal effect, Nexum was either the transfer of the ownership of a thing, or the transfer of a thing to a creditor as a secu-

rity: accordingly in one sense Nexum included Mancipium, as explained in MANCIPIUM; in another sense, Mancipium and Nexum are opposed in the same way in which Sale and Mortgage or Pledge are opposed. The formal part of both transactions consisted in a transfer per aes et libram. This explanation is consistent with the definitions of the jurists, and the uses of these two words.

The person who became Nexus by the effect of a Nexum or Nexus (for this form of the word also is used) was said Nexum inire. (Liv. vii. 19.) The phrases Nexi datio, Nexi liberatio respectively express the contracting and the release from the obligation.

The Roman law as to the payment of borrowed money (*pecunia certa credita*; see Lex Gall. Cisalp. 21, 22) was very strict. A curious passage of Gellius (xx. 1) gives us the ancient mode of legal procedure in the case of debt, as fixed by the Twelve Tables. If the debtor admitted the debt, or had been condemned in the amount of the debt by a judex, he had thirty days allowed him for payment. At the expiration of this time, he was liable to the Manus Injunctio [MANUS INJECTIO], and ultimately to be assigned over to the creditor (*addictus*) by the sentence of the praetor. The creditor was required to keep him for sixty days in chains, during which time he publicly exposed the debtor on three nundinae, and proclaimed the amount of his debt. If no person released the prisoner by paying the debt, the creditor might sell him as a slave or put him to death. If there were several creditors, the letter of the law allowed them to cut the debtor in pieces, and to take their share of his body in proportion to their debt. Gellius says that there was no instance of a creditor ever having adopted this extreme mode of satisfying his debt. But the creditor might treat the debtor, who was *addictus*, as a slave, and compel him to work out his debt; and the treatment was often very severe.

In this passage Gellius does not speak of Nexi, but only of *Addicti*; which is sometimes alleged as evidence of the identity of nexus and *addictus*, but it proves no such identity. If a Nexus is what he is here supposed to be, the Law of the Twelve Tables could not apply; for when a man had once become Nexus with respect to one creditor, he could not become Nexus to another; and if he became Nexus to several at once, in this case the creditors must abide by their contract in taking a joint security. This Law of the Twelve Tables only applied to the case of a debtor being assigned over by a judicial sentence to several debtors, and it provided for the settlement of their conflicting claims. The distinction between a nexus and a *res judicata* is obvious enough, though some writers have missed it.

The precise condition of a Nexus has however been a subject of much discussion among scholars, and it is not easy to reconcile all the passages in which the term occurs so as to deduce from them a consistent view of the matter. Sometimes indeed Nexus appears to be used in the same sense as *Addictus*, which cannot cause any difficulty if we consider that the effect of being Nexus and *Addictus* was the same, as will presently be made probable.

As a Nexum was effected per aes et libram, it was in the form of a sale, and of course there was

an object of sale; and this object of sale might be a thing or a person. We need not assume that "per aes et libram se obligare," and for a man to make himself Nexus are the same. In the case of Nexum aes, it is more consistent to consider the aes as the object of the obligatio per aes et libram, and in the case when a man made himself Nexus to consider the man as the object. It does not follow then that an obligatio per aes et libram always made a man Nexus; but there is no difficulty in assuming that a man only became Nexus with reference to an obligatio per aes et libram, so that a man could contract an obligatio per aes et libram, and at the same time could make himself Nexus. A free man could not properly be the object of a sale, but it requires only a slight acquaintance with Roman law to perceive that this difficulty could be got over by a fiction. As in the case of Manumission Per Vindictam there was a fiction that the slave was free; so there might here be a fiction that the freeman was a slave. And if this is not admitted as a probable solution, it cannot be denied that there is as much difficulty in understanding the coemptio of a female, who was *sui juris*, which as a legal fact is quite certain, as the formal sale of a freeman with his consent. The notion of a freeman giving himself into the power of another, so far from being foreign to the notions of Roman law, as some writers have asserted, is perfectly consistent with them, as we see in the instance of adrogation. The Nexum then being in the form of a sale, the Nexus was in a servile condition as a necessary consequence of the Nexum, and the opinion that there must be an *addictio* to give effect to the Nexum, is inconsistent with the notion of the Nexum. According to this view, a Nexus, as soon as the contract of Nexum was made, was in the condition of an *Addictus*, and both were treated as slaves. But it has been urged, that "one cannot discover any reason for this self-pledging (*securum*), since every insolvent, even when there was no nexum, must become his creditor's slave (*addictus*), and how can we understand that the abolition of the nexum was such an advantage gained by the Plebeians (Liv. viii. 28), if the *addictio* still remained, which might be obtained when there was no nexum; and it cannot be denied that it did remain?" The advantage consists precisely in the difference between a contract which cannot be enforced against a person without the forms of legal proceeding, and a contract which at once gives a man a power over his debtor without any application to a court of justice. The effect of the abolition of the Nexum, in this its special sense, while the *Addictio* still existed, may be illustrated by the supposed case of a landlord's remedy for the recovery of his rent by distress being abolished, while his other remedies under the contract for letting and hiring remained.

It is remarked by Goettling (*Geschichte der Röm. Staatsverfassung*) that "the comparison of the Adrogatio and the Adoptio gives the clearest proof of the correctness of Savigny's view, who rejects the notion of a freeman pledging himself. In the case of the Adrogatio of a Roman, who is *sui juris*, there was no mancipatio which such person could effect as to himself: but in the case of adoption, a mancipatio occurs, and it is effected by the living father and the son together. In the case of coemptio it certainly appears, as if the woman of herself effected a self-mancipation; she, however,

is not herself *auctor*, but her guardian is *auctor*." There may be some weight in this observation, the point of which appears to be this: there was *mancipatio* in the case of adoption, where the adopted person was in the power of another, but no *mancipatio* in the case of *Adrogation*, where the adopted person was not in the power of another. The tacit conclusion then seems to be, that if in one case there was no *mancipatio* and yet a person was brought into the power of another with his own consent, there could be no *mancipatio* when a person consented to put himself into a servile relation to another; for it is here assumed that a *nexum* was voluntary. But this is not a legitimate conclusion. It is easy to see that *mancipatio* in the case of adoption, where the son was in the power of the father, was a sufficient form, considering that the person adopted was only a *filius familias*; and that *Adrogation*, which was of a person who was *sui iuris*, was a very different matter, and required other forms to be observed, because the person *adrogatus* was not a *filius-familias*. [ADOPTION.] A *nexum* effected no change of *familia* like an adoption or *adrogation*, and while its object was different from that of both of these ceremonies, it is quite consistent for its form to have been the same as the form of the one, and different from the form of the other.

The mode in which Goetting (p. 123) explains this matter of the *nexum* is as follows: "A free citizen can come into a *mancipii causa* when he cannot pay a loan (*aes confessum*) out of his own means. What in such case he has to give security for, that to which he has bound himself, is called *nexum* (namely *aes*); hence the phrases *nexi datio*, *nexi liberatio*. The person who does such an act is called *nexum* (from *nexus nexūs*) *iniens*, *nexum faciens*, but after he has received the loan in the above solemn manner, he is *nexu obligatus*, *nexu victus*: as soon as he has failed to fulfil his obligation, and in consequence of such failure has been addicted (*addictus*), and given in *mancipium* by the magistrate, he is called *nexi* (adjective), *qui se nexum dedit*"—a more confused account of the thing, or one more remote from legal precision, cannot be imagined. The passage of Livy (ii. 27) is not easy to explain. (Compare Liv. ii. 23.)

The *Lex Poetelia* (b. c. 326) alleviated the condition of the *nexi*. So far as we can understand its provisions, it set all the *nexi* free or made them *soluti* (Liv. viii. 28, *nexi soluti*), and it enacted that for the future there should be no *nexum* (*cautumque is posterum ne necteretur*), and that no debtor should for the future be put in chains. *Addictio* however still continued in force after the *Lex Poetelia*, as we see in several instances. (Liv. xxiii. 14; Sall. *Cat.* 33; Cic. *pro Flacco*, 20.) It appears from the *Lex Galliae Cisalpinæ* (c. 21, 22), that in the case of other actions there was only a *Possessio Bonorum*, but in the case of *pecunia certa credita* there was personal execution. The enactment of the *Lex Julia* which introduced the *Bonorum Cessio*, and gradual changes in society, must have diminished the frequency of the *Addictio*. [BONORUM CESSIO.] In the system of Justinian, *Nexum* did not exist, for the use of *aes et libra* in legal transactions had ceased.

Neither the *Addictus* nor the *Nexus* was a slave, and his *ingenuitas* was only in suspense. As to the *Nexum*, it must have been necessary that the effect of the legal act by which the *ingenuus* was

made a *nexus* should be done away with by another legal act; and this seems to be the *Nexi liberatio* which was done *per aes et libram*. It also appears from a passage in Livy (vi. 14), that a certain person, who was *judicatus pecuniae*, and is not described as *nexus*, was released from his obligation *per aes et libram*. In the time of Gaius an imaginary form of payment *per aes et libram* was retained in cases where the obligation was contracted either *per aes et libram* or was due *ex iudicati causa*. (Gaius, iii. 173—175.) There seems indeed no reason why this ceremony should have been used in the case of an *addictus* who wished to be restored to his former state, for the *Addictio* was by implication only to have an effect till the debt was paid. It might be contended that such was the effect of the *Nexum* also, but we must distinguish between the effect of a sentence of the Praetor and a solemn act like that of the *Nexum*, which was in form a transfer of ownership. The *addictus* was protected against *injuria* from his master (Gaius. i. 141), and it is said that he retained his name and tribe; but it is somewhat difficult to understand how he retained his tribe, since he had sustained *Infamia*. Upon the discharge of his obligations the *addictus*, it seems, returned to his former status.

It was Niebuhr's opinion that the *Nexum*, when it became a form of giving security, had not its complete effect until the debtor was unable to pay and was brought into the condition of a debtor-slave by the *addictio*. An answer to this has been already given. If it required an *addictio* to make a person *nexus*, what was the use of a *Nexum* when a man might become *addictus*, even when there was no *Nexum*? The only intelligible solution of all these difficulties is that a *Nexum*, in which there was a *mancipatio personae*, had an immediate effect.

It seems to be a legal consequence of a *Nexum* and an *Addictio* that the children, if they were in the power of the parent, must follow his condition, as in the case of *adrogation*.

In the case mentioned in Livy (viii. 28), where the son is said to have been *nexus* for his father's debt (*cum se nexum dedisset*), it may be that the father bound his son only, which he could certainly do just in the same way as he could *mancipate* him. If the son was not in his father's power, he could still bind himself on behalf of his father. The expression in Livy does not enable us to determine which of the two possible cases was the real case, but it seems probable that the son was in the power of the father. Unterholzner observes (*Lehre des Röm. Rechts von den Schuldverhältnissen*, i. p. 31. note g): "The legal condition of the *nexi* is one of the most obscure points in the old Roman law. It is here assumed that a man by the *personae mancipatio* came into this condition. Persons who were in the *Patria Potestas* could for the *noxae causa*, which was long maintained in practice, and also on account of the debts of him who had the *Potestas*, consequently in a sense after the nature of a pawn, and by virtue of the so-called paternal power of sale, be *mancipated*. Further, we must assume that persons who were *sui iuris* could also *mancipate* themselves by way of pawn, though no evidence of that has been preserved. This is made the less incredible, since we cannot doubt, that women who were *sui iuris* could make a *coemptio*,

and consequently could mancipate themselves either *matrimonii causa* or *fiduciae causa*, whereby however they did not, like the *nexi*, come into a condition similar to that of slaves, but only into a state of dependence similar to that of a child. The *nexi* were, as a matter of course, in mancipio, and consequently *alieni iuris*, but for that very reason greatly different from the *addicti*. However, they could, like them, be put in chains, until the power of putting debtors in chains was altogether abolished."

The meaning of the provision in the Twelve Tables, cited by Gellius, as to cutting the debtor in pieces has been a subject of much discussion. Taylor in his essay (*Comment. ad L. Decemviralem de Inop. Debitore in partis dissecando*) attempts to prove that Gellius misunderstood the old law, and that the words of the Twelve Tables "*partis secanto: si plus minusve secuerint se fraude esto*," mean that the several creditors are intitled to have the "*partis*," that is, the "*operas*" of the *addictus* divided or distributed among them; and he goes on to explain the rest of the law in these terms: "*Communis sit servus eorum, qui quidem adfuerint; et sine fraude esto, si ceteri toties procitati suas quoque partis in Debitore non vindicaverint*." But the arguments of Taylor are by no means satisfactory. The conjecture that the "*partis*" are the shares of the creditors arising from the sale of the debtor, is also unsupported by any proof. This monstrous enactment, if we take it literally, shocks all our notions of humanity, but it has been well observed that it is by no means inconsistent with the spirit of the old Roman law; and the fact of an actual division of a debtor's body not being on record, is no proof against, and hardly furnishes a presumption against the existence of such a law. The Romans had no prisons for debtors. The creditor was the debtor's jailer, and we know that in the oldest time he was often a cruel keeper. When there were several creditors who claimed the body of a debtor, he might be kept by any one for the benefit of himself and the rest till the sixty days were over; but after that time, if the creditors could not agree among themselves, there was no possible mode of settling their conflicting claims than that which the law of the *Decemviri* gave them, and which they might adopt if they chose. Such a law could never be carried into effect in any country, as the legislators must have well known, and thus while its terms fully satisfied the claims of the creditors, in practice it may have turned out really favourable to the debtor. (See the remarks of Gellius on this part of the law, xx. 1.) But the solution of the difficulty is quite a different matter from the fact of its existence, which is in no way to be questioned because we cannot explain it.

The various authorities on the subject of the *Nexum* and *Addictio* are referred to by Rein, *Das Röm. Privatrecht*, p. 313, &c. The writer of this article has not had the advantage of seeing the essay of Savigny, *Ueber das altrömische Schuldrecht*, Berlin, 1834. The whole subject is still encumbered with difficulty, as will appear from a reference to the various writers on this subject. The note of Walter (*Geschichte des Röm. Rechts*, p. 642. n. 6) appears to contain the true statement as to the difference between the effect of a *Nexum* and a *Res Judicata*; but he rejects the notion of a man selling or pledging himself. [G. L.]

NOBILES, NOBILITAS. In the early periods of the Roman state the Patricians were the Nobles as opposed to the Plebe. The Patricians possessed the chief political power and the distinction which power gives. Livius, who wrote in the age of Augustus, and is not very careful in the use of terms, often designates the Patricians by the term *Nobilis* (vi. 42); and yet *Nobilis*, in its proper historic sense, has a different meaning.

In B. C. 366, the plebeians obtained the right of being eligible to the consulship, and finally they obtained access to all the curule magistracies. Thus the two classes were put on the same footing as to political capacity. Those plebeians who had obtained a curule magistracy were thus elevated above their own body, and the personal distinction of a father would confer distinction on his descendants. It is in the nature of aristocratical institutions to perish if they are exclusive; but they perpetuate themselves by giving a plebeian class the power of entering within their narrow limits. Those who are received within the body of nobles are pleased at being separated from their former companions, and are at least as exclusive in their notions as the original members of the class which they have joined.

This was the history of *Nobilitas* at Rome. The descendants of plebeians who had filled curule magistracies formed a class called Nobiles or men "*known*," who were so called by way of distinction from "*Ignobiles*" or people who were not known. The Nobiles had no legal privileges as such; but they were bound together by a common distinction derived from a legal title and by a common interest; and their common interest was to endeavour to confine the election to all the high magistracies to the members of their body, to the *Nobilitas*. Thus the descendants of those Plebeians who had won their way to distinction combined to exclude other Plebeians from the distinction which their own ancestors had transmitted to them.

The external distinction of the Nobiles was the *Jus Imaginum*, a right or privilege which was apparently established on usage only, and not on any positive enactments. These *Imagines* were figures with painted masks of wax, made to resemble the person whom they represented (Plin. *H. N.* xxxv. 2. *expressi cera vultus*); and they were placed in the Atrium of the house, apparently in small wooden receptacles or cases somewhat in the form of temples (*ξύλαινα ναῖδια*, Polyb. vi. 53). The *Imagines* were accompanied with the tituli or names of distinction which the deceased had acquired; and the tituli were connected in some way by lines or branches so as to exhibit the pedigree (*stemma*) of the family. (Compare the passages quoted in Becker, p. 222, note 53.) These *Imagines* were generally enclosed in their cases, but they were opened on festival days and other great ceremonials, and crowned with bay (*laureatae*): they also formed part of a solemn funeral procession. The most complete account of these *Imagines* is in the passage of Polybius, which has been already referred to; but there is frequent mention of them in the Roman writers.

These were the external marks or signs of a *Nobilis* Familia; a kind of heraldic distinction in substance. The origin of this use of *Imagines* from which the notion of a Roman *Nobilitas* must not be separated, is uncertain. The term *Nobilitas*, as already observed, is applied by Livius to a

period of Roman history before the consulship was opened to the Plebeians; and it is possible that the Patricians may have had the use of Imagines, which those Plebeians afterwards adopted, when the curule magistracies were opened to them. The Patricians carried back their pedigrees (stemmata) to the remotest historical period and even beyond it. (Tacit. *Ann.* iv. 9.) It seems probable that the Roman Nobilitas, in the strict sense of that term, and the Jus Imaginum, originated with the admission of the Plebeians to the consulship a. c. 366. The practice of having Imagines, as already observed, may have existed and probably did exist before the notion of the Jus Imaginum was established. Indeed, as the object of the Patricians, who were all of equal rank so far as respected their class, would be to attach to themselves such Plebeians as were elected to Curule magistracies, it seems conformable to the nature of the thing that the family of such plebeians should be allowed or invited to adopt some existing distinction which should separate them from the body to which they properly belonged. Usage would soon give to such a practice the notion of legality; and thus the Jus Imaginum would be established, as many Roman institutions were, by some general conviction of utility or upon some prevailing notion, and it would be perpetuated by custom.

A plebeian who first attained a Curule office was the founder of his family's Nobilitas (princeps nobilitatis; auctor generis). Such a person could have no Imagines of his ancestors; and he could have none of his own, for such Imagines of a man were not made till after he was dead. (Polyb. vi. 53.) Such a person then was not nobilis in the full sense of the term, nor yet was he ignobilis. He was called by the Romans a "novus homo" or a new man; and his status or condition was called Novitas. (Sall. *Jug.* 86; the speech which is put in the mouth of C. Marius.) The term novus homo was never applied to a Patrician. The first novus homo of Rome was the first Plebeian Consul, L. Sextius; and the two most distinguished "novi homines" were C. Marius and M. Tullius Cicero, both natives of an Italian municipium.

The Patricians would of course be jealous of the new nobility; but this new nobility once formed would easily unite with the old aristocracy of Rome to keep the political power in their hands, and to prevent more novi homines from polluting this exclusive class. (Sall. *Jug.* 63.) As early as the second Punic war this new class, compounded of Patricians or original aristocrats, and Nobiles or newly-engrafted aristocrats, was able to exclude novi homines from the consulship. (Liv. xxii. 34.) They maintained this power to the end of the republican period, and the consulship continued almost in the exclusive possession of the Nobilitas. The testimony of Cicero, himself a novus homo, on this point is full and distinct.

The mode in which the Nobilitas continued to keep possession of the great offices in the state, is neither difficult to conjecture, nor to establish by evidence; but the inquiry does not belong to this place.

As to the persons who would be included in the stemma of a noble family, it appears that all the ascendants of a man up to the ancestor who first attained a curule office would be comprehended, and of course all the intermediate ancestors who

had attained a like distinction. The kinsfolks on the mother's side were also included, so that a stemma would contain both Agnati and Cognati. Adoption would also increase the number of persons who would be comprised within a stemma; and if Affines were occasionally included, as they appear to have been, the stemma would become an enormous pedigree.

The word Optimates, as explained by Cicero (*pro Sest.* 45) is opposed to Populares: he describes the Optimates to be all those "qui neque nocentes sunt nec natura improbi nec furiosi nec malis domesticis impediti." This is no political definition: it is nothing more than such a name as Conservative or any other like name. The use of it in Livius (iii. 39) shows how he understood it; but Livius is blameable for using the term with reference to those early times. Velleius (ii. 3) describes the Optimates, as the Senatus, the better and larger part of the equestris ordo, and such part of the Plebs as were unaffected by pernicious counsels: all these joined in the attack on Gracchus. This opens our eyes to the real meaning of Optimates: they were the Nobilitas and the chief part of the Equites, a rich middle class, and also all others whose support the Nobilitas and Equites could command, in fact all who were opposed to change that might affect the power of the Nobilitas and the interests of those whom the Nobilitas allied with themselves. Optimates in this sense are opposed to Plebs, to the mass of the people; and Optimates is a wider term than Nobilitas, inasmuch as it would comprehend the Nobilitas and all who adhered to them.

The term Populares is vague. It could be used to signify the opponents of the Nobilitas, whether the motives of these opponents were pure and honest, or whether the motives were self-aggrandisement through popular favour. Of Caesar, who sought to gain the popular favour, it was truly said, that it was not so much what he gave to the people which made him formidable, as what he would expect to get from them in return. A Popularis might be of the class of the Nobilitas, and very often was. He might even be a Patrician like Caesar: his object might be either to humble the nobles, or to promote the interest of the people, or to promote his own; or he might have all the objects, as Caesar had.

The Nobilitas is discussed by Becker, *Handbuch der Römischen Alterthümer*, ii. 1ste Abth.; and there is probably little to add to what he has said, and little to correct in it. There are also some remarks on the Roman Nobiles in Zachariæ, *Sulla* (i. 5). He observes of Sulla that though his family was Patrician, he could hardly be considered as belonging to the Nobiles in the strict sense, as the term Nobilitas implied that some one of a man's ancestors had filled a curule magistracy, and it also implied the possession of wealth. But this is a confused view of the matter. Sulla's ancestors had filled curule magistracies; and though his family was poor, it was still Nobilis. A Nobilis, though poor, as Sulla was, was still Nobilis. Want of wealth might deprive a man of influence, but not of the Jus Imaginum. If there was any Patrician whose ancestors had never filled a curule magistracy, he would not be Nobilis in the strict sense. But when the Nobilitas had been formed into a powerful body, which was long before the reforms of the Gracchi, the distinction of

Patrician was of secondary importance. It would seem unlikely that there was any patrician gens existing in the year B. C. 133, or, indeed, long before that time, the families of which had not enjoyed the highest honours of the state many times. The exceptions, if any, would be few.

In reading the Greek writers on Roman history, it is useful to attend to the meaning of the political terms which they use. The *δυνατοί* of Plutarch (*Tib. Gracch.* 13, 20), and the *πλούσιοι*, are the Nobilitas and their partisans; or as Cicero, after he was made consul, would call them the Optimates. In such passages as Dion Cassius (xxxviii. 2), the meaning of *δυνατοί* may be collected from the context. [G. L.]

NODUS, in a special sense, was applied to the following parts of dress: — I. The knot used in tying on the scarf [*CHLAMYS*] or other article constituting the *AMICTUS*. This was often effected by the aid of a brooch [*FIBULA*], a ring, or some jewel (*Virg. Aen.* i. 320, vi. 301, xi. 776; *Claud. de Rapt. Pros.* ii. 40); but frequently in the method shown in the woodcut of Diana at p. 276. II. The knot of hair (*κόρυμβος*, *κροβύλος*), either at the top or at the back of the head adopted by both sexes in fastening their long hair, which was turned upwards or backwards for the purpose (*crine rursus adducto revocare nodo*, Seneca, *Oedip.* ii.; *Virg. Aen.* iv. 138; *Hor. Epod.* xi. 28). Examples may be seen in the woodcuts at pp. 329, 597. III. The knot of leather worn by boys of the poorer classes at Rome instead of the golden BULLA. [J. Y.]

NOMEN (*ὄνομα*), name. 1. GREEK. The Greeks, as is well known, bore only one name (*Paus.* vii. 7. § 4), and it was one of the especial rights of a father to choose the names for his children, and to alter them if he pleased. (*Demosth. c. Boeot.* i. p. 1002, 1006, *c. Macart.* p. 1075, &c.) It was customary to give to the eldest son the name of the grandfather on his father's side. The history of Greece contains many instances of this custom, and Sositheus (*ap. Demosth. c. Macart. l.c.*) says, "I gave to my eldest son, as is just (*ὡςπερ καὶ δικαίον ἐστὶ*), the name of my father." (Compare Eustath. *ad Il.* v. 546.) What custom was generally followed in regard to the other children may be inferred from the same passage, for Sositheus goes on to say, that he called his second son after the name of his wife's father, the third after a relation of his wife, and the fourth son after his own grandfather on his mother's side. Mothers seem also sometimes to have assumed the right of giving the names to their children (*Eurip. Phoen.* 58), and it may be that, as in the case described by Aristophanes (*Nub.* 60, &c.), sometimes a quarrel arose between the parents, if they could not agree upon the name to be given to a child. A boy also sometimes received the name of his father, as in the cases of Demosthenes and Demadea, or one similar to that of his father. Nausimachus thus called his son Nausiphilus, and Callicrates called his son Callistratus. (Böckh, *ad Pind. Pyth.* iv. p. 265.) A similar method was sometimes adopted in the names of several brothers; thus two brothers in the speech of Lysias against Diagiton are called Diodotus and Diogiton. In some cases lastly, the name of a son was a patronymicon, formed from the name of the father, as Phocion, the son of Phocæa.

The day on which children received their names

was the tenth after their birth. (*Aristoph. Av.* 922, &c.) According to some accounts a child received its name as early as the seventh or even fifth day after its birth. [*AMPHIDROMIA.*] The tenth day, called *δεκάτη*, however, was a festive day, and friends and relations were invited to take part in a sacrifice and a repast, whence the expressions *δεκάτην δύνειν* and *δεκάτην ἐστιάειν*. If in a court of justice proofs could be adduced that a father had held the *δεκάτη*, it was sufficient evidence that he had recognised the child as his own. (*Demosth. c. Boeot.* i. p. 1001, *c. Boeot.* ii. p. 1017; *Isæus, de Pyrrh. hered.* p. 60.)

The fact that every Greek had only one name rendered it necessary to have an innumerable variety of names, and never has a nation shown more taste, ingenuity, and invention in devising them than the ancient Greeks. But however great the number of names might be, ambiguity and confusion could not be avoided; and in reading the works of the Greeks we are not always certain whether the same name in different passages or writers belongs to one or to several persons. The Greeks themselves were aware of this, and where accuracy was of importance they used various means to prevent mistakes. Sometimes they added the name of the father in the genitive case, as *Ἀλκιβιδῆς ὁ Κλεινίου*, *Πλειστοδάξ ὁ Πανσωνίου*: sometimes they added the name of the place or country in which a person was born, in the form of an adjective, as *Θουκυδίδης ὁ Ἀθηναῖος*, *Ἡρόδοτος Ἀλικαρνασσεύς*, *Χαρμαντίδης Παιανιεύς*, *Δικαίπαρχος ὁ Μεσσηνίος*, &c.; sometimes they added an epithet to the name, expressing either the occupation or profession which a person followed, or indicating the school to which he belonged. Instances are of such frequent occurrence that it is superfluous to quote any. The custom of adding the father's name was called *πατρὸθεν ὀνομαζέσθαι*. (*Paus.* vii. 7. § 4; *Xenoph. Oeconom.* 7. § 3.)

In common life the Greeks had yet another means of avoiding ambiguity, and this was the frequent use of nicknames, expressive of mental or bodily peculiarities and defects. Thus Demosthenes was from his childhood called *Βράταλος*. (*Aeschin. c. Timarch.* pp. 139, 142; *Demosth. de Coron.* p. 288.) Aristophanes (*Av.* 1291, &c.) mentions several names of birds which were used as nicknames; other nicknames are preserved in *Athenæus* (vi. p. 242).

(Compare Becker, *Charikles*, vol. i. p. 23, &c.)

2. ROMAN. In the earliest history of Rome there occur persons who are designated by only one name, such as Romulus, Remus, and others, while there are many also who bear two names. The Romans of a later age were themselves uncertain as to the legitimate number of names borne by the earliest Romans; and while Varro (*ap. Val. Max., Epitome de Nominum Ratione*), Apian (*Rom. Hist. Praef.* 13), and others, stated that the earliest Romans used only to have one name, their opponents adduced a great many instances in which persons had two. This question will perhaps be placed in a more proper light, and become more satisfactorily settled, if we consider separately the three distinct elements of which the Roman nation was composed in its origin, and it will then be found that both Varro and his opponents are right or wrong according as their assertions are applied to one or to all of the three tribes.

The Sabines, from the earliest times down to the end of their existence, had two names (Val. Max. *de Nominum Ratione*), one indicating the individual as such (*praenomen*), e.g. Albus, Volesus, Pompus (Val. Max. *l. c.*), Talus (Fest. *s. v.*), Caius, Titus, Quintus, Appius, &c., and the second the gens to which the individual belonged, which terminated like the Roman nomina gentilitia in *ius* or *sius*, e.g. Tattius, Pompilius, Claudius, &c. It is moreover a feature peculiar to the Sabines that a person sometimes, instead of a praenomen and a nomen gentilitium, had two nomina gentilitia, one indicating the gens of his father and the other that of his mother. The latter sometimes preceded and sometimes followed the former. This custom is clear from Livy (xxxix. 13, 17), who mentions a Campanian (Sabine) woman, Paculla Minia, who was married to a man who bore the name of Cerrinius from his gens, and one of the sons of these parents was called Minius Cerrinius. Another instance is the name of the Sabine augur Attius Navius, where, according to Dionysius (iii. p. 70), Attius is the *ὀνομα συγγενικόν*. Dionysius, however, must be mistaken in making Navius an *ὀνομα προσηγορικόν*, if he meant this to be the same as the Roman praenomen, which the name Navius never was. In all probability therefore both Attius and Navius are nomina gentilitia. A third instance seems to be Minatius Magius (Vell. Pat. ii. 16), the son of Decius Magius. This practice must have been very common among the Sabines, for in most cases in which the two names of a person have come down to us, both have the termination *ius*, as Marius Egnatius, Herius Asinius (Appian. *B. C.* i. 40), Statius Gellius (Liv. ix. 44), Ofilius Calavius. A more complete list of such Sabine names is given by Götting (*Geesch. d. Röm. Staates*, p. 6, note 3), who supposes that a son bore the two nomina gentilitia of his father and mother only as long as he was unmarried, and that at his marriage he only retained the nomen gentilitium of his father, and, instead of that of his mother, took that of his wife. Of this, however, there is not sufficient evidence. Thus much is certain, that the Sabines at all times had two names, one a real praenomen, or a nomen gentilitium serving as a praenomen, and the second a real nomen gentilitium, derived from the gens of the father. The Sabine women bore, as we have seen in the case of Paculla Minia, likewise two names, e.g. Vestia Oppia, Fauscula Cluvia (Liv. xxvi. 33), but whether in case they both terminate in *ius* they are nomina gentilitia, and whether the one, as Götting thinks, is derived from the gens of the woman's father, and the other from that of her husband, cannot be decided. Many Sabines also appear to have had a cognomen, besides their praenomen and nomen gentilitium; but wherever this occurs, the praenomen is generally omitted, e.g. Herennius Bassus (Liv. xxiii. 43), Calavius Perolla (Liv. xxxiii. 8), Vettius Cato (Appian. *B. C.* i. 40), Instaeus Cato, Popaedius Silo, Papius Mutilus (Vell. Pat. ii. 16). Such a cognomen must, as among the Romans, have distinguished the several families contained in one gens.

The Latins in the earliest times had generally only one name, as is seen in the instances adduced by Varro (*ap. Val. Max. l. c.*), Romulus, Remus, Faustulus, to which we may add the names of the kings of the Aborigines (Latins), Latinus, Ascanius, Capetus, Capys, Procas, Numitor, Amulius, and

others. When, therefore, Varro and Appian say that the earliest Romans had only one name, they were probably thinking of the Latins. There occur, indeed, even at an early period, Latins with two names, such as Geminus Metius, Metius Suffetius, Vitruvius Vaccus, Turnus Herdonius, &c.; but these names seem to be either two nomina gentilitia, or one a nomen gentilitium and the other a cognomen, and the Latins do not appear to have had genuine praenomina such as occur among the Sabines and afterwards among the Romans.

The Etruscans in the Roman historians generally bear only one name, as Porcenna, Spurrina, which apparently confirms the opinion of Varro; but on many urns in the tombs of Etruria such names terminating in *na* are frequently preceded by a praenomen. Müller (*Etrusk.* i. p. 413, &c.), and Götting (*l. c.* p. 31), who follows him, are of opinion that no Etruscan ever bore a nomen gentilitium, and that the names terminating in *na* are mere cognomina or agnomina. Niebuhr (*Hist. of Rome*, i. p. 381, note 922, and p. 500, note 1107), on the other hand, thinks, and with more probability, that the Etruscan *na* corresponds to the Sabine and Roman *ius*, and that accordingly such names as Porcenna, Spurrina, Caecina, Perperna, Vibenna, Ergenna, Mastarna, &c. are real nomina gentilitia.

From this comparison of the three original tribes, it is clear that when the Romans became united into one nation, they chiefly followed the custom of the Sabines, and perhaps that of the Latins. (Val. Max. *l. c.*) Originally every Roman citizen belonged to a gens, and derived his name (*nomen* or *nomen gentilitium*) from his gens. This nomen gentilitium generally terminated in *ius*, or with a preceding *e*, in *sius*, which in later times was often changed into *aesus*, as Annius, Anneius, and Annaeus; Appuleius and Appulaeus. Nomina gentilitia terminating in *sius* or *sius*, sometimes change their termination into the diminutive *illus* and *ellus*, as Opilius, Hostilius, Quintilius, and Ofellus, instead of Opilius, Hostilius, Quintilius, and Ofelius. (Horat. *Sat.* ii. 2. 3, et passim.) Besides this nomen gentilitium every Roman had a name, called praenomen, which preceded the nomen gentilitium, and which was peculiar to him as an individual, e.g. Caius, Lucius, Marcus, Cneius, Sextus, &c. In early times this name was given to boys when they attained the age of puberty, that is, at the age of fourteen, or, according to others, at the age of seventeen (Gellius, x. 28), when they received the toga virilis. (Fest. *s. v. Pubes*; Scaevola *ap. Val. Max. l. c.*) At a later time it was customary to give to boys a praenomen on the ninth day after their birth, and to girls on the eighth day. This solemnity was preceded by a lustratio of the child, whence the day was called *dies lustricus*, *dies nominum*, or *nominalia*. (Macrob. *Sat.* i. 16; Tertull. *de Idolol.* 6.) The praenomen given to a boy was in most cases that of the father, but sometimes that of the grandfather or great-grandfather. Hence we frequently meet with instances like M. Tullius, M. F., that is, Marcus Tullius, Marci filius, or C. Octavius, C. F., C. N., C. P., that is, Caius Octavius, Caii filius, Caii nepos, Caii pronepos. Sometimes, however, the praenomen was given without any reference to father or grandfather, &c. There existed, according to Varro, about thirty praenomina, while nomina gentilitia

were very numerous. These two names, a praenomen and a nomen gentilicium or simply nomen, were indispensable to a Roman, and they were at the same time sufficient to designate him; hence the numerous instances of Romans being designated only by these two names, even in cases where a third or fourth name was possessed by the person. Plebeians, however, in many cases only possessed two names, as C. Marius, Q. Sertorius, Cn. Pompeius, &c. The praenomen characterised a Roman citizen as an individual, and gave him, as it were, his caput [CAPUT] at the time when he received it. As women had not the full caput of men, they only bore the feminine form of the nomen gentilicium, as Cornelia, Sempronia, Tullia, Terentia, Porcia, &c. In later times, however, we find that women also sometimes had a praenomen, which they received when they married, and which was the feminine form of the praenomen of their husbands; such as Caia, Lucia, Publia. (Scaevol. *ap. Val. Max. l. c.*) Caia Caecilia, the wife of L. Tarquinius, if the name be historical, is an exception to this rule. (Val. Max. *l. c.*; see Cic. *pro Murena*. 12.) When Macrobius (*l. c.*) states that girls received their name (he evidently means the praenomen) on the eighth day after their birth, he alludes, as in the case of boys receiving theirs on the ninth day, to an innovation of later times, and among the female praenomina given at such an early age we may reckon Prima, Secunda, Tertia, Quarta, Postuma, &c. (Varro, *de Ling. Lat.* ix. 60; Suet. *Caes.* 50; Capitol. *Max. et Balb.* 5.) Vestal Virgins, at the appointment to their priesthood (*cooptio*), when they left the patria potestas, received, like married women, a praenomen, e.g. Caia Tarratia, or Caia Suffetia. (Plin. *H. N.* xxxiv. 11.)

Every Roman citizen, besides belonging to a gens, was also a member of a familia, contained in a gens, and, as a member of such a familia, he had or might have a third name or cognomen. Such cognomina were derived by the Romans from a variety of mental or bodily peculiarities, or from some remarkable event in the life of the person who was considered as the founder of the familia. Such cognomina are, Asper, Imperiosus, Magnus, Maximus, Publicola, Brutus, Capito, Cato, Naso, Labeo, Caecus, Cicero, Scipio, Sulla, Torquatus, &c. These names were in most cases hereditary, and descended to the latest members of a familia; in some cases they ceased with the death of the person to whom they were given for special reasons. Many Romans had a second cognomen (*cognomen secundum* or *agnomen*), which was given to them as an honorary distinction, and in commemoration of some memorable deed or event of their life, e.g. Africanus, Asiaticus, Hispallus, Cretensis, Macedonicus, Numantianus, &c. Such agnomina were sometimes given by one general to another, sometimes by the army and confirmed by the chief-general, sometimes by the people in the comitia, and sometimes they were assumed by the person himself, as in the case of L. Cornelius Scipio Asiaticus. Sometimes also a person adopted a second cognomen which was derived from the name of his mother, as M. Porcius Cato Salonianus or Saloniinus, who was the son of M. Cato Censorius and of Salonia. (Gellius, xiii. 19; Plut. *Cat. Maj.* 24.)

The regular order in which these names followed one another was this:—1. praenomen; 2. nomen

gentilicium; 3. cognomen primum; 4. cognomen secundum or agnomen. Sometimes the name of the tribe to which a person belonged, was added to his name, in the ablative case, as Q. Verres Romilia (Cic. *c. Verr.* i. 8), C. Claudius Palatina (Cic. *c. Verr.* ii. 43), Ser. Sulpicius Lemonia (Cic. *Philip.* ix. 7). No one was allowed to assume a nomen gentilicium or a cognomen which did not belong to him, and he who did so was guilty of falsum. (Dig. 48. tit. 11. s. 13.)

It must have been in comparatively few cases that persons had a fourth name or agnomen, but the three others were, at least at a late period, when the plebeian aristocracy had become established, thought indispensable to any one who claimed to belong to an ancient family. (Juvenal, v. 127.) In the intercourse of common life, however, and especially among friends and relatives, it was customary to address one another only by the praenomen or cognomen, as may be seen in the letters of Cicero. It was but very seldom that persons were addressed by their nomen gentilicium. The most common mode of stating the name of a person in cases where legal accuracy was not the object, was that of mentioning the praenomen and cognomen, with the omission of the nomen gentilicium, which was easily understood. Thus Caius Julius Caesar would during the better ages of the republic and in familiar address be called Caius, otherwise Caius Caesar, or even Caius Julius, but never Julius Caesar, which was only done during the latter period of the republic and under the empire, as in Albius Tibullus, Cornelius Nepos, Menenius Agrippa, &c. A very common mode of stating the name of a person during these latter times, was that of merely mentioning the cognomen, provided the person bearing it was sufficiently known or notorious, as we speak of Milton and Johnson, without adding any other distinction, although there are many persons bearing the same name. The most common of these cases among the Romans are Verres, Carbo, Cato, Caepio, Cicero, Caesar, Sulla, &c. In the time of Augustus and Tiberius it became very common to invert the ancient order of nomen and cognomen, and to say, e.g. Drusus Claudius, or Silvanus Plantius, instead of Claudius Drusus and Plantius Silvanus. (Vell. Pat. ii. 97, 112.)

Roman women had likewise sometimes a cognomen, although instances of it are very rare. It was sometimes, like that of men, derived from personal peculiarities, such as Rufa and Pusilla (Horat. *Sat.* ii. 3. 216); sometimes from the nomen gentilicium of their husbands, as Junia Claudilla, Ennia Naevia (Suet. *Calig.* 12), Livia Ocellina (Suet. *Galb.* 3), and sometimes from the cognomen of their husbands, as Caecilia Metella.

During the latter part of the republic, and the early period of the empire, when the Roman franchise was given to whole countries and provinces, the persons who thus acquired the civitas frequently adopted the praenomen and nomen of the person through whose interest they had obtained the distinction, or of the emperor himself. After the time of Caracalla (A. D. 212), when all the free inhabitants of the empire had obtained the Roman franchise, and when the gentilician relations which had already gradually fallen into oblivion were totally forgotten, any person might adopt what name he pleased, either ancient or newly invented, and even change his name, if he did not like

it (Cod. 9. tit. 25); and henceforth the ancient Roman names disappear from the history of the empire with incredible rapidity.

If a person by adoption passed from one gens into another, he assumed the praenomen, nomen, and cognomen of his adoptive father, and added to these the name of his former gens, with the termination *anus*. Thus C. Octavius, after being adopted by his great-uncle C. Julius Caesar, was called C. Julius Caesar Octavianus, and the son of L. Aemilius Paullus, when adopted by P. Cornelius Scipio, was called P. Cornelius Scipio Aemilianus. [ADOPTRIO (ROMAN).] There were, however, two gentes, viz., the gens Antonia and the gens Flaminia, which, in case of any of their gentiles being adopted into another gens, took the termination *ius* instead of *anus*, as Antoninus and Flamininus, instead of Antonianus and Flaminianus. Sometimes also the cognomen of the former family was retained and added without any alteration to the name of the adoptive father, as in the case of Q. Servilius Caepio Brutus. (Eckhel, *Doctr. Num.* vol. v. p. 59.) This was done only in case the cognomen was of great celebrity; but it sometimes underwent a change in the termination. Thus Claudius Marcellus, when adopted by Cornelius Lentulus, was called Cornelius Lentulus Marcellinus. (Eckhel, *Doctr. Num.* vol. v. p. 59 and p. 187.) If one man adopted two brothers, the adoptive father might choose any praenomena at his discretion in order to distinguish his adoptive sons from each other. Thus when Augustus adopted the two sons of Agrippa, he gave to the one the praenomen Caius, and to the other the praenomen Lucius. (Vell. Pat. ii. 96.) During the early period of the empire it appears to have sometimes occurred that a person, when adopted into another gens, added his own nomen gentilicium without any alteration to that of his adoptive father, as in the cases of C. Plinius Caecilius Secundus, and L. Aelius Aurelius Commodus. (Dion Cass. *Excerpt.* lib. lxxii. c. 15.) Besides this, many other irregularities occurred in cases of adoption during the period of the empire, but it is not necessary for our purpose to enumerate them here.

Slaves had only one name, and usually retained that which they had borne before they came into slavery. If a slave was restored to freedom, he received the praenomen and nomen gentilicium of his former master, and to these was added the name which he had had as a slave. He became thus in some measure the gentilis of his former master, in as far as he had the same nomen gentilicium, but he had none of the other claims which a freeborn gentilis had. (Cic. *Top.* 6.) Instances of such freedom are, Titus Ampius Menander, a freedman of T. Ampius Balbus (Cic. *ad Fam.* xiii. 70); L. Cornelius Chrysogonus, a freedman of L. Cornelius Sulla (Cic. *pro Rosc. Am.* 2, &c.), M. Tullius Laurea, and M. Tullius Tiro, freedmen of M. Tullius Cicero. If the state emancipated a *servus publicus*, and gave him the franchise at the same time, any praenomen and nomen were given to him, or he took these names from the magistrate who performed the act of emancipation in the name of the state, and then received a cognomen derived from the name of the city, as Romanus or Romanensis. (Varro, *de Ling. Lat.* viii. 83; Liv. iv. 61.) [L. S.]

NOMEN. [FENUS, p. 527, a; OBLIGATIONES.]

NOMENCLATOR. [AMBITUS, p. 77, a.]

NOMISMATOS DIAPHORAS GRAPHE (νομισματος διαφορας γραφη) is the name of the public action which might, at Athens, be brought against any one who coined money either too light in weight or not consisting of the pure metal prescribed by the law. The lawful punishment inflicted upon a person in case he was convicted was death. (Demosth. c. *Lept.* p. 508, c. *Timocrat.* p. 765, &c.) What action might be brought against those who coined money without the sanction of the republic, and how such persons were punished, is not known. (See Petitius, *Legg. Att.* p. 510.) [L. S.]

NOMOPHYLACES (νομοφύλακες), were certain magistrates or official persons of high authority, who exercised a control over other magistrates, and indeed over the whole body of the people, it being their duty to see that the laws were duly administered and obeyed. Mention is made of such officers at Sparta and elsewhere, and some of the Greek philosophers who wrote on legislation appear to have thought, that such a body of men was essential to the well-being of a social community. (Schömann, *Ant. Jur. Pub. Gr.* p. 130; Plat. *Leg.* vi. p. 252; Xen. *Oecon.* ix. 14.) No such body existed at Athens, for they must have had a power too great for the existence of a democracy. The Senate of 500, or the Areopagitic council, performed in some measure the office of law-guardians (Arist. *Pol.* vi. 5, *sub fin.*; Andoc. *De Myst.* 11); but the only persons designated by this name appear to have been inferior functionaries (a sort of police), whose business it was to prevent irregularities and disturbances in the public assemblies. Even their existence has been doubted by modern writers; some think they have been confounded with the *δεσμοθῆται*. Another hypothesis is, that the office was never introduced until the time of Demetrius Phalereus, who, when he was invested with the authority of lawgiver by Cassander, gave to the Eleven the additional duty of watching the conduct of all the other magistrates, with a view to introduce a more aristocratical government. In favour of this opinion it has been observed, that the office of *νομοφύλακες* is only mentioned by grammarians, and they refer to Deinarchus, who was the friend and contemporary of Demetrius. (See Schneider's note to Arist. *Pol.* vi. 5. § 10; Wachsm. vol. i. pt. i. p. 209; Meier, *Att. Proc.* pp. 68—73.) [C. R. K.]

NOMOS (νόμος). This word comprehends the notion not only of established or statute law, but likewise of all customs and opinions to which long prescription or natural feeling gives the force of law; as Euripides (*Bacch.* 893) expresses it, τὸ ἐν χρόνῳ μακρῷ νόμιμον δει φύσει τε πεφυκός. In the heroic ages, before the period of authentic history begins, we find in the Homeric and other poems traces of a general belief among the Greeks that government ought to be controlled by law. As even the supreme God was supposed to be subject to a higher power, Fate or Ἀναγκή, so the Διοτρεφὴς βασιλεὺς was bound to govern according to the rules of justice, δικη, νόμος, ἐννομίη. (Hom. *Od.* xvii. 487; Pind. *Pyth.* 2. 157; Herod. iii. 38; Hes. *Op. et Dies.* 274.) Government, though monarchical and hereditary, was nevertheless limited, ἐπὶ ῥητοῖς γέρας (Thuc. i. 13). The monarchs were ἡγήτορες ἢ δὲ μέδοντες, bound to consult for the good of their people, and to listen

to the advice of their counsellors, or the chief men of the state (*γέροντες, ἀνακτες, &c.*), and also to administer justice, *δικας, δέμοντας, εὐδικίας*. (*Il.* ii. 660, xvi. 542, *Od.* xix. 3, iv. 689.)

These notions of law and justice were necessarily vague. The regal power, though limited in practice, appears to have been absolute in theory, and, as such, was easily liable to be abused. We find complaints of the abuse of power in Hesiod (*Op. et Dies*, 39. 258); and Wachsmuth (*Hell. Alt.* vol. i. pt. i. c. 18) remarks that the *Odyssey* contains indications of a struggle of the nobility against the sovereign. That many beneficial concessions were made by the kings to their people before the age of authentic history, is not improbable. The changes introduced by Theseus may be considered in this light. But the first great step towards the establishment of constitutional law appears to have been taken by the Athenians, when they abridged the power of the Medontidae, and rendered government responsible, *τὴν βασιλείαν μετέστησαν εἰς ἀρχὴν ἐπείθουον*. (*Paus.* iv. 5. § 10.)

The transition from customary or traditional law to fixed civil ordinances must have taken place gradually. When people came to unite in cities (*συγκλιόντο*), and form compact societies, they began to feel the necessity of having permanent laws to define and secure their civil rights. The notion soon sprang up that society was formed for the good of all classes. The expression *τὸ κοινόν*, formerly applied to national leagues and confederacies (Herod. v. 109), came to denote a united body of citizens; and equal laws were claimed for all. From this body indeed were excluded all such persons as came under the definition of *πεπλοκοί*, provincials (Herod. vi. 58, ix. 11), or serfs, like the Helots; and all slaves of every kind. It was only the townsman (*πολίτης*) and the freeman who could enjoy the privileges of a citizen. The emigrant (*ἀτιμῆτος μεταναστής*) though, if he became a resident (*μέτοικος*), he was upon certain conditions admitted to the protection of the law, was never placed on the same footing as the native.

Before any written codes appeared, law was promulgated by the poets or wise men, who sang the great deeds of their ancestors, and delivered their moral and political lessons in verse. Such was the *ῥήτρα* (declared law) of Sparta and Tarentum. The laws of Charondas were sung as *σκόλια* at Athens. (*Aelian*, ii. 39; *Arist. Probl.* xix. 28; *Athenaeus*, xiv. p. 619; *Wachsm. Hell. Alt.* vol. i. pt. i. pp. 201, 208.) The influence exercised by these men arose in a great measure from the belief that they were divinely inspired; a power which was ascribed to most of the ancient law-makers. Thus, the laws of Minos were said to be a revelation from Jupiter (*Pausan.* iii. 2. § 4); *Lycurgus* was the confidant of the Delphic god; *Zaleucus* of Pallas. (*Wachsm.* vol. i. pt. i. p. 204.) Some have supposed that the use of *νόμος*, in the sense of law, was derived from the circumstance of laws having first been in verse, as the same word denotes *measure* or *tune*. But this is not surprising, when we consider that principles of harmony are necessary not only to music and poetry, but to the adjustment of the various relations of civil society; and both meanings may well be derived from *νέμειν* (*distribuere sive nutre*).

As civilisation advanced, laws were reduced to writing, in the shape either of regular codes or dis-

inct ordinances, and afterwards publicly exhibited, engraved on tablets, or hewn on columns. (*Lyc. c. Leoc.* p. 165, ed. Steph.; *Arist. Pol.* v. 9. § 2; *Plato, Leg.* v. p. 738.) The first written laws we hear of are those of *Zaleucus*. (*Wachsm.* vol. i. pt. i. p. 208.) The first at Athens were those of *Draco*, called *Δρακονες*, and by that name distinguished from the *νόμοι* of Solon. (*Andoc. de Myst.* p. 11, ed. Steph.) From the origin of this word one would suppose that it signified ordained or statute law, *τεθειλς νόμος*: but it is frequently used like *δέμης*, in the sense of natural right or social usage. (*Hom. Il.* ix. 134, xi. 778, *Od.* xxiii. 296.) The six inferior archons were called *Δεσμωτῆραι*, because a great variety of causes fell under their cognizance, and, in the absence of a written code, those who declare and interpret the laws may be properly said to make them. (*Thirlwall, Gr. Hist.* vol. ii. p. 17.)

The laws of *Lycurgus* were not written. He enjoined that they should never be inscribed on any other tablet than the hearts of his countrymen. (*Thirlwall*, vol. i. p. 336.) Those of Solon were inscribed on wooden tablets, arranged in pyramidal blocks turning on an axis, called *ἄξονες* and *κύρβεις*. (*Harpocration* and *Suidas*, s. v.; *Plut. Solon.* 25.) They were first hung in the Acropolis, but afterwards brought down to the Prytaneum. (*Harpocr.* s. v. *Ὁ κάτωθεν νόμος*; *Pausan.* i. 18. § 3.) Archives were established for the custody of Athenian laws in the temple of the mother of the gods (*ἐν τῷ μητρόῳ*) with a public servant (*δημόσιος*) to take care of them. (*Demosth. de Fals. Leg.* 381, c. *Aristot.* 799.) Others were hung up in various public places, so that any citizen might have access to them, to read or take extracts. For instance, laws which concerned the jurisdiction of the archon were hung up in his office; those which concerned the senate (*βουλευτικοὶ νόμοι*) in their council-room, and so on. (*Demosth. c. Aristoc.* 627, 643, c. *Timoc.* 706; *Wachsm.* vol. i. pt. i. p. 266; *Meier* and *Schömann. Att. Proc.* pp. 170, 660.) After the expulsion of the thirty tyrants, in the archonship of *Euclides*, a decree was passed by the assembly to restore the ancient laws, and appoint a committee to revise them, and propose any alterations or additions that might seem necessary. The new and old laws were all to be written out in the enlarged Ionian alphabet, which had not come into use in Solon's time; and the whole code thus revised was transcribed on the walls of the portico (*εἰς τὴν στοὰν ἀνέγραψαν*). At the same it was enacted that no magistrate should be allowed to use an unwritten law (*ἀγράφῳ δὲ νόμῳ τὰς ἀρχὰς μὴ χρῆσθαι μηδὲ περὶ ἐνός*, *Andoc. de Myst.* 11—13, ed. Steph.)

According to these statutes of Solon, and those which were subsequently enacted at various times, the magistrates and the judges at Athens were bound to administer the law, executive and judicial. The Heliastic body, acting in their capacity of judges or jurors (as to their legislative see *ΝΟΜΟΘΗΤΕΣ*), were sworn *περὶ μὲν ὧν νόμοι εἰσὶ, κατὰ τοὺς νομοὺς ψηφισέσθαι, περὶ δὲ ὧν μὴ εἰσὶ, γνῶμῃ τῇ δικαιοτάτῃ*. (*Meier* and *Schömann. Att. Proc.* p. 128.) In all causes, whether civil or criminal, the parties procured copies or extracts of such laws as were material to the questions to be tried, and brought them before the *ἡγμένων δικαστηρίου* at the *ἀνδρισίαι*, by whom they were assigned to the *ἐχίνο*s, and produced at the trial, to be read to the *δικασταί* by the *γραμματεῖς*. If

any man produced before the judges a fictitious law (*οὐκ ὄντα νόμον*), he was punishable with death. (Demosth. c. *Arist.* 807.)

As the *δικασταί* (chosen as explained under *DIKASTES*) performed the functions both of judge and jury, it is evident that the important question, how the laws of Athens worked, depends on the discretion which in practice they exercised in the interpretation of the written law. This is only to be discovered by a careful perusal of the Attic orators, and is too wide a question to be discussed here. Much light is thrown on the subject by Aristotle (*Rhet.* i. 15), who, in treating of judicial matters, always has in view the practice of the Athenian courts. He reckons the *νόμοι* among the *ἄτεχνοι πίστεις*, and advises the orator, when the law of the country is against him (*ἐάν ἐνδυνάτω ἢ ὁ γεγραμμένος τῷ πράγματι*) to appeal to the universal law of justice or equity (*τῷ κοινῷ νόμῳ καὶ τοῖς ἐπιεικέσι, ὡς δικαιοτέροις*). For (says he) if the written law is contrary to justice, it is not a law, *οὐ γὰρ ποιεῖ τὸ ἔργον τοῦ νόμου*. From this it may be seen, that the notions entertained by the Athenians of the discretion to be exercised by a judge were somewhat different from our own. There existed at Athens no class of persons corresponding to our counsel or attorneys, whose business or profession it was to expound the laws. The office of the *ἐξηγηταί* related only to religious observances. [*ΕΞΗΓΕΤΑΙ*.] According to the principle of the constitution, every citizen was bound to watch over the preservation of the laws, and to inform against and prosecute any persons who transgressed them. The people, either on the bench or in the assembly, were the ultimate judges. (Lycurg. c. *Leoc.* 148, ed. Steph.)

As to the difference between *νόμος* and *ψήφισμα*, and as to the manner in which laws were enacted or repealed, see *NOMOTHETES*. [C. R. K.]

NOMOTHETES (*νομοθέτης*), legislator, is a word which may be applied to any person who causes laws to be enacted. Thus, Pericles and Themistocles are called *νομοθέται*, movers or proposers of laws. (Lys. c. *Nicom.* 186, ed. Steph.) It is, however, more commonly given to those eminent men whose laws have been celebrated for their intrinsic merit, or for the important influence which they exercised over the destinies of their country. Such were Minos of Crete, Draco at Athens, Zaleucus at Locri and Charondas, whose laws were distinguished for their *ἀριστεία*, and were received at Rhegium, Catana, and other Chalcidian states. (Aristot. *Pol.* ii. 9. § 8; Hermann, *Pol. Ant.* § 88, 89.) Many other men have been honoured with this title, either for having improved the laws of their countrymen, or as having by their writings, their counsel, and good example, led to the introduction of a sound moral discipline among them. These were the sages or wise men, called by Diogenes Laërtius (i. 40) *συνετοὶ ἄνθρωποι νομοθετικοί*. Pittacus of Lesbos, Phidon of Argos, Thales of Miletus, Bias of Priene, Chilon, who improved the laws of Lycurgus, and Pythagoras, may be reckoned in this class. (Wachsm. vol. i. pt. i. p. 212.) But the name of *νομοθέτης* is given κατ' ἐξοχὴν to Solon and Lycurgus; for they not only introduced codes of laws, but were the founders of *constitutions* (*πολιτείας*), which, though from time to time modified and altered, and sometimes even suspended, remained more or less in force, so long as Athens and Sparta existed

as republics. (Aristot. *Pol.* ii. 9. § 1.) So high was the esteem in which Solon was held by the Athenians, as the founder of their social polity, that although many important reforms were effected at various periods, he still continued to be regarded as *the lawgiver* (*ὁ νομοθέτης*), and the whole body of laws passed under his name. Wachsmuth (vol. i. pt. i. p. 268) remarks that on this account, whenever a law of Solon is cited, we may suspect that it contains interpolation. On the other hand, we should bear in mind that in all the changes which took place in the Athenian constitution, the reformers aimed at preserving the main principles of Solon's policy. Cleisthenes, who established the *δῆμοι*, remodelled the *φυλαί*, and made other changes, is characterised by Aristotle (*Pol.* ii. 6. § 11) as having for his object *αὐξήσαι τὴν δημοκρατίαν*.

There is this remarkable difference between the legislation of Solon and that of other Greek lawgivers, that he did not (as they did) endeavour to secure fixity and finality for his institutions. Zaleucus and Charondas are said to have made it a capital crime to propose new laws. Lycurgus forbade young men to censure the laws; and when he went on his last journey, from which he never returned (the story says), he bound his countrymen by an oath to observe all his laws till his return. Solon exacted a similar oath of the Athenians for only ten years. (Herod. i. 29; Wachsm. vol. i. pt. i. p. 211; Thirlwall, *Gr. Hist.* vol. i. p. 295.)

But Solon also devised regulations by which the laws might undergo periodical revision, and be amended as occasion required. At the first *κυρία ἐκκλησία* in every year, any person was at liberty to point out defects in the existing code or propose alterations. If his motion was deemed worthy of attention, the third assembly might refer the matter to a legislative committee, called *νομοθέται*. This committee was selected by lot from the Heliasitic body; it being the intention of Solon to limit the power of the popular assembly by means of a superior board emanating from itself, composed of citizens of mature age, bound by a stricter oath, and accustomed to weigh legal principles by the exercise of their judicial functions. The number of the committee, so appointed, varied according to the exigency of the occasion. The people appointed five advocates (*σύνδικοι*) to attend before the board and maintain the policy of the existing institution. If the proposed measure met the approval of the committee, it passed into law forthwith. Besides this, the *Thesmothetæ* were officially authorised to review the whole code, and refer all statutes which they considered unworthy of being retained to the *νομοθέται*. (Hermann, *Pol. Ant.* § 131; Wachsm. vol. i. pt. i. p. 260; Thirlwall, vol. ii. p. 46; Demosth. c. *Timocr.* 706.)

Hence appears the difference between *ψήφισμα* and *νόμος*. The mere resolution of the people in assembly was a *ψήφισμα*, and only remained in force a year, like a decree of the senate. Nothing was a *law* that did not pass the ordeal of the *νομοθέται*. The democracy of Solon was therefore one of that kind, in which (as Aristotle says), *κύριος ἦν ὁ νόμος, ἀλλ' οὐ τὸ πλῆθος*. (*Pol.* iv. 4. § 3; Hermann, *Pol. Ant.* § 67. n. 8; Demosth. c. *Aristoc.* 649, 651.) *Privilegia* required to be passed by six thousand of the people in assembly, giving their votes secretly. The naturalization of a foreigner is an example of a *privilegium*; for

which two votes of different assemblies were necessary. (Demosth. c. *Neær*. 1375.)

Propositions to be submitted to the people were first approved by the senate of 500, and then called *προβουλευματα*. The mover of a law was said *δέναι* or *γράφειν νόμον*, the people who passed it *δέσθαι*. To indict a man for proposing illegal measures was called *γράφεσθαι τινα παρανόμων*. As to the proceedings in such a case, see *ΠΑΡΑΝΟΜΟΝ ΓΡΑΦΗΝ*. [C. R. K.]

NONAE. [CALENDARIUM.]

NORMA (*γνώμων*), a square, used by carpenters, masons, and other artificers, to make their work rectangular. (Philo de 7 *Orb. Spect.* 2; Vitruv. vii. 3; Plin. *H. N.* xxxvi. 22. a. 51; Prudent. *Psychom.* 828.) It was made by taking three flat wooden rulers [*REGULA*] of equal thickness, one of them being two feet ten inches long, the others each two feet long, and joining them together by their extremities so as to assume the form of a right-angled triangle. (Isid. *Orig.* xix. 19.) This method, though only a close approximation, must have been quite sufficient for all common purposes. For the sake of convenience, the longest side, i. e. the hypotenuse of the triangle, was discarded, and the instrument then assumed the form, in which it is exhibited among other tools in woodcut at p. 283. A square of a still more simple fashion, made by merely cutting a rectangular piece out of a board, is shown on another sepulchral monument, found at Rome and published by Gruter (*L. c.* p. 229), and copied in the woodcut which is here introduced. The square was used in making the semicircular strise of Ionic columns [*COLUMNA*], a method founded on the proposition in Euclid, that the angle contained in a semicircle is a right angle (Vitruv. iii. 5. § 14).

From the use of this instrument a right angle was also called a *normal* angle. (Quintil. xi. 3. p. 446, ed. Spalding.) Any thing mis-shapen was called *abnormis*. (Hor. *Sat.* ii. 2. 3.) [J. Y.]

NOTA, which signified a mark or sign of any kind, was also employed for an abbreviation. Hence *notae* signified the marks or signs used in taking down the words of a speaker, and was equivalent to our short-hand writing, or stenography; and *notarii* signified short-hand writers. It must be borne in mind, however, that *notae* also

signified writing in cipher; and many passages in the ancient reciters which are supposed to refer to short-hand, refer in reality to writing in cipher. Thus both Julius Caesar and Augustus wrote many of their letters in cipher (*per notas*, Suet. *Jul. Caes.* 56, *Aug.* 88; comp. Gell. xvii. 9). Still short-hand was well known and extensively employed. Among the Greeks it is said to have been invented by Xenophon (Diog. Laërt. ii. 48), and their short-hand writers were called *ταχυγράφοι*, *δενυγράφοι* and *σημειογράφοι*. The first introduction of the art among the Romans is ascribed to Cicero. Plutarch, in speaking of the speech of Cato in the senate on the punishment of the Catilinarian conspirators, relates, "They say that this is the only speech of Cato which is preserved, and that it was owing to Cicero the consul who had previously instructed those clerks, who surpassed the rest in quick writing, in the use of certain signs which comprehended in their small and brief marks the force of many characters, and had placed them in different parts of the senate-house. For the Romans at this time were not used to employ nor did they possess what are called note-writers (*σημειογράφοι*), but it was on this occasion, as they say, that they were first established in a certain form." (*Cat. min.* c. 23, Long's transl.) Cicero himself sometimes wrote in short-hand for the sake of brevity or secrecy (*βία σημείων scripturam*, Cic. *ad Att.* xiii. 32). Dion Cassius (lv. 7) attributes the invention of stenography to Maecenas. Eusebius, in his *Chronicon*, ascribes it to Tiro, the freedman of Cicero, and hence the system of abbreviated writing, in which some manuscripts are written, has received the name of *Notae Tironianae*; but there is no evidence to show whether this species of short-hand was really the invention of Tiro. It would appear, moreover, from several passages in ancient writers, that the system of short-hand employed in the time of the Roman empire must have been of a much simpler and more expeditious kind than the *Notae Tironianae*. Thus Seneca says (*Ep.* 90): "Quid verborum notas, quibus quamvis citata excipitur oratio, et celeritatem linguae manus sequitur." Manilius speaks to the same effect (iv. 197): —

"Hic et scriptor erit velox, cui litera verbum est,
Quique notis linguam superet, cursimque loquentis
Excipiet longas nova per compendia voces."

And likewise Martial (xiv. 208): —

"Currant verba licet; manus est velocior illis;
Nondum lingua suum, dextra peregit opus."

Many of the wealthy Romans kept slaves, who were trained in the art. (Senec. *Ep.* l. c.) Thus the elder Pliny, when travelling, used to carry a *notarius* with him, that the slave might be ready to take down any thing that he wished. (Plin. *Ep.* iii. 5.) The art was also learnt even by the Roman nobles, and the emperor Titus was a great proficient in it. (Suet. *Tit.* 3.) At a later time, it seems to have been generally taught in the schools, and hence Fulgentius (*Mytholog.* iii. 10) divides the writing taught in schools into two kinds, the *Abecedaria* and *Notaria*; the former being the regular letters of the alphabet, A, B, C, D, &c., and the latter, stenography. There were, moreover, short-hand writers (*notarii*) by profession, who were chiefly employed in taking down (*notare, accipere*) the proceedings in the courts of justice. At a later

period, they were called *exceptores* (Dig. 19. tit. 2. § 19. § 9). These short-hand writers were also employed on some occasions to take down a person's will (Dig. 29. tit. 1. § 40).

This is the chief information we have respecting the use of stenography by contemporary writers. But Isidorus, who lived in the seventh century of the Christian era, gives a more detailed account of the history of the art (*Orig.* i. 21. p. 836, ed. Gothofred). He ascribes the invention of the art to Ennius (?), who he says invented 1100 marks (*notae*); but the first person who practised it at Rome he states to have been Tiro, the freedman of Cicero, who, however, according to Isidore's account, used only *notae* for prepositions. Isidore then goes on to say that additional *notae* were invented by Tertius Persannius, Philargius, and Aquila, a freedman of Maecenas, till at length Seneca reduced the whole to a regular system, and increased the number of *notae* to 5000. What truth there may be in this account, it is impossible to say; but the view which it gives of the gradual improvement of the system by successive persons is, from the nature of the case, most probable.

The system of short hand called *Notae Tironianae* is explained in a work printed by Gruter in his *Thesaurus Inscriptionum*. This work is ascribed in the manuscripts to Tiro and Seneca, but contains many words, which were only used at a much later age. It appears from this work, that the *Notae Tironianae* were very different from our system of stenography, and were simple abbreviations of the words, such as were used, only to a smaller extent, in ordinary writing. We likewise have some manuscripts written in *Notae Tironianae*, of which an account is given in the work of Kopp quoted below (Carpentier, *Alphabetum Tironianum*, Paris, 1747; Kopp, *Palaeographia Critica*, 1817, vol. i.; Becker, *Gallus*, vol. i. pp. 197, 198).

NOTA CENSO'RIA. [CENSUS.]

NOTA'RII, short-hand writers, were generally slaves or freedmen, and are spoken of under *NOTA*. They were likewise called *Actuarii*. They were also employed by the emperors (Lamprid. *Alex. Sev.* 28, *Aurel.* 36; Trebell. *Claud.* 14), and in course of time the title of *Notarii* was exclusively applied to the private secretaries of the emperors, who, of course, were no longer slaves, but persons of high rank. The short-hand writers were now called *exceptores*, as is remarked under *NOTA*. On the reorganisation of the empire by Constantine, the *Notarii* were constituted into a kind of imperial chancery, who, in addition to their regular duties, were frequently employed by the emperor on important public missions. The first of them in rank was called *Primicerius Notariorum*, and the second, *Secundicerius Notariorum*. Others were called *tribuni et notarii*, and another class *domestici et notarii*, who probably acted specially as private secretaries of the emperors. Others again who served under the Praefecti Praetorii, were called *Notarii Praetoriani* (Cod. Theod. 6. tit. 10; Cassiod. *Var.* vi. 16; Walter, *Geschichte des Römischen Rechts*, § 345, 2d ed.).

NOVA'LE. [ARATRUM.]

NOVA'TIO. [OBLIGATIONES.]

NOVELLAE or NOVELLAE CONSTITUTIONES form a part of the *Corpus Juris*. Most of them were published in Greek, and their Greek

title is *Ἀποκαταπορος 'Ῥωμαίωνων Ἀποφύσεων Νεαρὰ Διατάξεις*. Some of them were published in Latin and some in both languages. The first of these *Novellae* of Justinian belongs to the year A. D. 535 (Nov. 1), and the latest to the year A. D. 565 (Nov. 137); but most of them were published between the years 535 and 539. These *Constitutiones* were published after the completion of the second edition of the Code, for the purpose of supplying what was deficient in that work. Indeed it appears that on the completion of his second edition of the Code the Emperor designed to form any new constitutions, which he might publish, into a body by themselves so as to render a third revision of the Code unnecessary, and that he contemplated giving to this body of law the name of *Novellae Constitutiones*. (Const. *Cordi.* a. 4.) It does not however appear that any official compilation of these new constitutions appeared in the lifetime of Justinian. The Greek text of the *Novellae*, as we now have them, consists of 165 *Novellae* at the least, or 168 as some make it, of which 159 belong to Justinian, and the rest to Justin the Second and to Tiberius: they are generally divided into chapters.

A large part of these *Novellae* relate to the administration of the state and to ecclesiastical affairs; but a considerable number relate to *Privatum Jus*, and they modified or altered many rules of law.

There is a Latin Epitome of these *Novellae* by Julian, a teacher of law at Constantinople, which contains 125 *Novellae*. The Epitome was probably made in the time of Justinian, and the author was probably Antecessor at Constantinople.

There is also another collection of 134 *Novellae*, in a Latin version made from the Greek text. This collection is generally called *Authenticum* or *Liber Authenticorum*: the compiler and the time of the compilation are unknown. This collection has been made independently of the Greek compilation. It is divided into nine *Collationes*, and the *Collationes* are divided into *tituli*. This was the collection which the *Glossatores* considered as having the authority of law.

The most complete work on the history of the *Novellae* is by Biener, *Geschichte der Novellen*. See also *Beitrag zur Litterar-Geschichte des Novellen-Auszugs von Julian*, Von Haubold, *Zeitschrift*, &c. vol. iv. The history of the collections of the *Novellae* is very confused, and it is impossible to state it correctly in a short space. (Puchta, *Inst.* i. § 147.)

After the publication of his *Codex*, Theodosius made various new enactments under the name of *Novellae Constitutiones*, or *Novellae Leges*, as to which see *CODIX THEODOSIANUS*. [G. L.]

NOVENDIA'LE (ac. *sacrum*) was the name given to two different festivals. 1. Of a festival lasting nine days, which was celebrated as often as stones rained from heaven. It was originally instituted by Tullus Hostilius, when there was a shower of stones upon the Mons Albanus, and was frequently celebrated in later times. (Liv. i. 31, xxi. 62, xxv. 7, xxvii. 23, xxviii. 37, xxix. 34.) 2. Of the sacrifice performed nine days after a funeral. [FUNUS, p. 562, a.]

NOVI HO'MINES. [NOBILES.]

NOVI O'PERIS NUNTIA'TIO. [OPERIS

NOVI NUNTIA'TIO.]

NOXA. [NOXALIS ACTIO.]

NOXA'LIS ACTIO. If a *filiusfamilias* or a slave committed theft or injury, the person injured

had a Noxalis Actio, or a legal remedy for the Noxa or wrong done to him, against the father (*paterfamilias*) or the owner of the slave, as the case might be; but he had no action against the son or the slave. The word Noxa (from *noceo*) properly signified injury done; in its legal sense it comprehended every delictum. (Dig. 50. tit. 16. a. 238.) The father or the master might either pay damages to the injured person, or surrender the offender to him. The surrender of the offender was expressed by the phrase "noxæ dare or dedere;" and the acceptance of the offender in satisfaction of the injury was expressed by the phrase "noxæ accipere;" in these expressions "noxa" does not mean "punishment," as is sometimes supposed, but the meaning of the expression is that the person was surrendered in respect of or as a compensation for his Noxa. In the Institutes (4. tit. 8) Noxa is defined to be the person that does the mischief, that is, the slave, and Noxia the mischief that is done.

Noxales Actiones were given both by Leges and by the Edict. In the case of Furtum they were given by the Twelve Tables; and in the case of Damni Injuria by the Lex Aquilia. In the case of Injuriæ and of Vi Bonorum Raptorum, they were given by the Edict. This action was said "caput sequi," which is thus explained by instances: if a son or slave committed Noxa, the action was against the father or owner, so long as the offender was in his power; if the offender became sui juris, the injured party had a directa actio against him; and if he came into the power of another person, that other person was liable to the action. If a paterfamilias committed a Noxa, and was adopted (adrogated), the actio which was originally against him (*directa*), became an action against the adopting person. A paterfamilias or master could have no action against a son or slave in respect of a Noxa done to himself, the ground of which was that no obligatio could be contracted between such parties; and as the foundation of all obligatio was wanting in such case, it followed that there could be no action against such son or slave, if he became sui juris, nor against another person into whose power he might come. If another person's slave or son committed Noxa, and then came into the power of the injured person, it was a question between the two schools whether the right of action was extinguished, or only suspended so as to revive in case the offending party was released from the power of the injured person. The opinion of the Proculiani, which was in favour of the suspension only, appears more consistent with the principles on which this right of action was founded.

The mode of the "noxæ deditio" was by mancipatio. The Proculiani contended that three mancipationes were required by the Law of the Twelve Tables [EMANCIPATIO]; but the Sabiniani contended that the Law only applied to the case of voluntary mancipations, and that one mancipatio was sufficient.

If the father or owner made no defence to a noxalis actio, the offender was given up by a decree of the prætor to the injured person, and thus became his prætorian property (*in bonis*). If several slaves committed theft, the Edict required the master to pay only the amount of damage which would be payable, in case a single freeman had committed the theft.

Justinian abolished the noxæ datio in the case of children; observing that it appeared from the ancient jurists, that there might be an action against a filiusfamilias in respect of his own delicta.

As to damage done by an animal, see PAUPERIES.

(Gaius, iv. 75—79; *Instit.* 4. tit. 8; Dig. 9 tit. 4.) [G. L.]

NUDIPEDA'LIA. [CALCEUS, p. 221, a.]
 NUDUS (*γυμνός*). These words, besides denoting absolute nakedness, which was to be ἀραμπεχονος καὶ ἀκίτων (compare Moschus, iv. 98), were applied to any one who, being without an AMICTUS, wore only his tunic or indutus. (Aristoph. *Eccles.* 409; John xxi. 7.) In this state of nudity, the ancients performed the operations of ploughing, sowing, and reaping. (Hes. *Op. et Dies*, 391; Proclus *ad loc.*; Virg. *Georg.* i. 299; Servius *ad loc.*; Aelian, *V. H.* vi. 11, xiii. 27; Matt. xxiv. 18.) Thus Cincinnatus was found naked at the plough when he was called to be dictator, and sent for his toga, that he might appear before the senate. (Plin. *H. N.* xviii. 4; Aur. Vict. *de Vir. Illust.* 17; Liv. iii. 26.) The accompanying woodcut is taken from an antique gem in the Florentine Collection, and shows a man ploughing in his tunic

only. The light and thin clothing of Hetaerae, was denoted by the use of the same epitheta. (Athen. xiii. 24, 25.) [COA VESTIS.]

This term applied to the warrior expressing the absence of some part of his armour. (Hom. *Il.* xxi. 50; Jos. *Ant. Jud.* vi. 2. § 2; Gell. ix. 13; Xen. *de Rep. Lac.* xi. 9.) Hence the light-armed were called γυμνῆτες. [J. Y.]

NUMERUS, the name of a body of troops in the imperial period. [EXERCITUS, p. 500, b.]

NUMMULARII or NUMULARII. [MENSARIII.]

NUMMUS or NUMUS, coined money.—L. The chief terms used in Greek and Latin for money are ἀργύριον, χρῆμα, νόμισμα, aes, pecunia, moneta, nummus (or numus), and numisma. It was called ἀργύριον from ἀργυρος, because the prevailing coinages in Greece were of silver [ARGENTUM], (so at a later period we have χρῆσιον and χαλκίον, which, however, are seldom used, except in their specific senses), and aes, because that of Rome and Italy was of copper [AES]; χρῆμα, simply as the representative of value; pecunia, from the same cause, in connection with pecus, which either meant originally cattle, and thence, in an early age, valuable property in general, or, perhaps, vice versa*; and νόμισμα (sc. ἀργύ-

* There is no probability whatever in the other reason given for the origin of the word, namely, because the early coins had the image of cattle stamped upon them. (See ANA.)

πρω), from *νόμος*, because it was a medium of exchange established by custom and law, *current coin* (Demosth. *adv. Timocr.* p. 805; Aristoph. *Nub.* 246; Aristot. *Eth.* v. 8). These last terms, *nummus* and *aureum*, were transferred into the Latin language through the Greeks of Sicily and southern Italy, who applied the word *νόμος* (or, as it is also written, *νόμμος*), not only to money in general, but specifically to the chief silver coin of their system; and thus, in Latin, the word is used both in the specific sense, as equivalent to *sestertius* [SESTERTIUS], and in the generic meaning of any sort of money. (Varro, *L. L.* v. 37. § 173, ed. Müller; Pollux, ix. 79; Müller, *Etrusk.* vol. i. p. 315; Böckh, *Metrol. Untersuch.* p. 310; Eckhel, *Prolegom. General.* c. 1; and the Greek and Latin Lexicons.) Some writers give the ridiculous derivation of *nummus* from *Numa*, who, they say, first coined money: here the process has been, first, to fancy the connection of the words, and then to invent the fact to account for it. (Suid. s. v. 'Ασάπια; Isid. *Orig.* xvi. 17.) The word *moneta*, from which, through the French, we get our word *money*, was a surname of Juno, in whose temple the standards of weight, measure, and money were preserved: the epithet itself seems to correspond in meaning and derivation (from *monere*) to the name of the Greek deity Μηννοστήριον. [MONETA.]

II. *Origin of Money.*—Aristotle (*Polit.* i. 3) defines νόμισμα as στοιχείον καὶ μέρος τῆς ἀλλαγῆς, and traces its invention to the early felt necessity of a common medium of exchange, to obviate the inconveniences of barter. At first, he tells us, it consisted of masses of metal and other convenient substance, determined by size and weight, and, lastly, with marks stamped upon them, to save the trouble of always weighing them. It is unnecessary to quote other authorities in confirmation of this statement. (Eckhel, *Proleg.* c. 2.) The things which are essential to money are the *material* and the *stamp*—the former giving it the reality of value, the latter its assurance. In the early state of commerce, described in the Homeric poems and other ancient works, when the transfer of commodities was effected by means of quantities of unstamped gold, silver, or copper, which were determined by weight, *money*, properly speaking, did not exist. On the other hand, a mere stamp, on a material of little intrinsic value, does not make it money, but a mere token of credit, which is sometimes loosely and inaccurately called money. This sort of so-called money was sometimes, though rarely, employed by the ancients, and that chiefly by the barbarous nations; the civilised states preferred the subterfuge of debasing their coinage to any attempt to introduce the element of credit avowedly into their monetary system. They had nothing like our paper money or bills of exchange.

III. *Materials of ancient Money.*—The conditions which any material used for money must of necessity answer are obviously the following:—it must exist in sufficient abundance; it must be of intrinsic, that is, universally acknowledged value, and, as nearly as possible, of uniform value; it must be capable of resisting wear and corrosion; it must be portable, easily divisible, and not difficult to work into those sizes and to mark with those stamps, which determine and certify its quantity and quality. These conditions are best fulfilled by the metals gold, silver, and copper,

which therefore have formed, either separately or in combination with each other, the materials of nearly every system of money which has ever existed. The history of their use by the Greeks and Romans will be noticed presently; but it is necessary first to say a few words respecting some other substances, which were anciently employed for money.

Iron was used by the Lacedaemonians and Byzantines, probably on account of the abundance of the metal in Laconia and on the shores of the Euxine. (Pollux vii. 106; besides numerous other testimonies.) Aristotle, who in the passage already quoted, mentions iron and silver as examples of the materials of money, tells us elsewhere (*Oecon.* ii. 2) that the people of Clazomenae had iron money; and there are some obscure testimonies respecting the use of iron money in the earliest age of Rome (Suid. s. v. 'Ασάπια). Not a specimen of iron money is now extant, a fact easily accounted for by the liability of the metal to rust. (Eckhel, *Proleg.* 6.)

Tin was coined by Dionysius at Syracuse (Aristot. *Oecon.* ii. 2; Pollux, ix. 79); but this is the only notice of such money, except a law in the Digest, which refers merely to spurious coins. (48. tit. 10.) No specimens are extant. (See further, Eckhel, l. c.)

Lead money is not unfrequently mentioned by the poets, and not a few coins or medals of it are preserved; but it is doubtful whether they were true money. (Eckhel, l. c.)

Leather, wood, and shells are also referred to as materials of money; but such monies could only have been tokens, not true coin. *Leather money* is said to have been used by the Carthaginians, Spartans, and Romans. (Eckhel, l. c.)

IV. *Distinction between ancient Money and Medals.*—It is no longer necessary to examine the paradoxical assertion of Sebastian Erizzo, that all the ancient coins which have come down to us are mere medals, and were never current money. (See Eckhel, *Proleg.* c. 5.) But the question is very important, whether any among them were mere medals, and if so, how they are to be distinguished from the coins which were used as money. This question is fully discussed by Eckhel (l. c.), who lays down the following as the chief criteria for distinguishing between them.

When we find a continuous series of coins, having the same, or nearly the same weight, stamp, and style of workmanship (allowing for the decline or improvement of the art); or when we find a multitude of specimens of the same coins, and that too in different places; when the stamp upon a coin expresses its weight or its denomination; in these cases there can be no doubt that the coins, if genuine, were real money. These tests are answered by the general series of Roman copper, silver, and gold coins; by most of those of the Greek states; by the gold and silver coins of Philip, Alexander, and his successors; and by the *cistophori* of proconsular Asia. On the other hand, those appear to be medals, and not coins, which very much exceed in size the ordinary coins, such as the celebrated and beautiful gold medals of Lysimachus, many gold medals of the Roman Empire, and some silver medals which occur only under the later emperors. The question of the copper or bronze medals is more difficult to decide by this test, on account of the large size of the

ancient copper money of Rome. (See Eckhel, *l. c.* p. xv.) Another test of a medal is its being of an unusual or very elaborate device or workmanship. Respecting the occasions on which medals appear to have been struck, see Eckhel, *l. c.* pp. xvi—xviii.

V. *Tests of the genuineness of ancient Coins.*—As this work is intended for the general classical student, and makes no pretension to be a perfectly adequate guide for the special study of each branch of antiquity, and as this branch of numismatic science, although of primary importance for one who wishes to examine the ancient coins themselves, is yet one of the most intricate, and is comparatively unimportant for the mere explanation of the Greek and Roman writers, it must suffice to refer to the chief writers, quoted at the end of this article, with only the observation that the abundance of ancient false money and modern forged coins is one chief cause of the great difficulties of the subject.

VI. *History of Greek and Roman Coins.*—It has already been observed that the general definition of money is a certain weight of metal of a certain value, that is, of a certain fineness; the weight and the fineness being attested by a stamp upon the coin. The latter condition was not introduced until the first had long been acted upon; and, on the other hand, there are many occasions on which the stamp upon a coin is altogether neglected, and it passes current merely according to its real weight and fineness: one interesting example of this has been noticed under *As*, p. 140. The primitive stage in the invention of money is illustrated by various passages in the historical books of the Old Testament, and in Homer. Coined money is never once mentioned in the Homeric poems; but the instrument of all the traffic referred to in them is either simple barter, or quantities of gold, silver, and copper. Gold alone is referred to as measured by a definite weight, the *τάλαντον*, which in Homer appears to be quite a different quantity from the common *talent* of the historical period. This word was originally a generic term for *weight*, and signified a pair of scales, and any thing weighed out, as well as a definite weight. The same is true of the Latin word *libra*: the original meaning of the equivalent word *as* was merely *unity*, or a *unit*, whether of weight or of anything else. The other principal Greek word, *μῶν*, which is later than the Homeric poems, is, undoubtedly, of Oriental origin, and probably means anything divided, apportioned, or determined, akin to the Hebrew *maneh*, and to *μνδομαι*, *monere*, *moneta*, &c. These words concur with all the other information we have upon the subject, and with the very necessity of the case, to prove that every system of money is founded upon a previously existing system of weight. It is, however, of the utmost importance to observe, that a word denoting a certain weight does not, of necessity, when applied to money, indicate a quantity of metal of the same weight. For, first, the word *talent* or *pound* may be applied to an equivalent value of gold, silver, or copper, although, in weight, its meaning must be restricted to one of these metals: secondly, there may be, in the formation of a monetary system, an intentional deviation from the existing standard of weight, while the names of that standard are preserved: and, lastly, the progressive deterioration, to which history informs

us that most coinages have been subjected, destroys the meaning of the terms of weight, which are still applied to the coins. Examples of the first cause of disagreement occur of necessity in every monetary system which contains more than one metal; of the second, an interesting illustration will be found in the Attic weights and money; and of the third, we have a striking instance in the progressive diminution of the Roman *as*. [*As*.] Still, however, where we have no historical evidence of such discrepancies between the weights and monies of a people, especially in early periods, we assume their correspondence. If we did not, the attempt to reconstruct any ancient system of weight and money, and to express it in terms of our own, would be hopeless, as there would be no basis whatever for the investigation. Unless then we know anything to the contrary, we assume a *talent* of money to mean a *talent's weight* of the metal, which was chiefly used for money, namely, among the Greeks, silver; and, conversely, that the weight of the silver coins, which make up the value of a *talent*, gives us the amount of *talent-weight*.

In order that what follows may be better understood, we give here the chief denominations of weight and money among the Greeks and Romans. Among all the Greeks, the unit was the *talent*, which was thus divided (comp. *PONDERA* and the tables):—

1 Talent* contained	60 Minae.*
1 Mina	100 Drachmae.
1 Drachma	6 Oboli.

In this system we have a combination of the decimal and duodecimal systems.

Among the Romans, the unit of weight and money was the *As* or *LIBRA*, which was divided on the duodecimal system, its twelfth part being called *uncia*, and the intermediate parts being named according to the number of *unciae* they contained, or according to the fractional part of the *As* which each was. In some parts of Italy, however, (namely, Central Italy, north of the Apennines,) the decimal division of the *As* was used, the *uncia* being its tenth part. (Comp. *As*, *PONDERA*, *UNCIA*, and the Tables.)

i. *History of Greek Money.*—The invention of coined money among the Greeks is ascribed by tradition to two sources, not to mention the merely mythical stories of its origin (Pollux, ix. 83). According to one account, the Lydians were the first of mankind who coined and used gold and silver money (Herod. i. 94; Xenoph. *ap. Poll.* *l. c.*). The other and prevailing tradition is, that Phidon, king of Argos, first coined both copper and silver money at Aegina, and first established a system of weights and measures. (Herod. vi. 127; Ephor. *ap. Strab.* viii. p. 376; Ael. *V. H.* xii. 10; Poll. *l. c.*; *Marm. Pur.* 45, 46; Grote, *History of Greece*, vol. ii. p. 424: the date of Phidon, according to the Parian Marble, is *B. C.* 895; but Grote, Clinton, Böckh, and Müller all agree in placing him about the middle of the eighth century, between 783 or 770 and 744 or 730, *B. C.*; see Grote, *l. c.* p. 419.) These traditions are not altogether inconsistent; only we must understand the former as implying nothing more than that a system of money existed in Asia Minor in very early times;

* These were not coined, but were monies of account.

which was adopted by the Ionian colonists, from whom it passed over into the Ionian States of Greece Proper, especially Athens, under the name of the Euboic system; a name which it probably obtained from an early coinage in the island of Euboea, which was rich in copper and silver ores.* The other tradition, in all probability, expresses an historical fact, except as to the circumstance of Pheidon's executing his coinage in Aeginet†, which is almost certainly an invention of the later writers, made for the purpose of explaining the name *Aeginetan*, applied to the system which was established by Pheidon and adopted by most of the Dorian states. This system, as well as the former, was derived from the East, and was identical with the Babylonian; and, moreover, both systems existed together in Asia Minor, where the larger (Babylonian) talent was used for silver, and the smaller (Euboic) for gold. Thus it appears that these two systems of weight and money, both derived originally from the Chaldeans, may be distinguished as the *larger Babylonian* or *Argive* or (generally, but less properly) *Aeginetan*, and the *smaller Babylonian* or *Lydian* or *Ionian* or *Euboic* or *larger Attic*. The last term is used to distinguish the old Attic scale, which was identical with the Euboic, from the scale which Solon introduced, and which was considerably less; the latter alone was used for money, although the former continued in use as a scale of weight under the name of the *commercial standard*. The talents of the three systems of money, which have been mentioned, are known respectively as the *Aeginetan*, the *Euboic*, and the *Attic* or *Solonian*. Their numerical ratios to one another were as follows:—

Aeginetan : Euboic ::	6	:	5
Aeginetan : Solonian ::	5	:	3
Euboic : Solonian ::	138½	:	100
i. e. ::	100	:	72
::	25	:	18
or nearly ::	4	:	3

(Respecting the details of these matters comp. PONDERA).

(1.) *Money of the Aeginetan Standard*.—Although, according to the tradition, Pheidon coined copper as well as silver, and although we have indications of a copper currency among the Greek states of Sicily and Magna Graecia, which followed the Aeginetan standard, yet in Greece Proper copper money was altogether exceptional. [CHALCUS.] The ordinary currency in all the states was silver, the principal coins being the *drachma*, and its double (*διδραχμον*), and quadruple (*τετραδραχμον*), the *didrachm* prevailing in the

older coinages, and the *tetradrachm* in the later. *Didrachms* are the prevailing coin among the extant specimens of Aeginetan money: *tetradrachms* among the Attic. The *didrachm*, from its prevalence in the early coinages, obtained the name of *stater* (*στᾶτήρ*, i. e. *standard*), which was afterwards used specifically as the name of the chief gold coin, because they were of the same weight as the silver *didrachm* [STATER]. There still exist numerous Aeginetan *drachmas*, *didrachms*, and *tetradrachms* of undoubted genuineness; many of the highest antiquity. The earliest of these coins are very thick, and of rude workmanship: they are stamped with the figure of a turtle, the reverse having no device, but only an indented mark, as if the coin, at the time of striking, had been laid upon a punchon, the impress of which has been transferred to it by the weight of the blow. In the later coins of Aegina, the turtle is changed into a tortoise, and the other side bears a device. (See the woodcut on p. 439.)

In calculating the weight of the Aeginetan coins, we are at once met with one of the great sources of uncertainty in numismatics, namely, the doubt whether the existing coins of any system are of full weight, which doubt, in the great majority of cases, experience converts into the certainty that they are not. The chief exception to the general debasement of ancient money was the silver money of Athens, which, at least until some time after the Peloponnesian War, was proverbial for its full weight and purity. One method, therefore, is to take the best Attic coins as the standard of computation, not only for the Attic system, but also for any other system which bore a known determined ratio to the Attic. Now, taking Hussey's value for the Attic *drachma*, 66½ grains (which, if there be any error, is a little below the mark), the Aeginetan *drachma* ought to weigh between 110 and 111 grains.† Its actual average weight, however, as obtained by Mr. Hussey from the coins of Aegina and Boeotia, is only 96 grains. There is, of course, the alternative of using this discrepancy as an argument against the ratio of 5 : 3 for the systems of Aegina and Athens; and this course Mr. Hussey has adopted. But Böckh has shown most conclusively that this explanation is totally inadmissible. We have not space to discuss the question at length. It must suffice to observe that, if any one fact in ancient metrology is to be accepted as established by testimony, it is the fact of this ratio of 5 : 3;—that the fact of the prevailing debasement of ancient coinages, by which the discrepancy above noticed may be explained, is also one of the most certain facts in the whole subject;—that coins are actually found of the Aeginetan system, which come very nearly up to the full theoretical weight, those, namely, of Melos and Byzantium, both Dorian settlements, and those of the Macedonian kings before Alexander the Great.§ To these positive arguments it may be added, that Mr. Hussey's attempt to explain away the statement of Pollux, that the Aegi-

* Mr. Grote's derivation of the names *Euboic* and *Aeginetan*, "from the people whose commercial activity tended to make the scales most generally known—in the one case, the Aeginetans; in the other case, the inhabitants of Chalcis and Eretria" (vol. ii. p. 432)—is at least as probable as that suggested in the text.

† The statement (*Etym. Mag.* s. v. *Εὐβοϊκὸν νόμισμα*) that Pheidon's coinage was struck in a place of Argos called *Euboea*, obviously arose from a confusion, in the head of the compiler, between the Aeginetan and Euboic standards; and then, after the frequent fashion of the grammarians, attempting to set right a blunder by a wilful misstatement, he invented the Argolic *Euboea*.

‡ Böckh, from a rather higher value of the Attic *drachma*, gives the following theoretical weights for the Aeginetan coins: the *didrachm* 224.59 grains, the *drachm* 112.295 grains, the *obolus* 18.716 grains (p. 77).

§ These Mr. Hussey is compelled by his theory to erect into a distinct standard.

netan talent contained 10,000 Attic drachmae, as not referring to the genuine ancient money, but to the coins which passed as drachmae under the Roman empire, and which either were, or were equal to denarii,—is not only unsupported by any actual evidence, but is easily proved to be fallacious. Some minor, but important, arguments are satisfactorily disposed of by Böckh. (*Metrol. Untersuch.* pp. 77, foll.; comp. Grote's Review in the *Classical Museum*, 1844, vol. i. pp. 10, 11; Hussey, *Ancient Weights*, pp. 31, foll., 61, foll.) For the actual value of the Aeginetan silver money, as compared with ours, see *DRACHMA* and the *Tables*.

The Aeginetan system of money was adopted throughout the Peloponnesus (except perhaps in Achaëa) in Boeotia, and Northern Greece generally, up to Thessaly, in Macedonia, in Crete, and generally in the Dorian settlements in the Aegean and on the coast of Asia Minor; and also in the Dorian states of Italy and Sicily, where, however, it assumed a peculiar form though coming into connection with the native Italian system (see below). In Egypt also, the coins of the Ptolemies appear to have been at first conformed to the Aeginetan system; but they were soon very much debased. One state, in which the Aeginetan system was adopted, demands special notice. At Corinth, as being a Dorian state, and from its proximity to Argos, there can be no doubt that the Aeginetan system was adopted, to which in fact some of the oldest extant Corinthian coins approach very near. But we also find a smaller Corinthian stater or didrachm of 10 Aeginetan obols, which, according to the fixed ratio of the Aeginetan to the Euboic scale (6 : 5, i. e. 12 : 10) would be 12 Euboic obols, or a didrachm. This coin seems also to be equivalent to that found in Sicily as the *piece of 10 litras* (δεκάλιτρον or δεκάλιτρος στατήρ). Hence it would seem that the Euboic scale was early introduced at Corinth, a fact which might easily have been anticipated from the position and commercial activity of that state. This Corinthian stater or didrachm seems to have passed at a later period, at a depression of 1-10th of its value, that is, as 9 Aeginetan obols. The Attic (Solonian) scale seems also to have been introduced at an early period into Corinth, and afterwards to have been used there in preference to the Aeginetan and Euboic. Through Corinth, the Attic standard was introduced into Sicily and several states of Western Greece, such as Ambracia, Anactorium, Leucas, Amphilochia, Aetolia, and the Locrians.

Respecting the gold money of Aegina and the other Greek states, see *STATER*.

(2.) *Money of the Euboic Standard.*—In Asia Minor, under the Persian empire, the tribute in gold was paid in Euboic talents: but we must here understand weight alone to be referred to: for the weight of the existing darics shows clearly that the Persian money was conformed to the Babylonian standard. That there were in some parts of Greece, current coins of the Euboic standard of weight, is proved by the very term *Εὐβοϊκὸν νόμισμα*, and such coins are found among the extant money of the Euboean cities and their colonies, especially those of Chalcis. First, however, the standard may be obtained theoretically from the Attic and the Aeginetan; and in this manner, from Hussey's value of the Attic drachma, we obtain about 92 grains for the Euboic drachma

or, from Böckh's value, rather more than 93½ (or 93·5792, Böckh, p. 109). There exist several coins of Chalcis itself, of Rhegium in Italy, Naxos in Sicily, and other Chalcidian cities, which come quite as near to this standard as could be expected. (See Böckh, *l. c.* and foll.) The Euboic gold money is singularly scarce, and the few pieces that exist only give rise to new difficulties. (Böckh, *l. c.* § 5.)

(3.) *Money of the Attic (Solonian) Standard.*—Before the time of Solon, the standard of weight used at Athens was the Euboic; and there still exist coins, evidently from their form and workmanship among the most ancient we possess, which appear to be didrachms of the Euboic scale. These coins are stamped with the figure of an ox, which we know from several ancient writers to have been the regular impress upon the oldest Attic coins. (*Schol. A. B. L. ad Hom. Il. vi. 236; Etym. Mag. s. v. ἐκατόμβη*; Pollux, ix. 60; Diogenian. iii. 48; Hesych. s. vv. *βοῦς ἐπὶ γλαύκῳ, δεκάβοιον*; Zenob. ii. 70; Suid. s. v. *βοῦς ἐπὶ γλαύκῳ*). This coin was called *βοῦς*, and its origin was carried back mythically to the time of Theseus, who was said to have first coined it, and to have stamped it with the figure of an ox, in allusion either to the Marathonian bull, or to the Minotaur; reasons which are mere guess-work.* (*Plut. Thes. 25*.) This didrachm or *βοῦς* was the chief coin of the old Attic system: in the Solonian system the chief coin was the tetradrachm stamped with the head of Athena and the owl, and this also received a name from its impress, and was called *γλαύξ*. (*Philoch. ap. Schol. ad Aristoph. Av. 1106*.) The latter device continued to be the prevailing one throughout the whole history of the Athenian coinage. (See the wood-cut on p. 438.) Böckh supposes that the didrachms of the old Attic system passed for tetradrachms in the later (or Solonian) currency.

The politico-economical history of Solon's alteration of the Athenian currency does not belong to the present subject. (See Grote's *History of Greece*, vol. iii. pp. 131, foll.) That legislator is known to have lowered the standard of money in order to relieve debtors, and Plutarch (*Solon*, 15) informs us, on the testimony of Androtion, that "Solon made the mina of 100 drachmae, which had formerly contained 73." It is incredible that a large prime number, such as 73, should have been used as a multiplier in any system of weights; but what Plutarch meant to say was, that Solon made a mina or 100 drachmae out of the same quantity of silver which was formerly used for 73 drachmae. The value, therefore, of the Solonian money to that of the old standard was as 73 : 100. Now this was very nearly the proportion of the old or commercial weight to the new silver weight, namely, 100 : 138, = 72½ : 100, or, more exactly, as Böckh has shown, as 100 : 138½ = 72 : 100 = 18 : 25. [*PONDERA*.] But why should Solon have adopted so singular a proportion? Böckh suggested in his *Public Economy of Athens* that it was probably an accident; that Solon intended to reduce the mina one-fourth, that is, to make 100 drachmae of the new coinage equal to 75 of the old, but that by some inaccuracy

* The ox on the coins of Euboea is supposed to be in allusion to the name of the island, and possibly the Attic coins may have borrowed the type from the coins of Euboea.

of manufacture the new coins were found to be a little too light; and as Solon's coinage furnished the standard for all subsequent ones, the error was retained; and that, in fixing upon one-fourth as the amount of the reduction, Solon was guided by the wish of assimilating the Attic system to the Euboic, which, according to this view, would be different from the old Attic. A more complete investigation of the subject has, however, convinced that distinguished scholar that he was mistaken in supposing the Euboic standard to be distinct from the old Attic, and that the true reason of the precise amount of debasement adopted by Solon was in order to bring his new system into a simple definite ratio, namely 3 : 5 to the Aeginetan, which the Pheidonian institutions had established throughout the greater part of Greece. (For the full development of the argument, see Böckh, *Metrologische Untersuchungen*, c. ix., and for the denominations and values of the Attic silver money, see DRACHMA.)

It was the boast of the Athenians that their coinage was finer than all other money in Greece, and Xenophon says that they exchanged it with profit in any market (Aristoph. *Ran.* 732; Xen. *Vect.* iii. 2): there is, however, a distinction to be made in this respect between the Attic coins of different ages, which are easily distinguished by their form and workmanship. The most ancient are very thick and extremely rude. The second kind, which appear to belong to the age of Pericles and Xenophon, are also of a thick form, but not so clumsy in appearance. The third, which belong to a later period, are broad and thin. Most of the extant specimens are of very fine silver. Some writers have supposed that they are quite free from baser metal; but the experiments which have been made show that the finest possess a small quantity of alloy. Mr. Hussey found upon trial (*Ancient Weights and Money*, p. 45), that the most ancient Athenian coins contained about $\frac{1}{10}$ of the weight alloy, the second kind about $\frac{1}{10}$, and the more modern about $\frac{1}{10}$; the last of which is nearly the same alloy as in our own silver coin.

The purity and full standard of the Attic silver money, and the commercial character of the people, will account easily for its wide diffusion throughout the Grecian states. It was adopted at an early period by Corinth and her colonies; and thus was introduced into Sicily and Italy, where we find it, not only in the coins of Rhegium and Tarentum, but even in those of Populonia; but in most of these cases, it existed side by side with the Aeginetan standard. It is also found in the later coins of Euboea and of Crete, and in those of Thasos and Acanthus. It is probable that it prevailed extensively in the Ionian islands and cities of the Aegean Sea, but there are great difficulties connected with the coins of many of these states, and some of them (Chios, for example) seem to have had standards altogether distinct and peculiar. The Attic standard prevailed in Western Greece. The Thessalian confederacy had, at a late period, coins on the Attic scale; and the money of some of the barbarian nations of Eastern Europe appears to belong to the same standard. It also formed the basis of the later Macedonian coinage, having been adopted by Philip for gold [AURUM, STATER], and by Alexander for silver. It was followed likewise by the Seleucidae in Syria, and by Philistaeus in Pergamum.

There are many other points connected with

Greek money in general, and with the systems of particular states, which cannot be comprised within the limits of this article, but which are fully treated of in the works referred to at the end of it. The details of the minting of the money and the laws affecting it will be found under MONETA.

ii. *History of Roman and Italian Money.* — The earliest coinage at Rome was of copper. Its history has been already given under AS.

Silver was not coined at Rome till B. C. 269, five years before the first Punic war (Plin. *H. N.* xxxiii. 3. a. 13); but the Roman coinage of silver never appears to have been so free from baser metal as the best Athenian coinage. Under the Emperor Gallienus, the coinage was so much debased that it contained $\frac{1}{2}$ silver and $\frac{1}{2}$ alloy. In the time of the republic the impression on silver coins was usually, on the obverse, the head of Rome with a helmet, the Dioscuri, or the head of Jupiter; and on the reverse, carriages drawn by two or four animals (*bigae, quadrigae*), whence they were called respectively *bigati* and *quadrigati*, *sc. nummi*. The principal silver coins among the Romans were the denarius and sestertius. [DENARIUS, SESTERTIUS.] Respecting the Roman gold money, see AURUM.

Among the interesting matters which are here passed over for want of space, and as not of great importance for the ordinary classical student, are the fuller discussion of the early systems of the other states of Italy besides Rome, and the description of the coins of the later empire. On the former subject, the reader is referred to Müller's *Etrusker*, and Abeken's *Mittelitalien*, on the latter to Eckhel.

iii. *Connection of the Greek and Roman Systems in Sicily and Lower Italy.* — For the reasons just assigned, some very brief remarks must suffice for this part of the subject, though it is one of the most interesting in the whole range of numismatics. It is also, however, one of the most difficult, and its full discussion would require a separate work of no small dimensions. We find in Sicily and Lower Italy all the three chief systems which prevailed in Greece, and also the Italian system, not kept distinct, but brought into connection; besides a system which may be called specifically Sikelian, as it is not found elsewhere, and besides also the Carthaginian system. Of the three systems imported from Greece, the Aeginetan was naturally brought by the colonists from Corinth and Rhodes, who were the chief Dorian settlers in Sicily; the Euboic was similarly introduced by the Chalcidian colonists, and also from Corinth; and the Attic was imported through commerce, both directly and by way of Corinth. The Italian is supposed by Böckh to have been introduced by the commercial activity of the Etruscans at a very early period. Undoubted evidence of the existence of the last system is furnished by the very words *λίτρα* and *οβρυλία*, which it is impossible to explain otherwise than as being the Italian *libra* and *uncia*. It is important to observe that we have here a mixture, not only of different standards of weight and money, but also of different systems of arithmetical computation, the mixed decimal and duodecimal system of the Greeks coming into collision with the purely duodecimal system of the Italians.

In adapting these systems to one another, it would seem that the pound of the Italian system

(*libra*, *λίτρα*) was identified, not, as some have supposed, with the *mina*, but with the *half mina* of the Aeginetan scale; and, consequently, that 120 pounds went to the *talent*, as we are expressly informed by the Tauromenian inscription; and that copper money was coined in conformity with this standard.

Pollux (ix. 80—82) refers to Aristotle's *Polity of the Himeraeans*, for an account of several denominations of Sicilian coins, and of these he mentions the *οὐγκία*, as equal in value to one *chalcus*; the *διξās*, equal to two *chalci*; the *τριξās* to three; the *ἡμιλίτρον* to six; and the *λίτρα*, which is an *obol*; the *δεκάλιτρον*, he adds, still quoting Aristotle, is worth ten *obols*, and is the Corinthian *stater*. He then proceeds to state that there were many passages of the Attic, as well as the Dorian, comedians, in which these coins were alluded to, and he quotes lines from Diphilus, and from Epicharmus, in which mention is made of the *λίτρα*, the *ἡμιλίτρον*, the *ἐξάστιον* (a diminution of *ἐξās*), the *πεντάγκιον*, and the *δεκάλιτρος στατήρ*, as *silver coins*. A little before this, he quotes from Aristotle's *Polity of the Agrigentines* the statement, that the *λίτρα* was equal in value to an Aeginetan *obol*. (Compare, to the same effect, Pollux, iv. 174, 175.)

From these statements, it appears that, in the Sicilian silver money, the Euboic and Aeginetan scales were connected just as we have seen that they already were in one of the systems, from which the Sicilian money was derived, namely, in the Corinthian didrachm or stater of ten Aeginetan

obols, which may be regarded as forming the *στατήρ*, or chief coin, of the Sicilian system also: that then, the *obol*, being identified with the *λίτρα*, was subdivided, just like the Italian pound, from which its name was derived, into twelve parts or *ounces* (*οὐγκίαι*, *οὐγκίαι*, i. e. *unciae*), each of which was a *chalcus* (*χαλκοῦς*: what this *chalcus* really was, we shall presently endeavour to show).

As to the intermediate parts of the pound or *λίτρα*, it is evident, from the explanation which Pollux gives of *διξās* and *τριξās*, that he supposed them to be named from the number of ounces they contained, as was clearly the case with the *πεντάγκιον*, according to the analogy of which, if the idea of Pollux had been right, *διξās* and *τριξās* would have been respectively *διώγκιον* and *τριώγκιον* (like *teruncius*). Bentley has conclusively shown (quoted by Böckh, p. 293) that, in this matter, the Greek grammarians fell into a very natural error, through not understanding a system foreign to that of their language, and that, in fact, the parts of the *λίτρα* were named, as the general rule, not from the number of ounces they contained (except in the case of the *πεντάγκιον*, like the Latin *quincunx*, an exception easily accounted for by the difficulty of expressing the fraction 5-12ths by a single word), but from the fractional part of the *λίτρα* which each of them was equal to, just as in the Latin system. The following table shows the whole scale, with the corresponding Latin names, and with the values of the coins in silver *obols* of the Aeginetan standard and in the copper coins called *chalci* :—

Denominations.			Values.		
στατήρ or δεκάλιτρον	=	10 λίτραι	= { 10 <i>asses</i> , <i>decussis</i> afterwards <i>denarius</i> as or <i>libra</i>	= { 10 <i>obols</i> Aegin.	= { 12 <i>obols</i> or 1 didrachm Euboic.
λίτρα	=	12 οὐγκίαι	=	= 1 <i>obol</i>	= 12 <i>chalci</i>
ἡμιλίτρον	=	6 "	=	= ½ "	= 6 "
πεντάγκιον	=	5 "	=	= ⅕ "	= 5 "
τριξās	=	4 "	=	= ⅓ "	= 4 "
τετράς	=	3 "	= { <i>quadrans</i> or <i>teruncius</i>	= ¼ "	= 3 "
ἐξās	=	2 "	=	= ½ "	= 2 "
οὐγκία	=	1 "	=	= ⅓ "	= 1 "

Just as in the Latin system, so in the Graeco-Sicilian, there seem to have been no coins between the half and whole *λίτρα*. Thus, in the second passage quoted by Pollux from Epicharmus, a sum of money is expressed as consisting of *λίτρα* καὶ δεκάλιτρος στατήρ, ἐξάστιον τε καὶ πεντάγκιον. Even as denominations of weight we have (so far as we know) no terms corresponding to the Latin *septunx*, *bes*, *didrans*, *sestans*, and *denus*. Böckh supposes that this system was introduced in Sicily about O. 40 or 50, a. c. 620 or 580.

The worth of the chief coin in this system, the *silver libra*, or Aeginetan *silver obol*, must evidently be assumed to have been, like the Italian *libra*, the value of a pound-weight of copper.

The gold money of this scale has already been spoken of under DAMARETION.

For further details on the whole subject, see Böckh, *Metrol. Untersuch.* c. xix.

Besides the *λίτρα*, we find the word *nummus* (νοῦμμος) itself in the Sicilian system as the name of a particular coin. The Greek origin of the word is attested by several of the grammarians.

(Varro, *L. L.* v. 36. s. 67, ed. Müller; Pollux, ix. 79; Festus, s. v.; Suid. s. v. νόμος.) Pollux (*l.c.*) quotes two passages from Epicharmus, in which the word is used in the specific sense, for a particular coin; and he adds the statement, from Aristotle's *Polity of the Tarentines*, that *νοῦμμος* is the name applied by them to a coin, on which Taras was represented carried on a dolphin. The grammarians gave the value of the Sicilian *nummus* as 1½ Attic *obols*, in connection with a small talent, peculiar to Sicily, or rather two such talents, the older containing 24 *nummi* and the later 12. From a careful criticism of these statements, and from an examination of the extant coins, Böckh comes to the conclusion, that the *nummus* was originally the same as the *λίτρα*, but that, when the Attic standard came into common use, this *nummus* or *λίτρα* was diminished by 1-10th, in order to bring it into conformity with that scale; and by this change it became ⅔ of the Aeginetan *obol*, which is equal to 1¼ Attic *obols*, or the fourth part of an Attic drachma. Thus we get the simple law by which the Sicilian money was

connected with the Attic, namely, 4 *summi* = 1 *drachm*. Hence, also, we see how the *ounce* of the Sicilian system came to be identified by the Greek writers with the *chalcus*, in its specific sense. The Attic *chalcus* was $\frac{1}{4}$ of the obol [CHALCUS]; hence 12 *chalci* would make up $1\frac{1}{4}$ Attic obols, that is (restoring the 1-10th of depreciation), an Aeginetan obol, or a Sicilian litra. The *nummus* of the Tarentines, mentioned in the above passage from Pollux, and which was also used at *Heracleia*, was a much larger coin, and is probably the same as the full-weighted Aeginetan drachma (*δραχμή τραπεζία*), which came near enough to the Attic didrachm to be identified with it when the currencies came to be mixed. In fact the word *nummus* was evidently applied (like *στάρηρ* in Greece) to the chief current coin in any system, and it may therefore have had very different values: Plautus actually uses it for the didrachm.

For a further account of the Sicilian *nummus* and *small talent*, and the Attico-Sicilian system, see Böckh, cc. xxi. xxii.

iv. *On the Value of Ancient Money in terms of our own.*—When we endeavour to express the value of ancient coins in terms of our own, we meet with certain difficulties which require particular consideration. If we take for example, a drachma, and a shilling, and make a comparison of their weight and of the fineness of the silver in each, we at once obtain a determinate ratio for the value of the one to the other; and it might appear to a thoughtless person that, having thus found what fractional part of a shilling a drachma is, we might substitute that value for the drachma, its multiples and parts, wherever they are mentioned by ancient authors; and so of the other coins; and that thus we might express all ancient money in terms of our own. Of course we *might* do so; but it does not follow that, after doing so, we should at all obtain what we are seeking, a *true idea of the value of ancient money*, in any sense which can throw light on the numerous social, and economical, and political questions, which the determination of its value may affect. Even the coins themselves give different results according as we compare the gold or the silver with our gold or silver, and also according as we compare them with the true value of the metal in the coin and the value at which the coin is current; our shilling, for example, is current at rather more than its real value. Another source of disagreement, in comparing the gold and the silver coins with ours, is the different ratios of the value of gold to that of silver in ancient and in modern times. (See ARGENTUM, AURUM.) The only course left is to express the value of the ancient coins in terms of the *current value* of our coins, choosing the sovereign or shilling as the standard just as we may prefer, but in making use of the values so obtained, to remember that *they are comparatively worthless, until by other investigations we have ascertained the value of money as compared with commodities* at different periods of ancient history. Such investigations form no part of our present subject. The reader is referred for them to Böckh's *Public Economy of Athens*, and to Jacob's *History of the Precious Metals*. The Tables appended to this work are constructed on the principle we have described.

It is unnecessary to make any attempt to give a

complete list even of the chief books on numismatics. All the earlier works are referred to in one or other of the few books which we now proceed to mention as those which are most important for the student who wishes to pursue the subject further:—Eckhel, *Doctrina Numorum Veterum*, 8 vols. 4to., Vindobon. 1792—1839, some of the volumes being second editions; Rasche, *Lezicon Universalis Rei Numariae*, 7 vols. 8vo., Lips. 1785—1805; Wurm, *de Ponderum, Numorum, Mensurarum, ac de Anni ordinandi Rationibus, apud Romanos et Græcos*. Stuttg. 1831, 8vo.; Hussey, *Essay on the Ancient Weights and Money*, Oxfr., 1836, 8vo.; Böckh, *Metrologische Untersuchungen über Gewichte, Münzfüsse, und Masse des Alterthums in ihrem Zusammenhange*, Berlin, 1838, 8vo.; Grote's Review of Böckh's work, in the *Classical Museum*, vol. I. [P.S.]

NUNCUPATIO. [TESTAMENTUM.]

NUNDINAE is invariably and justly derived by all the ancient writers from *novem* and *dies*, so that it literally signifies the ninth day. (Dionys. *Ant. Rom.* ii. 28, vii. 58; Macrobi. *Sat.* i. 16; Festus, s. v. *Nundinalem Cocum*.) In ancient Calendars all the days of the year, beginning with the first of January, are divided into what we may call weeks, each containing eight days which are marked by the letters A, B, C, D, E, F, G, H. Now it is admitted on all hands that this division is made to mark the nundinae, for every eighth day, according to our mode of speaking, was a nundinae. There were thus always seven ordinary days between two nundinae. The Romans in their peculiar mode of reckoning added these two nundinae to the seven ordinary days, and consequently said that the nundinae recurred every ninth day, and called them *nundinae*, as it were *novendinae*. A similar mode of stating the number of days in a week is still customary in Germany, where, in common life, the expression *eight days* is used for a week, and the French and Italians in the same manner call a fortnight *quince jours* and *quindici giorni*.

The number of nundinae in the ancient year of ten months was 38; and care was always taken that they should not fall on the calends of January nor upon the nones of any month (Macrobi. *Sat.* i. 13; Dion Cass. xl. 47, xlviii. 33), and in order to effect this, the 355th day of the lunar year (*dies intercalaris*) was inserted in such a manner as to avoid the coincidence of the nundinae with the *primae calendae* or the nones. Macrobius says that it was generally believed that if the nundinae fell upon the *primae calendae*, the whole year would be signalised by misfortunes; the nones were avoided because the birthday of king Servius Tullius was celebrated on the nones of every month, as it was known that he was born on the nones of some month, though the month itself was not known. Now, as on the nundinae, the country-folk assembled in the city, the patricians feared lest the plebeians gathered at Rome on the nones might become excited and endanger the peace of the republic. These reasons are indeed very unsatisfactory, as Götting (*Gesch. der Röm. Staatsv.* p. 183) has shown, and it is more probable that the calends of January were ill suited to be nundinae, because this day was generally spent by every father in the bosom of his own family, and that the nones were avoided, because, as Ovid (*Fast.* i. 58) says, *Nonarum tubola*

deo caret. But at the time when the Julian calendar was introduced, these scruples, whatever they may have been, were neglected, and in several ancient calendars the nundinae fall on the first of January as well as on the nones. (See Graevius, *Thesaur.* vol. viii. p. 7, and the various ancient Calendars. Both before and after the time of Caesar it was sometimes thought necessary, for religious reasons, to transfer the nundinae from the day on which they should have fallen to another one. (Dion Cass. ix. 24.) The nundinae themselves were, according to Plutarch (*Quaest. Rom.* p. 275, B), sacred to Saturn, and, according to Granius Licinianus (*ap. Macrob. Sat.* i. 16) the Flaminica offered at all nundinae a sacrifice of a ram to Jupiter.

It is uncertain to whom the institution of the nundinae is to be ascribed, for some say that it was Romulus (Dionys. ii. 28; Tuditanus, *ap. Macrob. Sat. l. c.*), and others that it was Servius Tullius (Cassius Hemina, *ap. Macrob. l. c.*), who instituted them, while the nature of the things for which they were originally set apart seems to show that their institution was as old as the Romulan year of ten months, or at least that they were instituted at the time when the Roman population extended beyond the precincts of the city itself. For the nundinae were originally market-days for the country-folk, on which they came to Rome to sell the produce of their labour, and on which the king settled the legal disputes among them. When, therefore, we read that the nundinae were *feriae*, or *dies nefasti*, and that no comitia were allowed to be held, we have to understand this of the populus, and not of the plebs; and while for the populus the nundinae were *feriae*, they were real days of business (*dies fasti* or *comitiales*) for the plebeians, who on these occasions pleaded their causes with members of their own order, and held their public meetings (the ancient comitia of the plebeians) and debates on such matters as concerned their own order, or to discuss which they were invited by the senate. (Dionys. vii. 58; *Macrob. l. c.*; *Plin. H. N.* xviii. 3; *Festus, s. v. Nundinae*; compare Niebuhr, *Hist. of Rome*, vol. ii. p. 213.) How long this distinction existed that the nundinae were *nefasti* for the patricians and *fasti* for the plebeians, is not quite clear. In the law of the Twelve Tables they appear to have been regarded as *fasti* for both orders (Gellius, xx. 1. § 49), though, according to Granius Licinianus (*ap. Macrob. l. c.*), this change was introduced at a later time by the *Lex Hortensia*, 286 B. C. This innovation, whenever it was introduced, facilitated the attendance of the plebeians at the comitia centuriata. In the ancient calendars, therefore, the nundinae and *dies fasti* coincide. The subjects to be laid before the comitia, whether they were proposals for new laws or the appointment of officers, were announced to the people three nundinae beforehand (*trinundino die proponere*, *Macrob. l. c.*; *Cic. ad Fam.* xvi. 12, *Philipp.* v. 3, *pro Domo*, 16; *Liv.* iii. 35.)

The nundinae being thus at all times days of business for the plebeians (at first exclusively for them, and afterwards for the patricians also), the proceedings of the tribunes of the people were confined to these days, and it was necessary that they should be terminated in one day, that is, if a proposition did not come to a decision in one day it was lost, and if it was to be brought again before

the people, the tribunes were obliged to announce it three nundinae beforehand, as if it were quite a new subject.

Instead of *nundinae* the form *nundinum* is sometimes used, but only when it is preceded by a numeral, as in *trinundinum*, or *trinum nundinum*. (See the passages above referred to.) It is also used in the expression *internundinum* or *inter nundinum*, that is, the time which elapses between two nundinae. (Varro and Lucil. *apud Nonium*, iii. 145.) The word *nundinae* is sometimes used to designate a market-place or a time for marketing in general. (*Cic. de Leg. Agr.* ii. 33, *Philipp.* v. 4.) [L. S.]

NUNDINUM. [NUNDINAE.]

NUNTIIATIO. [OPUS NOVUM NUNTIIATIO.]

NUPTIAE. [MATRIMONIUM.]

O.

OBAB. [TRIBUS.]

OBELISCUS (ὀβελίσκος) is a diminutive of *Obelus* (ὀβελός), which properly signifies a *sharp-edged thing*, a *skewer* or *spit*, and is the name given to certain works of Egyptian art.* A detailed description of such works would be inconsistent with the plan of this work, but some notice of them is required by the fact that several of them were transported to Rome under the emperors. Ammianus Marcellinus (xvii. 4) says "that an obelisk is a very rough stone in the shape of a kind of land-mark or boundary stone, rising with a small inclination on all sides to a great height; and in order that it may imitate a solar ray by a gradual diminution of its bulk, it terminates in a prolongation of four faces united in a sharp point. It is very carefully smoothed." Most ancient writers consider obelisks as emblematic of the sun's rays. (*Comp. Plin. H. N.* xxxvi. 14.)

An obelisk is properly a single block of stone, cut into a quadrilateral form, the sides of which diminish gradually, but almost imperceptibly from the base to the top of the shaft, but do not terminate in an apex upon the top, which is crowned by a small pyramid, consisting of four sides terminating in a point. The Egyptian obelisks were mostly made of the red granite of Syene, from which place they were carried to the different parts of Egypt. They were generally placed in pairs at the entrance to a temple, and occasionally in the interior, and were usually covered with hieroglyphical inscriptions.

Obelisks were first transported to Rome under Augustus, who caused one to be erected in the Circus and another in the Campus Martius. (*Plin.* xxxvi. 14.) The former was restored in 1589, and is called at present the Flaminian obelisk. Its whole height is about 116 feet, and without the base about 78 feet. The obelisk in the Campus Martius was set up by Augustus as a sun-dial. It stands at present on the Monte Citorio, where it was placed in 1792. Its whole height is about 110 feet, and without the base about 71 feet. Another obelisk was brought to Rome by Caligula, and placed on the Vatican in the Circus of Caligula. (*Plin.* xxxvi. 15, xvi. 76. § 2.) It stands at present in front of St. Peter's, where it was

* Herodotus (ii. 111) uses ὀβελός in the sense of an obelisk.

placed in 1586, and its whole height is about 152 feet, and without the base and modern ornaments at top about 83 feet. But the largest obelisk at Rome is that which was originally transported from Heliopolis to Alexandria by Constantine, and conveyed to Rome by his son Constantius, who placed it in the Circus Maximus. (Amm. Marc. xvii. 4.) Its present position is before the north portico of the Lateran church, where it was placed in 1588. Its whole height is about 149 feet, and without the base about 105 feet.

There are eight other obelisks at Rome besides those mentioned above, but none of them are of historical importance. There are also obelisks in various other places, as at Constantinople, Arles, Florence, Catania in Sicily, &c., some of which are works of Egyptian art, and others only imitations.

There are two small obelisks in the British Museum, which were brought by the French from Cairo. The preceding brief account is chiefly taken from Long's *Egyptian Antiquities*, vol. i. cc. 14, 15. London, 12mo. 1832.

OBLIGATIONES. Obligatio is defined (Inst. 3. tit. 13) to be "a bond of law by which we are under a necessity of releasing (*solvendae*) something according to the laws of our state." According to Paulus (Dig. 44. tit. 7. s. 3) the substance of an obligatio does not consist in this, that its object is to make any corporeal thing (*corpus*) or servitus ours, but that it shall bind another person to give us something, or to do something, or to secure or make good something (*ad dandum aliquid, vel faciendum, vel praestandum*). This "binding" is a "legal binding," that is, the party who fails to perform what he has engaged to do, is liable to legal compulsion; in other words, the duty which he owes may be enforced by suit or action. The duty must consist in something that has a pecuniary value, or may be estimated in money (Dig. 40. tit. 7. s. 9. § 2): if the duty is not capable of such estimation, it is not a duty which can be enforced by legal process. An agreement which cannot be enforced because it is not conformable to the principles of Roman Law, is not properly an obligatio, but still the Romans gave such agreement the name of Obligatio, when it was conformable to the principles of the Jus Gentium, and added the term Naturalis, by which it is opposed to Civilis and Praetoria or Honoraria. Obligations Civiles were those which produced a right of action according to the Jus Civile; Praetoriae or Honorariae were those which owed their force to the jurisdiction of the Praetor. In the wider sense Civiles Obligations comprehend Honorariae, inasmuch as the Edicta magistratuum belong to Jus Civile in its wider sense. [Jus.] This is the sense of Civiles when opposed to Naturales Obligations: Civiles Obligations have the narrower sense when Civiles, Honorariae, and Naturales are opposed among one another. Those obligations, which were viewed as based on the Naturalis Ratio, were peculiarly considered as bonae fidei; and such obligations were the foundation of bonae fidei actiones, of which the Roman Law recognised a limited number, as empti et venditi actiones; locati et conducti actio; mandati, negotiorum gestorum, tutelae actiones; commodati actio, and some others. The term *strictum jus* (Cod. 5. tit. 13) is opposed to bona fides; and stricti juris actiones are opposed to bonae fidei actiones. Viewed with reference to

the facts on which the law operated to give Obligations a binding force, Obligations arose from Contract and Quasi Contract, and Delict (*malefictum, delictum*), and Quasi delict. (Inst. 3. tit. 13.) This division of Obligations with respect to their origin was apparently viewed as exhaustive; though it is doubtful whether the Roman jurists really viewed every obligatio as included with one of these four divisions. For instance, it is doubtful whether the actio ad exhibendum was considered as an obligatio quasi ex contractu, or an obligatio quasi ex delicto. Gaius divides Obligations into these: ex contractu and ex delicto; but he intends to comprehend the obligations quasi ex contractu under those ex contractu, and obligations quasi ex delicto under those ex delicto. In his Aures (Dig. 44. tit. 7. s. 1) he distributes obligations as to their origin into obligations ex contractu, ex delicto, and ex variis causarum figuris; and the ex variis causarum figuris comprehends the obligations quasi ex contractu and quasi ex delicto; indeed the term is comprehensive enough to comprehend all others, whatever they may be.

Contract (*contractus*) was made in four ways—Re, Verbis, Litteris, and Consensu.

As an example of an obligatio Re, Gaius mentions Mutuum [MUTUUM]. Also, if a man received what was not due from a person who paid by mistake, the payer had his remedy for the recovery (*condictio indebiti*) just as if it were a case of Mutuum. But "this kind of obligation," observes Gaius (iii. 91), "does not appear to arise from contract, because he who gives with the intention of payment, rather intends to dissolve or put an end to (*distrabere*) a transaction (*negotium*), than to commence or to constitute (*contrahere*) a transaction."

To the contracts made Re, there also belong COMMODATUM, DEPOSITUM, and PIGNUS.

The Obligatio Verbis was contracted by oral question and answer between the parties. The form of words might be:—Dare Spondes? Spondeo (Sponden'tu istud? Spondeo. Plant. Cyp. iv. 2. 117.) Dabis? Dabo; Promittis? Promitto; Fidepromittis? Fidepromitto; Fidejubes? Fidejubeo; Facies? Faciam. The words Dare Spondes? Spondeo, were so peculiarly Roman that their legal effect could not be preserved, if their meaning was transferred into another language: nor could a valid obligatio with a peregrinus be made by the use of the word Spondeo. (Gaius, iii. 93, 179.) The evidence of such an obligatio must have been the presence of witnesses. (Cic. pro Rosc. Com. 5.)

It is to this form of contract by question and answer (*ae interrogatione et responsione*) that the terms "stipulari" and "stipulatio" refer. The word "stipulari" properly refers to him who asks the question: ai quis ita dari stipuletur? Post mortem meam dari spondes; vel ita, Cum morieris, spondes? The person who asked the question was Stipulator; he who answered the question was Promissor, and he was said Spondere. (Gaius, iii. 100, 105; Dig. 45. tit. 1. s. 113. *De Verborum Obligationibus*.) Sometimes the whole form of words which comprises the question and the answer, is comprehended in the term Stipulatio (Dig. 45. tit. 1. s. 5. § 1), and the participle "Stipulata" is sometimes used in a passive sense. (Cic. pro Rosc. Com. 5.)

A stipulatio which contained an impossible condition was invalid (*inutilis*). As the Stipulatio was

effected by words, it was a necessary consequence that the parties should have power to speak and hear, and on this ground was founded the rule of law that a mutus and a surdus could not be parties to a Stipulatio. As to the ability of Pupilli and Infantes with respect to Obligationes, see IMPUBES and INFANS. The Stipulator might have another party to the contract on his behalf, who was called Adstipulator. The Adstipulator had the same right of action as the Stipulator, and therefore a payment in respect of the Stipulatio could be made to him as well as to the Stipulator; and the Stipulator had an actio Mandati against the Adstipulator for the recovery of any thing that he had received.

There were some peculiarities in the Adstipulatio. The right of action did not pass to the heres of the Adstipulator, and the adstipulatio of a slave for his master had no effect, though in all cases he could acquire for his master by stipulatio. The same rule of law appeared to apply to him who was In Mancipio, for he was servi loco. If a son who was in the power of his father, became his Adstipulator, he did not acquire any thing for his father, though he acquired for him by stipulatio. Still his adstipulatio gave the son a right of action, provided he was released from the father's power without a capitis diminutio, as for instance by the father's death or by being inaugurated Flamen Dialis. The same rule of law applied to a filia-familias and to a wife in manu.

Those who were bound for the Promissor were called Sponsores, Fidepromissores, Fidejussores [INTERCESSIO].

The Obligatio Literis is illustrated by Gaius (iii. 128) by the instance of Nomina transcripticia, as when a creditor who has a debt due from a person in respect of a sale, or a letting, or a partnership, enters it in his book (*codices, or tabulae expensi et accepti*) as a debt (*expensum illi fert*: compare Cic. *pro Rosc. Com.* 4, 5; *expensum tulisse non dicit, cum tabulas non recitat*). This was called Nomen transcripticium a re in personam. It was called transcriptio a persona in personam, when, for instance, "I have entered as due from you the debt which Titius owes to me, that is, if Titius has transferred or assigned (*delegavit*) you to me."

Cicero clearly alludes to this Literarum Obligatio in his Oration *pro Roscio Comedo*. He says (c. 5), speaking of the plaintiff's demand: "his claim is for a certain sum of money (*pecunia certa*), and this must be either 'data' (a case of obligatio re), or 'expensa lata' (the Literarum Obligatio), or stipulata (an obligatio Verbis)."

Some difficulty arises about the mode of converting an obligation of a different kind into an Obligatio Literis. The subject is discussed by Unterholzner (*Ueber die Rede des Cicero für den Schauspieler Q. Roscius*, Zeitschrift, vol. i. p. 248) in an ingenious essay, which, however, was written before the publication of the MS. of Gaius; and it has since been discussed by himself and by other writers. Unterholzner conjectured that a third party, with the consent of the debtor and creditor, made the entry in his own books; but there is no evidence in support of this assumption. Theophilus (Ad. tit. 1. *De Lit. Oblig.*) represents the Literarum Obligatio as a Novatio or a change of an obligation of one kind into an obligation of another kind, and this he says was effected both by words and writing (*ῥήματα καὶ γράμματα*). It was effected, according to him, by the creditor writing to the

debtor (*γράφειν ῥήματα πρὸς αὐτὸν*) to ask his consent to the old obligation being made into a new one of a different kind, and by the debtor consenting. As stated by him the Obligatio Literis might be an obligatio contracted by a letter of the creditor to the debtor and the debtor's reply. In principle there would be no objection to its being contracted by the debtor's consent expressed by a subscription in the creditor's books. The Literarum Obligatio of Theophilus, however, rather seems to correspond to the other kinds of Literarum Obligatio referred to by Gaius (iii. 134), where he says "this obligation can be contracted by chirographa and syngrapha, that is, if a man writes that he owes a sum of money or will pay it; provided, however, there be no stipulatio on the same account." It is not impossible that Gaius means that the creditor might convert an obligation of another kind into that of pecunia expensa by the bare entry of it in his book; for it is no objection to this, as Unterholzner has it, "that a unilateral writing on the part of the creditor should have the effect of putting another person under an obligatio," for an obligatio was already contracted, which the creditor would have to prove, but if he could prove it, the law gave him all the advantage of a creditor for pecunia certa, if he had complied with certain forms. Gaius (iii. 137) certainly may be understood as asserting that this obligatio was contracted simply "expensum ferendo:" but it seems to be the general opinion that this Literarum Obligatio required the consent of the debtor either orally in the presence of witnesses or by letter (Cic. *pro Rosc. Com.* 5; Val. Max. viii. 2. § 2); and this is not inconsistent with Gaius, for though he says that the debtor is bound by the "expensum ferendo," that does not exclude his consent, but merely shows what is necessary in order to make the consent an obligatio literis.

The Obligationes Consensu were Emptio and Venditio, Locatio Conductio, Societas, Mandatum. All Obligationes by contract of course required consent and the evidence of consent; but "these obligationes," says Gaius (iii. 135), "are said to be contracted consensu, because no peculiar form of words or writing was required, but the consent of the parties to the transaction was sufficient." Accordingly such transactions could take place between persons at a distance from one another, but a verborum obligatio required the presence of the parties. The actions founded on these Obligationes consensu were Bonae fidei.

An Obligatio Civilis implies a right of action against the person who owes the duty (*qui obligatur*). This right of action (*ex contractu*) might be acquired by any person who was sui iuris. It might also be acquired for him by those who were in his Potestas, Manus, and Mancipium; and by free men and slaves whom a man possessed bona fide, with certain exceptions. This right of action might also be acquired by a man through the acts of a free man who was his agent, so far that he could require the cession of the obligatio so acquired.

An Obligatio was terminated (*tolitur*) in various ways. The most common way was by payment (*solutio*) of what was due. A man with the consent of the creditor might pay another's debt, but the two schools differed as to the legal consequence of such payment. The Proculiani as usual adhering strictly to fundamental principles main-

tained that the debtor was still under his obligatio, but if the money was demanded of him by the creditor he had a good plea of *dolus malus* (*exceptio doli mali*).

An obligatio might be terminated by *Acceptilatio*. An obligatio contracted *per aes et libram* might be determined in the same way, and also one arising, "*ex iudicati causa*." [NAXUM.] An obligatio might also be determined by *Novatio*, which is the change of an existing duty (*debitum*) into another obligation, and the determination of the former obligation. (Dig. 46. tit. 2. *De Novationibus et Delegationibus*.) This is explained by the following instance (Gaius, iii. 176):—If I stipulate that Titius shall give me what is due from you, a new obligatio arises by the intervention of a new person, and the former obligation is determined by being replaced by the latter; and sometimes a former obligatio may be determined by a subsequent stipulatio, though the subsequent stipulatio may be invalid.—If the stipulation was from the same person, it required the addition of something to effect a *Novatio*, as the addition of a condition, or a sponsor, or the circumstance of adding to or subtracting from the time contained in the terms of the covenant. As to the case of a condition, it was the law in the time of Gaius that there was no *Novatio* until the condition was fulfilled, and till that time the former obligatio continued. The opinion of the great jurist Servius Sulpicius as to the addition of a condition immediately effecting a *Novatio*, was not law in the time of Gaius (*alio jure utimur*).

An obligatio was also determined by the *Litis contestatio*, if the proceedings had taken place in a *Legitimum iudicium*. It is stated generally under the articles *Litis contestatio* and *Legitimum iudicium*, what is the import of these terms respectively. The original obligation (*principalis obligatio*) was determined by the *Litis contestatio*, and the defendant (*reus*) was then bound (*tenetur*) by the *Litis contestatio*. If he was condemned, the *Litis contestatio* ceased to have any effect, and he was bound by the judgment (*ex causa iudicati*). It was a consequence of these doctrines that after a *Litis contestatio* in a *Legitimum iudicium*, a man could not bring his action on the original contract, for if his declaration or demand was *Dari mihi oportere*, it was bad (*inutilis*), for after the *Litis contestatio* the *Dari oportere* had ceased. In the case of a *Judicium quod imperio continetur*, the obligatio existed and the action could be brought, but the demand might be answered by a plea (*exceptio*) of a *res iudicata* or in *iudicium deducta*. In the *iudicia quae imperio*, &c., the *exceptio rei iudicatae* corresponds to the condemnation in the *Legitima iudicia*, and the *Exceptio rei in iudicium deductae* to the *Litis contestatio*. (Keller, *Ueber Litis Contestatio*, p. 11, &c.; Gaius, iii. 180.)

Obligations arising from Contract passed by universal succession to the heres. There were no means of transferring Obligations from the creditor to another person, except by a *Novatio*, which was effected by the assignee stipulating with the debtor with the consent of the creditor, the effect of which was to release the debtor from his former *Obligatio* and to bind him by a new one. If this *novatio* was not effected, the assignee could only sue as the cognitor or procurator of the assignor, and not in his own name. (Gaius, ii. 38, &c.)

From the consideration of Obligations arising

from Contracts, Gaius (iii. 182) passes to the consideration of Obligations "*quae ex delicto oriuntur*;" and these delicts which are the foundation of these obligations, are *FURTUM*, *BONA RAPTA* or *RAPINA*, *DAMNUM* and *INIURIA*. All these obligations he considers to be comprised in one genus, whereas the obligations *ex contractu* are distributed into four genera.

The arrangement by the Roman jurists of Obligations *ex delicto* with Obligations *ex contractu*, was founded on the circumstance that both classes of Obligations were the foundation of rights against a determinate individual or determinate individuals; but there is an important difference in the origin of the two rights. The rights *ex contractu* are rights founded on lawful acts; and rights *ex delicto* are rights founded on infringements of other rights.

The Obligations *quasi ex contractu* are not enumerated by Gaius, but they are discussed in the Institutes of Justinian (3. tit. 27). These Obligations do not properly arise either from contract or delict, but inasmuch as they are founded on acts, which are not delicts, they were considered as belonging to contract rather than to delict. Instances of these *quasi contractus*, enumerated in the Institutes, are "*absentis negotiorum gestio*" [*NEGOTORUM GESTORUM ACTIO*], the "*tutela iudicium*," a "*communis res sine societate*," as when a thing has been bequeathed and given to several persons; and some other instances.

These quasi contracts are arranged in the Institutes of Justinian after Obligations *ex contractu*; and the Obligations *quasi ex delicto* are placed immediately after the Obligations *ex delicto*. Instances of these Obligations *quasi ex delicto*, enumerated in the Institutes (4. tit. 5), are, "*si iudex litem suam fecerit*," and the case of "*dejectum effusumve*," and others. [DEJECTI, &c.]

The nature of an Obligation may now be more clearly understood. An Obligation implies two subjects or persons at least, *creditor*, or he who has the right, and *debitor*, or he who owes the duty: these two terms, which strictly apply to creditor and debtor in the common sense, are also used to express generally the relation of the parties to an Obligation. Obligation (literally a binding) primarily denotes the facts by which the legal relation between the parties is established. It also denotes the duty or obligation owing by one of the parties to the contract (*debitor*) to the other party (*creditor*), if the obligatio is unilateral; and the duties mutually owing from the one to the other, if the obligatio is bilateral. The word, which, as opposed to obligatio or "binding," expresses the determination of such binding, is "*olutio*;" and generally some form of the word "*solvo*" is the appropriate term to express the legal termination of the obligatio. But inasmuch as duties owing by one party to the contract, or duties mutually owing by the parties to the contract, imply a right in the other party to the contract, or imply mutual rights in the parties to the contract, the word obligatio is often used to express also the right which is established by the obligatio: and it is also used to express the whole relation between debtor and creditor. Thus, the right of the Creditor is spoken of as his Obligation, and the duty of the Debtor as his Obligation. There is no special name in the Roman law for a right against a determinate person or determinate persons. The

name for ownership is *Dominium*, to which is opposed the name *Obligationes* as descriptive of rights against determinate persons.

It is correctly remarked (Austin, *An Outline of a course of Lectures on General Jurisprudence*) "that in the writings of the Roman lawyers, the term *obligatio* is never applied to a duty which answers to a right *in rem*," that is, a right which is good against all the world. But as the duty answering to a right *in rem* is only the duty of forbearance, that is, of not doing anything to interfere with the right, there is no inconvenience in the want of a name: the right to the exclusive enjoyment of any thing (*corpus*) is ownership; all other people are not owners: as soon as an act is done which is an infringement of an owner's right, or in other words a *delictum* (in one sense in which the Romans use this word) an obligation arises by force of such act (*obligatio ex delicto*) and gives the injured person a right of action against the wrong-doer.

A *contractus* required the consent of all the parties to it. Those *Obligationes* which were said to be founded on "consent" (*consensus*) were said to be so founded only because consent was sufficient (Gaius, iii. 156), and no peculiar form of words or expression was required; whereas in the *Obligationes* contracted "re," "verbis," and "litteris," certain acts, words, or writing were required. In those contracts where particular forms were not required in order to convert them into *Obligationes*, any words or acts were sufficient, which were evidence of consent. Constraint by force or threats (*vis, metus*), and fraud (*dolus*), and in many cases error (*error, ignoratio*), either render an agreement absolutely null, or give the party who has been constrained, deceived, or in error, various modes of defence against the claims of the other party.

An *Obligatio*, as already observed, supposes two persons at least. But there may be more than two parties to an *Obligatio*, either as *creditores* or *debitores* or both, all of whom are comprehended under the general name of *Rei*. (Cic. *de Or.* ii. 43.) With reference to a person who is under the same obligation, a person may be called *Cor-reus*. But when there are several parties to an obligation, there are properly several *Obligationes*, and this is the case whether the creditor is one and the *debitores* are several, or the *creditores* are several and the debtor is one, or both the *creditores* and *debitores* are several. In the obligation *pro rata*, the claims of the several *creditores*, or the duties of the several *debitores*, are determinate parts of a whole, which is made up by the parts being united in one formal obligation. There are cases when several *creditores* may claim the whole (*solidum*), or several *debitores* may owe the whole (*solidum*): where a creditor claims the whole against several *debitores*, there are in fact several obligations binding on the several *debitores*. But if one creditor has recovered the whole, or one debtor has paid the whole, the entire *Obligatio* is at an end. (Inst. 3. tit. 16 (17).)

If an obligation is unilateral, it only gives a right of action to one of the parties to it, as in the case of *Mutuum*, *Stipulatio*, and others; if it is bilateral, it gives a right to each party against the other, as *emptio venditio*, and *locatio conductio*.

The most general name for any agreement, the object of which was to establish legal relations

between the parties, is *Conventio*, *Pactio*, *Pactum Conventum*, and its essence is consent: "*conventionis verbum generale est, ad omnia pertinens, de quibus negotii contrahendi transigendique causa consentiunt, qui inter se agunt.*" (Dig. 2. tit. 14.) *Conventiones* were *juris gentium*, and as a genus were divisible into species. Those *Conventiones* which were reducible to certain classes were called *Contractus*, of which the *Jus Civile* acknowledged the four kinds already mentioned, *Re*, *Verbis*, *Litteris* and *Consensu*. Of those *Obligationes* which were established *Re*, the four which have been already mentioned, had special names, *Mutuum*, *Commodatum*, *Depositum* and *Pignus*; and accordingly they have been called by modern writers *Contractus Nominati*. But there were other *Obligationes* which were established *Re*, for which the Romans had no particular name, and accordingly they have been called by modern writers *Contractus Innominati*.

These obligations are founded upon something that has been given or done by one party, which gives him a claim against the other for something to be given or done in return. If the matter of the *conventio* was a *civile negotium* or had a *civilis causa*, it formed an obligation, and was a foundation of an action "*praescriptis verbis*" or "*in factum*;" or as it is clearly expressed by Julian (Dig. 19. tit. 5. *De praescriptis verbis*, &c.), this is the actio "*ad quam necesse est confugere, quoties contractus existunt, quorum appellationes nullae jure civili proditae sunt.*" All the events upon which these actions could arise were reduced to the four following heads: "*aut do tibi ut des, aut do ut facias, aut facio ut des, aut facio ut facias.*" (Paulus, Dig. 19. tit. 5. s. 5. § 1—4.) The bare agreement (*pactum*) both in nominate and innominate contracts is not sufficient to establish an obligation: in both cases some act must be done to make the agreement become a contract, and to establish an obligation. The nominate contracts have their particular names. The innominate contracts take the name of contracts from their resemblance to nominate contracts; but as they are not referable to any one of such contracts, they are formed into a separate class: still some of them have special names. These contracts, as it will appear from the description just given of them, have their foundation in an act (a giving or doing) by one of the parties, and so far resemble contracts *Re*. The transaction is not completed so long as a thing remains to be given or done by the debtor; and the creditor may have his action (*condictio*) for the recovery of a thing which he has given, and for which the debtor has not made the return (a giving or an act) agreed upon. The creditor has also his action generally (*praescriptis verbis*) for the performance of the contract, if he prefers that, or for compensation to the amount of the injury sustained by its non-performance.

All other conventions were simply *Pacta*, the characteristic of which is that they were not originally the foundation of actions, but only of pleas or answers (*exceptiones*); that is, if an agreement (*conventio, pactio*) could not be referred to some class of contracts, it did not give a right of action. When there was no *civilis causa*, there was no *civilis obligatio* created by such *conventio*, and it is added (Dig. 2. tit. 14. s. 7. § 4), "therefore a *nuda pactio* does not produce an obligation but an *exceptio*;" whence it follows that a *nuda pactio*

is a *pactio sine causa*. Sometimes *Nuda conventio* is used as equivalent to *Nuda pactio*. (Dig. 15. tit. 5. a. 15.) It is a mistake to say that *Pactum* by itself means a one-sided contract. *Pactum* is a term as general as *conventio* (*pactum a pactione* — *est consensu pactio duorum plurimove in idem placitum consensus*, Dig. 2. tit. 14. a. 1), and is a part of all contracts as *conventio* is. There might be a *Pactum* or *Pactio* relating to marriage, the establishment of a *servitus* in provincial lands (Gaius, ii. 31), and other matters. But *Pactum* as included in the law of *Obligaciones*, obtained a limited signification; and it was used to signify agreements not included among the *Contractus*, but still binding agreements as being founded on some *causa*. A *pactum* therefore might produce a *naturalis obligatio*. Some of these *pacta* were in course of time made the foundation of an *actio civilis*, and some were protected by the *Prætor*: *ait Prætor: "Pacta conventa quæ neque dolo malo neque adversus leges plebiscita senatus-consulta edicta decreta principum neque quo fraus cui eorum fiat facta erunt servabo."* (Dig. 2. tit. 14. a. 7.) The parties to a *Pactum* were said "*pacisci*." Anything might be the subject of a "*pactum*" which did not involve an illegality. If an illegal *pactum* was made, it was still illegal, though it had been confirmed by a *stipulatio* or any other form. The matter relating to *Pacta* is not arranged in the Digest under the head of *Obligaciones et Actiones* (Dig. 44. tit. 7), but in the same book with the titles *De Jurisdictione*, &c.

Savigny shows that the notion of Agreement, (*vertrag*), is too narrowly conceived by jurists in general. He defines agreement to be the "union of several persons in one concordant declaration of will whereby their legal relations are determined." Consequently the notion of agreement must be extended to other things than to contracts which produce obligations: for instance *Traditio* or delivery is characterized by all the marks of an agreement; and the fact that the declaration of their will by the parties to the *traditio*, is insufficient to effect *Traditio* without the external act by which possession is acquired, does not in the least affect the essence of the agreement. The imperfect conception of an agreement has arisen from not separating in some cases the obligatory agreement from those acts for which such obligatory agreement is generally a preparation and of which it is an accompaniment. This becomes more apparent if we consider the case of a gift, which is a real agreement but without any obligation: it is merely a giving and receiving by mutual consent. This general notion of agreement is contained in the words of Ulpian already quoted, in which he defines *Pactio* to be "*duorum plurimove*," &c. It does not seem however that the Romans applied the terms *Pactio*, *Pactum*, and *Conventio* to any agreements except those which were the foundation of *Obligaciones* of some kind. (Savigny, *System des Heut. Röm. Rechts*, iii. § 140, &c.)

Pollicitatio is a proffer or offer on the part of a person who is willing to agree (*pollicitatio offerentis solius promissum*, Dig. 50. tit. 12. a. 3). A *pollicitatio* of course created no obligation until the proffer or offer was accepted. The word is frequently used with reference to promises made by a person to a state, city, or other body politic, such as the promise to erect a building, to exhibit public shows, &c. Such *pollicitationes* were binding,

when there was a *causa*, as a promise made with reference to a dignity (*honor*) conferred or to be conferred. A *pollicitatio sine causa* was also obligatory, if the person began to do what he had promised, as if he laid the foundation of a building or cleared the ground. (See Plin. *Ep.* x. 48. *Hinc theatro ex privatorum pollicitationibus multa debentur*; and v. 12.)

A person who vowed anything, was also bound (*voto obligatus*).

(Gaius, iii. 88, &c.; Inst. 3. tit. 12 (13), 4. 6; Dig. 47. tit. 7, Cod. 4. tit. 10. *De Obligationibus et Actionibus*; Mühlénbruch, *Doctrina Pandectarum*, lib. iii. *De Obligationibus*. The most complete work on Roman *Obligaciones* is by Unterholzner, *Quellenmässige Zusammenstellung der Lehre des Römischen Rechts von den Schuldverhältnissen*, Leipzig, 1840, 2 vols. 8vo.; see also Thibaut, *Pandektenrecht*; Vangerow, *Pandekten*, &c.; Puchta, *Inst.* vol. iii.) [G. L.]

O'BOLUS (*ὀβολός*), the smallest of the four principal denominations of weight and money among the Greeks, was 1-6th of the *drachma*, 1-600th of the mina, and 1-36,000th of the talent. As a coin, the *obolus* was of silver; and connected with it, at least in the Attic system, were silver coins weighing respectively 5, 4, 3, 2, 1½ *obols*, and ¾, ½, and ¼ of an *obol*; all which are found in collections of coins. The 1½ *obol* piece was a quarter of a *drachm*. The Attic *obol* was also divided into 8 (or according to others 10) *χαλκοί*. (See *PONDERA*; *NUMMUS*; *DRACHMA*; *CHALCUS*; and the *Tables*.) [P. S.]

OBSIDIONA' LIS CORONA. [*CORONA*]. *OBSONIUM*. [*OPSONIUM*].

OCCUPATIO. The word is used by Cicero (*de Off.* i. 7) to express the acquisition of ownership by occupation or the taking possession of that which has no owner, and with the intention of keeping it as one's own. Among the modes of acquiring ownership "*naturali ratione*," that is, by such means as are in all nations acknowledged to be lawful means of acquiring ownership, Gaius (ii. 66, &c.) enumerates the taking possession of those things *quæ nullius sunt*, as animals of the chase, birds and fishes, and such things are said "*occupantis fieri*." The same applies to the finding of things which have no owner; but there were particular rules as to the *thesaurus*, treasure found in the ground. (Inst. 2. tit. 1. a. 39; Dig. 49. tit. 14. a. 8. § 10; and Gaius, ii. 7). The latest legislation about *Thesaurus* is in Cod. 10. tit. 15. Things which were lost or thrown out of a ship in case of necessity were not subject to *Occupatio*. Things taken in war were subject to *Occupatio*. (Inst. 2. tit. 1. a. 17; Dig. 41. tit. 1. *de acquirendo rerum dominio*.) [G. L.]

OCHLOCRA'TIA (*ὀχλοκρατία*), the dominion of the rabble, a name of later origin than the time of Aristotle, and applied to that perversion of a democracy, in which, through the introduction of devices for removing or counteracting the natural and wholesome inequalities of society (such as paying citizens for attendance in the popular assembly and on other occasions on which their civic functions might be exercised, increasing the number and restricting the duration and authority of public offices), the exercise of all the highest functions of government came to be practically in the hands of a mere faction, consisting of the lowest and poorest, though most numerous, class of

citizens, who were thus tempted to adopt as one of their ordinary avocations, that which they would otherwise have left in more suitable hands. (Polyb. vi. 4; Plut. *de Monarch. &c.*, c. 3; Thirlwall, *Hist. of Greece*, c. x. vol. i. p. 410.) [C. P. M.]

O'CREA (*κνημίδες*), a greave, a leggin. A pair of greaves (*κνημίδες*) was one of the six articles of armour which formed the complete equipment of a Greek or Etruscan warrior [ARMA], and likewise of a Roman soldier as fixed by Servius Tullius. (Liv. i. 43.) They were made of bronze (Alcæus, *Frag.* i. ed. Matthiæ), of brass (Hes. *Scut.* 122), of tin (Hom. *Il.* xviii. 612, xxi. 592), or of silver and gold (Virg. *Æn.* vii. 634, viii. 624, xi. 488), with a lining probably of leather, felt, or cloth. Another method of fitting them to the leg so as not to hurt it, was by the interposition of that kind of sponge which was also used for the lining of helmets [GALMA], and which Aristotle describes as being remarkable for thinness, density, and firmness. The greaves, lined with these materials, as they were fitted with great exactness to the leg, probably required, in many cases, no other fastening than their own elasticity. Often, nevertheless, they were further secured by two straps, as may be seen in the woodcut at p. 135. Their form and appearance will be best understood from the accompanying woodcut. The upper figure is that of a fallen warrior represented among the sculptures, now at Munich, belonging to the temple in Aegina. In consequence of the bending of the knees, the greaves are seen to project a little above them. This statue also shows very distinctly the ankle-rings (*ἑπισφύρια*), which were used to fasten the greaves immediately above the feet. The lower portion of the same woodcut represents the interior view of a bronze shield and a pair of bronze greaves, which were found by Signor Campanari in the

tomb of an Etruscan warrior, and which are now preserved in the British Museum. These greaves are made right and left.

That the Greeks took great delight in handsome and convenient greaves may be inferred from the epithet *εὐκνημίδες*, as used by Homer, and from

his minuteness in describing some of their parts, especially the ankle-rings, which were sometimes of silver. (Hom. *Il.* iii. 331, xi. 18.) The modern Greeks and Albanians wear greaves, in form resembling those of their ancestors, but made of softer materials, such as velvet, ornamented with gold, and fastened with hooks and eyes.

Among the Romans, greaves made of bronze, and richly embossed, were worn by the gladiators. Some such have been found at Pompeii. [See woodcut, p. 576.] It appears that in the time of the emperors, greaves were not entirely laid aside as part of the armour of the soldiers. (Lamprid. *Al. Sever.* 40.) At an earlier period, the heavy-armed wore a single greave on the right leg. (Veget. *de Re Mil.* i. 20.) Leggings of ox-hide or strong leather, probably of the form already described and designated by the same names both in Greek and Latin, were worn by agricultural labourers (Hom. *Od.* xxiv. 228; Plin. *H. N.* xix. 7; Pallad. *de Re Rust.* i. 43) and by huntsmen. (Hor. *Sat.* ii. 3. 234.) [J. Y.]

OCTASTYLOS. [TEPLUM.]

OCTA'VAE. [VECTIGALIA.]

OCTOBER EQUUS. [PALILIA.]

OCTOPHORON. [LECTICA.]

ODEUM (*ὀδεῖον*), a species of public building, which was first erected during the flourishing epoch of Greek art in the fifth century B.C., for contests in vocal and instrumental music (*ῥαῖος ἐν ᾧ ὁ παῖς καὶ οἱ κρηττοὶ ἤγουντο*, Hesych. s. v., comp. Suid. s. v.). In its general form and arrangements it was very similar to the theatre; and it is sometimes called *θέατρον** (Paus. i. 8, ii. 3; Philostr. *Vit. Soph.* ii. 1. p. 549.) There were, however, some characteristic differences: the Odeum was much smaller than the theatre; and it was roofed over, in order to retain the sound. (Vitruv. v. 9.) The comparatively small size of the Odeum is easily accounted for, not only because the space required in the theatre for the evolutions of the Chorus was not wanted here; but also because it appears to have been originally designed chiefly for musical rehearsals, in subordination to the great choral performances in the theatre, and consequently a much smaller space was required for the audience.

Unfortunately we have no detailed description of this class of buildings. Vitruvius (*l. c.*) makes a passing mention of the Odeum of Pericles, but states no particulars respecting its construction, except that it was adorned with stone pillars, and roofed over with the masts and yards of the captured Persian ships, a statement which has led some writers into the mistake of referring the building to the time of Themistocles. From the statement of Pausanias (*i.* 20. § 4) that, when the Odeum was rebuilt, after its burning in the capture of Athens by Sulla, it was made of a form which was said to be in imitation of the tent of Xerxes, it may perhaps be inferred that the original building was actually covered with that tent. At all events, this statement proves that the roof must have been conical. Accordingly Plutarch, who states that the original building† was an imitation of the king's tent, describes its roof as

* See, respecting the precise meaning of the words, the note on p. 83, a.

† Perhaps he confounded it with the one which was standing in his time.

sloping all round, and inclined from one summit (Peric. 13). He also says that, in its internal arrangement, the building had many seats and many pillars. From a few other passages, and from the scanty remains of such edifices, we may conclude further that the Odeum had an orchestra for the chorus and a stage for the musicians (of less depth than the stage of the theatre), behind which were rooms, which were probably used for keeping the dresses and vessels, and ornaments required for religious processions. Of course the Odeum required no shifting scenes; but the wall at the back of the stage seems to have been permanently decorated with paintings. For example, Vitruvius tells us (vii. 5. § 5), that, in the small theatre at Tralles (which was doubtless an Odeum), Apaturius of Alabanda painted the scenes with a composition so fantastic that he was compelled to remove it, and to correct it according to the truth of natural objects. Among the paintings in the Odeum at Smyrna was a *Grace*, ascribed to Apelles. (Paus. ix. 35. § 6.) The Odeum of later times were richly decorated. That of Herodes Atticus had its roof of beams of cedar adorned with carvings, and contained numerous works of art. (Philost. ii. 1. p. 551.)

The earliest building of this kind was that already mentioned as erected by Pericles at Athens, for the purpose, according to Plutarch (*l. c.*) of celebrating the musical contests at the Panathenaea. It lay on the left hand to persons coming out of the great theatre, and therefore at the foot of the south-eastern part of the Acropolis. (Vitruv. v. 9.) Its proximity to the theatre suggested some of the uses made of it, namely, as a refuge for the audience when driven out of the theatre by rain, and also as a place in which the chorus could be prepared. (Vitruv. *l. c.*) It was burnt when Athens was taken by Sulla, B.C. 85, and was restored by Ariobarzanes II. king of Cappadocia; who employed C. and M. Stallius and Menalippus as the architects of the work. Ariobarzanes reigned from B.C. 63 to about B.C. 51. (Vitruv. *l. c.*; Paus. i. 20. § 4; Appian. *Bell. Mithr.* 38; Böckh, *Corp. Inscr.* vol. i. No. 357.) The building is now entirely destroyed.

This was not the only Odeum at Athens in the time of Hadrian and the Antonines. Pausanias, who in the passage referred to, does not apply the name of Odeum to the building, speaks of an Odeum at Athens in two other passages (i. 8. § 6, 14. § 1), from a close examination of which it appears more than doubtful whether this Odeum is the same as the former. Stieglitz (p. 228, foll.) identifies it with the Pnyx, which he supposes to have been fitted up as an Odeum, while that of Pericles was in ruins. It is remarkable that Pausanias nowhere mentions the Pnyx, unless this Odeum be the same as it.

• Another Odeum was built at Athens by Herodes Atticus, and was the most magnificent edifice of the sort in the whole empire. It stood, as compared with the Odeum of Pericles, on the opposite side of the great theatre, under the south-western part of the Acropolis; where large ruins of it are still seen. The length of its largest diameter was 248 feet, and it is calculated to have furnished accommodation for about 8000 persons. (Leake, *Topogr. of Athens*, p. 61.) This building was erected after Pausanias wrote his first book, and before he wrote his seventh. (Paus. vii. 20. § 3.)

The other principal Odeum were that of Corinth, also built by Herodes (Paus. ii. 3. § 6; Philost. *l. c.*); that of Patrae, which was next in magnificence to that of Herodes at Athens, and contained among other works of art, a celebrated statue of Apollo (Paus. vii. 20. § 6); those of Smyrna and Tralles already mentioned; that of Messene, 112 feet long, and 93 feet in its inner diameter; that of Nicopolis, with an inner diameter equal to the last, but with an outer diameter of 193 feet: there are also ruins of Odeum at Laodicea, Ephesus, Ane-murium, and other places in Asia Minor. (See Chandler, Pococke, Beaufort's *Caramania*, Leake, and other topographers.)

The first Odeum, properly so called, at Rome, was built by Domitian (Suet. *Dom.* 5; Eutrop. viii. 15), and the second by Trajan. (Amm. Marc. xvi. 10.) There are ruins of such buildings in the villa of Hadrian at Tivoli, at Pompeii, and at Catania.

As a general fact, the Odeum were less strictly reserved for their special use than the theatres. Some of the extra uses, to which the Odeum of Pericles was applied, have been already mentioned. It was also used sometimes as a court of justice (Aristoph. *Vesp.* 1104, *c. Schol.*, comp. Pollux, viii. 6); and philosophical disputations were held in the Odeum. (Plut. *de Exil.* p. 604.) Further details will be found in the following works. (Martini, *Ueber die Odeum*; Stieglitz, *Archäol. d. Baukunst*, vol. ii. sect. 3; Hirt, *Lekre d. Gebäude*, pp. 111—113; Rose, *über die Odeum in Athen, Rom, u. Karthago*, Soest, 1881, 4to; Müller, *Arch. d. Kunst*, § 289; Klausen, in Ersch and Gruber's *Encyclopädie*; Baumstark, in the *Real Encyclop. d. class. Alterthum*.) [P. S.]

OEUS. [DOMUS, p. 428, b.]

OENOMELUM. [VINUM.]

OENOPHORUM (*οἰνοφόρον*), a basket, or other contrivance for carrying bottles of wine; a wine-basket. This was sometimes used by those who took their own wine with them in travelling in order to avoid the necessity of purchasing it on the road. (Hor. *Sat.* i. 6. 109; Juv. *Sat.* vii. 11; Pers. *Sat.* v. 140; Mart. vi. 88.) A slave, called the wine-bearer (*oenophorus*, Plin. *H. N.* xxxiv. 8. s. 19), carried it probably on his back. [J. Y.]

OFFENDIX. [APEX.]

OFFICIAL'ES. [EXERCITUS, p. 508, b.]

OFFICIUM ADMISSIO'NUM. [ADMINISTRATIONALIS.]

OIKIAS DIKE (*οἰκίας δίκη*), an action to recover a house, in which (as in any other action where property was the subject of litigation) the dicasts decided (*δεδίκασεν*) to which of the parties the house belonged, and adjudged it to him (*έρεδίκασεν*). Nothing further being requisite, the suit was an *εὐκταῖος ἀγωγή*. Certain speeches of Lysias, Isaeus, and Hyperides, which are now lost, were upon this subject. The *οἰκίας δίκη* was only to recover the house itself; the by-gone rents, or mesne profits, were recoverable in an action called *ἐνοικίου δίκη*. [See ENOIKIOU DIKE.] (Meier, *Att. Proc.* p. 492.) [C. R. K.]

O'LEA, OLIV'A (*ἐλαία*); O'LEUM, OLIVUM (*ἐλαιον*); OLE'TUM, OLIVE'TUM (*ἐλαιον*)

The importance of the olive was recognised from the most remote period of antiquity, in all civilised countries where the temperature admitted of its cultivation; and it was widely adopted as an

emblem of industry and peace. While it yields a large supply of palatable and highly nutritious food, it requires less outlay and less attention than almost any other fruit tree, is subject to few casualties, and, even if altogether neglected, does not suffer serious injury, but may be quickly restored to fertility by moderate care. Hence, the honour paid to it at Athens, and hence the title of "prima omnium arborum" bestowed upon it by Columella.

VARIETIES. The *Olea Europæa* is the only species of the natural family of *Oleaceæ*, which yields the highly valued olive oil, but many varieties are produced by different modes of culture, and by peculiarities of soil and climate. Columella enumerates ten, and this number may be considerably increased from the works of other ancient writers. The following seem to have been the most important:—1. *Pausia* s. *Posea*; 2. *Regia*; 3. *Orohis* s. *Orchitis* s. *Orchita* s. *Orohas*; 4. *Radiis*; 5. *Licinia* s. *Liciniana*; 6. *Sergia* s. *Sergiana*. Of these the *Pausia*, according to Columella, was the most pleasant in flavour (*jucundissimus*), although upon this point he is apparently contradicted by Virgil (*amara Pausia bacca*); the *Regia* was the handsomest in appearance; while both of these together with the *Orohis* and the *Radiis*, and in general, all the larger varieties, were better suited for eating than for oil. The *Licinia*, on the other hand, yielded the finest oil, the *Sergia*, the greatest quantity. (Cat. R. R. 7; Varr. R. R. 7; Columell. v. 8, de Arbor. 17; Plin. H. N. xv. 6.)

SOIL AND CLIMATE. The soil considered most congenial was a rich tenacious clay, or a mixture of clay and sand, a gravelly subsoil being essential in either case to carry off the water. Deep fat mould was found to be not unsuitable, but any land which retained moisture was avoided, and also light, stony ground, for, although the trees did not die in the latter, they never became vigorous. Here again, however, Columella and Virgil are at variance, for while the former observes "inimicus est ager sabulo macer et nuda glare," the poet declares

Difficiles primum terræ collesque maligni,
Tenuis ubi argilla et dumosis calculus arvis
Palladia gaudent silva vivacis olive.

The olive is very impatient of frost, and scarcely any of the varieties known to the ancients would flourish in very hot or very cold situations. In hot localities, it was expedient to form the plantations on the side of a hill facing the north, in cold localities upon a southern slope. Neither a very lofty nor a very low position was appropriate, but gentle rolling eminences such as characterised the country of the Sabines in Italy, and the district of Bætica in Spain. Under ordinary circumstances, a western exposure lying well open to the sun was preferred. It is asserted by several classical authors that the olive will not live, or, at least, not prove fruitful at a distance from the sea coast greater than from thirty to fifty miles, and although exceptions did and do exist to this rule it will be found to accord with general experience. (Cat. R. R. 7; Varr. i. 24; Columella, v. 8; Plin. H. N. xvii. 3; Pallad. iii. 18; Theophr. π. φ. α. ii. 5; Geopon. ix. 4.)

PROPAGATION AND CULTURE. Previous to the formation of an olive yard (*oleum, olivetum*) it was necessary to lay out a nursery (*seminarium*) for the reception of the young plants. A piece of

ground was selected for this purpose, freely exposed to the sun and air, and in which the soil was a rich black mould. It was the practice to trench (*pastinare*) this to the depth of three feet, and then to leave it to crumble down under the influence of the atmosphere.

The propagation of the olive was effected in various ways.

1. The method generally adopted was to fix upon the most productive trees, and to select from these long, young, healthy branches (*ramos novellos*) of such a thickness as to be easily embraced by the hand. The branches immediately after being detached from the parent stem, were sawed into lengths of a foot and a half each, great care being taken not to injure the bark; these segments, which were called *tulæe* or *clavolæ* or *trunci*, were then tapered to a point at each end with a knife, the two extremities were smeared with dung and ashes, they were buried upright in the ground, so that the tops were a few fingers' breadth below the surface, and each *tulæa* was placed as nearly as possible in the same position, both vertically and laterally, as the branch had occupied upon the tree. During the first year, the ground was frequently loosened by the sarculum; when the young roots (*radiculae seminum*) had taken a firm hold, heavy hand-rakes (*rastra*) were employed for the same purpose, and in the heat of summer water was regularly supplied. For two years no pruning was resorted to, but in the third year the whole of the shoots (*ramuli*), with the exception of two, were lopped off; in the fourth year, the weaker of the remaining two was detached, and in the fifth year the young trees (*arbusculæ*) were fit for being transplanted (*habiles translationi*). This latter operation was best performed in autumn when the ground to which they were conveyed was dry, but if it was moist and rich, in spring, a short time before the buds were formed. In the field which they were to occupy permanently, pits (*acrobæ*) four feet every way were prepared, if practicable, a year beforehand, so that the earth might be thoroughly pulverised; small stones and gravel mixed with mould were placed at the bottom to the depth of a few inches, and some grains of barley were scattered over all. The young tree was lifted with as large a ball of earth as possible attached to the roots, placed in the pit surrounded with a little manure, and planted so as to occupy precisely the same position, in relation to the cardinal points, as in the nursery. In rich corn land, the space left between each row was at least sixty feet, and between each tree in the row forty feet, in order that the branches and roots might have full space to spread, but in poorer soil twenty-five feet, each way, were considered sufficient. The rows were arranged so as to run from east to west, in order that the cool breezes might sweep freely down the open spaces in summer. After the trees had become firmly fixed, and had been pruned up into a proper shape, that is, into a single stem kept without branches to the height of the tallest ox, the labour attending upon an olive yard was comparatively trifling. Every year, the soil around the roots was loosened with hoes (*bidens*), or with the plough, the roots themselves laid bare (*ablagueare, ablagueatio*), the young suckers cut away, and the lichens scraped from the bark; every third year, in autumn, manure was thrown in; every eighth year the trees were

pruned. The system of culture here indicated was followed so generally that it had become embodied in a proverb "*Veteris proverbii meminisse convenit, eum qui aret olivum, rogare fructum; qui stercoret, exorare; qui caedat, cogere.*" (Columell. v. 9. § 15.) Besides this, the whole surface of the ground was regularly ploughed at the usual seasons, and cropped in alternate years, the manure applied for these crops being altogether independent of that supplied to the trees specially. Moreover, since olives bore fruit, in abundance at least, only once in two years, matters were so arranged that the land should yield a crop in those years when the trees were unproductive.

2. A second method of propagation was to cut the roots of wild olives into small pieces in such a manner that each should contain an eye or rudiment of a lateral fibre (*radicem oculis silvestrium olearum hortulos excolere*), and these pieces were treated precisely in the same manner as the *talae* described above.

3. A third method is indicated by Virgil in the lines

Quin et caudicibus sectis, mirabile dictu,
Truditur e sicco radix oleagina ligno,

and is still pursued in some parts of Italy, where, as we are told, "an old tree is hewn down and the stock cut into pieces of nearly the size and shape of a mushroom, and which from that circumstance are called *novoli*; care at the same time is taken that a small portion of bark shall belong to each novolo. These, after having been dipped in manure, are put into the earth, soon throw up shoots, are transplanted at the end of one year, and in three years are fit to form an olive yard."

Grafting or budding (*inserere, insitio, oculos inserere*) were also resorted to for the purpose of introducing fine varieties or of rendering barren trees fruitful. (Cat. R. R. 40, 42, 43, 45; Varr. R. R. i. 40; Columell. v. 9, *De Arbor.* 17; Plin. H. N. xviii. 19. s. 30; Pallad. iii. 8, 18, x. 1, xi. 8; Geopon. ix. 5, 6, &c.; Blunt's *Vestiges of Ancient Manners, &c., in Italy*, p. 215.)

OLIVE GATHERING (*Oleitas, Olivitas*). The olive usually comes to maturity, in Italy, about the middle or latter end of December, but, according to the views of the proprietors, it was gathered in various stages of its progress, either while yet green (*alba*), or when changing colour (*varia*), or when fully ripe (*nigra*), but it was considered highly desirable that it should never be allowed to remain so long as to fall of its own accord. The fruit was picked as far as possible with the bare hand, but such as could not be reached from the ground or by the aid of ladders was beaten down with long reeds, which were preferred to sticks as less likely to injure the bark of the branches and the young bearers, a want of attention to this precaution on the part of the gatherers (*leguli*) being in the opinion of Varro the cause why olive trees so seldom yielded a full crop for two years consecutively. (Varr. R. R. i. 55; Plin. H. N. xv. 3. s. 6; Geopon. ix. 17.)

DIFFERENT USES. The fruit (*bacca*) of the olive was for the most part employed for one of two purposes.

1. It was eaten as a fruit, either fresh, pickled, or preserved in various ways.

2. It was pressed so as to yield the oil and other juices which it contained. And again, the

oil was employed for a variety of purposes, but chiefly

α. As an article of food.

β. For anointing the body, and in this case was frequently made a vehicle for perfumes (*unguenta*).

γ. For burning in lamps.

PRESERVING OLIVES. (*Condere oleas, olivarum conditura, conditio.*)

Olives might be preserved in various ways, either when unripe (*albæ, acerbæ*), or ripe (*nigræ*), or half-ripe (*varias, fuscas*).

Green olives, the *Pausia* being used principally for this purpose, were preserved in strong brine (*maria*), according to the modern practice, or they were beaten together into a mass, steeped in water which was frequently changed, then pressed and thrown with salt into a jar of vinegar, to which various spices or flavouring condiments were added, especially the seeds of the Pistachia Lenticus, or Gum Mastich tree, and fennel. Sometimes, instead of vinegar, inspissated must (*sapa, defrutum*), or sweet wine (*passum*) or honey were employed, in which case the olives were preserved sweet, and sometimes salt pickle, vinegar, must and oil, seem to have been all mixed together.

Half-ripe olives (and here again the *Pausia* was the favourite) were picked with their stalks and covered over in a jar with the best oil. In this manner they retained the flavour of the fresh fruit for more than a year.

Ripe olives, especially the *orolitæ*, were sprinkled with salt, and left untouched for five days, the salt was then shaken off, and they were dried in the sun. Or they were preserved sweet in defrutum without salt.

The peculiar preparation called *Epityrum* was made by taking olives in any of the three stages, extracting the stones, chopping up the pulp and throwing the fragments into a jar with oil, vinegar, coriander seeds, cumin, fennel, rue and mint, the quantity of oil being sufficient to cover up the compound and exclude the air. In fact, it was an olive salad, and, as the name imports, eaten with cheese. (Cat. R. R. 117, 118, 119; Varr. R. R. i. 60; Columell. xii. 49; Geopon. ix. 3, 32.)

OIL MAKING (*Oleum conficere*). The fruit of the olive tree consists of two parts, the pulpy pericarp (*caro*), and the stone (*nucleus*).

The *caro* or pulp yielded two fluids: one of these of a watery consistence, dark in colour, bitter to the taste, flowed from the olive upon very slight pressure; it was called *ἀμύρην* by the Greeks, *Amuros* by the Latins, and was extensively used as a manure and for a great number of purposes connected with domestic economy. The other fluid which flowed from the pulp, when subjected to more forcible pressure, was the oil (*oleum, olivum*), mingled however to a certain extent with amurca and other impurities (*fraces, faeces*), and this was of different qualities, according to the state of the fruit, and the amount of pressure. The finest oil was made from the fruit before it was fully ripe, and from this circumstance, or from its greenish colour, was termed *Oleum viride*, and by the Greeks *ἀμυρτικόν*: the quantity given out was however small, and hence the remark of Cato, *Quam acerbissima olea oleum facies tam oleum optimum erit: domino de matura olea oleum fieri maxime expedit.*

A distinction is made by Columella, between the

oil obtained from the fruit when green (*oleum acerbum s. aestivum*), when half ripe (*oleum viride*), and when fully ripe (*oleum maturum*), and while he considers the manufacture of the first as inexpedient, in consequence of the scanty produce, he strongly recommends the proprietor to make as much as possible of the second, because the quantity yielded was considerable, and the price so high, as almost to double his receipts.

Under ordinary circumstances, the ripe fruit when gathered was carefully cleaned, and conveyed in baskets to the farm house, where it was placed in heaps upon sloping wooden floors (*in tabulato*), in order that a portion of the *amurca* might flow out, and a slight fermentation takes place (*ut ibi mediocriter frascaat*), which rendered them more tender and more productive, and exactly the same system is pursued for the same reason in modern times. The gatherings of each day (*coactura uniuscuiusque diei*) were kept separate, and great care was taken to leave them in this state for a very limited period, for if the masses heated, the oil soon became rancid (*Olea lecta si nimium diu fuit in acervis, calore frascait, et oleum foetidum fit*). If, therefore, circumstances did not allow of the oil being made soon after the fruit was gathered, the olives were spread out and exposed to the air so as to check any tendency towards decomposition. It is the neglect of these rules and precautions which renders the oil now made in Spain so offensive, for there the olives are frequently allowed to remain in cellars for months before they are used. Although both ancient and modern experience are upon the whole in favour of a slight fermentation, Cato, whose great practical knowledge entitles him to respect, strongly recommends that it should be altogether dispensed with, and affirms that the oil would be both more abundant in quantity and superior in quality: "*Quam citissime conficies maxime expedit.*"

The olives when considered to be in a proper state were placed in bags or flexible baskets (*fiscia*), and were then subjected to the action of a machine consisting partly of a bruising and partly of a squeezing apparatus, which was constructed in various ways, and designated by various names: *Trapetum*, *Mola olearia*, *Canalis et Solea*, *Torcular*, *Pressum*, *Tudicula*. The oil as it issued forth was received in a leaden pot (*cortina plumbea*), placed in the cistern (*lacus*) below the press. From the cortina it was ladled out by an assistant (*capulator*), with a large flat spoon (*concha*), first into one vat (*labrum fictile*), and then into another, thirty being placed in a row for this purpose. It was allowed to rest for a while in each, and the operation was repeated again and again (*oleum frequenter capiant*) until the *amurca* and all impurities had been completely removed. In cold weather when the oil remained in union with the *amurca* notwithstanding these transferences, the separation was effected by mixing a little parched salt with the combined fluids, but when the cold was very intense, dry carbonate of soda (*nitrum*) was found to answer better. The oil was finally poured into jars (*dolia olearia*), which had been previously thoroughly cleaned and seasoned, and glazed with wax or gum to prevent absorption, the lids (*opercula*) were carefully secured, and they were then delivered to the overseer (*custos*) by whom they were stored up in the vault reserved for their reception (*cella olearia*).

After a moderate force had been applied to the press, and a considerable quantity of oil had flowed forth, the bruised cake (*sampos*) was taken out of the bags, mixed with a little salt, replaced and subjected to the action of the press a second, and again a third time. The oil first obtained (*oleum primae pressuræ*) was the finest, and in proportion as additional force was applied by the press-men (*factores, torcularis*), the quality became gradually worse (*longe melioris saporis quod minore vi preti quasi lixivium defluerit*). Hence, the product of each pressing was kept distinct, the marketable value of each being very different (*plurimum refert non miscere iterationes multoque minus tertiationem cum prima pressura*). The lowest quality of all (*oleum cibarium*) was made from olives which had been partially damaged by vermin, or which had fallen from the trees in bad weather into the mud, so that it became necessary to wash them in warm water before they could be used.

The quantity of fruit thrown at one time into the press varied from 120 to 160 modii, according to the capacity of the vessels: this quantity was termed *Factus*, the amount of oil obtained from one *factus* was called *Hostus*, but these words are not unfrequently confounded. (Cat. R. R. 7, 64, 65, 66; Varr. R. R. i. 24, 55; Columell. xii. 52; Plin. H. N. xv. 3, 6, 7; Geopon. ix. 17.) [W. R.]

OLIGARCHIA (ὀλιγαρχία), the government of a few, is a term, the application of which by writers on political science is less wide than its etymological signification might have warranted. (See Polyb. vi. 4; Arist. Pol. iv. 3, from whom we learn that some writers used Oligarchia as a generic name, including Aristocrasia as one of its species.) It is shown elsewhere [ARISTOCRATIA] under what conditions the limitation of political power to a portion of the community was regarded as a proper and regular constitution (ὁρθὴ πολιτεία, Arist. Pol. iii. 4, iv. 2). The term *Oligarchia* was applied to that perversion (παρὰ φύσιν) of an *Aristocrasia* into which the latter passed, when, owing to the rise of the *demos* [DEMOCRATIA], and the vanishing of those substantial grounds of pre-eminence which rendered an *Aristocrasia* not unjust, the rule of the dominant portion of the community ceased to be the exponent of the general interests of the state, and became the ascendancy of a faction, whose efforts were directed chiefly towards their own aggrandisement and the maintenance of their own power and privileges (Arist. l. c. Eth. Nicom. viii. 12; Polyb. vi. 8. § 4). The preservation of power under such circumstances of course depended chiefly upon the possession of superior wealth and the other appliances of wealth which were its concomitants. Thus it came to be regarded as essentially characteristic of an oligarchy, that the main distinction between the dominant faction and the subject portion of the community was the possession of greater wealth on the part of the former. Hence the term *Oligarchia* would not have been applied, if a small section of the community, consisting of poor persons, by any means got the reins of government into their hands. (Arist. Pol. iv. 3, δῆμος μὲν ἐστὶν ὅταν οἱ πλεῖστοι κύριοι ᾖσιν, ὀλιγαρχία δὲ ὅταν οἱ πλοῦστοι. A little further on he says: ὀλιγαρχία δὲ ὅταν οἱ πλοῦστοι καὶ εὐγενέστεροι, ὀλίγοι ὄντες, κύριοι τῆς ἀρχῆς ᾖσιν. Comp. iv. 6; Plat. de Rep. viii. pp. 550, c. 553, a.) The case of the wealthy portion being also the more numerous would be a very

rare exception. Their dominion, of course, would not be an oligarchy; but neither would it be a democracy (Arist. *Pol.* iv. 3). When an aristocracy passed in the natural development of society into an oligarchy, the oligarchs would, of course, be high born as well as rich. But high birth was not an essential condition. It very commonly happened that the oligarchs were themselves only a section of the old nobility, having excluded the poorer members of their order from the possession of power.

Aristotle (*Pol.* iv. 5) distinguishes various species of oligarchy:—1. Where a certain large amount of property is the only requisite for being a member of the ruling class: 2. Where the property qualification is not large, but the members of the government themselves supply any vacancies that may occur in their ranks by electing others to fill them: 3. Where the son succeeds to the power of his father: 4. Where, besides this being the case, the rulers govern according to no fixed laws, but arbitrarily. (Comp. *Plat. Polit.* pp. 301, 302.) The first kind, especially when the *τιμήμα* was not extravagantly high, so that a considerable number shared political power, though only a few of them might be eligible to the highest offices, was sometimes called *τιμοκρατία* (Arist. *Eth. Nic.* viii. 12; Xenophon, *Mem.* iv. 6. § 12, uses the term *πλουτοκρατία*; Plato, *de Rep.* viii. p. 547, d., uses the term *τιμοκρατία* in a different sense). It approximates closely to the *πολιτεία*, and hence Aristotle (*Pol.* iv. 11) calls it *ὀλιγαρχία πολιτική*. Elsewhere (*Eth. Nic.* l. c.) he identifies it with the *πολιτεία*.

These general divisions of course admitted of various modifications; and the distribution of the functions of government might be such as to create an oligarchy within an oligarchy. To this species of oligarchy, the name *δυναστεία* was sometimes applied. (Arist. *Pol.* v. 2. 5; Thuc. iii. 62, iv. 78; Xen. *Hellen.* v. 4. § 46.)

The term *Aristocratie* is not unfrequently applied to what the more careful distinctions of the writers on political science would term *Oligarchie*. (Comp. Thuc. iii. 82; Xen. *Hellen.* v. 2. § 7; Aristoph. *Av.* 125.)

Besides the authorities quoted above, the reader may consult Wachsmuth, *Hellenische Alterthumskunde*, §§ 36, 44, 47, 63, 64; Hermann, *Lehrbuch der Griech. Staatsalterthümer*, §§ 58—61; Thirlwall, *Hist. of Greece*, vol. i. ch. 10. [C. P. M.]

OLLA, *ant.* AULA (Plaut. *Aulul. passim*), *dim.* OLLULA (λέλης; χύτρος, χύτρα, *dim.* χύτρη), a vessel of any material, round and plain, and having a wide mouth; a pot; a jar.

Besides being made of earthenware (Antiphanes *op. Athen.* x. 70; *δορυκλήνη, testacea*) and bronze (χαλκή, *aeaea*, Aesop. *Fab.* 329; Cato, *de Re Rust.* 81; *aenum*, Ovid. *Met.* vii. 318—321; λέλης χαλκεος, Herod. i. 48), the ancients also made these vessels of different kinds of stone, which were turned upon the lathe. At Pleura, a village near Chiavenna to the north of the Lake of Como, the manufacture of vessels from the potstone found in a neighbouring mountain is still carried on, and has probably existed there from the time of Pliny, who makes express mention of it (*H. N.* xxxvi. 22. s. 44). Some of these vessels are nearly two feet in diameter, and, being adapted to bear the fire, are used for cooking. (*Oculis observare ollam pulvis, ne aduratur*, Varro, *ap. Non. Marcell.* p. 548. ed. Merceri; Festus, s. v. *Aulae*.)

The preceding woodcut is taken from a vase in the British Museum, which was found at Canino in Etruria. The painting upon it represents the story of Medea boiling an old ram with a view to persuade the daughters of Pelias to put him to death. (Ovid, *Met.* vii. 318—321; Hygin. *Fab.* 24.) The pot has a round bottom, and is supported by a tripod under which is a large fire. The ram, restored to youth, is just in the act of leaping out of the pot. Instead of being supported by a separate tripod, the vessel was sometimes made with the feet all in one piece, and it was then called in Greek *τρίπους* [ΤΡΙΠΟΣ], *χύτροπῆρος* (Hea. *Op. et Dias*, 748; Schol. in *Soph. Aj.* 1405), and *εὐπλάτατης*.

Besides being placed upon the fire in order to boil water or cook victuals, the ancients used pots to carry fire, just as is now done by the modern inhabitants of Greece, Italy, and Sicily. (Xen. *Hellen.* iv. 5. § 4.) They also used small pots containing fire and pitch to annoy the enemy in sieges by throwing them from slings and military engines.

Ollae were also used to hold solids and keep them in store, while amphorae rendered the same service in regard to liquids. [AMPHORA.] Thus grapes were kept in jars as at present. (Columell. *R. R.* xii. 43.) Although pots were commonly made solely with a view to utility, and were therefore destitute of ornament and without handles, yet they were sometimes made with two handles (*διωροί*) like amphorae; and, when they were well turned upon the wheel, well baked, smooth and neat, and so large as to hold six congii (= 4½ gallons nearly), they were, as we learn from Plato (*Hipp. Maj.* pp. 153, 154, ed. Heindorf), considered very beautiful.

Pots were used, as with us, in gardening. (Cato, *de Re Rust.* 51.) The custom of placing flower-pots in windows is mentioned by Martial (xi. 19. l. 2). A flower-pot, about six inches high and suited to this application, was found among the ruins of Aldborough, the ancient Isurium, and is

preserved by A. Lawson Esq., the owner of that place.

Another very remarkable use of these vessels of earthenware among the Greeks was to put infants into them to be exposed (Aristoph. *Ran.* 1188; Schol. *ad loc.*; Moeria, s. v. Ἐγκυρπιμός), or to be carried anywhere. (Aristoph. *Theam.* 512—516; Schol. *ad loc.*) Hence the exposure of children was called ἔγκυρπιεῖν (Hesych. s. v.), and the miserable women who practised it ἔγκυρπιόρπιαι. (Suidas, s. v.)

In monumental inscriptions the term *olla* is frequently applied to the pots which were used to receive the ashes of the slaves or inferior members of a family, and which were either exposed to view in the niches of the columbarium, or immured in such a manner as to show the lid only. Some good specimens of cinerary ollae are preserved in the British Museum in a small apartment so constructed as to exhibit accurately the manner of arranging them. (See above, p. 561; and numerous plates in Bartoli's *Antichi Sepolcri*.)

The lid of the olla was called *ἐπίθημα* and *operculum*. It generally corresponded in the material and the style of ornament with the olla itself. (Herod. i. 48; Col. l. c.) [J. Y.]

OLYMPIA (Ὀλυμπία), usually called the Olympic games, the greatest of the national festivals of the Greeks. It was celebrated at Olympia in Elis, the name given to a small plain to the west of Pisa, which was bounded on the north and north-east by the mountains Cronius and Olympus, on the south by the river Alpheus, and on the west by the Cladeus, which flows into the Alpheus. Olympia does not appear to have been a town, but rather a collection of temples and public buildings, the description of which does not come within the plan of this work.

The origin of the Olympic Games is buried in obscurity. The legends of the Elean priests attributed the institution of the festival to the Idaean Heracles, and referred it to the time of Cronos. According to their account, Rhea committed her newborn Zeus to the Idaean Dactyli, also called Curetes, of whom five brothers, Heracles, Paeonaeus, Epimedes, Iasius, and Idas, came from Ida in Crete, to Olympia, where a temple had been erected to Cronos by the men of the golden age; and Heracles the eldest conquered his brothers in a foot-race, and was crowned with the wild olive-tree. Heracles hereupon established a contest, which was to be celebrated every five years, because he and his brothers were five in number. (Paus. v. 7. § 4.) Fifty years after Deucalion's flood they said that Clymenus, the son of Cardia, a descendant of the Idaean Heracles, came from Crete, and celebrated the festival; but that Endymion, the son of Aethlius, deprived Clymenus of the sovereignty, and offered the kingdom as a prize to his sons in the foot-race; that a generation after Endymion the festival was celebrated by Pelops to the honour of the Olympian Zeus; that when the sons of Pelops were scattered through Peloponnesus, Amythaon, the son of Cretheus and a relation of Endymion, celebrated it; that to him succeeded Pelias and Neleus in conjunction, then Agamemnon, and at last Heracles, the son of Amphitryon, after the taking of Elis. Afterwards Oxyllus is mentioned as presiding over the games, and then they are said to have been discontinued till their revival by Iphitus. (Paus. v. 8. § 1, 2.) Most

ancient writers, however, attribute the institution of the games to Heracles, the son of Amphitryon (Apollod. ii. 7. § 2; Diod. iv. 14; compare Strabo, viii. p. 355), while others represent Atreus as their founder. (Vell. Pat. i. 8; Hermann, *Pol. Ant.* § 23. n. 10.)

Strabo (viii. pp. 354, 355) rejects all these legends, and says that the festival was first instituted after the return of the Heraclidae to the Peloponnesus by the Aetolians, who united themselves with the Eleans. It is impossible to say what credit is to be given to the ancient traditions respecting the institution of the festival; but they appear to show that religious festivals had been celebrated at Olympia from the earliest times, and it is difficult to conceive that the Peloponnesians and the other Greeks would have attached such importance to this festival, unless Olympia had long been regarded as a hallowed site. The first historical fact connected with the Olympian Games is their revival by Iphitus, king of Elis, who is said to have accomplished it with the assistance of Lycurgus, the Spartan lawgiver, and Cleosthenes of Pisa; and the names of Iphitus and Lycurgus were inscribed on a disc in commemoration of the event; which disc Pausanias saw in the temple of Hera at Olympia. (Paus. v. 4. § 4, v. 20. § 1; Plut. *Lyc.* 1. 23.) It would appear from this tradition, as Thirlwall (*Hist. of Greece*, ii. p. 386) has remarked, that Sparta concurred with the two states most interested in the establishment of the festival, and mainly contributed to procure the consent of the other Peloponnesians. The celebration of the festival may have been discontinued in consequence of the troubles consequent upon the Dorian invasion, and we are told that Iphitus was commanded by the Delphic oracle to revive it as a remedy for intestine commotions and for pestilence, with which Greece was then afflicted. Iphitus thereupon induced the Eleans to sacrifice to Heracles, whom they had formerly regarded as an enemy, and from this time the games were regularly celebrated. (Paus. l. c.) Different dates are assigned to Iphitus by ancient writers, some placing his revival of the Olympiad at a. c. 884, and others, as Callimachus, at a. c. 828. (Clinton, *Fast. Hell.* p. 409. t.) The interval of four years between each celebration of the festival was called an Olympiad; but the Olympiads were not employed as a chronological aera till the victory of Coroebus in the foot-race a. c. 776. [OLYMPIAS.]

The most important point in the renewal of the festival by Iphitus was the establishment of the *ἐκεχειρία*, or sacred armistice, the formula for proclaiming which was inscribed in a circle on the disc mentioned above. The proclamation was made by peace-heralds (προσβολόφοροι), first in Elis and afterwards in the other parts of Greece; it put a stop to all warfare for the month in which the games were celebrated, and which was called *ἑρμηνία*. The territory of Elis itself was considered especially sacred during its continuance, and no armed force could enter it without incurring the guilt of sacrilege. When the Spartans on one occasion sent forces against the fortress Phrycum and Lepreum during the existence of the Olympic truce (ἐν ταῖς Ὀλυμπιακαῖς σπονδαῖς), they were fined by the Eleans, according to the Olympic law, 2000 minae, being two for each Hoplite. (Thucyd. v. 49.) The Eleans, however, pretended not only that their lands were inviolable

during the existence of the truce, but that by the original agreement with the other states of Peloponnesus their lands were made sacred for ever, and were never to be attacked by any hostile force (Strabo, viii. p. 358); and they further stated that the first violation of their territory was made by Pheidon of Argos. But the Eleans themselves did not abstain from arms, and it is not probable that such a privilege would have existed without imposing on them the corresponding duty of refraining from attacking the territory of their neighbours. The later Greeks do not appear to have admitted this claim of the Eleans, as we find many cases in which their country was made the scene of war. (Xen. *Hell.* iii. 2. § 23, &c., vii. 4, &c.)

The Olympic festival was probably confined at first to the Peloponnesians; but as its celebrity extended, the other Greeks took part in it, till at length it became a festival for the whole nation. No one was allowed to contend in the games but persons of pure Hellenic blood: barbarians might be spectators, but slaves were entirely excluded. All persons who had been branded by their own states with *Atimia*, or had been guilty of any offence against the divine laws were not permitted to contend. (Compare Demosth. c. *Aristocrat.* pp. 631, 632.) When the Hellenic race had been extended by colonies to Asia, Africa, and other parts of Europe, persons contended in the games from very distant places; and in later times a greater number of conquerors came from the colonies than from the mother country. After the conquest of Greece by the Romans, the latter were allowed to take part in the games. The emperors Tiberius and Nero were both conquerors, and Pausanias (v. 20. § 4) speaks of a Roman senator who gained the victory. During the freedom of Greece, even Greeks were sometimes excluded, when they had been guilty of a crime which appeared to the Eleans to deserve this punishment. The horses of Hieron of Syracuse were excluded from the chariot-race through the influence of Themistocles, because he had not taken part with the other Greeks against the Persians. (Plut. *Them.* 25; Aelian, *V.H.* ix. 5.) All the Lacedaemonians were excluded in the 90th Olympiad, because they had not paid the fine for violating the Elean territory, as mentioned above (Thuc. v. 49, 50; Paus. iii. 8. § 2); and similar cases of exclusion are mentioned by the ancient writers.

No women were allowed to be present or even to cross the Alpheus during the celebration of the games under penalty of being hurled down from the Typæan rock. Only one instance is recorded of a woman having ventured to be present, and she, although detected, was pardoned in consideration of her father, brothers, and son having been victors in the games. (Paus. v. 6. § 5*; Ael. *V.H.* x. 1.) An exception was made to this law in favour of the priestess of Demeter Chamyne, who sat on an altar of white marble opposite to the Hellenodicae. (Paus. vi. 20. § 6; compare Suet. *Ner.* c. 12.)

* It would appear from another passage of Pausanias that *virgins* were allowed to be present, though *married* women were not (*παρθένους δὲ οὐκ ἀργουσι δεῖσθαι*, vi. 20. § 6); but this statement is opposed to all others on the subject, and the reading of the passage seems to be doubtful. (See Valckenaer, *ad Theocr. Adon.* pp. 196, 197.)

Women were, however, allowed to send chariots to the races; and the first woman, whose horses won the prize, was Cynisca, the daughter of Archidamus, and sister of Agesilaus. (Paus. iii. 8. § 1.) The number of spectators at the festival was very great; and these were drawn together not merely by the desire of seeing the games, but partly through the opportunity it afforded them of carrying on commercial transactions with persons from distant places (Vell. i. 8; *mercatus Olympiacus*, Justin, xiii. 5), as is the case with the Mohammedan festivals at Mecca and Medina. Many of the persons present were also deputies (*ἀσπολ*) sent to represent the various states of Greece; and we find that these embassies vied with one another in the number of their offerings, and the splendour of their general appearance, in order to support the honour of their native cities. The most illustrious citizens of a state were frequently sent as *ἀσπολ*. (Thuc. vi. 16; Andoc. c. *Alc.* pp. 126, 127. Reiske.)

The Olympic festival was a *Pentasteteris* (*πενταστήρις*), that is, according to the ancient mode of reckoning, a space of four years elapsed between each festival, in the same way as there was only a space of two years between a *τριετής*. According to the Scholiast on Pindar (*ad Ol.* iii. 35, Bæckh), the Olympic festival was celebrated at an interval sometimes of 49, sometimes of 50 months; in the former case in the month of Apollonius, in the latter in that of Parthenius. This statement has given rise to much difference of opinion from the time of J. Scaliger; but the explanation of Bæckh in his commentary on Pindar is the most satisfactory, that the festival was celebrated on the first full moon after the summer solstice, which sometimes fell in the month of Apollonius, and sometimes in Parthenius, both of which he considers to be the names of Elean or Olympian months: consequently the festival was usually celebrated in the Attic month of Hecatombaeum. It lasted, after all the contests had been introduced, five days, from the 11th to the 15th days of the month inclusive. (Schol. *ad Pind. Ol.* v. 6.) The fourth day of the festival was the 14th of the month, which was the day of the full-moon and which divided the month into two equal parts (*διχόμηνης μήνα*, Pind. *Ol.* iii. 19; Schol. *ad loc.*).

The festival was under the immediate superintendence of the Olympian Zeus, whose temple at Olympia, adorned with the statue of the god made by Phidias, was one of the most splendid works of Grecian art. (Paus. v. 10, &c.) There were also temples and altars to most of the other gods. The festival itself may be divided into two parts, the games or contests (*ἀγὼν Ὀλυμπιακός, ἀέθλων ἀμύλλαι, κρίσις ἀέθλων, τεθμός ἀέθλων, νικαφορία*), and the festive rites (*ἑορτή*) connected with the sacrifices, with the processions and with the public banquets in honour of the conquerors. Thus Pausanias distinguishes between the two parts of the festival, when he speaks of *τὸν ἀγῶνα ἐν Ὀλυμπίᾳ πανήγυριν τε Ὀλυμπιακὴν* (v. 4. § 4). The conquerors in the games, and private individuals, as well as the theori or deputies from the various states, offered sacrifices to the different gods; but the chief sacrifices were offered by the Eleans in the name of the Elean state. The order in which the Eleans offered their sacrifices to the different gods is given in a passage of Pausanias (v. 14. § 5). There has been considerable dispute among modern writers, whether the sacrifices were

offered by the Eleans and the Theori at the commencement or at the termination of the contests; our limits do not allow us to enter into the controversy, but it appears most probable that certain sacrifices were offered by the Eleans as introductory to the games, but that the majority were not offered till the conclusion, when the flesh of the victims was required for the public banquets given to the victors.

The contests consisted of various trials of strength and skill, which were increased in number from time to time. There were in all twenty-four contests, eighteen in which men took part, and six in which boys engaged, though they were never all exhibited at one festival, since some were abolished almost immediately after their institution, and others after they had been in use only a short time. We subjoin a list of these from Pausanias (v. 8. § 2, 3, 9. § 1, 2; compare Plut. *Symp.* v. 2), with the date of the introduction of each, commencing from the Olympiad of Coroebus:—1. The foot-race (*δρόμος*), which was the only contest during the first 13 Olympiads. 2. The *διαυλος*, or foot-race, in which the stadium was traversed twice, first introduced in OL 14. 3. The *δολιχος*, a still longer foot-race than the *διαυλος*, introduced in OL 15.* For a more particular account of the *διαυλος* and *δολιχος* see STADIUM. 4. Wrestling (*πάλη*) [*ΛΥCΤΑ*], and 5. The Pentathlon (*πένταθλον*), which consisted of five exercises [*PENTATHLUM*], both introduced in OL 18. 6. Boxing (*πυγμαχή*), introduced in OL 23. [*PUGILATUS*]. 7. The chariot-race, with four full-grown horses (*ἵππων τελείων δρόμος, ἄρμα*), introduced in OL 25. 8. The Pancratiun (*παγκράτιον*) [*PANCRATIUM*], and 9. The horse-race (*ἵππων κέλης*), both introduced in OL 33. 10 and 11. The foot-race and wrestling for boys, both introduced in OL 37. 12. The Pentathlon for boys, introduced in OL 38, but immediately afterwards abolished. 13. Boxing for boys, introduced in OL 41. 14. The foot-race, in which men ran with the equipments of heavy-armed soldiers (*τῶν ὀπλιτῶν δρόμος*), introduced in OL 65, on account of its training men for actual service in war. 15. The chariot-race with mules (*ἀπήνη*), introduced in OL 70; and 16. The horse-race with mares (*κῆλη*), described by Pausanias (v. 9. § 1, 2), introduced in OL 71, both of which were abolished in OL 84. 17. The chariot-race with two full-grown horses (*ἵππων τελείων συνορίς*), introduced in OL 93. 18, 19. The contest of heralds (*κήρυκες*) and trumpeters (*σαλπιγκταί*), introduced in OL 96. (African. *ap. Euseb. χρον.* i. ΈΑΛ. δλ. p. 41; Paus. v. 22. § 1; compare Cic. *ad Fam.* v. 12.) 20. The chariot-race with four foals (*πῶλων ἄρμασις*), introduced in OL 99. 21. The chariot-race with two foals (*πῶλων συνορίς*), introduced in OL 128. 22. The horse-race with foals (*πῶλος κέλης*), introduced in OL 131. 23. The Pancra-

* Some words appear to have dropped out of the passage of Pausanias. In every other case he mentions the name of the first conqueror in each new contest, but never the name of the conqueror in the same contest in the following OL. In this passage, however, after giving the name of the first conqueror in the *διαυλος*, he adds, *τῇ δὲ ἐξῆς Αἰαντος*. There can be little doubt that this must be the name of the conqueror in the *δολιχος*; which is also expressly stated by Africanus (*apud Eus. χρον.* i. ΈΑΛ. δλ. p. 39).

tium for boys, introduced in OL 145. 24. There was also a horse-race (*ἵππος κέλης*) in which boys rode (Paus. vi. 2. § 4, 12. § 1, 13. § 6), but we do not know the time of its introduction. Of these contests, the greater number were in existence in the heroic age, but the following were introduced for the first time by the Eleans:—all the contests in which boys took part, the foot-race of Hoplites, the races in which foals were employed, the chariot-race in which mules were used, and the horse-race with mares (*κῆλη*). The contests of heralds and trumpeters were also probably introduced after the heroic age.

Pausanias (v. 9. § 3) says that up to the 77th Olympiad, all the contests took place in one day; but as it was found impossible in that Olympiad to finish them all in so short a time, a new arrangement was made. The number of days in the whole festival, which were henceforth devoted to the games, and the order in which they were celebrated, has been a subject of much dispute among modern writers, and in many particulars can be only matter of conjecture. The following arrangement is proposed by Krause (*Olympia*, p. 106):—On the first day, the initiatory sacrifices were offered, and all the competitors classed and arranged by the judges. On the same day, the contest between the trumpeters took place; and to this succeeded on the same day and the next the contests of the boys, somewhat in the following order:—the Foot-Race, Wrestling, Boxing, the Pentathlon, the Pancratiun, and lastly, the Horse-Race. On the third day, which appears to have been the principal one, the contests of the men took place, somewhat in the following order:—the simple Foot-Race, the *διαυλος*, the *δολιχος*, Wrestling, Boxing, the Pancratiun, and the Race of Hoplites. On the fourth day the Pentathlon, either before or after the Chariot and Horse-Races, which were celebrated on this day. On the same day or on the fifth, the contests of the Herald and Mule have taken place. The fifth day appears to have been devoted to processions and sacrifices, and to the banquets given by the Eleans to the conquerors in the Games.

The judges in the Olympic Games, called *Hellandicae* (*Ελληνοδίκαι*), were appointed by the Eleans, who had the regulation of the whole festival. It appears to have been originally under the superintendence of Pisa, in the neighbourhood of which Olympia was situated, and accordingly we find in the ancient legends the names of Oenomaus, Pelops, and Augeas as presidents of the Games. But after the conquest of Peloponnesus by the Dorians on the return of the Heraclidae, the Aetolians, who had been of great assistance to the Heraclidae, settled in Elis, and from this time the Aetolian Eleans obtained the regulation of the festival, and appointed the presiding officers. (Strabo, viii. pp. 357, 358.) Pisa, however, did not quietly relinquish its claim to the superintendence of the festival, and it is not improbable that at first it had an equal share with the Eleans in its administration. The Eleans themselves only reckoned three festivals in which they had not had the presidency, namely, the 8th, in which Phaidon and the Pisceans obtained it; the 34th, which was celebrated under the superintendence of Pantaleon, king of Pisa; and the 104th, celebrated under the superintendence of the Pisceans and Arcadians. These Olympiads the Eleans called *ἀνολυμπιαδες*, as cele-

brated contrary to law. (Paus. vi. 22. § 2, 4. § 2.)

The Hellanodicae were chosen by lot from the whole body of the Eleans. Pausanias (v. 9. § 4, 5) has given an account of their numbers at different periods; but the commencement of the passage is unfortunately corrupt. At first, he says, there were only two judges chosen from all the Eleans, but that in the 25th Ol. (75th Ol.?) nine Hellanodicae were appointed, three of whom had the superintendence of the horse-races, three of the Pentathlon, and three of the other contests. Two Olympiads after, a tenth judge was added. In the 103rd Ol. the number was increased to 12, as at that time there were 12 Elean Phylae, and a judge was chosen from each tribe; but as the Eleans afterwards lost part of their lands in war with the Arcadians, the number of Phylae was reduced to eight in the 104th Ol., and accordingly there were then only eight Hellanodicae. But in the 108th Ol. the number of Hellanodicae was increased to 10, and remained the same to the time of Pausanias. (Paus. l. c.)

The Hellanodicae were instructed for ten months before the festival by certain of the Elean magistrates, called *Νομοφύλακες*, in a building devoted to the purpose near the market-place, which was called *Ἑλλανοδικαίον*. (Paus. vi. 24. § 3.) Their office probably only lasted for one festival. They had to see that all the laws relating to the games were observed by the competitors and others, to determine the prizes, and to give them to the conquerors. An appeal lay from their decision to the Elean senate. (Paus. vi. 3. § 3.) Their office was considered most honourable. They wore a purple robe (*πορφύρε*), and had in the Stadium special seats appropriated to them. (Paus. vi. 20. § 5, 6, 7; Bekker, *Anecd.* p. 249. 4.) Under the direction of the Hellanodicae was a certain number of *ἀλῆται* with an *ἀντιδράχης* at their head, who formed a kind of police, and carried into execution the commands of the Hellanodicae. (Lucian, *Herm.* c. 40. vol. i. p. 738, Reits; Etym. Mag. p. 72. 13.) There were also various other minor officers under the control of the Hellanodicae.

All free Greeks were allowed to contend in the games, who had complied with the rules prescribed to candidates. The equestrian contests were necessarily confined to the wealthy; but the poorest citizens could contend in the athletic contests, of which Pausanias (vi. 10. § 1) mentions an example. This, however, was far from degrading the games in public opinion; and some of the noblest as well as meanest citizens of the state took part in these contests. The owners of the chariots and horses were not obliged to contend in person; and the wealthy vied with one another in the number and magnificence of the chariots and horses which they sent to the games. Alcibiades sent seven chariots to one festival, a greater number than had ever been entered by a private person (Thuc. vi. 16), and the Greek kings in Sicily, Macedon, and other parts of the Hellenic world contended with one another for the prize in the equestrian contests.

All persons, who were about to contend, had to prove to the Hellanodicae that they were freemen, of pure Hellenic blood, had not been branded with *Atimia*, nor guilty of any sacrilegious act. They further had to prove that they had undergone the preparatory training (*προγυμνάσματα*) for ten months previously, and the truth of this they were

obliged to swear to in the *Βουλευτήριον* at Olympia before the statue of Zeus *Ὀρκίος*. The fathers, brothers, and gymnastic teachers of the competitors, as well as the competitors themselves, had also to swear that they would be guilty of no crime (*κακοῦργημα*) in reference to the contests. (Paus. v. 24. § 2.) All competitors were obliged, thirty days previous to the festival, to undergo certain exercises in the Gymnasium at Elis, under the superintendence of the Hellanodicae. (Paus. vi. 26. § 1—3, 24. § 1.) The different contests, and the order in which they would follow one another, were written by the Hellanodicae upon a tablet (*Λεύκωμα*) exposed to public view. (Compare Dion Cass. lxxix. 10.)

The competitors took their places by lot, and were of course differently arranged according to the different contests in which they were to be engaged. The herald then proclaimed the name and country of each competitor. (Compare Plato, *Leg.* viii. p. 833.) When they were all ready to begin the contest, the judges exhorted them to acquit themselves nobly, and then gave the signal to commence. Any one detected in bribing a competitor to give the victory to his antagonist was heavily fined; the practice appears to have been not uncommon from the many instances recorded by Pausanias (v. 21).

The only prize given to the conqueror was a garland of wild olive (*κότυνος*), which according to the Elean legends was the prize originally instituted by the Idaeian Heracles. (Paus. v. 7. § 4.) But according to Phlegon's account (*Περὶ τῶν Ὀλυμπίων*, p. 140), the olive crown was not given as a prize upon the revival of the games by Iphitus, and was first bestowed in the seventh Olympiad with the approbation of the oracle at Delphi. This garland was cut from a sacred olive tree, called *ἁλά καλλιστόφανος*, which grew in the sacred grove of Altis in Olympia, near the altars of Aphrodite and the Hours. (Paus. v. 15. § 3.) Heracles is said to have brought it from the country of the Hyperboreans, and to have planted it himself in the Altis. (Pind. *Ol.* iii. 14; Müller, *Dor.* ii. 12. § 3.) A boy, both of whose parents were still alive (*ἀμφιβαλὴς παῖς*) cut it with a golden sickle (*χρυσῇ δρεπάνῳ*). The victor was originally crowned upon a tripod covered over with bronze (*τρίπους ἐρίχταλος*), but afterwards, and in the time of Pausanias, upon a table made of ivory and gold. (Paus. v. 12. § 3, 20. § 1, 2.) Palm branches, the common tokens of victory on other occasions, were placed in their hands. The name of the victor, and that of his father and of his country, were then proclaimed by a herald before the representatives of assembled Greece. The festival ended with processions and sacrifices, and with a public banquet given by the Eleans to the conquerors in the Prytaneum. (Paus. v. 15. § 8.)

The most powerful states considered an Olympic victory, gained by one of their citizens, to confer honour upon the state to which he belonged; and a conqueror usually had immunities and privileges conferred upon him by the gratitude of his fellow-citizens. The Eleans allowed his statue to be placed in the Altis, or sacred grove of Zeus, which was adorned with numerous such statues erected by the conquerors or their families, or at the expense of the states of which they were citizens. On his return home, the victor entered the city in a triumphal procession, in which his praises were

celebrated frequently in the loftiest strains of poetry. (Compare *ATHLETAE*, p. 167.)

Sometimes the victory was obtained without a contest, in which case it was said to be *ἀκοντι*. This happened either when the antagonist, who was assigned, neglected to come or came too late, or when an Athletes had obtained such celebrity by former conquests or possessed such strength and skill that no one dared to oppose him. (Paus. vi. 7. § 2.) When one state conferred a crown upon another state, a proclamation to this effect was frequently made at the great national festivals of the Greeks. (Demosth. *de Cor.* p. 265.)

As persons from all parts of the Hellenic world were assembled together at the Olympic Games, it was the best opportunity which the artist and the writer possessed of making their works known. In fact, it answered to some extent the same purpose as the press does in modern times. Before the invention of printing, the reading of an author's works to as large an assembly as could be obtained, was one of the easiest and surest modes of publishing them; and this was a favourite practice of the Greeks and Romans. Accordingly, we find many instances of literary works thus published at the Olympic festival. Herodotus is said to have read his history at this festival; but though there are some reasons for doubting the correctness of this statement, there are numerous other writers who thus published their works, as the sophist Hippias, Prodicus of Ceos, Anaximenes, the orator Lysias, Dion Chrysostom, &c. (Compare Lucian, *Herod.* c. 3, 4. vol. i. p. 834, Reitz.) It must be borne in mind that these recitations were not contests, and that they formed properly no part of the festival. In the same way painters and other artists exhibited their works at Olympia. (Lucian, *l. c.*)

The Olympic Games continued to be celebrated with much splendour under the Roman emperors, by many of whom great privileges were awarded to the conquerors. [*ATHLETAE*, p. 167.] In the sixteenth year of the reign of Theodosius, A. D. 394 (Ol. 293), the Olympic festival was for ever abolished; but we have no account of the names of the victors from Ol. 249.

Our limits do not allow us to enter into the question of the influence of the Olympic Games upon the national character; but the reader will find some useful remarks on this subject in Thirlwall's *Hist. of Greece*, vol. i. p. 390, &c.

There were many ancient works on the subject of the Olympic Games and the conquerors therein. One of the chief sources from which the writers obtained their materials, must have been the registers of conquerors in the games, which were diligently preserved by the Eleans. (*Ἡλείων ἐς τοὺς Ὀλυμπιονίκας γράμματα*, Paus. iii. 21. § 1, v. 21. § 5, vi. 2. § 1; τὰ *Ἡλείων γράμματα ἀρχαία*, v. 4. § 4.) One of the most ancient works on this subject was by the Elean Hippias, a contemporary of Plato, and was entitled *ἀναγραφὴ Ὀλυμπιονικῶν*. (Plut. *Numa*, l.) Aristotle also appears to have written a work on the same subject. (Diog. Laërt. v. 26.) There was a work by Timaeus of Sicily, entitled *Ὀλυμπιονίκαι καὶ χρονικά πράξεις*, and another by Eratosthenes (born B. C. 275) also called *Ὀλυμπιονίκαι*. (Diog. Laërt. viii. 51.) The Athenian Stesicleides is mentioned as the author of an *ἀναγραφὴ τῶν ἀρχόντων καὶ Ὀλυμπιονικῶν* (Diog. Laërt. ii. 56), and Pliny (*H. N.* viii. 34) speaks of Agrippas as a writer of *Olympionices*.

There were also many ancient works on the Greek festivals in general, in which the Olympic Games were of course treated of. Thus the work of Dicaearchus *Περὶ Ἀγόνων* (Diog. Laërt. v. 47), contained a division entitled *ὁ Ὀλυμπικός*. (Athen. xiv. p. 620, d.)

One of the most important works on the Olympic Games was by Phlegon of Tralles, who lived in the reign of Hadrian; it was entitled *Περὶ τῶν Ὀλυμπίων* or *Ὀλυμπίων καὶ Χρονικῶν Συνταγῇ* was comprised in 16 books, and extended from the first Olympiad to Ol. 229. We still possess two considerable fragments of it. The important work of Julius Africanus, *Ἑλλάδων Ὀλυμπιάδες ἀπὸ τῆς πρώτης*, &c., is preserved to us by Eusebius; it comes down to Ol. 249. Dexippus of Athens, in his *χρονικὴ ἱστορία*, carried down the Olympic conquerors to Ol. 262.

In modern works much useful information on the Olympic games is given in Corsini's *Dissert. Agonicæ*, and in Böckh's and Disson's editions of Pindar. See also Meier's article on the Olympic Games, and Rathgeber's articles on Olympia, Olympieion, and Olympischer Jupiter in Erach and Gruber's *Encycloppädie*; Disson, *Ueber die Anordnung der Olympischen Spiele*, in his *Kleine Schriften*, p. 185; and Krause, *Olympia oder Darstellung der grossen Olympischen Spiele*, Wien, 1838.

In course of time festivals were established in several Greek states in imitation of the one at Olympia, to which the same name was given. Some of these are only known to us by inscriptions and coins; but others, as the Olympic festival at Antioch, obtained great celebrity. After these Olympic festivals had been established in several places, the great Olympic festival is sometimes designated in inscriptions by the addition of "in Pisa," *ἐν Πισῶν*. (Compare Böckh, *Inscr.* n. 247. pp. 361, 362. n. 1068. p. 564.) We subjoin from Krause an alphabetical list of these smaller Olympic festivals. They were celebrated at:—

Aegae in Macedonia. This festival was in existence in the time of Alexander the Great. (Arrian, *Anab.* i. 11.)

Alexandria. (Gruter, *Inscr.* p. cccxiv. n. 240.) In later times, the number of Alexandrian conquerors in the great Olympic Games was greater than from any other state.

Anazarbus in Cilicia. This festival was not introduced till a late period. (Eckhel, *Doctr. Num.* iii. p. 44.)

Antioch in Syria. This festival was celebrated at Daphne, a small place, 40 stadia from Antioch, where there was a large sacred grove watered by many fountains. The festival was originally called Daphnea, and was sacred to Apollo and Artemis (Strabo, xvi. p. 750; Athen. v. p. 194), but was called Olympia, after the inhabitants of Antioch had purchased from the Eleans, in A. D. 44, the privilege of celebrating Olympic games. It was not, however, regularly celebrated as an Olympic festival till the time of the emperor Commodus. It commenced on the first day of the month Hyperbeteaus (October), with which the year of Antioch began. It was under the presidency of an Alytarches. The celebration of it was abolished by Justin, A. D. 521. The writings of Libanius, and of Chrysostom, the Christian Father, who lived many years at Antioch, gave various particulars respecting this festival.

Athens. There were two festivals of the name

of Olympia celebrated at Athens, one of which was in existence in the time of Pindar (Pind. *Nem.* ii. 23, &c.; Schol. *ad loc.*), who celebrates the ancestors of the Athenian Timodemus as conquerors in it, and perhaps much earlier (Schol. *ad Thuc.* i. 126). It was celebrated to the honour of Zeus, in the spring between the great Dionysia and the Bendidia. (Böckh, *Inscr.* pp. 53, 250—252.) The other Olympic festival at Athens was instituted by Hadrian A. D. 131; from which time a new Olympic aera commenced. (Corsini, *Fest. Att.* vol. ii. pp. 105, 110, &c.; Spartan. *Hadr.* 13.) [OLYMPIAS.]

Attalia in Pamphylia. This festival is only known to us by coins. (Rathgeber, *l. c.* p. 326.)

Cyzicus. (Böckh, *Inscr.* n. 2810.)

Cyrene. (Böckh, *Explicat. Pind.* p. 328.)

Dium in Macedonia. These games were instituted by Archelaus, and lasted nine days, corresponding to the number of the nine Muses. They were celebrated with great splendour by Philip II. and Alexander the Great. (Diodor. xvii. 16; Dion Chrysost. vol. i. p. 73, Reiske; Suidas, s. v. Ἀρχαῖοι Πίδης.)

Epheesus. This festival appears by inscriptions, in which it is sometimes called Ἀθῆνα Ὀλύμπια ἢ Ἐφεσος, to have been instituted by Hadrian. (Böckh, *Inscr.* n. 2810; compare n. 2987, 3000.)

Elis. Besides the great Olympic Games, there appear to have been smaller ones celebrated yearly. (*Anecd. Gr.* ed. Siebenk. p. 95.)

Magnesia in Lydia. (Rathgeber, *l. c.* pp. 326, 327.)

Neapolis. (Corsini, *Diss. Agon.* iv. 14. p. 103.)

Nicaea in Bithynia. (Eustath. *ad Dionys. Perieg.* pp. 172, 173, in Geogr. Min. ed. Bernhardy.)

Nicopolis in Epeirus. Augustus, after the conquest of Antony, off Actium, founded Nicopolis, and instituted games to be celebrated every five years (ἑνὶν καὶ πεντηκισμῶς) in commemoration of his victory. These games are sometimes called Olympic, but more frequently bear the name of Actia. They were sacred to Apollo, and were under the care of the Lacedaemonians. (Strabo, vii. p. 325.) [ACTIA.]

Olympus in Thessaly, on the mountain of that name. (Schol. *ad Apoll. Rhod. Argonaut.* i. 539.)

Pergamos in Mysia. (Böckh, *Inscr.* n. 2810; Mionnet, ii. 610. n. 626.)

Sida in Pamphylia. (Rathgeber, p. 129.)

Smyrna. Pausanias (vi. 14. § 1) mentions an Agon of the Smyrnaeans, which Corsini (*Diss. Agon.* i. 12. p. 20) supposes to be an Olympic festival. The Marmor Oxoniense expressly mentions Olympia at Smyrna, and they also occur in inscriptions. (Gruter, *Inscr.* p. 314. 1; Böckh, *Inscr.* ad n. 1720.)

Tarsus in Cilicia. This festival is only known to us by coins. (Krause, p. 228.)

Tegae in Arcadia. (Böckh, *Inscr.* n. 1513. p. 700.)

Thessalonica in Macedonia. (Krause, p. 230.)

Thyatira in Lydia. (Rathgeber, p. 328.)

Tralles in Lydia. (Krause, p. 233.)

Tyris in Phoenicia. (Rathgeber, p. 328.)

OLYMPIAS (Ὀλύμπιας), the most celebrated chronological aera among the Greeks, was the period of four years, which elapsed between each celebration of the Olympic Games. The Olympiads began to be reckoned from the victory of Coroebus in the foot-race, which happened in the year A. C.

776. (Paus. v. 8. § 3, viii. 26. § 3; Strab. viii. p. 355.) Timaeus of Sicily, however, who flourished A. C. 264, was the first writer who regularly arranged events according to the conquerors in each Olympiad, with which aera he compared the years of the Attic Archons, the Spartan Ephors, and that of the Argive priestesses. (Polyb. xii. 12. § 1.) His practice of recording events by Olympiads was followed by Polybius, Diodorus Siculus, Dionysius of Halicarnassus, and sometimes by Pausanias, Aelian, Diogenes Laërtius, Arrian, &c. It is twice adopted by Thucydides (iii. 8, v. 49) and Xenophon (*Hell.* i. 2. § 1, ii. 3. § 1). The names of the conquerors in the foot-race were only used to designate the Olympiad, not the conquerors in the other contests. Thucydides (*l. cc.*), however, designates two Olympiads by the name of the conquerors in the Pancratium; but this appears only to have been done on account of the celebrity of these victors, both of whom conquered twice in the Pancratium. Other writers, however, adhere so strictly to the practice of designating the Olympiad only by the conqueror in the foot-race, that even when the same person had obtained the prize in other contests as well as in the foot-race, they only mention the latter. Thus Diodorus (xi. 70) and Pausanias (iv. 24. § 2) only record the conquest of Xenophon of Corinth in the foot-race, although he had also conquered at the same festival in the Pentathlon.

The writers, who make use of the aeras of the Olympiads, usually give the number of the Olympiad (the first corresponding to A. C. 776), and then the name of the conqueror in the foot-race. Some writers also speak of events as happening in the first, second, third, or fourth year, as the case may be, of a certain Olympiad; but others do not give the separate years of each Olympiad. The rules for converting Olympiads into the year B. C., and *vice versa*, are given under CHRONOLOGIA, p. 281; but as this is troublesome, we subjoin for the use of the student a list of the Olympiads with the years of the Christian aera corresponding to them from the beginning of the Olympiads to A. D. 301. To save space the separate years of each Olympiad, with the corresponding years B. C., are only given from the 47th to the 126th Olympiad, as this is the most important period of Grecian history; in the other Olympiads the first year only is given. In consulting the following table it must be borne in mind that the Olympic Games were celebrated about Midsummer [OLYMPIA], and that the Attic year commenced at about the same time. If, therefore, an event happened in the second half of the Attic year, the year A. C. must be reduced by 1. Thus Socrates was put to death in the 1st year of the 95th Olympiad, which corresponds in the following table to A. C. 400; but as his death happened in Thargelion, the 11th month of the Attic year, the year A. C. must be reduced by 1, which gives us A. C. 399, the true date of his death.

Many of the ancient writers did not consider history to begin till the Olympiad of Corcebus, and regarded as fabulous the events said to have occurred in preceding times. (Censorinus, *De Die Natali*, c. 21; African. *apud Euseb. Præp.* x. 10. p. 487, d; Clinton, *Fast. Hell.* vol. ii. Intro. p. ii.)

The old Olympiad æra appears only to have been used by writers, and especially by historians. It does not seem to have been ever adopted by any state in public documents. It is never found on any coins, and scarcely ever on inscriptions. There are only two inscriptions published by Böckh in which it appears to be used. (*Corp. Inscr.* n. 2682, 2999.) A new Olympiad æra, however, came into use under the Roman emperors, which is found in inscriptions and was used in public documents. This æra begins in Ol. 227. 3. (A. D. 131), in which year Hadrian dedicated the Olympieion at Athens; and accordingly we find Ol. 227. 3. spoken of as the first Olympiad, Ol. 228. 3. (A. D. 135) as the second Olympiad, &c. (Böckh, *Corp. Inscr.* n. 342, 446, 1345.)

(Krause, *Olympia*, p. 60, &c.; Wurm de *Pond.*, &c., § 94, &c.)

ONYX. [SCALPTURA.]

OPA. [ΜΕΤΟΡΑ.]

OPA'LIA, a Roman festival in honour of Opis, which was celebrated on the 14th day before the Calends of January (Dec. 19th), being the third day of the Saturnalia, which was also originally celebrated on the same day, when only one day was devoted to the latter festival. It was believed that Opis was the wife of Saturnus, and for this reason the festivals were celebrated at the same time. (Macrob. *Sat.* i. 12; Varr. *de Ling. Lat.* vi. 22, ed. Müller; Festus, s. v. *Opalia*.) The worshippers of Opis paid their vows sitting, and touched the earth on purpose, of which she was the goddess. (Macrob. *l. c.*)

O'PERIS NOVI NUNTIATIO was a summary remedy provided by the Edict against a person who was making an Opus Novum. An Opus Novum consisted in either adding something in the way of building (*œdificando*) or taking away something so as to alter the appearance of a thing (*facies operis*). The object of the nuntiatio was either the maintenance of a right (*jus*), or to prevent damage (*damnum*), or to protect the public interest (*publicum jus*). The owner of the pro-

perty which was threatened with damage by the Opus Novum, or he who had an easement (*servitus*) in such property, had the Jus nuntiandi (Dig. 43. tit. 25). Nuntiatio consisted in protesting against and forbidding the progress of the Opus Novum, on the spot where the work was proceeding and in the presence of the owner or of some person who was there present on his account. The Nuntiatio did not require any application to or interference on the part of the Praetor. It was a rule of law that the Nuntiatio must take place before the work was completed: after it was completed, the Operis Novi Nuntiatio had no effect, and redress could only be obtained by the Interdict Quod vi aut clam.

If the Opus Novum consisted in building on the complainant's ground, or inserting or causing any thing to project into his premises, it was better to apply at once to the praetor, or to prevent it per manum, that is, as it is explained "jactu lapilli," which was a symbol of the use of force for self-protection.

The Edict declared that after a Nuntiatio nothing should be done, until the Nuntiatio was declared illegal (*nuntiatio missa* or *remissa fiat*) or a security (*satisfactio de opere restituendo*) was given. If the person to whom the notice was given persevered, even if he had a right to do what he was doing; yet as he was acting against the praetor's edict, he might be compelled to undo what he had done. By the Nuntiatio, the parties were brought within the jurisdiction of the praetor. In cases where there was danger from the interruption of the work, or the person who was making the Opus Novum denied the right of the nuntians, he was allowed to go on upon giving a cautio or security for demolition or restoration, in case the law was against him. When the cautio was given or the nuntians waived it, the party was intitled to an interdictum prohibitorium for his protection in prosecuting the work.

The effect of the nuntiatio ceased, when the cautio was given; when the nuntians died; when he alienated the property in respect of which he claimed the Jus nuntiandi; or when the praetor permitted the work to go on (*operis novi nuntiationem . . . remissionem*, *Leu Gall. Civ. x.*; Dig. 39. tit. 1. s. 22, *ante remissionem nuntiationem*; Dig. 39. tit. 1; Mackeldey, *Lehrbuch*, &c., 12th ed. § 237, &c.). [G. L.]

OPI'MA SPO'LIA. [SPOLIA.]

OPINATO'RES were officers under the Roman emperors, who were sent into the provinces to obtain provisions for the army. The provisions had to be supplied to them within a year. The etymology of the name is uncertain. (Cod. 12. tit. 38. s. 11; Cod. Theod. 7. tit. 4. s. 26; 11. tit. 7. s. 16.)

OPISTHODOMUS. [ΤΕΜΠΛΥΜ.]

OPISTOGRAPHI. [LIBER.]

OPSONIUM, or OBSONIUM (ὄψον, *dim. ὀψάριον*; ὀψήμα, *Plut. Sympos. Prob.* iv. 1), denoted every thing which was eaten with bread. Among the ancients loaves, at least preparations of corn in some form or other, constituted the principal substance of every meal. But together with this, which was the staff of their life, they partook of numerous articles of diet called *oponia* or *pulmentaria* (*Cat. de Re Rust.* 58; *Hor. Sat.* ii. 2. 20), designed also to give nutriment, but still more to add a relish to their food. Some of these

articles were taken from the vegetable kingdom, but were much more pungent and savoury than bread, such as olives, either fresh or pickled, radishes, and sesamum. (Plato, *de Repub.* ii. p. 85, ed. Bekker; Xen. *Oecon.* viii. 9.) Of animal food by much the most common kind was fish, whence the terms under explanation were in the course of time used in a confined and special sense to denote fish only, but fish variously prepared, and more especially salt fish, which was most extensively employed to give a relish to the vegetable diet either at breakfast (Menander, p. 70, ed. Meineke), or at the principal meal. (Plaut. *Aulul.* ii. 6. 3.) For the same reason *ὀψοφάγος* meant a gourmand or epicure, and *ὀψοφάγία* gluttony. (Athen. ix. 24—37.) In maritime cities the time of opening the fish-market was signified by ringing a bell, so that all might have an equal opportunity for the purchase of delicacies. (Strab. xiv. 1. § 21; Plut. *Sympos. Prob.* p. 1187; ed. Steph.)

Of the different parts of fishes the roe was the most esteemed for this purpose. It is still prepared from the fish in the very same waters adjoining Myus in Ionia, which were given to Themistocles by the King of Persia. (Thuc. i. 138; Corn. Nepos. *Them.* x. 3; Diod. xi. 57.) A jar was found at Pompeii, containing caviare made from the roe of the tunny. (Gell, *Pompeiana*, 1832, vol. i. p. 178.)

Some of the principal *ταρχεῖαι*, or establishments for curing fish, were on the southern coast of Spain (Strab. iii. 4): but the Greeks obtained their chief supply from the Hellespont (Hermippus *ap. Athen.* i. 49, p. 27, e); and more especially Byzantium first rose into importance after its establishment by the Milesians in consequence of the active prosecution of this branch of industry. Of all seas the Euxine was accounted by the ancients the most abundant in fish, and the catching of them was aided by their migratory habits, as in the autumn they passed through the Bosphorus towards the South, and in spring returned to the Euxine, in order to deposit their spawn in its tributary rivers. At these two seasons they were caught in the greatest quantity, and, having been cured, were shipped in Milesian bottoms, and sent to all parts of Greece and the Levant. The principal ports on the Euxine engaged in this traffic were Sinope and Panticapæum. (Hegewisch, *Coloniæ der Griechen*, p. 80.)

Among the fish used for curing were different kinds of sturgeon (*ἀντακίος*, Herod. iv. 53; Schneider, *Ecl. Phys.* i. p. 65, ii. p. 48), tunny (*σκομβρός*, Hermippus, *l. c.*; *scomber*; *πηλαύς*, a name still in use with some modification among the descendants of the ancient Phœceans at Marseilles, Passow, *Handwörterbuch*, s. v.), and mullet. A minute discussion of their qualities, illustrated by quotations, may be seen in Athenæus. (iii. 84—93.)

Plato mentions the practice of salting eggs, which was no doubt intended to convert them into a kind of opsonium (*Symp.* p. 404, ed. Bekker). The treatise of Apicius, *de Opsoniis*, is still extant in ten books.

The Athenians were in the habit of going to markets (*εἰς τοὺς ἀγοὰς*) themselves in order to purchase their opsonia (*ὀψωνεῖν*, Theophrast. *Char.* 28; *opsonare*). [MACELLUM.] But the opulent Romans had a slave, called *opsonator* (*ὀψώνης*), whose office it was to purchase for his master. It

was his duty, by learning what flavours were most acceptable to him, by observing what most delighted his eyes, stimulated his appetite, and even overcame his nausea, to satisfy as much as possible all the cravings of a luxurious palate. (Sen. *Epist.* 47; compare Hor. *Sat.* i. 2. 9, ii. 7. 106; Plaut. *Mænæch.* ii. 2. 1, *Mil.* iii. 2. 73.) We may also infer, from an epigram of Martial (xiv. 217), that there were *opsonatores*, or purveyors, who furnished dinners and other entertainments at so much per head, according to the means and wishes of their employers. Spon (*Misc. Erud. Ant.* p. 214) has published two inscriptions from monuments raised to the memory of Romans who held the office of purveyors to the Imperial family. At Athens both the sale and the use of all kinds of opsonia were superintended by two or three special officers, appointed by the senate, and called *ὀψωνόμοι*. (Athen. vi. 12.) [J. Y.]

O'PTIO. [EXERCITUS, p. 506, a.]

OPTIMATES. [NOBILES.]

ORA/CULUM (*μαρτεῖον, χρηστήριον*) was used by the ancients to designate the revelations made by the deity to man, as well as the place in which such revelations were made. The deity was in none of these places believed to appear in person to man, and to communicate to him his will or knowledge of the future; but all oracular revelations were made through some kind of medium, which, as we shall see hereafter, was different in the different places where oracles existed. It may, on first sight, seem strange that there were, comparatively speaking, so few oracles of Zeus, the father and ruler of gods and men. But although, according to the belief of the ancients, Zeus himself was the first source of all oracular revelations, yet he was too far above men to enter with them into any close relation; other gods therefore, especially Apollo, and even heroes, acted as mediators between Zeus and men, and formed as it were the organs through which he communicated his will. (Soph. *Oed. Col.* 629; Aesch. *Eum.* 19, 611, &c.) The fact that the ancients consulted the will of the gods on all important occasions of public and private life, arose partly from the universal desire of men to know the issue of what they are going to undertake, and partly from the great reverence for the gods, so peculiar to the ancients, by which they were led not to undertake anything of importance without their sanction; for it should be borne in mind that an oracle was not merely a revelation to satisfy the curiosity of man, but at the same time a sanction or authorisation by the deity of what man was intending to do or not to do. We subjoin a list of the Greek oracles, classed according to the deities to whom they belonged.

I. ORACLES OF APOLLO.

1. *The oracle of Delphi* was the most celebrated of all the oracles of Apollo. Its ancient name was Pytho, which is either of the same root as *πυθέσθαι*, to consult, or, according to the Homeric hymn on Apollo (185, &c.) derived from *πίθεσθαι*, to putrefy, with reference to the nature of the locality. Respecting the topography of the temple of Apollo see Pausanias (x. 14. § 7) and Müller (*in Dissert. Pindar.* ii. p. 628). In the innermost sanctuary (the *μύχος ἄδυτον* or *μέγαρον*), there was the statue of Apollo, which was, at least, in later times, of gold; and before it there burnt upon

an altar an eternal fire, which was fed only with fir-wood. (Aesch. *Choeph.* 1036; Plut. *De El ap. Delph.*) The inner roof of the temple was covered all over with laurel garlands (Aesch. *Eum.* 39), and upon the altar laurel was burnt as incense. In the centre of this temple there was a small opening (*χάσμα*) in the ground from which, from time to time, an intoxicating smoke arose, which was believed to come from the well of Cassotis, which vanished into the ground close by the sanctuary. (Paus. x. 24. § 5.) Over this chasm there stood a high tripod, on which the Pythia, led into the temple by the prophetes (*προφήτης*), took her seat whenever the oracle was to be consulted. The smoke rising from under the tripod affected her brain in such a manner that she fell into a state of delirious intoxication, and the sounds which she uttered in this state were believed to contain the revelations of Apollo. These sounds were carefully written down by the prophetes, and afterwards communicated to the persons who had come to consult the oracle. (Diod. xvi. 26; Strabo, ix. p. 419, &c.; Plut. *de Orac. Def.*)

The Pythia (the *προφήτις*) was always a native of Delphi (Eurip. *Ion*, 92), and when she had once entered the service of the god she never left it, and was never allowed to marry. In early times she was always a young girl; but after one had been seduced by Echecrates the Thessalian, the Delphians made a law that in future no one should be elected as prophetess who had not attained the age of fifty years; but in remembrance of former days the old woman was always dressed as a maiden. (Diod. l.c.) The Pythia was generally taken from some family of poor country-people. At first there was only one Pythia at a time; but when Greece was in its most flourishing state, and when the number of those who came to consult the oracle was very great, there were always two Pythias who took their seat on the tripod alternately, and a third was kept in readiness in case some accident should happen to either of the two others. (Plut. *Quaest. Graec.* c. 9.) The effect of the smoke on the whole mental and physical constitution is said to have sometimes been so great, that in her delirium she leaped from the tripod, was thrown into convulsions, and after a few days died. (Plut. *de Orac. Def.* c. 51.)

At first oracles were given only once every year, on the seventh of the month of Bysius (probably the same as Πύθιος, or the month for consulting), which was believed to be the birthday of Apollo (Plut. *Quaest. Gr.* c. 9), but as this one day in the course of time was not found sufficient, certain days in every month were set apart for the purpose. (Plut. *Alex.* 14.) The order, in which the persons who came to consult were admitted, was determined by lot (Aesch. *Eum.* 32; Eurip. *Ion*, 422); but the Delphian magistrates had the power of granting the right of *ἱπομνηρία*, i. e. the right of consulting first, and without the order being determined by lot, to such individuals or states as had acquired claims on the gratitude of the Delphians, or whose political ascendancy seemed to give them higher claims than others. Such was the case with Croesus and the Lydians (Herod. i. 54), with the Lacedaemonians (Plut. *Per.* 21), and Philip of Macedonia. (Demosth. c. *Phil.* iii. p. 119.) It appears that those who consulted the oracle had to pay a certain fee, for Herodotus states that the Lydians were honoured with

ἀνέλεία by the Delphians. The Pythia always spent three days, before she ascended the tripod, in preparing herself for the solemn act, and during this time she fasted, and bathed in the Castalian well, and dressed in a simple manner; she also burnt in the temple laurel leaves and flour of barley upon the altar of the god. (Schol. *ad Eurip. Phoen.* 230; Plut. *de Pyth. Or.* c. 6.) Those who consulted the oracle had to sacrifice a goat, or an ox, or a sheep, and it was necessary that these victims should be healthy in body and soul, and to ascertain this they had to undergo a peculiar scrutiny. An ox received barley, and a sheep chick-peas, to see whether they ate them with appetite; water was poured over the goats, and if this put them into a thorough tremble the victim was good. (Plut. *de Or. Def.* 49.) The victim which was thus found eligible was called *δοσιερίπ*. (Plut. *Quaest. Gr.* 9.) Wachsmuth (*Hellen. Alt.* ii. p. 588, 2d ed.) states that all who came to consult the oracle wore laurel-garlands surrounded with ribands of wool; but the passages from which this opinion is derived, only speak of such persons as came to the temple as suppliants. (Herod. vii. 14; Aesch. *Choeph.* 1035.)

The Delphians, or more properly speaking the noble families of Delphi, had the superintendence of the oracle. Among the Delphian aristocracy, however, there were five families which traced their origin to Deucalion, and from each of these one of the five priests, called *δοιοί*, was taken. (Eurip. *Ion*, 411; Plut. *Quaest. Gr.* c. 9.) Three of the names of these families only are known, viz. the Cleomantida, the Thracids (Diod. xvi. 24; Lycurg. c. *Leocrat.* p. 158), and the Laphriada. (Hesych. s. v.)

The *δοιοί*, together with the high priest or prophetes, held their offices for life, and had the control of all the affairs of the sanctuary and of the sacrifices. (Herod. viii. 136.) That these noble families had an immense influence upon the oracle is manifest from numerous instances, and it is not improbable that they were its very soul, and that it was they who dictated the pretended revelations of the god. (See especially, Lycurg. c. *Leocrat.* p. 158; Herod. vii. 141, vi. 66; Plut. *Peric.* 21; Eurip. *Ion*, 1219, 1222, 1110.)

Most of the oracular answers which are extant, are in hexameters, and in the Ionic dialect. Sometimes, however, Doric forms also were used. (Hercd. iv. 157, 159.) The hexameter was, according to some accounts, invented by Phemonoë, the first Pythia. This metrical form was chosen, partly because the words of the god were thus rendered more venerable, and partly because it was easier to remember verse than prose. (Plut. *de Pyth. Or.* 19.) Some of the oracular verses had metrical defects, which the faithful among the Greeks accounted for in an ingenious manner. (Plut. l.c. c. 5.) In the times of Theopompus, however, the custom of giving the oracles in verse seems to have gradually ceased; they were henceforth generally in prose, and in the Doric dialect spoken at Delphi. For when the Greek states had lost their political liberty, there was little or no occasion to consult the oracle on matters of a national or political nature, and the affairs of ordinary life, such as the sale of slaves, the cultivation of a field, marriages, voyages, loans of money, and the like, on which the oracle was then mostly consulted, were little calculated to be spoken of in lofty poetical strains.

(Plut. *de Pyth. Or.* 28.) When the oracle of Delphi lost its importance in the eyes of the ancients, the number of persons who consulted it naturally decreased, and in the days of Plutarch one Pythia was, as of old, sufficient to do all the work, and oracles were only given on one day in every month.

The divine agency in Pytho is said to have first been discovered by shepherds who tended their flocks in the neighbourhood of the chasm, and whose sheep, when approaching the place, were seized with convulsions. (Diod. xvi. 26; Plut. *de Defect. Or.* c. 42.) Persons who came near the place showed the same symptoms, and received the power of prophecy. This at last induced the people to build a temple over the sacred spot. According to the Homeric hymn on Apollo, this god was himself the founder of the Delphic oracle, but the local legends of Delphi stated that originally it was in the possession of other deities, such as Gaëa, Themis, Phoebe, Poseidon, Night, Cronos, and that it was given to Apollo as a present. (Æschyl. *Eum.* 3, &c.; compare Paus. x. 5; Ovid. *Metam.* i. 321; Argum. *ad Pind. Pyth.*; Tzetz. *ad Lycophr.* 202.) Other traditions again, and these perhaps the most ancient and genuine, represented Apollo as having gained possession of the oracle by a struggle, which is generally described as a fight, with Python, a dragon, who guarded the oracle of Gaëa or Themis.

The oracle of Delphi, during its best period, was believed to give its answers and advice to every one who came with a pure heart, and had no evil designs; if he had committed a crime, the answer was refused until he had atoned for it (Herod. i. 19, 22), and he who consulted the god for bad purposes was sure to accelerate his own ruin. (Herod. iv. 86; Paus. ii. 18. § 2.) No religious institution in all antiquity obtained such a paramount influence, not only in Greece, but in all countries around the Mediterranean, in all matters of importance, whether relating to religion or to politics, to private or to public life, as the oracle of Delphi. When consulted on a subject of a religious nature, the answer was invariably of a kind calculated not only to protect and preserve religious institutions, but to command new ones to be established (Demosth. *c. Mid.* 15; Herod. v. 82, i. 165, &c.), so that it was the preserver and promoter of religion throughout the ancient world. Colonies were seldom or never founded without having obtained the advice and the directions of the Delphic god. (Cic. *de Div.* i. 1.) Hence the oracle was consulted in all disputes between a colony and its metropolis, as well as in cases where several states claimed to be the metropolis of a colony. (Thucyd. i. 25, 28; Diod. xv. 18.)

The Delphic oracle had at all times a leaning in favour of the Greeks of the Doric race; but the time when it began to lose its influence must be dated from the period when Athens and Sparta entered upon their struggle for the supremacy in Greece; for at this time the partiality for Sparta became so manifest, that the Athenians and their party began to lose all reverence and esteem for it (Plut. *Demosth.* 20), and the oracle became a mere instrument in the hands of a political party. In the times of Cicero and Plutarch many believed that the oracle had lost the powers which it had possessed in former days; but it still continued to be consulted down to the times of the emperor

Julian, until at last it was entirely done away with by Theodosius.

Notwithstanding the general obscurity and ambiguity of most of the oracles given at Delphi, there are many also which convey so clear and distinct a meaning, that they could not possibly be misunderstood, so that a wise agency at the bottom of the oracles cannot be denied. The manner in which this agency has been explained at different times, varies greatly according to the spirit of the age. During the best period of their history the Greeks, generally speaking, had undoubtedly a sincere faith in the oracle, its counsels and directions. When the sphere in which it had most benefitted Greece became narrowed and confined to matters of a private nature, the oracle could no longer command the veneration with which it had been looked upon before. The pious and believing heathens, however, thought that the god no longer bestowed his former care upon the oracle, and that he was beginning to withdraw from it; while free-thinkers and unbelievers looked upon the oracle as a skillful contrivance of priestcraft which had then outgrown itself. This latter opinion has also been adopted by many modern writers. The early Christians, seeing that some extraordinary power must in several cases have been at work, represented it as an institution of the evil spirit. In modern times opinions are very much divided. Hüllmann, for example, has endeavoured to show that the oracle of Delphi was entirely managed and conducted by the aristocratic families of Delphi, which are thus described as forming a sort of hierarchical senate for all Greece. If so, the Delphic senate surely was the wisest of all in the history of the ancient world. Klausen, on the other hand, seems to be inclined to allow some truly divine influence, and at all events thinks that even in so far as it was merely managed by men, it acted in most cases according to lofty and pure moral principles.

The modern literature on the Delphic oracle is very rich; the most important works are:—C. F. Wilster, *De Religione et Oraculo Apollinis Delphici*, Hafniæ, 1827; H. Piotrowski, *De Gravitate Oraculi Delphici*, Lipsiæ, 1829; R. H. Klausen, in *Ersch und Gruber's Encyclopædie*, s. v. *Orakel*; K. D. Hüllmann, *Würdigung des Delphischen Orakels*, Bonn, 1837; W. Götte, *Das Delphische Orakel, in seinem politischen, religiösen und sittlichen Einfluss auf die alte Welt*, Leipzig, 1839.

2. *Oracles at Abæ in Phocia.* An oracle was believed to have existed there from very early times (Paus. x. 35. § 2), and was held in high esteem by the Phocians. (Soph. *Oed. Tyr.* 899; Herod. viii. 33.) Some years before the Persian invasion, the Phocians gained a victory over the Thesalians, in which they obtained, among other spoils, four thousand shields, half of which they dedicated in the temple of Apollo at Abæ, and half in that of Delphi. (Herod. viii. 27.) The oracle was like many others consulted by Croesus; but he does not seem to have found it agreeing with his wishes. (Herod. i. 46.) In the Persian invasion of Xerxes, the temple of Abæ was burnt down, and, like all other temples destroyed in this invasion, it was never rebuilt. The oracle itself, however, remained, and before the battle of Leuctra it promised victory to the Thebans; but in the Phocian or sacred war, when some Phocian fugitives had taken refuge in the ruins, they were entirely destroyed by the Thebans. (Paus. i. c.) But even after this calamity the

oracle seems to have been consulted, for the Romans, from reverence for it, allowed the inhabitants of Abae to govern themselves. Hadrian built a small temple by the side of the old one, some walls of which were still standing as ruins in the time of Pausanias (x. 35. § 2, 3).

3. *Oracle on the hill of Ptoon*, in the territory of Thebes. The oracle was here given through the medium of a man called *πρόμαρτις*, and the first promantis was said to have been Teneros, a son of Apollo. (Strab. ix. p. 413; Paus. ix. 33. § 3.) The oracles were usually given in the Aeolian dialect, but when Mys, the Carian, consulted the god, the answer was given in the Carian language (Paus. l. c.), so that instead of the three Thebans who generally wrote down the oracles, the Carian was obliged to do it himself. (Herod. viii. 135.) When Alexander the Great destroyed Thebes, this oracle also perished. (Paus. ix. 33. § 3.) In the time of Plutarch the whole district was completely desolate. (*De Orac. Def.* c. 5.)

4. *Oracle of Apollo at Imenion*, in Boeotia, south of Thebes. The temple of Apollo Iamenios was the national sanctuary of the Thebans. The oracle was here not given by inspiration, as in other places, but from the inspection of the victim. (Herod. viii. 134.) On one occasion it gave its prophecy from a huge cobweb in the temple of Demeter. (Diod. xvii. 10; compare Paus. ix. 10. § 2, &c.)

5. *Oracle of Apollo at Hyniae*, on the frontiers of Attica. This place contained an oracle of Apollo with a sacred well, from which those drank who wished to become inspired. In the time of Pausanias the oracle had become extinct. (Paus. ix. 2. § 1.)

6. *Oracle of Apollo at Tegryra*, was an ancient and much frequented oracle in Boeotia, which was conducted by prophets. The Pythia herself on one occasion declared this to be the birth-place of Apollo. In the time of Plutarch the whole district was a wilderness. (*Plut. de Orac. Def.* c. 8, *Pelop.* 16; Steph. Byz. s. v. *Τέγρυρα*.)

7. *Oracle of Apollo in the village of Eutresis*, in the neighbourhood of Leuctra. (Steph. Byz. s. v. *Εβτρέσις*; Eustath. ad *Iliad.* ii. 502.) This oracle became extinct during the Macedonian period. (*Plut. de Orac. Def.* c. 5.)

8. *Oracle of Apollo at Orobiae*, in Euboea. Apollo here bore the surname of the Selinuntian. (Strab. x. p. 445.)

9. *Oracle of Apollo in the Lyceum at Argos*. The oracle was here given by a prophetess. (*Plut. Pyrrh.* 31.)

10. *Oracle of Apollo Deiradiotes*, on the acropolis of Argos. The oracle was given by a prophetess, who was obliged to abstain from matrimonial connections once in every month. She was believed to become inspired by tasting of the blood of a lamb which was sacrificed during the night. This oracle continued to be consulted in the days of Pausanias (ii. 24. § 1).

11. *Oracle of Apollo at Didyma*, usually called the oracle of the Branchidae, in the territory of Miletus. This was the oracle most generally consulted by the Ionians and Aeolians. (Herod. i. 158.) The temple, however, was said to have been founded previously to the arrival of the Ionians on the coast of Asia (Paus. vii. 2. § 4), and the altar was said to have been built by Heracles, and the temple by Branchus, a son of Apollo, who had come from Delphi as a purifying priest. (Paus. v.

13. § 6; Strab. xiv. p. 634.) Hence this oracle, like that of Delphi, combined purifying or atoning rites with the practice of prophesying. (Müller, *Dor.* ii. 2. § 6.) The real antiquity of the oracle, however, cannot be traced further back than the latter half of the 7th century before our aera. (Soldan, p. 553, &c.) The priests called Branchidae, who had the whole administration of the oracle, were said to be the descendants of Branchus. The high priest bore the name Stephanephorus. Among them was one family which possessed the hereditary gift of prophecy, and was called the family of the Euangelidae. (Conon, 44.) The oracle was under the especial management of a prophet, whose office did not last for life. The oracles were probably inspired in a manner similar to that at Delphi. (Paus. v. 7. § 3.) Croesus made to this oracle as munificent presents as to that of Delphi. (Herod. i. 46, &c.) The principles which it followed in its counsels and directions were also the same as those followed by the Delphians. The Persians burnt and plundered the temple as had been predicted by the Pythia of Delphi (Herod. vi. 19); but it was soon restored and adorned with a fine brazen statue of Apollo (Paus. ii. 10. § 4, ix. 10. § 2; compare Müller, *Ancient Art and its Remains*, § 86), which Xerxes on his retreat carried with him to Ecbatana. A part of the Branchidae had surrendered to Xerxes the treasures of the temple, and were at their own request transplanted to Bactriana (Strabo, l. c.), where their descendants are said to have been severely punished by Alexander for their treachery. (Curt. vii. 5.) Seleucus sent the statue of Apollo back to Didyma, because the oracle had saluted him as king. (Paus. i. 16. § 3; Diod. ix. 90.) The oracle continued to be consulted after the faithlessness of its ministers. Some ruins of the temple at Didyma are still extant. (Compare the Commentators on Herod. i. 92; Suid. s. v. *Βραχχίδαι*; Droysen, *Gesch. Altes. des Grossen*, p. 307; and an excellent essay by W. G. Soldan, *Das Orakel der Branchiden*, in *Zimmermann's Zeitschrift für die Alterthumswissenschaft*, 1841. No. 66, &c.)

12. *Oracle of Apollo at Claros*, in the territory of Colophon. It was said to have been founded by Cretans under Rhacius, previous to the settlement of the Ionians in Asia Minor. The early legends put this oracle in connection with Delphi, from whence Manto, the daughter of Teiresias, came to Claros, married Rhacius and gave birth to Mopsus, from whom the prophets of Claros were probably believed to be descended. (Paus. vii. 3. §§ 1, 2.) This oracle was of great celebrity, and continued to be consulted even at the time of the Roman emperors. (Paus. vii. 5. § 1, &c.; Strab. xiv. p. 642; Tacit. *Annal.* xii. 22.) The oracles were given through an inspired prophet, who was taken from certain Milesian families. He was generally a man without any refined education, had only the names and the number of the persons who consulted the oracle stated to him, and then descended into a cavern, drank of the water from a secret well, and afterwards pronounced the oracle in verse. (Tacit. *Annal.* ii. 54.)

13. *Oracle of Apollo at Grymea*, in the territory of the Myrinaeans. (*Hecat. Fragm.* 211.)

14. *Oracle of Apollo Gonnapeus*, in Leobon. (*Schol. Aristoph. Nub.* 145.)

15. *Oracle of Apollo at Abdera*. (Pindar, *ap. Tzetzes, Lycophr.* 445.)

16. *Oracle of Apollo in Delos*, which was only consulted in summer. (Callim. *Hymn. in Del.* i.; Serv. ad *Virg. Aen.* iv. 143.)

17. *Oracle of Apollo at Patara*, in Lycia, was only consulted in winter. The prophetess (ἡ πόμπτρις) spent a night in the temple to wait for the communications which the god might make to her. (Herod. i. 182; Serv. ad *Virg. Aen.* iv. 143.)

18. *Oracle of Apollo at Telmessus*. The priests of this institution did not give their answers by inspiration, but occupied themselves chiefly with the interpretation of dreams, whence Herodotus (i. 78; compare Cic. *de Div.* i. 41; Arrian, ii. 3) calls them ἐξηγηταί. But they also interpreted other marvellous occurrences. Near Telmessus there was another oracle of Apollo, where those who consulted it had to look into a well, which showed them in an image the answer to their questions. (Paus. vii. 21. § 6.)

19. *Oracle of Apollo at Mallos*, in Cilicia. (Strab. xiv. p. 675, &c.; Arrian, ii. 5.)

20. *Oracle of the Sarpedomian Apollo*, in Cilicia. (Diod. *Exc.* xxxviii. 12.)

21. *Oracle of Apollo at Hybla*, in Caria. (Athen. xv. p. 672.)

22. *Oracle of Apollo at Hiera Kome*, on the Maeander, a celebrated oracle which spoke in good verses. (Liv. xxxviii. 13; Steph. Byz. s. v.)

II. ORACLES OF ZEUS.

1. *Oracle of Zeus at Olympia*. In this as in the other oracles of Zeus the god did not reveal himself by inspiration, as Apollo did in almost all of his oracles, but he merely sent signs which men had to interpret. Those who came to consult the oracle of Olympia offered a victim, and the priest gave his answers from the nature of the several parts of the victim, or from accidental circumstances accompanying the sacrifice. (Herod. viii. 134; Strab. viii. p. 353.) The prophets or interpreters here belonged to the family of the Iamids. In early times the oracle was much resorted to, and Sophocles (*Oed. Tyr.* 900) mentions it along with the most celebrated oracles; but in later times it was almost entirely neglected, probably because oracles from the inspection of victims might be obtained anywhere. The spot, where the oracles were given at Olympia, was before the altar of Zeus. (Pind. *Ol.* vi. 70.) It was especially those who intended to take part in the Olympic games that consulted the oracle about their success (Pind. *Ol.* viii. 2), but other subjects also were brought before it.

2. *Oracle of Zeus at Dodona*. Here the oracle was given from sounds produced by the wind. The sanctuary was situated on an eminence. (Aeschyl. *Prom.* 830.) Although in a barbarous country, the oracle was in close connection with Greece, and in the earliest times apparently much more so than afterwards. (Hom. *Il.* xvi. 233.) Zeus himself, as well as the Dodonaean, were reckoned among the Pelasgians, which is a proof of the ante-hellenic existence of the worship of Zeus in these parts, and perhaps of the oracle also. (Hesiod. & Ephor. ap. Strab. vii. p. 327, &c.) The oracle was given from lofty oaks covered with foliage (Hom. *Od.* xiv. 328, xix. 297), whence Aeschylus (*Prom.* 832; compare Soph. *Trach.* 1170) mentions the speaking oaks of Dodona as great wonders. Beech-trees, however, are also mentioned in connection with the Dodonaean oracle,

which, as Hesiod (*Fragm.* 89; Soph. *Trach.* 169; Herod. ii. 55) said, dwelt in the stem of a beech-tree. Hence we may infer that the oracle was not thought to dwell in any particular or single tree, but in a grove of oaks and beeches. The will of the god was made manifest by the rustling of the wind through the leaves of the trees, which are therefore represented as eloquent tongues. In order to render the sounds produced by the winds more distinct, brazen vessels were suspended on the branches of the trees, which being moved by the wind came in contact with one another, and thus sounded till they were stopped. (Suid. s. v. Δοδώνη; Philostrat. *Imag.* ii.) Another mode of producing the sounds was this:—There were two columns at Dodona, one of which bore a metal basin, and the other a boy with a scourge in his hand; the ends of the scourge consisted of little bones, and as they were moved by the wind they knocked against the metal basin on the other column. (Steph. Byz. s. v. Δοδώνη; Suid. s. v. Δοδωναίων χαλκείον; Strabo, *Excerpt. ex lib.* vii. vol. ii. p. 73, ed. Kramer.) According to other accounts oracles were also obtained at Dodona through pigeons, which sitting upon oak-trees pronounced the will of Zeus. (Dionys. Hal. i. 15.) The sounds were in early times interpreted by men, but afterwards, when the worship of Dione became connected with that of Zeus, by two or three old women who were called πελεῖαδες or πέλααι, because pigeons were said to have brought the command to found the oracle. (Soph. *Trach.* 169, with the Schol.; Herod. l. c.; Paus. x. 12. § 5.) In the time of Herodotus (l. c.) the names of the three prophetesses were Promeneia, Timarete and Nicandra. They were taken from certain Dodonaean families, who traced their pedigree back to the mythical ages. There were, however, at all times priests called ῥόμυροι (Strab. l. c.) connected with the oracle, who on certain occasions interpreted the sounds; but how the functions were divided between them and the Pelasgae is not clear. In the historical times the oracle of Dodona had less influence than it appears to have had at an earlier period, but it was at all times inaccessible to bribes and refused to lend its assistance to the Doric interest. (Corn. Nep. *Lysand.* 3.) It was chiefly consulted by the neighbouring tribes, the Aetolians, Acarnanians, and Epirots (Paus. vii. 21. § 1; Herod. ix. 93), and by those who would not go to Delphi on account of its partiality for the Dorians. There appears to have been a very ancient connection between Dodona and the Boeotian Ismenion. (Strab. ix. p. 402; compare Müller, *Orchom.* p. 378, 2d edit.)

The usual form in which the oracles were given at Dodona was in hexameters; but some of the oracles yet remaining are in prose. In 219 B.C. the temple was destroyed by the Aetolians, and the sacred oaks were cut down (Polyb. iv. 67), but the oracle continued to exist and to be consulted, and does not seem to have become totally extinct until the third century of our aera. In the time of Strabo the Dodonaean prophetesses are expressly mentioned, though the oracle was already decaying like all the others. (Strab. vii. p. 329.)

Compare Cordes, *De Oraculo Dodonaeo*, Groningen, 1826; J. Arneth, *Ueber das Taubenorakel von Dodona*, Wien, 1840; L. von Lassaulx, *Das Pelasgische Orakel des Zeus zu Dodona, ein Beitrag zur Religionsphilosophie*, Würzburg, 1840.

3. *Oracle of Zeus Ammon*, in an oasis in Libya, in the north-west of Egypt. According to the traditions current at Dodona and Thebes in Egypt, it was founded by the latter city (Herod. ii. 42, 54, &c.), and the form in which the god was represented at Thebes and in the Ammonium was the same; he had in both places the head of a ram. (Herod. iv. 181.) The Greeks became acquainted with this oracle through the Cyreneans, and Sparta was the first city of Greece which formed connections with it. (Paus. iii. 18. § 2.) Its example was followed by the Thebans, Olympians, Dodonaeans, Eleans, and others, and the Athenians sent frequent theories to the Ammonium even before Ol. 91 (Böckh, *Publ. Econ.* p. 240, 2d edit.), and called one of their sacred vessels Ammonia. (Hezych. and Suid. s. v. Ἀμμων; Harpocrat. s. v. Ἀμμωνίς.) Temples of Zeus Ammon were now erected in several parts of Greece. His oracle in Libya was conducted by men who also gave the answers. (Diod. xvii. 51.) Their number appears to have been very great, for on some occasions when they carried the statue about in a procession, their number is said to have been eighty. (Diod. iii. 50.) In the time of Strabo (xvii. p. 813) the oracle was very much neglected, and in a state of decay. The Greek writers, who are accustomed to call the greatest god of a barbarous nation Zeus, mention several oracles of this divinity in foreign countries. (Herod. ii. 29; Diod. iii. 6.)

III. ORACLES OF OTHER GODS.

The other gods who possessed oracles were consulted only concerning those particular departments of the world and human life over which they presided. *Demeter* thus gave oracles at Patrae in Achaia, but only concerning sick persons; whether their sufferings would end in death or recovery. Before the sanctuary of the goddess there was a well surrounded by a wall. Into this well a mirror was let down by means of a rope, so as to swim upon the surface. Prayers were then performed and incense offered, whereupon the image of the sick person was seen in the mirror either as a corpse or in a state of recovery. (Paus. vii. 21. § 5.) At Pharae in Achaia, there was an oracle of *Hermes*. His altar stood in the middle of the market-place. Incense was offered there, oil-lamps were lighted before it, a copper coin was placed upon the altar, and after this the question was put to the god by a whisper in his ear. The person who consulted him shut his own ears, and immediately left the market-place. The first remark that he heard made by any one after leaving the market-place was believed to imply the answer of *Hermes*. (Paus. vii. 22. § 2.)

There was an *Oracle of Plato and Cora* at Charax, or Acharaca, not far from Nysa, in Caria. The two deities had here a temple and a grove, and near the latter there was a subterraneous cave of a miraculous nature, called the cave of Charon; for persons suffering from illness, and placing confidence in the power of the gods, travelled to this place, and stayed for some time with experienced priests who lived in a place near the cave. These priests then slept a night in the cavern, and afterwards prescribed to their patients the remedies revealed to them in their dreams. Often, however, they took their patients with them into the cave, where they had to stay for several

days in quiet and without taking any food, and were sometimes allowed to fall into the prophetic sleep, but were prepared for it, and received the advice of the priests; for to all other persons the place was inaccessible and fatal. There was an annual panegyris in this place, probably of sick persons who sought relief from their sufferings. On the middle of the festive day the young men of the gymnasium, naked and anointed, used to drive a bull into the cave, which, as soon as it had entered, fell down dead. (Strab. xiv. p. 649; compare xii. p. 579.)

At Epidaurus Limera oracles were given at the festival of *Iwo*. [INOA]. The same goddess had an oracle at Oetylon, in which she made revelations in dreams to persons who slept a night in her sanctuary. (Paus. iii. 26. § 1.) *Hera Acraea* had an oracle between Lechaeon and Pagae. (Strab. viii. p. 380.)

IV. ORACLES OF HEROES.

1. *Oracle of Amphiaras*, between Potniae and Thebes, where the hero was said to have been swallowed up by the earth. His sanctuary was surrounded by a wall and adorned with columns, upon which birds never settled, and birds or cattle never took any food in the neighbourhood. (Paus. ix. 3. § 2.) The oracles were given to persons in their dreams, for they had to sleep in the temple (Herod. viii. 134) after they had prepared themselves for this incubatio by fasting one day, and by abstaining from wine for three days. (Philostrat. *Vit. Apoll.* ii. 37.) The Thebans were not allowed to consult this oracle, having chosen to take the hero as their ally rather than as their prophet. (Herod. l. c.) Another oracle of *Amphiaras* was at Oropus, between Boeotia and Attica, which was most frequently consulted by the sick about the means of their recovery. Those who consulted it had to undergo lustrations, and to sacrifice a ram, on the skin of which they slept a night in the temple, where in their dreams they expected the means of their recovery to be revealed to them. (Paus. i. 34. § 2, &c.) If they recovered, they had to throw some pieces of money into the well of *Amphiaras* in his sanctuary. The oracle was said to have been founded by the Thebans. (Strab. ix. p. 399.)

2. *Oracle of Amphilochus*. He was the son of *Amphiaras*, and had an oracle at Mallos in Cilicia, which Pausanias calls the most trustworthy of his time. (Paus. i. 34. § 2; Dion Cass. lxxii. 7.)

3. *Oracle of Trophonius* at Lebadeia in Boeotia. (Paus. ix. 37. § 3.) Those who wished to consult this oracle had first to purify themselves by spending some days in the sanctuary of the good spirit and good luck (ἀγαθὸν δαίμονος καὶ ἀγαθῆς τύχης), to live sober and pure, to abstain from warm baths, but to bathe in the river Hercyna, to offer sacrifices to *Trophonius* and his children, to *Apollo*, *Cronos*, king *Zeus*, *Hera Heniocha*, and to *Demeter Europe*, who was said to have nursed *Trophonius*; and during these sacrifices a soothsayer explained from the intestines of the victims whether *Trophonius* would be pleased to admit the consultor. In the night in which the consultor was to be allowed to descend into the cave of *Trophonius*, he had to sacrifice a ram to *Agamedes*, and only in case the signs of the sacrifice were favourable, the hero was thought to be pleased to admit the person into his cave. What took place

after this was as follows:—Two boys, 13 years old, led him again to the river Hercyna, and bathed and anointed him. The priests then made him drink from the well of oblivion (*Ἀθήνη*) that he might forget all his former thoughts, and from the well of recollection (*Μνημοσύνη*) that he might remember the visions which he was going to have. They then showed him a mysterious representation of Trophonius, made him worship it, and led him into the sanctuary, dressed in linen garments with girdles around his body, and wearing a peculiar kind of shoes (*κηπίδες*) which were customary at Lebadeia. Within the sanctuary which stood on an eminence, there was a cave, into which the person was now allowed to descend by means of a ladder. Close to the bottom, in the side of the cave, there was an opening into which he put his feet, whereupon the other parts of the body were likewise drawn into the opening by some invisible power. What the persons here saw was different at different times. They returned through the same opening by which they had entered, and the priests now placed them on the throne of Mnemosyne, asked them what they had seen, and led them back to the sanctuary of the good spirit and good luck. As soon as they had recovered from their fear, they were obliged to write down their vision on a little tablet which was dedicated in the temple. This is the account given by Pausanias, who had himself descended into the cave, and writes as an eye-witness. (Paus. ix. 39. § 3, &c.; compare Philostr. *Vit. Apoll.* viii. 19.) The answers were probably given by the priests according to the report of what persons had seen in the cave. This oracle was held in very great esteem, and did not become extinct until a very late period: and though the army of Sulla had plundered the temple, the oracle was much consulted by the Romans (Orig. *c. Cels.* vii. p. 355), and in the time of Plutarch it was the only one among the numerous Boeotian oracles, that had not become silent. (Plut. *de Orac. Def.* c. 5.)

4. *Oracle of Calchas*, in Daunia in southern Italy. Here answers were given in dreams, for those who consulted the oracle had to sacrifice a black ram, and slept a night in the temple, lying on the skin of the victim. (Strab. vi. p. 284.)

5. *Oracles of Asclepius* (Aesculapius). The oracles of Asclepius were very numerous. But the most important and most celebrated was that of Epidaurus. His temple there was literally covered with votive tablets, on which persons had recorded their recovery by spending a night in the temple. In the temples of Aesculapius and Serapis at Rome, recovery was likewise sought by incubatio in his temple. (Suet. *Claud.* 25.) F. A. Wolf has written an essay, *Beitrag zur Gesch. des Somnambulismus aus dem Alterthum* (*Vermischte Schriften*, p. 382, &c.), in which he endeavours to show that what is now called Mesmerism, or animal magnetism, was known to the priests of those temples where sick persons spent one or more nights for the purpose of recovering their health. Other oracles of the same kind are mentioned in that essay, together with some of the votive tablets still extant.

6. *Oracle of Horacles* at Bura in Achaia. Those who consulted it, prayed and put their questions to the god, and then cast four dice painted with figures, and the answer was given according to the position of these figures. (Paus. vii. 25. § 6.)

7. *Oracle of Panphaëz*, at Thalamiae in Laconia,

where answers were given in dreams while persons spent the night in the temple. (Plut. *Cleom.* 7, *Agis*, 9; Cic. *de Div.* i. 43.)

8. *Oracle of Phrius*, in Iberia near Mount Caucasus, where no rams were allowed to be sacrificed. (Strab. xi. p. 498; Tacit. *Annal.* vi. 34.)

V. ORACLES OF THE DEAD.

Another class of oracles are the *oracles of the dead* (*νεκρομαντείον* or *ψυχομαντείον*), in which those who consulted called up the spirits of the dead, and offered sacrifices to the gods of the lower world. One of the most ancient and most celebrated places of this kind was in the country of the Thesprotians near lake Aornos. (Diod. iv. 22; Herod. v. 92. § 7; Paus. ix. 30. § 3.) Another oracle of this kind was at Heraclea on the Propontis. (Plut. *Cim.* 6.)

Respecting the Greek oracles in general see Wachsmuth, *Hellen. Alterth.* ii. p. 585, &c.; Klossen, in *Ersch und Gruber's Encyclop. s. v. Orakel*.

VI. ITALIAN ORACLES.

Oracles, in which a god revealed his will through the mouth of an inspired individual, did not exist in Italy. The oracles of Calchas and Aesculapius mentioned above were of Greek origin, and the former was in a Greek heroum on mount Garganus. The Romans, in the ordinary course of things, did not feel the want of such oracles as those of Greece, for they had numerous other means to discover the will of the gods, such as the Sibylline books, augury, haruspices, signs in the heavens, and the like, which are partly described in separate articles and partly in *DIVINATION*. The only Italian oracles known to us are the following:—

1. *Oracle of Faunus*. His oracles are said to have been given in the Saturnian verse, and collections of his vaticinia seem to have existed at an early period. (Aurel. Vict. *De Orig. gent. Rom.* c. 4.) The places where his oracles were given were two groves, the one in the neighbourhood of Tibur, round the well of Albunea, and the other on the Aventine. (Virg. *Aen.* vii. 81, &c.; Ovid, *Fast.* iv. 650, &c.) Those who consulted the god in the grove of Albunea, which is said to have been resorted to by all the Italians, had to observe the following points:—The priest first offered a sheep and other sacrifices to the god. The skin of the victim was spread on the ground, and the consultant was obliged to sleep upon it during the night, after his head had been thrice sprinkled with pure water from the well, and touched with the branch of a sacred beech tree. He was, moreover, obliged several days before this night to abstain from animal food and from matrimonial connections, to be clothed in simple garments, and not to wear a ring on his fingers. After he fell asleep on the sheep-skin he was believed to receive his answer in wonderful visions and in converse with the god himself. (Virg. *l. c.*; Isidor. viii. 11. 87.) Ovid (*l. c.*) transfers some of the points to be observed in order to obtain the oracle on the Albunea, to the oracle on the Aventine. Both may have had much in common, but from the story which he relates of Numa it seems to be clear that on the Aventine certain different ceremonies also were observed.

2. *Oracles of Fortuna* existed in several Italian towns, especially in Latium, as at Antium and Praeneste. In the former of these towns two

sisters Fortunae were worshipped, and their statues used to bend forward when oracles were given. (Macrob. *Sat.* i. 23; compare Horat. *Carm.* i. 35. 1; Suet. *Calig.* 57 with Ernesti's note; *Domit.* 15.) At Praeneste the oracles were derived from lots (*sortes*), consisting of sticks of oak with ancient characters graven upon them. These lots were said to have been found by a noble Praenestine of the name of Numerius Sufficius, inside of a rock which he had cleft open at the command of a dream by which he had been haunted. The lots, when an oracle was to be given, were shaken up together by a boy, after which one was drawn for the person who consulted the goddess. (Cic. *de Divin.* ii. 41.) The lots of Praeneste were, at least with the vulgar, in great esteem as late as the time of Cicero, while in other places of Latium they were mostly neglected. The Etruscan Caere in early times had likewise its *sortes*. (Liv. xxi. 62.)

3. An Oracle of Mars was in very ancient times, according to Dionysius (i. 15), at Tiora Matiena, not far from Reate. The manner in which oracles were here given resembled that of the pigeon-oracle at Dodona, for a woodpecker (*picus*), a bird sacred to Mars, was sent by the god, and settled upon a wooden column, whence he pronounced the oracle.

On Roman oracles in general see Niebuhr, *Hist. of Rome*, vol. i. p. 508, &c.; Hartung, *Die Relig. der Römer*, vol. i. p. 96, &c. [L. S.]

ORARIUM was a small handkerchief used for wiping the face, and appears to have been employed for much the same purposes as our pocket-handkerchief. It was made of silk or linen. In the *Etym. Mag.* (p. 804. 27, ed. Sylb.) it is explained by *προσώπου ἐκμαρτύριον*. Aurelian introduced the practice of giving *Oraria* to the Roman people to use *ad favorem*, which appears to mean for the purpose of waving in the public games in token of applause, as we use our hats and handkerchiefs for the same purpose. (Vopisc. *Aurel.* 48; Casaubon *ad loc.*; Augustin. *de Civ. Dei*, xxii. 8; Prudent. *Περὶ Τρεπ.* i. 86; Hieron. *ad Nepotian.* Ep. 2.)

ORATIONES PRINCIPUM. The Orations Principum are frequently mentioned by the Roman writers under the Empire; but those which are discussed under this head have reference to legislation only, and were addressed to the Senate. Under the Christian Emperors particularly, these Orations were only a mode of promulgating Law as constituted by the Emperor; and we have an instance of this even in the reign of Probus ("Leges, quas Probus ederet, Senatusconsultis propriis consecrarent," Prob. Imp. *ap. Flav. Vopisc.* 13.); and in a passage of the Institutes of Justinian (2. tit. 17. s. 7), the expression "*Divi Pertinacis oratione cautum est*." Under the earlier Emperors, the Orations were in the form of propositions for laws addressed to the Senate, who had still in appearance, though not in reality, the legislative power. This second kind of Orations is often cited by the Classical Jurists, as in the following instance from Gaius (ii. 285) — "*ex oratione Divi Hadriani Senatusconsultum factum est*." — "*Oratio Divi Marci . . quam S. C. secutum est*." (Paulus, Dig. 23. tit. 2. s. 16.)

Many of the Orations of the Roman emperors, such as are quoted by the Augustae Historiae Scriptores, are merely communications to the Senate; such for instance as the announcement of a victory. (Maxim. Duo, *ap. J. Capitol.* 12, 13.) These

Orationes are sometimes called *Litterae* or *Epistolae* by the non-juristical writers; but the juristical writers appear to have generally avoided the use of *Epistola* in this sense, in order not to confound the Imperial Orationes with the Rescripta which were often called *Epistolae*. It appears that the Roman jurists used the terms *Libellus* and *Oratio Principis* as equivalent, for the passages which have been referred to in support of the opinion that these two words had a different sense (Dig. 5. tit. 3. s. 20, 22), show that *Libellus* and *Oratio Principis* are the same, for the *Oratio* is here spoken of by both names. These Orationes were sometimes pronounced by the Emperor himself, but apparently they were commonly in the form of a written message, which was read by the Quaestors (Dig. 1. tit. 15); in the passage last referred to, these Imperial messages are called indifferently *Libri* and *Epistolae*. Suetonius (*Vita*, 6) says, that Titus sometimes read his father's orationes in the senate "*quaestoris vice*." We frequently read of *Litterae* and *Orationes* being sent by the Emperor to the Senate. (Tacit. *Ann.* iii. 52, xvi. 7.) The mode of proceeding upon the receipt of one of these Orations may be collected from the preamble of the *Senatusconsultum* contained in the Digest (5. tit. 3). These Orationes were the foundation of the *Senatusconsulta* which were framed upon them, and when the Orationes were drawn up with much regard to detail, they contained in fact the provisions of the subsequent *Senatusconsultum*. This appears from the fact that the *Oratio* and the *Senatusconsultum* are often cited indifferently by the classical jurists, as appears from numerous passages. (Dig. 2. tit. 15. s. 8; 5. tit. 3. s. 20, 22, 40; 11. tit. 4. s. 3, &c.) The *Oratio* is cited as containing the reasons or grounds of the law, and the *Senatusconsultum* for the particular provisions and words of the law. To the time of Septimius Severus and his son Caracalla, numerous *Senatusconsulta*, founded on Orationes, are mentioned; and numerous Orationes of these two Emperors are cited. But after this time they seem to have fallen into disuse, and the form of making and promulgating Laws by Imperial constitutions was the ordinary mode of legislation.

There has been much discussion on the amount of the influence exercised by the Orationes Principum on the legislation of the Senate. But it seems to be tolerably clear, from the evidence that we have, and from the nature of the case, that the *Oratio* might either recommend generally some legislative measure, and leave the details to the Senate; or it might contain all the details of the proposed measure, and so be in substance, though not in form, a *Senatusconsultum*; and it would become a *Senatusconsultum* on being adopted by the Senate, which, in the case supposed, would be merely a matter of form. In the case of an *Oratio*, expressed in more general terms, there is no reason to suppose that the recommendation of the Emperor was less of a command; it was merely a command in more general terms.

(Zimmern, *Geschichte des Röm. Privatrechts*, i. p. 79; and Dirksen, *Ueber die Reden der Röm. Kaiser und deren Einfluss auf die Gesetzgebung*, in *Rhein. Mus. für Jurisprudenz*, vol. ii.) [G. L.]

ORATOR. Cicero remarks (*Or. Part.* c. 28) that a "certain kind of causes belong to *Jus Civile*, and that *Jus Civile* is conversant about Laws (*Lex*) and Custom (*mos*) appertaining to things

public and private, the knowledge of which, though neglected by most orators, seems to me to be necessary for the purposes of oratory." In his treatise on the Orator, and particularly in the first book, Cicero has given his opinion of the duties of an orator and his requisite qualifications, in the form of a dialogue, in which Lucius Licinius Crassus and M. Antonius are the chief speakers. Crassus was himself a model of the highest excellence in oratory: and the opinions attributed to him as to the qualifications of an orator were those of Cicero himself, who in the introductory part of the first book (c. 6) declares that "in his opinion no man can deserve the title of a perfect orator, unless he has acquired a knowledge of all important things and of all arts: for it is out of knowledge that oratory must blossom and expand, and if it is not founded on matter which the orator has fully mastered and understood, it is idle talk, and may almost be called puerile." According to Crassus the province of the Orator embraces everything: he must be enabled to speak well on all subjects. Consequently he must have a knowledge of the *Jus Civile* (i. 44, &c.), the necessity for which Crassus illustrates by instances; and he should not only know the *Jus Civile*, as being necessary when he has to speak in causes relating to private matters and to *privata Judicia*, but he should also have a knowledge of the *Jus Publicum* which is conversant about a State as such, and he should be familiar with the events of history and instances derived from the experience of the past. Antonius (i. 49) limits the qualifications of the orator to the command of language pleasant to the ear and of arguments adapted to convince in causes in the forum and on ordinary occasions. He further requires the orator to have competent voice and action and sufficient grace and ease. Antonius (i. 58) contends that an orator does not require a knowledge of the *Jus Civile*, and he instances the case of himself, for Crassus allowed that Antonius could satisfactorily conduct a cause, though Antonius, according to his own admission, had never learned the *Jus Civile*, and had never felt the want of it in such causes as he had defended (*in jure*).

The profession then of the orator, who with reference to his undertaking a client's case is also called *patronus* (*de Or.* i. 56, *Brut.* 38) was quite distinct from that of the *Jurisconsultus* [*JURISCONSULTI*], and also from that of the *Advocatus*, at least in the time of Cicero (ii. 74), and even later (*de Orat. Dial.* 34). An orator, who possessed a competent knowledge of the *Jus Civile*, would however have an advantage in it, as Antonius admits (i. 59); but as there were many essentials to an orator, which were of difficult attainment, he says that it would be unwise to distract him with other things. Some requisites of oratory, such as voice and gesture, could only be acquired by discipline; whereas a competent knowledge of the law of a case (*juris utilitas*) could be got at any time from the *jurisconsulti* (*periti*) or from books. Antonius thinks that the Roman orators in this matter acted more wisely than the Greek orators, who being ignorant of law had the assistance of low fellows, who worked for hire, and were called *Pragmatici* (i. 45): the Roman orators entrusted the maintenance of the law to the high character of their professed Jurists.

So far as the profession of an advocate consists in the skilful conduct of a cause, and in the sup-

porting of his own side of the question by proper argument, it must be admitted with Antonius that a very moderate knowledge of law is sufficient; and indeed even a purely legal argument requires not so much the accumulation of a vast store of legal knowledge as the power of handling the matter when it has been collected. The method in which this consummate master of his art managed a cause is stated by himself (*de Or.* ii. 72); and Cicero in another passage (*Brutus*, 37) has recorded his merits as an orator. Servius Sulpicius, who was the greatest lawyer of his age, had a good practical knowledge of the law, but others had this also, and it was something else which distinguished Sulpicius from all his contemporaries—"Many others as well as Sulpicius had a great knowledge of the law; he alone possessed it as an art. But the knowledge of law by itself would never have helped him to this without the possession of that art which teaches us to divide the whole of a thing into its parts, by exact definition to develop what is imperfectly seen, by explanation to clear up what is obscure; first of all to see ambiguities, then to disentangle them, lastly to have a rule by which truth and falsehood are distinguished, and by which it shall appear what consequences follow from premises and what do not." (*Brut.* 41.) With such a power Sulpicius combined a knowledge of letters and a pleasing style of speaking. As a forensic orator then he must have been one of the first that ever lived; but still among the Romans his reputation was that of a jurist, while Antonius, who had no knowledge of the law, is put on a level as an orator (*patronus*) with L. Crassus, who of all the eloquent men of Rome had the best acquaintance with the law.

Oratory was a serious study among the Romans. Cicero tells us by what painful labour he attained to excellence. (*Brut.* 91, &c.) Roman oratory reached its perfection in the century which preceded the Christian era. Its decline dates from the establishment of the Imperial power under Augustus and his successors; for though there were many good speakers, and more skilful rhetoricians under the empire, the oratory of the republic was rendered by circumstances unsuitable for the senate, for the popular assemblies, or for cases of crimes and high misdemeanours.

In the Dialogue *De Oratoribus*, which is attributed to Tacitus, Messala, one of the speakers, attempts (c. 28, &c.) to assign the reasons for the low state of oratory in the time of Vespasian, when the Dialogue was written, compared with its condition in the age of Cicero and of Cicero's predecessors. He attributes its decline to the neglect of the discipline under which children were formerly brought up, and to the practice of resorting to rhetoricians (*rhetores*) who professed to teach the oratorical art. This gives occasion to speak more at length of the early discipline of the old orators and of Cicero's course of study as described in the *Brutus*. The old orators (c. 34) learned their art by constant attendance on some eminent orator and by actual experience of business: the orators of Messala's time were formed in the schools of Rhetoric, and their powers were developed in exercises on fictitious matters. These however, it is obvious, were only secondary causes. The immediate causes of the decline of eloquence appear to be indicated by Maternus, another speaker in the Dialogue, who attributes the former flourishing

condition of eloquence to the political power which oratory conferred on the orator under the Republic, and to the party struggles and even the violence that are incident to such a state of society. The allusion to the effect produced by the establishment of the Imperial power is clear enough in the following words, which refer both to the Imperial and the Republican periods: "cum mixtis omnibus et moderatore uno carentibus, tantum quisque orator saperet, quantum erranti populo persuaderi poterat."

The memorials of Roman oratory are the orations of Cicero; but they are only a small portion of the great mass of oratorical literature. The fragments of the Roman orators from Appius Caecus and M. Porcius Cato to Q. Aurelius Symmachus, have been collected by H. Meyer, Zürich, 1 vol. 8vo. 2d ed. 1842. [G. L.]

ORBUS. [LEGES JULIANÆ, p. 692, b.]

ORCA. [SITELLA.]

ORCHE'SIS (ὄρχησις). [SALTATIO.]

ORCHESTRA. [THEATRUM.]

ORCINUS LIBERTUS. [MANUMISSIO.]

ORCINUS SENATOR. [SENATUS.]

ORDINARIUS JUDEX. [JUDEX PEDANEUS.]

ORDINARIUS SERVUS. [SERVUS.]

ORDO is applied to any body of men, who form a distinct class in the community, either by possessing distinct privileges, pursuing certain trades or professions, or in any other way. Thus Cicero (*Verr.* ii. 6) speaks of the "Ordo aratorum, sive pecuarius, sive mercatorum." In the same way the whole body of sacerdotes at Rome is spoken of as an ordo (*Festus*, s. v. *Ordo Sacerdotum*), and separate ecclesiastical corporations are called by the same title. (*Ordo collegii nostri*, Orelli, *Inscr.* n. 2417; *Ordo Severianum*, Id. n. 2229.) The libertini and scribes also formed separate ordines. (*Suet. de Grammat.* 18; *Cic. Verr.* i. 47, iii. 79.) The Senate and the Equites are also spoken of respectively as the Ordo Senatorius and Ordo Equestris [SENATUS; EQUITAS]; but this name is never applied to the Plebes. Accordingly, we find the expression "Uterque Ordo" used without any further explanation to designate the Senatorial and Equestrian ordines. (*Suet. Aug.* 15; *Vell. Pat.* ii. 100.) The Senatorial Ordo, as the highest, is sometimes distinguished as "amplissimus Ordo." (*Plin. Ep.* x. 3; *Suet. Otho*, 8, *Vesp.* 2.)

The senate in colonies and municipia was called Ordo Decurionum (*Dig.* 59. tit. 2. s. 2. § 7; Orelli, *Inscr.* n. 1167; *COLONIA*, p. 318, a), and sometimes simply Ordo (*Tacit. Hist.* ii. 52; *Dig.* 50. tit. 2. s. 2. § 3; Orelli, n. 3734), Ordo amplissimus (*Cic. pro Cael.* 2), or Ordo splendidissimus (Orelli, n. 1180, 1181).

The term Ordo is also applied to a company or troop of soldiers, and is used as equivalent to Centuria: thus centuriones are sometimes called "qui ordines duxerunt" (*Cic. Phil.* i. 8; *Caes. Bell. Civ.* i. 13), and the first centuries in a legion "primi ordines." (*Caes. Bell. Gall.* v. 28, 44.) Even the centuries of the first centuries are occasionally called "Primi Ordines." (*Caes. Bell. Gall.* v. 30, vi. 7; *Liv.* xxx. 4; *Gronov. ad loc.*) [Comp. EXERCITUS, p. 501, b.]

ORGANON. [HYDRAULA; MACHINA.]

ORGIA. [MYSTERIA.]

ORGYIA (ὄργυια), a Greek measure of length, derived from the human body, was the distance from extremity to extremity of the out-

stretched arms, whence the name, from ὄργω. (*Xen. Mem.* ii. 3. § 19; *Pollux*, ii. 158.) It was equal to 6 feet or to 4 cubits, and was 1-100th of the stadium. (*Herod.* ii. 149.) It may be expressed nearly enough in English by the word *fathom*. (Comp. MENSURA and the Tables.) [P. S.]

ORICALCUM (ὀρείχαλκος), a metallic compound, akin to copper and bronze, which was highly prized by the ancients. (See the passages in *Forcellini*, and the other Latin Lexicons.) The word has given rise to much doubt; but the truth seems to be that it denotes *brass*, with which the ancients became acquainted by fusing zinc ore (*cadmium*, calamine) with copper, although they appear to have had scarcely any knowledge of zinc as a metal. They appear to have regarded orichalcum as a sort of bronze. How little acquainted they were with its true formation is shown by the fact that, deceived by its colour, they supposed gold to be one of its constituents, and then perpetuated their error by a false orthography, *aurichalcum*. The true derivation is no doubt from ὄρος and χαλκός, that is, *mountain-bronze*, so called probably because it was obtained by fusing copper with an ore (metal as found in the mountain), and not with an already reduced metal. (See especially *Strabo*, with *Groekurd's* note, and *Beckman*, as quoted in the article *MTALLUM*.) [P. S.]

ORTHODO'RON. [MENSURA.]

OSCHOPHORIA (ὄσχοφῶρια or ὄσχοφῶρία), an Attic festival, which according to some writers was celebrated in honour of Athena and Dionysus (*Phot.* p. 322, Bekk.), and according to others in honour of Dionysus and Ariadne. (*Plut. Thea.* 23.) The time of its celebration is not mentioned by any ancient writer, but *Corsini* (*Fest. Att.* ii. p. 354) supposes with great probability that it was held at the commencement of the Attic month Pyanepaion. It is said to have been instituted by Theseus. Its name is derived from ὄσχος, ὄσχος, or ὄσχη, a branch of vines with grapes, for it was a vintage festival, and on the day of its celebration two youths, called ὄσχοφῶροι, whose parents were alive, and who were elected from among the noblest and wealthiest citizens (*Schol. ad Nicom. Alexiph.* 109), carried, in the disguise of women, branches of vines with fresh grapes from the temple of Dionysus in Athens, to the ancient temple of Athena Sciras in Phalerus. These youths were followed by a procession of persons who likewise carried vine-branches, and a chorus sang hymns called ὄσχοφορικὰ μέλη, which were accompanied by dances. (*Athen.* xiv. p. 681.) In the sacrifice which was offered on this occasion, women also took part; they were called δειπνοφῶροι, for they represented the mothers of the youths, carried the provisions (ὄψα καὶ σιτία) for them, and related stories to them. During the sacrifice the staff of the herald was adorned with garlands, and when the libation was performed the spectators cried out ἐλεεῖ, ἰὸν, ἰὸν. (*Plut. Thea.* 22.) The ephebi taken from all the tribes had on this day a contest in racing from the city to the temple of Athena Sciras, during which they also carried the ὄσχη, and the victor received a cup filled with five different things (πεντάπλοος, πενταπλόα, or πενταπλῆ),

viz. wine, honey, cheese, flour, and a little oil. (Athen. xi. p. 495.) According to other accounts the victor only drank from this cup. The story which was symbolically represented in the rites and ceremonies of this festival, and which was said to have given rise to it, is related by Plutarch (*Thea*. 22, 23) and by Proclus (p. 388, ed. Gaisford). (Compare Bekker's *Anecd.* p. 318; Etymol. Magn. and Hesych. s. v. Ὀρχοί; Suidas, s. v. Ὀρχοφῶρια and ὠρχοφῶρος.) [L. S.]

OSCILLUM, a diminutive through *oculum* from *os*, meaning "a little face," was the term applied to faces or heads of Bacchus, which were suspended in the vineyards to be turned in every direction by the wind. Whichever way they looked, they were supposed to make the vines in that quarter fruitful. (Virg. *Georg.* ii. 388—392.) The left-hand figure in the annexed woodcut is taken from an oscillum of white marble in the British Museum. The back of the head is wanting, and it is concave within. The mouth and pupils of the eyes are perforated. It represents the countenance of Bacchus with a beautiful, mild, and propitious expression (*mollis, honestus*, Virg. *l. c.*). A fillet, spirally twisted about a kind of wreath, surrounds the head, and descends by the ears towards the neck. The metallic ring, by which the marble was suspended, still remains. The other figure is from an ancient gem (Maffei, *Gem. Ant.* iii. 64), representing a tree with four

oscilla hung upon its branches. A SYMBIX and a PEDUM are placed at the root of the tree.

From this noun came the verb *ocillo*, meaning "to swing." Swinging (*ocillatio*) was among the bodily exercises practised by the Romans, and was one of the amusements at the *Feriae Latinae*. (Festus, s. v.; Hygin. *Fab.* 130; Wunder, *Comment. ad Cic. pro Planc.* p. 93; *FERIAE*, p. 530, a.) [J. Y.]

O'SCINES. [AUGUR, p. 175, b.]

OSTIA'RIMUM was a tax upon the doors of houses, which was probably imposed along with the *Colonnarium* by the *lex sumptuaria* of Julius Caesar. It was levied by Metellus Scipio in Syria, together with the *Colonnarium*, on which see *COLONNARIUM* (Caes. *B. C.* iii. 32; Cic. *ad Fam.* iii. 8).

OSTIA'RIUS. [DOMUS, p. 427, b.]

OSTIUM. [JANUA.]

OSTRACISMUS. [EXSILIUM, p. 514.]

OSTRACON (ὄστρακον). [FICTILE.]

OVATIO, a lesser triumph; the terms employed by the Greek writers on Roman history are *εὐα, εὐαστή, πρῶτος δῖπλος*. The circumstances by which it was distinguished from the more imposing solemnity [TRIUMPHUS] were the following:—The general did not enter the city in a

chariot drawn by four horses, but on foot; he was not arrayed in the gorgeous gold embroidered robe, but in the simple toga praetexta of a magistrate; his brows were encircled with a wreath not of laurel but of myrtle; he bore no sceptre in his hand; the procession was not heralded by trumpets, headed by the senate and thronged with victorious troops, but was enlivened by a crowd of flute-players, attended chiefly by knights and plebeians, frequently without soldiers; the ceremonies were concluded by the sacrifice not of a bull but of a sheep. (Plut. *Marcell.* c. 22; Dionys. v. 47; Gell. v. 6; Liv. iii. 10, xxvi. 21.) The word *ovatio* seems clearly to be derived from the kind of victim offered, and we need pay little respect to the opinion of Festus (s. v. *Ovantes*), who supposes it to have been formed from the glad shout O! O! frequently reiterated, nor to that of Dionysius, whose system required him to trace every custom to a Grecian origin, and who therefore maintains that it is corrupted from the Bacchanalian *εὐοι*. Dionysius makes another mistake in assigning a laurel chaplet to the conqueror on these occasions, since all the Roman writers agree with Plutarch in representing that the myrtle crown, hence called *Ovalis Corona*, was a characteristic of the ovation. (Festus, s. v. *Ovalis Corona*; Plin. *H. N.* xv. 29; Plut.; Gell. *l. c.*) Compare CORONA, p. 361.

In later times, the victor entered upon horseback (Serv. in Virg. *Aen.* iv. 543), and the ovations celebrated by Octavianus, Drusus, Tiberius, &c., are usually recorded by Dion Cassius by a reference to this circumstance. (Dion Cass. xlviii. 31, xlix. 15, liv. 8, 33, lv. 2.)

An ovation was granted when the advantage gained, although considerable, was not sufficient to constitute a legitimate claim to the higher distinction of a triumph, or when the victory had been achieved with little bloodshed, as in the case of Postumius Tubertus, who first received this honour (Plin. *H. N.* xv. 29); or when hostilities had not been regularly proclaimed (Festus, Gell. *l. c.*); or when the war had not been completely terminated, which was one of the ostensible reasons for refusing a triumph to Marcellus on his return from Sicily (Plut. *l. c.*; Liv. xxvi. 21); or when the contest had been carried on against base and unworthy foes, and hence when the servile bands of Athenion and Spartacus were destroyed by Perperna and Crassus, these leaders celebrated ovations only (Florus, iii. 19; Plin. Gell. *l. c.*), although the latter by a special resolution of the senate was permitted to wear a laurel crown. [W. R.]

OXYBAPHUM. [ACETABULUM.]

P.

PA'CTIO, PACTUM. [OBLIGATIONES.]

PAEAN (παῖον, παῖον, παῖον), a hymn or song which was originally sung in honour of Apollo, and seems to be as old as the worship of this deity. The etymology of the word is doubtful. Some suppose that it obtained its name from Paeon, the god of healing; but in the Homeric poems Paeon is always spoken of as a separate divinity, distinct from Apollo. Other writers, with still less probability, connect it with *παῖον*, to strike.

The paean was always of a joyous nature, and its tune and sounds expressed hope and confidence. The sound of *h* appears to have been invariably connected with it. (Athen. xv. pp. 696, e. f. 701, b. c.) It was sung by several persons, one of whom probably led the others, and the singers either marched onwards or sat together at table. Thus Achilles after the death of Hector calls upon his companions to return to the ships, singing a paean on account of the glory they had gained (*Il.* xxiii. 391); and the Achaeans, after restoring Chryseis to her father, are represented as singing a paean to Apollo at the end of the sacrificial feast, in order to appease his wrath. (*Il.* i. 473.) From these passages it is clear that the paean was a song of thanksgiving, when danger was passed, and also a hymn to propitiate the god. It was sung at the solemn festivals of Apollo, especially at the Hyacinthia (*eis τὰ Ὑακινθία ἐπὶ τὸν ναῦνα*, Xen. *Hell.* iv. 5. § 11, *Ag.* ii. 17), and was also sung from very early times in the temples of the god. (Hom. *Hymn. ad Apoll.* 514; Eurip. *Ion*, 125, &c.)

The paean was also sung as a battle song, both before an attack on the enemy and after the battle was finished. (Thucyd. i. 50, iv. 43, ii. 91, vii. 44; Xen. *Anab.* i. 8. § 17, &c.) This practice seems to have chiefly prevailed among the Dorians, but it was also common among the other Greek states. The origin of it is said to have arisen from the fact, that Apollo sang it after his victory over the Pythian dragon. The paean sung previous to an engagement was called by the Spartans *παῖν ἑμβατήριος*. (Plut. *Lyc.* 22.) The Scholiast on Thucydides (i. 50) says, that the paean which was sung before the battle was sacred to Ares, and the one sung after to Apollo; but there are strong reasons for believing that the paean as a battle-song was in later times not particularly connected with the worship of Apollo. (Bode, *Gesch. der lyrisch. Dichtkunst der Hellenen*, vol. i. pp. 9, 10, &c.) It is certain that the paean was in later times sung to the honour of other gods besides Apollo. Thus Xenophon relates that the Lacedaemonians on one occasion sang a paean to Poseidon, to propitiate him after an earthquake (*Hell.* iv. 7. § 4), and also that the Greek army in Asia sang a paean to Zeus. (*Anab.* iii. 2. § 9.)

In still later times, paeans were sung in honour of mortals. Thus Aratus sang paeans to the honour of the Macedonian Antigonus (Plut. *Cleom.* 16); a paean composed by Alexinus was sung at Delphi in honour of the Macedonian Craterus; and the Rhodians celebrated Ptolemaeus I., king of Egypt, in the same manner. (Athen. xv. p. 696, e. f.) The Chalcidians, in Plutarch's time, still continued to celebrate in a paean the praises of their benefactor, Titus Flamininus. (Plut. *Flam.* 16.)

The practice of singing the paean at banquets, and especially at the end of the feast, when libations were poured out to the gods, was very ancient. It is mentioned by Alcman, who lived in the seventh century B. C. (Strab. x. p. 482.) The paean continued to be sung on such occasions till a late period. (Xen. *Symp.* ii. 1; Plut. *Symp.* vii. 8. § 4.)

(Müller, *Hist. of Greek Literature*, pp. 19, 20, *Dorians*, ii. 6. § 4; Bode, *Gesch. der lyrisch. D.* vol. i. pp. 7—77.)

PAEDAGO'GIA. [PAEDAGOGUS.]

PAEDAGO'GUS (*παῖδαγωγός*), a tutor. The

office of tutor in a Grecian family of rank and opulence (Plato, *de Repub.* i. p. 87, ed. Bekker, *de Leg.* vii. pp. 41, 42) was assigned to one of the most trustworthy of the slaves. The sons of his master were committed to his care on attaining their sixth or seventh year, their previous education having been conducted by females. They remained with the tutor (*magister*) until they attained the age of puberty. (Ter. *Andr.* i. l. 24.) His duty was rather to guard them from evil, both physical and moral, than to communicate instruction, to cultivate their minds, or to impart accomplishments. He went with them to and from the school or the GYMNASIUM (Plato, *Lysis*, p. 118); he accompanied them out of doors on all occasions; he was responsible for their personal safety, and for their avoidance of bad company. (Bato, *op. Athen.* vii. p. 279.) The formation of their morals by direct superintendence belonged to the *παιδονόμοι* as public officers, and their instruction in the various branches of learning, i. e. in grammar, music, and gymnastics, to the *διδασκαλοὶ* or *πραεσφορτές*, whom Plato (*ll. cc.*), Xenophon (*de Lac. Rep.* ii. l. iii. 2), Plutarch (*de Lib. Ed.* 7), and Quintilian (*Inst. Or.* i. l. 8, 9) expressly distinguish from the *paedagogi*. These latter even carried the books and instruments which were requisite for their young masters in studying under the sophists and professors.

This account of the office is sufficient to explain why the *παῖδαγωγός* so often appears on the Greek stage, both in tragedy, as in the *Medea*, *Phœnisææ*, and *Ion* of Euripides, and in comedy, as in the *Bacchides* of Plautus. The condition of slavery accounts for the circumstance, that the tutor was often a Thracian (Plato, *Alcib.* i. p. 341, ed. Bekker), an Asiatic, as is indicated by such names as Lydus (Plaut. *l. c.*), and sometimes an eunuch. (Herod. viii. 75; Corn. Nep. *Themist.* iv. 3; Polyæn. i. 30. § 2.) Hence also we see why these persons spoke Greek with a foreign accent (*ὑποβαρῆσι* *οὔρες*, Plato, *Lysis*, p. 145, ed. Bekker). On rare occasions, the tutor was admitted to the presence of the daughters, as when the slave, sustaining this office in the royal palace at Thebes, accompanies Antigone while she surveys the besieging army from the tower. (Eurip. *Phœn.* 87—210.)

Among the Romans the attendance of the tutor on girls as well as boys was much more frequent, as they were not confined at home according to the Grecian custom. (Val. Max. vi. l. § 3.) As luxury advanced under the emperors, it was strikingly manifested in the dress and training of the beautiful young slaves who were destined to become *paedagogi*, or, as they were also termed, *paedagogia* and *pueri paedagogiani*. (Plin. *H. N.* xxxiii. 12. s. 54; Sen. *Epist.* 124, *De Vita beata*, 17; Tertull. *Apol.* 13.) Augustus assigned to them a separate place, near his own, at the public spectacles. (Sueton. *Aug.* 44.) Nero gave offence by causing free boys to be brought up in the delicate habits of *paedagogi*. (Sueton. *Ner.* 28.) After this period numbers of them were attached to the imperial family for the sake of state and ornament, and not only is the modern word *page* a corruption of the ancient appellation, but it aptly expresses the nature of the service which the *paedagogia* at this later era afforded.

In palaces and other great houses the pages slept and lived in a separate apartment, which was also called *paedagogium*. (Plin. *Epist.* vii. 27.) [J. Y.]

PAEDO'NOMUS (παῖδονόμος), was a magistrate at Sparta, who had the general superintendence of the education of the boys. His office was considered very honourable, and he was always chosen from the noblest citizens. He had to make a general inspection of the boys, and to punish severely all those who had been negligent or idle; for which purpose μαστιγοφόροι were assigned to him by Lycurgus. Those who were refractory he might bring before the Ephors. The more immediate inspection of the gymnastic exercises of the boys belonged to magistrates called βιδυαῖοι. [BIDIAEI.] (Xen. *Rep. Lac.* ii. 2, iii. 10, iv. 6; Plut. *Lyc.* 17; Hesychius, s. v.; Krause, *Gymnastik und Aeon der Hellenen*, pp. 254, 677.)

PAEDOTRI'BAE (παῖδοτριβαί), [GYMNASIUM, p. 581, b.]

PAE'NULA was a thick cloak, chiefly used by the Romans in travelling instead of the toga, as a protection against the cold and rain. (Cic. *pro Mil.* 20; Quintil. vi. 3. § 66.) Hence we find the expression of *scindere paenulam* (Cic. *ad Att.* xiii. 33) used in the sense of greatly pressing a traveller to stay at one's house. The paenula was worn by women as well as by men in travelling. (Dig. 34. tit. 2. s. 23.) It appears to have been a long cloak without sleeves, and with only an opening for the head, as is shown in the following figure taken from Bartholini. If this is a real example of a paenula, it would seem that the dress was sewed in front about half way down, and was divided into two parts, which might be thrown back by the wearer so as to leave the arms comparatively free: it must have been put on over the head. This figure explains the expression of Cicero (*pro Mil.* l. c.), "paenula irretitus;" and of the author of the *Dialogus de Oratoribus* (c. 39), "paenulis adstricti et veluti inclusi."

Under the emperors the paenula was worn in the city as a protection against the rain and cold (Juv. v. 79), but women were forbidden by Alexander Severus to wear it in the city. (Lamprid. *Alex. Sev.* 27.) At one time, however, the paenula appears to have been commonly worn in the city instead of the toga, as we even find mention of orators wearing it when pleading causes (*Dial. de Orat.* 39), but this fashion was probably of short duration.

The paenula was usually made of wool (Plin. *H. N.* viii. 48. s. 73), and particularly of that kind which was called Gausapa [GAUSAPA] (*paenula gausapina*, Mart. xiv. 145). It was also sometimes made of leather (*paenula scortea*, Mart. xiv. 130). Seneca (*Quaest. Nat.* iv. 6) speaks of "paenulae aut scortae," but he appears only to use this expression because paenulae were usually made of wool. (Bartholini, *de Paenula*; Becker, *Gallus*, vol. ii. p. 93.)

PAGANA'LIA. [PAGI.]

PAGA'NI. [PAGI.]

PAGA'NICA. [PILA.]

PAGI, were fortified places, to which the country-people might retreat in case of an hostile inroad, and are said to have been instituted by Servius Tullius (Dionys. iv. 15); though the division of the country-people into pagi is as old as the time of Numa (Dionys. ii. 76.) Each of the country-tribes was divided into a certain number of pagi; which name was given to the country adjoining the fortified village, as well as to the village itself. There was a magistrate at the head of each pagus, who kept a register of the names and of the property of all persons in the pagus, raised the taxes, and summoned the people, when necessary, to war. Each pagus had its own sacred rites, and an annual festival called *Paganalia*. (Dionys. iv. 15; Varro, *de Ling. Lat.* vi. 24, 26, ed. Müller; Macrob. *Saturn.* i. 16; Ovid, *Fast.* i. 669.) The *Pagani*, or inhabitants of the pagi, had their regular meetings, at which they passed resolutions, many of which have come down to us. (Orelli, *Inscr.* n. 3793, 4083, 106, 202, 2177.) The division of the country-people into pagi continued to the latest times of the Roman empire, and we find frequent mention of the magistrates of the pagi under the names of Magistri, Praefecti or Praepositi pagorum. (Orelli, *Inscr.* n. 121, 3795, 3796; Cod. Theod. 2. tit. 30. s. 1; 8. tit. 15. s. 1; Walter, *Geschichte des Röm. Rechts*, §§ 26, 164, 247, 366, 2d ed.)

The term *Pagani* is often used in opposition to *milites*, and is applied to all who were not soldiers, even though they did not live in the country. (*Milites et pagani*, Plin. *Ep.* x. 18; Juv. xvi. 32; Suet. *Aug.* 27, *Galb.* 19; Dig. 11. tit. 4. s. 1; 48. tit. 19. s. 14, &c.). Hence we find *Pagani* or citizens applied as a term of reproach to soldiers who did not perform their duty (Tacit. *Hist.* iii. 24), in the same way as Julius Caesar addressed his rebellious soldiers on one occasion as *Quirites*. The Christian writers gave the name of *Pagani* to those persons who adhered to the old Roman religion, because the latter continued to be generally believed by the country-people, after Christianity became the prevailing religion of the inhabitants of the towns. (Isidorus, viii. 10; Cod. Theod. 16. tit. 10; Cod. Just. 1. tit. 11.)

PALA (πῦλον, σκαπάνη, σκαφίον, μακέλλα), a spade. (Cato *de Re Rust.* 10; Plin. *H. N.* xvii. 17. s. 27, xviii. 22. s. 35.) The spade was but little used in ancient husbandry, the ground having been broken and turned over by the plough, and also by the use of large hoes and rakes. [LIGO; RASTRUM.] But in some cases a broad cutting edge was necessary for this purpose, as, for example, when the ground was full of the roots of rushes or other plants. (Plin. *H. N.* xviii. 8.) Also in gardening it was an indispensable instrument, and it was then made on the same principle as the

plough-share, viz. by casing its extremity with iron. (Colum. x. 45.) The annexed woodcut, taken from a funeral monument at Rome (Fabretti, *Fa-scrip. Ant.* p. 574), exhibits a deceased countryman with his *falx* and *bidentis*, and also with a *pala*, modified by the addition of a strong cross-bar, by the use of which he was enabled to drive it nearly twice as deep into the ground as he could have done without it. In this form the instrument was

called *bipalium*, being employed in trenching (*pas-sinatio*), or, when the ground was full of roots to a considerable depth, in loosening them, turning them over, and extirpating them, so as to prepare the soil for planting vines and other trees. By means of this implement, which is still used in Italy and called *vanga*, the ground was dug to the depth of two spades or nearly two feet. (Plin. *H. N.* xviii. 26. s. 62; Cat. *de Re Rust.* 6, 45, 151; Varr. *de Re Rust.* i. 37; Col. *de Re Rust.* v. 6. p. 214, xi. 3. p. 450, ed. Bip.)

Cato (*Ibid.* 11) mentions wooden spades (*palas bigneas*) among the implements necessary to the husbandman. One principal application of them was in winnowing. The winnowing-shovel, also called in Latin *ventilabrum*, is still generally used in Greece, and the mode of employing it is exhibited by Stuart in his "Antiquities of Athens." The corn which has been threshed lies in a heap upon the floor, and the labourer throws it to a distance with the shovel, whilst the wind, blowing strongly across the direction in which it is thrown, drives the chaff and refuse to one side. (Theocrit. vii. 156; Matt. iii. 12; Luke, iii. 17.) The fruit of leguminous plants was purified and adapted to be used for food in the same manner. (Hom. *Il.* v. 499—502, xiii. 588—592.)

The term *pala* was applied anciently, as it is in modern Italian, to the blade or broad part of an oar. [REMUS.] In a ring the broad part, which held the gem, was called by the name of *pala* [ANNULUS.] [J. Y.]

PALAESTE. [PALMUS; MENSUMA, p. 751, b.]

PALAESTRA (παλαίστρα) properly means a place for wrestling (παλαίω, παλῆ), and appears to have originally formed a part of the gymnasium. The word was, however, used in different

senses at various periods, and its exact meaning, especially in relation to the gymnasium, has occasioned much controversy among modern writers. It first occurs in Herodotus (vi. 126, 128), who says that Cleisthenes of Sicyon built a *dromos* and a *palaestra*, both of which he calls by the general name of *palaestra*. At Athens, however, there was a considerable number of *palaestrae*, quite distinct from the *gymnasia*, which were called by the names either of their founders, or of the teachers who gave instruction there; thus, for example, we read of the *palaestra* of Taureas. (Plat. *Charmid.* init.) Krause (*Gymnastik und Agonistik der Hellenen*, p. 117, &c.) contends that the *palaestrae* at Athens were appropriated to the gymnastic exercises of boys and youths (παῖδες and νεώτεροι), and the *gymnasia* to those of men; but Becker (*Charikles*, vol. i. pp. 311, 335, &c.) has shown that this cannot be the true distinction, although it appears that certain places were, for obvious reasons, appropriated to the exclusive use of boys. (Aesch. c. *Timarch.* p. 35, Reiske.) But that the boys exercised in the *gymnasia* as well, is plain from many passages (Antiph. *de Coed. invol.* p. 661, Reiske; *παῖς ἐπαῖος ἀπὸ γυμνασίου*, Aristoph. *Av.* 138, 140); while, on the other hand, we read of men visiting the *palaestrae*. (Lucian, *Navig.* 4. vol. iii. p. 251, Reits.)

It appears most probable that the *Palaestrae* were, during the flourishing times of the Greek republics, chiefly appropriated to the exercises of wrestling and of the *pancratium*, and were principally intended for the *athletae*, who, it must be recollected, were persons that contended in the public games, and therefore needed special training. This is expressly stated by Plutarch (*Symp.* ii. 4), who says, "that the place in which all the *athletae* exercise is called a *palaestra*;" and we also learn from Pausanias (v. 15. § 5, vi. 21. § 2), that there were at Olympia *palaestrae* especially devoted to the *athletes*. In Athenaeus (x. p. 417, f.) we read of the great *athletes* Damippus coming out of the *palaestra*; and Galen (*περὶ τοῦ διὰ μικρὰς σφαλῶν γυμνασίου*, c. 5) places the *athletae* in the *palaestra*. (Krause, *Ibid.* p. 115.)

The Romans had originally no places corresponding to the Greek *gymnasia* and *palaestrae*; and when towards the close of the republic, wealthy Romans, in imitation of the Greeks, began to build places for exercise in their villas, they called them indifferently *gymnasia* and *palaestrae*. (Cic. *ad Att.* i. 4, 8, 9, 10, *ad Qu. Fr.* iii. 1. § 2, *Verr.* v. 72.) The words were thus used by the Romans as synonymous; and accordingly we find that Vitruvius (v. 11) gives a description of a Greek *gymnasium* under the name of *palaestra*.

PALA'RIA. [PALUS.]

PALATI'NI LUDI. [LUDI PALATINI.]

PALE (πάλη). [LUCTA.]

PALI'LIA, a festival celebrated at Rome every year on the 21st of April, in honour of *Pales*, the tutelary divinity of shepherds. Some of the ancient writers called this festival *Parilia*, deriving the name from *pario*, because sacrifices were offered on that day *pro partu pecoris*. (Fest. s. v. *Pales*; compare *Popularia sacra*; Varro, *de Ling. Lat.* vi. 15; Dionys. i. 88.) The 21st of April was the day on which, according to the early traditions of Rome, Romulus had commenced the building of the city, so that the festival was at the same time solemnised as the dies natalitius of Rome (Fest.

s. v. Parilibus; Cic. *de Divin.* ii. 47; Varro, *de Re Rust.* ii. 1; Plin. *H. N.* xviii. 66; and some of the rites customary in later times were said to have been first performed by Romulus when he fixed the pomerium. (Dionys. *l. c.*) Ovid (*Fast.* iv. 731, &c.) gives a description of the rites of the Palilia, which clearly shows that he regarded it as a shepherd-festival, such as it must originally have been when the Romans were real shepherds and husbandmen, and as it must have continued to be among country-people in his own time, as is expressly stated by Dionysius; for in the city itself it must have lost its original character, and have been regarded only as the dies natalitius of Rome. The connection, however, between these two characters of the festival is manifest, as the founders of the city were, as it were, the kings of shepherds, and the founders of a religion suited to shepherds.

The first part of the solemnities, as described by Ovid, was a public purification by fire and smoke. The things burnt in order to produce this purifying smoke were the blood of the *October-horse*, the ashes of the calves sacrificed at the festival of Ceres, and the shells of beans. The people were also sprinkled with water; they washed their hands in spring-water, and drank milk mixed with must. (Ovid. *Fast. l. c.*; compare Propert. iv. 1. 20.) As regards the *October-horse* (*equus October*) it must be observed that in early times no bloody sacrifice was allowed to be offered at the Palilia, and the blood of the *October-horse*, mentioned above, was the blood which had dropped from the tail of the horse sacrificed in the month of October to Mars in the Campus Martius. This blood was preserved by the Vestal virgins in the temple of Vesta for the purpose of being used at the Palilia. (Solin. p. 2, d; Fest. *v. October equus*; Plut. *Romul.* 12.) When towards the evening the shepherds had fed their flocks, laurel-branches were used as brooms for cleaning the stables, and for sprinkling water through them, and lastly the stables were adorned with laurel-boughs. Hereupon the shepherds burnt sulphur, rosemary, fir-wood, and incense, and made the smoke pass through the stables to purify them; the flocks themselves were likewise purified by this smoke. The sacrifices which were offered on this day consisted of cakes, millet, milk, and other kinds of eatables. The shepherds then offered a prayer to Palea. After these solemn rites were over, the cheerful part of the festival began: bonfires were made of heaps of hay and straw, and under the sounds of cymbals and flutes the sheep were again purified by being compelled to run three times through the fire, and the shepherds themselves did the same. The festival was concluded by a feast in the open air, at which the people sat or lay upon benches of turf, and drank plentifully. (Tibull. ii. 5. 87, &c.; compare Propert. iv. 4. 75.)

In the city of Rome the festival must, at least in later times, have been celebrated in a different manner; its character of a shepherd-festival was forgotten, and it was merely looked upon as the day on which Rome had been built, and was celebrated as such with great rejoicings. (Athen. viii. p. 361.) In the reign of Caligula it was decreed that the day, on which this emperor had come to the throne, should be celebrated under the name of Palilia, as if the empire had been revived by

him, and had commenced its second existence. (Suet. *Calig.* 16.) Athenaeus (*l. c.*) says, that before his time the name *Palilia* had been changed into *Romana* (*Ρωμαία*). Whether this change of name was occasioned by the decree in the reign of Caligula just mentioned, is unknown. (Comp. Hartung, *Die Relig. der Römer*, vol. ii. p. 150, &c.) [L. S.]

PALIMPSESTUS. [LIBER.]

PALLA. [PALLIUM.]

PALLACE (παλλακή). [CONCUBINA.]

PALLIATA FABULA. [COMEDIA, p. 346.]

PALLIUM, *dim.* PALLIOLUM, *poet.* PALLA (Plaut. *Men.* ii. 3. 41—47; Ovid. *Amor.* iii. 1. 12, iii. 2. 25) (*ἱμάτιον*, *dim.* *ἱματίδιον*; *Ion.* and *poet.* *ῥάπος*). The English *cloak*, though commonly adopted as the proper translation of these terms, conveys no accurate conception of the form, material, or use of that which they denoted. The article designated by them was always a rectangular piece of cloth, exactly, or at least nearly, square (*τετράγωνα ἱμάτια*, Posidonius *ap. Athen.* v. p. 213; *quadrangulus*, Tertull. *de Pallio*, 1). Hence it could easily be divided without loss or waste into four parts. (John. xix. 23.) It was indeed used in the very form in which it was taken from the loom [TELE], being made entirely by the weaver (*τὸ ἱματίον ὀφθαί*, Plat. *Charm.* pp. 86, 98, ed. Heindorf; *Hipp. Min.* p. 210, ed. Bekker), without any aid from the tailor except to repair (*sarcire*, *ἀρκεῖσθαι*) the injuries which it sustained by time. Although it was often ornamented, more especially among the northern nations of Europe, with a fringe [FIMBRIAE], yet this was commonly of the same piece with the pallium itself. Also whatever additional richness and beauty it received from the art of the dyer, was bestowed upon it before its materials were woven into cloth or even spun into thread. Most commonly it was used without having undergone any process of this kind. The raw material, such as wool, flax, or cotton, was manufactured in its natural state, and hence blankets and sheets were commonly white (*λευκὰ ἱμάτια*, Artemidor. ii. 3), although from the same cause brown, drab, and grey were also prevailing colours. The more splendid and elegant tints were produced by the application of the murex (*muricata*, *conchyliata*, *purpurea*, *vestis*; *πορφυρεόν*, *ἀλουργγὴ ἱμάτια*, Heraclides Pont. *ap. Athen.* xii. p. 512), the kermes (*coccineus*, *κόκκινον*), the argol (*fucatus*), and the saffron (*croceus*, *κροκωτόν*). [CROCOTA.] Pale green was also worn (*δμφάκινον*, Pollux, *Onom.* vii. 56). Black and grey pallia were either made from the wool of black sheep (Theocrit. v. 98) or were the result of the art of the dyer. They were worn in mourning (*μέλανα ἱμάτια*, Xen. *Hist. Gr.* i. 7. § 8; Artemidor. *l. c.*; *φαῖν ἐσθῆτα*, *Inscription* in Fellows's *Journal*, 1838, p. 31), and by sorceresses. (Hor. *Sat.* i. 8. 23.) The pallium of one colour (*ἰσόχρουν ἱμάτιον*, literally "the self-coloured," Artem. *l. c.*) was distinguished from the variegated (*ποικίλον*); and of this latter class the simplest kinds were the striped (*ραβδωτόν*, Xen. *Cyrop.* viii. 8. § 8), in which the effect was produced by inserting alternately a woof of different colours, and the check or plaid (*σευτάλιον*, *tessellatum*), in which the same colours were made to alternate in the warp also. Zeuxis, the painter, exhibited at the Olympic games a plaid having

his name woven in the squares (*lesserae*, *πλωθία*) in golden letters. (Plin. *H. N.* xxxv. 9. a. 36. 2.) An endless variety was produced by interweaving sprigs or flowers in the woof (*ἄνθεα πεποικιλμένην*, Plat. *Republ.* viii. p. 401, ed. Bekker). By the same process carried to a higher degree of complexity and refinement, whole figures and even historical or mythological subjects were introduced, and in this state of advancement the weaving of pallia was the elegant and worthy employment of females of the first distinction (Hom. *Il.* iii. 125—128, xxii. 440, 441), and of Athena, the inventress of the art, herself. (Apollon. Rhod. i. 721—768.) The greatest splendour was imparted by the use of gold thread. (Virg. *Aen.* iv. 262—264; Plin. *H. N.* viii. 48, xxxiii. 19; Auson. *Epig.* 37; Themist. *Orat.* 21; Q. Curt. iii. 3. 17.) Homer represents Penelope weaving a purple blanket for Ulysses, which also displayed a beautiful hunting-piece wrought in gold. (*Od.* xix. 225—235.) The epithet *δίκλας*, which is commonly applied by the poets to these figured pallia, probably denoted that they were made on the principle of a quilt or a Scotch carpet, in which two cloths of different colours are so interlaced as to form one double cloth, which displays a pattern of any kind according to the fancy of the artist.

Although pallia were finished for use without the intervention of the tailor, they were submitted to the embroiderer (*Phrygiō*; *ποικιλτής*, *πλουμαρὶς*: Aesch. c. *Timarch.* p. 118, ed. Reiske; Schol. *ad loc.*); and still more commonly to the fuller [FULLO], who received them both when they were new from the loom, and when they were sullied through use. Hence it was a recommendation of this article of attire to be well-trodden (*ἰδοτῖστον*, Apollon. Rhod. ii. 30) and well washed (*ἐβλυντός*, Hom. *Od.* viii. 425). The men who performed the operation are called of *πλυντῆς*, i. e. the washers, in an inscription found in the stadium at Athens. Another appellation which they bore, viz. of *στρίβεις*, the treaders (Schol. in *Apoll.* Rhod. l. c.), is well illustrated by the woodcut, representing them at their work, in p. 552.

Considering *pallium* and *palla*, *ἱμάτιον* and *φάρος*, as generic terms, we find specific terms included under them, and denoting distinctions which depended on the materials of which the cloth was made. Among the Greeks and Romans by far the most common material was wool. (Plaut. *Mil.* iii. 1. 93; Xen. *Oecon.* vii. 36; Theocrit. l. c.) The garment made of it (*lanæum pallium*, Cic. *de Nat. Deor.* iii. 35) was called (from the root of *lana*, wool), in Latin *LAENA*, in Greek *χλαῖνα*: and as the garment varied, not only in colour and ornament, but also in fineness, in closeness of texture (*ἱματίον λεπτόντης*, Aelian, *V. H.* iv. 3), and in size, some of these differences were expressed by the diminutives of *χλαῖνα*, such as *χλαίνιον*, *χλαίνις* (Herod. iii. 139; Athen. xii. pp. 545, a, 548, a, 553, a), *χλαίνιδιον* (Herod. i. 195, compared with Strabo, xvi. 1. § 20; Plut. *Symp. Probl.* vi. 6; Dionys. *Ant. Rom.* vii. 9), *χλαίνισκιον* (Aristoph. *Acharn.* 518; Aesch. c. *Timarch.* p. 142; Alciphron, i. 38), and *χλαίνισκιδιον*. (Aristoph. *Pax*, 1002.) In like manner we find the pallium not only designated by epithets added to the general terms in order to denote that it was made of flax, e. g. *ἱμάτιον λινόν*, *λινόιο νεβήλυτα φάρσα* (Orpheus, *de Lapid.* 702), *pallium lineum*

(Isid. *Hisp. Orig.* xix. 25), but also distinguished by the specific terms *lineum*, *lineamentum*; *sindon* (Mart. *Epig.* iv. 12); *σινδών* (Herod. ii. 86; Mark, xiv. 51, 52); and its diminutive *σινδώνιον*, (Palladii, *Vita Serap.*) A coarse linen pallium was also called *φάσων* (Pollux, vii. c. 16), and a fine one *ὀδόνη*, *dim. ὀδόνιον*. (Hom. *Il.* iii. 141, xviii. 595; Bruck, *Anal.* iii. 81.) These specific terms are no doubt of Egyptian origin, having been introduced among the Hebrews, the Greeks, and the Romans, together with the articles of merchandise to which they were applied. On the same principle a cotton pallium is called *palla carbasea* (Prudent. *Psychom.* 186, 187), and a silk shawl is denominated *pallium Sericum* (Stat. *Sylv.* iii. 4. 89), and *ὀδόνιον Σηρικόν*. (Arrian, *Per. Mar. Eryth.* pp. 164, 170, 173, 177, ed. Blancardi.)

The following instances of the application of pallia to the purposes of common life, show that it is an error to translate the word in all cases by "cloak" or "garment," and although in some of these cases the application may have been accidental, it serves not the less on that account to demonstrate the form and properties of the thing spoken of, and the true meaning of the various names by which it was called.

I. They were used to spread over beds and couches, and to cover the body during sleep (*ἱματίον*, Aelian, *V. H.* viii. 7, xii. 1; *Deut.* xxiv. 13; *ἱματισμός*, Theophrast. *Char.* 23; *φάρος*, Soph. *Trach.* 916, compare 537; *χλαῖνα*, Theocrit. xviii. 19, xxiv. 25; Hom. *Od.* xiv. 500—521, xvii. 86, 179, xx. 4, 95, 143; *Hymn.* in *Ven.* 159—184; *χλαίνισκιον*, Alciphron, l. c.; *pallium*, Juv. vi. 202; Spartian, *Hadr.* 22). In many of these cases it is to be observed, that the same pallium which was worn as a garment by day served to sleep in at night, in exact agreement with the practice which to the present day prevails among the Bedouin Arabs, who constantly use their large hykes for both purposes. [LECTUS; LODIX; ΤΑΠΕΣ.]

II. They were spread on the ground and used for carpets. Clitus, the friend of Alexander, when he held a levee, appeared walking *ἐπὶ πορφύρεῳ ἱματίῳ*. (Athen. xii. p. 539, c.) This was an affectation of Eastern luxury. When the people at Jerusalem spread their hykes upon the ground (as recorded in St. Matt. xxi. 8; St. Mark, xi. 8; St. Luke, xix. 36) they intended thereby to recognise Jesus as a king. [ΤΑΠΕΣ.]

III. They were hung over doors (Prudent. *adv. Sym.* ii. 726), and used as awnings or curtains. (Athen. xii. p. 518, a.)

IV. At the bath, persons wiped and rubbed themselves not only with linen sheets (*ἱντεῖς*), but with very soft blankets (*pallia ex mollissima lana factis*, Petron. *Sat.* 28). The coarse linen cloth used for this purpose was called *sabakum* (*σάβανον*).

V. Agamemnon (Hom. *Il.* viii. 221) holds in his hand "a great purple *φάρος*" to serve as a banner floating in the air.

VI. Pallia, especially of linen and cotton, were used for sails (*φάσσανες*, Lycophron, v. 26; *λινόκροκον φάρος*, Eurip. *Hec.* 1080; Hom. *Od.* v. 258).

VII. When Antony's ships were on fire, his soldiers, having failed to extinguish it by water, which they could not obtain in sufficient quantity, threw upon it their thick blankets (*ἱμάτια αὐτῶν τὰ παχέα*, Dion Cass. l. 34).

VIII. Thick coarse blankets, which had not

been to the fuller (*ῥαδρία ἀργύρα*, Plut. *Symp. Probl.* vi. 6), were wrapped round ice and snow to keep them from melting.

IX. A fine white blanket was sometimes used as a shroud (*φάρος ταφῆος*, Hom. *Il.* xviii. 353; *Od.* ii. 94—100; *ῥαδρίον*, Xen. *Cyrop.* vii. 3. § 13).

X. In Asia, horses and other animals used to ride upon, were covered with beautiful pallia, especially upon occasions of ceremony or of rejoicing. Cyrus had 200 horses covered with striped cloths. (Xen. *Cyrop.* viii. 3. § 16.) When the Persian ambassador, a few years ago, went to the levee in London, his horses were in like manner covered *βαθροῖς ἵππων*. Compare St. Matt. xxi. 7; St. Mark, xi. 7; St. Luke, xix. 35. [TAPES.]

XI. The newly-born infant was wrapped in a blanket (*φάρος*, Hom. *Hymn. in Apoll.* 121). [INCUNABULA.]

XII. Lastly, the pallium was the most common article of the AMICTUS. [CHLAMYS.] Hence we find it continually mentioned in conjunction with the TUNICA, which constituted the indutus. Such phrases as "coat and waistcoat," or "shoes and stockings," are not more common with us than such as those which follow, in ancient authors: *tunica palliumque* (Cic. *de Verr.* v. 52; Plaut. *Epid.* v. 2. 61); *ῥαδρίον καὶ χιτῶνα* in the will of a certain philosopher (Diog. Laërt. v. 72); *τὸ ῥαδρίον καὶ τὸν χιτῶνίσκον*; *φάρος ἡδὲ χιτῶνα* (Hom. *Il.* xxiv. 588, *Od.* viii. 425); *χλαῖναν ἢ ἡδὲ χιτῶνα* (Hom. *Il.* ii. 262, *Od.* iv. 50, v. 229, viii. 455, x. 365, 451, xiv. 132, 154, 320, 341, xv. 330, xvii. 89); *χλαῖς καὶ χιτῶνίσκος*. (Antiphanes, *ap. Athen.* xii. p. 545, a.) The following passages also exemplify the practice of naming these two articles of dress together: A. Gell. vi. 10; Plaut. *Trin.* v. 2. 30; Athen. v. p. 198, c, d, f; Theophrast. *Char.* 21; St. Matt. v. 40; St. John, xix. 23—25.

But although the pallium and tunica were always regarded as essential parts of an entire dress, yet each of them might be worn without the other. Cases in which the tunic was retained and the blanket laid aside, are explained under the article NUDUS. It is also evident that the pallium would not be the most convenient kind of dress when the wearer of it had occasion to run; and we find that in such circumstances he either put it away entirely (Hom. *Il.* ii. 183, *Od.* xiv. 500) or folded it up as a Scottish Highlander folds his plaid, and threw it round his neck or over his shoulder. (Plaut. *Capt.* iv. 1. 12, iv. 2. 9; Ter. *Phor.* v. 6. 4.) On the other hand, to wear the pallium without the under-clothing indicated poverty or severity of manners, as in the case of Socrates (Xen. *Mem.* i. 6. § 2), Agesilaus (Aelian, *V. H.* vii. 13), and Gelon, king of Syracuse. (Diod. Sic. xi. 26.)

The pallium was no doubt often folded about the body simply with a view to defend it from cold, and without any regard to gracefulness of appearance. It is thus seen on the persons of Poly- nices and Parthenopæus in the celebrated intaglio, now preserved at Berlin, representing five of the heroes who fought against Thebes, and copied on an enlarged scale in the annexed woodcut. The names of the several heroes are placed beside them in Etruscan letters. This precious relic was found at Perugia. (Winckelmann, *Description des Pierres gravées de Stoeck*, p. 344—347.) By a slight adaptation, the mode of wearing it was rendered

both more graceful and more convenient. It was first passed over the left shoulder, then drawn behind the back and under the right arm, leaving it bare, and then thrown again over the left shoulder. Of this we see an example in a bas-relief engraved by Dodwell. (*Tour through Greece*, vol. i. p. 243.) Another very common method was to fasten the pallium with a brooch [FIBULA] over the right shoulder (*ἀμφιπεπονησθαι*, Hom. *Il.* x. 131—136; Stat. *Theb.* vii. 658, 659; Apul. *Flor.* ii. 1), leaving the right arm at liberty, and to pass the middle of it either under the left arm so as to leave that arm at liberty also, or over the left shoulder so as to cover the left arm. We see Phocion attired in the last-mentioned fashion in the admired statue of him preserved in the Vatican at Rome. (*Mus. Pio-Clement.* vol. i. tav. 43.) (See woodcut.) The attachment of the pallium by means of the brooch caused it to depend in a graceful manner (*demissa*

ex humeris, Virg. *Aen.* iv. 263), and contributed mainly to the production of those dignified and elegant forms which we so much admire in ancient sculptures. When a person sat, he often allowed his pallium to fall from his shoulder, so as to envelope the lower part of his body only.

The sagum of the northern nations of Europe (see woodcut, p. 213) was a woollen pallium, fa-

tened, like that of the Greeks, by means of a brooch, or with a large thorn as a substitute for a brooch. (Tacit. *Germ.* 17; Strabo, iv. 4. 3.) The Gauls wore in summer one which was striped and chequered, so as to agree exactly with the plaid which still distinguishes their Scottish descendants; in winter it was thick and much more simple in colour and pattern. (Diod. Sic. v. 30.) The Greeks and Romans also wore different pallia in summer and in winter. The thin pallium made for summer wear was called *ἡῆδος*, *dim.* *ἡῆδαριον* (Aristoph. *Aves*, 713—717) and *σπειρον dim.* *σπειριον* (Hom. *Od.* ii. 102, vi. 179; Xen. *Hist. Gr.* iv. 5. § 4) in contradistinction from the warm pallium with a long nap, which was worn in winter (*λαενα*, Mart. xiv. 136; *χλαῖνα*, Moeris, s. v.; Hom. *Il.* xvi. 224, *Od.* xiv. 529; Plut. *de Aud.* p. 73, ed. Steph.; *ἄχλαιον*, Callim. *Hymn.* in *Dion.* 115). This distinction in dress was, however, practised only by those who could afford it. Socrates wore the same pallium both in summer and winter. (Xen. *Mem.* i. 6. § 2.)

One kind of blanket was worn by boys, another by men (*τὸ παιδικόν, τὸ ἀνδρεῖον ἱμάτιον*, Plut. *de Aud.* init.). Women wore this garment as well as men. "Phocion's wife," says Aelian (*V. H.* vii. 9), "wore Phocion's pallium;" but Xanthippe, as related by the same author (vii. 10), would not wear that of her husband Socrates. (See also Hom. *Od.* v. 229, 230, x. 542, 543; Plaut. *Men.* iv. 2. 36; Herod. v. 87.) When the means were not wanting, women wore pallia, which were in general smaller, finer, and of more splendid and beautiful colours than those of men (*δοιμᾶτριά ἀνδρεία*, Aristoph. *Eccles.* 26, 75, 333), although men also sometimes displayed their fondness for dress by adopting in these respects the female costume. Thus Alcibiades was distinguished by his purple pallium which trailed upon the ground (Plut. *Alcib.* pp. 350, 362, ed. Steph.); for a train was one of the ornaments of Grecian as well as Oriental dress (*μαρτίον ἑλξεις*, Plato, *Alcib.* i. p. 341, ed. Bekker; Ovid. *Met.* xi. 166; Quintil. xi. 3), the general rule being that the upper garment should reach the knee, but not the ground. (Aelian, *V. H.* xi. 10; Theophrast. *Char.* 4.)

Philosophers wore a coarse and cheap pallium, which from being exposed to much wear was called *τριβαν* and *τριβάνιον*. (Aristoph. *Plut.* 897; Athen. v. p. 211, e; Themist. *Orat.* x. p. 155, ed. Dindorf; *palliastrum*, Apul. *Florid.* i.) The same was worn also by poor persons (Isaeus, *de Dic.* p. 94, ed. Reiske; Polyæn. *Strat.* vii. 35), by the Spartans (Athen. xii. p. 535, e; Aelian, *V. H.* vii. 13), and in a later age by monks and hermits (*φαιδὸν τριβάνιον*, Synes. *Epiol.* 147; *sagum rusticum*, Hieron. *Vita Hilar.*). These blanket-wearers (*τριβανοφόροι*, Palladii, *Hist. Laus.* in *vita Serap.*) often went without a tunic, and they sometimes supplied its place by the greater size of their pallium. It is recorded of the philosopher Antisthenes, that "he first doubled his pallium" (Diog. Laërt. vi. 6, 13), in which contrivance he was followed by his brother Cynics (Brunck, *Anal.* ii. 22; Hor. *Epiol.* i. 7. 25), and especially by Diogenes, who also slept and died in it, and who according to some was the first inventor of this fashion. (Diog. Laërt. vi. 22, 77.) The large pallium, thus used, was called *διπλοῖς* (*diplaxis*, Isid. *Hisp. Orig.* xix. 24), and also *ΕΧΟΜΙΣ*, because, being worn without the fibula, it left the right shoulder bare, as

seen in the preceding figure of Polynices, and in the bas-relief in Dodwell's Tour already referred to (Plaut. *Mil.* iv. 4. 43; Aelian, *V. H.* ix. 34); and, when a girdle was added round the waist, it approached still more to the appearance of the single-sleeved tunic, the use of which it superseded.

Under the Roman republic and the early Emperors, the Toga was worn by men instead of the pallium. They were proud of this distinction, and therefore considered that to be *palliat* or *sagatus* instead of being *togatus* indicated an affectation of Grecian or even barbarian manners. (*Graeco pallio amictus*, Plin. *Epist.* iv. 11; *Graeci palliati*, Plaut. *Cure.* ii. 3. 9; Cic. *Phil.* v. 5, xiv. 1; Sueton. *Jul.* 48; Val. Max. ii. 6. § 10.) Caecina, on his return from the north of Europe, offended the Romans (*togatos*) by addressing them in a plaid (*versicolore sagulo*) and trowsers. [BRACCÆ] (Tacit. *Hist.* ii. 20.) [J. Y.]

PA'LMIPES, i. e. *pes et palmus*, a Roman measure of length, equal to a foot and a palm; or a foot and a quarter, or 15 inches, or 20 digits. (Plin. *H. N.* xvii. 20. a. 32; Vitruv. v. 6.) [P. S.]

PALMUS, properly the width of the open hand, or, more exactly, of the four fingers, was used by the Romans for two different measures of length, namely, as the translation of the Greek *πάλαιστή*, or *δάρπον* in old Greek, and *σπιθαμή* respectively. In the former sense it is equal to 4 digits, or 3 inches, or 1-4th of a foot, or 1-6th of the cubit. [MENSURA, p. 751, b.] Jerome (in *Ezech.* 40) expressly states that this was its proper meaning, but that the Greek *σπιθαμή* was also called by some *palmus*; or, for the sake of distinction, *palmus*; in which sense it would be 3-4ths of a foot. Hence some writers distinguish, in the old Roman metrical system, a *palmus major* of 9 inches, and a *palmus minor* of 3 inches, and they suppose that the former is referred to by Varro (*R. R.* iii. 7). Ideler has, however, shown that this supposition is groundless, that Varro refers to the common palm of 4 digits (3 inches), and the larger palm only occurs in later Roman writers. (*Ueber die Längen und Flächenmaasse der Alten*, p. 129). From this large *palmus* of 9 inches the modern Roman *palmus* is derived. [P. S.]

PALUDAMENTUM, according to Varro (*L. L.* vii. 37) and Festus (s. v.), originally signified any military decoration; but the word is always used to denote the cloak worn by a Roman general commanding an army, his principal officers and personal attendants, in contradistinction to the *sagum* [SAGUM] of the common soldiers and the toga or garb of peace. It was the practice for a Roman magistrate after he had received the *imperium* from the Comitia Curiate and offered up his vows in the Capitol, to march out of the city arrayed in the paludamentum (*exire paludatus*, Cic. *ad Fam.* viii. 10) attended by his lictors in similar attire (*paludatus lictoribus*, Liv. xli. 10, xlv. 39), nor could he again enter the gates until he had formally divested himself of this emblem of military power, a ceremony considered so solemn and so indispensable that even the emperors observed it. (Tacit. *Hist.* ii. 89; compare Sueton. *Vitell.* c. 11.) Hence Cicero declared that Verres had sinned "*contra auspicia, contra omnes divinas et humanas religiones*," because, after leaving the city in his paludamentum (*cum paludatus exisset*), he stole back in a litter to visit his mistress. (*In Verr.* v. 13.)

The paludamentum was open in front, reached

down to the knees or a little lower, and hung loosely over the shoulders, being fastened across the chest by a clasp. A foolish controversy has arisen among antiquaries with regard to the position of this clasp, some asserting that it rested on the right shoulder, others on the left, both parties appealing to ancient statues and sculptures in support of their several opinions. It is evident from the nature of the garment, as represented in the annexed illustrations, that the buckle must have shifted from place to place according to the movements of the wearer; accordingly, in the following cut, which contains two figures from Trajan's column,

one representing an officer, the other the emperor with a tunic and fringed paludamentum, we observe the clasp on the right shoulder, and this would manifestly be its usual position when the cloak was not used for warmth, for thus the right

hand and arm would be free and unembarrassed; but in the preceding cut, copied from the *Raccolta Maffei*, representing also a Roman emperor, we perceive that the clasp is on the left shoulder; while in the cut below, the noble head of a warrior from the great Mosaic of Pompeii, we see the paludamentum flying back in the charge, and the clasp nearly in front. It may be said that the last is a Grecian figure; but this, if true, is of no importance, since the chlamys and the paludamentum were essentially, if not absolutely, the same. Nonius Marcellus considers the two terms synonymous, and Tacitus (*Ann.* xii. 56) tells how the splendid naumachia exhibited by Claudius was viewed by Agrippina dressed *chlamyde aurata*, while Pliny (*H. N.* xxxiii. 3) and Dion Cassius (*ix.* 33) in narrating the same story use respectively the expressions *paludamento aurotestili*, and *χλαμύδι διακόσῳ*.

The colour of the paludamentum was commonly white or purple, and hence it was marked and remembered that Crassus on the morning of the fatal battle of Carrhae went forth in a dark-coloured mantle. (*Val. Max.* i. 6. § 11; compare *Plin. H. N.* xxiii. 1; *Hirtius, de bello Africano*, c. 57.) [W. R.]

PALUS, a pole or stake, was used in the military exercises of the Romans. It was stuck into the ground, and the tirones had to attack it as if it had been a real enemy; hence this kind of exercise is sometimes called *Palaria*. (*Veget.* i. 11.) Juvenal (vi. 247) alludes to it when he says, "Quis non vidit vulnera pali?" and Martial (vii. 32. 8) speaks of it under the name of *stipes*, "Aut nudi stipitis ictus hebes." (*Becker, Gallus*, i. p. 278.)

PAMBOEOTIA (*παμβοιότεια*), a festive panegyria of all the Boeotians, which the grammarians compare with the Panathenaea of the Atticans, and the Panionia of the Ionians. The principal object of the meeting was the common worship of Athena Itonia, who had a temple in the neighbourhood of Coronea, near which the panegyria was held. (*Strabo*, ix. p. 411; *Paus.* ix. 34. § 1.) From Polybius (iv. 3, ix. 34) it appears that during this national festival no war was allowed to be carried on, and that in case of a war a truce was always concluded. This panegyria is also mentioned by Plutarch. (*Anat. Narrat.* p. 774, f.) It is a disputed point whether the Pambœotia had anything to do with the political constitution of Boeotia, or with the relation of its several towns to Thebes; but if so, it can have been only previous to the time when Thebes had obtained the undisputed supremacy in Boeotia. The question is discussed in *Sainte Croix, Des Gouvernements fédérat.* p. 211, &c.; *Raoul-Rochette, Sur la Forme*

et l'Administ. de l'Etat fédératif des Béotiens, in the *Mém. de l'Acad. des Inscrip.* vol. viii. (1827) p. 214, &c.; Wachsmuth, *Hell. Alt.* vol. i. p. 176. 2d edit. [L. S.]

PANATHENAEA (Παναθήναια), the greatest and most splendid of the festivals celebrated in Attica in honour of Athena, in the character of Athena Polias, or the protectress of the city. It was said to have been instituted by Erichthonius (Harpocrat. s. v. Παναθήναια; Marm. Par. Ep. 10), and its original name, until the time of Theseus, was believed to have been Athenaea; but when Theseus united all the Atticans into one body, this festival, which then became the common festival of all Atticans, was called Panathenaea (Paus. viii. 2. § 1; Plut. *Thes.* 24; Apollod. iii. 14. § 6; Hygin. *Poet. Astron.* ii. 13; Suid. s. v. Παναθήναια.) According to this account it would seem as if the name of the festival were derived from that of the city; but the original name Athenaea was undoubtedly derived from that of the goddess, and the subsequent appellation Panathenaea merely signifies the festival of Athena, common to or celebrated by all the Attic tribes conjointly. Panathenaea are indeed mentioned as having been celebrated previous to the reign of Theseus (Apollod. iii. 15. § 7; Diod. iv. 60), but these writers merely transfer a name common in their own days to a time when it was not yet applicable. The Panathenaea, which, as far as the character implied in the name is concerned, must be regarded as an institution of Theseus, were celebrated once in every year. (Harpocrat. Suid. s. v.) All writers who have occasion to speak of this festival agree in distinguishing two kinds of Panathenaea, the greater and the lesser, and in stating that the former was held every fourth year (πενταετηρίς), while the latter was celebrated once in every year. Libanius (*Argum. ad Demosth. Mid.* p. 510), by mistake calls the lesser Panathenaea τριετηρίς.

The time, when the lesser Panathenaea (which are mostly called Panathenaea, without any epithet, while the greater are generally distinguished by the adjective μεγάλη) were celebrated, is described by Proclus (*ad Plat. Tim.* p. 26, &c.) in a vague manner as following the celebration of the Bendideia; from which Meursius infers that the Panathenaea were held on the day after the Bendideia, that is, on the 20th of Thargelion. Petitus (*Leg. Att.* p. 18), on the other hand, has shown from Demosthenes (*c. Timocrat.* p. 708), that the Panathenaea must have fallen in the month of Hecatombaeion, and Corsini (*Fast. Att.* ii. 357, &c.) has further proved from the same passage of Demosthenes, that the festival must have commenced before the 20th of this month, and we may add that it was probably on the 17th. Clinton (*Fast. Hell.* ii. p. 332, &c.) has revived the opinion of Meursius. (Compare H. A. Müller, *Panathenaea*, a. 3.)

The great Panathenaea were, according to the unanimous accounts of the ancients, a pentatesteria, and were held in the third year of every Olympiad. (Böckh, *Staatsk.* ii. p. 165, &c.) Proclus (*ad Plat. Tim.* p. 9) says that the great Panathenaea were held on the 28th of Hecatombaeion. This statement, however, must not lead us to suppose that the great Panathenaea only lasted for one day; but Proclus in mentioning this particular day was probably thinking of the most solemn day of the festival on which the great procession took place

(Thucyd. vi. 56), and which was in all probability the last day of the festival, for it is expressly stated that the festival lasted for several days. (Schol. ad Eurip. *Hecub.* 464; Aristid. *Panath.* p. 147.) We have, moreover, every reason to suppose with Böckh, that the great Panathenaea took place on the same days of the month of Hecatombaeion, on which the lesser Panathenaea were held, and that the latter were not celebrated at all in those years in which the former fell. Now if, as we have supposed, the lesser Panathenaea commenced in the 17th, and the last day of the greater festival fell on the 28th of Hecatombaeion, we may perhaps be justified in believing that the lesser as well as the greater Panathenaea lasted for twelve days, that is, from the 17th to the 28th of Hecatombaeion. This time is not too long, if we consider that the ancients themselves call the Panathenaea the longest of all festivals (Schol. ad Aristoph. *Nub.* 385), and if we bear in mind the great variety of games and ceremonies that took place during the season. When the distinction between the greater and lesser Panathenaea was introduced, is not certain, but the former are not mentioned before Ol. 66. 3 (Thucyd. vi. 56, i. 20; Herod. v. 56), and it may therefore be supposed that they were instituted a short time before Ol. 66, perhaps by Peisistratus, for about his time certain innovations were made in the celebration of the Panathenaea, as is mentioned below. The principal difference between the two festivals was, that the greater one was more solemn, and that on this occasion the peplos of Athena was carried to her temple in a most magnificent procession which was not held at the lesser Panathenaea.

The solemnities, games, and amusements of the Panathenaea were: rich sacrifices of bulls, foot, horse, and chariot races, gymnastic and musical contests, and the lampadephoria; rhapsodists recited the poems of Homer and other epic poets, philosophers disputed, cock-fights were exhibited, and the people indulged in a variety of other amusements and entertainments. It is, however, not to be supposed that all these solemnities and games took place at the Panathenaea from the earliest times. Gymnastic contests, horse and chariot races and sacrifices are mentioned in the legends belonging to the period anterior to the reign of Theseus. (Apollod. and Diod. *l. cc.*; Plut. *Thes.* 24.) The prize in these contests was a vase with some oil from the ancient and sacred olive tree of Athena on the Acropolis. (Pind. *Nem.* x. 35, &c.; Schol. ad Soph. *Oed. Col.* 698.) A great many of such vases, called Panathenaic vases (ἀμφότες Παναθηναϊκοί, Athen. v. p. 199), have in late years been found in Etruria, southern Italy, Sicily, and Greece. They represent on one side the figure of Athena, and on the other the various contests and games in which these vases were given as prizes to the victors. The contests themselves have been accurately described from these vases by Ambroch (*Annal. dell' Instit.* 1833. p. 64—89), and the probable order in which they took place has been defined by Müller (*l. c.* p. 80, &c.).

The poems of Homer were read by rhapsodists only at the great Panathenaea (Lycurg. *c. Leocrat.* p. 161), and this custom commenced in the time of Pisistratus or of his son Ipparchus, after these poems had been collected. Afterwards the works of other epic poets also were recited on this occasion. (Plat. *Hipparch.* p. 228, b. Aelian, *V. H.*

viii. 2.) Songs in praise of Harmodius and Aristogiton appear to have been among the standing customs at the Panathenaea. Musical contests in singing and in playing the flute and the cithara were not introduced until the time of Pericles; they were held in the Odeum. (Plut. *Pericli*. 13.) The first who gained the victory in these contests was Phrynis, in Ol. 81. 1. (Schol. ad *Aristoph. Nub.* 971; Marm. Par. Ep. 64.) The prize for the victors in the musical contests was, as in the gymnastic contests, a vase, but with an additional chaplet of olive branches. (Suid. s. v. *Παναθηναία*.) Cyclic choruses and other kinds of dances were also performed at the Panathenaea (Lys. de *Muner. accept.* p. 161), and the pyrrhic dance in armour is expressly mentioned. (Aristoph. *Nub.* 988, with the Schol.) Of the discussions of philosophers and orators at the Panathenaea we still possess two specimens, the *λόγος Παναθηναϊκός* of Isocrates, and that of Aristides. Herodotus is said to have recited his history to the Athenians at the Panathenaea. The management of the games and contests was entrusted to persons called *ἀθλοθέται*, whose number was ten, one being taken from every tribe. Their office lasted from one great Panathenaic festival to the other. (Pollux, viii. 8. 6.) It was formerly believed, on the statement of Diogenes Laërtius (iii. 56; compare Suidas, s. v. *Τετραλογία*), that dramatic representations also took place at the Panathenaea, but this mistake has been clearly refuted by Böckh. (*Græc. Trag. Princip.* p. 207.)

The lampadephoria or torch-race of the Panathenaea has been confounded by many writers, and even by Wachsmuth (*Hell. Alt.* ii. 2. p. 246; ii. p. 573, 2d ed.), with that of the Bendideia. On what day it was held, and in what relation it stood to the other contests, is unknown, though it is clear that it must have taken place in the evening. It has been supposed by some writers that the lampadephoria took place only at the great Panathenaea, but this rests upon the feeble testimony of Libanius (*Argum. ad Demosth. Mid.* p. 510), while all other writers who mention this lampadephoria, speak of it as a part of the Panathenaea in general, without the epithet *μεγάλαια*, which is itself a sufficient proof that it was common to both festivals. The same is implied in a statement of the author of the *Etymologicum Magnum* (s. v. *Κεραμεικός*). The prize of the victor in the lampadephoria was probably the lampas itself, which he dedicated to Hermes. (Böckh, *Corp. Inscript.* i. n. 243, 250.)

It is impossible to determine the exact order in which the solemnities took place. We may, however, believe that those parts which were the most ancient preceded those which were of later introduction. Another assistance in this respect are the sculptures of the Parthenon (now in the British Museum), in which a series of the solemnities of the Panathenaea is represented in the great procession. But they neither represent all the solemnities—for the lampadephoria and the gymnastic contests are not represented—nor can it be supposed that the artists should have sacrificed beauty and symmetry merely to give the solemnities in precisely the same order as they succeeded one another at the festival. In fact we see in these sculptures the flute and cithara players represented as preceding the chariots and men on horseback, though the contests in chariot and horse racing

probably preceded the musical contests. But we may infer from the analogy of other great festivals that the solemnities commenced with sacrifices. The sacrifices at the Panathenaea were very munificent; for each town of Attica, as well as every colony of Athens, and, during the time of her greatness, every subject town, had to contribute to this sacrifice by sending one bull each. (Schol. *Aristoph. Nub.* 385.) The meat of the victims appears to have been distributed among the people; but before the feasting commenced, the public herald prayed for the welfare and prosperity of the republic. After the battle of Marathon the Plataeans were included in this prayer. (Herod. vi. 111.)

The chief solemnity of the great Panathenaea was the magnificent procession to the temple of Athena Polias, which, as stated above, probably took place on the last day of the festive season. The opinion of Creuzer (*Symbol.* ii. p. 810) that this procession also took place at the lesser Panathenaea, is opposed to all ancient authorities with the exception of the Scholiasts on Plato (*Republ.* init.) and on Aristophanes (*Equit.* 566), and these scholiasts are evidently in utter confusion about the whole matter. The whole of this procession is represented in the frieze of the Parthenon, the work of Phidias and his disciples. The description and explanation of this magnificent work of art, and of the procession it represents, would lead us too far. (See Stuart, *Antiq. of Athens*, vol. ii.; Leake, *Topogr. of Athens*, p. 215, &c.; C. O. Müller, *Ancient Art and its Rem.* § 118; H. A. Müller, *Panath.* p. 98, &c.) The chief object of this procession was to carry the peplos of the goddess to her temple. It was a crocus-coloured garment for the goddess, and made by maidens, called *ἐργαστίαι*. (Hesych. s. v.; compare *ARRHOPHORIA*.) In it were woven Enceladus and the giants, as they were conquered by the goddess. (Eurip. *Hecub.* 466; Schol. ad *Aristoph. Equit.* 566; Suid. s. v. *Πέπλος*; Virg. *Cir.* 29, &c.; compare Plat. *Euthyd.* p. 6.) Proclus (*ad Plat. Tim.*) says that the figures on the peplos represented the Olympic gods conquering the giants, and this indeed is the subject represented on a peplos worn by an Athena preserved in the Museum of Dresden. On one occasion in later times, when the Athenians overwhelmed Demetrius and Antigonus with their flatteries, they also decreed that their images, along with those of the gods, should be woven into the peplos. (Plut. *Demetr.* 10.) The peplos was not carried to the temple by men but was suspended from the mast of a ship (Schol. *Hom. Il.* v. 734; Philostr. *Vit. Soph.* i. 5. p. 550; compare Böckh, *Græc. Trag. Princip.* p. 193; Schol. ad *Aristoph. Pax*, 418); and this ship, which was at other times kept near the Areiopagus (Paus. i. 29. § 1), was moved along on land, it is said, by *subterraneous machines*. What these machines may have been is involved in utter obscurity. The procession proceeded from the Cerameicus, near a monument called Leocorium (Thucyd. i. 20), to the temple of Demeter at Eleusis, and thence along the Pelasgic wall and the temple of Apollo Pythius to the Pnyx, and thence to the Acropolis, where the statue of Minerva Polias was adorned with the peplos.

In this procession nearly the whole population of Attica appears to have taken part, either on foot, on horseback, or in chariots, as may be seen in the frieze of the Parthenon. Aged men carried olive

branches, and were called *δαλλοφόροι* (Etym. M. and Hesych. s. v.); young men attended, at least in earlier times, in armour (Thucyd. vi. 56), and maidens who belonged to the noblest families of Athens carried baskets, containing offerings for the goddess, whence they were called *κρηφόροι*. (Harpocrat. s. v. *Κρηφόρος*; compare Thucyd. l. c.) Respecting the part which aliens took in this procession, and the duties they had to perform, see *HYDRIAPHORIA*.

Men who had deserved well of the republic were rewarded with a gold crown at the great Panathenaea, and the herald had to announce the event during the gymnastic contests. (Demosth. *de Coron.* p. 265; compare Meurs. *Panath.* p. 43.) Prisoners also were allowed to enjoy freedom during the great Panathenaea. (Ulpian, *ad Demosth. c. Timocrat.* p. 740; compare Demosth. *de Fals. Leg.* p. 394.)

(Compare J. Meursii, *Panathenaea, liber singularis*, Lugd. Bat. 1619; C. Hoffmann, *Panathenaeos*, Cassel, 1835, 8vo.; H. A. Müller, *Panathenaea*, Bonn, 1837, 8vo.; C. O. Müller's Dissertation, *Quo anni tempore Panathenaea minora celebrata sint*, which is reprinted in the Philological Museum, vol. ii. pp. 227—235.) [L. S.]

PANCRATIATAE. [PANCRATIUM.]

PANCRATIUM (*παγκράτιον*) is composed of *πᾶν* and *κράτος*, and accordingly signifies an athletic game, in which all the powers of the fighter were called into action. The pancratium was one of the games or gymnastic contests which were exhibited at all the great festivals of Greece; it consisted of boxing and wrestling (*πυγμή* and *πάλη*), and was reckoned to be one of the heavy or hard exercises (*ἀγωνίσματα βαρὰ* or *βαρύτερα*), on account of the violent exertions it required, and for this reason it was not much practised in the gymnasia; and where it was practised, it was probably not without modifications to render it easier for the boys. According to the ancient physicians it had very rarely a beneficial influence upon health. (H. Mercurial. *De Art. Gymnas.* v. 7.)

At Sparta the regular pancratium was forbidden, but the name was there applied to a fierce and irregular fight not controlled by any rules, in which even biting and scratching were not uncommon, and in which, in short, every thing was allowed by which one of the parties might hope to overcome the other. In Homer we neither find the game nor the name of the pancratium mentioned, and as it was not introduced at the Olympic games until Ol. 33 (Paus. v. 8. § 3), we may presume that the game, though it may have existed long before in a rude state, was not brought to any degree of perfection until a short time before that event. It is scarcely possible to speak of an inventor of the pancratium, as it must have gradually arisen out of a rude mode of fighting, which is customary among all uncivilized nations, and which was kept up at Sparta in its original state. But the Greeks regarded Theseus as the inventor of the pancratium, who for want of a sword was said to have used this mode of fighting against the Minotaurus. (Schol. *ad Pind. Nem.* v. 89.) Other legends represented Hercules as having been victor in the pancratium (Paus. v. 8. § 1; Hygin. *Fab.* 273), and later writers make other heroes also fight the pancratium (Lucan, *Pharsal.* iv. 613, &c.); but these are mere fictions. After the pancratium was once introduced at Olympia, it soon found its way

also into the other great games of Greece, and in the times of the Roman emperors we also find it practised in Italy. In Ol. 145 the pancratium for boys was introduced at the Olympic games, and the first boy who gained the victory was Phaedimus, a native of a town in Troas. (Paus. v. 8, in fin.) This innovation had been adopted before in others of the national games, and in the 61st Pythiad (Ol. 108), we find a Theban boy of the name of Olaidas as victor in the pancratium in the Pythian games. (Paus. x. 7. § 3.) At the Isthmian games the pancratium for boys is not mentioned till the reign of Domitian (Corini, *Disert. Agon.* p. 101); but this may be merely accidental, and the game may have been practised long before that time.

Philostratus (*Imag.* ii. 6) says that the pancratium of men was the most beautiful of all athletic contests; and the combatants must certainly have shown to the spectators a variety of beautiful and exciting spectacles, as all the arts of boxing and wrestling appeared here united. (Aristot. *Rhet.* i. 5; Plut. *Sympos.* ii. p. 638, c.) The combatants in the pancratium did not use the cestus, or if they did, it was the *ἱμάντες μαλακότεροι* [Cestus], so that the hands remained free, and wounds were not easily inflicted.

The name of these combatants was *pancratiatae* (*παγκρατισταί*) or *πάμμαχοι*. (Pollux iii. 30. 5.) They fought naked, and had their bodies anointed and covered with sand, by which they were enabled to take hold of one another. (Philostr. l. c.; Aristoph. *Pax*, 848.) In cases where the contests of the *pancratiatae* were not regulated by strict rules, it might, as at Sparta, sometimes happen, that the fighters made use of their teeth and nails (Philostr. l. c.; Lucian, *Demonax*, c. 49; Plut. *Lac. Apophth.* p. 234, d.); but such irregularities probably did not occur at any of the great public games.

When two *pancratiatae* began their contest, the first object which each of them endeavoured to accomplish, was to gain a favourable position, each trying to make the other stand so that the sun might shine in his face, or that other inconveniences might prevent his fighting with success. This struggle (*ἀγὼν περὶ τῆς στάσεως*, Aeschin. c. *Ctesiph.* p. 83, ed. Steph.) was only the introduction to the real contest, though in certain cases this preparatory struggle might terminate the whole game, as one of the parties might wear out the other by a series of stratagems, and compel him to give up further resistance. Sostratus of Sicyon had gained many a victory by such tricks. (Paus. vi. 4. § 1.) When the real contest began, each of the fighters might commence by boxing or by wrestling, accordingly as he thought he should be more successful in the one than in the other. The victory was not decided until one of the parties was killed, or lifted up a finger, thereby declaring that he was unable to continue the contest either from pain or fatigue. (Faber, *Agonist.* i. 8.) It usually happened that one of the combatants, by some trick or other, made his antagonist fall to the ground, and the wrestling, which then commenced, was called *ἀνακλινοτάλη*, and continued until one of the parties declared himself conquered or was strangled, as was the case at Olympia with Arrhichion or Arrachion of Phigalia, in Ol. 54. (Paus. viii. 40. § 1, &c.; Euseb. *Chron.* p. 150, Scalig.) A lively description of a struggle of this kind is given by Philostratus (l. c.). Sometimes one of

the fighters fell down on his back on purpose that he might thus ward off the attacks of his antagonist more easily, and this is perhaps the trick called *ὑπτασμός*. The usual mode of making a person fall was to put one foot behind his, and then to push him backward, or to seize him round his body in such a manner that the upper part being the heavier the person lost his balance and fell. Hence the expressions *μέσον λαμβάνειν, μεσολαθεῖν, μέσον αἰρεῖν, τὰ μέσα ἔχειν, διὰ μηρῶν σπᾶν*, &c. (Scalig. *ad Euseb. Chron.* p. 48.) The annexed woodcut represents two pairs of Pan-

cratiastae; the one on the right hand is an example of the *ἀνακλινομένη*, and that on the left of the *μεσολαθεῖν*. They are taken from Krause's *Gymnastik und Agonistik d. Hellen.* Taf. xxi. b. Fig. 35, b. 31, b., where they are copied respectively from Grivaud, *Rec. d. Mon. Ant.* vol. i. pl. 20, 21, and Krause, *Signorum vet. icones*, tab. 10.

At Rome the pankration is first mentioned in the games which Caligula gave to the people. (Dion Cass. lix. 13.) After this time it seems to have become extremely popular, and Justinian (*Novell.* cv. c. 1, provided *παγκραττον* be, as some suppose, a mistake for *παγκράτιον*) made it one of the seven solemnities (*ἑποδοί*) which the consuls had to provide for the amusement of the people.

Several of the Greek pankratiastae have been immortalised in the epinician odes of Pindar, namely Timodemus of Athens (*Nem.* ii.), Melissus and Strepsiadēs of Thebes (*Isth.* iii. and vi.), Aristocleides, Cleander and Phylacides of Aegina (*Nem.* iii., *Isth.* iv. v. and vi.), and a boy Pytheas of Aegina. (*Nem.* v.) But besides these the names of a great many other victors in the pankration are known. (Compare Fellows, *Discoveries in Lycia*, p. 313, Lond. 1841.)

The diet and training of the pankratiastae was the same as that of other Athletae. [ATHLETÆ.] (Compare Hieron. Mercurialis, *de Arte Gymnastica*; J. H. Krause, *Die Gymnastik und Agonistik der Hellenen*, vol. i. pp. 534—556.) [L. S.]

PANDECTAE or DIGESTA. In the last month of the year A. D. 530, Justinian by a Constitution addressed to Tribonian empowered him to name a commission for the purpose of forming a Code out of the writings of those Jurists who had enjoyed the *Jus Respondendi*, or, as it is expressed by the Emperor, "antiquorum prudentium quibus auctoritatem conscribendarum interpretandarumque legum sacratissimi principes praeberunt." The compilation however comprises extracts from some writers of the Republican period (*Const. Deo Auctore*), and from Arcadius Charsianus and Her-

mogenianus. Ten years were allowed for the completion of the work. The instructions of the Emperor were, to select what was useful, to omit what was antiquated or superfluous, to avoid unnecessary repetitions, to get rid of contradictions, and to make such other changes as should produce out of the mass of ancient Juristical writings a useful and complete body of law (*jus antiquum*). The compilation was to be distributed into Fifty Books and the Books were to be subdivided into Titles (*Tituli*). The work was to be named *Digesta*, a Latin term indicating an arrangement of materials, or *Pandectae*, a Greek word expressive of the comprehensiveness of the work. The name *Digesta* had been already used by Salvius Julianus for the title of his chief work. The term *Pandectae* had also been applied to compilations which contained various kinds of matter. (A. Gell. *Præf.*) It was also declared that no commentaries should be written on this compilation, but permission was given to make *Paratitla* or references to parallel passages with a short statement of their contents. (*Const. Deo Auctore*, s. 12.) It was also declared that abbreviations (*sigla*) should not be used in forming the text of the Digest. The work was completed in three years (17 Cal. Jan. 533) as appears by a Constitution both in Greek and Latin which confirmed the work and gave to it legal authority. (*Const. Tanta*, &c., and *Δέδικται*.)

Besides Tribonian, who had the general conduct of the undertaking, sixteen other persons are mentioned as having been employed on the work, among whom were the Professors Dorotheus and Anatolius, who for that purpose had been invited from the law-school of Berytus, and Theophilus and Cratinus who resided at Constantinople. The compilers made use of about two thousand different treatises, which contained above 3,000,000 lines (*versus, στίχοι*), but the amount retained in the compilation was only 150,000 lines. Tribonian procured this large collection of treatises, many of which had entirely fallen into oblivion, and a list of them was prefixed to the work, pursuant to the instructions of Justinian. (*Const. Tanta*, &c. s. 16.) Such a list is at present only found in the Florentine MS. of the Digest, but it is far from being accurate. Still it is probably the Index mentioned in the Constitution, *Tanta*, &c. (Puchta, *Bemerkungen ueber den Index Florentinus*, in *Rhein. Mus.* vol. iii. pp. 365—370.)

The work is thus distributed into Fifty Books, which, with the exception of three books, are subdivided into Titles, of which there are said to be 422. The books 30, 31, 32, are not divided into Titles, but have one common Title, *De Legatis et Fideicommissis*; and the first Title of the 45th book, *De Verborum Obligationibus*, is really divided into three parts, though they have not separate Rubricæ. Under each Title are placed the extracts from the several jurists, numbered 1, 2, 3, and so on, with the writer's name and the name and division of the work from which the extract is made. These extracts are said to amount to 9123. No name, corresponding to *Liber* or *Titulus*, is given to these subdivisions of *Tituli* which are formed by the extracts from the several writers, but Justinian (*Const. Tanta*, &c. s. 7) has called them "*leges*," and though not "*laws*" in the strict sense of the term, they were in fact "*law*;" and in the same sense the Emperor calls the jurists "*legialatores*." (*Const. Tanta*, &c. s. 16.) The Fifty

Books differ materially both in bulk, number of titles, and number of extracts. The Glossatores and their followers, in referring to the Digest, sometimes indicate the work by P, p, or II, and sometimes by D or ff, which according to some writers represents D, and according to others represents II. The oldest printed English work in which the Digest is cited is Bracton's *Treatise on the Law of England*, and his mode of citation is that of the Glossatores. (*Two Discourses* by G. Long, London, 1847, p. 107.)

There was also a division of the whole Fifty Books into Seven larger masses, called *Partes*, which corresponded to the seven main divisions of the works on the Edict, and had also a special reference to the course of instruction then established. Thus the first *Part* comprises Four Books, the second *Part* comprises seven Books, and so on. (*Const. Tanta*, &c. a. 2. "Igitur prima quidem pars," &c.)

The number of writers from whose works extracts were made is thirty-nine, comprehending those Jurists from whom extracts were made at second hand, as Q. Mucius Scaevola, the Pontifex, from whom four fragments, and Aelius Gallus from whom one fragment is taken; but omitting Servius Sulpicius Rufus, who is represented by Alfenus, distinguishing Aelius Gallus from Julius Aquila, Venuleius from Claudius Saturninus; assuming that there is only one Pomponius, and omitting Sabinus whose name is erroneously inserted in the Florentine Index. (Zimmern, *Geschichte des Röm. Privatrechts*, p. 224.)

The following is the list of Jurists from whose writings the Digest was constructed, as it is given in the Palingenesia of Hommelius, who has arranged the matter taken from each writer under his name, and placed the names in alphabetical order. The dates of the Jurists are chiefly founded on the authority of Zimmern. The figures in the third column indicate the proportions contributed to the Digest by each Jurist, estimated in the pages of Hommelius: (a) denotes that the contribution is under one page of the Palingenesia. This list includes Sabinus. The extracts from many of the writers are few and short: those from Ulpian are more than a third of the whole; and next to these the extracts from Paulus, Papinian, Julianus, Pomponius, Q. Cervidius Scaevola, and Gaius, are the largest.

It follows from the instructions of the Emperor and the plan of the work that the extracts from the Jurists are not always given in their exact words. It is probable that many short passages were interpolated, or altered, as a matter of necessity, though there seems to be no reason for supposing that these changes were carried farther than the nature of the case required. Still there is no doubt that the changes are such that the extracts from the old Jurists cannot be used for many purposes without some caution and judgment.

The distribution of the matter of the Digest into Books and Titles has evidently been made according to a plan, as will be obvious on inspecting the list of Tituli prefixed to the editions. Thus the 28th book treats of testaments, of the institution of a heres, &c., and the 29th of military testaments, and of codicils, &c.; in fact of matters appertaining to universal succession by testament: the 30th, 31st, and 32d books treat of legacies and fiduciary

* He must not be confounded with C. Aquilius Gallus, one of the masters of Servius Sulpicius, from whom there is no extract in the Digest.

bequests. There is a method of arrangement therefore so far as generally to bring things of the same kind together, but the compilation has no claims to being considered as a scientific arrangement of the matter of law. And indeed the compilers were evidently fettered in this respect by the Emperor's instructions, which required them to arrange (*digerere*) the whole body of the law comprised in the Digest, according to the Code and the Edictum Perpetuum.

It has long been a matter of dispute whether the compilers of the Digest were guided by any, and if any, by what principle in the arrangement of the several extracts under the respective Titles. This subject is examined in a very learned essay by Bluhme, entitled "*Die Ordnung der Fragmente in den Pandektentiteln.*" (*Zeitschrift*, vol. iv.) The investigation is of course founded on the titles of the several works of the Jurists, which as already observed are given at the head of each extract: thus, for instance, in the beginning of the 3d book, the first seven extracts are headed as follows: "*Ulpianus Libro sexagesimo quarto ad Edictum;*" "*Idem Libro primo Fideicommissorum;*" "*Idem Libro quarto ad Sabinum;*" "*Idem Libro quinto ad Sabinum;*" "*Paulus Libro primo ad Sabinum;*" "*Julianus Libro trigesimo tertio Digestorum;*" "*Paulus Libro secundo ad Sabinum.*" These will serve as samples of the whole and will explain the following remarks from Bluhme, whose conclusions are these: "The compilers separated all the writings from which extracts were to be made, into three parts, and formed themselves into three committees. Each committee read through in order the books that had fallen to its lot, yet so that books which were closely related as to their contents, were extracted at the same time. The books were compared with the Code of Justinian, and what was selected for the new compilation, was placed under a Title taken either from the Code, the Edict, or in case of necessity from the work itself which was extracted. What came under the same title was compared; repetitions were erased, contradictions were got rid of, and alterations were made, when the contents of the extracts seemed to require it. When the three committees had finished their labours, the present Digest was formed out of the three collections of extracts. In order to accomplish this, they made that collection the foundation of each Title which contained the most numerous or at least the longest extracts. With these they compared the smaller collections, striking out, as they had done before, repetitions and contradictions, making the necessary additions, and giving more exact definitions and general principles. What remained over of the smaller collections without having had an appropriate place assigned to it, was placed after the first collection, and its place in the series after the first collection was generally determined by the number of extracts."

"The Digest does not seem to have been subjected to any further revision."

Bluhme remarks that, although the Constitutions, *Deo Auctore*, *Imperatoriam*, *Tanta*, and *Cordi*, contain much information on the economy of the Digest and the mode of proceeding of the compilers, only the two following facts are distinctly stated: 1. That the extracts from the writings of the Jurists were arranged according to the titles of the Code and the Edict. 2. That the extracts were compared with the Code. Accordingly everything

else must be proved from an examination of the work itself, and this is the object of Bluhme's laborious essay. He observes that if a person will examine the extracts in the titles *De Verborum Significatione* and *De Regulis Juris* (50. tit. 16, 17) he will find a regular order observable in the titles of the juridical works from which the extracts are taken. Generally, the series of the books quoted shows that the original order of the works from which the extracts were to be made, has not been altered; and the several works generally follow in both these titles in the same order. A similar remark applies to the title *De Verborum Obligationibus* (Dig. 45. tit. 1), though there is a variation in all the three titles as to the relative order of the three masses, which are presently to be mentioned. "In the remaining titles of the Digest," adds Bluhme, "at first sight it appears as if one could find no other distinction in the titles of the extracts than this, that one part of them has a certain kind of connection, and another part merely indicates a motley assemblage of books out of which the extracts have been made. But on a closer comparison not only are three masses clearly distinguishable, but this comparison leads to the certain conclusion, that all the writings which were used in the compilation of the Digest, may be referred to three classes. The Commentaries on Sabinus (*Ad Sabinum*), on the Edict (*Ad Edictum*), and Papinian's writings are at the head of these three classes. We may accordingly denote these three masses respectively by the names Sabinian, the Edict, and Papinian. In each of these classes the several works from which extracts are made, always follow in regular order." This order is shown by a table which Bluhme has inserted in his essay.

This article, if read in connection with the articles *CODICES* and *INSTITUTIONES*, will give some general notion of the Legislation of Justinian, the objects of which cannot be expressed better than in the following words:—

"Justinian's plan embraced two principal works, one of which was to be a selection from the Jurists and the other from the Constitutions. The first, the Pandect, was very appropriately intended to contain the foundation of the law: it was the first work since the date of the Twelve Tables, which in itself and without supposing the existence of any other, might serve as a central point of the whole body of the law. It may be properly called a Code, and the first complete Code since the time of the Twelve Tables, though a large part of its contents is not Law, but consists of Dogmatic and the investigation of particular cases. Instead of the insufficient rules of Valentinian III., the excerpts in the Pandect are taken immediately from the writings of the Jurists in great numbers, and arranged according to their matter. The Code also has a more comprehensive plan than the earlier codes, since it comprises both Rescripts and Edicts. These two works, the Pandect and the Code, ought properly to be considered as the completion of Justinian's design. The *Institutiones* cannot be viewed as a third work, independent of both: it serves as an introduction to them or as a manual. Lastly, the *Novellae* are single and subsequent additions and alterations, and it is merely an accidental circumstance that a third edition of the Code was not made at the end of Justinian's reign, which would have comprised the *Novellae* which had a permanent

application." (Savigny, *Geschichte des Röm. Rechts im Mittelalter*, i. p. 14.)

There are numerous manuscripts of the Digest, both in libraries of the Continent and of Great Britain. A list of the MSS. of the Corpus Juris in the libraries of this country, which are principally in the Colleges of Oxford and Cambridge, is given by Dr. Hach in the *Zeitschrift* (vol. v.). But the MSS. of the Digest generally contain only parts of the work, and are not older than the twelfth century. The MS. called the Florentine is complete and probably as old as the seventh century. It is generally said that it had been kept at Amalfi time out of mind, and was given to the Pisans by Lotharius the Second, after the capture of Amalfi A. D. 1187, as a memorial of his gratitude to them for their aid against Roger the Norman. The Pisans kept it till their city was taken by the Florentines under Gino Caponi A. D. 1406, who carried this precious MS. to Florence where it is still preserved. There is however pretty good evidence that the MS. was not found at Amalfi. Odofredus says, that it was transmitted to Pisa by Justinian, and Bartolus adds, that it always had been, and then was at Pisa. At any rate it is the oldest MS. of the Pandectæ. An exact copy of this MS. was published at Florence in 1553, folio, with the title "Digestorum seu Pandectarum Libri Quinquaginta Ex Florentinis Pandectis representati; Florentiæ In Officina Laurentii Tarrentini Ducalis Typographi MDLIII Cum Summi Pontif. Car. V. Imp. Henrici II Gallorum Regis, Eduardi VI Angliæ regis, Cosmi Medicis Ducis Florent. II Privilegio." The facts relating to the history of the MS. appear from the dedication of Franciscus Turrellius to Cosmo I., Duke of Florence. Laelio Torelli and his son Francisco superintended the printing of the edition of this splendid work, which is invaluable to a scholar. The orthography of the MS. has been scrupulously observed. Those who cannot consult this work may be satisfied with the edition of the Corpus Juris by Charondæ, which the distinguished printer of that edition, Christopher Plantinus, affirms to be as exact a copy of the Florentine edition as it could be made. (Antwerp, 1575). As to the other editions of the Digest, see CORPUS JURIS. [G. L.]

PA'NDIA (παῖδια), an Attic festival, the real character of which seems to have been a subject of dispute among the ancients themselves; for according to the *Etymologicum M.* (s. v. Πᾶνδια; comp. Phot. s. v.), some derived it from Pandia, who is said to have been a goddess of the moon (this is also Wachsmuth's opinion, ii. p. 485); others from the Attic king Pandion; others again from the Attic tribe Dias, so that the Pandia would have been in the same relation to this tribe as the Panathenæa to Athens; and others from Διός, and call it a festival of Zeus. Welcker (*Aeschyl. Trilog.* p. 303) considers it to have been originally a festival of Zeus celebrated by all the Attic tribes, analogous to the Panathenæa, and thinks that when the confederacy, of which this festival was as it were the central point, became dissolved, the old festival remained, though its character was changed. It was celebrated at Athens in the time of Demosthenes (*c. Mid.* p. 517). Taylor in his note on this passage strangely confounds it with the Diasia, though it is well known that this festival was held on the 19th of Munychion, while

the Pandia took place on the 14th of Elaphebolion. (Compare Suidas and Hesych. s. v. Πᾶνδια; Böckh, *Abhandl. der Berlin. Akademie*, 1818, p. 65, &c.) [L. S.]

PANE'GYRIS (πανηγυρίς) signifies a meeting or assembly of a whole people for the purpose of worshipping at a common sanctuary. But the word is used in three ways:—1. For a meeting of the inhabitants of one particular town and its vicinity [EPHESIA]; 2. For a meeting of the inhabitants of a whole district, a province, or of the whole body of people belonging to a particular tribe [DELIA, PAMBOEOTIA, PANIONIA]; and 3. For great national meetings, as at the Olympic, Pythian, Isthmian, and Nemean games. Although in all panegyris which we know, the religious character forms the most prominent feature, other subjects, political discussions and resolutions, as well as a variety of amusements, were not excluded, though they were perhaps more a consequence of the presence of many persons than objects of the meeting. As regards their religious character, the panegyris were real festivals in which prayers were performed, sacrifices offered, processions held, &c. The amusements comprehended the whole variety of games, gymnastic and musical contests, and entertainments. Every panegyris, moreover, was made by tradespeople a source of gain, and it may be presumed that such a meeting was never held without a fair, at which all sorts of things were exhibited for sale. (Paus. x. 32. § 9; Strab. x. p. 486; Dio Chrysost. *Orat.* xxvii. p. 528.) In later times, when the love of gain had become stronger than religious feeling, the fairs appear to have become a more prominent characteristic of a panegyris than before; hence the Olympic games are called *mercatus Olympiacus* or *ludi et mercatus Olympiorum*. (Justin. xiii. 5; Vell. Pat. i. 8.) Festive orations were also frequently addressed to a panegyris, whence they are called *λόγοι πανηγυρικοί*. The Panegyricus of Isocrates, though it was never delivered, is an imaginary discourse of this kind. In later times any oration in praise of a person was called panegyricus, as that of Pliny on the emperor Trajan.

Each panegyris is treated of in a separate article. For a general account see Wachsmuth, *Hell. Alt.* i. p. 149, &c.; Böckh, *ad Pind. Ol.* vii. p. 175, &c.; Hermann, *Polit. Ant.* § 10. [L. S.]

PANELLE'NIA (πανελληνία), a festival, or perhaps rather a panegyris of all the Greeks, which seems to have been instituted by the emperor Hadrian, with the well-meant but impracticable view of reviving a national spirit among the Greeks. (Philostr. *Vit. Sophr.* ii. l. 5; Böckh, *Corp. Inscript.* i. p. 789, ii. p. 580.) [L. S.]

PANIO'NIA (πανιώνια), the great national panegyris of the Ionians on mount Mycale, where their national god Poseidon Heliconius had his sanctuary, called the Panionium. (Herod. i. 148; Strab. viii. p. 384; Paus. vii. 24. § 4.) One of the principal objects of this national meeting was the common worship of Poseidon, to whom splendid sacrifices were offered on the occasion. (Diodor. xv. 49.) As chief-priest for the conduct of the sacrifices, they always appointed a young man of Priene, with the title of king, and it is mentioned as one of the peculiar superstitions of the Ionians on this occasion, that they thought the bull which they sacrificed to be pleasing to the god if it roared at the moment it was killed. (Strab. l. c.) But

religious worship was not the only object for which they assembled at the Panionium; on certain emergencies, especially in case of any danger threatening their country, the Ionians discussed at these meetings political questions, and passed resolutions which were binding upon all. (Herod. i. 141, 170.) But the political union among the Ionians appears nevertheless to have been very loose, and their confederacy to have been without any regular internal organization, for the Lydians conquered one Ionian town after another, without there appearing anything like the spirit of a political confederacy; and we also find that single cities concluded separate treaties for themselves, and abandoned their confederates to their fate. (Herod. i. 169.)

Diodorus (xv. 49) says that in later times the Ionians used to hold their meeting in the neighbourhood of Ephesus instead of at Mycale. Strabo, on the other hand, who speaks of the Panionic panegyris as still held in his own time, does not only not mention any such change, but appears to imply that the panegyris was at all times held on the same spot, viz. on mount Mycale. Diodorus therefore seems to consider the Ephesian panegyris [ΕΦΗΣΙΑ] as having been instituted instead of the Panionia. But both panegyrises existed simultaneously, and were connected with the worship of two distinct divinities, as is clear from a comparison of two passages of Strabo, viii. p. 384, xiv. p. 639.

(Compare Tittmann's *Griech. Staatsv.* p. 668, &c.; Thirlwall, *Hist. of Greece*, ii. p. 102; C. F. Hermann, *Lehrb. der Gottesd. Alterth.* § 66. n. 2, 3.) [L. S.]

PANOPLIA. [ARMA.]

PANTOMIMUS is the name of a kind of actors peculiar to the Romans, who very nearly resembled in their mode of acting the modern dancers in the ballet. They did not speak on the stage, but merely acted by gestures, movements, and attitudes. All movements, however, were rhythmical like those in the ballet, whence the general term for them is *saltatio*, *saltare*; the whole art was called *musica muta* (Cassiodor. *Var.* i. 20); and to represent Niobe or Leda was expressed by *saltare Nioben* and *saltare Ledam*.

Mimic dancers of this kind are common to all nations, and hence we find them in Greece and Italy; in the former country they acquired a degree of perfection of which we can scarcely form an idea. But pantomimes in a narrower sense were peculiar to the Romans, to whom we shall therefore confine ourselves. During the time of the republic the name pantomimus does not occur, though the art itself was known to the Romans at an early period; for the first histriones said to have been introduced from Etruria were in fact nothing but pantomimic dancers [HISTRIO, p. 612], whence we find that under the empire the names *histrion* and *pantomimus* were used as synonymous. The pantomimic art, however, was not carried to any degree of perfection until the time of Augustus; whence some writers ascribe its invention to Augustus himself, or to the great artists who flourished in his reign. (Suidas, s. v. Ὀρχηστὴς παντομίμος.) The greatest pantomimes of this time were Bathyllus, a freedman and favourite of Maecenas, and Pylades and Hylas. (Juv. vi. 63; Suet. *Aug.* 45; Macrobi. *Sat.* ii. 7; Athen. i. p. 70.) The great popularity which the pantomimes acquired at Rome in the time of Augustus through these distinguished actors, was

the cause of their spreading not only in Italy but also in the provinces, and Tiberius found it necessary to put a check upon the great partiality for them: he forbade all senators to frequent the houses of such pantomimes, and the equites were not allowed to be seen walking with them in the streets of Rome, or to attend their performances in any other place than the public theatres, for wealthy Romans frequently engaged male and female pantomimes to amuse their guests at their repasts. (Tacit. *Annal.* i. 77.) But Caligula was so fond of pantomimes that one of them, M. Lepidus Mnester, became his favourite; and through his influence the whole class of pantomimes again recovered their ascendancy. (Suet. *Calig.* 36, 55, 57; Tacit. *Annal.* xiv. 21.) Nero not only patronised them, but acted himself as pantomime (Suet. *Nero*, 16, 26), and from this time they retained the highest degree of popularity at Rome down to the latest period of the empire.

As regards their mode of acting, we must first state that all pantomimes wore masks, so that the features of the countenance were lost in their acting. All the other parts of their body, however, were called into action, and especially the arms and hands, whence the expressions *manus loquacissimae*, *digiti clamosi*, *χρῆς παμφώνοι*, &c. Notwithstanding their acting with masks, the ancients agree that the pantomimes expressed actions, feelings, passions, &c., more beautifully, correctly, and intelligibly than it would be possible to do by speaking or writing. They were, however, assisted in their acting by the circumstance that they only represented mythological characters, which were known to every spectator. (Juv. vi. 63, v. 121; Horat. *Epist.* ii. 2, 125; Sueton. *Nero*, 54; Vell. Pat. ii. 83.) There were, moreover, certain conventional gestures and movements which every body understood. Their costume appears to have been like that of the dancers in a ballet, so as to show the beauty of the human form to the greatest advantage; though the costume of course varied according to the various characters which were represented. See the manner in which Plancus is described by Velleius (ii. 83) to have danced the character of Glaucus. In the time of Augustus there was never more than one dancer at a time on the stage, and he represented all the characters of the story, both male and female, in succession. (Lucian, *de Saltat.* c. 67; Jacobs, *ad Anthol.* ii. 1, p. 308.) This remained the custom till towards the end of the second century of our aera, when the several parts of a story began to be acted by several pantomimes dancing together. Women, during the earlier period of the empire, never appeared as pantomimes on the stage, though they did not scruple to act as such at the private parties of the great. During the latter time of the empire women acted as pantomimes in public, and in some cases they threw aside all regard to decency, and appeared naked before the public. The Christian writers therefore represent the pantomimic exhibitions as the school of every vice and licentiousness. (Tertull. *de Spect.* p. 269, ed. Paris; see also Senec. *Quaest. Nat.* vii. 32; Plin. *Epist.* v. 24; Ammian. Marc. xiv. 6; Procop. *Anecdol.* 9.)

Mythological love stories were from the first the favourite subjects of the pantomimes (Ovid. *Remed. Am.* 753), and the evil effects of such sensual representations upon women are described in strong colours by Juvenal (vi. 63, &c.). Every represent-

ation was based upon a text written for the purpose. This text was called the *Canticum* (Macrob. *Sat.* ii. 7; Plin. *Epist.* vii. 24), and was mostly written in the Greek language. Some of them may have represented scenes from, or the whole subjects of Greek dramas; but when Arnobius (*adv. Gent.* 4, compare Antholog. i. p. 249) states, that whole tragedies of Sophocles and Euripides were used as texts for pantomimic representations, he perhaps only means to say that a pantomimus sometimes represented the same story contained in such a tragedy, without being obliged to act or dance every sentiment expressed in it. The texts of the pantomimes or cantica were sung by a chorus standing in the background of the stage, and the sentiments and feelings expressed by this chorus were represented by the pantomimus in his dance and gesticulation. The time was indicated by the *scabellum*, a peculiar kind of sole made of wood or metal, which either the dancer or one of the chorus wore. The whole performance was accompanied by musical instruments, but in most cases by the flute. In Sicily pantomimic dances were called *βαλλισμοί*, whence perhaps the modern words ball and ballet. (Compare Leasing, *Abhandlung von den Pantomimen der Alten*; Grynar, in *Ersch and Gruber's Encyclop. s. v. Pantomimische Kunst des Alterthums*; Welcker, *Die griechischen Tragödien*, pp. 1317, 1409, 1443, 1477.) [L. S.]

PAPY'RUS. [LIBER.]

PAR IMPAR LUDERE (ἀρτιασμός, ἀρτιόζευ, ἄρτια ἢ περιττὰ παίζειν), the game at odd and even, was a favourite game among the Greeks and Romans. A person held in his hand a certain number of astragali or other things, and his opponent had to guess whether the number was odd or even. (Pollux, ix. 101; Plato, *Lys.* p. 207; Hor. *Sat.* ii. 3. 248; Suet. *Aug.* 71; *Nuv. Eleg.* 79; Becker, *Gallus*, vol. ii. p. 233.)

PARA'BASIS. [COMOEDIA.]

PARA'BOLON (παρόβολον or παραβόλιον), a small fee paid by the appellant party, on an appeal (ἔφεσις) from an inferior to a superior tribunal; as for instance, from an arbitrator or a magistrate, or from the court of the *δημόται*, or from the Senate of Five Hundred, to the jury or Heliastic court. As to the sum to be paid, and other particulars, we are uninformed. (Pollux, viii. 62, 63; Meier, *Att. Proc.* pp. 767, 772.) [C. R. K.]

PARACATA'BOLE (παρακαταβολή), a sum of money required of a plaintiff or petitioner in certain cases, as a security that his complaint or demand was not frivolous, or made on slight and insufficient grounds. Such was the deposit made in certain inheritance causes, viz. a tenth part of the value of the property sought to be recovered. [HERES.] So also in the proceeding termed *ἐνεπίσκημμα*, which was a suit instituted against the public treasury by a creditor to obtain payment out of his debtor's confiscated goods, a fifth part of the value was deposited. It was returned to the petitioner, if successful; otherwise it went to the state. (Suidas, s. v. *Ἐνεπίσκημμα*.) The money was deposited either at the *ἀνδκρίσις*, or on the commencement of the cause. The word *παρακαταβολή* signifies both the paying of the deposit, and the money deposited; and, being a word of more general import, we find it used to denote other kinds of deposits, as the *πρωτανεία* and *παράσσις*. (Pollux, viii. 32; Meier, *Att. Proc.* pp. 604, 616—621.) [C. R. K.]

PARACATATHE'CE (παρακαταθήκη), generally signifies a deposit of something valuable with a friend or other person, for the benefit of the owner. Thus, if I deliver my goods to a friend, to be taken care of for me; or if I deposit money with a banker; such delivery or *bailment*, or the goods bailed or delivered, or the money deposited, may be called *παρακαταθήκη* (Herod. vi. 86; Demosth. *pro Phorm.* 946); and the word is often applied metaphorically to any important trust committed by one person to another. (Demosth. c. *Aphob.* 840; Aesch. c. *Timaroch.* 26, ed. Steph., *de Fals. Leg.* 47.) As every bailor is bound to restore to the bailor the thing deposited; either on demand (in case of a simple bailment), or on performance of the conditions on which it was received; the Athenians gave a *παρακαταθήκης δίκην* against a bailor who unjustly withheld his property from the owner, *ἀπεστέρησε τὴν παρακαταθήκην*. (Pollux, vi. 154.) An example of such an action against a banker is the *παραξίτικος λόγος* of Isocrates. A pledge given to a creditor could not be recovered, except on payment of the money owed to him; but, after selling the article, and satisfying his debt out of the proceeds, he would of course be bound to restore the surplus (if any) to the pledgor. It follows from the nature of the *παρὰξ. δίκην* that it was *ἀντιμύτος*, but it is not improbable that the additional penalty of *ἀτιμία* might be inflicted on a defendant who fraudulently denied that he had ever received the deposit.

The difficulty of procuring safe custody for money, and the general insecurity of movable property in Greece, induced many rich persons to make valuable deposits in the principal temples, such as that of Apollo at Delphi, Jupiter at Olympia, and others. (Meier, *Att. Proc.* pp. 512—515.) It may be observed that *τίθεσθαι, παρακατατίθεσθαι*, in the middle voice, are always used of a person making a deposit for his own benefit, with the intention of taking it up again. Hence the expression *δέσθαι χάριν*, to confer an obligation, which gives the right (as it were) of drawing upon the obliged party for a return of the favour at some future time. *Κομίζεσθαι* is to recover your property or right. (Isocrat. c. *Euthym.* 400, ed. Steph.) [C. R. K.]

PARADI'SUS (παράδεισος), was the name given by the Greeks to the parks or pleasure-grounds, which surrounded the country residences of the Persian kings and satraps. They were generally stocked with animals for the chase, were full of all kinds of trees, watered by numerous streams, and enclosed with walls. (Xen. *Anab.* i. 4. § 10, *Cyr.* i. 3. § 14, 4. § 5, *Hell.* iv. 1. § 33, *Oec.* iv. 13; Diod. Sic. xvi. 41; Curt. viii. i. § 11, 12; Gell. ii. 20.) These paradises were frequently of great extent; thus Cyrus on one occasion reviewed the Greek army in his paradise at Celaenae (Xen. *Anab.* i. 2. § 9), and on another occasion the Greeks were alarmed by a report that there was a great army in a neighbouring paradise. (*Id.* ii. 4. § 16.)

Pollux (ix. 13) says that *παράδεισος* was a Persian word, and there can be no doubt that the Greeks obtained it from the Persians. The word, however, seems to have been used by other Eastern nations, and not to have been peculiar to the Persians. Gesenius (*Lexicon Hebraicum*, p. 838. Lips. 1833) and other writers suppose it to be the same as the Sanakrit *paradisa*, but this word does

not mean a *land elevated and cultivated*, as *Genesis* and others state, but merely a *foreign country*, whence is derived *paradēini*, a *foreigner*. The word occurs in Hebrew (פָּרְדֵּי, *parēdēs*) as early as the time of Solomon (*Eccles.* ii. 5; *Cant.* iv. 13), and is also found in Arabic (*firdaus*), and Armenian (*pardes*, Schroeder, *Dissert. Thesaur. Ling. Armen. praemiss.* p. 56).

PARAGAUDA (παγαῶδης), the border of a tunic [LIMBUS], enriched with gold thread, worn by ladies, but not allowed to men except as one of the insignia of office. These borders were among the rich presents given by *Furius Placidus* A.D. 343, when he was made consul (*linceae paragaudae*, *Vopisc. Aul.* 15). Under the later emperors the manufacture of them was forbidden except in their own gynaeceae. (Cod. 11. tit. 8. s. 1, 2.) The term *paragauda*, which is probably of Oriental origin, seems also to have been converted into an adjective, and thus to have become the denomination of the tunic, which was decorated with such borders. (*Lydus de Mag.* i. 17, ii. 4. 13.) [J. Y.]

PARAGRAPHE (παράγραφη). This word does not exactly correspond with any term in our language, but may without much impropriety be called a *plea*. It is an objection raised by the defendant to the admissibility of the plaintiff's action: "exceptio rei adversus actorem, actionemve, querentis aut de foro haud competente, aut de tempore, modove procedendi illegitimo." (Reiske, *Index Gr. in Orat.*) Sir William Jones, in the preface to his translation of *Isaeus*, compares it with a *demurrer*. But this is not so correct; because a *demurrer* is an objection arising out of the adversary's own statement of his case; whereas the *παράγραφη* was an objection depending on facts stated by the defendant himself, and therefore rather resembles a *plea*, or (more strictly) a *special plea*. This appears from the *παράγραφικοί λόγοι* of *Demosthenes*, in which we find the defendant introducing new allegations into the cause, and supporting them by proof. Thus, in the speech against *Nausimachus* and *Xenophanes*, the ground of objection is, that the father of the defendants having obtained a release from the plaintiffs, it was no longer open to the plaintiffs to bring an action for the same cause. But the first mention of this release is made by the defendants in their plea. In the speech against *Zenothemis* the defendant objects, that the *ἐμπορικὴ δίκη* does not lie, because there was no written contract between him and the plaintiff on a voyage to or from Athens; and this (says he) appears from the declaration itself (*ἐν τῷ ἐγκλήματι*). As parties could not be defeated at Athens by a technical objection to the pleadings, the defendant in the above case, notwithstanding the defective statement of the plaintiff in the declaration, was compelled to bring forward his objection by plea, and to support it before the jury. In the speech against *Phormio*, the plaintiff says that as the defendant only denies that he has committed a breach of the contract, there was no occasion for a *παράγραφη*: the question merely was, whether the plaintiff's charge was true. It seems that a *παράγραφη* might be put in, not only when the defendant could show that the cause of action was discharged, or that it was not maintainable in point of law; but also when the form of action was misconceived, or when it was commenced at a wrong time, or brought before the wrong magistrate (*ἡγεμὸν δικαστηρίου*). In

the last case the *παράγραφη* would answer to our *plea to the jurisdiction*. (*Demosth. c. Pantanen.* 976; *Suidas*, s. v. *Παράγραφη* and *εὐθυδικία*.)

The *παράγραφη*, like every other answer (*ἀντιγραφὴ*) made by the defendant to the plaintiff's charge, was given in writing; as the word itself implies. (*Demosth. c. Phorm.* 912.) If the defendant merely denied the plaintiff's allegations, or (as we might say) *pleaded the general issue*, he was said *εὐθυδικίαν εἰσιέναι*, or *ἀπολογεῖσθαι τὴν εὐθυδικίαν εἰσιόν*. In this case a court was at once held for the trial of the cause. If, however, he put in a *παράγραφη*, he maintained that the cause was not *εἰσαγωγίμος* (*παρεργάματο μὴ εἰσαγωγίμον εἶναι τὴν δίκην*), and in that case a court was to be held to try the preliminary question, whether the cause could be brought into court or not. Upon this previous trial the defendant was considered the *actor*, and hence is said by *Demosthenes* (*c. Phorm.* 908) *κατηγορεῖν τοῦ δίκοντος*. He began, and had to maintain the ground of objection which he relied upon. (*Demosth. c. Steph.* 1103.) If he succeeded, the whole cause was at an end; unless the objection was only to the form of action, or some other such technicality, in which case it might be recommenced in the proper manner. If, however, the plaintiff succeeded, the jury merely decided *εἰσαγωγίμον εἶναι τὴν δίκην*, and then the original action, which in the meantime had been suspended, was proceeded with. (*Demosth. c. Zenoth.* 888; *Lys. de Publ. Pec.* 148, ed. Steph.) Both parties on the trial of the *παράγραφη* were liable to the *ἐπιθελία*, on failure to obtain a fifth part of the votes.

The course of proceeding on a *παράγραφη* was obviously calculated to delay the progress of the cause, and was therefore not looked on with favour by the dicasts. Προφάσεις, ἰπνομοσίαι, παραγραφαί, τὰ ἐκ τῶν νόμων, ἐκπτώσεις, delays, pleas, legal objections, are classed together by the orator as being the manoeuvres of defendants to defeat justice. Hence we find in the extant *παράγραφικοί λόγοι*, that the defendant, in order to remove the prejudice of the dicasts against himself, not only supports the ground of the *παράγραφη*, but discusses the general merits of the cause, and endeavours to show that there is no foundation for the plaintiff's complaint. And there is no doubt that the dicasts were materially influenced by such discussion, however in strictness irrelevant. (*Demosth. c. Mid.* 541, *c. Laer.* 924, *c. Steph.* 1117, *pro Phorm.* 944, *Argum. Or. c. Zenoth.*) The same observation applies to the *διαμαρτυρία*. [See *HEKES*.] (*Isaeus, de Philoct.* her. 60, *de Apoll.* her. 63, ed. Steph.; *Demosth. c. Leoch.* 1097.)

There was no such thing as this proceeding by *παράγραφη*, until after the expulsion of the thirty tyrants, when a law was passed on the proposal of *Archinus*, ἂν τις διαδίζηται παρὰ τοῦς ἄρκους, εἰ εἶναι τῷ φερόντι παραγράφασθαι, τοὺς δὲ ἄρχοντας περὶ τοῦτου πρῶτον εἰσάγειν, λάγειν δὲ πρότερον τὸν παραγραφάμενον, ὁπότερος δ' ἂν ἤττηθῃ, τὴν ἐπιθελίαν ὀφείλειν. The object of this law appears to have been, to enable any person against whom an information or prosecution might be brought, or action commenced, for any matter arising out of the late political troubles, to obtain the benefit of the general amnesty, by specially pleading the same, and so bringing his defence in a more solemn manner before the court. The same privilege was afterwards extended to other grounds

of defence. (See the opening of the speech of Isocrates against Callimachus.) Before this time all special objections to the adversary's course of proceeding seem to have been called *ἀντιγραφὰι*, and sometimes *ἐξουμοσίαι*, because an oath was taken by the party who tendered them. (Lysias, c. *Panod.* 166, ed. Steph.; Aristoph. *Eccles.* 1026; Schol. *ad loc.*; Suidas, s. v. *Ἐξουμοσία*; Meier, *Att. Proc.* pp. 644—650.) [C. R. K.]

ΠΑΡΑΛΟΣ (*πάρalos*), and SALAMINIA (*σαλαμίνια*). The Athenians from very early times kept for public purposes two sacred or state vessels, the one of which was called *Paralus* and the other *Salaminia*: the crew of the one bore the name of *παράλιται* or *πάρaloi*, and that of the other *σαλαμίνιοι*. (Phot. s. v. *Πάρalos* and *πάρaloi*.) In the former of these two articles Photius erroneously regards the two names as belonging to one and the same ship. (Pollux, vii. 116; Hesych. s. v. *Παράλιτης*.) The *Salaminia* was also called *Δηλία* or *Θεωπλις*, because it was used to convey the *θεῶπολι* to Delos, on which occasion the ship was adorned with garlands by the priest of Apollo. (Plat. *Phaed.* p. 58, c.) Both these vessels were quick-sailing triremes, and were used for a variety of state purposes: they conveyed theories, despatches, &c. from Athens, carried treasures from subject countries to Athens, fetched state criminals from foreign parts to Athens, and the like. (Thucyd. vi. 53, 61.) In battles they were frequently used as the ships in which the admirals sailed. These vessels and their crew were always kept in readiness to act, in case of any necessity arising; and the crew, although they could not for the greater part of the year be in actual service, received their regular pay of four oboli per day all the year round. This is expressly stated only of the *Paralus* (Harpocrat. and Phot. s. v. *Πάρalos*), but may be safely said of the *Salaminia* also. The statement of the scholiast on Aristophanes (*Av.* 147; comp. Suidas, s. v. *Σαλαμίνια πᾶσις*), that the *Salaminia* was only used to convey criminals to Athens, and the *Paralus* for theories, is incorrect, at least if applied to the earlier times. When Athens had become a great maritime power, and when other ships were employed for purposes for which before either the *Salaminia* or the *Paralus* had been used, it is natural to suppose that these two vessels were chiefly employed in matters connected with religion, as theories, and in extraordinary cases, such as when a state criminal like Alcibiades was to be solemnly conveyed to Athens. The names of the two ships seem to point to a very early period of the history of Attica, when there was no navigation except between Attica and Salamis, for which the *Salaminia* was used, and around the coast of Attica, for which purpose the *Paralus* was destined. In later times the names were retained, although the destination of the ships was principally to serve the purposes of religion, whence they are frequently called the sacred ships. (Böckh, *Publ. Econ. of Athens*, p. 240, 2d ed.; Güller, *ad Thucyd.* iii. 33; Schömann, *ad Isaeum*, p. 296.) [L. S.]

PARANOIAS GRAPHE (*παράνοιας γραφή*). This proceeding may be compared to our commission of lunacy, or writ *de lunatico inquirendo*. It was a suit at Athens that might be instituted by a son or other relation against one who, by reason of madness or mental imbecility, had become incapable of managing his own affairs. If the com-

plaint was well grounded, the court decreed that the next heir should take possession of the lunatic's property, and probably also made some provision for his being put in confinement, or under proper care and guardianship. (Suidas, s. v. *Παράνοια*; Xen. *Mem.* i. 2. § 49; Aristoph. *Nub.* 844; Aesch. c. *Ctes.* 89, ed. Steph.) It is related of Sophocles, that having continued to write tragedies to an advanced age, and by reason thereof neglected his family affairs, he was brought before the court by his sons, and accused of lunacy; that he then read to the judges his *Oedipus Coloneus*, which he had just composed, and asked them if a man out of his mind could write such a poem as that; whereupon they acquitted him. (Cic. *de Senect.* 7.) The story is told differently by the anonymous author of the life of Sophocles; who speaks of the suit as taking place between Iophon and his father, and seems to intimate that it was preferred before the *φρόνες*. In this last point he is supported by the Scholiast on Aristophanes, but it can hardly be correct; as we have no other authority for supposing that the *φρόνες* had such a jurisdiction, and Pollux (viii. 89) expressly says that the *παράνοιας γραφή* came before the archon; to whom indeed it peculiarly belonged, as being a matter connected with family rights; and, if so, we are to understand that it came before the archon in the regular way, as *ἡγεμὼν δικαστηρίου*. (Meier, *Att. Proc.* pp. 296—298.) It is highly probable that there was some foundation for this anecdote of Sophocles. He might perhaps have given offence to his sons by that penuriousness which is said to have crept upon him in his old age; and Iophon being a poet, and lying under the suspicion of being assisted by his father, might possibly be induced by a mean jealousy to bring this charge against him. (See Aristoph. *Ran.* 78, *Pax*, 697.) The play of *Oed. Col.* appears to exhibit the wounded feelings of the writer. (See more especially 337, 441.) [C. R. K.]

ΠΑΡΑΝΟΜΟΝ GRAPHE (*παράνομον γραφή*). An indictment for propounding an illegal, or rather unconstitutional measure or law. We have seen [*ΝΟΜΟΘΗΤΗΣ*] that any Athenian citizen was at liberty to make a motion in the popular assembly, to pass a new law, or amend an old one. In order to check rash and hasty legislation, the mover of any law or decree, though he succeeded in causing it to be passed, was still amenable to criminal justice, if his enactment was found to be inconsistent with other laws that remained in force, or with the public interest. (Demosth. c. *Timoc.* 710, 711.) Any person might institute against him the *γραφὴ παράνομον* within a year from the passing of the law. If he was convicted, not only did the law become void, but any punishment might be inflicted on him, at the discretion of the judges before whom he was tried; for it was a *τιμωρὸς ἄγον*. A person thrice so convicted lost the right of proposing laws in future. The cognizance of the cause belonged to the *Thesmothetae*. (Schömann, *Ant. Jur. Pub. Gr.* p. 244.) The prosecutor was compelled to take an oath, called by the same name as that taken to obtain delay in courts of justice (*ἐξουμοσία*), because it had the effect of delaying the operation of the proposed measure, which otherwise might have come into force immediately. (Schömann, *Id.* p. 224.) Examples of such prosecutions are the speech of Demosthenes against Timocrates, and that of Aeschines against Ctesiphon. They both comment on

the importance of the prosecution, as tending to preserve the existing laws, and maintain constitutional liberty. (Demosth. *c. Tim.* 748, 749; Aesch. *c. Ctes.* 54, 82, ed. Steph.) Notwithstanding this check, the mania for legislation appears to have increased so greatly at Athens in later times, that Demosthenes (*c. Leptin.* 485) declares that ψήφισμάτων οὐδ' ἐνιαυτὸν διαφέρουσιν οἱ νόμοι. This arose from the relaxation of that precautionary law of Solon, which required every measure to be approved by the νομοθέται, before it could pass into law. (ΝΟΜΟΤΗΤΑΣ, and Schömann, *Id.* p. 229.) It is obvious that, while the people in assembly had the power of making decrees which could remain in force for a year, if they wished to evade the law of Solon, all they had to do was to renew their decree from year to year, and thus in practice the ψήφισμα became νόμος.

If the year had elapsed, the propounder of the law could not be punished, though the law itself might be repealed in the ordinary way by the institution of proceedings before the νομοθέται, before whom it was defended by the five σύνδικοι. The speech against Leptines was made in a proceeding against the law itself, and not against the mover. As the author of the second argument says, παρελθόντος τοῦ χρόνου, ἐν ᾧ ὁ κείνου ἦν κρείσσει καὶ τιμωρίᾳ γράφον τις νόμον, φαίνεται Λεπτίνης ἀκρίβυνος. ὅθεν πρὸς αὐτὸν, ἀλλ' οὐ κατ' αὐτοῦ δ λόγος. (Hermann, *Pol. Ant.* § 132.) [C. R. K.]

PARANYMPHUS (παράνυμφος). [ΜΑΤΡΙΜΟΝΙΟΝ, p. 737, a.]

PARAPETASMA. [VULUM.]

PARAPHERNA. [DOS.]

PARAPRESBEIA (παρὰπροσβεία), signifies any corrupt conduct, misfeasance, or neglect of duty on the part of an ambassador; for which he was liable to be called to account and prosecuted on his return home. (Demosth. *c. Mid.* 515, *de Fals. Leg.* 342.) Ambassadors were usually elected by the people in assembly; they either had instructions given to them, or not; in the latter case they were called ἀντοκράτορες, envoys with full powers, or plenipotentiary. (Thucyd. v. 45; Aesch. *c. Ctes.* 62, ed. Steph.) To act contrary to their instructions (παρὰ τὸ ψήφισμα προσβείναι) was a high misdemeanour. (Demosth. *de Fals. Leg.* 346.) On their return home they were required immediately to make a report of their proceedings (ἀπαγγέλλειν τὴν προσβείαν) first to the Senate of Five Hundred, and afterwards to the people in assembly. (Aesch. *de Fals. Leg.* 30, ed. Steph.; Aristoph. *Ach.* 61; Schömann, *Ant. jur. pub. Gr.* p. 234.) This done, they were *functi officio*; but still, like all other persons who had held an office of trust, they were liable to render an account (εὐθύνας) of the manner in which they had discharged their duty. (Demosth. *de Fals. Leg.* 367, 406.) The persons to whom such account was to be rendered were the λογισταί, and the officers associated with them, called εὐθύνοι. A pecuniary account was only rendered in cases where money had passed through the hands of the party; in other cases, after stating that he had neither spent nor received any of the public money, the accounting party was discharged, unless there was reason for thinking that he deserved to be proceeded against for misconduct. The λογισταί themselves had power to summon the party at once to appear as a criminal, and undergo the ἀνδραρισίς in their office (λογιστήριον), upon which they would direct the

συνήγοροι to prosecute; and this probably was the ordinary course in case of any pecuniary malversation. Accusations, however, of a more general nature were commonly preferred by individuals, giving information to the λογισταί, who, for the purpose of giving any citizen an opportunity of so doing, caused their κήρυξ to make proclamation in public assembly, that such a person was about to render his account, and to ask if any one intended to accuse him. If an accuser appeared, his charge would be reduced to the form of a γραφή, and the prosecution would be conducted in the usual way, the λογισταί being the superintending magistrates. (Pollux, viii. 40, 45; Schömann, *Id.* p. 240; Meier, *Att. Proc.* pp. 214—224.) Magistrates, who were annually elected, rendered their accounts at the end of the official year; but ambassadors, who were extraordinary functionaries, had no time limited for this purpose. Aeschines delayed giving an account of his embassy to Philip for three years. (Demosth. *de Fals. Leg.* 374; Thirlwall, *Gr. Hist.* vol. vi. p. 26.) We can hardly suppose, however (as Thirlwall states), that the time of rendering the account was optional with the ambassador himself; since, not to mention the power of the λογισταί, it was open to any man to move for a special decree of the people, that the party should be called to account immediately. The γραφή παρὰπροσβείας was a τιμωρὸς ἄγρων (Meier, *Att. Proc.* p. 193); and as it might comprise charges of the most serious kind, such as treachery and treason against the state, the defendant might have to apprehend the heaviest punishment. Aeschines (*de Fals. Leg.* 28, 52) reminds the dicasts of the great peril to which he is exposed, and makes a merit of submitting to his trial without fear. Besides the γραφή, an εἰσαγγελία might be brought against an ambassador; upon which the accused would be committed to prison, or compelled to give bail for his appearance. This course was taken by Hyperides against Philocrates, who avoided his trial by voluntary exile. (Aeschin. *c. Ctes.* 65, ed. Steph.) [C. R. K.]

PARASANGA (δ παρὰσαγγής), a Persian measure of length, frequently mentioned by the Greek writers. It is still used by the Persians, who call it *farsang*, which has been changed in Arabic into *farsakh*.

According to Herodotus (ii. 6, v. 53, vi. 42) the parasang was the half of the Egyptian schoenus, and was equal to 30 Greek stadia. Suidas (*s. v.*) and Hesychius (*s. v.*) assign it the same length; and Xenophon must also have calculated it at the same, as he says (*Anab.* ii. 2. § 6) that 16,050 stadia are equal to 535 parasangs (16,050 ÷ 535 = 30.). Agathias (ii. 21), however, who quotes the testimony of Herodotus and Xenophon to the parasang being 30 stadia, says that in his time the Iberi and Persians made it only 21 stadia. Strabo (xi. p. 518) also states, that some writers reckoned it at 60, others at 40, and others at 30 stadia; and Pliny (*H. N.* vi. 26. a. 30) informs us, that the Persians themselves assigned different lengths to it. Modern English travellers estimate it variously at from 3½ to 4 English miles, which nearly agrees with the calculation of Herodotus. These variations may probably be accounted for by the fact, to which attention has been called under ΜΕΝΣΥΡΑ, that itinerary distances were originally indefinite, and therefore that the values of the parasang, at least those given by the earlier Greek writers, were only *computed values*. This

view is confirmed by the opinion of the best Oriental scholars respecting the etymology of the word. (Comp. Ukert, *Geogr. d. Griech. u. Röm.* vol. i. pt. 2, p. 77, and *über die Art d. Gr. u. R. die Entfernungen zu bestimmen.*) Its true etymology is doubtful. Röddiger (in *Erach und Gruber's Encyclopädie*, s. v. *Paras.*) supposes the latter part of the word to be the same as the Persian *seng*, "a stone," and the former part to be connected with the Sanskrit *pāra*, "end," and thinks that it may have derived its name from the stones placed at the end of certain distances on the public roads of Persia.

PARASE/MON (*παράσημον*). [INSIGNÆ.]

PARASITI (*παράσιτοι*) properly denotes persons who dine with others. In the early history of Greece the word had a very different meaning from that in which it was used in later times. Τὸ δὲ τοῖς παράσιτου ὄνομα πάλαι μὲν ἦν σεμνὸν καὶ ἱερὸν, says Athenæus (vi. p. 234), and he proves from various decrees (*ψηφίσματα*) and other authorities that anciently the name *παράσιτος* was given to distinguished persons, who were appointed as assistants to certain priests and to the highest magistrates. As regards the priestly and civil parasites, the accounts of their office are so obscure that we are scarcely able to form any definite notion of it. An ancient law (Athen. l. c.) ordained that each of the priestly parasites should select from the *Βουκολλία* the sixth part of a medimnus of barley, and supply with it the Athenians who were present in the temple, according to the custom of their fathers; and this sixth of a medimnus was to be given by the parasites of Acharnae. The meaning of this very obscure law is discussed by Preller. (*Polemonis Fragm.* p. 115, &c.) Thus much, however, is clear, that the parasites were elected in the demes of Attica from among the most distinguished and most ancient families. We find their number to have been twelve, so that it did not coincide with that of the demes. This may be accounted for by supposing that in one demos two or more gods were worshipped, whose service required a parasite; while in another there was no such divinity. The gods in whose service parasites are mentioned, are Hercules, Apollo, the Anaces, and Athena of Pallene. Their services appear to have been rewarded with a third of the victims sacrificed to their respective gods. Such officers existed down to a late period of Greek history, for Clearchus, a disciple of Aristotle, said that parasites in his own days continued to be appointed in most Grecian states to the most distinguished magistrates. (Athen. vi. p. 235.) These, however, must have been different from the priestly parasites. Solon in his legislation called the act of giving public meals to certain magistrates and foreign ambassadors in the prytaneum, *παράσσειν* (Plut. *Sol.* 24), and it may be that the parasites were connected with this institution. (Compare Pollux, vi. c. 7.)

The class of persons whom we call parasites was very numerous in ancient Greece, and appears to have existed from early times, though they were not designated by this name. The comedies of Aristophanes contain various allusions to them, and Philippus, who is introduced in the Symposium of Xenophon, as well as a person described in some verses of Epicharmus preserved in Athenæus, are perfect specimens of parasites. But the first writer who designated these persons by the name of *παράσιτοι* was Alexis in one of his comedies. (Athen. vi. p. 235.) In the so called middle and

new Attic comedy, and in their Roman imitations, the parasites are standing characters, and although they are described in very strong colours in these comedies, yet the description does not seem to be much exaggerated, if we may judge from other accounts of real parasites. We shall not therefore be much mistaken in borrowing our description of parasites chiefly from these comedies.

The characteristic features common to all parasites are importunity, love of sensual pleasures, and above all the desire of getting a good dinner without paying for it. According to the various means they employed to obtain this object, they may be divided into three classes. The first are the *γελωτοποιοί* or jesters; who, in order to get some invitation, not only tried to amuse persons with their jokes, but even exposed their own person to ridicule, and would bear all kinds of insult and abuse if they could only hope to gain the desired object. Among these we may class Philippus in the Symposium of Xenophon, Ergastilus in the Captivi, and Gelasimus in the Stichus of Plautus. The second class are the *κόλακες* or flatterers (*assentatores*), who, by praising and admiring vain persons, endeavoured to obtain an invitation to their house. Gnatho in the Eunuchus of Terence, and the Artotrogus in the Miles Gloriosus of Plautus, are admirable delineations of such characters. The third class are the *Σεπαινευτικοί* or the officious, who by a variety of services even of the lowest and most degrading description endeavoured to acquire claims to invitations. (Plut. *de Adul.* 23, *de Educat.* 17.) Characters of this class are the parasites in the Asinaria and Menaechmi of Plautus, and more especially the Curculio and Satrio in the Persæ of Plautus, and the Phormio of Terence. From the various statements in comedies and the treatise of Plutarch, *De Adulatoris et Amici Discrimine*, we see that parasites always tried to discover where a good dinner was to be had, and for this purpose they lounged about in the market, the palaestrae, the baths, and other public places of resort. After they had fixed upon a person, who was in most cases probably an inexperienced young man, they used every possible means to induce him to invite them. No humiliation and no abuse could deter them from pursuing their plans. Some examples of the most disgusting humiliations which parasites endured, and even rejoiced in, are mentioned by Athenæus (vi. p. 249) and Plutarch. (*De Occult. vii.* 1, *Sympos.* vii. 6; compare Diog. Laërt. ii. 67.) During the time of the Roman emperors a parasite seems to have been a constant guest at the tables of the wealthy. (Lucian, *de Parasit.* 58.)

(Compare Becker, *Charikles*, vol. i. p. 490; Le Beau, in the *Histoire de l'Acad. des Inscriptions*, vol. xxxi. p. 61, &c.; M. H. E. Meyer, in *Erach und Gruber's Encyclopädie*, s. v. *Parasiten*.) [L. S.]

PARASTADES. [ΑΝΤΑΞ.]

PARASTASIS (*παράστασις*), a fee of one drachm paid to an arbitrator by the plaintiff, on bringing his cause before him; and by the defendant, on putting in his answer. The same name was given to the fee (perhaps a drachm) paid by the prosecutor in most public causes. (Harpocr. s. v. *Παράστασις*; Meier, *Att. Proc.* pp. 614, 615.) [Compare ΔΙΑΒΕΤΤΑΞ, p. 397, b.] [C. R. K.]

PARASTATAE. [ΗΕΝΔΕΚΑ.]

PARAZONIUM. [ΖΩΝΑ.]

PAREDRI (*παρεδρί*). Each of the three

superior archons was at liberty to have two assessors (*παρεδροι*) chosen by himself, to assist him by advice and otherwise in the performance of his various duties. The assessor, like the magistrate himself, had to undergo a *δοκιμασία* in the Senate of Five Hundred and before a judicial tribunal, before he could be permitted to enter upon his labours. He was also to render an account (*εἰσέτιμις*) at the end of the year. The office is called an *ἀρχή* by Demosthenes (c. *Neaer*. 1369). The duties of the archon, magisterial and judicial, were so numerous, that one of the principal objects of having assessors must have been to enable them to get through their business. We find the *παρεδρος* assisting the archon at the *ἀλγῆς δίκης*. (Demosth. c. *Theoc*. 1332.) He had authority to keep order at public festivals and theatres, and to impose a fine on the disorderly. (Demosth. c. *Mid*. 572.) As the archons were chosen by lot (*καληπεροί*), and might be persons of inferior capacity, and not very well fitted for their station, it might often be useful, or even necessary for them, to procure the assistance of clever men of business. (Demosth. c. *Neaer*. 1372.) And perhaps it was intended that the *παρεδρος* should not only assist, but in some measure check and control the power of their principals. They are spoken of as being *βοηθοί, συμβούλοι καὶ φύλακες*. Demosthenes accuses Stephanus of buying his place of the *Ἀρχὸν βασιλέως* (c. *Neaer*. 1369). It was usual to choose relations and friends to be assessors; but they might at any time be dismissed, at least for good cause. (Demosth. c. *Neaer*. 1373.) The *Thesmothetae*, though they had no regular *παρεδρος*, used to have counsellors (*συμβούλοι*), who answered the same purpose. (Demosth. c. *Theoc*. 1330; Schömann, *Ant. Jur. Pub. Gr.* p. 245; Meier, *Att. Proc.* pp. 57—59.) The office of *παρεδρος* was called *παρεδρία*, and to exercise it *παρεδρεῖν*.

From the *παρεδρος* of the archons, we must distinguish those who assisted the *ἐθνοβοι* in examining and auditing magistrates' accounts. The *ἐθνοβοι* were a board of ten, and each of them chose two assessors. (Schömann, *Ant. Jur. Pub. Gr.* p. 240; Meier, *Att. Proc.* p. 102.) [EUTHYNE.] [C.R.K.]

PAREISGRAPHE (*παρεισγραφή*), signifies a fraudulent enrolment in the register of citizens. For this an indictment lay at Athens called *ἐπίστας γραφή*; and, besides, the *δημόται* might by their *διαψήφισις* eject any person who was illegally enrolled among them. From their decision there might be an appeal to a court of dicasts; of which the speech of Demosthenes against Eubulides furnishes an example. If the dicasts confirmed the decision of the *δημόται*, the appellant party was sold for a slave. Spurious citizens are sometimes called *πατέγγραττοι, παρεγγραμμένοι*. (Aesch. *de Fals. Leg.* 38, 51, ed. Steph.) The expression *παρεισγραφῆς γραφή* is not Attic. (Schömann, *Ant. Jur. Pub. Gr.* p. 206; Meier, *Att. Proc.* pp. 347—349.) [C.R.K.]

PARENTALIA. [FUNUS, p. 562, b.]

PARIES (τοιχος), the wall of a house, in contradistinction to *MURUS* (τείχος), the wall of a city, and *maceries* (τείχιον), a small enclosure, such as a court-yard; sometimes *τείχιον* is used for the wall of a house. (See Liddell and Scott.) Among the numerous methods employed by the ancients in constructing walls we find mention of the following:—

I. The *paries craticus*, i. e. the wattled or the

lath-and-plaster wall, made of canes or hurdles [CRATES], covered with clay. (Plin. *H. N.* xxxv. 14. s. 48; Festus, s. v. *Solea*.) These were used in the original city of Rome to form entire houses (Ovid. *Fast.* iii. 183, vi. 261; Vitruv. ii. 1); afterwards they were coated with mortar instead of clay, and introduced like our lath-and-plaster walls in the interior of houses.

II. Vitruvius (l. c.) mentions as the next step, the practice, common in his time among the Gauls, and continued to our own in Devonshire, of drying square lumps of clay and building them into walls, which were strengthened by means of horizontal bond-timbers (*jugamenta*) laid at intervals, and which were then covered with thatch.

III. The *paries formaceus*, i. e. the *pisé* wall, made of rammed earth. [FORMA.]

IV. In districts abounding with wood, log-houses were common, constructed, like those of the Siberians and of the modern Americans in the back settlements, of the trunks of trees, which, having been more or less squared, were then laid upon one another in an horizontal position, and had their interstices filled with chips (*schidiiis*), moss, and clay. After this manner the Colchians erected houses several stories high. (Vitruv. l. c.; compare Herod. iv. 108; Vitruv. ii. 9.)

V. The *paries latericius*, i. e. the brick wall. [LATER.] Among the Romans the ordinary thickness of an outside wall was 18 inches (*sesquipes*), being the length of the common or Lydian brick; but, if the building was more than one story high, the walls at the bottom were either two or three bricks thick (*diplinthii* and *triplinthii*) according to circumstances. The Egyptians sometimes exhibited a chequered pattern, and perhaps other devices, upon the walls of their houses by the alternation of white and black bricks. (Ath. v. p. 208, c.) The Romans, probably in imitation of the Etruscans, often cased the highest part of a brick wall with a range of terra-cotta (*structura et lorica testacea*, Vitruv. ii. 8; Pallad. *de Re Rust.* i. 11), eighteen inches high, with projecting cornices, and spouts for discharging the water from the roof. [ANTEFIXA.]

VI. The *reticulata structura* (Plin. *H. N.* xxxvi. 22. s. 51), i. e. the reticulated, or resembling network. This structure consists in placing square or lozenge-shaped stones side by side upon their edges, the stones being of small dimensions and cemented by mortar (*materia ex calce et arena*). In many cases the mortar has proved more durable than the stone, especially where volcanic tufa is the material employed, as at Baiae in the Bay of Naples, and in the villa of Hadrian near Tivoli. This kind of building is very common in the ancient edifices of Italy. Vitruvius says (ii. 8), that it was universally adopted in his time. Walls thus constructed were considered more pleasing to the eye, but less secure than those in which the stones lay upon their flat surfaces. The front of the wall was the only part in which the structure was regular, or the stones cut into a certain form, the interior being rubble-work or concrete (*far-tura*), i. e. fragments and chippings of stone (*coementa, xάλες*) imbedded in mortar. Only part of the wall was reticulated: to give it firmness and durability the sides and base were built of brick or of squared stones, and horizontal courses of bricks were laid at intervals, extending through the length and thickness of the wall. These circum-

stances are well exemplified in the annexed woodcut, which is copied from the drawing of a wall at Pompeii, executed on the spot by Mr. Mocatta.

VII. The *structura antiqua* or *incerta*, i. e. the wall of irregular masonry, built of stones, which were not squared or cut into any exact form. The necessary consequence of this method of construction was, that a great part of the wall consisted of mortar and rubble-work. (Vitruv. l. c.)

VIII. The *emplecton*, i. e. the complicated wall, consisting in fact of three walls joined together. Each side presented regular masonry or brickwork; but the interior was filled with rubble (*fastura*). To bind together the two outside walls, and thus render the whole firm and durable, large stones or courses of brickwork (*coagmenta*) were placed at intervals, extending through the whole thickness of the wall, as was done also in the *Structura Reticulata*. Walls of this description are not uncommon, especially in buildings of considerable size.

IX. The *paries e lapide quadrato*, i. e. the ashlar wall, consisting entirely of stones cut and squared by the chisel. [DOLABRA.] This was the most perfect kind of wall, especially when built of marble. The construction of such walls was carried to the highest perfection by the architects of Greece; the temples of Athens, Corinth, and many cities of Asia Minor still attesting in their ruins the extreme skill bestowed upon the erection of walls. Considerable excellence in this art must have been attained by the Greeks even as early as the age of Homer, who derives one of his similes from the "nicely fitted stones" of the wall of a house. (*Il.* xvi. 212.) But probably in this the Greeks only copied the Asiatics; for Xenophon came to a deserted city in Mesopotamia, the brick walls of which were capped by a parapet of "polished shell marble." (*Anab.* iii. 4. § 10.) Besides conferring the highest degree of beauty and solidity, another important recommendation of ashlar walls was, that they were the most secure against fire, an advantage, to which St. Paul alludes, when he contrasts the stones, valuable both for material and

for workmanship (*ἁλθους τιμῆος*), and the gold and silver, which were exhibited in the walls of such a temple as that just mentioned, with the logs of wood, the thatch, the straw and cane, employed in building walls of the four first kinds. (1 Cor. iii. 10—15.) Vitruvius also strongly objects to the *paries crassitius* on account of its great combustibility (ii. 8. *ad fin.*). Respecting walls of this kind see further under *MURUS*.

Cicero, in a single passage of his *Topica* (§ 4), uses four epithets which were applied to walls. He opposes the *paries solidus* to the *fornicatus*, and the *communis* to the *directus*. The passage at the same time shows that the Romans inserted arches [*FORNIX*] into their "common" or party walls. The annexed woodcut, representing a portion of

the supposed *Thermae* at Trèves (Wytenbach's *Guide*, p. 60), exemplifies the frequent occurrence of arches in all Roman buildings, not only when they were intended for windows or doorways, but also when they could serve no other use than to strengthen the wall. In this "*paries fornicatus*" each arch is a combination of two or more concentric arches, all built of brick. This specimen also shows the alternation of courses of brick and stone, which is a common characteristic of Roman masonry. The "*paries solidus*," i. e. the wall without openings for windows or doorways, was also called "a blind wall" (Virg. *Aen.* v. 589); and the *paries communis* (Ovid. *Met.* iv. 66; *κοινὸς τοίχος*, Thucyd. ii. 3), which was the boundary between two tenements and common to them both, was called *intergerimus*, al. *intergerivus* (Festus, s. v.; Plin. *H. N.* xxxv. 14. s. 49), and in Greek *μεσό-τοίχος* (Athen. vii. p. 281. d), or *μεσότηριον*. (*Eph.* ii. 14.) The walls, built at right angles to the party-wall for the convenience of the respective families, were the *parietes directi*.

Walls were adorned, especially in the interior of buildings, in a great variety of ways. Their plane surface was broken by panels. [ANACUS.] However coarse and rough their construction might be, every unevenness was removed by a coating, two or three inches thick, of mortar or of plaster with rough-cast, consisting of sand together with stone, brick, and marble, broken and ground to various degrees of fineness. (Vitruv. vii. 3; *Acta*, xxiii. 3.) Gypsum also, in the state which we call plaster of Paris, was much used in the more

splendid edifices, and was decorated with an endless variety of tasteful devices in bas-relief. Of these ornaments, wrought in stucco (*opus albarium*), specimens remain in the "Baths of Titus" at Rome. When the plasterer (*tector*, *κοιδιτης*) had finished his work (*trullissatio*, i. e. trowelling; *opus tectorium*), in all of which he was directed by the use of the square [*NORMA*], the rule, and the line and plummet [*PERPENDICULUM*], and in which he aimed at producing a surface not only smooth and shining, but as little as possible liable to crack or decay (Vitruv. vii. 3), he was often succeeded by the painter in fresco (*udo tectorio*, Vitruv. l. c.). In many cases the plaster or stucco was left without any additional ornament; and its whiteness and freshness were occasionally restored by washing it with certain fine calcareous or aluminous earths dissolved in milk (*parastonium*, Plin. *H. N.* xxxv. 6. s. 18; *terra Solinusia*, 16. s. 56). A painted wall was commonly divided by the artist into rectangular compartments, which he filled according to his taste and fancy with an endless variety of landscapes, buildings, gardens, animals, &c. (Vitruv. vii. 5.)

Another method of decorating walls was by encrusting them with slabs of marble (*crustae*). The blocks, designed for this purpose, were cut into thin slabs by the aid of saw-mills. [*MOLA*.] Various kinds of sand were used in the operation, according to the hardness of the stone; emery (*masia*, Plin. *H. N.* xxxvi. 6. s. 9) being used for the hardest. This art was of high antiquity, and probably Oriental in its origin. The brick walls of the Mausoleum at Halicarnassus, built as early as 355 B. C. were covered with slabs of Proconnesian marble (Plin. *H. N.* xxxvi. 6); and this is the most ancient example upon record. In the time of Pliny (*H. N.* xxxv. 1) slabs of a uniform colour were sometimes inlaid with variously coloured materials in such a way as to represent animals and other objects. In short the beautiful invention now called Florentine Mosaic was then in use for the decoration of the walls of apartments. [*EX-BLEMA*.] The common kind of Mosaic was also sometimes used in walls as well as in floors and ceilings. The greatest refinement was the attempt to produce the effect of mirrors, which was done by inserting into the wall pieces of black glass manufactured in imitation of obsidian. (Plin. *H. N.* xxxvi. 26. s. 67.) [*DOMUS* p. 431; *PICTURA*, § XV.] [J. Y.]

PARILI-LIA. [*PALILIA*.]

PARMA. *dim.* **PARMULA** (Hor. *Carm.* ii. 7. 10), a round shield, three feet in diameter, carried by the *velites* in the Roman army. Though small, compared with the *CLYPEUS*, it was so strongly made as to be a very effectual protection. (Polyb. vi. 20.) This was probably owing to the use of iron in its frame-work. In the Pyrrhic dance it was raised above the head and struck with a sword so as to emit a loud ringing noise. (Claud. *de vi. Cons. Honor.* 628.) The parma was also worn by the *EQUITES* (Sallust, *Frag. Hist.* iv.); and for the sake of state and fashion it was sometimes adorned with precious stones. (Propert. iv. 2. 21.)

We find the term *parma* often applied to the target [*CESTRA*], which was also a small round shield, and therefore very similar to the parma. (Propert. iv. 2. 40; *Mele*, l. 5. § 1; *Virg. Aen.* x. 817.) Virgil, in like manner, applies the term

to the clipeus of the Palladium, because, the statue being small, the shield was small in proportion. (*Aen.* ii. 175.)

The annexed woodcut represents a votive parma,

embossed (*σφυρηλατος*) [*MALLEUS*] and gilt, representing on its border, as is supposed, the taking of Rome by the Gauls under Brennus and its recovery by Camillus. It belonged formerly to the Woodwardian Museum, and is supposed by antiquaries to have been made in the time of Claudius or Nero. The boss (*umbo*) is a grotesque face, surrounded with ram's horns, foliage, and a twisted beard. (Dodwell, *de Parma Woodwardiana*, Oxon. 1713.) Compare Bernd, *Das Wappenwesen der Griechen und Römer*, Bonn, 1841. [J. Y.]

PA'ROCHI, were certain people who were paid by the state to supply the Roman magistrates, ambassadors, and other official persons, when they were travelling, with those necessities which they could not conveniently carry with them. They existed on all the principal stations on the Roman roads in Italy and the provinces, where persons were accustomed to pass the night. But as many magistrates frequently made extortionate demands from the *parochi*, the *lex Julia de Repetundis* of Julius Caesar, B. C. 59, defined the things which the *parochi* were bound to supply, of which hay, fire-wood, salt, and a certain number of beds appear to have been the most important (Hor. *Sat.* i. 5. 46; *Cic. ad Att.* v. 16. xiii. 2; Heindorf, *ad Hor. l. c.*)

PAROPSIS (*παροψις*). Two different meanings are given to this word by the Greek grammarians; some interpret it as meaning any food eaten with the *ἄφρον* [*OPSONIUM*], as the *μάζα*, a kind of frumenty or soft cake, broth, or any kind of condiment or sauce (Pollux, vi. 56, x. 87; Hemsterh. *ad loc.*); and others a saucer, plate, or small dish. (Hesych. and Suidas, s. v.) It is plain, however, from the numerous passages collected by Athenæus (ix. pp. 367, 368), that the word was used in both significations, and was the name of the dish or plate as well as of its contents. (Compare Xen. *Cyr.* i. 3. § 4; *Plut. de Adul. et Amic.* 9; *St. Matth.* xxiii. 26.) The Roman writers seem always to use it in the sense of a dish or plate (Juv. iii. 142; *Mart.* xi. 27. 5); and according to Charisius it was so called, "quia in eo reponuntur obsonia, et ex eo in mensa comeduntur." The word is also written *Parapsia*. (Hesych. s. v.; *Suet. Galb.* 12; *Petron.* 34; *Dig.* 34. tit. 2. s. 19. § 9.)

PARRICI'DA, PARRICI'DIUM. [Lex Coanella, p. 687.]

PARTHENIAE (*παρθενίαι* or *παρθενίαι*), are, according to the literal meaning of the word, children born by unmarried women (*παρθέναι*, Hom. *Il.* xvi. 180). Some writers also designated by this name those legitimate children at Sparta who were born before the mother was introduced into the house of her husband. (Hesych. s. v.; Müller, *Dor.* iv. 4. § 2.) The partheniae, however, as a distinct class of citizens, appear at Sparta after the first Messenian war and in connection with the foundation of Tarentum; but the legends as to who they were differ from one another. Hesychius says that they were the children of Spartan citizens and female slaves; Antiochus (*op. Strab.* vi. p. 278, &c.) states, that they were the sons of those Spartans who took no part in the war against the Messenians. These Spartans were made Helots, and their children were called partheniae, and declared *ἐλευθοί*. When they grew up, and were unable to bear their degrading position at home, they emigrated, and became the founders of Tarentum. Ephorus (*op. Strab.* vi. p. 279) again related the story in a different manner. When the Messenian war had lasted for a considerable number of years, the Spartan women sent an embassy to the camp of their husbands, complained of their long absence, and stated that the republic would suffer for want of an increase in the number of citizens if the war should continue much longer. Their husbands, who were bound by an oath not to leave the field until the Messenians were conquered, sent home all the young men in the camp, who were not bound by that oath, and requested them to cohabit with the maidens at Sparta. The children thus produced were called partheniae. On the return of the Spartans from Messenia, these partheniae were not treated as citizens, and accordingly united with the Helots to wage war against the Spartans. But when this plan was found impracticable, they emigrated and founded the colony of Tarentum. (Compare Theopomp. *op. Athen.* vi. p. 271; *Ἐφεύστατοι*.) These stories seem to be nothing but distortions of some historical fact. The Spartans at a time of great distress had perhaps allowed marriages between Spartans and slaves or Laconians, or had admitted a number of persons to the franchise, but afterwards endeavoured to curtail the privileges of these new citizens, which led to insurrection and emigration. (See Thirlwall, *Hist. of Greece*, vol. i. p. 352, &c.) [L. S.]

PA'SCUA PUBLICA. [SCRIPTURA.]

PASSUS (from *pando*), a measure of length, which consisted of five Roman feet. (Colum. v. 1; Vitruv. x. 14.) [MENSURA.] The *passus* was not the single step (*gradus*), but the double step; or, more exactly, it was not the distance from heel to heel, when the feet were at their utmost ordinary extension, but the distance from the point which the heel leaves to that in which it is set down. The *millis passuum*, or thousand paces, was the common name of the Roman mile. [MILLIARE.] In connecting the Greek and Roman measures, the word *passus* was sometimes applied to the extension of the arms, that is, the Greek *δρυγίς*, which, however, differed from the true *passus* by half-a-foot; and, conversely, the *gradus* was called by Greek writers *βήμα*, or *τὸ βήμα τὸ ἀπλοῦν*, and the *passus* *τὸ βήμα τὸ διπλοῦν*. [P. S.]

PASTOPHORUS (*παστοφόρος*). The shawl,

richly interwoven with gold (*χρυσόσπινος*), and displaying various symbolical or mythological figures, was much used in religious ceremonies to conduce to their splendour, to explain their signification, and also to veil their solemnity. The maidens, who carried the figured peplos in the Panathenaea at Athens, were called *ἀπὸπρόφοι*. In Egypt, the priests of Isis and Osiris, who probably fulfilled a similar office, were denominated *παστοφόροι*, and were incorporated. (Diod. i. 29; Porphy. *de Abstin.* iv. 8; Apul. *Met.* xi. pp. 124, 128, ed. Aldi.) They appear to have extended themselves together with the extension of the Egyptian worship over parts of Greece and Italy, so that "the College of the Pastophori of Industria," a city of Liguria, is mentioned in an inscription found near Turin. (Maffei, *Mus. Veron.* p. 230.) The Egyptian college was divided into minor companies, each containing ten pastophori, and each having at its head a leader who was called *decurio quinquennialis*, because he was appointed for five years. (Apul. *Met.* xi. ad fin.) Besides carrying the *παστός*, or sacred ornamental shawl, they performed other duties in connection with the worship of the temple. It was the office of this class of priests to raise the shawl with the performance of an appropriate chaunt, so as to discover the god seated or standing in the adytum (Clem. Alex. *Paedag.* iii. 2), and generally to show the temple with its sacred utensils, of which, like modern sacristans, they had the custody. (Horpollon, *Hier.* i. 41.) In consequence of the supposed influence of Isis and her priesthood in healing diseases, the pastophori obtained a high rank as physicians. (Clem. Alex. *Strom.* vi. 4. p. 758, ed. Potter.)

It must be observed, that according to another interpretation of *παστός*, the pastophori were so denominated from carrying, not a shawl, but a shrine or small chapel, containing the image of the god. Supposing this etymology to be correct, it is no less true that the pastophori sustained the various offices which have been assigned to them.

It was indispensably requisite, that so numerous and important a body of men should have a residence appropriated to them in the temple to which they belonged. This residence was called *παστοφείον*. The common use of the term, as applied by the Greeks to Egyptian temples, led to its application to the corresponding part of the temple at Jerusalem by Josephus (*Bell. Jud.* iv. 12), and by the authors of the Alexandrine version of the Old Testament. (1 Chron. ix. 26, 33, xxxiii. 28; Jer. xxxv. 4; 1 Macc. iv. 38, 57.) [J. Y.]

PATER FAMILIAE. [FAMILIA; MATRIMONIUM; PATRIA POTESTAS.]

PATER PATRATUS. [FETTER.]

PATERA, *dsm.* PATELLA (*πάτηρ*), a round dish; a plate; a saucer. Macrobius (*Sat.* v. 21), explaining the difference between the *patera* and the *CARCHESIUM*, says that the former received its name from its flat expanded form (*planum ac patens*). The *paterae* of the most common kind are thus described by Festus (s. v. *Patellae*), "*Vasa plicata parva, sacrificia faciendis apta.*" (*Nigra patella*, Mart. v. 120; *Rubicunda testa*, xiv. 114.) They were small plates of the common red earthenware, on which an ornamental pattern was drawn in the manner described under the article of *FESTILE*, and which were sometimes entirely black. Numerous specimens of them may be seen in the

British Museum, and in other collections of ancient fictile vases. The more valuable paterae were metallic, being chiefly of bronze: but every family, raised above poverty, possessed one of silver (*ἀργυρῆς*), together with a silver salt-cellar. [SALINUM.] (Plin. *H. N.* xxxiii. 12. s. 54.) In opulent houses there was a plate of gold (*χρυσῆς*, Athen. xi. pp. 497, 502; Pind. *Ol.* vii. 1—3; Virg. *Georg.* ii. 192). These metallic plates were often adorned with figures, engraved or embossed upon them. (Cic. *Verr.* iv. 21; Xen. *Anab.* iv. 7. § 27, vii. 3. § 27.) A beautiful specimen is presented in the woodcut to the article *LIBRA*; and the accompanying woodcut exhibits a highly ornamented dish, also of bronze, designed to be used in the worship of Mars, and found at Pompeii. (Donaldson's *Pomp.* vol. ii. pl. 78.) The view of the upper surface is accompanied by a side-view, showing the

form and depth of the vessel. The ornamental paterae sometimes represented leaves of fern, which probably diverged from the centre (*filicatae*, Cic. *Parad.* i. § 2). Gems were set in others. (Cic. *Verr.* iv. 24; Virg. *Aen.* i. 728, 739.) We read also of an amber dish (*electrinam*), having in the centre the countenance of Alexander the Great, and his history represented on the border. (Treb. *Polli. Trig. Tyr.* 13.) The annexed woodcut contains a view and section of a plate of white marble

PATINA.

In the British Museum, which was found in the ruins of Hadrian's Villa, and purchased by Mr. Townley. It is 14 inches in diameter, and 1½ high. It is cut with skill and delicacy, the marble not being much more than a quarter of an inch thick. In the centre is sculptured a female bacchant in a long tunic and with a scarf [*CHLAMYs*] floating over her head. This centre-piece is encircled by a wreath of ivy. The decorations indicate the appropriation of the plate to the worship of Bacchus.

Plates were sometimes made so as to be used with either side downward, and were then distinguished by the epithet *ἀμφίθερος*. (Hom. *Il.* xxiii. 270, 616.) In these the under surface was ornamented as well as the upper. The Massilians and other Ionic Greeks commonly placed the under surface uppermost. Plates were further distinguished from one another by being either with or without a base (*πυθμήν*), a boss in the middle (*ὀμφαλὸν*, *μεσόμφαλος*, *φθοῖς*), feet (*βαλανῶν*), and handles. (Athen. xi. pp. 501, 502.) In the preceding woodcuts the bronze patera has one handle: both the paterae are made to stand upon a low base.

Small plates were sometimes used in cooking (Plin. *H. N.* xxx. 8. s. 21), an operation more commonly performed in pots [*OLLA*] and basins or bowls. [*PATINA*.] They were used at meals to eat upon as we use them (Varro, *Eumen. ap. Non. Marc.* xv. 6; Hor. *Epist.* i. 5. 2), although it appears that very religious persons abstained from this practice on account of the customary employment of them in sacrificing to the gods. (Cic. *de Fin.* ii. 7.) A larger plate, in fact, a round dish, was used to bring to table such an article of food as a flat fish. (Mart. xiii. 81.) Mustard (Plin. *H. N.* xix. 8. s. 54) and ointments (Xenophanes, p. 68, ed. Karsten) were brought in saucers. The Greeks also drank wine out of plates or saucers (Xen. *Conv.* ii. 23), as we see in the woodcut under *SYMPOSIUM*, which represents a symposium, and in which the second and third figures from the right hand have each a saucer.

The use of paterae at meals no doubt gave origin to the employment of them in sacrifices. On these occasions they held either solid food (*μικρὸν κρέας*, Varro, *Man. ap. Non. Marc.* l. c.; *oibos*, Ovid, *Fast.* vi. 310), or any liquid intended to be poured out as a libation. (Virg. *Aen.* iii. 67, iv. 60, v. 98, vi. 249, vii. 135, xii. 174; Ovid. *Met.* ix. 160, *Fast.* ii. 634, iv. 934; Val. Flacc. v. 192; Juv. iii. 26; Heliodor. *Aethiop.* ii. p. 98; Athen. xi. p. 482.) We find them continually represented in conjunction with the other instruments of sacrifice upon coins, gems, altars, bas-reliefs, and the friezes of temples. In the ancient Doric temple at Rome, now dedicated to St. Adrian, the tasteful patera and the cranium of the bull are alternately sculptured on the metopae. (Labacco, *Ant. di Roma*, 16, 17.)

Plates of the most precious materials and of the finest workmanship were sometimes given as prizes at the public games. (Hom. *Il.* xxiii. 270; Pind. *Isth.* i. 20; Schol. in Pind. *Nem.* ix. 121, 123.)

PATIBULUM. [FURCA.]

PATINA (λεκάνη, *dīm. λεκάνιον* al. *λεκάνιον*, *λεκανίσκη*, Athen. vi. p. 268, *λεκανίς*, *σοσσὸν dīm. λεκανίδιον*, Bekker, *Anec.* 794), a basin or bowl of earthenware, rarely of bronze (Pallad. *de Re Rust.*

l. 40; Plin. *H. N.* xxxiv. 11. s. 25) or silver. (Treb. Poll. *Claud.* p. 208, c.)

A patina, covered with a lid (*operculum*), was sometimes used to keep grapes instead of a jar (Col. *de Re Rust.* xii. 43), a proof that this vessel was of a form intermediate between the *PATERA* and the *OLLA*, not so flat as the former, nor so deep as the latter. Hence it is compared to the crater. (Schol. in *Aristoph. Acharn.* 1109.) [CRATER.] This account of its shape accords with a variety of uses to which it was applied, viz., to hold water and a sponge for washing (*Aristoph. Vesp.* 598), and clay for making bricks (*Aves.* 1143, 1146), in vomiting (*Nub.* 904), and in smelting the ore of quicksilver. (Plin. *H. N.* xxxiii. 8. s. 41.) But its most frequent use was in cookery and pharmacy. (Plin. *H. N.* xxii. 2. s. 33.) Although the patera and the olla were also used, the articles of diet were commonly prepared, sometimes over a fire (Plaut. *Pseud.* iii. 2. 51; Plin. *H. N.* xviii. 11. s. 26, xxii. 25. s. 80), and sometimes without fire, in a patina, and more especially when they were accompanied with sauce or fluid. (Hor. *Sat.* i. 3. 80.) Hence the word occurs in almost every page of Apicius *De Opusculis* [*Opsonium*]; and hence came its synonym, *ὀψοδόκη*. (Photius, *Lex. s. v.*) In the same bowl the food was commonly brought to table (Xen. *Cyrop.* i. 3. § 4; Athen. iv. p. 149, f; Plant. *Mil.* iii. 1. 164; Ter. *Eum.* iv. 7. 46; Hor. *Sat.* ii. 8. 43), an example of which is *λεκανίων τῶν λαγῶν κρέας*, i. e. "a basin of stewed hare." (*Aristoph. Acharn.* 1109.) But it is to be observed, that dishes [*LANX, PATERA*] were used to bring to table those articles of food, the form and solidity of which were adapted to such vessels.

The silver bowl was sometimes ornamented, as with ivy-leaves (*hederata*, Treb. Poll. *L. c.*), or by the insertion of mirrors (*speciollata*, Fl. Vopisc. *Probus*, p. 234, ed. Salmasii). These bowls weighed from 10 to 20 lbs. each. Vitellius, wishing to obtain an earthenware bowl of immense size, had a furnace constructed on purpose to bake it. (Plin. *H. N.* xxv. 12. s. 46; Juv. iv. 130—134.)

A method of divination by the use of a basin (*λεκανομαντεία*) is mentioned by Tzetzes on Lycophron, v. 813.

[J. Y.]

PATRES. [PATRICH; SENATUS.]

PATRIA POTESTAS. Potestas signifies generally a power or faculty of any kind by which we do any thing. "Potestas," says Paulus (Dig. 50. tit. 16. s. 215), "has several significations: when applied to Magistratus, it is Imperium; in the case of Children, it is the Patria Potestas; in the case of Slaves, it is Dominium." According to Paulus then, Potestas, as applied to Magistratus, is equivalent to Imperium. Thus we find Potestas associated with the adjectives Praetoria, Consularis. But Potestas is applied to Magistratus who had not the Imperium, as for instance to Quæstors and Tribuni Plebis (Cic. *pro Cluent.* c. 27); and Potestas and Imperium are often opposed in Cicero. Both the expressions Tribunicium Jus and Tribunica Potestas are used (Tacit. *Ann.* i. 2, 3). Thus it seems that this word Potestas, like many other Roman terms, had both a wider signification and a narrower one. In its wider signification it might mean all the power that was delegated to any person by the State, whatever might be the extent of that power. In its narrower significations, it was on the one

hand equivalent to Imperium; and on the other, it expressed the power of those functionaries who had not the Imperium. Sometimes it was used to express a Magistratus, as a person (Sueton. *Claud.* 13; Juv. *Sat.* x. 100); and hence in the Italian language the word Podestà signifies a Magistrate.

Potestas is also one of the words by which is expressed the power that one private person has over another, the other two being Manus and Mancipium. The Potestas is either Dominica, that is, ownership as exhibited in the relation of Master and Slave [*SERVUS*]; or Patria as exhibited in the relation of Father and Child. The Mancipium was framed after the analogy of the Potestas Dominica. [MANCIPIUM.]

Patria Potestas then signifies the power which a Roman father had over the persons of his children, grandchildren, and other descendants (*filii/familias, filiae/familias*), and generally all the rights which he had by virtue of his paternity. The foundation of the Patria Potestas was a Roman marriage, and the birth of a child gave it full effect. [MATRIMONIUM.]

It does not seem that the Patria Potestas was ever viewed among the Romans as absolutely equivalent to the Dominica Potestas, or as involving ownership of the child; and yet the original notion of the Patria came very near to that of the Dominica Potestas. Originally the father had the power of life and death over his son as a member of his familia: he could sell him and so bring him into the mancipii causa; and he had the jus noxae dandi as a necessary consequence of his being liable for the delicts of his child. He could also give his child in adoption, and emancipate a child at his pleasure.

The father could exheredate his son, he could substitute another person as heir to him [*HERES*], and he could by his will appoint him a tutor.

The general rights and disabilities of a filius-familias may be thus briefly expressed—"The child is incapable, in his private rights, of any power or dominion; in every other respect he is capable of legal rights." (Savigny, *System*, &c. ii. 52.) The incapacity of the child is not really an incapacity of acquiring legal rights, for the child could acquire by contract, for instance; but every thing that he acquired, was acquired for his father.

As to matters that belonged to the Jus Publicum, the son laboured under no incapacities: he could vote at the Comitia Tributa, he could fill a magistratus; and he could be a tutor for the Tutela was considered a part of Jus Publicum. (Dig. 1. tit. 6. s. 9; Liv. xxiv. 44; Gell. ii. 2.)

The child had Connubium and commercium, like any Roman citizen who was sui jura, but these legal capacities brought to him no present power or ownership. His marriage with his father's consent was legal (*justum*), but if it was accompanied with the In Manum conventio, his wife came into the power of his father, and not into the power of the son. The son's children were in all cases in the power of their grandfather, when the son was. The son could also divorce his wife with his father's consent.

Inasmuch as he had commercium, he could be a witness to Mancipationes and Testaments; but he could not have property nor servitutes. He had the testamenti factio, as already stated, so far

as to be a witness to a testament; but he could not make a testament, for he had nothing to dispose of; and he could not have a heres.

He could, as already observed, acquire rights for his father by contract, but none for himself, except in the case of an *Adstipulatio*, an instance which shows the difference between a son and a slave. [OBLIGATIONES.] But a *filius pube* could incur obligations and could be sued, like a *paterfamilias*. (Dig. 45. tit. 1. s. 141. § 2; 44. tit. 7. s. 39.) The foundation of these rules of law was the maxim that the condition of a master could be improved by the acts of his slaves, but not made worse; and this maxim applied equally to a son and a slave. Between the father and the son no *civiles* obligations could exist; neither of them consequently could have a right of action against the other. But *naturales* obligations might be established between them. Some writers have supposed that there was a difference between the capacities and incapacities of a *filiusfamilias* and a *filiusfamilias* as to obligations; but the reasons alleged by Savigny seem conclusively to show that there was no difference at all. (*System*, &c. ii. Beylege, v.)

In the case of delict by a *filiusfamilias* *noxales* actions were allowed against the father. (Gaius, iv. 75.) But Justinian abolished the *noxæ deditio* in the case of a *filius* or *filiusfamilias*, "*cum apud veteres legum commentatores invenimus sæpius dictum, ipsos filiosfamilias pro suis delictis posse conveniri.*" (Inst. 4. tit. 8. s. 7; Dig. 43. tit. 29. s. 1. 3. § 4.) [NOXALIS ACTIO; FILIUSFAMILIAS.]

The incapacity of the child to acquire for himself and his capacity to acquire for his father, as well as their mutual incapacity of acquiring rights of action against one another, are viewed by some modern writers as a consequence of a legal unity of person, while others affirm that there is no trace of such a fiction in the Roman law, and that the assumption is by no means necessary to explain the rule of law. (Böcking, *Inst.* i. 228, n. 20.) Indeed the fiction of such a unity is quite unnecessary, for the fundamental maxim, already referred to, that a man may be made richer but not poorer by his slaves and children is a simple positive rule. Though the child could not acquire for himself, yet all that he did acquire for his father, might become his own in the event of his father's death, a circumstance which materially distinguished the acquisitions of a son from those of a slave; and accordingly the son is sometimes, though not with strict propriety, considered as a kind of joint owner with his father.

The rule as to the incapacity of a *filiusfamilias* for acquiring property was first varied about the time of Augustus, when the son was empowered to acquire for himself and to treat as his own whatever he got in military service. This was the *Castrense Peculium*, with respect to which the son was considered as a person *sui juris*. (Juv. Sat. xvi. 51; Gaius, ii. 106.) But if the *filiusfamilias* died without having made any disposition of this *peculium*, it came to the father, and this continued to be the law till Justinian altered it; but in this case the property came as *Peculium*, not as *Hereditas*. The privileges of a *filiusfamilias* as to the acquisition of property were extended under Constantine to his acquisitions made during the discharge of civil offices, and as this new privilege

was framed after the analogy of the *Castrense Peculium*, it was designated by the name *Quasi Castrense Peculium*. Further privileges of the same kind were also given by Constantine and extended under subsequent emperors (*bonæ quæ patri non adquiruntur*).

The *Patria Potestas* began with the birth of a child in a Roman marriage. If a Roman had by mistake married a woman with whom he had no *connubium*, thinking that *connubium* existed, he was allowed to prove his case (*causæ erroris probatio*), upon doing which the child that had been born and the wife also became Roman citizens, and from that time the son was in the power of the father. This *causæ probatio* was allowed by a *Senatus-consultum* (Gaius, i. 67), which, as it appears from the context, and a comparison with Ulpian's Fragments (vii. 4), was an amendment of the *Lex Aelia Sentia*. Other instances of the *causæ probatio* are mentioned by Gaius.

It was a condition of the *Patria Potestas* that the child should be begotten in *matrimonium legitimum*. (Gaius, i. 55—107; Inst. 1. tit. 9—11.) By the old law, the subsequent marriage of the parents did not legitimate a child born before the marriage. But it seems to have early become the fashion for the Emperor, as an act of grace, to place such child on the same footing as legitimate children. The legitimation per subsequens *matrimonium* only became an established rule of law under Constantine, and was introduced for the advantage of children who were born in concubinage. [CONCUBINA.] In the time of Theodosius II., the rule was established by which a child was legitimated per *oblationem curiæ*. To these two modes of legitimation, Justinian added that per *rescriptum principis*. The child thus legitimated came into the familia and the potestas of his father, as if he had been born in lawful marriage.

The *Patria Potestas* could also be acquired by either of the modes of Adoption. [ADOPTRIO, p. 15, b.]

The *Patria Potestas* was dissolved in various ways. It was dissolved by the death of the father, upon which event, the grandchildren, if there were any, who had hitherto been in the power of their grandfather, came into the power of their father who was now *sui juris*. It could also be dissolved in various ways during the lifetime of the father. A *maxima* or *media capitis diminutio* either of the parent or child dissolved the *Patria Potestas*; though in the case of either party sustaining a *capitis diminutio* by falling into the hands of an enemy, the relation might be revived by *Postliminium*. A father who was *adrogatus*, and consequently sustained a *minima capitis diminutio*, came together with his children, who had hitherto been in his power, into the power of his adoptive father. The emancipation of the child by the father was a common mode of dissolving the *Patria Potestas*, and was accompanied by the *Minima Capitis diminutio*. If a son was elected *Flamen Dialis* or a daughter was chosen a *Vestal*, the *Patria Potestas* ceased; and in the later period, it was also dissolved by the son's attaining certain civil or ecclesiastical honours. The *Potestas* of the father might cease without the son becoming *sui juris*, as in the case of the son being given in adoption.

The term *Patria Potestas* strictly expresses the power of the father, as such, which arises from the paternal relation; but the term also imports the

rights of the child as a *filiafamilias* or *filiafamilias*. Of these rights, the most important was the capacity of being the *suius heres* of the father. Generally, the parent could emancipate his child at his pleasure, and thus deprive him of the rights of agnation; but the law in this respect was altered by Justinian (*Nov. 89. c. 11*), who made the consent of the child necessary. (Savigny, *System*, &c., ii. 49, &c.; Puchta, *Inst.* iii. 142; Böcking, *Inst.* i. 224.) [G. L.]

PATRICII. This word is a derivative from *pater*, which in the early times invariably denoted a patrician, and in the later times of the republic frequently occurs in the Roman writers as equivalent to senator. Patricii therefore signifies those who belonged to the *patres* "rex patres eos (*senatores*) voluit nominari, patriciosque eorum liberos." (*Cic. de Re Publ.* ii. 12; *Liv.* i. 8; *Dionys.* ii. 8.) It is a mistake in these writers to suppose that the patricii were only the offspring of the *patres* in the sense of senators, and necessarily connected with them by blood. *Patres* and patricii were originally convertible terms. (*Plut. Romul.* 13; *Lydus, de Mens.* i. 20, *de Mag.* i. 16; Niebuhr, *Hist. of Rome*, i. p. 336.) The words *patres* and *patricii* have radically and essentially the same meaning, and some of the ancients believed that the name *patres* was given to that particular class of the Roman population from the fact that they were fathers of families (*Plut. Dionys.* i. c.); others, that they were called so from their age (*Sallust, Catil.* 6); or because they distributed land among the poorer citizens, as fathers did among their children. (*Fest. s. v. Patres Senatores*; *Lyd. de Mens.* iv. 50.) But most writers justly refer the name to the patricium which the patricians exercised over the whole state, and over all classes of persons of whom it was composed. (*Plut.* and *Sallust*, l. c.; *Zonaras*, vii. 8; *Suidas*, s. v. Πατρίκιοι.)

In considering who the patricians were, we have to distinguish three periods in the history of Rome. The first extends from the foundation of the city down to the establishment of the plebeians as a second order; the second, from this event down to the time of Constantine, during which time the patricians were a real aristocracy of birth, and as such formed a distinct class of Roman citizens opposed to the plebeians, and afterwards to the new plebeian aristocracy of the nobles: the third period extends from Constantine down to the middle ages, during which the patricians were no longer an aristocracy of birth, but were persons who merely enjoyed a title, first granted by the emperors and afterwards by the popes also.

First Period: from the foundation of the city, to the establishment of the plebeian order. Niebuhr's researches into the early history of Rome have established it as a fact beyond all doubt, that during this period the patricians comprised the whole body of Romans who enjoyed the full franchise, that they were the *populus Romanus*, and that there were no other real citizens besides them. (Niebuhr, *Hist. of Rome*, ii. pp. 224, 225, note 507; *Cic. pro Cæciliis*. 35.) The patricians must be regarded as conquerors who reduced the earlier inhabitants of the places they occupied to a state of servitude, which in our authorities is designated by the terms *clens* and *plebs*. The other parts of the Roman population, namely clients and slaves, did not belong to the *populus Romanus*, or sovereign

people, and were not burghers or patricians. The senators were a select body of the *populus* or patricians, which acted as their representative. The burghers or patricians consisted originally of three distinct tribes, which gradually became united into the sovereign *populus*. These tribes had founded settlements upon several of the hills which were subsequently included within the precincts of the city of Rome. Their names were Ramnes, Tities, and Luceres, or Ramnenses, Titenses, and Lucerenses. Each of these tribes consisted of ten *curiæ*, and each *curia* of ten *decuriæ*, which were established for representative and military purposes. [*SENATUS*.] The first tribe, or the Ramnes, were a Latin colony on the Palatine hill, said to have been founded by Romulus. As long as it stood alone, it contained only one hundred gentes, and had a senate of one hundred members. When the Tities, or Sabine settlers on the Quirinal and Viminal hills, under king Tatius, became united with the Ramnes, the number of gentes as well as that of senators was increased to 200. These two tribes after their union continued probably for a considerable time to be the patricians of Rome, until the third tribe, the Luceres, which chiefly consisted of Etruscans, who had settled on the Caelian Hill, also became united with the other two as a third tribe. When this settlement was made is not certain: some say that it was in the time of Romulus (*Fest. s. v. Caelius Mons* and *Luceres*; *Varro, de Ling. Lat.* v. 55); others that it took place at a later time. (*Tacit. Annal.* iv. 65; *Fest. s. v. Tuscan vicum*.) But the Etruscan settlement was in all probability older than that of the Sabines (see Götting, *Gesch. der Röm. Staatsverf.* p. 54, &c.), though it seems occasionally to have received new bands of Etruscan settlers even as late as the time of the republic.

The amalgamation of these three tribes did not take place at once: the union between Latins and Sabines is ascribed to the reign of Romulus, though it does not appear to have been quite perfect, since the Latins on some occasions claimed a superiority over the Sabines. (*Dionys.* ii. 62.) The Luceres existed for a long time as a separate tribe without enjoying the same rights as the two others until Tarquinius Priscus, himself an Etruscan, caused them to be placed on a footing of equality with the others. For this reason he is said to have increased the number of senators to 300 (*Dionys.* iii. 67; *Liv.* i. 35; *Cic. de Re Publ.* ii. 20; compare *SENATUS*), and to have added two Vestal virgins to the existing number of four. (*Dionys.* l. c.; *Fest. s. v. Sex Vestales sacerdotes*; Niebuhr, *Hist. of Rome*, i. p. 302, &c.) The Luceres, however, are, notwithstanding this equalisation, sometimes distinguished from the other tribes by the name *patres minorum gentium*; though this name is also applied to other members of the patricians, e. g. to those plebeian families who were admitted by Tarquinius Priscus into the three tribes, and in comparison with these, the Luceres are again called *patres majorum gentium*. (Compare Niebuhr, i. p. 304, and Götting, p. 226, &c.) That this distinction between *patres majorum* and *minorum gentium* was kept up in private life, at a time when it had no value whatever in a political point of view, is clear from Cicero (*ad Fam.* ix. 21). Tullus Hostilius admitted several of the noble gentes of Alba among the patricians (the

patres legiti, Liv. i. 30), viz., the Tullii (Tutii?), Servilii, Quinctii, Geganii, Curiiati, and Cloelii, to which Dionysius (iii. 29) adds the gens Metilia. Ancus Marcius admitted the Tarquinius (Dionys. iii. 48), Tarquinius Priscus the Tullii (Dionys. iv. 3), Servius Tullius the Octavii (Sueton. *Aug.* 1, &c.), and even Tarquinius Superbus seems to have had similar intentions. (Dionys. iv. 57; Sueton. *Vitell.* 1.) We do not hear that the number of gentes was increased by these admissions, and must therefore suppose that some of them had already become extinct, and that the vacancies which thus arose were filled up with these new burghers. (Götting, p. 222.) During the time of the republic, distinguished strangers and wealthy plebeians were occasionally made Roman patricians, e. g. Appius Claudius and his gens (Liv. x. 8; compare ii. 16; Dionys. v. 40; Sueton. *Tib.* 1), and Domitius Ahenobarbus. (Suet. *Nero.* 1.) As regards the kingly period the Roman historians speak as if the kings had had the power of raising a gens or an individual to the rank of a patrician; but it is evident that the king could not do this without the consent of the *patres* in their curies; and hence Livy (iv. 4) makes Canuleius say, "per cooptationem in *patres*, aut ab *regibus lecti*," which *lectio*, of course, required the sanction of the body of patricians. In the time of the republic such an elevation to the rank of patrician could only be granted by the senate and the *populus*. (Liv. iv. 4, x. 8, compare especially Becker, *Handb. der Röm. Alterth.* ii. 1. p. 26, &c.)

Since there were no other Roman citizens but the patricians during this period, we cannot speak of any rights or privileges belonging to them exclusively; they are all comprehended under *CIVITAS* (ROMAN) and *GENS*. Respecting their relations to the kings see *COMITIA CURIATA* and *SENATUS*. During this early period we can scarcely speak of the patricians as an aristocracy, unless we regard their relation to the clients in this light. [*CLIENTS*.]

Second Period: from the establishment of the plebeian order to the time of Constantine. When the plebeians became a distinct class of citizens, who shared certain rights with the patricians, the latter lost in so far as these rights no longer belonged to them exclusively. But by far the greater number of rights, and those the most important ones, still remained in the exclusive possession of the patricians, who alone were *cives optimo jure*, and were the *patres* of the nation in the same sense as before. All civil and religious offices were in their possession, and they continued as before to be the *populus*, the nation now consisting of the *populus* and the plebea. This distinction, which Livy found in ancient documents (xxv. 12), seems however in the course of time to have fallen into oblivion, so that the historian seems to be scarcely aware of it, and uses *populus* for the whole body of citizens including the plebeians. Under the Antonines the term *populus* signified all the citizens, with the exception of the patricii. (Gaius, i. 3.) In their relation to the plebeians or the commonalty, the patricians now were a real aristocracy of birth. A person born of a patrician family was and remained a patrician, whether he was rich or poor, whether he was a member of the senate, or an eque, or held any of the great offices of the state, or not: there was no power that could make a patrician a plebeian, except his own free will, for every patrician might

by adoption into a plebeian family, or by a solemn transition from his own order to the plebea, become a plebeian, leaving his gens and curia and renouncing the *sacra*. As regards the census, he might indeed not belong to the wealthy classes, but his rank remained the same. Instances of reduced patricians in the latter period of the republic are, the father of M. Aemilius Scaurus and the family of the Sullas previous to the time of the dictator of that name. (Suet. *Aug.* 2; Liv. iv. 16; Plin. *H. N.* xviii. 4; Zonar. vii. 15; Ascon. *Ped. in Scaur.* p. 25, ed. Orelli.) A plebeian, on the other hand, or even a stranger, might, as we stated above, be made a patrician by a *lex curiata*. But this appears to have been done very seldom; and the consequence was, that in the course of a few centuries the number of patrician families became so rapidly diminished, that towards the close of the republic there were not more than fifty such families. (Dionys. i. 85.) Julius Caesar by the *lex Cassia* raised several plebeian families to the rank of patricians, in order that they might be able to continue to hold the ancient priestly offices which still belonged to their order. (Suet. *Caes.* 41; Tacit. *Annal.* xi. 25; Dion. *Caes.* xliii. 47, xlv. 2.) Augustus soon after found it necessary to do the same by a *lex Saenia*. (Tacit. *l. c.*; Dion. *Caes.* xlix. 43, lii. 42.) Other emperors followed these examples: Claudius raised a number of senators and such persons as were born of illustrious parents to the rank of patricians (Tacit. *l. c.*; Suet. *Oct.* 1); Vespasian, Titus, and other emperors did the same. (Tacit. *Agria.* 9; Capitol. *M. Antonin.* 1; Lamprid. *Commod.* 6.) The expression for this act of raising persons to the rank of patricians was *in patricios* or *in familiam patriciam adligere*.

Although the patricians throughout this whole period had the character of an aristocracy of birth, yet their political rights were not the same at all times. The first centuries of this period are an almost uninterrupted struggle between patricians and plebeians, in which the former exerted every means to retain their exclusive rights, but which ended in the establishment of the political equality of the two orders. [*PLEBS*.] Only a few insignificant priestly offices, and the performance of certain ancient religious rites and ceremonies, remained the exclusive privilege of the patricians; of which they were the prouder, as in former days their religious power and significance were the basis of their political superiority. (See Ambrosch, *Studien und Andeutungen*, &c. p. 58, &c.) At the time when the struggle between patricians and plebeians ceased, a new kind of aristocracy began to arise at Rome, which was partly based upon wealth and partly upon the great offices of the republic, and the term *Nobiles* was given to all persons whose ancestors had held any of the curule offices. (Compare *NOBILES*.) This aristocracy of nobles threw the old patricians as a body still more into the shade, though both classes of aristocrats united as far as was possible to monopolise all the great offices of the state (Liv. xxii. 34, xxxix. 41); but although the old patricians were obliged in many cases to make common cause with the nobles, yet they could never suppress the feeling of their own superiority; and the veneration which historical antiquity alone can bestow, always distinguished them as individuals from the nobles. How much wealth gradually gained the upper hand, is seen from the measure adopted about the time of the

first Punic war, by which the expenses for the public games were no longer given from the aerarium, but were defrayed by the aediles; and as their office was the first step to the great offices of the republic, that measure was a tacit exclusion of the poorer citizens from those offices. Under the emperors the position of the patricians as a body was not improved; the filling up of the vacancies in their order by the emperors began more and more to assume the character of an especial honour, conferred upon a person for his good services or merely as a personal favour, so that the transition from this period to the third had been gradually preparing.

Respecting the great political and religious privileges which the patricians at first possessed alone, but afterwards were compelled to share with the plebeians, see PLEBS and the articles treating of the several Roman magistracies and priestly offices. Compare also GENS; CURIA; SENATUS.

In their dress and appearance the patricians were scarcely distinguished from the rest of the citizens, unless they were senators, curule magistrates, or equites, in which case they wore like others the ensigns peculiar to these dignities. The only thing by which they appear to have been distinguished in their appearance from other citizens, was a peculiar kind of shoes, which covered the whole foot and part of the leg, though they were not as high as the shoes of senators and curule magistrates. These shoes were fastened with four strings (*corrigias* or *lora patricia*) and adorned with a lunula on the top. (Senec. *De Tranquil. Anim.* 11; Plut. *Quaest. Rom.* 75; Stat. *Silv.* v. 2. 27; Martial, i. 50, ii. 29.) Festus (s. v. *Mulleus*) states that mulleus was the name of the shoes worn by the patricians; but the passage of Varro which he adduces only shows that the mullei (shoes of a purple colour) were worn by the curule magistrates. (Compare Dion Cass. xliii. 43.)

Third Period: from the time of Constantine to the middle ages. From the time of Constantine the dignity of patricius was a personal title, which conferred on the person, to whom it was granted, a very high rank and certain privileges. Hitherto patricians had been only genuine Roman citizens, and the dignity had descended from the father to his children; but the new dignity was created at Constantinople, and was not bestowed on old Roman families; it was given, without any regard to persons, to such men as had for a long time distinguished themselves by good and faithful services to the empire or the emperor. This new dignity was not hereditary, but became extinct with the death of the person on whom it was conferred; and when during this period we read of patrician families, the meaning is only that the head of such a family was a patricius. (Zosim. ii. 40; Cassiodor. *Variar.* vi. 2.) The name patricius during this period assumed the conventional meaning of father of the emperor (Ammian. Marcellin. xxix. 2; Cod. 12. tit. 3. § 5), and those who werethus distinguished occupied the highest rank among the illustres; the consuls alone ranked higher than a patricius. (Isidor. ix. 4. 1. 3; Cod. 3. tit. 24. s. 3; 12. tit. 3. s. 3.) The titles by which a patricius was distinguished were magnificentia, celsitudo, eminentia, and magnitudo. They were either engaged in actual service (for they generally held the highest offices in the state, at the court and in the provinces), and were then called *patricii praesentales*,

or they had only the title and were called *patricii codicillares* or *honorarii*. (Cassiod. viii. 9; Savaaron *ad Sidon. Apoll.* i. 3.) All of them, however, were distinguished in their appearance and dress from ordinary persons, and seldom appeared before the public otherwise than in a carriage. The emperors were generally very cautious in bestowing this great distinction, though some of the most arbitrary despots conferred the honour upon young men and even on eunuchs. Zeno decreed that no one should be made patricius who had not been consul, praefect, or magister militum. (Cod. 3. tit. 24. s. 3.) Justinian, however, did away with some of these restrictions. The elevation to the rank of patricius was testified to the person by a writ called diploma. (Sidon. Apollin. v. 16; Suidas, s. v. *Τραυματίδιος*; compare Cassiodor. vi. 2, viii. 21, &c.)

This new dignity was not confined to Romans or subjects of the empire, but was sometimes granted to foreign princes, such as Odoacer, the chief of the Heruli, and others. When the popes of Rome had established their authority, they also assumed the right of bestowing the title of patricius on eminent persons and princes, and many of the German emperors were thus distinguished by the popes. In several of the Germanic kingdoms the sovereigns imitated the Roman emperors and popes by giving to their most distinguished subjects the title of patricius, but these patricii were at all times much lower in rank than the Roman patricii, a title of which kings and emperors themselves were proud.

(Rein, in *Ersk and Gruber's Encyclopädie*, s. v. *Patricier*, and for the early period of Roman History, Götting's *Gesch. der Röm. Staatsverf.* p. 51, &c., Becker's *Handbuch. l. c.*, and p. 133, &c.) [L. S.]

PATRIMI ET MATRIMI, also called *Patrimēs et Matrimēs*, were those children whose parents were both alive (Festus, s. v. *Flaminia*; *Matrimēs*; called by Dionysius, ii. 22, *ἀμφιθαλείς*); in the same way as *pater patrimus* signifies a father, whose own father is still alive. (Festus, s. v. *Pater Patr.*) Servius (*ad Virg. Georg.* 31), however, confines the term *patrimi et matrimi* to children born of parents who had been married by the religious ceremony called *confarreatio*: it appears probable that this is the correct use of the term, and that it was only applied to such children so long as their parents were alive. We know that the flamines majores were obliged to have been born of parents who had been married by *confarreatio* (Tac. *Ann.* iv. 16; Gaius, i. 112); and as the children called *patrimi et matrimi* are almost always mentioned in connection with religious rites and ceremonies (Cic. *de Har. resp.* 11; Liv. xxxvii. 3; Gell. i. 12; Tacit. *Hist.* iv. 53; Macrobi. *Satur.* 6; Vopisc. *Aurel.* 19; Orelli, *Inscr.* n. 2270), the statement of Servius is rendered more probable, since the same reason, which confined the office of the flamines majores to those born of parents who had been married by *confarreatio*, would also apply to the children of such marriages, who would probably be thought more suitable for the service of the gods than the offspring of other marriages. (Rein, *Das Röm. Privatrecht.* p. 177; Götting, *Gesch. d. Röm. Staatsverf.* p. 90.)

PATRONOMI (πατρονομίαι), were magistrates at Sparta, who exercised, as it were, a paternal power over the whole state. Pausanias (ii. 9. § 1) says, that they were instituted by Cleomenes III.

(*n. c.* 236—221), who destroyed the power of the *γερουσία* by establishing patronomi in their place. The *γερουσία*, however, was not abolished by Cleomenes, as it is again spoken of by Pausanias (*iii.* 11. § 2), and also in inscriptions. The patronomi are mentioned by Philostratus (*Vit. Apollon.* iv. 32) among the principal magistrates along with the gymnasiarchs and ephori; and their office is also spoken of by Plutarch. (*An seni sit resp. ger.* c. 24.) Their number is uncertain; but Böckh (*Corp. Inscr.* vol. i. p. 605) has shown that they succeeded to the powers which the ephori formerly possessed, and that the first patronomus was the *πρώτος* of the state, that is, gave his name to the year as the first ephor had formerly done. (Compare Müller, *Dor.* iii. 7. § 8.)

PATRONUS. The act of manumission created a new relation between the manumissor and the slave, which was analogous to that between father and son. The manumissor became with respect to the manumitted person his Patronus, and the manumitted person became the Libertus of the manumissor. The word Patronus (from Pater) indicates the nature of the relation. If the manumissor was a woman, she became Patrona; and the use of this word instead of Matrona appears to be explained by the nature of the patronal rights. Viewed with reference to the early ages of Rome, this patronal relation must be considered a part of the ancient Clientela; but from the time of the Twelve Tables at least, which contained legislative provisions generally on the subject of patronal rights, we may consider the relation of Patronus and Libertus as the same both in the case of Patrician and Plebeian manumissores.

The Libertus adopted the gentile name of the Manumissor. Cicero's freedman Tiro was called M. Tullius Tiro.

The Libertus owed respect and gratitude to his patron, and in ancient times the patron might punish him in a summary way for neglecting those duties. This obligation extended to the children of the Libertus, and the duty was due to the children of the patron. In later times, the patron had the power of relegating an ungrateful freedman to a certain distance from Rome, under a law probably passed in the time of Augustus. (*Tacit. Ann.* xiii. 26; *Dion Cass.* lv. 13.) In the time of Nero it was proposed to pass a *Senatus-consultum* which should give a patron the power of reducing his freedman to slavery, if he misconducted himself towards his patron. The measure was not enacted, but this power was given to the patron under the later emperors. The *Lex Aelia Sentia* gave the patron a right of prosecuting his freedman for ingratitude (*et ingratus accusare*). (*Dig.* 40. tit. 9. s. 30.) An ingratus was also called Libertus Impius, as being deficient in Pietas.

If the Libertus brought an action against the Patronus (*in jus vocavit*), he was himself liable to a special action on the case (*Gaius*, iv. 46); and he could not, as a general rule, institute a capital charge against his patron. The Libertus was bound to support the patron and his children in case of necessity, and to undertake the management of his property and the tutela of his children: if he refused, he was ingratus. (*Dig.* 37. tit. 14. s. 19.)

If a slave were the property of several masters and were manumitted by all of them, and became a Roman citizen, all of them were his Patroni.

The manumissor could secure to himself further rights over his libertus by a stipulatio or by taking an oath from him. The subjects of such agreements were gifts from the libertus to the patronus (*donata et manere*) and services (*operae*). The oath was not valid, unless the person was a libertus when he took it. If then he took the oath as a slave, he had to repeat it as a freeman, which seems to be the meaning of the passage of Cicero in which he speaks of his freedman Chrysogonus. (*Ad Att.* vii. 2; compare *Dig.* 38. tit. 1. s. 7.) These Operae were of two kinds, *Officiales* which consisted in respect and affection; and *Fabriles* which are explained by the term itself. The *officiales* determined by the death of the Patronus, unless there was an agreement to the contrary; but the *fabriles* being of the nature of money or money's worth passed to the heredes of the Patronus, like any other property. The Patronus, when he commanded the operae of his libertus, was said "*ei operas indicere* or *imponere*." (*Gaius*, iv. 162; *Dig.* 38. tit. 2. s. 29.)

The Patron could not command any services which were disgraceful (*turpes*) or dangerous to life, such as prostitution or fighting in the amphitheatre; but if the libertus exercised any art or calling (*artificium*), even if he learned it after his manumission, the operae in respect of it were due to the patron.

The *Lex Julia et Papia Poppaea* released freedmen (except those who followed the *ars ludicra* or hired themselves to fight with beasts) from all obligation as to gifts or operae, who had begotten two children and had them in their power, or one child five years old. (*Dig.* 38. tit. 1. *De Operis Libertorum*, s. 37.)

If liberty was given directly by a testament, the testator was the manumissor, and his patronal rights would consequently belong to his children: if it was given indirectly, that is, per *fideicommissum*, the person who performed the act of manumission was the patronus. In those cases where a slave obtained his freedom under the *Senatusconsultum Silianum*, the Praetor could assign him a Patronus; and if this was not done, that person was the Patron of whom the libertus had last been the slave. (*Dig.* 38. tit. 16. s. 3.)

The patronal rights were somewhat restricted, when the act of manumission was not altogether the free act of the manumissor. For instance, the Manumissor per *fideicommissum* had all the patronal rights, except the power to prosecute for ingratitude, the right to be supported by the libertus, and to stipulate for munera and operae: his rights against the property of the libertus were however the same as those of any other manumissor. (*Frag. Vat.* § 225; *Dig.* 38. tit. 2. s. 29.) If a slave had given money to another person in order that this other person might purchase and manumit him, the manumissor had no patronal rights, and he lost even the name of patron, if he refused to perform the act for which he had received the money and allowed the slave to compel him to perform his agreement, which the slave could do by a constitution of M. Aurelius and L. Verus. (*Dig.* 40. tit. 1. s. 4, 5.) If a master manumitted his slave in consideration of a sum of money, he retained all patronal rights, but he could not stipulate for operae. A person who purchased a slave, and on the occasion of the purchase agreed to manumit him, had all patronal rights, except the right of prosecuting

for ingratitude, in case the slave compelled him to manumit pursuant to the constitution of M. Aurelius and L. Verus. (Dig. 40. tit. 9. a. 30.)

It was the duty of the patron to support his freedman in case of necessity, and if he did not, he lost his patronal rights: the consequence was the same if he brought a capital charge against him. The Lex Aelia Sentia, among its various provisions, contained several that related to the rights and duties of the patron.

A *capitis diminutio*, either of the Patron or the Libertus, dissolved the relation between them. (See Tacit. *Hist.* ii. 92, where "jura libertorum" means "jura patronorum," or "jura in libertos.") The relation was dissolved when the Libertus obtained *Ingenuitas* by the *Natalium Restitutio*, but not when he merely obtained the *jus aureorum annulorum*. [INGENUUS.]

The most important of the Patronal rights related to the property of Liberti who died intestate or having made a testament.

The subject, so far as concerns the Ante-Justinian period, may be distributed under the two following heads: — 1. the ordinary rules of law, and 2. the extraordinary: the former comprehend the rules of the old civil law, and the Edict on the Bonorum Possessio; and the latter, the Bonorum Possessio contra tabulas liberti and contra suos non naturales, the Bonorum Possessio contra tabulas libertae, and the right to a virilis pars which was given by the Lex Papia Poppaea.

By the law of the Twelve Tables, if a freedman died intestate, without sui heredes, the patronus was his heir. This right was viewed as a right of Agnation. The Legitima patronorum tutela was not expressly mentioned in the Twelve Tables, but it was a legal consequence of the rule as to inheritance. (Ulp. *Frag.* xi. 3.) In the case of an intestate liberta, who could not have a suus heres, the patron was heres. The Senatusconsultum Orfitianum, which was passed after Gaius wrote (iii. 51), and in the last year but one of the reign of M. Aurelius, made an alteration in this respect. The passage of Ulpian (*Frag.* xxix. 2), which was written when this Senatusconsultum was in force, says, that if a liberta died intestate, the patron succeeded to her property, because a mother could not have sui heredes; yet Ulpian himself (lib. 12, *ad Sabianum*; Dig. 38. tit. 17. a. 1) says, that whether the mother was Ingenua or Libertina, the children could succeed to her inheritance by the Senatusconsultum Orfitianum. This apparent contradiction is removed by the supposition that the Senatusconsultum gave the children in such cases an equal right with the patron.

These patronal rights belonged both to a Patronus and a Patrona, and to the liberi of a Patronus. (Ulp. *Frag.* xxvii.) The male children of the patronus had the same rights as the patronus himself; but the females had only the rights which the Twelve Tables gave to the males, and they had not the Bonorum Possessio contra tabulas testamenti liberti aut ab intestato contra suos heredes non naturales, until these rights were given them by the Lex Papia Poppaea. (Ulp. *Frag.* xxix. 4, 5.) A difficulty which is raised by a passage in Justinian's legislation on the patronal rights is discussed by Unterholzner. (*Zeitschrift*, v. p. 37.) It seems that the children of a Patrona had not by the Twelve Tables the same rights as the children of a Patronus, but the Lex Papia Poppaea probably

made some change in this respect. (*Zeitschrift*, v. p. 43, &c.)

In order that these patronal rights should exist, it was necessary that the libertus must have been made free by a Roman citizen, and have become a Roman citizen by the act of manumission. Accordingly, if a person obtained the citizenship, it was necessary that he should have a special grant of the *jus patronatus*, in order that he might have patronal rights against his then freedmen, who must also at the same time become Roman citizens. (Plin. *Ep.* x. 6.) A *capitis diminutio*, as already observed, either of the patron or the libertus, destroyed the patronal rights to the inheritance. (Gaius, iii. 51.)

If there were several patroni or patronae, they divided the inheritance equally, though their shares in the libertus when a slave might have been unequal. These patronal rights resembled a joint-tenancy in English Law, for the survivor or survivors of the patroni had all the patronal rights to the exclusion of any children of a deceased patronus. A son of a patron also claimed the inheritance to the exclusion of the grandson of a patron. If the patroni were all dead, leaving several children, the hereditas was divided among all the children equally (*in capita*), pursuant to the law of succession in the case of Agnation. (Gaius, iii. 16, 59, &c.)

A Senatusconsultum, which was passed in the time of Claudius, allowed a patron to assign his patronal rights to the inheritance of a libertus, to any of his children whom he had in his power, to the exclusion of the rest. (Dig. 88. tit. 4.)

The Edict extended the Bonorum Possessio to Patroni. The Patronal rights of the Civil Law were founded on an assumed Agnatio: those of the Edict were founded on an assumed Cognatio. The Edict called to the Bonorum Possessio of Liberti, 1. their children; 2. their heredes legitimi; 3. their cognati, who must of course be descendants; 4. the familia of the Patronus; 5. the patronus and patrona, and their children and parents, by which provision was made in case the Patronus or Patrona had sustained a *capitis diminutio*, and so could not be called in the fourth order; 6. the husband or wife of the freedwoman or freedman; 7. the cognati of the manumissor.

Originally, if the freedman made a will, he could pass over (*praeterire*) the patron. But by the Edict, unless he left him as much as one half of his property, the patron or his male children could obtain the Bonorum possessio contra tabulas of one half of the property. If the libertus died intestate, leaving no suus heres, except an adopted child, or a wife in manu, or a nurus in the manus of his son, the patron had a bonorum possessio of one half against these sui heredes. But if the libertus had children of his own blood (*naturales*) either in his power at the time of his death or emancipated or given in adoption, and if these children were made heredes by his testament or being praeteriti claimed the Bonorum possessio contra tabulas, the patron had no claim on the freedman's property. The patron was not excluded, if the children of the freedman were exheredated. (Gaius, iii. 40; Dion Cass. li. 15, and the note of Reimar.)

By the Lex Papia Poppaea, if a freedman had a property amounting to a hundred thousand aertarii and fewer than three children, the patronus had an

equal share (*virilis pars*) with the children, whether the freedman died testate or intestate; and a patrona ingenua, who had three children, enjoyed the same privilege. Before the Lex Papia, Patronae had only the rights which the Twelve Tables gave them; but this Lex put Ingenuae patronae who had two children, and Libertinae patronae who had three children, on the same footing with respect to the Bonorum possessio contra tabulas and with respect to an adopted son, a wife in manu, or a nurus in manu filii, as the Edict had placed Patroni. The Lex did the same for daughters of the Patronus who had three children. The Lex also gave to a Patrona ingenua, but not to a Libertina, who had three children, the same rights that it gave to a Patronus.

According to the old law, as the liberta was in the legitima tutela of her patron, she could make no disposition of her property without his consent (*patrono auctore*). The Lex Papia freed a liberta from this tutela, if she had four children, and she could consequently then make a will without the consent of her patronus, but the law provided that the patronus should have an equal share with her surviving children.

In the case of a liberta dying intestate, the Lex Papia gave no further rights to a Patrona, who had children (*liberis honoratis*) than she had before; and therefore if there had been no capitis diminutio of the Patrona or the Liberta, the Patrona inherited the property, even if she had no children, to the exclusion of the children of the liberta. If the liberta made a will, the Lex Papia gave to the Patrona, who had the number of children required by that law, the same rights which the Edict gave to the Patronus contra tabulas liberti. The same Lex gave to the daughter of a patrona, who had a single child, the same rights that the patronus had contra tabulas liberti. (Gaius, iii. 53; a passage which Unterholzner proposes to correct, but on very insufficient grounds, *Zeitschrift*, v. p. 45.)

The rules of law as to the succession of the Patronus to the property of Latini Liberti differed in various respects from those that have been explained. Being viewed as a peculium, it had the incidents of such property. It came to the extranei heredes of the manumissor, but not to his exheredated children, in both which respects it differed from the property of a Libertus who was a Civis Romanus. If there were several patrona, it came to them in proportion to their interests in the former slave, and it was consistent with this doctrine that the share of a deceased patronus should go to his heres. The Senatusconsultum Largianum, which was passed in the time of Claudius, enacted that the property of Latini should go first to those who had manumitted them, then to their liberi who were not expressly exheredated, according to proximity, and then according to the old law, to the heredes of the manumissor. The only effect of this Senatusconsultum was to prefer liberi, who were not expressly exheredated, to extranei heredes. Accordingly, an emancipated son of the patronus, who was praeteritus, and who could not claim the Bonorum possessio of his father's property contra tabulas testamenti, had a claim to the property of a Latinus prior to the extranei heredes.

As to the Dediticii under the Lex Aelia Sentia, there were two rules. The property of those who on their manumission would have become Roman

citizens, but for the impediments thereto, came to their patroni as if they had been Roman citizens: they had not however the testamenti factio. The property of those, who on their manumission would have become Latini, but for the impediments thereto, came to their patroni as if they had been Latini. On this Gaius remarks that in this matter the legislator had not very clearly expressed his intention. He had already made a similar remark as to a provision of the Lex Papia (iii. 47).

As to the other meanings of the word Patronus, see *CLIENTS* and *ORATOR*.

The subject of the Patronatus is one of considerable importance towards a right understanding of many parts of the Roman polity. This imperfect outline may be filled up by referring to the following authorities. (Gaius, iii. 39—76; Ulpian, *Frag.* tit. xxvii. xxix.; Dig. 37. tit. 14, 15; 38. tit. 1, 2, 3, &c.; the Index to Paulus, *Sent. Recept.*; and for Justinian's legislation, Inst. 3. tit. 8, &c.; Unterholzner, *Ueber das patronatische Erbrecht*, *Zeitschrift*, v., and the article *GENS*, with the references in Rein, *Das Röm. Privatrecht*, p. 285, and in Walter, *Geschichte des Röm. Rechts*, pp. 507—516, and 684—689.) [G. L.]

PAVIMENTUM. [DOMUS, p. 431, a; VIAR.]

PAVONACEUM. [TIGULA.]

PAUPERIE, ACTIO DE. [PAUPERIES.]

PAUPERIES was the legal term for mischief done by an animal (*quadrupes*) contrary to the nature of the animal, as if a man's ox gored another man. In such cases, the law of the Twelve Tables gave the injured person an action against the owner of the animal for the amount of the damage sustained. The owner was bound either to pay the full amount of damages or to give up the animal to the injured person (*noxae dare*). Pauperies excluded the notion of Injuria; it is defined to be "damnum sine injuria facientis factum," for an animal could not be said to have done a thing "injuria, quod sensu caret." The actio de pauperie belonged to the class of Noxales Actiones. According to the old law, if a bear got away from his master, he was not liable; because when the animal got away, it ceased to be the master's property. But the Aedile's edict declared that it was not lawful to keep a dog, boar, wild boar, bear, or lion, in any place which was a place of public resort. If this rule was violated, and any damage was done by one of these beasts to a freeman, the judex might condemn the owner in such sum as he should think to be "bonum et aequum." If damage was done to any thing else, the judex might condemn the owner in double the amount of the damage. There might also be an actio de pauperie in addition to the aedilitiae actiones. (Dig. 9. tit. 1; Inst. 4. tit. 9.) [G. L.]

PAUSA/RIL was the name given to the priests of Isis at Rome, because they were accustomed in the processions in honour of Isis to make pauses (*pausae*) at certain chapels or places, called *mansiones*, by the road's side, to sing hymns and perform other sacred rites. (Orelli, *Inscr.* n. 1885; Spartian. *Pescen. Nig.* 6, *Caracall.* 9; Salm. *ad loc.*)

The *porticulus*, or commander of the rowers in a vessel, was sometimes called *pausarius* (Sen. *Ep.* 56), because the rowers began and ceased (*pausae*) their strokes according to his commands. [PORTICULUS.]

PECHUS (πῆχυς). [CURTUS; MENSURA.]

PECTEN (*κραις*), a comb. The Greeks and Romans used combs made of box-wood (Brunck, *Anst.* i. 221; Ovid. *Fast.* vi. 23; Mart. xiv. 25), which they obtained, as we do, from the shores of the Euxine sea. The mountain ridge of Cyturus in Galatia was particularly celebrated for this product. (Ovid. *Met.* iv. 311.) The Egyptians had ivory combs (Apul. *Met.* xi. p. 121, ed. Aldi), which also came into use by degrees among the Romans. (Claudian, *de Nupt. Honor.* 102.) The golden comb, ascribed to the goddesses, is of course imaginary. (Callim. in *Loc. Pall.* 31.) The wooden combs, found in Egyptian tombs, are toothed on one side only; but the Greeks used them with teeth on both sides, as appears from the remains of combs found at Pompeii (Donaldson's *Pompeii*, vol. ii. pl. 78), and from the representation of three combs, exactly like our small-tooth combs, on the Amyclæan marbles. (*Mémoires relating to Turkey*, edited by Walpole, p. 452.)

The principal use of the comb was for dressing the hair (Ovid. *Amor.* i. 14. 15, *Met.* xii. 409), in doing which the Greeks of both sexes were remarkably careful and diligent. (Herod. vii. 208.) To go with uncombed hair was a sign of affliction. (Soph. *Oed. Col.* 1257.)

A comb with iron teeth was used in corn-fields to separate the grain from the straw, whilst it was yet standing. (Col. *de Re Rust.* ii. 21.) This method of reaping was called *pectinare segetem*. A painting in the sepulchral grotto of El Kab in Egypt represents a man combing flax for the purpose of separating the lineæ from the stem. The rake used in making hay is called *rarus pecten* (Ovid. *Rem. Amor.* 192), because its teeth are far apart; but this may be only a poetical use of the term.

Two portions of the Greek lyre were called the combs (Eratosth. *Cataster.* 24); they may have been two rows of pegs, to which the strings were tied. The use of the comb in weaving, and the transference of its name to the plectrum, are explained under **TELA**. [J. Y.]

PECUARIUM, the name given to persons who pastured their cattle on the public lands (*pasua*), for which they were bound to pay a tax to the state, called **SCRIPTURA**. But in the earlier times of the republic many persons supported their cattle on the public pastures without paying this tax at all, or paying less than was legally due; and hence the word *pecuarii* was frequently employed to signify those persons who thus illegally made use of the public pastures. They were often prosecuted by the aediles and fined (Ov. *Fast.* v. 283—294; Liv. x. 23, 47, xxxiii. 42, xxxv. 10; Festus, p. 238, ed. Müller.)

PECULATUS is properly the misappropriation or theft of public property (*pecunia publica*), whether it was done by a functionary or by a private person. Labeo defines it thus, "*pecuniae publicae aut sacrae furtum, non ab eo factum, cuius periculo est.*" The person guilty of this offence was **Peculator**. Cicero (*de Off.* iii. 18) enumerates *Peculatores* with *sicarii*, *venefici*, *testamentarii* and *fures*. The origin of the word appears to be *Pecus*, a term which originally denoted that kind of movable property which was the chief sign of wealth. Originally trials for *Peculatus* were before the *Populus*, or before the Senate. (Liv. v. 32, xxxvii. 57, xxxviii. 54.) In the time of Cicero matters of *peculatus* were one of the *Quæ-*

tiones perpetuae, which imply some *Lex de Peculatu*, and such a *Lex* is by some writers enumerated among the *Leges Sullanæ*, but without stating the authority for this assertion. Two *Leges* relating to *Peculatus* are cited in the Digest, *Lex Julia Peculatus* and *Lex Julia de Residuis* (Dig. 48. tit. 13); but these may be the same *Lex*, though quoted as two *Leges*, just as the *Lex Julia de Adulteriis* comprised a provision *De Fundo Dotali*, which chapter is often quoted as if it were a separate *Lex*. Matters relating to sacrilege were also comprised in the *Lex Julia Peculatus* (*ne quis ex pecunia sacra, religiosa publicave auferat, &c.*); matters relating to the debasement of the coinage; the erasing or cancelling of *tabulae publicae*, &c. The *Lex de Residuis* applied to those who had received public money for public purposes and had retained it (*apud quem pecunia publica resedit*). The penalty under this *Lex*, on conviction, was a third part of the sum retained. The punishment which was originally *aquæ et ignis interdictio*, was changed into *Deportatio* under the Empire: the offender lost all his rights, and his property was forfeited. (Inst. 4. tit. 18. § 9.) Under the Empire sacrilege was punished with death. A "*Sacrilegus*" is one who plunders public sacred places. (Rein, *Das Criminalrecht der Römer*, p. 672.) [G. L.]

PEDA'NEUS JUDEX. [JUDEX PEDANEUS.]

PEDA'RII. [SENATUS.]

PEDI'SEQUI, a class of slaves, whose duty was to follow their master when he went out of his house. This name does not appear to have been given to any slave, who accompanied his master; but the *pedisequi* seem to have formed a special class, which was almost the lowest of all. (Nep. *Attic.* 13; Plaut. *Mil. Glor.* iv. 2. 18.) There was a similar class of female slaves, called *pedisequæ*. (Plaut. *Asin.* i. 3. 31.) Compare Becker, *Gallus*, vol. i. p. 101.

PEDUM (*κορὴν, λαγυβόλος*, Theocrit. vii. 43, 128), a crook. The accompanying woodcut is taken from a painting found at Civita Vecchia. (*Ant. d'Ercolano*, vol. iii. tav. 53.) It shows the

crook in the hand of a shepherdess, who sits upon a rock, tending sheep and other cattle. (See also woodcut to OSCILLUM.)

On account of its connection with pastoral life the crook is continually seen in works of ancient art in the hands of Pan (Sil. Ital. *Pan.* xiii. 334), and of satyrs, fauns, and shepherd. It was also the usual attribute of Thalia, as the Muse of Pastoral poetry. (Combe, *Anc. Marbles of Br. Museum*, Part iii. pl. 5.) [J. Y.]

PEGMA (πήγμα), a pageant, i. e. an edifice of wood, consisting of two or more stages (*tabulata*), which were raised or depressed at pleasure by means of balance-weights (*ponderibus reductis*, Claudian, *de Mallis Theod. Cons.* 323—328; Sen. *Epist.* 89). These great machines were used in the Roman amphitheatres (Juv. iv. 121; Mart. i. 2. 2; Sueton. *Claud.* 34), the gladiators who fought upon them being called *pegmares*. (*Calig.* 26.) They were supported upon wheels so as to be drawn into the circus, glittering with silver and a profusion of wealth. (Plin. *H. N.* xxxiii. 3. s. 16.) At other times they exhibited a magnificent though dangerous (Vopisc. *Carin.* 15) display of fire-works. (Claudian, *l. c.*) Accidents sometimes happened to the musicians and other performers who were carried upon them. (Phaedr. v. 7. 7.)

The pegmata mentioned by Cicero (*ad Att.* iv. 8) may have been movable book-cases. [J. Y.]

PEGMARES. [PEGMA.]

PELATAE (πελάται), are defined by Pollux (iii. 82) and other authorities to be free labourers working for hire, like the *θήτες*, in contradistinction to the Helots and Penestae, who were bondsmen or serfs, having lost their freedom by conquest or otherwise. Aristotle (*ap. Phot.* s. v. Πελάται) thus connects their name with πέλας: Πελάται, he says, from πέλας, ὅλον ἔγγιστα διὰ πείρας προσ-
 ὁντες: i. e. persons who are obliged by poverty to attach themselves to others. Timaeus (*Lex Plat.* s. v.) gives the same explanation. Πελάτης, δ' ἀπὸ τροφῆν ὑπηρετῶν καὶ προσκείσθων. In the later Greek writers, such as Dionysius of Halicarnassus, and Plutarch, the word is used for the Latin *clien*s, though the relations expressed by the two terms are by no means similar. Plutarch (*Ages.* c. 6) also uses the word rather loosely for Helots, and we are told of a nation of Illyrians (the *Ardiaei*) who possessed 300,000 *Prospelatae*, compared by Theopompus (*ap. Ath.* vi. p. 271, d. e.) with the Helots of Laconia. (Müller, *Dor.* iii. 4. § 7; Wachsmuth, *Hellen. Alterthumsk.* vol. i. pp. 361, 811, 2d ed.; Hermann, *Griech. Staatsalterth.* § 101, n. 9.) [R. W.]

PELLEX. [CONCUBINA.]

PELLIS (πέρις, δόρις), the hide or skin of a quadruped. Before weaving was introduced into Europe there is reason to believe that its inhabitants were universally clothed in skins. The practice continued among the less civilised nations (Virg. *Georg.* iii. 383; Tacit. *Germ.* 17, 46; Ovid, *Trist.* iii. 10, 19), and is often ascribed by the poets to heroes and imaginary beings [Comp. *ARGOS*; *NEBRIS*.] The term *σισύρα* or *σισύρα*, denoted an article of domestic furniture, which was made by sewing together several goat-skins with the hair on. (Schol. in *Aristoph. Aves*, 122.) The sheep-skin (*δίς, νέκος, διφθέρα*) was worn not only by the Lacedaemonian helots, but frequently by the laborious poor, as is still the case in many parts of Europe. The lamb-skin was called *ἀ-*

νάξ, and a dress, supposed to have had a sheep-skin sewed to it below, *κατὰ νάξ*.

PELTA (πέλτη), a small shield. Iphicrates, observing that the ancient CLYPEUS was cumbersome and inconvenient, introduced among the Greeks a much smaller and lighter shield, from which those who bore it took the name of *pellastae*. [EXERCITUS, p. 487, b.] It consisted principally of a frame of wood or wickerwork (Xen. *Anab.* ii. 1. § 6), covered with skin or leather, without the metallic rim. [ANTYX.] (Timaeus, *Lex Plat.* s. v.) Light and small shields of a great variety of shapes were used by numerous nations before the adoption of them by the Greeks. The round target or *ostr*a was a species of the Pelta, and was used especially by the people of Spain and Mauritania. [CETRA.] The Pelta is also said to have been quadrangular. (Schol. in *Thucyd.* ii. 29.) A light shield of similar construction was part of the national armour of Thrace (Thucyd. ii. 29; Eurip. *Alces.* 516, *Rhes.* 407; Max. Tyr. *Diss.* vii.) and of various parts of Asia, and was on this account attributed to the Amazons, in whose hands it appears on the works of ancient art sometimes elliptic, as in the bronzes of Siris (woodcut, p. 712), and at other times variously sinuated on the margin, but most commonly with a semicircular indentation on one side (*lanatis peltis*, Virg. *Aen.* i. 490, xi. 663). An elegant form of the pelta is exhibited in the annexed woodcut, taken from a sepulchral urn in the Capitoline Museum at Rome, and representing Penthesileia, Queen of the Amazons, in the act of offering aid to Priam.

PELTASTAE. [EXERCITUS, p. 487, b.; PELTA.]

PENATES. See *Dict. of Gr. and Rom. Biogr. and Myth.*

PENESTAE (πενέσται), probably from *πείρα*, *operari*. (Dionys. ii. 9.) The Penestae of Thessaly are generally conceived to have stood in nearly the same relation to their Thessalian lords as the Helots of Laconia did to the Dorian Spartans, although their condition seems to have been on the whole superior. (Plat. *Leg.* vi. p. 776.) They were the descendants of the old Pelasgic or Aeolian inhabitants of Thessaly proper, and the following account is given of them by an author

called Archemachus, in his *Euboica*. (Athen. vi. p. 264.) "The Aeolian Boeotians who did not emigrate when their country Thessaly was conquered by the Thessalians (compare Thuc. i. 12), surrendered themselves to the victors on condition that they should not be carried out of the country (whence, he adds, they were formerly called *Μερίσται*, but afterwards *Περίσται*), nor be put to death, but should cultivate the land for the new owners of the soil, paying by way of rent a portion of the produce of it: and many of them are richer than their masters." They were also called *Λόρπεις*. It appears then that they occupied an intermediate position between freemen and purchased slaves, being reduced to servitude by conquest, and resembling, in their fixed payments, the *ἑκτημέριοι* of Attica. Moreover, they were not subject to the whole community, but belonged to particular houses, whence also they were called *Θεσσαλοκτῆται*. They were very numerous, for instance, in the families of the Alenadas and Scopadae. (Theocr. xvi. 35; Müller, *Dor.* iii. 4. § 6.) We may add that amongst the Thessalian Penestae Theopompus includes the descendants of the conquered Magnesians and Perrhaebians (Athen. vi. p. 265), a statement which can only apply to a part of these nations, as, though reduced to dependence, they were not made entirely subject. (Herod. viii. 132; Müll. *L. c.*)

From a passage in Demosthenes (*c. Arist.* 687, 1) it appears that the Penestae sometimes accompanied their masters to battle, and fought on horseback, as their knights or vassals: a circumstance which need not excite surprise, as Thessaly was so famous for cavalry. The Penestae of Thessaly also resembled the Laconian Helots in another respect; for they often rose up in arms against their lords. (*Arist. Pol.* ii. 6.) There were Penestae amongst the Macedonians also. (Müller, *L. c.*; Wachsmuth, *Alterthumsk. Hollen.* vol. i. pp. 177, 402, 403, 642, 2d ed.; Thirlwall, *Hist. of Greece*, vol. i. p. 437; Clinton, *Fast. Hell.* Appendix, c. 22.)

PENTASPASTON. [MACHINA.]

PENTATHLON (πένταθλον, *quinquartium*) was next to the pancratium the most beautiful of all athletic performances. (Herod. ix. 33; Paus. iii. 11. § 6.) It does not appear to have been known in the heroic ages of Greece, although Apollodorus (ii. 4. § 4), according to the usual practice of later times, describes Perseus as killing Acrisius in the pentathlon, and although its invention was attributed to Peleus. (Schol. ad *Pind. Nem.* vii. 11.) These accounts are fabulous; the pentathlon was not practised until the time when the great national games of Greece began to flourish. The persons engaged in it were called pentathli (πένταθλοι, Herod. ix. 75; Paus. i. 29. § 4). The pentathlon consisted of five distinct kinds of games, viz. leaping (*άλμα*), the foot-race (*δρόμος*), the throwing of the discus (*δίσκος*), the throwing of the spear (*σπικυρρος* or *ἀκόντιον*), and wrestling (*πάλη*) (Schol. ad *Plat. Amat.* p. 135; Simonides in

Anthol. Palat. vol. ii. p. 626, ed. Jacobs), which were all performed in one day and in a certain order, one after the other, by the same athlete. (Schol. ad *Sopha. El.* 691; Paus. iii. 11. § 6.) The pentathlon was introduced in the Olympic games in Ol. 18, and we may presume that soon after this it was also introduced at the other national games, as well as at some of the less important festivals, such as the Erotidia in Thespie. (Böckh, *Corp. Inscript.* n. 1590.)

The order in which the different games of the pentathlon followed one another has been the subject of much discussion in modern times. The most probable opinion, however, is Böckh's (*Comment. ad Pind. Nem.* vii. 71, &c.), which has been adopted by Dissen, Krause, and others, although G. Hermann has combated it in a little work called *De Sogenis Aeginetae victoria quinquert.* Lipsiae 1822. The order adopted by Böckh is as follows:—1. The *άλμα*. This was the most prominent part of the pentathlon, and was sometimes used to designate the whole game. It was accompanied by flute-music. (Paus. v. 7. § 4, v. 17. § 4.) Other writers, as Pausanias himself (vi. 14. § 5) and Plutarch (*De Mus.* c. 26) speak as if the whole pentathlon had been accompanied by the flute, but in these passages the whole game seems to be mentioned instead of that particular one which formed the chief part of it. 2. The foot-race. 3. The discus. 4. The throwing of the spear. 5. Wrestling. In later times, probably after Ol. 77, the foot-race may have been the fourth game instead of the second, so that the three games which gave to the pentathlon its peculiar character, viz. leaping, discus, and the spear, preceded the foot-race and wrestling, and thus formed the so-called *τριφυμύς*. The foot-race of the pentathlon was probably the simple stadion or the dianlos, and not a race in armour as has been supposed by some; for the statues of the victors in the pentathlon are never seen with a shield but only with the halteres, besides which it should be remembered that the race in armour was not introduced at Olympia until Ol. 65 (Paus. v. 8. § 3), while the pentathlon had been performed long before that time. It is moreover highly improbable that even after Ol. 65 the race in armour should have formed a part of the pentathlon. In Ol. 38 the pentathlon for boys was introduced at Olympia, but it was only exhibited this one time and afterwards abolished. (Paus. v. 9. § 1.)

In leaping, racing, and in throwing the discus or spear, it was easy enough to decide who won the victory, even if several athletes took part in it and contended for the prize simultaneously. In wrestling, however, no more than two persons could be engaged together at a time, and it is not clear how the victory was decided, if there were several pairs of wrestlers. The arrangement probably was, that if a man had conquered his antagonist, he might begin a fresh contest with a second, third, &c., and he who thus conquered the greatest number of adversaries was the victor. It is difficult to conceive in what manner the prize was awarded to the victor in the whole pentathlon; for an athlete might be conquered in one or two games and be victorious in the others, whereas it can have occurred but seldom that one and the same man gained the victory in all the five. Who of the pentathli then was the victor? Modern writers have said that the prize was either awarded

to him who had been victorious in all the five games, or to the person who had conquered his antagonist in at least three of the games; but nothing can be determined on this point with any certainty. That the decision as to who was to be rewarded was considered difficult by the Greeks themselves, seems to be implied by the fact that at Olympia there were three hellanodicae for the pentathlon alone. (Paus. v. 9. § 5.)

As regards the *τριγμός* mentioned above, several statements of ancient writers suggest, that the whole of the pentathlon was not always performed regularly and from beginning to end; and the words by which they designate the abridged game, *τριγμός*, *ἐκστράδιον*, and *τριπὶ περὶεῖναι*, lead us to suppose that the abridged contest only consisted of three games, and most probably of those three which gave to the pentathlon its peculiar character, viz. leaping and throwing the discus and the spear. (Dion Chrysost. *Διωγ.* i. p. 279, ed. Reiske; Schol. ad Aristid. *ap. Phot. Cod.* p. 409, Bekker; Müller, *Ancient Art and its Rem.* § 423. 3.) The reason for abridging the pentathlon in this manner may have been the wish to save time, or the circumstance that athletes who had been conquered in the first three games were frequently discouraged, and declined continuing the contest. When the triagmos was introduced at Olympia is not mentioned any where, but Krause infers with great probability from Pausanias (v. 9. § 3) that it was in Ol. 77.

The pentathlon required and developed very great elasticity of all parts of the body, whence it was principally performed by young men (Schol. ad Plat. *Amat.* p. 135, d, &c.); and it is probably owing to the fact, that this game gave to all parts of the body their harmonious development, that Aristotle (*Rhet.* i. 5) calls the pentathli the most handsome of all athleteæ. The pentathlon was for the same reason also regarded as very beneficial in a medical point of view, and the Elean Hysmon, who had from his childhood suffered from rheumatism, was cured by practising the pentathlon, and became one of the most distinguished athleteæ. (Paus. vi. 3. § 4.) (Compare G. Fr. Philipp, *De Pentathlo sive Quinguentio Commentatio*, Berlin, 1827; Krause, *Gymnastik und Agonistik der Hellenen*, pp. 476—497.) [L. S.]

PENTECOSTERUS (πεντηκόστηρος). [NΔ-via, p. 784, a.]

PENTECOSTE (πεντηκοστή), a duty of two per cent. levied upon all exports and imports at Athens. (Harpocr. s. v. Πεντηκοστή.) Thus, it was levied on corn (Demosth. c. *Neæor.* 1353); which, however, could only be imported, exportation being prohibited by law (Demosth. c. *Laor.* 941); and also on woollen cloth, and other manufactured goods. (Demosth. c. *Mid.* 558.) On imports the duty was payable on the unloading (Demosth. c. *Laor.* 932); on exports, probably, when they were put on board. The money was collected by persons called *πεντηκοσταλῆγοι*, who kept a book in which they entered all customs received. Demosthenes refers to their entry (*ἑκλογράφη*), to prove that a ship was not laden with more than a certain quantity of goods. (c. *Phorm.* 909.) The merchant who paid the duty was said *πεντηκοτεύσθαι*. All the customs appear to have been let to farm, and probably from year to year. They were let to the highest bidders by the *τεν πωληταί*, acting under the authority of the

senate. The farmers were called *τελώναι*, and were said *ἐνείσθαι τὴν πεντηκοστήν*. They might either collect the duty themselves, or employ others for that purpose. Several persons often joined together in the speculation, in which case the principal, in whose name the bidding took place, and who was responsible to the state, was called *ἀρχόμενος* or *τελωνάρχης*. Sureties were usually required. (Demosth. c. *Timocr.* 713; Andoc. *de Myst.* 17, ed. Steph.) Whether the customs on different articles of merchandise were farmed altogether, or separately, does not appear. The corn-duty at least was kept distinct (Demosth. c. *Neæor.* 1353); and this was the case with another tax. (Aesch. c. *Timaroch.* 16.) With respect to the amount of the revenue derived from this source, the reader may consult Böckh (*Publ. Econ. of Athens*, p. 315, &c., 2d ed.). The *πεντηκοστή* has been thought by some to be the same with the *ἐλλαμένιον*, mentioned by Pollux (viii. 132, ix. 30), but this was more probably a duty paid for the use of the harbour, whether goods were unladen or not; and was perhaps the same as the *ἐκατοστή*, mentioned by Xenophon (*de Rep. Ath.* i. 17) as being paid by foreign ships entering the Peiræus, and alluded to by Aristophanes. (*Vesp.* 658.) Böckh's conjecture, that, besides a personal harbour due, a duty was levied of one per cent. on all the goods on board, appears less probable; for it would be unreasonable to exact a customs duty on goods not landed; and, if they were to be landed, why should the *πεντηκοστή* be required in addition to the *ἐκατοστή*. [C. R. K.]

PENTECOSTYS (πεντηκοστής). [ΕΚΚΑ-CTVS, p. 483, a.]

PEPLUM (πέπλος), a shawl, differing from the CHLAMYs in being much larger, and from the PALLIUM in being finer and thinner and also considerably larger. It was sometimes used as a cover to protect valuable articles of furniture (Hom. *Il.* v. 194) or to adorn a throne (*Od.* vii. 96), but most commonly as a part of the dress of females (Hom. *Il.* v. 315, 734, 735, viii. 384, *Od.* xv. 123—128, *Iwds.* *Il.* xiv. 178; Eurip. *Hec.* 1013, *Med.* 791; Theocrit. i. 33); although instances occur, even among the Greeks, in which it is worn by the other sex, unless we suppose the term to be in these instances improperly put for *φάρος*. (Eurip. *Ion.* 1033; Theocrit. vii. 17.) In Persia and other Eastern countries the shawl was no doubt worn anciently, as it is at the present day, by both sexes. (Aeschyl. *Pers.* 204, 474, 1030, 1061.) Also in Bacchanalian processions it was worn by men both in allusion to Oriental habits, and because they then avowedly assumed the dress of females. (Eurip. *Bacch.* 783—791.) Women of high rank wore their shawls so long as to trail upon the ground. (*Προδὲας ἑλασεπέπλους*, Hom. *Il.* vi. 442; *Ἐλένη τανύπεπλος*, *Od.* iv. 305.) Like all other pieces of cloth used for the AMICTVS, it was often fastened by means of a brooch [FIBULA] (Soph. *Trach.* 920; Callim. *Lav. Pall.* 70; Apollon. Rhod. iii. 833), and was thus displayed upon the statues of female divinities, such as Diana (Brunck, *Anal.* iii. 206) and the goddess Rome. (Sidon. Apollin. *Carm.* v. 18.) It was, however, frequently worn without a brooch in the manner represented in the annexed woodcut, which is copied from one of Sir Wm. Hamilton's vases (vol. iii. pl. 58). Each of the females in this group wears a shift falling down to her feet [TUNICA],

and over it an ample shawl, which she passes entirely round her body and then throws the loose extremity of it over her left shoulder and behind her back, as is distinctly seen in the sitting figure. The shawl was also often worn so as to cover the head while it enveloped the body, and more especially on occasion of a funeral (see woodcuts, p. 557), or of a marriage, when a very splendid shawl (*σαορός*, 1 *Maccab.* i. 27) was worn by the bride. The following woodcut (from Bartoli, *Admir. Rom. Ant.* pl. 57) may be supposed to represent the moment when the bride, so veiled, is delivered to her husband at the door of the nuptial chamber. He wears the *PALLIUM* only; she has a long shift beneath her shawl, and is supported by the pronuba.

Thus veiled the poets represented Aurora and Night, but with this difference, that the one arose expanding a shawl dyed with saffron (*κροκόπειλος* *Hæw*, Hom. *Il.* viii. 1, xxiii. 227), whereas a black one enveloped the other (*μελαμπελος* Νύξ, Eurip. *Ion*, 1150).

Of all the productions of the loom shawls were those on which the greatest skill and labour were bestowed. So various and tasteful were the subjects which they represented, that poets delighted to describe them. The art of weaving them was

entirely Oriental (*Βαφίδων ὑφάματα*, Eurip. *Ion*, 1159); those of the most splendid dyes and curious workmanship were imported from Tyre and Sidon (Hom. *Il.* vi. 289—294): a whole book was written by Polemo “Concerning the Shawls at Carthage.” (Athen. xii. p. 541.) Hence “Shawls” (*σέναιο*, Clem. Alex. *Strom.* vi. 1. p. 736, ed. Potter) was one of the titles of works of an imaginative or descriptive character, and was adopted to intimate the variety of their subjects and the beautiful mode of displaying them. A book, intended to depict some of the characters in the *Iliad*, and denominated “The Shawl,” was ascribed to Aristotle. (Eustath. in *Il.* ii. 557.) Varro also wrote a *Pepligraphy* (*πενλογραφία*, Cic. *ad Att.* xvi. 11.) As a specimen of the subjects delineated a shawl may be mentioned, which exhibited the frame of the world. (Mart. Capella, L. vi. in Mattaire’s *Corpus Poetarum*, vol. ii. p. 1446.) Euripides describes one which represented the sun, moon, and stars, and which, with various others containing hunting-pieces and a great variety of subjects, belonged to the temple of Apollo at Delphi, and was used to form a magnificent tent for the purpose of an entertainment (*Ion*, 1141—1162); for it is to be observed, that stores of shawls were not only kept by wealthy individuals (Hom. *Od.* xv. 104—108), but often constituted a very important part of the treasures of a temple (Eurip. *Ion*, 329, 330), having been presented to the divinity on numerous occasions by suppliants and devotees. (Hom. *Il.* vi. 271—304; Virg. *Aen.* i. 480, *Civ.* 21—35.) [Compare DONARIA; PANATHENAEA; PASTOPHORUS.] [J. Y.]

PER CONDUCTIO’NEM. This *Legis Actio*, says Gaius, was so called because the plaintiff gave notice to the defendant to be present on the thirtieth day after the notice in order that a *iudex* might be appointed. (Comp. Gell. x. 24.) It was an *actio in personam* and applicable to those cases in which the plaintiff required the defendant to give something (*qua intendit dari oportere*). This *Legis Actio* was introduced by a *Lex Silia* in the case of a fixed sum of money (*certa pecunia*), and by a *Lex Calpurnia* in the case of any definite thing. Gaius observes that it does not appear why this form of action was needed, for in a case of “*dari oportere*” there was the *Sacramentum*, and the *Per Judicis postulationem*. The name *Condictio* was applied to *actiones in personam*, after the *legis actiones* fell into disuse, though improperly, for the notice (*demonstratio*) whence the *legis actio* took its name was discontinued. (Gaius, iv. 18, &c.) [G. L.]

PER JUDICIS POSTULATIO’NEM was one of the *Legis Actiones*. The passage in Gaius is wanting in which this form of action is described. There are some remarks on this *Actio* by Puchta, *Inst.* ii. § 154, 162. [G. L.]

PER MANUS INJECTIO’NEM. [MANUS INJECTIO.]

PER PIGNORIS CAPIO’NEM or **CAPTIO’NEM.** This was one of the *Legis Actiones* or old Forms of procedure, which in some cases was founded on custom (*mos*), in others on enactments (*lex*). It was founded on military usage in the following cases. A soldier might seize as a pledge (*pinus capere*) anything belonging to the person who had to furnish the *aes militare*, in case he did not make the proper payments; he might also make a seizure in respect of the money due

to him for the purchase of a horse (*aes equestre*), and also in respect of the allowance for the food of his horse (*aes hordearium*), upon what belonged to the person whose duty it was to make the payment. Originally, such payments were fixed upon particular persons, and not made out of the *Aerarium* (Liv. i. 43; Gaius, iv. 27). The Law of the Twelve Tables allowed a *pignoris capio* in respect of pay due for the hire of a beast, when the hire money was intended for a sacrifice. By a special law (the name is not legible in the MS. of Gaius) the publicani had the right *pignoris capionis* in respect of *vectigalia publica* which were due by any *lex*. The thing was seized (*pignus capiebatur*) with certain formal words, and for this reason it was by some considered to be a *legis actio*. Others did not allow it to be a *legis actio*, because the proceeding was *extra jus*, that is, not before the *Prætor*, and generally also in the absence of the person whose property was seized. The *pignus* could also be seized on a *dies nefastus*, or one on which a *legis actio* was not permitted.

It appears from a passage of Gaius, in which he speaks of the legal fiction that was afterwards introduced into the Formula by which the publicani recovered the *vectigalia*, that the thing seized was only taken as a security and was redeemed by payment of the sum of money in respect of which it was seized. In case of non-payment, there must however have been a power of sale, and accordingly this *pignoris capio* resembled in all respects a *pignus* proper, except as to the want of consent on the part of the person whose property was seized. It does not appear whether this *legis actio* was the origin of the law of pledge, as subsequently developed; but it seems not improbable. (Gaius, iv. 26, &c.; Cic. *Verr.* iii. 11; *Pignoris capio*, Gell. vii. 10.) [G. L.]

PERA, dim. PÉRULA (ῥήρα), a wallet, made of leather, worn suspended at the side by rustics and by travellers to carry their provisions (Mart. xiv. 81) and adopted in imitation of them by the Cynic philosophers. (Diog. Laert. vi. 13; Brunck, *Anal.* i. 223, ii. 22, 28; Auson. *Epig.* 53.) The

preceding woodcut is the representation of a goatherd with his staff and wallet from the column of Theodosius, formerly at Constantinople. (Menesier, *Description de la Col. Hist. Par.* 1702. pl. 16.) [J. Y.]

PERDUELLIO. [MAJESTAS, p. 725.]

PERDUELLIONIS DUUMVIRI were two officers or judges appointed for the purpose of trying persons who were accused of the crime of *perduellio*. Niebuhr believes that they were the same as the *quaestores paricidii*, and Walter (*Geogr. des Röm. Rechts*, p. 24. note 19) agrees with him, though in a later part of his work (p. 855. note 20) he admits that they were distinct. It appears from a comparison of the following passages, — Liv. i. 26; Dig. i. tit. 2. s. 2. § 23; Fest. s. v. *Parici* and *Sororivm*, — either that some of the ancient writers confound the *duumviri perduellionis* and the *quaestores paricidii*, or that, at least during the kingly period, they were the same persons; for in giving an account of the same occurrence, some writers call the judges *quaestores paricidii*, while others call them *duumviri perduellionis*. After the establishment of the republic, however, there can be no doubt that they were two distinct offices, for the *quaestores* were appointed regularly every year, whereas the *duumviri* were appointed very rarely and only in cases of emergency, as had been the case during the kingly period. (Liv. ii. 41, vi. 20; Dion Cass. xxxvii. 27.) Livy (i. 26) represents the *duumviri perduellionis* as being appointed by the kings, but from Junius Gracchanus (Dig. i. tit. 13. s. 1; compare Tacit. *Annal.* xi. 22) it appears that they were proposed by the king and appointed by the *populus* (*reges populi suffragio creabantur*). During the early part of the republic they were appointed by the *comitia curiata*, and afterwards by the *comitia centuriata*, on the proposal of the consuls. (Dig. i. tit. 2. s. 2. § 23; Cic. *pro Rabir.* 4, &c.) In the case of Rabirius (a. c. 63), however, this custom was violated, as the *duumviri* were appointed by the *prætor* instead of by the *comitia centuriata*. (Dion Cass. l. c.; Cic. l. c.; Suet. *Cass.* 12.) In the time of the emperors no *duumviri perduellionis* were ever appointed.

The punishment for those who were found guilty of *perduellio* was death; they were either hanged on the *arbor infelix* or thrown from the Tarpeian rock. But when the *duumviri* found a person guilty, he might appeal to the people (in early times the *populus*, afterwards the *comitia centuriata*), as was done in the first case which is on record (Liv. i. 26), and in the last, which is that of Rabirius, whom Cicero defended before the people in an oration still extant. Marcus Horatius who had slain his sister, was acquitted, but was nevertheless obliged to undergo some symbolical punishment, as he had to pass under a yoke with his head covered. The house of those who were executed for *perduellio*, was razed to the ground, and their relatives were not allowed to mourn for them. (Dig. 3. tit. 2. s. 11. § 3; comp. Becker, *Handbuch der Röm. Alterth.* ii. 2. p. 329, &c.) [L. S.]

PEREGRINUS. [CIVITAS (ROMAN.)]

PERGULA, appears to have been a kind of booth or small house, which afforded scarcely any protection except by its roof, so that those who passed by could easily look into it. It served both as a workshop (Dig. 5. tit. 1. s. 19) and a stall where things were exhibited for sale. We

find, for instance, that painters exhibited their works in a pergula that they might be seen by those who passed by (Lucil. *op. Laetant.* i. 22), and Apelles is said to have concealed himself in his pergula behind his pictures that he might overhear the remarks of those who looked at them. (Plin. *H. N.* xxxv. 36. § 12.) Such places were occupied by persons, who, either by working or sitting in them, wished to attract the attention of the public. (Salmas. *ad Script. Hist. Aug.* pp. 458, 459.) Hence we find them inhabited by poor philosophers and grammarians who gave instruction and wished to attract notice in order to obtain pupils. (Suet. *Aug.* 94, *de Illustr. Grammat.* 18; Flav. Vopisc. *Sabrinus.* 10; Juven. *l.* 187.)

It should be observed that scholars do not agree as to the real meaning of pergula: Scaliger (*ad Plaut. Pseud.* i. 2. 79) describes it as a part of a house built out into the street, as in some old houses of modern times; Ernesti (*ad Suet. Aug.* 94) thinks that a pergula is a little room in the upper part of a house which was occasionally used by poor philosophers as an observatory. But neither of these two definitions is so applicable to all the passages in which the word occurs as that which we have proposed. [L. S.]

PERIACROS (*περιακρος*), a theatrical machine, consisting of three scenes, placed in the form of a triangle (or rather, triangular prism) on a revolving platform, so that, by simply turning the machine, the scene could be changed. It was chiefly used when a god was to be introduced with the accompaniment of thunder. The name was also applied to the space which was provided for the machine in the erection of the theatre. (Vitruv. v. 7; Pollux, iv. 126.) [P. S.]

PERIDEIPNON (*περιδειπνον*). [FUNUS, p. 557, b.]

PERIDROMIDES. [Xystus.]

PERIOECI (*περιοικοι*). This word properly denotes the inhabitants of a district lying around some particular locality, but is generally used to describe a dependent population, living without the walls or in the country provinces of a dominant city, and although personally free, deprived of the enjoyment of citizenship, and the political rights conferred by it. The words *σύνουικοι* and *μέτοικοι* have an analogous meaning.

A political condition such as that of the Perioeci of Greece, and like the vassalage of the Germanic nations, could hardly have originated in anything else than foreign conquest, and the Perioeci of Laconia furnish a striking illustration of this. Their origin dates from the Dorian conquest of the Peloponnesus, when the old inhabitants of the country, the Achaeans, submitted to their conquerors on certain conditions, by which, according to Ephorus (Strab. viii. p. 364), they were left in possession of their private rights of citizenship (*ισοτιμία*), such as the right of intermarriage with the Dorians, and also of their political franchise. They suffered indeed a partial deprivation of their lands, and were obliged to submit to a king of foreign race, but still they remained equal in law to their conquerors, and were eligible to all offices of state except the sovereignty. *ἰσόνομοι μετέχορτες καὶ πολιτείας καὶ ἀρχαίων.* (Arnold. *Thucyd.* vol. i. p. 641.) But this state of things did not last long: in the next generation after the conquest, either from the lust of increased dominion on the part of the Dorians or from an

unsuccessful attempt by the Achaeans to regain their independence, the relation between the two parties was changed. The Achaeans were reduced from citizens to vassals; they were made tributary to Sparta (*συντελεῖς*), and their lands were subjected to a tax, perhaps not so much for the sake of revenue as in token of their dependence (Ephor. *l. c.*); they lost their rights of citizenship (*ισοτιμία*), such as that of intermarriage with the Dorians, the right of voting in the general assembly, and their eligibility to important offices in the state, such as that of a senator, &c. It does not, however, appear that the Perioeci (especially in the Historic times) were generally an oppressed people, though kept in a state of political inferiority to their conquerors. On the contrary, the most distinguished amongst them were admitted to offices of trust (Thucyd. viii. 61), and sometimes invested with naval command (Id. viii. 22), but probably only because they were better suited for it than the Spartans themselves, who did not set a high value on good sailanship. Moreover, the Perioeci sometimes served as heavy-armed soldiers or troops of the line: at the battle of Plataeae, for instance, they supplied 10,000 men, 5000 hoplites and 5000 light-armed (Herod. ix. 61), a circumstance which seems to imply a difference of rank connected with a difference of occupation amongst the Perioeci themselves. Again, at Sphacteria 292 prisoners were taken, of whom 120 were Spartans and the rest *περιοικοι*. (Müller, iii. 2. § 3.) We also read of *καλοὶ κτράβοι*, "or accomplished and well-born" gentlemen, amongst the Perioeci serving as volunteers in the Spartan service. (Xen. *Hell.* v. 3. § 9.) But still it is not to be expected, it is not natural, that men competent to the discharge of high functions in a state, and bearing its burdens, should patiently submit to an exclusion from all political rights. Accordingly we find, that on the rising of the Helots in B. C. 464, some of the Perioeci joined them. (Thucyd. i. 101.) When the Thebans invaded Laconia (B. C. 369), the Perioeci were ready to help them. (Xen. *Hell.* vi. 5. § 25.) In connection with the insurrection of Cinadon we are told that the Perioeci were most bitter against the ruling Spartans. (Id. iii. 3. § 6.) From these and other facts (Clim. *F. H.* Append. xxii.) it appears that the Perioeci of Laconia, if not an oppressed, were sometimes a disaffected and discontented class; though in cases of strong excitement, or of general danger to the whole of Greece, they identified themselves with their conquerors. The very relation indeed which subsisted between them was sufficient to produce in Sparta a jealousy of her subjects, with corresponding feelings on their part. Nor can we suppose that the Dorians would willingly permit the Perioeci to acquire strength and opulence, or even to settle in large towns. (Thirlwall, *Hist. of Greece*, vol. i. p. 307.) In fact it is stated by Isocrates (*Panath.* p. 307), that the Dorians intentionally weakened the Achaeans by dispersing them over a great number of hamlets, which they called *πόλεις*, though they were less powerful than the country parishes of Attica, and were situated in the most unproductive parts of Laconia, the best land of which was reserved for the Spartans. It is not, however, necessary to understand the orator as speaking of a uniform practice; and another of his statements, to the effect that the Ephori could put any of the Perioeci to death (p. 271) without trial, is either a perversion of the

truth, or arose from his confounding the Perioeci with the Helots.

Still the grievances of the Perioeci were not after all intolerable, nor do they seem to have been treated with wantonness or insolence. The distance at which many of them lived from Sparta, must have rendered it impossible for them to share in the administration of the state, or to attend the public assemblies; a circumstance which must in some measure have blunted their sense of their political inferiority. Nor were they subjected to the restraints and severe discipline which the necessity of maintaining their political supremacy imposed upon the Spartans, making them more like an "army of occupation in a conquered country," or a "beleaguered garrison," than a society of men united for civil government and mutual advantage. By way of compensation, too, the Perioeci enjoyed many advantages (though not considered as privileges) which the Spartans did not. The trade and manufactures of the country were exclusively in their hands, and carried on by them with the more facility and profit as they occupied maritime towns. The cultivation of the arts also, as well in the higher as in the lower departments, was confined to the Perioeci, the Spartans considering it beneath themselves; and many distinguished artists, such as embossers and brass-founders, were found in the Laconian schools, all of whom were probably Perioeci. (Müller, *Dor.* iii. 2. § 3.) Nor is there wanting other evidence, though not altogether free from doubts, to show that the Spartan provincials were not in the least checked or shackled in the development of their intellectual powers. (Thirlwall and Müller, *ll.* cc.) Moreover, it seems natural to suppose that they enjoyed civil rights in the communities to which they belonged, and which otherwise would scarcely have been called πόλεις; but whether or no these cities had the power of electing their own chief magistrate is a matter of conjecture. Ephorus, indeed (*l. c.*), informs us that on the conquest of the Peloponnesus by the Dorians, they divided the country of Laconia into six districts, four of which were left in the possession of the Achæans, and governed by magistrates sent from Sparta; but we do not know how long this practice lasted, nor can we draw any conclusions with respect to the government of Laconia in general from the example of Cythera, to which a Spartan officer was annually sent under the peculiar title of *Κυθηροδίκης*, or the "Justice of Cythera."

The number of Laconian (as they are called) or subject cities, is said to have formerly amounted to 100. (Strab. viii. p. 362.) Several of them lay on the coast, as Gythium, the port of Sparta; whence the whole coast of Laconia is called *ἡ περιούκισ*. (Thucyd. iii. 16.) Many, however, lay more inland, as Thuria (Thucyd. i. 101) and Cardamyle, which seems to have belonged to the old Messenia. The inhabitants of the district of Sciros (*ἡ Σκιρίτις*), on the confines of Arcadia, seem to have been distinct from the other Perioeci (Xen. *Hell.* v. 2. § 24), and in battle were posted by themselves on the left wing. (Thucyd. v. 67.) An enumeration of the principal of these cities is given in Clinton. (*Fast. Hell.* App. c. 22.) The Perioeci also occupied the island of Cythera, at the port of which the Lacedæmonian merchants usually put in, on their voyages home from Egypt and Libye. (Thucyd. iv. 53, vii. 57.) We have said that the Perioeci living in these towns were the de-

scendants of the old inhabitants of the country, but we must not suppose they were exclusively so. Some of them on the contrary were foreigners, who had either accompanied the Dorians on their invasion of Laconia, or been afterwards invited by them to supply the place of the dispossessed Achæans. One of these cities, Boia, is even said to have been founded by a Heracleid chief (Strab. p. 364); and another, Geronthrae, was peopled by colonists sent from Sparta, after it was evacuated by the old inhabitants. (Paus. iii. 22. § 6.)

The number of Perioeci in the Persian war is thus determined by Clinton (*l. c.*):—"At the battle of Plataeæ in B. C. 479, the Perioeci supplied 10,000 men. If we assume this proportion to be the same as that which the Spartan force bore to the whole number on the same occasion, or five-eighths of the whole number of citizens, this would give 16,000 for the males of full age, and the total population of this class of the inhabitants of Laconia would amount to about 66,000 persons."

In the later times of Spartan history, the Perioecian towns of the coast (Laconiae oraæ castella et vici) were detached from Sparta by T. Quintus Flamininus, and placed under the protection of the Achæian league. (Müller, iii. 2. § 1; Liv. xxxiv. 29, 30, xxxviii. 31.) Subsequently to this the emperor Augustus released 24 towns from their subjection to Sparta, and formed them into separate communities, under laws of their own. They were consequently called Eleuthero-Lacones. (Paus. iii. 21. § 6.) But even in the time of Pannania some of the Laconian towns were not *αὐτονόμοι*, but dependent upon Sparta (*συντελοῦσαι ἐς Σπάρτην*).

A class of Perioeci, and also of Helots, has been said by Müller to be the basis of the Dorian form of government: we may therefore expect to find Perioeci amongst other Dorian communities, as well as at Sparta, as, for instance, Elis and Argos, and the Boeotian Thebes: the dependent towns of which states formed separate communities, as Thespiæ under Thebes, the Tryphylia cities in Elis, and Orneæ under Argos, though they could not be called *αὐτονόμοι*. (Wachsmuth, i. 1. p. 161.) From the last mentioned town, which was long independent, but reduced about B. C. 580, all the Argive Perioeci derived their name of Orneatae. About the time of the Persian war, however, the inhabitants of the towns surrounding Argos were received into the city as *σύννοικοι*, and admitted to the rights of citizenship; a change which was attended with a revolution in the constitution of Argos, and gave additional force to its democracy. (Müller, iii. 4. § 2.) The Dorian cities of Crete also had their Perioeci (Arist. *Pol.* ii. 7), as well as the colonies of Cyrene and Thera. (Herod. iv. 161.)

The Perioeci of antiquity have been compared to other bodies, such as the plebs of Rome, and the communities of the Athenian demi or parishes. But the only resemblance they bore to the latter was in the similarity of their position relative to the chief city of their country, nor did the former body stand in the same relation to the Patricians as the Laconian provincials did to the Spartan citizens. Modern history furnishes fitter objects of comparison in the Norman conquest of England and the city of Augsburg. (Arnold, *Thucyd.* vol. i. App. 1 and 2.) The burghers or free citizens of Augsburg lived in the city, while there grew up

about them a distinct and large community living without the city, chiefly formed of the emancipated vassals of the dominant class, and called "Pfählbürger," or citizens of the "pale," the suburbs in which they lived being surrounded by palisades. The Norman conquest of England presents a striking parallel to the Dorian conquest of Laconia, both in its achievement and consequences. The Saxons, like the old Achæians, were deprived of their lands, excluded from all offices of trust and dignity, and reduced, though personally free, to a state of political slavery. The Normans on the contrary, of whatever rank in their own country, were all nobles and warriors, compared with the conquered Saxons, and for a long time enjoyed exclusively the civil and ecclesiastical administration of the land.

For further details see Arnold, *Thucyd.* lib. i. c. 101, and Appendix ii.; Thierry, *Histoire de la Conquête de l'Angleterre par les Normands*, Livres iv.—vii. [R. W.]

PERI'POLI (περίπολοι). [EPHEBUS.]

PERI'PTEROS. [TAMPLUM.]

PERI'SCELIS (περισκελῖς, Long. *Past.* i. 2; Menander, *op. Polluc.* ii. 194, v. 100, Hor. *Ep.* i. 17. 56; Petron. 67). Much controversy has arisen with regard to the true meaning of this word. The etymology points out merely that it was something worn round the leg (περὶ σκέλος), but from the context of the passage in Horace where it is found we must at once infer that it was a trinket. The Scholiast explains it as "ornamentum pedis circum crura," and hence we can scarcely doubt that it denotes an anklet or bangle, especially since we know that these were commonly worn not only by the Orientals, the Egyptians, and the Greeks, but by the Roman ladies also. (Plin. *H. N.* xxxiii. 3. s. 12; compare Wilkinson's *Ancient Egyptians*, vol. iii. p. 374.) This explanation perfectly accords with the expressions of Tertullian (*de Cultu Feminarum*, ii. sub fin.), where the *periscelium* is spoken of as decorating the leg in the same manner as the bracelet adorns the wrist and the necklace the throat. The anklet is frequently represented in the paintings of Greek figures on the walls of Pompeii, as in the following representation of a Nereid. (*Museo Borbonico*, vol. vi. tav. xxxiv.)

It must be observed, however, that the Greek lexicographers Hesychius, Photius, and Suidas, interpret *περισκελῖ* and *περικέλια* by *βρακκία*, *φαιμόνια*, and St. Jerome (*Epist. ad Fabiol.*) expressly states that the Greek *περισκελῖ* were the same with the Latin *feminalia*, that is, drawers reaching from the navel to the knees. In the Septuagint we find *περισκελῖς* (sc. *ἐνδυμα*) in

Exod. xxviii. 42, xxxix. 28, Levit. vi. 10, and *περικέλιον* in Levit. xvi. 4, which our translators uniformly render, and apparently with accuracy, *linen breeches*. [W. R.]

PERISTIARCHUS (περιστάρχος). [ECCLESIA, p. 441, b.]

PERISTRO'MA. [TAPES; VELUM.]

PERISTY'LIUM (περιστύλιον), as its name implies, was a continued row or series of rows of columns all round a court or building, in contradistinction to PORTICUS (στέα), in which the pillars did not surround a space, but were arranged in one or more parallel lines. The enclosed court was also called *peristylum*. The chief specific use of the word is in relation to the ancient dwelling-houses. [DOMUS, p. 428, a.] [P. S.]

PERJUR'RIUM. [JUSJURANDUM.]

PERIZO'MA (περίζωμα). [SUBLIGACULUM.]

PERO (ἀρέβλη, dim. ἀρεβυλῖς; καρβατίνη, Xen. *Anab.* iv. 5. § 14), a low boot of untanned hide (*crudus*, Virg. *Aen.* vii. 690; Brunn, *Anab.* i. 230), worn by ploughmen (*peronatus arator*, Pers. v. 102) and shepherds, as exemplified in the woodcut, at p. 808, and by others employed in rural occupations. (Juv. xiv. 186.) It had a strong sole (Theocrit. vii. 26), and was adapted to the foot with great exactness. (Galen. in *Hippoc.* Lib. iv.) It was also called *πηλοπᾶντις* on account of its adaptation for walking through clay and mire. In the Greek mythology Perseus was represented wearing boots of this description with wings attached to them. (Lycophron, 839.) Diana wore them, when accounted for the chase. (Brunn, *Anab.* iii. 206.) [CORHURNUS.]

The term ἀρέβλη is applied to an appendage to the Greek chariot. (Eurip. *Hippol.* 1179, *Herc. Fur.* 1275.) It seems to have been a shoe fastened to the bottom of the chariot, into which the driver inserted his foot to assist him in driving and to prevent him from being thrown out. [J. Y.]

PERPETUA ACTIO. [ACTIO.]

PERSAE or STATUAE PERSICAE were figures which were used in place of columns, like the Caryatides, Atlantes, and Telamones. The tradition respecting their invention is that they were first used in the *Porticus Persica* which was built at Sparta out of the spoils of the battle of Plataeae (Vitruv. i. l. § 6). Pausanias, however, (iii. 2) describes the statues of the conquered Persians, as being *ἐπὶ τῶν κινόνων*. [P. S.]

PERSECUTO'RIA ACTIO. [ACTIO.]

PERSONA (*larva*, πρόσωπον or προσωπίον), a mask. Masks were worn by Greek and Roman actors in nearly all dramatic representations. This custom arose undoubtedly from the practice of smearing the face with certain juices and colours, and of appearing in disguise, at the festivals of Dionysus. [DIONYSIA.] Now as the Greek drama arose out of these festivals, it is highly probable that some mode of disguising the face was as old as the drama itself. Choerilus of Samos, however, is said to have been the first who introduced regular masks. (Suid. s. v. *Χοῦριλλος*.) Other writers attribute the invention of masks to Thespis or Aeschylus (Horat. *ad Pis.* 278), though the latter had probably only the merit of perfecting and completing the whole theatrical apparatus and costume. Phrynichus is said to have first introduced female masks. (Suid. s. v. *Φρύνιχος*.) Aristotle (*Poët.* ii. 22) was unable to discover who had first introduced the use of masks in comedy. Some masks

covered, like the masks of modern times, only the face, but they appear more generally to have covered the whole head down to the shoulders, for we find always the hair belonging to a mask described as being a part of it; and this must have been the case in tragedy more especially, as it was necessary to make the head correspond to the stature of an actor which was heightened by the *cothurnus*.

I. **TRAGIC MASKS.** It may at first seem strange to us, that the ancients, with their refined taste in the perception of the beautiful in form and expression, should by the use of masks have deprived the spectators in their theatres of the possibility of observing the various expressions, of which the human face is capable, and which with us contribute so much to theatrical illusion. But it must be remembered, that in the large theatres of the ancients it would have been impossible for the greater part of the audience to distinguish the natural features of an actor. The features of the masks were for this same reason very strong and marked. Again, the dramatic personae of most of the ancient tragedies were heroes or gods, and their characters were so well known to the spectators, that they were perfectly typical. Every one therefore knew immediately on the appearance of such a character on the stage, who it was, and it would have been difficult for a Greek audience to imagine that a god or hero should have had a face like that of an ordinary actor. The use of the *cothurnus* also rendered a proportionate enlargement of the countenance absolutely necessary, or else the figure of an actor would have been ridiculously disproportionate. Lastly, the solemn character of ancient tragedy did not admit of such a variety of expressions of the countenance as modern tragedies; the object of which seems to be to exhibit the whole range of human passions in all their wild and self-devouring play. How widely different are the characters of ancient tragedy! It is, as Müller (*Hist. of the Lit. of Anc. Greece*, i. p. 298) justly remarks, perfectly possible to imagine, for example, the Orestes of Aeschylus, the Ajax of Sophocles, or the Medea of Euripides, throughout the whole tragedy with the same countenance, though it would be difficult to assert the same of a character in any modern drama. But there is no necessity for supposing that the actors appeared throughout a whole piece with the same countenance, for if circumstances required it, they might surely change masks during the intervals between the acts of a piece. Whether the open or half-open mouth of a tragic mask also contributed to raise the voice of the actor, as Gellius (v. 7) thinks, cannot be decided here, though we know that all circumstances united to compel a tragic actor to acquire a loud and sonorous voice.

The masks used in ancient tragedies were, thus, for the most part, typical of certain characters, and consequently differed according to the age, sex, rank, and other peculiarities of the beings who were represented. Pollux, from whom we derive most of our information on this subject, enumerates (iv. 153, &c.) 25 typical or standing masks of tragedy, six for old men, seven for young men, nine for females, and three for slaves. The number of masks which were not typical, but represented certain individuals with their personal peculiarities, such as the blind Thamyris, the hundred-eyed Argus, &c., must have been much more numerous, for Pollux by way of example mentions thirty of

such peculiar masks. The standing masks of tragedy are divided by Pollux into five classes.

1. *Tragic masks for old men.* The mask for the oldest man on the stage was called *εὐπλάς ἄνθρωπος*, from the circumstance of the beard being smoothly shaved. The hair, which was in most cases attached to the masks, was white, and hung down with the exception of a part above the forehead, which rose in an acute angle, or in a round shape, and left the temples uncovered. This rising part of the hair was called *ὄγκος*. The cheeks of this mask were flat and hanging downwards. A second mask for old men, called *λευκὸς ἄνθρωπος*, had grey hair, floating around the head in locks, a full beard and a prominent forehead, above which the hair formed a small *ὄγκος*. The countenance was probably pale, as the adjective *λευκός* seems to indicate. A third mask, called *σπαρτοκόλιος*, had black hair interspersed with grey, and was somewhat pale. It probably represented a hero of from 40 to 50 years of age, and in a suffering condition. The fourth mask, *μέλας ἄνθρωπος*, represented a hero in his full vigour, with black and curly hair and beard, strong features and a high *ὄγκος*. This was probably the mask for most of the tragic heroes who were not very much advanced in age. For a secondary class of heroes there were two other masks, the *ξανθός* and the *ξανθότερος ἄνθρωπος*: the former represented a fair man with floating locks, a low *ὄγκος*, and a good colour in his countenance; the second or fairer man, was pale and of a sickly appearance.

2. *Tragic masks for young men.* Among these are mentioned, 1. The *νεανίσκος πάγχρηστος*, a mask intended to represent a man who had just entered the age of manhood, and was yet unbearded, but of a blooming and brownish complexion, and with a rich head of hair. The name *πάγχρηστος* probably indicates that the mask might be used in a great variety of parts. 2. The *νεανίσκος ὀδῶς*, or *ξανθός* or *ὀδύρογος*, a fair youth of a haughty or impudent character; his hair was curly and formed a high *ὄγκος*; his character was indicated by his raised eye-brows. 3. *Νεανίσκος πύρρως*, resembled the preceding mask, but was somewhat younger. The counterpart of these two was, 4. The *ἀπαλός*, a young man of a delicate and white complexion, with fair locks and a cheerful countenance like that of a youthful god. 5. *Πινάρως*. There were two masks of this name, both representing young men of an irascible appearance, of yellow complexion and fair hair; the one, however, was taller and younger, and his hair was more curly than that of the other. 6. *Ὀχρὸς*, a mask quite pale, with hollow cheeks and fair floating hair. It was used to represent sick or wounded persons. 7. The *πύρρως* might be used for the *πάγχρηστος* if this character was to be represented in a suffering or melancholy situation.

3. *Tragic masks for male slaves.* Pollux mentions three, viz. the *δυσθερίας*, which had no *ὄγκος* and wore a band round the smooth white hair. The countenance was pale, the beard gray, the nose sharp, and the expression of the eyes melancholy. The *σφηνωτάγων*, or the pointed beard, represented a man in his best years, with a high and broad forehead, a high *ὄγκος*, hardened features, and a red face. The *ἀνδρίμιος*, or the pug-nose, was an impudent face with fair rising hair, of a red colour and without beard.

4. *Tragic masks for female slaves.* Of these five specimens are mentioned, viz. the *πολλὰ κνέματα*,

in earlier times called *παράχρμος*, represented an old woman with long white hair, with noble but pale features, to indicate a person who had seen better days; the *γραιβιον ἐλευθέρος*, an old freed-woman; the *γραιβιον οἰκευκόν*, the old domestic slave; the *οἰκευκόν μεσκούρος*, a domestic slave of middle age; and lastly the *διφθερίτις*, a young female slave.

5. *Tragic masks for free women.* The first of these, called *κάρδομος*, represented a pale lady, with long black hair and a sad expression in her countenance. She generally shared the sufferings of the principal hero in a play. The second, called *μεσκούρος ἑχρά*, resembled the former, with the exception that her hair was half shorn. She was a woman of middle age, and was probably intended to represent the wife of the chief hero, if he was not too advanced in age. The third is the *μεσκούρος πρόσφατος*, representing a newly married woman in full bloom with long and floating hair. The fourth is the *κοῦρμος παρθένος*, a maiden of mature age, with short hair divided on the middle of the forehead, and lying smoothly around the head. The colour of her countenance was rather pale. There was another mask of the same name, but it differed from the former by the following circumstances:—the hair was not divided on the forehead or curled, but wildly floating, to indicate that she had had much suffering to go through. The last is the *κόρη*, or young girl. This mask represented the beauties of a maiden's face in their full bloom, such as the face of Danaë, or any other great beauty was conceived to have been.

The account which Pollux gives of the tragic masks comprehends a great number, but it is small in comparison with the great variety of masks which the Greeks must have used in their various tragedies, for every hero and every god who was known to the Greeks as being of a particular character, must have been represented by a particular mask, so that the spectators were enabled to recognise him immediately on his appearance. For this very reason the countenances of the gods, heroes, and heroines, must, in point of beauty, have been as similar as possible to their representations in statues and paintings, to which the eyes of the Greeks were accustomed; and the distorted masks with widely open mouths, which are seen in great numbers among the paintings of Herculaneum and Pompeii (see the annexed woodcut from *Museo Borbon.* vol. i. tab. 20) would give but a very inadequate notion of the masks used at Athens during the most flourishing period of the arts. All the representations of tragic masks belonging to this period, do not show the slightest trace of exaggeration or distortion in the features of the countenance, and the mouth is not opened wider than would be necessary to enable a person to pronounce such sounds as *oh* or *ha*. In later times, however, distortions and exaggerations were carried to a very great extent, but more particularly in comic masks, so that they in some degree were more caricatures than representations of ideal or real countenances. (Apollon. *Vit. Apollon.* v. 9. p. 195, ed. Olear;

Lucian, *de Saltat.* 27, *Anach.* 23, *Nigrin.* 11, *Soma* s. *Gall.* 26.)

The annexed woodcut represents some masks, one apparently comic and the other tragic, which are placed at the feet of the choragus in the celebrated mosaic found at Pompeii. (*Museo Borbon.* vol. ii. tab. 56; Gell, *Pomp.* vol. i. pl. 45.)

II. *COMIC MASKS.*—In the old Attic comedy, in which living and distinguished persons were so often brought upon the stage, it was necessary that the masks, though to some extent they may have been caricatures, should in the main points be faithful portraits of the individuals whom they were intended to represent, as otherwise the object of the comic poets could not have been attained. The chorus on the other hand, as well as certain phantastic dramatic personae, rendered sometimes a complete masquerade necessary; as in those cases when the chorutae appeared with the heads of birds or of frogs, &c. We may remark here, by the way, that the chorus of tragedy appeared generally without masks, the Eumenides of Aeschylus being probably only an exception to the general rule. The masks of the characters in the old Attic comedy were therefore, on the whole, faithful to life, and free from the burlesque exaggerations which we see in the masks of later times. A change was made in the comic masks, when it was forbidden to represent in comedy the archon by imitating his person upon the stage (Schol. *ad Aristoph. Nub.* 31), and still more, shortly after, by the extension of this law to all Athenian citizens. (Schol. *ad Aristoph. Ach.* 1149, *Av.* 1297; Suid. s. v. *Ἀριστοκράτης*.) The consequence of such laws was, that the masks henceforth, instead of individuals, represented classes of men, i. e. they were masks typical of men of certain professions or trades, of a particular age or station in life, and some were grotesque caricatures. A number of standing characters or masks was thus introduced in comedy. Pollux gives a list of such standing masks, which are divided, like those of tragedy, into five classes.

1. *Comic masks for old men.* Nine masks of this class are mentioned. The mask representing the oldest man was called *πάρως πῶτος*: his head was shaved to the skin, he had a mild expression about his eyebrows, his beard was thick, his cheeks hollow, and his eyes melancholy. His complexion was pale, and the whole expression of the countenance was mild. 2. The *πάρως ἔσπεος* was of a more emaciated and more vehement appearance, sad and pale; he had hair on his head and a beard, but the hair was red and his ears broken. 3. The *ἄγγελον*, likewise an old man, with a thin crown of hair round his head, an aquiline nose, and a flat countenance. His right eyebrow was higher than the left. 4. The *πρεσβύτης* had a long and floating beard, and likewise a crown of hair round his head; his eyebrows were raised, but his whole aspect was that of an idle man. 5. The *ἐμπύρετος* was bald-headed, but had a beard and raised eyebrows, and was of angry appearance. 6. The *προπόδοκός* resembled the mask called *λυρομήδειος*, but his lips were contorted, the eyebrows contracted, and the head without any hair. 7. The *ἐμπύρετος δεύτερος* had a pointed beard, but was otherwise without hair. 8. The *σφηνο-*

(Apollon. *Vit. Apollon.* v. 9. p. 195, ed. Olear;

πάγων, or pointed beard, was likewise bald-headed, had extended eye-brows, and was looking ill-tempered. 9. The *Λυκομήδεις* had a thick beard, was conspicuous on account of his long chin, and the form of his eyebrows expressed great curiosity.

The annexed comic mask, representing an old man, is taken from the *Museo Borbon.* vol. i. tab. A.

2. *Comic masks for young men.* Pollux enumerates ten masks of this kind. 1. The *πάγχρηστος* formed the transition from the old to the young men; he had but few wrinkles on his forehead, showed a muscular constitution (*γυμναστικός*), was rather red in the face, the upper part of his head was bald, his hair was red, and his eyebrows raised. 2. The *νεανίσκος μέλας* was younger than the preceding one, and with low eyebrows. He represented a young man of good education and fond of gymnastic exercises. 3. The *νεανίσκος οδλος*, or the thick-haired young man, was young and handsome, and of a blooming countenance, his eyebrows were extended, and there was only one wrinkle upon his forehead. 4. The *νεανίσκος ἀγαλός*, his hair was like that of the *πάγχρηστος*, but he was the youngest of all, and represented a tender youth brought up in seclusion from the world. 5. The *ἀγροίκος* or rustic young man, had a dark complexion, broad lips, a pug-nose, and a crown of hair round his head. 6. The *ἐπίσειστος στρατιώτης* or the formidable soldier, with black hair hanging over his forehead. 7. The *ἐπίσειστος δεύτερος* was the same as the preceding, only younger and of a fair complexion. 8. The *κόλαξ* or the flatterer, and 9. The *παρόσιτος* or parasite were dark (compare Athen. vi. p. 237), and had aquiline noses. Both were apparently of a sympathizing nature; the parasite, however, had broken ears, was merry-looking, and had a wicked expression about his eyebrows. 10. The *εἰκονικός* represented a stranger in splendid attire, his beard was shaved and his cheeks pierced through. The *σικελικός* was another parasite.

3. *Comic masks for male slaves.* Of this class seven masks are mentioned. 1. The mask representing a very old man was called *πάππος*, and had grey hair to indicate that he had obtained his liberty. 2. The *ἡγεμὼν δερπάνων* had his red hair platted, raised eyebrows, and a contracted forehead. He was among slaves the same character as the *προσβύτης* among freemen. 3. The *κάτω τριχίας*, or *κάτω τετριχωμένος*, was half bald-headed, had red hair and raised eyebrows. 4. The *οδλος δερπάνων*, or the thick-haired slave, had red hair and a red countenance; he was without eyebrows, and had a distorted countenance. 5. The *δερπάνων μέσος* was bald-headed and had red hair. 6. The *δερπάνων τέττιξ* was bald-headed and dark, but had two or three slips of hair on his head and on his chin, and his countenance was distorted. 7. The *ἐκλείστος ἡγεμὼν*, or the fierce-looking slave, resembled the *ἡγεμὼν δερπάνων* with the exception of the hair.

4. *Comic masks for old women.* Pollux mentions three, viz. the *γραιβὼν ἰσχυρὸν* or *Λυκαίτιον*, a tall woman with many but small wrinkles, and pale but with animated eyes; the *παχέια*

γραιῦς, or the fat old woman with large wrinkles, and a band round her head keeping the hair together; and the *γραιβὼν οἰκουρὸν*, or the domestic old woman. Her cheeks were hollow, and she had only two teeth on each side of her mouth.

5. *Comic masks for young women.* Pollux mentions fourteen, viz.—1. The *γυνὴ λεκτική*, or the talkative woman; her hair was smoothly combed down, the eyebrows rather raised, and the complexion white. 2. The *γυνὴ οὐλή* was only distinguished for her fine head of hair. 3. The *κόρη* had her hair combed smoothly, had high and black eyebrows, and a white complexion. 4. The *ψευδοκόρη* had a whiter complexion than the former, her hair was bound up above the forehead, and she was intended to represent a young woman who had not been married more than once. 5. Another mask of the same name was only distinguished from the former by the irregular manner in which the hair was represented. 6. The *σκαρτοπόλιος λεκτική*, an elderly woman who had once been a prostitute, and whose hair was partly grey. 7. The *παλαστή* resembled the former, but had a better head of hair. 8. The *τέλειον ἑταιρικὸν* was more red in the face than the *ψευδοκόρη*, and had locks about her ears. 9. The *ἑταιρίδιον* was of a less good appearance, and wore a band round the head. 10. The *διάχρυσος ἑταίρα* derived the name from the gold with which her hair was adorned. 11. The *διμήτρος ἑταίρα*, from the variegated band wound around her head. 12. The *λαμπάδιον*, from the circumstance of her hair being dressed in such a manner that it stood upright upon the head in the form of a lampas. 13. The *αἶρα περικούρος* represented a female slave newly bought and wearing only a white chiton. 14. The *παρὰψηφιστόν* was a slave distinguished by a pug-nose and her hair; she attended upon hetærae, and wore a crocus-coloured chiton.

Numerous as these masks are, the list cannot by any means be considered as complete, for we know that there were other standing masks for persons following particular kinds of trade, which are not mentioned in Pollux. Maeson of Megara, for example, is said to have invented a peculiar mask called after his own name *μαῖσων*, another for a slave, and a third to represent a cook. (Athen. xiv. p. 659.) From this passage of Athenæus we also learn that Stephanus of Byzantium wrote a work *περὶ προσώπων*.

III. MASKS USED IN THE SATYRIC DRAMA. The masks used in this species of the Greek drama were intended to represent Satyrs, Silenus, and similar companions of Dionysus, whence the expressions of the countenances and the form of their heads may easily be imagined. Pollux only mentions the grey-headed Satyr, the unbearded Satyr, Silenus, and the *πάππος*, and adds that the characters of all the other Satyric masks either resembled these, or were sufficiently expressed in their names, e.g. the Papposilenus was an old man with a very predominant animal character. (Compare Eichstädt, *de Dramate Comico-Satyrico*, p. 81.) A grotesque mask of a Satyr, together with one of the finest specimens of a tragic mask, is contained in the Townly Gallery in the British Museum, and is represented on the following page.

As regards the earliest representations of the regular drama among the Romans, it is expressly stated by Diomedes (iii. p. 486, ed. Putsch.), that masks were not used, but merely the *galerus* or

wig, and that Roscius Gallus, about the year 100 B. C., was the first who introduced the use of masks. It should, however, be remembered that masks had been used long before that time in the Atellanæ (Fest. s. v. *Personatæ*), so that the innovation of Roscius must have been confined to the regular drama, that is, to tragedy and comedy. As for the forms of Roman masks, it may be presumed that, being introduced from Greece at so late a period, they had the same defects as those used in Greece at the time when the arts were in their decline, and this supposition is confirmed by all works of art, and the paintings of Herculaneum and Pompeii, in which masks are represented; for the masks appear unnaturally distorted and the mouth always wide open. The expressions of Roman writers also support this supposition. (Gellius, v. 7; Juv. iii. 175.) We may mention here that some of the oldest MSS. of Terence contain representations of Roman masks, and from these MSS. they have been copied in several modern editions of that poet, as in the edition published at Urbino in 1726, fol., and in that of Dacier. The cut annexed contains representations of four of these masks prefixed to the *Andria*.

When actors at Rome displeased their audience and were hissed, they were obliged to take off their masks; but those who acted in the Atellanæ were not obliged to do so. (Fest. s. v. *Personatæ fabula*; Macrobi. *Sat.* ii. 7.) The Roman mimes never wore masks. [MIMUS.] (Compare Fr. De Ficoroni, *Dissertatio de Larvis scenicis et Figuris comicis ant. Rom.*, Rome 1736 and 1750, 4to; Fr. Stieve, *Dissertatio de rei scenice apud Romanos Origine.*) [L. S.]

PERTICA, the pole, used by the AGRIMENSORES, was also called DECUMPERDA because it was ten feet long. On account of its use in assigning lands to the members of a colony, it is sometimes represented on medals by the side of the augural plough. (Propert. iv. 1. 30.) [J. Y.]

PES (πούς), a foot, the standard measure of length among the Greeks and Romans, as well as among nearly all other nations, both ancient and

modern. Very little needs to be added to what has been said of the Greek and Roman feet under *MENSURA*.

The Romans applied the uncial division [As] to the foot, which thus contained 12 *unciae*, whence our *inches*; and many of the words used to express certain numbers of *unciae* are applied to the parts of the foot. (Veget. *de Re Milit.* i. 5; Plin. *H.N.* xxvii. 5. s. 11, xiii. 15.) It was also divided into 16 *digiti* (finger-breadths): this mode of division was used especially by architects and land-surveyors, and is found on all the foot-measures that have come down to us. *Pollex* (the thumb), which is used in modern Latin for an *inch*, is not found in the ancient writers, but Pliny (*H.N.* xxvii. 9, xv. 24, xiii. 23) uses the adjective *pollicaris* (of a thumb's breadth or thickness).

From the analogy of the *as*, we have also *dupondium* for 2 feet (Colum. iii. 15, &c.), and *pes sestertius* for 2½ feet. (Leg. XII. Tab., Tab. viii.) The chief subdivisions and multiples of the foot will be found mentioned under *MENSURA*, and more fully described in their proper places. (See also the Tables.) One itinerary measure, which has been omitted in its proper place, is the *Leuga*, or *Leuca*, which was a Gallic measure = 1500 *passus* or 1½ mile. (Ammian. Marc. xvi. 12; *Itin. Antonin.*) Stones are still found on the roads in France with distances marked on them in *Leugas*. [MILLIAR.]

The square foot (*pes quadratus*) is called by Frontinus *constratus*, and by Boëthius *contractus*. Frontinus applies the term *quadratus* to the cubic foot, and the same, as a measure of capacity, was called *QUADRANTAL*.

Certain peculiar foot-measures, differing from the ordinary ones, are mentioned by ancient writers. The Samian, which was the same as the Egyptian foot, is known from the length of the Egyptian cubit as derived from the Nilometer (namely, 17·74278576 inches) to have contained 11·82852384 inches, or more than 11½ inches. A larger foot than the common standard seems to have been used in Asia Minor. Heron (*de Mens.* p. 368) names the Royal or Philaetarian foot as being 16 finger-breadths, and the Italian as 13½, and he also mentions a mile (μίλιον) of 5400 Italian or 4500 royal feet. Ideler supposes that the Italian foot means the common Roman, and the royal a Greek foot larger than the common standard, corresponding to the stadium of 7 to the mile, which had been introduced before Heron's time, namely, the tenth century. The *Pes Drusianus* or foot of Drusus, contained 13½ Roman inches = 13·1058 English inches. It was used beyond the boundaries of Italy for measuring land, and was the standard among the Tungri in Lower Germany.

(Hussey, on *Ancient Weights*, &c., Appendix; Wurm, *de Pond.* chap. 6 and 7; Böckh's *Metrol.* *Untersuch.* pp. 196, &c.; Ideler, *Längen und Flächenmaasse*; Fréret, *Observations sur le Rapport des Mesures Grecques et des Mesures Romaines*, Mém. de l'Acad. d'Inscrip. t. xxiv. pp. 551, &c. [P.S.]

PESSI (πῆσος). [LATRUNCULL.]

PESULUS. [JANUA, p. 626, b.]

PETALISMUS (πεταλισμός). [EXSILIUM, p. 515, a.]

PETASUS. [PILUS.]

PETAURISTAE. [PETAURUM.]

PETAURUM (πέταυρον, πέτερον) is said by the Greek grammarians to have been a pole or board, on which fowls roosted. (Heysch. s. v.; Pollux, x.

156.) We also find the name of *Petaurum* in the Roman games, and considerable doubt has arisen respecting its meaning. It seems, however, to have been a board moving up and down, with a person at each end, and supported in the middle, something like our see-saw; only it appears to have been much longer, and consequently went to a greater height than is common amongst us. Some writers describe it as a machine, from which those who exhibited were raised to a great height and then seemed to fly to the ground; but this interpretation does not agree so well with the passages of the ancient authors as the one previously mentioned. (Lucil. *ap. Fest. s. v. Petaurist*; Juv. xiv. 265; Mart. xi. 21. 3; Manil. v. 433.) The persons, who took part in this game, were called *Petauristas* or *Petauristarii*; but this name seems to have been also applied in rather a wider signification. (Compare Petron. 53.)

PETITOR. [ACTOR.]

PETORRITUM, a four-wheeled carriage, which, like the *ESSEUDUM*, was adopted by the Romans in imitation of the Gauls. (Hor. *Sat. i. 6. 104*.) It differed from the *HARMAMAXA* in being uncovered. Its name is obviously compounded of *petor*, four, and *rit*, a wheel. Festus (*s. v.*) in explaining this etymology observes that *petor* meant four in Oscan and in Aeolic Greek. There is no reason to question the truth of this remark; but, since *Petor* meant four in many other European languages, it is more probable that the Romans derived the name, together with the fashion of this vehicle, from the Gauls. Gellius (xv. 30) expressly says that it is a Gallic word. [J. Y.]

PEZETAERI (πεζεταῖοι). [EXERCITUS, p. 488, b.]

PHALANGAE or PALANGAE (φάλαγγες), any long cylindrical pieces of wood, such as trunks or branches of trees (Herod. iii. 97; Plin. *H. N.* xii. 4. s. 8), truncheons (Plin. *H. N.* vii. 56. s. 57), and poles used to carry burthens. The carriers who used these poles were called *phalangarii* (Gloss. *Ant. s. v.*), and also *heaphoroi*, *tetraphoroi*, &c., according as they worked in parties of six, four, or two persons.

The word was especially used to signify rollers placed under ships to move them on dry land, so as to draw them upon shore or into the water (*βουπαρέοι κυλινδροί*, Brunck, *Anac.* iii. 89; Apoll. Rhod. i. 375—389). This was effected either by making use of the oars as levers, and at the same time fastening to the stern of the ship cables with a noose (*μηρίσθος*), against which the sailors pressed with their breasts, as we see in our canal navigation (Orph. *Argon.* 239—249, 270—273), or by the use of machines. (Hor. *Carm. i. 4. 2*.) Rollers were employed in the same manner to move military engines (Caesar, *Bell. Civ. ii. 10*).

PHALANX (φάλαγξ). [EXERCITUS, pp. 482, b, 488.]

PHALA'RICA. [HASTA, p. 589, a.]

PHA'LERA (φάλαρον), a boss, disc, or crescent of metal, in many cases of gold (Herod. i. 215; Athen. xii. p. 550; Claudian, *Epig.* 34) and beautifully wrought so as to be highly prized. (Cic. *Ferr. iv. 12*.) Ornaments of this description, being used in pairs, are scarcely ever mentioned except in the plural number. The names for them are evidently formed from the term *phalos*, which is explained under *GALBA*. (Compare Hom. *Il.* xvi. 106.) Besides the metallic ornaments of the

helmet similar decorations were sometimes, though very rarely, worn by warriors on other parts of their dress or armour, probably upon the breast. (Virg. *Aen. ix. 359, 458*.) The negro slaves who were kept by opulent Romans wore them suspended round their necks. (Sueton. *Nero*, 30.) Also the tiara of the king of Persia was thus adorned. (Aeschyl. *Perz.* 668.) But we most commonly read of *phalerae* as ornaments attached to the harness of horses (Xen. *Hellen. iv. 1. § 39*; Virg. *Aen. v. 310*; Gell. v. 5; Claudian, *Epig.* 36), especially about the head (*ἀμυνκτήρια φάλαρα*, Soph. *Oed. Col.* 1069; Eurip. *Suppl.* 586; Greg. *Cor. de Dialect.* p. 508, ed. Schäfer), and often worn as pendants (*penisula*, Plin. *H. N.* xxxvii. 12. a. 74), so as to produce a terrific effect when shaken by the rapid motions of the horse (*turbantur phalerae*, Claudian, in *iv. Cons. Honor.* 548). These ornaments were often bestowed upon horsemen by the Roman generals in the same manner as the *ARMILLA*, the *TORQUES*, the *hasta pura* [*HASTA*], and the crown of gold [*CORONA*], in order to make a public and permanent acknowledgment of bravery and merit (Juv. xvi. 60; Gell. ii. 11.) [J. Y.]

PHALLUS. [DIONYSIA, p. 411, a.]

PHALOS (φάλος). [GALBA.]

PHARETRA (φαρέτρα, *ap. Herod. φαρετραόν*), a quiver. A quiver, full of arrows, was the usual accompaniment of the bow. [ARCUS.] It was consequently part of the attire of every nation addicted to archery. Virgil applies to it the epithets *Cressae*, *Lycoia*, *Threlosae* (Georg. iii. 345, *Aen.* vii. 816, xi. 858); Ovid mentions the *pharetratus Geta* (*De Ponto*, i. 8. 6); Herodotus represents it as part of the ordinary armour of the Persians (vii. 61). The quiver, like the bow-case (*corymbus*), was principally made of hide or leather (Herod. ii. 141), and was adorned with gold (Anacr. xiv. 6; *aspidas*, Virg. *Aen. iv. 138*, xi. 858), painting (Ovid, *Epist. Her.* xxi. 175), and braiding (*πολύρρυθρον*, Theocrit. xxv. 265). It had a lid (*πώμα*, Hom. *Il.* iv. 116, *Od.* ix. 314), and was suspended from the right shoulder by a belt [*BALTEUS*], passing over the breast and behind the back. (Hes. *l. c.*) Its most common position was on the left

nip, in the usual place of the sword [GLADIUS], and consequently, as Pindar says, "under the elbow" (*Ol.* ii. 150. s. 91) or "under the arm" (*ὑπὸ ἄλκμονος*, Theocrit. xvii. 30). It was worn thus by the Scythians (Schol. in *Pind.* l. c.) and by the Egyptians (Wilkinson, *Man. and Cust.* vol. i. pp. 311, 391), and is so represented in the preceding figure of the Amazon Dinomache, copied from a Greek vase. (Hope, *Costume of the Ancients*, i. 22.) The left-hand figure in the same woodcut is from one of the Aegina marbles. It is the statue of an Asiatic archer, whose quiver (fractured in the original) is suspended equally low, but with the opening towards his right elbow, so that it would be necessary for him in taking the arrows to pass his hand behind his body instead of before it. To this fashion was opposed the Cretan method of carrying the quiver, which is exemplified in the woodcut, p. 276, and is uniformly seen in the ancient statues of Diana. [J. Y.]

PHARMACON GRAPHE (*φάρμακον* or *φάρμακας γραφή*), an indictment against one who caused the death of another by poison, whether given with intent to kill or to obtain undue influence. (Pollux, viii. 40, 117; Demosth. c. *Aristocr.* 627; *Argum. in Or. Antiph.* Κατηγ. φαρμ.) It was tried by the court of Areiopagus. That the malicious intent was a necessary ingredient in the crime, may be gathered from the expressions *ἐκ προνοίας, ἐξ ἐπιβουλῆς καὶ προβουλῆς*, in Antiphon (l. c. iii. 112, ed. Steph.). The punishment was death, but might (no doubt) be mitigated by the court under palliating circumstances. We have examples of such *γραφὰι* in the speech of Antiphon already cited, and that entitled *περὶ τοῦ χορευτοῦ*. (Meier, *Att. Proc.* p. 311.) Among the Greeks, women appear to have been most addicted to this crime, as we learn from various passages in ancient authors. Such women are called *φάρμακίδες* and *φάρμακευρίαι*. Poisonous drugs were frequently administered as love potions, or for other purposes of a similar nature. Men whose minds were affected by them were said *φάρμακται*. Wills made by a man under the influence of drugs (*ὅνδ φαρμάκων*) were void at Athens. (Demosth. c. *Steph.* 1133.) [C. R. K.]

PHAROS or PHARUS (*φάρος*), a light-house. The most celebrated light-house of antiquity was that situated at the entrance to the port of Alexandria. It was built by Sostratus of Cnidos on an island, which bore the same name, by command of one of the Ptolemies, and at an expense of 800 talents. (Plin. *H. N.* xxxvi. 12; Steph. Byz. s. v. *Φάρος*; Achill. Tat. v. 6.) It was square, constructed of white stone, and with admirable art; exceedingly lofty, and in all respects of great dimensions. (Caesar, *Bell. Civ.* iii. 112.) It contained many stories (*πολύστορον*, Strabo, xvii. l. § 6), which diminished in width from below upwards. (Herodian, iv. 3.) The upper stories had windows looking seawards, and torches or fires were kept burning in them by night in order to guide vessels into the harbour. (Val. Flacc. vii. 84; see Bartoli, *Luc. Ant.* iii. 12.)

Pliny (l. c.) mentions the light-houses of Ostia and Ravenna, and says that there were similar towers at many other places. They are represented on the medals of Apamea and other maritime cities. The name of Pharos was given to them in allusion to that at Alexandria, which was the model for their construction. (Herodian, l. c.;

Sueton. *Claud.* 20; Bruck, *Anal.* ii. 186.) The Pharos of Brundisium, for example, was, like that of Alexandria, an island with a light-house upon it. (Mela, ii. 7. § 13; Steph. Byz. l. c.) Suetonius (*Tiber.* 74) mentions another pharos at Caprese.

The annexed woodcut shows two phari remaining in Britain. The first is within the precincts of Dover Castle. It is about 40 feet high, octagonal externally, tapering from below upwards, and built with narrow courses of brick and much wider courses of stone in alternate portions. The space within the tower is square, the sides of the octagon without and of the square within being equal, viz., each 15 Roman feet. The door is seen at the bottom. (Stukely, *Itin. Curios.* p. 129.) A similar pharos formerly existed at Boulogne, and is supposed to have been built by Caligula. (Sueton. *Calig.* 46; Montfaucon, *Suppl.* vol. iv. l. vi. § 4.) The round tower here introduced is on the summit of a hill on the coast of Flintshire. (Pennant, *Par. of Whiteford and Holywell*, p. 112.) [J. Y.]

PHAROS (φάρος). [PALLIUM.]

PHASE'LUS (*φάσηλος*), was a vessel rather long and narrow, apparently so called from its resemblance to the shape of a phaselus or kidney-bean. It was chiefly used by the Egyptians, and was of various sizes, from a mere boat to a vessel adapted for long voyages. (Virg. *Georg.* iv. 289; Catull. 4; Martial, x. 30. 13; Cic. *ad Att.* i. 13.) Octavia sent ten triremes of this kind, which she had obtained from Antony, to assist her brother Octavianus; and Appian (*Bell. Civ.* v. 95) describes them as a kind of medium between the ships of war and the common transport or merchant vessels. The phaselus was built for speed (Catull. l. c. *phaselus illo-navium celerissimus*), to which more attention seems to have been paid than to its strength; whence the epithet *fragilis* is given to it by Horace. (*Carm.* iii. 2. 27, 28.) These vessels were sometimes made of clay (*fragilibus phaselis*, Juv. xv. 127), to which the epithet of Horace may perhaps also refer.

PHASIS (*φάσις*), was one of the various methods by which public offenders at Athens might be prosecuted; but the word is often used to denote any kind of information; as Pollux (viii. 47) says, *κοινῶς φάσις ἐκαλοῦντο πᾶσαι αἱ μνηστεῖς τῶν λαμβανόντων ἀδικημάτων*. (See Aristoph. *Eq.* 300, and *Acharn.* 823, 826, where the word *φαντάζω* is used in the same sense as *φαίρω*.) The word *συνεφάντης* is derived from the practice of laying information against those who exported figs. [SYCOPHANTES.]

Though it is certain that the *φάσις* was distinguished from other methods of prosecution (Demosth. c. *Aristog.* 793; Isocr. c. *Callim.* 375, ed.

Steph.), we are not informed in what its peculiarities consisted. According to Pollux (*l. c.*), it might be brought against those who committed offences against the mine laws, or the customs, or any other part of the revenue; against any persons who brought false accusations against others for such offences; and against guardians who injured their wards. The charge, as in the *γραφή*, was made in writing (*ἐν γραμματείῳ*), with the name of the prosecutor, and the proposed penalty (*τίμμημα*) affixed, and also the names of the *κλητῆρες*. The same author says, *ἐφαίνοντο δὲ πρὸς τὸν ἄρχοντα*. Here we must either understand the word *ἄρχοντα* to be used in a more general sense, as denoting any magistrate to whom a jurisdiction belonged, or read with Schömann (*de Comit.* 178) *τοὺς ἄρχοντας*. For it is clear that the archon was not the only person before whom a *φάσις* might be preferred. In cases where corn had been carried to a foreign port, or money lent on a ship which did not bring a return cargo to Athens, and probably in all cases of offence against the export and import laws, the information was laid before the *ἐπιμελητὰ τοῦ ἐμπορίου*. (Demosth. *c. Theocr.* 1323.) Where public money had been embezzled, or illegally appropriated, for which a *φάσις* was maintainable, the *σύνδικοι* were the presiding magistrates. (Isocr. *c. Callim.* 372; Lys. *de Publ. Pecun.* 149, *de Aristoph. bon.* 154, ed. Steph.) Offences relating to the mines came before the thesmothetae. (Meier, *Att. Proc.* p. 64.) Injuries done by guardians to their wards or wards' estate, whether a public prosecution or a civil action was resorted to, belonged to the jurisdiction of the archon, whose duty it was to protect orphans. (Suidas. *s. v. φάσις*; Demosth. *c. Omal.* 865, *c. Lacr.* 940, *c. Nausim.* 991.) All *φάσεις* were *τιμητοὶ ἄγωνες*, according to Pollux (viii. 48), and he says *τὸ τιμηθὲν ἐγγύητο τῶν ἀδικουμένων, εἰ καὶ ἄλλος ὑπὲρ αὐτῶν φήνειν*. By this we are to understand that the *τίμμημα* went to the state, if the prosecution was one of a purely public nature, that is, where the offence immediately affected the state; but where it was of a mixed nature, as where a private person was injured, and the state only indirectly, in such case compensation was awarded to the private person. This was the case in prosecutions against fraudulent guardians. On the same ground, wherever the prosecutor had an interest in the cause, beyond that which he might feel as the vindicator of public justice; as where he, or some third person on whose behalf he interposed, was the party directly injured, and might reap advantage from the result; he was liable to the *ἐπὶ πρῶτῃ*, and also to the payment of the *πρωτανεία*, just as he would be in a private action. Probably this liability attached upon informations for carrying corn to a foreign port, as the informer there got half the penalty if successful. (Demosth. *c. Theocr.* 1325.) Where the *φάσις* was of a purely public nature, the prosecutor would be subject only to the payment of the *παρόστασις*, and to the thousand drachma, if he failed to obtain a fifth part of the votes, according to the common practice in criminal causes. (Demosth. *c. Theocr.* 1323.) Whether in those of a mixed nature he was liable to these payments, as well as to the *πρωτανεία* and *ἐπὶ πρῶτῃ*, is a question which has been much discussed, but cannot be settled. We have no speech left us by the orators on the subject of a *φάσις*, but only mention of a lost speech of Lysias *πρὸς τὴν φάσιν τοῦ*

ὀρφανικοῦ οἴκου. (See Böckh, *Publ. Econ. of Athens*, p. 368, &c. 2d ed.; Meier, *Att. Proc.* pp. 247—252, 732; Platner, *Proc. and Kl.* vol. ii. pp. 9—17.) [C. R. K.]

PHEDIDTIA (*φειδίτια*). [SYSSITIA.]

PHENACE (*φενάκη*). [COMA, p. 330, a.]

PERNE (*φερνή*). [DOS.]

PHIALA. [PATERA.]

PHONOS (*φόνος*), *Homicide*, was either *ἐκούσιος* or *ἀκούσιος*, a distinction which corresponds in some measure, but not exactly, with our *murder* and *manslaughter*; for the *φόνος ἐκούσιος* might fall within the description of justifiable homicide, while *φόνος ἀκούσιος* might be excusable homicide. According to the different circumstances under which the homicide was committed, the tribunal to which the case was referred, and the modes of proceeding at Athens, varied. All cases of murder (with one exception, to be hereafter noticed) were tried by the court of Areiopagus; other cases of homicide were (by the statutes of Draco) to be tried by the *ἐφέται*. All *φονικὰ δίκαια* belonged to the jurisdiction of the *ἄρχων βασιλεύς* as *ἡγεμόν δικαστήριον*. He was anciently the sole judge in cases of unintentional homicide; for such an act was considered in a religious point of view, as being a pollution of the city; and it became his duty, as guardian of religion, to take care that the pollution (*έτος*) was duly expiated. Draco, however, established the *ἐφέται*, first as a court of appeal from the *ἄρχων βασιλεύς*; and soon after they began to perform the office of *δικασταί*, he being the presiding magistrate. (Suidas, *s. v. ἡγεμόν δικαστήριον*; Pollux, viii. 90, 125.) In discussing this subject we have to consider the various courts established at Athens for the trial of homicide, the different species of crime therein respectively prosecuted, the manner of proceeding against the criminal, and the nature of the punishment to which he was liable. All these points are fully discussed by Matthiae in his treatise *de Judiciis Athen.* in the *Miscellanea Philologica*, vol. i., to which more particular references are given in this article.

Solon, who seems to have remodelled the court of Areiopagus, enacted that this court should try cases of murder and malicious wounding, besides arson and poisoning. (Demosth. *c. Aristocr.* 627.) One would be deemed a murderer, who instigated another to commit the deed, provided the purpose were accomplished. (Demosth. *c. Conon.* 1264, 1265; Matth. p. 148.) Besides the court of Areiopagus, there were four other courts, of which the *ἐφέται* were judges; *τὸ ἐπὶ Παλλαδίῃ*, *τὸ ἐπὶ Δελφινίῃ*, *τὸ ἐπὶ Πρωτανείῃ*, and *τὸ ἐν Φρεαττοῖ*. (Harpor. et Suid. *s. v. Ἐφέται*.) To the court *ἐπὶ Παλλαδίῃ* belonged cases of accidental homicide, manslaughter, and attempts to commit murder (*βουλεύσεις*). Such a case as that mentioned by Demosthenes (*c. Neaer.* 1348) of an unlawful blow followed by death, would be manslaughter. It seems also that this court had a concurrent jurisdiction with the Areiopagus in charges of murderous conspiracy, which was carried into effect. The law perhaps allowed the prosecutor to waive the heavier charge, and proceed against the offender for the conspiracy only. (Harpor. *s. v. Βουλεύσεις*; Antiph. *τετραλ.* 126, ed. Steph.; Matth. p. 150.) As to the supposed origin of this court, see Harpor. *s. v. Ἐπὶ Παλλαδίῃ*; Pollux, viii. 118. To the court *ἐπὶ Δελφινίῃ* were referred cases where the party com-

feared the deed, but justified it; *ἐν τῇ δαλογίᾳ μὲν κτεῖναι, ἐν δὲ φῇ δεδρακέναι*. Demosthenes calls it ἀγιάτατον καὶ φρικωδέστατον (*c. Aristocr.* 644; Harpocr. *s. v.* 'Ἐπὶ Δελφίνῳ; Pollux, viii. 119). As to the origin of this court see Matth. p. 152. In the τὸ ἐπὶ Πρυτανείῳ the objects of prosecution were inanimate things, as wood, stone, or iron, which had caused the death of a man by falling on him. (Harpocr. *s. v.* 'Ἐπὶ Πρυτανείῳ; Pollux, viii. 120; Demosth. *c. Aristocr.* 645.) Draco enacted that the cause of death should be cast out of the boundaries of the land (*ὑπερορίζεσθαι*), in which ceremony the ἔρχων βασιλεὺς was assisted by the φυλοδασίλεις. (Meier, *Att. Proc.* p. 117; Suidas, *s. v.* Νίκων; Aesch. *c. Ctesiph.* 88, ed. Steph.) This was a relic of very rude times, and may be not inaptly compared with our custom of giving deodands. Matthiae (p. 154) thinks there was an ulterior object in the investigation, viz., that by the production of the instrument by which death was inflicted, a clue might be found to the discovery of the real murderer, if any. The court ἐν φρεαττοῖς was reserved for a peculiar case; where a man, after going into exile for an unintentional homicide, and before he had appeased the relations of the deceased, was charged with having committed murder. He was brought in a ship to a place in the harbour called ἐν φρεαττοῖς, and there pleaded his cause on board ship, while the judges remained on land. If he was convicted, he suffered the punishment of murder; if acquitted, he suffered the remainder of his former punishment. The object of this contrivance was to avoid pollution (for the crime of the first act had not yet been expiated), and at the same time to bring the second offence to trial. (Demosth. *c. Aristocr.* 646; Harpocr. *s. v.* 'Ἐν φρεαττοῖς; Pollux, viii. 120; Matth. p. 155.)

To one or other of these courts all *φονικὰ δίκαι* were sent for trial; and it was the business of the ἔρχων βασιλεὺς to decide which. The task of prosecution devolved upon the nearest relatives of the deceased; and in case of a slave, upon the master. To neglect to prosecute, without good cause, was deemed an offence against religion, that is, in any relation not further removed than a first cousin's son (*ἀνεψιῶδους*). Within that degree the law enjoined the relations to prosecute, under penalty of an ἀρεθείας γραφή, if they failed to do so. (Demosth. *c. Androt.* 593, *c. Macart.* 1069, *c. Eury.* et *Mnes.* 1160, 1161; Antiph. *de Her. coed.* 135, ed. Steph.) They might, however (without incurring any censure), forbear to prosecute, where the murdered man had forgiven the murderer before he died (Demosth. *c. Pantæn.* 983); or, in cases of involuntary homicide, where the offender gave the satisfaction which the law required; unless the deceased had given a special injunction to avenge him. (*Lyssa*, *c. Agor.* 133, 138, ed. Steph.; Matth. p. 170.)

The first step taken by the prosecutor was, to give notice to the accused to keep away from all public places and sacrifices. This was called πρόβησις, and was given at the funeral of the deceased. (Antiph. *de Her. coed.* 130, 139, *de Chor.* 141, ed. Steph.; Demosth. *c. Leptin.* 505, *c. Aristocr.* 632, *c. Eury.* 1160.) After this, he gave a public notice in the market-place, warning the accused to appear and answer to the charge: here he was said προεπεῖν or προσαγορεύειν φόνου. (Demosth. *c. Macart.* 1068, *c. Neaer.* 1348.) The next thing

was, to prefer the charge before the king-archon. To such charge the term ἐπισκήπτεσθαι or ἐτελέσθαι was peculiarly applied. (Pollux, viii. 33, 118; Harpocr. *s. v.* 'Ἐπισκήψατο; Antiph. *κατηγ.* φαρμ. 111, ed. Steph.) The charge was delivered in writing; the prosecutor was said ἀπογράφειν δίκην φόνου. (Antiph. *de Chor.* 145, ed. Steph.) The king-archon having received it, after first warning the defendant ἀπέχεσθαι τὸν μυστηρίων καὶ τῶν ἄλλων νομίμων (Pollux, viii. 66, 90), proceeded in due form to the ἀνέκρισις. The main thing to be inquired into was the nature of the offence, and the court to which the cognizance appertained. The evidence and other matters were to be prepared in the usual way. Three months were allowed for this preliminary inquiry, and there were three special hearings, one in each month, called διαδικασίαι, or (according to Bekker's reading) ποδιδικασίαι (Antiph. *de Chor.* 146, ed. Steph.); after which, in the fourth month, the king-archon εἰσήγε τὴν δίκην. (Matth. p. 160.) The defendant was allowed to put in a παράγραφη, if he contended that the charge ought to be tried in one of the minor courts. (Pollux, viii. 57.)

All the *φονικὰ διαστήρια* were held in the open air, in order that the judges might not be under the same roof with one suspected of impurity; nor the prosecutor with his adversary. (Antiph. *de Her. coed.* 130, ed. Steph.) The king-archon presided, with his crown taken off. (Pollux, viii. 90.) The parties were bound by the most solemn oaths; the one swearing that the charge was true, that he bore such a relationship to the deceased, and that he would in conducting his case confine himself to the question at issue; the other declaring the charge to be false. (Antiph. *de Her. coed.* 130, 140, *de Chor.* 143, ed. Steph.; Demosth. *c. Eury.* 1161; Matth. p. 163.) The witnesses on both sides were sworn in like manner (Antiph. *de Her. coed.* 130, 131, ed. Steph.; Meier, *Att. Proc.* p. 675); and slaves were allowed to appear as witnesses. (Meier, *Att. Proc.* p. 667.) Either party was at liberty to make two speeches, the prosecutor beginning, as may be seen from the *τετραλογία* of Antiphon; but both were obliged to confine themselves to the point at issue. (*Lys.* *c. Simon.* 100; Antiph. *de Chor.* 143, ed. Steph.) Advocates (*συνήγοροι*) were not admitted to speak for the parties anciently, but in later times they were. (Matth. p. 164.) Two days were occupied in the trial. After the first day the defendant, if fearful of the result, was at liberty to fly the country, except in the case of parricide. Such flight could not be prevented by the adversary, but the property of the exile was confiscated. (Pollux, viii. 117; Demosth. *c. Aristocr.* 634, 643; Matth. p. 167.) On the third day the judges proceeded to give their votes; for which two boxes or urns were provided (*ὕδρια* or *ἀμφορεῖς*), one of brass, the other of wood; the former for the condemning ballots, the latter for those of acquittal. An equal number of votes was an acquittal; a point first established (according to the old tradition) upon the trial of Orestes. (Aeschyl. *Eumen.* 753; Matth. p. 165.)

As the defence might consist either in a simple denial of the killing, or of the intention to kill, or in a justification of the act, it is necessary to inquire what circumstances amounted to a legal justification or excuse. We learn from Demosthenes (*c. Aristocr.* 637) that it was excusable to kill another unintentionally in a gymnastic combat, or

to kill a friend in battle or ambuscade, mistaking him for an enemy; that it was justifiable to slay an adulterer if caught in *ipso delicto*, or a paramour caught in the same way with a sister or daughter, or even with a concubine, if her children would be free. (As to an adulterer, see *Lys. de Eratoth. caed.* 94, ed. Steph.) It was lawful to kill a robber at the time when he made his attack (*εἰδὼς ἀνιόντα*) but not after. (Demosth. *c. Aristocr.* 629.) By a special decree of the people, made after the expulsion of the thirty tyrants, it was lawful to kill any man who attempted to establish a tyranny, or put down the democracy, or committed treason against the state. (Lycurg. *c. Leocr.* 165; Andoc. *de Myst.* 13, ed. Steph.) A physician was excused who caused the death of a patient by mistake or professional ignorance. (Antiph. *τετραλ.* 127, ed. Steph.) This distinction, however, must be observed. Justifiable homicide left the perpetrator entirely free from pollution (*καθάρων*). That which, though unintentional, was not perfectly free from blame, required to be expiated. See the remarks of Antiphon in the *Τετραλογία*, n. 123.

It remains to speak of the punishment.

The courts were not invested with a discretionary power in awarding punishment; the law determined this according to the nature of the crime. (Demosth. *c. Neocr.* 1372.) Wilful murder was punished with death. (Antiph. *de Hor. caed.* 130, ed. Steph.; Demosth. *c. Mid.* 528.) It was the duty of the Thesmothetæ to see that the sentence was executed, and of the Eleven to execute it. (Demosth. *c. Aristocr.* 630; Meier, *Att. Proc.* p. 74; Schömann, *Ant. Jur. Publ. Gr.* p. 246.) We have seen that the criminal might avoid it by flying before the sentence was passed. Malicious wounding was punished with banishment and confiscation of goods. (*Lys. c. Simon.* 100; Matth. p. 148.) So were attempts to murder (*βουλεβόρῃς*). But where the design was followed by the death of him whose life was plotted against, and the crime was treated as a murder, it might be punished with death, at least if it was tried in the Areiopagus; for it is doubtful whether the minor courts (except that *ἐν φρεστροῖς*) had the power of inflicting capital punishment. (Matth. p. 150; Schömann, *Ant. Jur. Publ. Gr.* p. 294; Meier, *Att. Proc.* p. 313.) If the criminal who was banished, or who avoided his sentence by voluntary exile, returned to the country, an *ἐνδεξις* might forthwith be laid against him, or he might be arrested and taken before the Thesmothetæ, or even slain on the spot. (Suidas, s. v. *Ἐνδεξις*; Matth. p. 168.) The proceeding by *ἐκπαράχῃ* (arrest) might perhaps be taken against a murderer in the first instance, if the murder was attended with robbery, in which case the prosecutor was liable to the penalty of a thousand drachms if he failed to get a fifth of the votes. (Demosth. *c. Aristocr.* 647; Meier, *Att. Proc.* p. 231.) But no murderer, even after conviction, could lawfully be killed, or even arrested, in a foreign country. (Demosth. *c. Aristocr.* 631, 632.) The humanity of the Greeks forbade such a practice. It was a principle of international law, that the exile had a safe asylum in a foreign land. If an Athenian was killed by a foreigner abroad, the only method by which his relations could obtain redress, was to seize natives of the murderer's country (not more than three), and keep them until the murderer was given up for judgment. (Demosth. *c. Aristocr.* 647;

Pollux, viii. 50; Harpocr. and Suidas, s. v. *Ἀρρελάφθιον*.)

Those who were convicted of unintentional homicide, not perfectly excusable, were condemned to leave the country for a year. They were obliged to go out (*ἐξέρχεσθαι*) by a certain time, and by a certain route (*τακτῆρ δδόν*), and to expiate their offence by certain rites. Their term of absence was called *ἀνευαντισμός*. It was their duty also to appease (*ἀλγεῖσθαι*) the relations of the deceased, or if he had none within a certain degree, the members of his clan, either by presents or by humble entreaty and submission. If the convict could prevail on them, he might even return before the year had expired. The word *ἀλγεῖσθαι* is used not only of the criminal humbling himself to the relations, but also of their forgiving him. (Harpocr. s. v. *Ἐρπονία*; Demosth. *c. Pantaem.* 983; *c. Macart.* 1069, *c. Aristocr.* 643; Matth. p. 170.) The property of such a criminal was not forfeited, and it was unlawful to do any injury to him either on his leaving the country or during his absence. (Demosth. *c. Aristocr.* 634.)

Such was the constitution of the courts, and the state of the law, as established by Solon, and mostly indeed by Draco; for Solon retained most of Draco's *φρονέων νόμοι*. (Demosth. *c. Eurycl.* 1161, *c. Aristocr.* 636.) But it appears that the jurisdiction of the *ἐφέται* in later times, if not soon after the legislation of Solon, was greatly abridged; and that most of the *φρονέων δίκαι* were tried by a common jury. It is probable that the people preferred the ordinary method of trial, to which they were accustomed in other causes, criminal as well as civil, to the more aristocratical constitution of the court of *ἐφέται*. Their jurisdiction in the courts *ἐν φρεστροῖς* and *ἐν Πιπταρείᾳ*, was, no doubt, still retained; and there seem to have been other peculiar cases reserved for their cognizance. (Pollux, viii. 125; Matth. p. 158; Schömann, *Ant. Jur. Publ. Gr.* p. 296.) Whether the powers of the Areiopagus, as a criminal court, were curtailed by the proceedings of Pericles and Ephialtes, or only their administrative and censorial authority as a council, is a question which has been much discussed. The strong language of Demosthenes (*c. Aristocr.* 641) inclines one to the latter opinion. See also Dinarchus (*c. Aristog.* init.), from which it appears there was no appeal from the decision of that court. (Matth. 166; Platner, *Proc. and Klag.* vol. i. p. 27; Schömann, *Ant. Jur. Publ.* p. 301; Thirlwall, *Gr. Hist.* vol. iii. c. 17. p. 24.)

No extraordinary punishment was imposed by the Athenian legislator on parricide. Suicide was not considered a crime in point of law, though it seems to have been deemed an offence against religion; for by the custom of the country the hand of the suicide was buried apart from his body. (Aesch. *c. Ctes.* 88, ed. Steph.) [C. R. K.]

PHORBEIA (*φορβεία*). [CAPISTRUM.]

PHORMINX (*φάρμυξ*). [LYRA.]

PHOROS (*φόρος*), literally *that which is brought in*, was specially used to signify the tribute paid by the Attic states to Athens, which is spoken of under TELOS.

PHRA'TRIA. [CIVITAS, pp. 289, 290; TRIBUS (GREEK).]

PHRY'GIO. [PALLIUM, p. 851, a.]

PHTHORA TON ELEUTHERON (*φθώρα τῶν ἐλευθέρων*), was one of the offences that might be criminally prosecuted at Athens. The word

φθορά may signify any sort of corruption, bodily or mental; but the expression φθ. τ. ε. comprehends, if it is not limited to, a crime too common among the Greeks, as appears from a law cited by Aeschines (c. *Timarch.* 2, ed. Steph.). On this subject see PROLOGOGRAS GRAPHE, and Schömann, *Ant. Jur. Pub. Gr.* pp. 335, 338. [C. R. K.]

PHYGE (φυγή). [EXSILIUM.]

PHYLARCHI (φύλαρχοι), generally the prefects of the tribes in any state, as at Epidamnus, where the government was formerly vested in the φύλαρχοι, but afterwards in a senate. (Arist. *Polit.* v. 1.) At Athens the officers so called were (after the age of Cleisthenes) ten in number, one for each of the tribes, and were specially charged with the command and superintendence of the cavalry. (Harpor. s. v.; Pollux, viii. 94.) There can be but little doubt, that each of the Phylarchs commanded the cavalry of his own tribe, and they were themselves collectively and individually under the control of the two Hipparcha, just as the Taxiarchs were subject to the two Strategi. According to Pollux (viii. 94), they were elected one from each tribe by the Archons collectively; but his authority can hardly be considered as conclusive on this point. Herodotus (v. 19) informs us that when Cleisthenes increased the number of the tribes from four to ten, he also made ten Phylarchs instead of four. It has been thought, however (Titmann, *Staaten.* pp. 274, 275), that the historian should have said ten Phylarchs in the place of the old φυλοβασίλεις, who were four in number, one for each of the old tribes. (See Wachsmuth, *Hellen. Alterthumsk.* vol. i. pp. 425, 543, vol. ii. p. 326, 2d ed.) [R. W.]

PHYLOBASILEIS (φυλοβασίλεις). The origin and duties of the Athenian magistrates, so called, are involved in much obscurity, and the little knowledge we possess on the subject is derived almost entirely from the grammarians. In the earliest times they were four in number, representing each one of the four tribes, and probably elected (but not for life) from and by them. (Heusy. s. v.) They were nominated from the Eupatridae, and during the continuance of royalty at Athens, these "kings of the tribes" were the constant assessors of the sovereign, and rather as his colleagues than counsellors. (Thirlwall, *Hist. of Greece*, vol. ii. p. 11.) From an expression in one of the laws of Solon (Plut. *Solon*, 19), it appears that before his time the kings of the tribes exercised a criminal jurisdiction in cases of murder or high treason; in which respect, and as connected with the four tribes of the city, they may be compared with the "duumviri perduellionis" at Rome, who appeared to have represented the two ancient tribes of the Ramnes and Titias. (Niebuhr, *Hist. of Rome*, vol. i. p. 304.) They were also intrusted (but perhaps in later times) with the performance of certain religious rites, and as they sat in the βασιλειον (Poll. viii. 111), they probably acted as assessors of the ἀρχων βασίλεις, or "Rex sacrificulus," as they had formerly done of the king. Though they were originally connected with the four ancient tribes, still they were not abolished by Cleisthenes when he increased the number of tribes and otherwise altered the constitution of Athens; probably because their duties were mainly of a religious character. (Wachsmuth, *Hellen. Alterthumsk.* vol. ii. p. 426, 2d ed.) They appear to have existed even after his time, and acted as judges, but in unimpor-

tant or merely formal matters. They presided, we are told (Poll. viii. 120), over the court of the Ephetae, held at the Prytaneum, in the mock trials over instruments of homicide (αἱ τῶν ἐφύχων δίκαι), and it was part of their duty to remove these instruments beyond the limits of their country (τὸ ἐμπεσεῖν ἐφύχων διεπορίσαι). We may reasonably conclude that this jurisdiction was a relic of more important functions, such as those described by Plutarch (*Solon*, 19), from which, and their connection with the Prytaneum, it has been conjectured that they were identical with the old Prytanes. (Müller, *Evmen.* § 67.) Plutarch (l. c.) speaks of them both as βασίλεις and πρυτάνεις. In a ψήφισμα, quoted by Andocides (*de Myst.* p. 11), the title of βασίλεις seems to be applied to them. [R. W.]

PHYLON (φύλον). [TRIBE.]

PICTU'RA (γραφὴ, γραφικὴ, ζωγραφία), painting. I. The art of imitating the appearances of bodies upon an even surface, by means of light and shade or colour, was an art most extensively cultivated by the ancients, but especially by the Greeks, amongst whom it was certainly carried to the highest degree of technical development.

II. *Authorities.* The principal original sources of information upon the history of ancient art, are Pausanias, the elder Pliny, and Quintilian; the writings also of Cicero, Lucian, Aelian, Aristotle, Athenæus, Plutarch, the elder and younger Philostratus, contain many hints and maxims invaluable to the historian of art. The best modern works on the subject are: Junius, *De Pictura Veterum* and *Catalogus Artificum*, Roter. 1694, folio, which contain almost all the passages in ancient authors relating to the arts; but the Catalogue is the more valuable portion of the work; Sillig, *Catalogus Artificum*, Dresden 1827, 8vo., an indispensable supplement to the Catalogue of Junius; this excellent work, written equally for the scholar and the artist, has been translated into English under the title of a *Dictionary of the Artists of Antiquity*, 1837*; a further supplement to Sillig, of great importance, is the work of M. Raoul-Rochette, *Lettres à M. Schorn, Supplément au Catalogue des Artistes de l'Antiquité Grecque et Romaine*, Paris 1845; Müller, *Handbuch der Archäologie der Kunst*, Breslau 1848, 8vo., 3rd ed. by Welcker, a most useful work, but written more for the antiquary than the artist; the 2nd edition has recently been translated by Mr. Leitch; Böttiger, *Ideen zur Archäologie der Malerei*, Dresden 1811, 8vo., first part, from the earliest times until Polygnotus and his contemporaries, inclusive; Durand, *Histoire de la Peinture Ancienne*, London 1725, folio, a translation of book xxxv. of Pliny, with copious notes; Carlo Dati, *Vite dei Pittori Antichi*, Florence 1667, 4to., the lives of Zeuxis, Parrhasius, Apelles, and Protogenes; Thiersch, *Ueber die Epochen der bildenden Kunst unter den Griechen*, München 1829, 8vo., 2nd ed.; Raoul-Rochette, *Recherches sur l'Emploi de la Peinture*, &c., Paris 1836, 4to.; John, *Malerei der Alten*, Berlin 1836, 8vo.; Letronne, *Lettres d'un Antiquaire à un Artiste*, Paris 1840, 8vo.; Nagler, *Neues allgemeines Künst-*

* An important error, however, among many others, in this translation, demands notice; the term *enamel* is throughout erroneously used in the place of *encaustic*.

ler-Lavison, München, 17 vols. 8vo., not yet completed; and the lectures of Fuseli upon ancient painting, and of Flaxman upon sculpture. Other works have been written upon general and particular subjects bearing more or less upon painting, such as those of Heyne, Meyer, Hirt, Hermann, Kugler, Völkel, Jacobs, Creuzer, Grund, Caylus, Levesque, Millin, D'Hancarville, Quatremère de Quincy, Inghirami, Visconti, Millingen, and others, too numerous to mention here. Of the celebrated work of Winckelmann, *Geschichte der Kunst des Alterthums*, only a very small portion is devoted to painting.

III. *Painting is its earliest state.* The legends relating to the origin of painting in Greece, though they may have no real historical value, are at least interesting to the lovers of art. One legend, which is recorded by Pliny (*H. N.* xxxv. 12. s. 43) and is adverted to by Athenagoras (*Legat. pro Christ.* 14. p. 59, ed. Dechair), relates the origin of the delineation of a shadow (*σκία*, *σκιαγραφία*, Pollux, vii. 128), which is the essential principle of design, the basis of the imitative and plastic arts. The legend runs as follows:—The daughter of a certain Dibutades, a potter of Sicyon, at Corinth, struck with the shadow of her lover who was about to leave her, cast by her lamp upon the wall, drew its outline (*umbrae ex facie lineis circumscriptae*) with such force and fidelity, that her father cut away the plaster within the outline, and took an impression from the wall in clay, which he baked with the rest of his pottery. (*Dict. of Biog. s. v.*) There seem to be, however, other claimants to the honour of having invented skiagraphy (*σκιαγραφία*). Athenagoras (*l. c.*) mentions Saurias of Samos, who traced his horse's shadow in the sun with the point of his spear, and Crato of Sicyon, whom he styles the inventor of drawing or outline (*γραφική*), for he was the first to practise the art upon tablets with prepared grounds (*ἐν πινυκι λελευκωμένῳ*). Pliny (*H. N.* vii. 57) mentions upon the testimony of Aristotle, that Eucheir (*Εὐχέειρ*), a relation of Daedalus, invented painting in Greece. (*Dict. of Biog. s. v.*) Although Pliny's account (*H. N.* xxxv. 5) of the origin and progress of painting in Greece is somewhat circumstantial, his information can still not be considered as authentic matter of history; and the existence of several of the most ancient artists, mentioned by Pliny and many Greek writers, is very questionable. Besides those already spoken of, we find mention made of Philocles of Egypt; Cleantes, Ardices, and Cleophantus, of Corinth; Telephanes of Sicyon, Eugrammus, and others. (Upon the meanings of some of these names see Böttiger, *Ideen zur Archäologie*, p. 138, and Thiersch, *Epoch. &c.*, note 22, and *Dict. of Biog. art. Chæriophorus*.)

Sculpture is generally supposed to be a more ancient art than *painting*; but this arises from an imperfect comprehension of the nature of the two arts, which are *one* in origin, end, and principle, and differ only in their development. Design is the basis of both, colour is essential to neither, nor can it be said to belong more particularly to the latter (*γραφική*) than to the former (*πλαστική*). Coloured works in plastic, in imitation of nature, were in ancient times as common, and probably more so, than coloured designs: the majority of the illustrations upon the vases are colourless. The staining of the human body, or the colouring of

images, is the common notion of the origin of painting; but *simple colouring*, and *painting*, strictly speaking, are quite distinct; the distinction between "to colour," *χρᾶν*, *colorem inducere*, and "to paint," (*εὑρεῖν*, *pingere, delineare*. (Pollux, vii. 126.) The colouring of the early wooden images, the ancient *ἱδωτα*, or the *ἑρμαι*, the *ναλῆδια*, and the *δαῖδαλα*, must certainly have preceded any important essays in painting, or the representation of forms upon an even surface by means of colour and light and shade combined. But this is no stage in the art of painting, and these figures were most probably coloured by the artists who made them, by the old *πλάστοι* or *ἐργαστοὶ*, themselves; the existence, however, of the art of design is established by the existence of the plastic art.

We will now as briefly as possible consider the gradual development of painting, and the information relating to its progressive steps, preserved in ancient writers. The simplest form of design or drawing (*γραφική*) is the outline of a shadow, without any intermediate markings, or the shape of a shadow itself (*a silhouette*), in black, white, or in colour (*umbra hominis lineis circumducta*); this kind of drawing was termed *σκιαγραφία*. But this simple figure or shade, *σκία* (*σκιαγράμμα*), when in colour was also essentially a monochrome (*μονοχρόματον*). The next step was the outline, the "pictura linearis," the monogram (*μονόγραμμα*); this is said to have been invented by Philocles of Egypt or Cleantes of Corinth, but first developed in practice by Ardices of Corinth and Telephanes of Sicyon: it was the complete outline with the inner markings, still without colour; such as we find upon the ancient vases, or such as the celebrated designs of Flaxman, which are perfect monograms. These outlines were most probably originally practised upon a white ground (*ἐν ῥινακι λελευκωμένῳ*), for Pliny remarks that they were first coloured by Cleophantus of Corinth, who used "*testa trita*," by which we should perhaps understand that he was the first to draw them upon a coloured or red ground, such as that of the vases. (Plin. *H. N.* xxxv. 5.)

The next step is the more perfect form of the monochrome, alluded to above; in this, light and shade were introduced, and in its most perfect state it was, in everything that is essential, a perfect picture. These "monochromata" were practised in all times, and by the greatest masters. Pliny, speaking of Zeuxis (*H. N.* xxxv. 36), says, "*pinxit et monochromata ex albo*;" "*ex albo*, that is, in gray and gray, similar to the *chiaroscuro* of the Italians. They are described by Quintilian (xi. 3. § 46), "*qui singulis pinxerunt coloribus, alia tamen eminentiora, alia reductione fecerunt*." They were painted also in red. Pliny (*H. N.* xxxiii. 39) tells us that the old masters painted them in vermilion, "*Cinnabari veteres, quas etiam nunc vocant monochromata, pingebant*;" and also in red lead, but that afterwards the rubrica or red ochre was substituted for these colours, being of a more delicate and more agreeable tint.

Hygieion, Dinias, and Charmadas, are mentioned by Pliny (*H. N.* xxxv. 34) as having been famous ancient monochromists; their age is not known, but they most probably practised the simpler form, such as we find upon the most ancient vases. Four monochroms in the latter style, red in red, were discovered in Herculaneum. (*Le*

Antichità d'Ercolano, vol. i. plates 1, 2, 3, 4.) They are paintings of a late date and are of considerable merit in every respect, but the colours have been nearly destroyed by the heat, and the pictures are in some places defaced; they are painted upon marble. They were probably all executed by the same artist, Alexander of Athens. ΑΛΕΞΑΝΔΡΟΣ ΑΘΗΝΑΙΟΣ ΕΓΡΑΦΕΝ, is an inscription upon one of them (pl. 1), which represents five females, with their names attached, two of whom are playing at the ancient game of the *tali* (δοτράγαισμός). These tablets are in the collection of ancient paintings of the Museo-Borbonico at Naples, Nos. 408, 409, 410, 411.

The next and last essential step towards the full development or establishment of the art of painting (ὑγραφία) was the proper application of local colours in accordance with nature. This is, however, quite a distinct process from the simple application of a variety of colours before light and shade were properly understood, although each object may have had its own absolute colour. The local colour of an object is the colour or appearance it assumes in a particular light or position, which colour depends upon, and changes with, the light and the surrounding objects; this was not thoroughly understood until a very late period, but there will be occasion to speak of this hereafter. Probably Eumarus of Athens, and certainly Cimon* of Cleonae, belonged to the class of ancient tetrachromists or polychromists, for painting in a variety of colours, without a due or at least a partial observance of the laws of light and shade, is simply polychromy; and a picture of this latter description is a much more simple effort than the ripest forms of the monochrom in chiaroscuro. There are a few examples of this kind of polychrom upon the most ancient vases. In the works of Eumarus of Athens, however, there must have been some attention to light and shade, and in those of Cimon of Cleonae still more.

IV. *Painting in Asia Minor and in Magna Graecia.* It is singular that the poems of Homer do not contain any mention of painting as an

imitative art, nor is there mention of any artist, similar to Hephæstus, who might represent the class of painters. This is the more remarkable, since Homer speaks of rich and elaborate embroidery as a thing not uncommon; it is sufficient to mention the splendid Diplax of Helen (*Il.* iii. 126), in which were worked many battles of the Greeks and Trojans fought on her account. This embroidery is actual painting in principle, and is a species of painting in practice, and it was considered such by the Romans, who termed it "*pictura textilis*" (*Cic. Verr.* ii. 4. 1), "*textili stragulo, magnificis operibus picto*" (*Id. Tusc.* v. 21); that is, painted with the needle, embroidered, *acq. picto*. (*Ovid. Met.* vi. 23; *Virg. Aen.* ix. 582.) The various allusions also to other arts, similar in nature to painting, are sufficient to prove that painting must have existed in some degree in Homer's time, although the only kind of painting he notices is the "red-cheeked" and "purple-cheeked ships" (*ῥῆες μιλτοπάρροι*, *Il.* ii. 637; *ῥῆες ποινικοπαρήους*, *Od.* xi. 123), and an ivory ornament for the faces of horses, which a Maeonian or Carian woman colours with purple. (*Il.* iv. 141.) The description of the shield of Achilles, worked by Hephæstus in various-coloured metals, satisfactorily establishes the fact that the plastic art must have attained a considerable degree of development in the time of Homer, and therefore determines also the existence of the art of design. (*Ars delineandi; γραφική.*)

Painting seems to have made considerable progress in Asia Minor, while it was still in its infancy in Greece, for Candaules, king of Lydia (B.C. 716), is said to have purchased at a high price a painting of Bularchus, which represented a battle of the Magnetæ. (*Plin. H. N.* xxxv. 34.) It would appear from the expression of Pliny (*H. N.* vii. 39) that Candaules paid the painter as much gold coin as would cover the picture. It must be confessed that the tradition is very doubtful (see *Dict. of Biog. art. Bularchus*); but this painting of Bularchus is not an isolated fact in evidence of the early cultivation of painting in Asia; there is a remarkable passage in Ezeiel, who prophesied about 600 B.C., relating to pictures of the Assyrians (xxiii. 14, 15): "Men portrayed upon the wall, the images of the Chaldeans portrayed with vermilion, girded with girdles upon their loins, exceeding in dyed attire upon their heads, all of them princes to look to, after the manner of the Babylonians of Chaldaea, the land of their nativity."

The old Ionic or Asiatic painting, the "*genus picturae Asiaticum*," as Pliny (*H. N.* xxxv. 10. s. 36) terms it, most probably flourished at the same time with the Ionian architecture, and continued as an independent school until the sixth century B.C., when the Ionians lost their liberty, and with their liberty their art. Herodotus (i. 164) mentions that when Harpagus besieged the town of Phocæa (B.C. 544), the inhabitants collected all their valuables, their statues and votive offerings from the temples, leaving only their paintings, and such works in metal or of stone as could not easily be removed, and fled with them to the island of Chios; from which we may conclude that paintings were not only valued by the Phocæans, but also common among them. Herodotus (iv. 88) also informs us that Mandrocles of Samos, who constructed for Darius Hytaspis the bridge of boats across the Bosphorus (B.C. 508),

* These two names are generally connected with each other, but Eumarus must have preceded Cimon some time. He was the first, according to Pliny (*H. N.* xxxv. 34), who distinguished the male from the female in painting: "qui primus in pictura mærem feminamque discreverit, . . . figuras omnes imitari ausum." The most obvious distinction which here suggests itself can scarcely be alluded to by Pliny, or Eumarus must belong to a very early period, for we find that distinction very decidedly given on even the most ancient vases, whenever the figure is naked. That Eumarus dared or ventured to imitate all figures, may imply that he made every distinction between the male and the female, giving also to each sex a characteristic style of design, and even in the compositions, draperies, attitudes, and complexions of his figures, clearly illustrating the dispositions and attributes of each, exhibiting a robust and vigorous form in the males, and making the females slighter and more delicate. These qualities are all perfectly compatible with the imperfect state of the art of even so early a period, and they may also be very evident, notwithstanding ill-arranged composition, defective design, crude colour, and a hard and tasteless execution.

had a picture painted, representing the passage of Dareius's army, and the king seated on a throne reviewing the troops as they passed, which he dedicated in the temple of Hera at Samos.

After the conquest of Ionia, Samos became the seat of the arts. (Herod. iii. 60.) The Heraeum at Samos, in which the picture of Mandrocles was placed, was a general depository for works of art, and in the time of Strabo appears to have been particularly rich in paintings, for he terms it a "picture-gallery" (πικταόθηκη, xiv. p. 637). Consecrated or votive pictures on panels or tablets (πίνακες ἀνακειμένους, or γραφαὶ ἀνακειμέναι) constituted a considerable portion of the ἀνάθημα or votive offerings in the temples of Greece, most of which in a later period had a distinct building or gallery (ὄλκωμα) attached to them disposed for the reception of pictures and works of this class. (Paus. i. 22. § 4, x. 25. § 1, 2; Ath. xiii. p. 606, b.; Strab. ix. p. 396.)

After the decline of the Ionian art, painting flourished amongst the Greeks in Italy and Sicily, and especially in Crotona, Sybaris, and Tarentum. Aristotle (*de Mirab. Auscult.* c. 99) speaks of a magnificent cloth or pallium (ὑμῖον) of Alcibiades of Sybaris, which measured 15 cubits, was of the richest purple, and in it were worked the representations of cities, of gods, and of men. It came afterwards into the possession of the tyrant Dionysius the elder, who sold it to the Carthaginians for 120 talents. This is sufficient evidence of the existence of painting among the Italiote, and even of painting of a high degree.

Pliny would induce us to believe that painting was established throughout Italy as early as the time of Tarquinius Priscus (*H. N.* xxxv. 6). He mentions some most ancient paintings at Caere; and a naked group of Helen and Atalanta, of beautiful forms, painted upon the wall of a temple at Lanuvium, and some paintings by the same artist in the temple of Juno at Ardea, accompanied with an inscription in ancient Latin characters, recording the name of the artist and the gratitude of Ardea. (*H. N.* xxxv. 6, 37.)

V. *Painting in Greece.* Cimon of Cleonae is the first important personage we meet with in the history of painting in Greece. His exact period is very uncertain, but he was probably a contemporary of Solon, and lived at least a century before Polygnotus. It is not at all necessary, as Pliny supposes, that he must have preceded Bularchus, which would place him very much earlier; as he may easily have acquired the art in one of the Ionian cities, for in the time of Solon there was a very extensive intercourse between Greece and the Asiatic colonies. The superior quality of the works of Cimon, to which Pliny and Aelian bear sufficient testimony, is a strong reason for assigning him a later date; but his having been contemporary with Dionysius of Colophon, who imitated the works of Polygnotus, is quite out of the question. This has been inferred from the occurrence of the name Cimon in connection with that of Dionysius in Simonides (*Anthol. Pal.* ix. 758, and in *Append.* ii. p. 648); but as Müller (*Archäologie*, § 99. 1) has observed, Μίμων ought to be there most probably substituted for Κίμων.

Cimon improved upon the inventions of Eumarus; he was the first who made foreshortenings (*catagrapha*), and drew the figure in a variety of attitudes; he first made muscular articulations, indi-

cated the veins, and gave natural folds to drapery (Plin. *H. N.* xxxv. 34.) The term "catagrapha," which Pliny uses, evidently signifies any oblique view of the figure or countenance whatever, whether in profile or otherwise; in technical language, *foreshortenings*.

We learn from Aelian (*V. H.* viii. 8) that Cimon was much better paid for his works than any of his predecessors. This alone implies a great superiority in his works. He appears to have emancipated painting from its archaic rigidity; and his works probably occupied a middle place between the productions of the earlier school and those of Polygnotus of Thasos.

At the time of Polygnotus (a. c. 460), partly on account of the changes which took place in the Greek character subsequent to the Persian invasion, and partly in consequence of his own great works in Athens and at Delphi, painting attracted the attention of all Greece; but previous to this time, the only cities that had paid any considerable attention to it, were Aegina, Sicyon, Corinth, and Athens. Sicyon and Corinth had long been famous for their paintings upon vases and upon articles of furniture; the school of Athens was of much later date than the others, and had attained no celebrity whatever, until the arrival of Polygnotus from Thasos raised it to that pre-eminence which, through various circumstances, it continued to maintain for more than two centuries, although very few of the great painters of Greece were natives of Athens.

It has been attempted hitherto, as far as our space would admit of, to trace the progressive steps of Grecian painting from its infancy, until it attained that degree of development requisite to entitle it to the name of an independent art; but before entering upon the consideration of the painting of the Greeks in its complete development, it will be well to examine both their technic systems and their mechanical means.

VI. *Technic.*—*Vehicles, Materials, &c.* (φάρμακα, βάσι, &c., Pollux, vii. 128). The Greeks painted with wax, resins, and in water colours, to which they gave a proper consistency, according to the material upon which they painted, with gum (*gummi*), glue (*glutinum*), and the white of egg (*ovi albumen*); gum and glue were the most common. It does not appear that they ever painted in oil; the only mention of oil in ancient writers in connection with painting, is the small quantity which entered into the composition of encaustic varnish, to temper it. (Vitruvius, vii. 9; Plin. *H. N.* xxxiii. 40.) They painted upon wood, clay, plaster, stone, parchment, and canvas; the last was, according to one account (Plin. *H. N.* xxxv. 33), not used till the time of Nero; and though this statement appears to be doubtful ("depictam in tabula spirariorum imaginem rei," (Quint. *Inst. Or.* vi. 1. § 32; see Raoul-Rochette, p. 331), the use of canvas must have been of late introduction, as there is no mention of it having been employed by the Greek painters of the best period. They generally painted upon panels or tablets (πίνακες, *tabulae*, *tabellae*), and very rarely upon walls; and an easel similar to what is now used, was common among the ancients, who called it *δυσίπας* or *καλύβας*. (Pollux, vii. 129.) Even in the time of Pliny, when wall-painting was common, those only who painted easel-pictures (*tabulae*) were held in esteem: "sed nulla gloria artificum est

nisi eorum qui tabulas pinxere" (*H. N.* xxxv. 37); that is, those who painted history or fable upon panels, in what is termed the historic or great style, the *megalographia* of Vitruvius (vii. 4, 5), and the *χηροτογραφία* of Plutarch. (*Ara.* 13.) These panels, when finished, were fixed into frames of various descriptions and materials (*Plin. H. N.* xxxv. 45), and encased in walls. (*Plin. H. N.* xxxv. 10; *Cic. in Verr.* iv. 55; *Dig.* 19. tit. 1. s. 17. § 3; *Müller, Arch.* § 319. 5; see Raoul-Rochette, *Sur l'Emploi de la Peinture, &c.*, and Letronne, *Lettres d'un Antiquaire, &c.*, works devoted to the discussion of this subject.) The ornamental panel-painting in the houses of Pompeii is evidently an imitation of this more ancient and more costly system of decorating walls. The wood of which these panels or tablets were generally made was Larch (*Abies Larix*, *Larix femina*, *Ἐλδνη*, *Theophr. H. Pl.* iii. 9. 7; *Plin. H. N.* xvi. 73), and they were grounded or prepared for painting with chalk or white plaster; this prepared ground was termed *λευκωμα*, which term was applied also to the tablet itself when thus prepared. (*Suidas*, s. v.; *ἐν πινυκὶ λευκωμένον*, *Athenag.* l. c.)

The style or cestrum used in drawing, and for spreading the wax colours, pointed at one end and broad and flat at the other, was termed *τραπίς* by the Greeks and cestrum by the Romans; it was generally made of metal. There is a representation of an instrument of this description in one of the paintings of Herculaneum. (*Antichità d'Ercolano*, vol. iii. pl. 45.) The hair pencil (*penicillus*, *penicillum*) was termed *ὄνογραφός*, and apparently also *βαβίλιον* (*χρῶσθαι διὰ τοῦ βαβίλιον*, *Timaeus, Lex. Plat.* s. v. *Χρῶσθαι*: see Letronne, *Encaustic, Journ. des Sav.* Sept. 1835, on the meaning of *βαβίλιον*).

The ancients used also a palette very similar to that used by the moderns, although it appears that there is no absolute mention of the palette in any ancient author. The fact, however, is sufficiently attested by the figure of Painting discovered in the so-called Pantheon at Pompeii, which holds the palette and brushes in her left hand. (*Zahn, Die schönsten ornamente und merkwürdigsten gemälde aus Pompeii Herculaneum und Stabiae*, Berlin 1828.) In the same work (plate 98) a female who is painting is represented holding something in her left hand which appears to be a palette, but it is not well defined even in the original. (*Museum of Naples*, No. 383. "La femme Peintre," *Pompéi*. In the *Antichità d'Ercolano*, it is given as a female copying a *Hermes*, vol. vii. pl. 1.) In the grotesque drawing of a portrait-painter at work, copied by Mazois (*Les Ruines de Pompéi*, part ii. p. 68) from a picture in the Casa Carolina at Pompeii, a small table serves as a palette and stands close to his right hand; it appears to have seventeen different tints upon it. It is most probable that the "tabella" of Pliny and the *πινυκίον* of Pollux (or even the *πυξίον*, x. 59) signified also palette as well as tablet.

The ancient authors have left us less information concerning the media or vehicles (*φάρμακα*) used by the painters of antiquity than on any other matter connected with ancient painting. Gum and glue, commis, gummi, glutinum, glutinum taurinum, were evidently in common use. (*Plin. H. N.* xxxv. 25; *Vitruv.* vii. 10.) Pliny (*H. N.* xiii. 20) speaks of sarcocolla (*Penaea Sarcocolla*, *Linnaeus*) as a gum most useful to painters. The Greeks received

it from Persia. (*Diosc.* iii. 99.) Its substance has been analyzed by M. Pelletier. (See *Merat, Dict. Méd. Scien.*)

Mastich, a resin of the *Pistacia Lentiscus*, now much used by painters, is also mentioned by Greek and Roman writers (*Plin. H. N.* xii. 36, xxiv. 28; *Diosc.* i. 96; *Theophr. H. Pl.* vi. 4); the best was produced in the island of Chios. It was termed *ῥητίνη σχινίη* and *μαστίχη*, also *ἀκανθινή μαστίχη*, *resina lentiscina*, *mastiche*. There were various kinds; Pliny mentions a kind from Pontus which resembled bitumen. This resin was not improbably mixed with the Punic wax prepared for painting in encaustic, for the Abate Requeno, who made many experiments in encaustic (*Saggi sul ristabilimento dell' antica arte dei Greci e Romani pittori*, Parma 1787), asserts that it amalgamates well with wax; the same writer is also of opinion that the ancient encaustic painters used also amber (*succinum*) and frankincense or olibanum (*Thus masculum*) in the preparation of their colours. Pliny (*H. N.* xxxiv. 26), speaking of verdigris, remarks that it was sometimes mixed with frankincense. He also mentions (xiv. 25) other resins and substances which are useful to painters, and (xxiv. 22) particularly turpentine (*Terebinthina*), of which, as now, there were formerly various kinds. (See *Geoffroy, Mater. Méd.*; and *Excursa*. vi. ad *Plin. H. N.* xxiv. 22, ed. Lemaire.)

The method of preparing wax, or Punic wax (*cera Punica*), as it was termed, is preserved in Pliny (*H. N.* xxi. 49) and *Dioscorides* (ii. 105). It was the ordinary yellow wax, purified and bleached, by being boiled three distinct times in sea-water, with a small quantity of nitre, applying fresh water each time. When taken out of the water the third time, it was covered with a thin cloth and placed in the sun to dry. Wax thus purified was mixed with all species of colours and prepared for painting; but it was applied also to many other uses, as polishing statues, walls, &c.

Pliny speaks of two kinds of bitumen or asphaltum (*ἀσφαλτος*), the ordinary, and a white Babylonian bitumen (*H. N.* xxxv. 51). It was used as a varnish for bronze statues. For an account of the colours used by the ancient painters, see the article *COLORS*, and *John, Malerei der Alten, &c.*

VII. *Methods of Painting.* There were two distinct classes of painting practised by the ancients; in water colours, and in wax; both of which were practised in various ways. Of the former the principal were fresco, al fresco; and the various kinds of distemper (a tempera), with glue, with the white of egg, or with gums (a guazzo); and with wax or resins when these were rendered by any means vehicles that could be worked with water.* Of the latter the principal was through fire (*διὰ πυρός*) termed encaustic (*ἐγκαυστική, encaustica*). The painting in wax, *κηρογραφία*, or ship painting, *ιεροκράντα ναυίων* (*Liv.* xxviii. 45), was distinct from encaustic. Compare *Athenaeus*,

* Wax becomes a water colour medium, when boiled with sarcocolla or mastich, according to the Abate Requeno, who mixed five ounces of mastich with two of wax, which when boiled he cooled in a basin of cold water; turpentine becomes such when well mixed with the white of egg and water. The yolk of egg, when mixed with vinegar, also makes a good working vehicle for this species of painting, but it does not require water.

v. p. 204, b. ; *κηρογραφία κατεπενοικίλτο*, which is distinct from *εἰκόνες* . . . *ἐν ἐγκαίμασι γραφόμεναι διὰ πυρός*, Plut. *Mor. Amat.* 16.)

Fresco was probably little employed by the ancients for works of imitative art, but it appears to have been the ordinary method of simply colouring walls, especially amongst the Romans. The walls were divided into compartments or panels, which were termed *abaci*, *ἀβάκες*; the composition of the stucco and the method of preparing the walls for painting is described by Vitruvius (vii. 3). They first covered the wall with a layer of ordinary plaster, over which, when dry, were successively added three other layers of a finer quality, mixed with sand; above these were placed still three layers of a composition of chalk and marble dust, the upper one being laid on before the under one was quite dry, and each succeeding coat being of a finer quality than the preceding. By this process the different layers were so bound together, that the whole mass formed one solid and beautiful slab, resembling marble, and was capable of being detached from the wall and transported in a wooden frame to any distance. (Vitruv. ii. 8; Plin. *H. N.* xxxv. 49.) Vitruvius remarks that the composition of the ancient Greek walls was so excellent, that persons were in the habit of cutting away slabs from them and converting them into tables, which had a very beautiful appearance. This colouring *al fresco*, in which the colours were mixed simply in water, as the term implies, was applied when the composition was still wet (*udo tectorio*), and on that account was limited to certain colours, for no colours except earths can be employed in this way, that have not already stood the test of fire. Pliny (*H. N.* xxxv. 31) mentions those colours which could not be so employed: *Purpurissum*, *Indicum*, *Caeruleum*, *Melinum*, *Anr pigmentum*, *Appianum*, and *Cerussa*; instead of *Melinum* they used *Parætonium*, a white from Egypt, which was by the Romans considered the best of whites. [COLORES.]

The care and skill required to execute a work in fresco, and the tedious and expensive process of preparing the walls, must have effectually excluded it from ordinary places. The majority of the walls in Pompeii are in common distemper; but those of the better houses, not only in Pompeii but in Rome and elsewhere, especially those which constitute the grounds of pictures, are in fresco. All the pictures, however, are apparently in distemper of a superior kind, or a guazzo, but the *impasto* is of various qualities; in some it appears to have the consistency of oil painting without its defects, in others it is very inferior.

Ordinary distemper, that is, with glue or size, is probably the most ancient species of painting; many of the ancient ornamental friezes and painted bassi-relievi in the temples and ruins in Egypt, and also many of the most ancient remains in Italy, are painted in this manner.

The fresco walls, when painted, were covered with an encaustic varnish, both to heighten the colours and to preserve them from the injurious effects of the sun or the weather. Vitruvius (vii. 9) describes the process as a Greek practice, which they termed *καύσις*. When the wall was coloured and dry, Punic wax, melted and tempered with a little oil, was rubbed over it with a hard brush (*seta*); this was made smooth and even by applying a *cauterium* (*καυτήριον*), or an iron pan, filled with live coals, over the surface, as near to it as

was just necessary to melt the wax: it was then rubbed with a candle (wax?) and a clean linen cloth, in the way that naked marble statues were done. (Compare Plin. *H. N.* xxxiii. 40.) The Abate Reuqueno supposes that the candles were used as a species of delicate cauterium, simply to keep the wax soft, that it might receive a polish from the friction of the linen; but it is a subject that presents considerable difficulty.

This kind of varnish was applied apparently to plain walls only, for Sir Humphry Davy discovered no remains whatever in the Baths of Titus, of an encaustic varnish upon paintings, although the plain walls had generally traces of a red varnish of this description. Neither Pliny nor Vitruvius mention anything about colour, but this is evidently a most simple addition, and does not interfere at all either with the principle or the application of the varnish. Paintings may have possibly been executed upon the walls after they were thus varnished.

A method apparently very generally practised by the Roman and later Greek painters was Encaustic, which, according to Plutarch (*l. c.*), was the most durable of all methods; it was in very little use by the earlier painters, and was not generally adopted until after the time of Alexander. Pliny (*H. N.* xxxv. 39) defines the term thus: "*ceris pingere ac picturam inurere*," to paint with wax or wax colours, and to *burn* in the picture afterwards with the cauterium; it appears therefore to have been the simple addition of the process of *burning* in to the ordinary method of painting with wax colours.* *Cerae* (waxes) was the ordinary term for painters' colours amongst the Romans, but more especially encaustic colours and they kept them in partitioned boxes, as painters do at present. ("*Pictores loculatas magnas habent arculas, ubi discolores sint cerae*," Varro, *de Re Rust.* iii. 17.) They were most probably kept dry in these boxes, and the wet brush or pencil was rubbed upon them when colour was required, or they were moistened by the artist previous to commencing work. From the term *cerae*, it would appear that wax constituted the principal ingredient of the colouring vehicle used, but this does not necessarily follow, and it is very improbable that it did; there must have been a great portion of gum or resin in the colours, or they could not have hardened. Wax was undoubtedly a most essential ingredient, since it apparently prevents the colours from cracking: *cerae* therefore might originally simply mean colours which contained wax, in contradistinction to those which did not, but was afterwards applied generally by the Romans to the colours of painters, as

* There were various kinds of encaustic, with the pencil and with the cestrum; but the difference between them and the common process in which the cauterium or heater was not applied cannot have been very great, for Pausias, whose style was in encaustic with the cestrum, nevertheless undertook to repair the paintings of Polygnotus at Thespie, which were painted in the ordinary manner in water colours with the pencil. Pliny (*H. N.* xxxv.) in enumerating the most celebrated painters of antiquity speaks separately of those who excelled in either class; chap. 36 is devoted to those who painted in the ordinary method with the pencil, and chap. 40 principally to those who painted in encaustic.

for instance by Statius (*Sylv.* i. l. 100), "Apelleae cupereut te scribere cerae." The sponge (*σπογγία*, *spongia*), spoken of by Pliny and other writers in connection with painting, affords some proof that painting in water colours was the method generally practised by the ancient painters; which is also corroborated by the small vessel placed close to the palette or table of the portrait-painter of the Casa Carolina of Pompeii, evidently for the purpose of washing his single brush in. Seneca (*Ep.* 121. 5) notices the facility and rapidity with which a painter takes and lays on his colours. That wax or resins may be used as vehicles in water-colours has been already mentioned.

The origin of encaustic painting is unknown. It was practised in two ways with the cestrum, namely, in wax and on ivory; and in a third manner with the pencil. The last method, according to Pliny, was applied chiefly to ship-painting; the colours were laid on hot. His words are,—"Encausto pingendi duo fuisse antiquitus genera constat, cera, et in ebore, cestro id est viriculo, donec classes pingi coepere. Hoc tertium accessit, resolutis igni ceris penicillo utendi, quae pictura in navibus nec sole nec sale ventisque corrumpitur." (*H. N.* xxxv. 41.) This passage, from its conciseness, presents many difficulties. "Cera, cestro," that is, in wax with the cestrum; this was the method of Pausias: "in ebore, cestro;" this must have been a species of drawing with a hot point, upon ivory, for it was, as is distinctly said, without wax, "cera, et in ebore." The third method, "resolutis igni ceris penicillo utendi," though first employed on ships, was not necessarily confined to ship-painting; and if the assertion of Pliny is correct, it must have been a very different style of painting from the ship-colouring of Homer, since he says it was of a later date than the preceding methods. The "incramenta navium" of Livy, and the *κηρογραφία* of Athenaeus, mentioned above, may have been executed in this third method of Pliny; the use of the cauterium, or process of burning in, is here not alluded to, but since he defined encaustic to be "ceris pingere ac picturam inungere" (*H. N.* xxxv. 39), its employment may be understood in this case also. It is difficult, however, to understand what effect the action of the cauterium could have in the second method (*in ebore, cestro*), which was without wax. It would appear, therefore, that the definition alluded to is the explanation of the first mentioned method only; and it is probable that the ancient methods of painting in encaustic were not only three, but several; the *καὶσος* of Vitruvius, mentioned also by himself, is a fourth, and the various modes of ship painting add others to the number. Pliny (*H. N.* xvi. 23) himself speaks of "zopiassa," a composition of wax and pitch, which was scraped from ships; and it is difficult to suppose that the higher class of encaustic was practised with the cestrum only, since the pencil is such an infinitely more efficient instrument for the proper mixing and application of colours. (*Κεράσασθαι τὰ χρώματα, καὶ εἰκαίρον ποιεῖσθαι τὴν ἐπιβολὴν αὐτῶν*, Lucian, *Imag.* 7. vol. ii. p. 465, κ.) The wax painting on the fictile vases, mentioned by Athenaeus (v. p. 200. 6), can have been scarcely executed with the cestrum; and it is also unlikely that it was done with hot colours, as the painting of the "figlinum opus" mentioned by Pliny (*H. N.* xxxvi. 64) may have been. But as there were various methods of painting in encaustic, it follows that

the colours designed for this species of painting were also variously prepared, and those which were suited for one style may have been quite unfit for another. All these styles, however, are comparatively simple, compared with that of Pausias, in wax with the cestrum, "cera, cestro;" and it is difficult for a modern practitioner to understand how a large and valuable picture could be produced by such a method; unless these colours or cerae, which painters of this class, according to Varro (*L. c.*), kept in partitioned boxes, were a species of wax crayons, which were worked upon the panel with the broad end of the cestrum (which may have had a rough edge) within an outline or monogram, previously drawn or cut in, with the pointed end, and were afterwards fixed, and toned or blended by the action of the cauterium. Painters were in the habit of inscribing the word *ἐνέκαυσεν*, "burnt it in," upon pictures executed in encaustic, as *Νικίας ἐνέκαυσεν*, *Δυσίππος ἐνέκαυσεν*. (Plin. *H. N.* xxxv. 10, 39.)

VIII. *Polychromy*. The practice of varnishing and polishing marble statues has been already incidentally noticed. The custom was very general; ancient statues were also often painted, and what is now termed polychrome sculpture was very common in Greece, for the acrolithic and the chryselephantine statues were both of this description. Many works of the latter class, which were of extraordinary magnificence and costliness, are described by Pausanias. The term polychromy, thus applied, was apparently unknown to the ancients; this species of painting is called by Plutarch (*De Glor. Athen.* 6) *ἀγαλμάτων ἑγκαυσις*, and appears to have been executed by a distinct class of artists (*ἀγαλμάτων ἑγκαυσταί*). They are mentioned also by Plato (*De Republ.* iv. 420. c.), *οἱ ἀνδριάντας γράφοντες*: and if it is certain that Plato here alludes to painting statues, it is clear that they were occasionally entirely painted, in exact imitation of nature; for he expressly remarks, that it is not by applying a rich or beautiful colour to any particular part, but by giving its local colour to each part, that the whole is made beautiful (*ἀλλ' ἄρχει εἰ τὰ προσήκοντα ἐκδοῖσι ἀποδιδόντες, τὸ δὲ βλον καλὸν ποιοῦμεν*). That this was, however, not a general practice, is evident from the dialogue between Lycinus and Polystratus, in Lucian (*Imag.* 5—8), where it is clearly, though indirectly, stated, that the Venus of Cnidus by Praxiteles, and other celebrated statues, were not coloured, although they may have been ornamented in parts and covered with an encaustic varnish.

The practice of colouring statues is undoubtedly as ancient as the art of statuary itself; although they were perhaps originally coloured more from a love of colour than from any design of improving the resemblance of the representation. The Jupiter of the Capitol, placed by Tarquinius Priscus, was coloured with minium. (Plin. *H. N.* xxxv. 45.) In later times the custom seems to have been reduced to a system, and was practised with more reserve. Considerable attention also seems to have been paid to the effect of the object as a work of art. Praxiteles being asked which of his marble works he most admired, answered, those which Nicias had had a hand in, "quibus Nicias manum admovisset," so much, says Pliny (*H. N.* xxxv. 40), did he attribute to his circumlitio. Nicias, therefore, who painted in encaustic, seems in his youth

to have been an ἀγαλμάτων ἐγκαυστής, or painter of statues, and from the approval of Praxiteles, excelled apparently in this description of painting or colouring.

This view differs very materially from those which have been hitherto advanced upon this subject, but it has not been adopted without mature consideration.

In the "circumlitio" of Nicias, the naked form was most probably merely varnished, the colouring being applied only to the eyes, eyebrows, lips, and hair, to the draperies, and the various ornaments of dress; and there can be little doubt that fine statues, especially of females, when carefully and tastefully coloured in this way, must have been extremely beautiful; the encaustic varnish upon the white marble must have had very much the effect of a pale transparent flesh. Gold was also abundantly employed upon ancient statues; the hair of the Venus de Medicis was gilded, and in some, glass eyes and eyelashes of copper were inserted, examples of which are still extant.

The practice also of colouring architecture seems to have been universal amongst the Greeks, and very general amongst the Romans. It is difficult to define exactly what the system was, for there is scarcely any notice of it in ancient writers; a few casual remarks in Vitruvius and Pausanias are all we possess of any value. Our information is drawn chiefly from the observations of modern travellers; for traces of colour have been found upon most of the architectural ruins of Greece, and upon the ancient monuments of Italy and Sicily; but with the exception of the Doric ruins at Corinth and the temple of Aegina, which are not of marble, the colouring was confined to the mouldings and other ornaments, the friezes, the metopes, and the tympana of the pediments. The exterior of the wall of the cella of the Aegina temple, and the columns of the Corinthian ruins, were covered with stucco and coloured red. It does not appear that the exterior walls when of marble were ever coloured, for no traces of colour have been found upon them. At an early age, before the use of marble, when the temples and public edifices were constructed mostly of wood, the use of colour must have been much more considerable and less systematic; but during the most refined ages, the colouring, otherwise quite arbitrary, appears to have been strictly confined to the ornamental parts. From the traces found upon ancient monuments we are enabled to form a very tolerable idea of the ancient system of decorating mouldings. They were painted in various ways and in a great variety of colours, and a tasteful combination of colours must have added greatly to the effect of even the richest mouldings. The ordinary decorations were foliage, ova, and beads; but upon the larger mouldings on which foliage was painted, the outlines of the leaves were first engraved in the stone. Gilding and metal work were also introduced, particularly in the Doric order; the architrave of the Parthenon at Athens was decorated with gilded shields. Friezes that were adorned with sculpture appear to have been invariably coloured, as also the tympana of the pediments; in the Parthenon these parts were of a pale blue, in some of the Sicilian monuments red has been found. Some interior polychrome cornices of Pompeii are given in the work of Zahn (*Die schönsten Ornamente*, &c., pl. 91).

In later times, amongst the Romans, the practice

of colouring buildings seems to have degenerated into a mere taste for gaudy colours. Pliny and Vitruvius both repeatedly deplore the corrupt taste of their own times. Vitruvius (vii. 5) observes that the decorations of the ancients were tastelessly laid aside, and that strong and gaudy colouring and prodigal expense were substituted for the beautiful effects produced by the skill of the ancient artists. Pompeii, with much that is chaste and beautiful, has many traces also of what Vitruvius and Pliny complain of. Plate 99 of Zahn affords a beautiful specimen of the ancient wall-painting of Pompeii, in courts and interiors. For a further account of this subject, see Kugler, "*Ueber die Polychromie der Griechischen Architectur und Sculptur und ihre Grenzen*," Berlin, 1835.

IX. *Vase Painting*. The fictile-vase painting of the Greeks was an art of itself, and was practised by a distinct class of artists (Aristoph. *Ecol.* 995, 996, Bekker), who must have required a peculiar instruction, and probably exercised their art according to a prescribed system. It is, however, impossible to say anything positive regarding the history of this branch of ancient painting, as scarcely anything is known. The designs upon these vases (which the Greeks termed λήκυθιοι) have been variously interpreted, but they have been generally considered to be in some way connected with the initiation into the Eleusinian and other mysteries. (Lanzi, *De' Vasi Antichi dipinti*; Christie, *Disquisitions upon the painted Greek Vases*; Böttiger, *Ideen*, &c.) They were given as prizes to the victors at the Panathenaea and other games, and seem to have been always buried with their owners at their death, for they have been discovered only in tombs.

Vase painting cannot be adduced to determine the general nature or character of ancient painting as a liberal or imitative art; though the rude designs upon the vases throw considerable light upon the progressive development of the art, as relates to style of design, and in some degree upon the principles of Grecian composition of the early times; but their chief interest and value consist in the faithful pictures they afford of the traditions, customs, and habits of the ancients.

The ancient vase-painters were probably attached to the potteries, or the establishments in which the vases were made; or themselves constituted distinct bodies, which from the general similarity of style and execution of the designs upon the vases, is not improbable. They do not seem to have been held in any esteem, for their names have not been preserved by any ancient writer; and we only know the names of very few, from their being inscribed upon the vases themselves, as Taleides, Assteas, Lasimos, Calliphon, and a few others. (Millin, *Peintures de Vases Antiques*, vol. i. pl. 3. pl. 44. vol. ii. pl. 37. pl. 61; Millingen, *Anc. Uned. Mon.* pl. 27.)

The words καλός and καλή, found frequently upon the ancient vases, are explained to be simple acclamations of praise or approval, supposed to be addressed to the person to whom the vase was presented; the words are frequently preceded or followed by a name, evidently that of the person for whom the vase was designed. The inscription also ἡ καὶς καλή has been found on some vases, which have probably been designed as presents for young females. D'Hancarville (*Collection of Vases*, &c. *Introduct.*) supposes that vase painting had ex-

tirely ceased about the time of the destruction of Corinth, and that the art of manufacturing vases began to decline towards the reign of Trajan, and arrived at its last period about the time of the Antonines and Septimius Severus. Vase painting had evidently ceased long before the time of Pliny, for in his time the painted vases were of immense value and were much sought after; but the manufacture of the vases themselves appears to have been still extensive, for he himself mentions sixteen celebrated potteries of his own time, eight in Italy and six elsewhere. The vases, however, appear to have been merely remarkable for the fineness or durability of the clay and the elegance of their shapes. (*H. N.* xxxv. 46.) For the composition of the clay, with which these fictilia were made, see FICTILIA.

Even in the time of the empire painted vases were termed "operis antiqui," and were then sought for in the ancient tombs of Campania and other parts of Magna Græcia. Suetonius (*Jul. Cæs.* 81) mentions the discovery of some vases of this description in the time of Julius Cæsar, in clearing away some very ancient tombs at Capua. It is also remarkable that not a single painted vase has been yet discovered in either Pompeii, Herculaneum, or Stabiae, which is of itself almost sufficient to prove that vase painting was not practised, and also that painted vases were extremely scarce. We may form some idea of their immense value from the statement of Pliny (*H. N.* xxxv. 46), that they were more valuable than the Murrhine vases. [MURRHINA VASA.] The paintings on the vases, considered as works of art, vary exceedingly in the detail of the execution, although in style of design they may be arranged in two principal classes, the black and the yellow; for those which do not come strictly under either of these heads, are either too few or vary too slightly to require a distinct classification. The majority of the vases that have been as yet discovered have been found, in ancient tombs, about Capua and Nola.

The black vases, or those with the black figures upon the stained reddish-yellow terra cotta, the best of which were found at Nola, are the most ancient, and their illustrations consist principally of representations from the early mythological traditions; but the style of these vases was sometimes imitated by later artists. (Plate 56, vol. iv. of D'Hancarville is an example.) The inferior examples of this class have some of them traces of the graphis or cestrum upon them, which appear to have been made when the clay was still soft; some also have lines or scratches upon the figures, which have been added when the painting was completed. The style of the design of these black figures, or skingrams, is what has been termed the Egyptian or Daedalian style. The varieties in this style are, occasionally a purple tint instead of the black; or the addition of a red sash, or white vest, and sometimes a white face and white hands and feet. A curious and interesting example of this kind of polychrom, in black, red, and white, was discovered near Athens in 1813, representing on one side a Minerva with a spear and shield, in the Daedalian style; and on the reverse, in a somewhat better style, a young man driving a biga of most ancient construction; it is supposed to represent Erichthonius. Near the Minerva is the following inscription, written from right to

left: ΤΟΝ ΑΘΕΝΕΟΝ ΑΘΑΟΝ ΕΜΙ, τῶν Ἀθηναίων ἀδελφὸν εἰμὶ, "I am the prize of the Athenæa" (Panathenæa). It is supposed to be of the time of Solon. (Millingen, *Anc. Uned. Mon.* pl. 1.)

The vases with the yellow monograms, or rather the black monograms upon the yellow grounds, constitute the mass of ancient vases. Their illustrations are executed with various degrees of merit: those of inferior execution, also of this class, have traces of the graphis upon them, which appear to have been drawn upon the soft clay; the only colour upon these, independent of that of the clay is the dark back-ground, generally black, which renders the figures very prominent. The designs upon the better vases are also merely monograms, with the usual dark back-grounds, but there is a very great difference between the execution of these and that of those just alluded to; there are no traces whatever of the graphis upon them, their outlines are drawn with the hair pencil, in colour, similar to that of the back-ground, which is a species of black varnish, probably asphaltum; or perhaps rather prepared with the gagates lapis (jet?) (γὰργάτης) of Pliny, for he remarks that it is indelible when used on this kind of earthenware. (*H. N.* xxxvi. 34.)

The best of these vases, which probably belong to about the time of Alexander, are conspicuous for a very correct style of design, although they are invariably carelessly executed, especially in the extremities, but exhibit at the same time a surprising facility of hand. The celebrated vase of Sir W. Hamilton's collection, now in the British Museum, the paintings of which represent Hercules and his companions in the gardens of the Hesperides, and the race of Atalanta and Hippomenes, exhibits, for design, composition, and execution, perhaps the finest specimen of ancient vase painting that has been yet discovered: the style of design is perfect, but the execution, though on the whole laborious, is in many parts very careless. (D'Hancarville, plates 127, 128, 129, 130.)

There appears to be no example of the more perfect monochrom (see No. III.) upon ancient vases, and examples of the polychrom are very rare. In Sir W. Hamilton's collection there are a few examples in which various colours have been added after the ordinary monogram has been completed, for they are not incorporated with the vase, as the black and ground tints are, but are subject to scale and are easily rubbed off. They consist of white, red, yellow, and blue colours. These vases are apparently of a later date than the above; for the style of design is very inferior.

The Museums of Naples, Paris, London, and other cities afford abundant examples of these ancient vases; the Museo Borbonico at Naples contains alone upwards of 2500 specimens. The subjects of the illustrations are almost always connected with ancient mythology, and the execution is generally inferior to the composition.

No opinion of the style of the designs upon ancient vases can be formed from the generality of the great works purporting to illustrate them, which have been published of late years. Very few are at all accurate in the lines and proportions, especially of the extremities; and in some, even the composition is not faithfully imitated. This is particularly the case with the splendid works published by Dubois-Maisonneuve, Laborde, and some

others, in which the illustrations are drawn with a care, precision, and uniformity of character quite foreign to the paintings on the vases. They all appear to be drawn rather according to common and perfect standards of the different styles, than to be the faithful imitations of distinct original designs. Plates 25 and 26 of the first volume of Maissonneuve, purporting to be faithful imitations of the design upon the celebrated Nola vase, (in the Museum at Naples, No. 1846,) representing a scene from the destruction of Troy, bear but little resemblance to the original. This remark is applicable also to the work of D'Hancarville and other earlier productions, but in a less degree. Perhaps the work which illustrates most faithfully the style of the designs upon ancient vases, as far as it goes, is that in course of publication by Gerhard (*Auserlesene Griechische Vasenbilder*, Berlin 1839). The specimens also of ancient paintings, published by Raoul-Rochette (*Peintures Antiques*), have every appearance of being faithful imitations of the originals.

X. *Remains of Ancient Painting.* There is a general prejudice against the opinion that the painting of the Greeks equalled their sculpture; and the earlier discoveries of the remains of ancient paintings at Pompeii and Herculaneum tended rather to increase this prejudice than to correct it. The style of the paintings discovered in these cities was condemned both by Pliny and Vitruvius, and yet almost every species of merit may be discovered in them. What therefore must have been the productions which the ancients themselves esteemed their immortal works, and which singly were estimated equal to the wealth of cities? (Plin. *H.N.* xxxv. 32.)

These remains of Pompeii and Herculaneum induced Sir Joshua Reynolds to form a decided opinion upon ancient painting. He remarks (*Notes to Fresco*, 37), "From the various ancient paintings which have come down to us we may form a judgment with tolerable accuracy of the excellencies and the defects of the arts amongst the ancients. There can be no doubt but that the same correctness of design was required from the painter as from the sculptor; and if what has happened in the case of sculpture, had likewise happened in regard to their paintings, and we had the good fortune to possess what the ancients themselves esteemed their masterpieces, I have no doubt but we should find their figures as correctly drawn as the Laocoon, and probably coloured like Titian." This opinion has been further confirmed by later discoveries at Pompeii; especially by the great mosaic of the Casa del Fauno discovered in 1831, supposed to represent the battle of Issus. (*Mosaic*, No. XV.) But the beauty of ancient sculpture alone is itself a powerful advocate in favour of this opinion; for when art has once attained such a degree of excellence as the Greek sculpture evinces, it is evident that nothing mediocre or even inferior could be tolerated. The principles, which guide the practice of both arts, are in design and proportion the same; and the style of design in painting cannot have been inferior to that of sculpture. Several of the most celebrated ancient artists were both sculptors and painters; Pheidias and Euphranor were both; Zeuxis and Protogenes were both modellers; Polygnotus devoted some attention to statuary; and Lysippus consulted Eupompus upon style in sculpture. The design of Pheidias

and Euphranor in painting cannot have been inferior in style to that of their sculpture; nor can Eupompus have been an inferior critic in his own art than in that of Lysippus. We have besides the testimony of nearly all the Greek and Roman writers of every period, who in general speak more frequently and in higher terms of painting than of sculpture. "Si quid generis istius modi me delectat, pictura delectat," says Cicero (*ad Fam.* vii. 23).

The occasional errors in perspective, detected in some of the architectural decorations in Pompeii, have been assumed as evidence that the Greek painters generally were deficient in perspective. This conclusion by no means follows, and is entirely confuted by the mosaic of the battle of Issus, in which the perspective is admirable; in many other works also of minor importance the perspective has been carefully attended to. We know, moreover, that the Greeks were acquainted with perspective at a very early period; for Vitruvius (*vii. præf.*) says, that when Aeschylus was exhibiting tragedies at Athens, Agatharchus made a scene, and left a treatise upon it. By the assistance of this, Democritus and Anaxagoras wrote upon the same subject. (See *Dict. of Biog. art. Agatharchus*.) This class of painting was termed scenography (*σκηνογραφία*) by the Greeks, and appears to have been sometimes practised by architects. Cleisthenes of Eretria is mentioned as architect and scenograph (*σκηνογράφος*). (Diog. ii. 125.) Serapion, Eudorus, and others, were celebrated as scene-painters. (Plin. *H.N.* xxxv. 37. 40.) Scene-painting was not perhaps generally practised until after the time of Aeschylus, for Aristotle (*Poet.* 4) attributes its introduction to Sophocles.

The most valuable and the most considerable of the ancient paintings, that have been yet discovered, are:—The so-called Aldobrandini Marriage, *Nozze Aldobrandine*, originally the property of the Aldobrandini family, which was found on the Esquiline Mount during the pontificate of Clement VIII., Ippolito Aldobrandini, and was placed by Pius VII. in the Vatican; this painting, which is on stucco and contains ten rather small figures in three groups, is a work of considerable merit in composition, drawing, and colour, and is executed with great freedom (Böttiger and Meyer, *Die Aldobrandinische Hochzeit*, Dresden 1810); and the following paintings of the Museo Borbonico at Naples, which are conspicuous for freedom of execution and general technical excellence: the two Nereids found in Stabiae, Nos. 561 and 562, Cat.; Telephus nourished by the roe, &c., from Herculaneum, No. 495; Chiron and Achilles, also from Herculaneum, No. 730; Briseis delivered to the heralds of Agamemnon, from Pompeii (Sir W. Gell, *Pompeiana*, pl. 39 and 40), No. 684; and the nine Funambuli or Rope-dancers, which are executed with remarkable skill and facility. (Mus. Borb., Ant. d'Ercol., and Zahn contain engravings from these works; for facsimiles of ancient paintings, see "Recueil de Peintures antiques, imitées fidèlement pour les couleurs et pour le trait, d'après les desseins colorés faits par P. S. Bartoli," &c. Paris 1757, folio.)

XI. *Period of Development. — Essential Style.* With Polygnotus of Thasos (B.C. 463) painting was fully developed in all the essential principles of imitation, and was established as an independent art in practice. The works of Polygnotus were

conspicuous for expression, character, and design; the more minute discriminations of tone and local colour, united with dramatic composition and effect, were not accomplished until a later period. The limited space of this article necessarily precludes anything like a general notice of all the various productions of Greek painters incidentally mentioned in ancient writers. With the exception, therefore, of occasionally mentioning works of extraordinary celebrity, the notices of the various Greek painters of whom we have any satisfactory knowledge will be restricted to those who, by the quality or peculiar character of their works, have contributed towards the establishment of any of the various styles of painting practised by the ancients. A fuller account of each artist will be found under the respective names in the *Dictionary of Greek and Roman Biography*.

Polygnotus is frequently mentioned by ancient writers, but the passages of most importance relating to his style are in the *Poetica* of Aristotle (c. 2 and 6) and the *Imagines* of Lucian (c. 7). The notice in Pliny (*H. N.* xxxv. 35) is very cursory; he mentions him amongst the many before Olymp. 90, from which time he dates the commencement of his history, and simply states that he added much to the art of painting, such as opening the mouth, showing the teeth, improving the folds of draperies, painting transparent vests for women, or giving them various coloured head-dresses. Aristotle speaks of the general character of the design and expression of Polygnotus, Lucian of the colour; in which respects both writers award him the highest praise. Aristotle (c. 2), speaking of imitation, remarks that it must be either superior, inferior, or equal to its model, which he illustrates by the cases of three painters: "Polygnotus," he says, "paints men better than they are, Pauson worse, and Dionysius as they are." This passage alludes evidently to the general quality of the design of Polygnotus, which appears to have been of an exalted and ideal character. In another passage (c. 6) he speaks of him as an ἀγαθὸς ἡθογράφος, or an excellent delineator of moral character and expression, and assigns him in this respect a complete superiority over Zeuxis. From the passage in Lucian, we may infer that Polygnotus, Euphranor, Apelles, and Aëtion, were the best colourists among the ancients according to the general opinion (ἀριστοὶ ἐγένοντο κερδασσάμενοι τὰ χρώματα, καὶ εὐκαιρὸν ποιεῖσθαι τὴν ἐπιβολὴν αὐτῶν). He notices also in the same passage the truth, the elegance, and the flowing lightness of the draperies of Polygnotus.

Pausanias mentions several of the works of Polygnotus, but the most important were his two great paintings, or series of paintings, in the Lesche of the temple of Apollo at Delphi, to a description of which Pausanias devotes seven chapters. (x. 25—31, *Dict. of Biog. s. v.*)

The painting of the destruction of Troy (and the other was similar in style) seems to have contained three rows of figures, with the names of each written near them, in distinct groups, covering the whole wall, each telling its own story, but all contributing to relate the tale of the destruction of Troy. It is evident from this description that we cannot decide upon either the merits or the demerits of the composition, from the principles of art which guide the rules of composition of modern times. Neither perspective nor composition, as a whole, are to be expected in such works as these, for they did not

constitute single compositions, nor was any unity of time or action aimed at; they were painted histories, and each group was no further connected with its contiguous groups, than that they all tended to illustrate different facts of the same story.

Polygnotus has been termed the Michel Angelo of antiquity. His style was strictly ethic, for his whole art seems to have been employed in illustrating the human character; and that he did it well, the surname of Ethograph (Ἠθογράφος) given to him by Aristotle and others sufficiently testifies. His principles of imitation may be defined to be those of individual representation independently of any accidental combination of accessories; neither the picturesque, nor a general and indiscriminate picture of nature, formed any part of the art of Polygnotus or of the period. Whatever, therefore, was not absolutely necessary to illustrate the principal object, was indicated merely by symbol: two or three warriors represented an army; a single hut, an encampment; a ship, a fleet; and a single house, a city: and, generally, the laws of basso-relievo appear to have been the laws of painting, and both were still to a great extent subservient to architecture.

The principal contemporaries of Polygnotus were Dionysius of Colophon, Pleistænetus and Panaenus, of Athens, brothers (or the latter, perhaps, a nephew) of Pheidias, and Micon, also of Athens.

Dionysius was apparently an excellent portrait-painter, the Holbein of antiquity; for besides the testimony of Aristotle, quoted above, Plutarch (*Timol.* 36) remarks that the works of Dionysius wanted neither force nor spirit, but that they had the appearance of being too much laboured. Polygnotus also painted portraits. (Plut. *Cimon*, 4.)

Panaenus assisted Pheidias in decorating the statue and throne of the Olympian Jupiter. Micon was particularly distinguished for the skill with which he painted horses. (*Dict. of Biog. s. v.*)

Prize contests also were already established, in this early period, at Corinth and at Delphi. Pliny (*H. N.* xxxv. 35) mentions that Panaenus was defeated in one of these at the Pythian games, by Timagoras of Chalcia, who himself celebrated his own victory in verse.

The remarks of Quintilian (*Inst. Orator.* xii. 10) respecting the style of this period are very curious and interesting, although they do not accord entirely with the testimonies from Greek writers quoted above. He says, that notwithstanding the simple colouring of Polygnotus, which was little more than a rude foundation of what was afterwards accomplished, there were those who even preferred his style to the styles of the greatest painters who succeeded him; not, as Quintilian thinks, without a certain degree of affection.

XII. *Establishment of Painting.—Dramatic style.*

In the succeeding generation, about 420 B.C., through the efforts of Apollodorus of Athens and Zeuxis of Heracles, dramatic effect was added to the essential style of Polygnotus, causing an epoch in the art of painting, which henceforth comprehended a unity of sentiment and action, and the imitation of the local and accidental appearances of objects, combined with the historic and generic representation of Polygnotus. The contemporaries of Apollodorus and Zeuxis, and those who carried out their principles, were, Parrhasius of Ephesus, Eupompus of Sicyon, and Timanthes of Cythna, all painters of the greatest fame. Athens and

Scyon were the principal seats of the art at this period.

Apollodorus, says Plutarch, invented *tone* (φθορὰν καὶ ἀπόχρωσιν σκιᾶς), which is well defined by Fuseli (*Lec.* 1) as "the element of the ancient Ἀμυρῆ, that imperceptible transition, which, without opacity, confusion, or hardness, united local colour, demitint, shade, and reflexes." This must, however, not be altogether denied to the earlier painters; for Plutarch himself (*Timol.* 36) attributes the same property to the works of Dionysius (λαχὺν ἔχοντα καὶ τόνον), though in a less degree. The distinction is, that what in the works of Dionysius was really merely a gradation of *light and shade*, or gradual diminution of light, was in those of Apollodorus a gradation *also of tints*, the tint gradually changing according to the degree of light. The former was termed *τόνος*, the latter *ἀμυρῆ*; but the English term *tone*, when applied to a coloured picture, comprehends both; it is equivalent to the "splendor" of Pliny. (*H. N.* xxxv. 11.)

Apollodorus first painted men and things as they really appeared; this is what Pliny (*H. N.* xxxv. 36) means by "Hic primus species exprimere instituit." The rich effect of the combination of light and shade with colour is also clearly expressed in the words which follow: "primusque gloriam *penicillo* jure contulit;" also, "neque ante eum tabula ullius ostenditur, quae teneat oculos." We may almost imagine the works of a Rembrandt to be spoken of; his pictures rivetted the eye. Through this striking quality of his works, he was surnamed the *shadower*, σκιαγράφος. (Hesychius, s. v. *Comp.* further *Dict. of Biog.* s. v.)

Zeuxis combined a certain degree of ideal form with the rich effect of Apollodorus. Quintilian (*l. c.*) says that he followed Homer, and was pleased with powerful forms even in women. Cicero (*Brut.* 18) also praises his design. Zeuxis painted many celebrated works, but the Helen of Croton, which was painted from five of the most beautiful virgins in the city, was the most renowned, and under which he inscribed three verses (156—158) in the third book of the *Iliad*. (Valer. Max. iii. 7. § 3; Cic. *de Invent.* ii. 1; Aelian, *V. H.* iv. 12, &c.) Stobæus (*Serm.* 61) relates an anecdote of the painter Nicomachus and this Helen, where the painter is reported to have observed to one who did not understand why the picture was so much admired, "Take my eyes and you will see a goddess." We learn from another anecdote, recorded by Plutarch (*Pericl.* 13), that Zeuxis painted very slowly.

Parrhasius is spoken of by ancient writers in terms of the very highest praise. He appears to have combined the magic tone of Apollodorus, and the exquisite design of Zeuxis, with the classic invention and expression of Polygnotus; and he so defined all the powers and ends of art, says Quintilian (*l. c.*), that he was called the "Legislator." He was himself not less aware of his ability, for he termed himself the prince of painters. (Ἐλαθέων πρῶτα φέροντα τέχνης, Athen. xii. p. 543, c.) He was, says Pliny (*H. N.* xxxv. 36), the most insolent and most arrogant of artists. (Compare Athen. xv. p. 687, b.; and Aelian, *V. H.* ix. 11.)

Timanthes of Cythnus or Scyion, was distinguished for invention and expression; the particular charm of his invention was, that he left much to be supplied by the spectator's own fancy; and although his productions were always admir-

able works of art, still the execution was surpassed by the invention. As an instance of the ingenuity of his invention, Pliny (*H. N.* xxxv. 36. § 6) mentions a sleeping Cyclops that he painted upon a small panel, yet conveyed an idea of his gigantic form by means of some small satyrs who were painted measuring his thumb with a thyrsus. He was celebrated also for a picture of the sacrifice of Iphigenia. (See the admirable remarks of Fuseli upon this picture, *Lecture i.*) Timanthes defeated Parrhasius in a professional competition, in which the subject was the contest of Ulysses and Ajax for the arms of Achilles. (Aelian, *l. c.*; Plin. *l. c.*)

Eupompus of Scyion was the founder of the celebrated Scyionian school of painting which was afterwards established by Pamphilus. Such was the influence of Eupompus's style, that he added a third, the Scyionic, to the only two distinct styles of painting then recognized, the Hælladic or Grecian and the Asiatic, but subsequently to Eupompus distinguished as the Attic and the Ionic; which with his own style, the Scyionic, henceforth constituted the three characteristic styles of Grecian painting. (Plin. *H. N.* xxxv. 36. s. 7.) We may judge, from the advice which Eupompus gave Lysippus, that the predominant characteristic of this style was individuality; for upon being consulted by Lysippus whom of his predecessors he should imitate, he is reported to have said, pointing to the surrounding crowd, "Let nature be your model, not an artist." (Plin. *H. N.* xxxiv. 19. s. 6.) This celebrated maxim, which eventually had so much influence upon the arts of Greece, was the first professed deviation from the principles of the generic style of Polygnotus and Pheidias.

XIII. *Period of Refinement.* The art of this period, which has been termed the Alexandrian, because the most celebrated artists of this period lived about the time of Alexander the Great, was the last of progression or acquisition; but it only added variety of effect to the tones it could not improve, and was principally characterised by the diversity of the styles of so many contemporary artists. The decadence of the art immediately succeeded; the necessary consequence, when, instead of excellence, variety and originality became the end of the artist. "Floruit circa Philippum, et usque ad successores Alexandri," says Quintilian (*l. c.*), "pictura præcipue, sed diversis virtutibus;" and he then enumerates some of the principal painters of this time, with the excellencies for which each was distinguished. Protogenes was distinguished for high finish; Pamphilus and Melanthius for composition; Antipholus for facility; Theon of Samos for his prolific fancy; and for grace Apelles was unrivalled; Euphranor was in all things excellent; Pausias and Nicias were remarkable for chiaroscuro of various kinds; Nicomachus was celebrated for a bold and rapid pencil; and his brother Aristides surpassed all in the depth of expression. There were also other painters of great celebrity during this period: Philoxenus of Eretria, Asclepiodorus of Athens, Athenion of Maronea, Echion, Cydias, Philochares, Theomnestus, Pyreicus, &c.

This general revolution in the theories and practice of painting appears to have been greatly owing to the principles taught by Eupompus at Scyion. Pamphilus of Amphipolis succeeded Eupompus in the school of Scyion, which from that time became the most celebrated school of art in Greece. Pam-

philus had the reputation of being the most scientific artist of his time; and such was his authority, says Pliny (*H. N.* xxxv. 36), that chiefly through his influence, first in Sicily, then throughout all Greece, noble youths were taught the art of drawing before all others: the first exercise was probably to draw a simple line. (*Γραμμήν ἐλκύσαι*, Pollux, vii. 128; see further, respecting the school of Pamphilus, *Dict. of Biog. s. v.*)

Nicomachus of Thebes was, according to Pliny (*L. c.*), the most rapid painter of his time; but he was as conspicuous for the force and power of his pencil as for its rapidity; Plutarch (*Timol.* 36) compares his paintings with the verses of Homer. Nicomachus had many scholars, of whom Philoxenus of Eretria was celebrated as a painter of battles; a battle of Alexander and Darius by him is mentioned by Pliny (*H. N.* xxxv. 36) as one of the most celebrated paintings of antiquity; but they were all surpassed by his own brother Aristides, who appears to have been the greatest master of expression among the Greeks. We must, however, apply some modification to the expression of Pliny (*L. c.*), that Aristides first painted the mind and expressed the feelings and passions of man, since ἦθη, as it is explained by Pliny in this passage, cannot be denied to Polygnotus, Apollodorus, Parrhasius, Timanthes, and many others. (See further *Dict. of Biog. art. Aristides.*)

Pausias of Sicily painted in encaustic, with the cœstrum, and seems to have surpassed all others in this method of painting; he was the pupil of Pamphilus, and the contemporary of Apelles. Pausias was conspicuous for a bold and powerful effect of light and shade, which he enhanced by contrasts and strong foreshortenings. (*Dict. of Biog. s. v.*)

Apelles was a native of Ephesus or of Colophon (*Suidas, s. v.*), according to the general testimony of Greek writers, although Pliny (*L. c.*) terms him of Cos. Pliny asserts that he surpassed all who either preceded or succeeded him; the quality, however, in which he surpassed all other painters will scarcely bear a definition; it has been termed grace, elegance, beauty, χάρις, *venustus*. Fuseli (*Lec. 1*) defines the style of it. Apelles thus:—"His great prerogative consisted more in the union than the extent of his powers; he knew better what he could do, what ought to be done, at what point he could arrive, and what lay beyond his reach, than any other artist. Grace of conception and refinement of taste were his elements, and went hand in hand with grace of execution and taste in finish; powerful and seldom, possessed singly, irresistible when united."

The most celebrated work of Apelles was perhaps his Venus Anadyomene, Venus rising out of the waters. (*Dict. of Biog. art. Apelles.*)

He excelled in portrait, and indeed all his works appear to have been portraits in an extended sense; for his pictures, both historical and allegorical, consisted nearly all of single figures. He enjoyed the exclusive privilege of painting the portraits of Alexander. (*Hor. Ep. ii. 1. 239.*) One of these, which represented Alexander wielding the thunderbolts of Jupiter, termed the Alexander *Κεραυροφόρος* appears to have been a masterpiece of effect; the hand and lightning, says Pliny, seemed to start from the picture, and Plutarch (*Alex. 4*) informs us that the complexion was browner than Alexander's, thus making a finer contrast with the fire in his hand, which apparently

constituted the light of the picture. Pliny (*L. c.*) tells us that Apelles glazed his pictures in a manner peculiar to himself, and in which no one could imitate him. When his works were finished he covered them with a dark transparent varnish (most probably containing asphaltum), which had a remarkable effect in harmonizing and toning the colours, and in giving brilliancy to the shadows. Sir J. Reynolds discovered in this account of Pliny "an artist-like description of the effect of glazing or scumbling, such as was practised by Titian and the rest of the Venetian painters." (*Notes to Fresco. 37.*) There is a valuable though incidental remark in Cicero (*de Nat. Deor. i. 27*), relating to the colouring of Apelles, where he says, that the tints of the Venus Anadyomene were not blood, but a resemblance of blood. The females, and the pictures generally, of Apelles, were most probably simple and unadorned; their absolute merits, and not their effect, constituting their chief attraction. See further *Dict. of Biog. s. v.*

Protagenes of Caunus, a contemporary of Apelles, was both statuary and painter; he was remarkable for the high finish of his works, for a detailed account of which, as well as of his life and his relations with Apelles, see *Dict. of Biog. art. Protagenes.*

Euphranor, the Isthmian, was celebrated equally as painter and statuary; he was, says Pliny (*H. N.* xxxv. 40), in all things excellent, and at all times equal to himself. He was distinguished for a peculiarity of style of design; he was fond of a muscular limb, and adopted a more decided anatomical display generally, but he kept the body light, in proportion to the head and limbs. Pliny says that Euphranor first represented heroes with dignity. Parrhasius was said to have established the canon of art for heroes; but the heroes of Parrhasius were apparently more divine, those of Euphranor more human. We have examples of both these styles, in the kindred art of sculpture, in the Apollo and the Laocoön, and in the Meleager and the Gladiator, or the Antinous and the Discobolus. It was to this distinction of style which Euphranor apparently alluded, when he said that the Theseus of Parrhasius had been fed upon roses, but his own upon beef. (*Plut. de Glor. Athem. 2*; *Plin. L. c.*) Euphranor painted in encaustic, and executed many famous works; the principal were a battle of Mantinea, and a picture of the twelve gods. (*Plin. L. c.*; *Plut. L. c.*; *Paus. i. 3*; *Lucian, Imag. 7*; *Valer. Max. viii. 11. § 5*; *Eustath. ad Il. i. 529, &c.*)

Nicias of Athens was celebrated for the delicacy with which he painted females, and for the rich tone of chiaroscuro which distinguished his paintings. He also painted in encaustic. His most celebrated work was the *νεκρία*, or the region of the shades, of Homer (*necromantia Homeri*), which he declined to sell to Ptolemy I. of Egypt, who had offered 60 talents for it, and preferred presenting to his native city, Athens, as he was then sufficiently wealthy. Nicias also painted some of the marble statues of Praxiteles. (*Plin. H. N.* xxxv. 40; *Plut. Mor. Epicur. 11*; see *No. VIII.*)

Athenion of Maronea, who painted also in encaustic, was, according to Pliny (*L. c.*), compared with, and even preferred by some to Nicias; he was more austere in colouring, but in his austerity more pleasing, and if he had not died young, says Pliny, he would have surpassed all men in painting. He appears to have looked upon colours as a

mere means, to have neglected pictorial effect, and, retaining individuality and much of the refinement of design of his contemporaries, to have endeavoured to combine them with the generic style of Polygnotus and Pheidias (*ut in ipsa pictura eruditio doceat*). His picture of a groom with a horse is mentioned by Pliny as a remarkable painting.

Philochares, the brother of the orator Aeschines, was also a painter of the greatest merit, according to Pliny (*H. N.* xxxv. 10), although he is contemptuously termed by Demosthenes (*Fals. Legat.* p. 415, Reiske) "a painter of perfume-pots and tambours" (*ἀλυστροθήκας καὶ τύμπανα*).

Echion also, of uncertain country, is mentioned by Cicero (*Brut.* 18) and Pliny (*H. N.* xxxv. 36) as a famous painter. Pliny speaks of a picture of a bride by him as a noble painting, distinguished for its expression of modesty. A great compliment is also incidentally paid to the works of Echion by Cicero (*Parad.* v. 2), where he is apparently ranked with Polyctetus.

Theon of Samos was distinguished for what the Greeks termed *φαντασία*, according to Quintilian (*l. c.*), who also ranks him with the painters of the highest class. Pliny (*H. N.* xxxv. 40), however, classes him with those of the second degree. Aelian gives a spirited description of a young warrior painted by Theon. (*V. H.* ii. 44.)

XIV. *Decline.* The causes of the decline of painting in Greece are very evident. The political revolutions with which it was convulsed, and the various dynastic changes which took place after the death of Alexander, were perhaps the principal obstacles to any important efforts of art; the intelligent and higher classes of the population, upon whom painters chiefly depend, being to a great extent engrossed by politics or engaged in war. Another influential cause was, that the public buildings were already rich in works of art, almost even to the exhaustion of the national mythology and history; and the new rulers found the transfer of works already renowned a more sure and a more expeditious method of adorning their public halls and palaces, than the more tardy and hazardous alternative of requiring original productions from contemporary artists.

The consequence was, that the artists of those times were under the necessity of trying other fields of art; of attracting attention by novelty and variety: thus rhyparography (*ῥυπαρογραφία*), pornography, and all the lower classes of art, attained the ascendancy and became the characteristic styles of the period. Yet during the early part of this period of decline, from about B. C. 300, until the destruction of Corinth by Mummius, B. C. 146, there were still several names which upheld the ancient glory of Grecian painting, but subsequent to the conquest of Greece by the Romans, what was previously but a gradual and scarcely sensible decline, then became a rapid and a total decay.

In the lower descriptions of painting which prevailed in this period, Pyreicus was pre-eminent; he was termed Rhyparographos (*ῥυπαρογράφος*), on account of the mean quality of his subjects. He belonged to the class of genre-painters, or "peintres de genre bas," as the French term them. The Greek *ῥυπαρογραφία* therefore is apparently equivalent to our expression, the Dutch style. (See *Dict. of Biog.* art *Pyreicus*.)

Pornography, or obscene painting, which, in the

time of the Romans, was practised with the grossest licence (Propert. ii. 6; Sueton. *Tib.* 43; and *Vit. Hor.*), prevailed especially at no particular period in Greece, but was apparently tolerated to a considerable extent at all times. Parrhasius, Aristides, Pausanias, Nicophanes, Chaerephanes, Arellius, and a few other *πομπρογράφοι* are mentioned as having made themselves notorious for this species of licence. (Athen. xiii. p. 567, b; Plut. *de aud. Pœt.* 3; Plin. *H. N.* xxxv. 37.)

Of the few painters who still maintained the dignity of the dying art, the following may be mentioned: Mydon of Soli; Nealces, Leontiscus, and Timanthes, of Sicyon; Arcesilaus, Erigonus, and Pasias, of uncertain country; and Metrodorus of Athens, equally eminent as a painter and as a philosopher. The school of Sicyon, to which the majority of the distinguished painters of this period belonged, is expressly mentioned by Plutarch (*Arat.* 12) as the only one which still retained any traces of the purity and the greatness of style of the art of the renowned ages. It appears to have been still active in the time of Aratus, about 250 B. C., who seems to have instilled some of his own enterprising spirit into the artists of his time. Aratus was a great lover of the arts, but this did not hinder him from destroying the portraits of the Tyrants of Sicyon; one only, and that but partially, was saved. (Plut. *Arat.* 13.)

It was already the fashion in this age to talk of the inimitable works of the great masters; and the artists generally, instead of exerting themselves to imitate the masterpieces of past ages, seem to have been content to admire them. All works bearing great names were of the very highest value, and were sold at enormous prices. Plutarch mentions that Aratus bought up some old pictures, but particularly those of Melanthus and Pamphilus, and sent them as presents to Ptolemy III. of Egypt, to conciliate his favour, and to induce him to join the Achæan league. Ptolemy, who was a great admirer of the arts, was gratified with these presents, and presented Aratus with 150 talents in consideration of them. (Plut. *Arat.* 12.) These were, however, by no means the first works of the great painters of Greece, which had found their way into Egypt. Ptolemy Soter had employed agents in Greece to purchase the works of celebrated masters. (Plut. *Mor. Epicur.* c. 11.) Athenæus also (v. p. 196, a.) expressly mentions the pictures of Sicyonian masters which contributed to add to the pomp and display of the celebrated festival of Ptolemy Philadelphus at Alexandria.

From the time of Alexander the spirit of the Greeks animated Egyptian artists, who adopted the standard of Grecian beauty in proportion and character. Antiphilus, one of the most celebrated painters of antiquity, was a native of Egypt, perhaps of Naucratis. (*Dict. of Biog.* s. v.) Many other Greek painters also were established in Egypt, and both the population and arts of Alexandria were more Greek than Egyptian. (Quint. xii. 10; Plin. *H. N.* xxxv. 37 and 40; Athen. v. p. 196.)

Amongst the most remarkable productions of this period were, the celebrated ship of Hiero II. of Syracuse, which had Mosaic floors, in which the whole history of the fall of Troy was worked with admirable skill (Athen. v. p. 207, c.), and the immense ship of Ptolemy Philopator, on the prow and stern of which were carved colossal figures, eighteen feet in height; and the whole vessel,

both interior and exterior, was decorated with painting of various descriptions. (Athen. v. p. 204, a.)

Nearly a century later than Aratus we have still mention of two painters at Athens of more than ordinary distinction, Heracleides a Macedonian, and Metrodorus an Athenian. The names of several painters, however, of these times are preserved in Pliny, but he notices them only in a cursory manner. When Aemilius Paulus had conquered Perseus, B. C. 168, he commanded the Athenians to send him their most distinguished painter to perpetuate his triumph, and their most approved philosopher to educate his sons. The Athenians selected Metrodorus the painter, professing that he was pre-eminent in both respects. Heracleides was a Macedonian, and originally a ship-painter; he repaired to Athens after the defeat of Perseus. (Plin. *H. N.* xxxv. 40.) Plutarch in his description of the triumph of Aemilius Paulus (*in Vit.* 32) says, that the paintings and statues brought by him from Greece were so numerous that they required 250 waggons to carry them in procession, and that the spectacle lasted the entire day. Aemilius appears at all times to have been a great admirer of the arts, for Plutarch (*Aemil. Paul.* 6) mentions that after his first consulship he took especial care to have his sons educated in the arts of Greece, and amongst others in painting and sculpture; and that he accordingly entertained masters of those arts (*παιδῶναι καὶ ὑψηλοὶ*) in his family. From which it is evident that the migration of Greek artists to Rome had already commenced before the general spoliations of Greece. Indeed Livy (xxxix. 22) expressly mentions, that many artists came from Greece to Rome upon the occasion of the ten days games appointed by Fulvius Nobilior, B. C. 186. But Rome must have had its Greek painters even before this time; for the picture of the feast of Gracchus's soldiers after the battle of Beneventum, consecrated by him in the temple of Liberty on the Aventine, B. C. 213 (*Liv.* xiv. 16), was in all probability the work of a Greek artist.

The system adopted by the Romans of plundering Greece of its works of art, reprobated by Polybius (ix. 3), was not without a precedent. The Carthaginians before them had plundered all the coast towns of Sicily; and the Persians, and even the Macedonians, carried off all works of art as the lawful prize of conquest. (Diodor. xiii. 90; Polyb. ix. 6. § 1; Liv. xxxi. 26; Plin. *H. N.* xxxiv. 19, xxxv. 36.) The Roman conquerors, however, at first plundered with a certain degree of moderation (Cic. *in Verr.* v. 4); as Marcellus at Syracuse, and Fabius Maximus at Tarentum, who carried away no more works of art than were necessary to adorn their triumphs, or decorate some of the public buildings. (Cic. *in Verr.* v. 52, &c.; Plut. *Fab. Max.* 22, *Marcel.* 30.) The works of Greek art brought from Sicily by Marcellus, were the first to inspire the Romans with the desire of adorning their public edifices with statues and paintings; which taste was converted into a passion when they became acquainted with the great treasures and almost inexhaustible resources of Greece; and their rapacity knew no bounds. Plutarch says that Marcellus (*in Vit.* 21) was accused of having corrupted the public morals through the introduction of works of art into Rome; since from that period the people wasted much of their time in disputing about arts and

artists. But Marcellus gloried in the fact, and boasted even before Greeks, that he was the first to teach the Romans to esteem and to admire the exquisite productions of Greek art. We learn from Livy (xxvi. 21) that one of the ornaments of the triumph of Marcellus, 214 B. C., was a picture of the capture of Syracuse.

These spoliations of Greece, of the Grecian kingdoms of Asia, and of Sicily, continued uninterruptedly for about two centuries; yet, according to Mucianus, says Pliny (*H. N.* xxxiv. 17), such was the inconceivable wealth of Greece in works of art, that Rhodes alone still contained upwards of 3000 statues, and that there could not have been less at Athens, at Olympia, or at Delphi. The men who contributed principally to fill the public edifices and temples of Rome with the works of Grecian art, were Cn. Manlius, Fulvius Nobilior, who plundered the temples of Ambracia (*Liv.* xxxviii. 44), Mummius, Sulla, Lucullus, Scaurus, and Verres. (*Liv.* xxxix. 5, 6, 7; Plin. *H. N.* xxxiii. 53, xxxiv. 17, xxxvii. 6.)

Mummius, after the destruction of Corinth, B. C. 146, carried off or destroyed more works of art than all his predecessors put together. Some of his soldiers were found by Polybius playing at dice upon the celebrated picture of Dionysus by Aristides. (Strab. viii. p. 381.) Many valuable works also were purchased upon this occasion by Attalus III., and sent to Pergamus; but they all found their way to Rome on his death, B. C. 133, as he bequeathed all his property to the Roman people. (Plin. *H. N.* xxxiii. 53.) Scaurus, in his aedileship, B. C. 58, had all the public pictures still remaining in Sicily transported to Rome on account of the debts of the former city, and he adorned the great temporary theatre which he erected upon that occasion with 3000 bronze statues. (Plin. *H. N.* xxxv. 40, xxxvi. 24.) Verres ransacked Asia and Achaia, and plundered almost every temple and public edifice in Sicily of whatever was valuable in it. Amongst the numerous robberies of Verres, Cicero (*in Verr.* iv. 55) mentions particularly twenty-seven beautiful pictures taken from the temple of Minerva at Syracuse, consisting of portraits of the kings and tyrants of Sicily.

From the destruction of Corinth by Mummius, and the spoliation of Athens by Sulla, the higher branches of art, especially in painting, experienced so sensible a decay in Greece, that only two painters are mentioned who can be classed with the great masters of former times: Timomachus of Byzantium, contemporary with Caesar (Plin. *H. N.* xxxv. 40, &c.), and Aëtion, mentioned by Lucian (*Imag.* 7; Herod. 5), who lived apparently about the time of Hadrian. (Müller, *Archäol.* § 211. 1.) Yet Rome was, about the end of the republic, full of painters, who appear, however, to have been chiefly occupied in portrait, or decorative and arabesque painting: painters must also have been very numerous in Egypt and in Asia. Paintings of various descriptions still continued to perform a conspicuous part in the triumphs of the Roman conquerors. In the triumph of Pompey over Mithridates the portraits of the children and family of that monarch were carried in the procession (Appian, *de Bell. Mithrid.* 117); and in one of Caesar's triumphs the portraits of his principal enemies in the civil war were displayed, with the exception of that of Pompey. (*Id. de Bell. Civil.* ii. 101.)

The school of art at Rhodes appears to have been

the only one that had experienced no great change; for works of the highest class in sculpture were still produced there. The course of painting seems to have been much more capricious than that of sculpture; in which masterpieces, exhibiting various beauties, appear to have been produced in nearly every age, from that of Pheidias to that of Hadrian. A decided decay in painting, on the other hand, is repeatedly acknowledged in the later Greek and in the best Roman writers. One of the causes of this decay may be, that the highest excellence in painting requires the combination of a much greater variety of qualities; whereas invention and design, identical in both arts, are the sole elements of sculpture. Painters also are addicted to the pernicious, though lucrative, practice of dashing off or despatching their works, from which sculptors, from the very nature of their materials, are exempt: to paint quickly was all that was required from some of the Roman painters. (Juv. ix. 146.) Works in sculpture also, through the durability of their material, are more easily preserved than paintings, and they serve therefore as models and incentives to the artists of after ages. Artists, therefore, who may have had ability to excel in sculpture, would naturally choose that art in preference to painting. It is only thus that we can account for the production of such works as the Antinous, the Laocoon, the Torso of Apollonius, and many others of surpassing excellence, at a period when the art of painting was comparatively extinct, or at least principally practised as mere decorative colouring, such as the majority of the paintings of Rome, Herculaneum, and Pompeii, now extant; though it must be remembered that these were the inferior works of an inferior age.

XV. *Roman Painting.* The early painting of Italy and Magna Græcia has been already noticed, and we know nothing of a Roman painting independent of that of Greece, though Pliny (*H. N.* xxxv. 7) tells us that it was cultivated at an early period by the Romans. The head of the noble house of the Fabii received the surname of Pictor, which remained in his family, through some paintings which he executed in the temple of Salus at Rome, a. c. 304, which lasted till the time of the emperor Claudius, when they were destroyed by the fire that consumed that temple. Pacuvius also the tragic poet, and nephew of Ennius, distinguished himself by some paintings in the temple of Hercules in the Forum Boarium, about 180 a. c. Afterwards, says Pliny (*l. c.*), painting was not practised by *polite hands* (*honestis manibus*) amongst the Romans, except perhaps in the case of Turpilus, a Roman knight of his own times, who executed some beautiful works with his left hand at Verona. Yet Q. Pedius, nephew of Q. Pedius, coheir of Caesar with Augustus, was instructed in painting, and became a great proficient in the art, though he died when young. Antistius Labeo also amused himself with painting small pictures.

Julius Caesar, Agrippa, and Augustus were among the earliest great patrons of artists. Suetonius (*Jul. Cæs.* 47) informs us that Caesar expended great sums in the purchase of pictures by the old masters; and Pliny (*H. N.* xxxv. 40) mentions that he gave as much as 80 talents for two pictures by his contemporary Timomachus of Byzantium, one an Ajax, and the other a Medea meditating the murder of her children. These pictures, which were painted in encaustic, were very cele-

brated works; they are alluded to by Ovid (*Trist.* ii. 525), and are mentioned by many other ancient writers.

There are two circumstances connected with the earlier history of painting in Rome which deserve mention. One is recorded by Livy (xli. 28), who informs us that the Consul Tib. Sempronius Gracchus, dedicated in the temple of Mater Matuta, upon his return from Sardinia, a. c. 174, a picture of apparently a singular description; it consisted of a plan of the island of Sardinia, with representations of various battles he had fought there, painted upon it. The other is mentioned by Pliny (*H. N.* xxxv. 7), who says that L. Hostilius Mancinus, a. c. 147, exposed to view in the forum a picture of the taking of Carthage, in which he had performed a conspicuous part, and explained its various incidents to the people. Whether these pictures were the productions of Greek or of Roman artists is doubtful; nor have we any guide as to their rank as works of art.

The Romans generally have not the slightest claims to the merit of having promoted the fine arts. We have seen that before the spoiliations of Greece and Sicily, the arts were held in no consideration in Rome; and even afterwards, until the time of the emperors, painting and sculpture seem to have been practised very rarely by Romans; and the works which were then produced were chiefly characterised by their bad taste, being mere military records and gaudy displays of colour, although the city was crowded with the finest productions of ancient Greece.

There are three distinct periods observable in the history of painting in Rome. The first, or great period of Græco-Roman art, may be dated from the conquest of Greece until the time of Augustus, when the artists were chiefly Greeks. The second, from the time of Augustus to the so-called Thirty Tyrants and Diocletian, or from the beginning of the Christian era until about the latter end of the third century; during which time the great majority of Roman works of art were produced. The third comprehends the state of the arts during the exarchate; when Rome, in consequence of the foundation of Constantinople, and the changes it involved, suffered similar spoiliations to those which it had previously inflicted upon Greece. This was the period of the total decay of the imitative arts amongst the ancients.

The establishment of Christianity, the division of the empire, and the incursions of barbarians, were the first great causes of the important revolution experienced by the imitative arts, and the serious check they received; but it was reserved for the fanatic fury of the iconoclasts effectually to destroy all traces of their former splendour.

Of the first of these three periods sufficient has been already said; of the second there remain still a few observations to be made. About the beginning of the second period is the earliest age in which we have any notice of portrait painters (*imaginum pictores*), as a distinct class. Pliny mentions particularly Dionysius and Sopolis, as the most celebrated at about the time of Augustus, or perhaps earlier, who filled picture galleries with their works. About the same age also Lala of Cyzicus was very celebrated; she painted, however, chiefly female portraits, but received greater prices than the other two. (Plin. *H. N.* xxxv. 37, 40.)

Portraits must have been exceedingly numerous

amongst the Romans; Varro made a collection of the portraits of 700 eminent men. (Plin. *H. N.* xxxv. 2.) The portraits or statues of men who had performed any public service were placed in the temples and other public places; and several edicts were passed by the emperors of Rome respecting the placing of them. (Sueton. *Tiber.* 26, *Calig.* 34.) The portraits of authors also were placed in the public libraries; they were apparently fixed above the cases which contained their writings, below which chairs were placed for the convenience of readers. (Cic. *ad Attic.* iv. 10; Sueton. *Tiber.* 70, *Calig.* 34.) They were painted also at the beginning of manuscripts. (Martial, xiv. 186.) Respecting the images or wax portraits, which were preserved in "armaria" in the atria of private houses (Plin. *H. N.* xxxv. 2; Senec. *de Benef.* iii. 28), there is an interesting account in Polybius (vi. 53). With the exception of Aëtion, as already mentioned, not a single painter of this period rose to eminence: although some were of course more distinguished than others; as the profligate Arellinus; Fabullus, who painted Nero's golden house; Dorotheus, who copied for Nero the Venus Anadyomene of Apelles; Cornelius Pinus, Accius Priscus, Marcus Ludius, Mallius, and others. (Plin. *H. N.* xxxv. 37, &c.) Portrait, decorative, and scene painting seem to have engrossed the art. Pliny and Vitruvius regret in strong terms the deplorable state of painting in their times, which was but the commencement of the decay; Vitruvius has devoted an entire chapter (vii. 5) to a lamentation over its fallen state; and Pliny speaks of it as a dying art. (*H. N.* xxxv. 11.) The latter writer instances (*H. N.* xxxv. 33) as a sign of the madness of his time (*nostrae ætatis insaniam*), the colossal portrait of Nero, 120 feet high, which was painted upon canvas, a thing unknown till that time.

Marcus Ludius, in the time of Augustus, became very celebrated for his landscape decorations, which were illustrated with figures actively employed in occupations suited to the scenes; the artist's name, however, is doubtful. (See *Dict. of Biog. s. v.*) This kind of painting became universal after his time, and apparently with every species of licence. Vitruvius contrasts the state of decorative painting in his own age with what it was formerly, and he enumerates the various kinds of wall painting in use amongst the ancients. They first imitated the arrangement and varieties of slabs of marble, then the variegated frames and cornices of panels, to which were afterwards added architectural decorations; and finally in the exedrae were painted tragic, comic, or satyric scenes, and in the long galleries and corridors, various kinds of landscapes, or even subjects from the poets and the higher walks of history. But these things were in the time of Vitruvius tastelessly laid aside, and had given place to mere gaudy display, or the most phantastic and wild conceptions, such as many of the paintings which have been discovered in Pompeii.

Painting now came to be practised by slaves, and painters as a body were held in little or no esteem. Respecting the depraved application of the arts at this period see Plin. *H. N.* xxxv. 33; Petron. *Sat.* 88; Propert. ii. 6; Sueton. *Tib.* 43; Juven. ix. 145, xii. 28.

Mosaic, or *pictura de musivo, opus musivum*, was very general in Rome in the time of the early em-

perors. It was also common in Greece and Asia Minor at an earlier period, but at the time of which we are now treating it began to a great extent even to supersede painting. It was used chiefly for floors, but walls and also ceilings were sometimes ornamented in the same way. (Plin. *H. N.* xxxvi. 60, 64; Athen. xii. p. 542, d.; Senec. *Ep.* 86; Lucan, x. l. 6.) There were various kinds of mosaic; the *lithostrota* were distinct from the *picturae de musivo*. There were several kinds of the former, as the *sectile*, the *tessellatum*, and the *vermiculatum*, which are all mechanical and ornamental styles, unapplicable to painting, as they were worked in regular figures. As a general distinction between musivum and lithostrotum, it may be observed that the picture itself was *de musivo* or *opus musivum*, and its frame, which was often very large and beautiful, was *lithostrotum*. The former was made of various coloured small cubes (*tesserae* or *tessellae*), of different materials, and the latter of small thin slabs, *crustae*, of various marbles, &c.; the artists were termed *musivarii*, and *quadratarii* or *tessellarii* respectively. Pliny (*H. N.* xxxvi. 60) attributes the origin of mosaic pavements to the Greeks. He mentions the "asarotus oecus" at Pergamum, by Sosus, the most celebrated of the Greek musivarii, the pavement of which represented the remnants of a supper. He mentions also at Pergamum the famous Cantharus with the doves, of which the 'Doves of the Capitol' is supposed to be a copy. (*Mus. Cop.* iv. 69.) Another musivarius of antiquity was Dioscorides of Samos, whose name is found upon two mosaics of Pompeii. (*Mus. Borb.* iv. 34.) Five others are mentioned by Müller. (*Archæol.* § 322. 4.) There are still many great mosaics of the ancients extant. (See the works of Ciampini, Furietti, and Laborde.) The most interesting and most valuable is the one lately discovered in Pompeii, which is supposed to represent the battle of Issus. This mosaic is certainly one of the most valuable relics of ancient art, and the design and composition of the work are so superior to its execution, that the original has evidently been the production of an age long anterior to the degenerate period of the mosaic itself. The composition is simple, forcible, and beautiful, and the design exhibits in many respects merits of the highest order. (See Nicolini, *Quadro in musaico scoperto in Pompeii*; Mazois, *Pompéi*, iv. 48 and 49; and Müller, *Denkmäler der alten Kunst*, i. 55.) [R.N.W.]

PIGNORATICA ACTIO. [PIGNUS.]

PIGNORIS CA'PIO. [PER PIGNORIS CAPTIONEM.]

PIGNUS, a pledge or security for a debt or demand, is derived, says Gaius (Dig. 50. tit. 16. s. 238), from *pignus* "quia quae pignori dantur, manu traduntur." This is one of several instances of the failure of the Roman Jurists when they attempted etymological explanation of words. [MUTUUM.] The element of *pignus* (*pig*) is contained in the word *pa(π)g-o*, and its cognate forms.

A thing is said to be pledged to a man when it is made a security to him for some debt or demand. It is called, says Ulpian, *Pignus* when the possession of the thing is given to him to whom it is made a security, and *Hypotheca*, when it is made a security without being put in his possession. (Dig. 13. tit. 7. s. 9. § 2; Isidor. *Orig.* v. 25; see also Cic. *ad Fam.* xiii. 56.) The agreement for pledge which was made without delivery of the

thing by bare agreement (*nuda conventio*) is properly *Hypotheca*. (Inst. 4. tit. 6. § 7.) The law relating to *Pignus* and *Hypotheca* was in all essentials the same. The object of the pledging is that the pledgee shall in case of necessity sell the pledge and pay himself his demand out of the proceeds. The original nature of pledge perhaps was simply the power of holding a debtor's property as a means of compelling him to pay; and a power of sale would be a matter of agreement: but the later Roman jurists viewed a power of sale as a part of the contract of pledge.

A pledge may be given (*res hypothecae dari potest*) for any obligation, whether money borrowed (*mutua pecunia*), dos, in a case of buying and selling, letting and hiring, or *mandatum*; whether the obligation is conditional or unconditional; for part of a sum of money, as well as for the whole. (Dig. 20. tit. 1. s. 5.) Any thing could be the object of pledge which could be an object of sale (Dig. 20. tit. 1. s. 9; Dig. 20. tit. 3. *Quae res pignori vel hypothecae datae obligari non possunt*), and it might be a thing corporeal or incorporeal; a single thing or a universality of things. If a single thing was pledged, the thing with all its increase was the security, as in the case of a piece of land which was increased by alluvio. If a shop (*taberna*) was pledged, all the goods in it were pledged, and if some of them were sold and others brought in, and the pledger died, the pledgee's security was the shop and all that it contained at the time of the pledger's death. (Dig. 20. tit. 1. s. 34.) If all a man's property was pledged, the pledge comprehended also his future property, unless such property was clearly excepted. A man might also pledge any claim or demand that he had against another, whether it was a debt (*nomen*) or a thing (*corpus*). (Dig. 13. tit. 7. s. 18.)

The act of pledging required no particular form, in which respect it resembled contracts made by consensus. Nothing more was requisite to establish the validity of a pledge than proof of the agreement of the parties to it. It was called *Contractus pignoratitius*, when it was a case of *Pignus*; and *Pactum hypothecae*, when it was a case of *Hypotheca*: in the former case, tradition was necessary. A man might also by his testament make a *Pignus* (Dig. 13. tit. 7. s. 26); for the Romans applied the notion of *pignus* to an annual payment left by way of legacy, and charged or secured on land. (Dig. 34. tit. 1. s. 12.) The intention of a man to pledge could in any case be deduced either from his words or from any acts which admitted of no other interpretation than an intention to pledge.

A man could only pledge a thing when he was the owner and had full power of disposing of it; but a part owner of a thing could pledge his share. A man could pledge another man's property, if the other consented to the pledge at the time or afterwards; but in either case this must properly be considered the pledge of the owner for the debt of another. If a man pledged a thing, which was not his, and afterwards became the owner of it, the pledge was valid. (Dig. 13. tit. 7. s. 20; 20. tit. 2. s. 5.)

The amount for which a pledge was security depended on the agreement: it might be for principal and interest, or for either; or it might comprehend principal and interest, and all costs and expenses which the pledgee might be put to on account of the thing pledged. (Dig. 13. tit. 17. s. 8, 25.) For

instance a creditor would be entitled to his necessary expenses concerning a slave or an estate which had been pignegrated.

Pignus might be created by a judicial sentence, as for instance by the decree of the praetor giving to a creditor power to take possession of his debtor's property (*missio creditoris in bona debitoris*), either a single thing, or all his property, as the case might be. But the permission or command of the magistratus did not effect a pledge, unless the person actually took possession of the thing. The following are instances:—the *immissio damni infecti causa* [*DAMNUM INFECTUM*]: *legatorum servandorum causa*, which had for its object the securing of a legacy which had been left *sub conditione* or *die* (Dig. 36. tit. 4); *missio ventris in possessionem*, when the pregnant widow was allowed to take possession of the inheritance for the protection of a postumus; and the *missio rei servandae causa*. The right which a person obtained by such *Immissio* was called *Pignus Praetorium*. It was called *Pignoris capio*, when the Praetor allowed the goods of a person to be taken who was in contempt of the court, or allowed his person to be seized after a judgment given against him (*ex causa iudicati*).

There was also among the Romans a *tacita hypotheca*, which existed not by consent of the parties, but by rule of law (*ipso iure*), as a consequence of certain acts or agreements, which were not acts or agreements pertaining to pledging. (Dig. 20. tit. 2. *In quibus causis pignus vel hypotheca tacite contrahitur*.) These *Hypothecae* were general or special. The following are instances of what were General *Hypothecae*. The *Fiscus* had a general *hypotheca* in respect of its claims on the property of the subject, and on the property of its agents or officers: the husband, on the property of him who promised a *Dos*; and legatees and fideicommissarii in respect of their legacies or fideicommissa, on that portion of the hereditas of him who had to pay the legacies or fideicommissa. There were other cases of general *hypothecae*.

The following are instances of Special *hypothecae*:—The lessor of a *Prædium urbanum* had an *hypotheca*, in respect of his claims arising out of the contract of hiring, on every thing which the lessee (*inquilinus*) brought upon the premises for constant use (*invecta et illata*). The lessor of a *Prædium rusticum* had an *hypotheca* on the fruits of the farm as soon as they were collected by the lessee (*colonus*). (Dig. 20. tit. 2. s. 7; 19. tit. 2. s. 24.) A person who lent money to repair a ruinous house, had an *hypotheca* on the house and the ground on which it stood, provided the money were laid out on it; but there was no *hypotheca*, if the money was lent to build a house with or to enlarge it or ornament it. *Pupilli* and *minores* had an *hypotheca* on things which were bought with their money.

The person who had given a pledge, was still the owner of the thing that was pledged. He could therefore use the thing, and enjoy its fruits, if he had not given up the possession. But the agreement might be that the creditor should have the use or profit of the thing instead of interest, which kind of contract was called *Antichresis* or *mutual use*: and if there was no agreement as to use, the creditor could not use the thing, even if it was in his possession. The pledger could also sell the thing pledged, unless there were some agreement

to the contrary, but such sale did not affect the right of the pledgee. (Dig. 13. tit. 7. a. 18. § 2.) If the pledger sold a movable thing that was pignered, or that was specially hypothecated, without the knowledge and consent of the creditor, he was guilty of *furtum*. (Dig. 47. tit. 2. a. 19. § 6, and a. 68. pr.) If the pledger at the time of a *pignus* being given was not the owner of the thing, but had the possession of it, he could still acquire the property of the thing by *usucapion*, for the pledging was not an interruption of the *usucapio*. [Possessio.]

The creditor could keep possession of a pignered thing till his demand was fully satisfied, and he could maintain his right to the possession against any other person who obtained possession of the thing. He could also pledge the thing that was pledged to him; that is, he could transfer the pledge. (Dig. 20. tit. 1. a. 13. § 2.) He had also the right, in case his demand was not satisfied at the time agreed on, to sell the thing and satisfy his demands out of the proceeds (*ius distrahendi sive vendendi pignus*). (Cod. 8. tit. 27 (28).) This power of sale might be qualified by the terms of the agreement; but a creditor could not be deprived of all power of sale; nor could he be compelled to exercise his power of sale. Gaius (ii. 64) illustrates the maxim that he who was not the owner of a thing, could in some cases sell it, by the example of the pledgee selling a thing pledged; but he properly refers the act of sale to the will of the debtor, as expressed in the agreement of pledging; and thus in legal effect, it is the debtor who sells by means of his agent, the creditor. An agreement that a pledge should be forfeited in case the demand was not paid at the time agreed on, was originally very common; but it was declared by Constantine, A. D. 326, to be illegal. [COMMISORIA LEX.] In case of a sale the creditor, according to the later law, must give the debtor notice of his intention to sell, and after such notice he must wait two years before he could legally make a sale. If any thing remained over after satisfying the creditor, it was his duty to give it to the debtor; and if the price was insufficient to satisfy the creditor's demand, his debtor was still his debtor for the remainder. If no purchaser at a reasonable price could be found, the creditor might become the purchaser, but still the debtor had a right to redeem the thing within two years on condition of fully satisfying the creditor. (Cod. 8. tit. 34. a. 3.)

If there were several creditors to whom a thing was pledged which was insufficient to satisfy them all, he whose pledge was prior in time had a preference over the rest (*potior est in pignore qui prius credidit pecuniam et accepit hypothecam*, Dig. 20. tit. 4. a. 11). There were some exceptions to this rule; for instance, when a subsequent pledgee had lent his money to save the pledged thing from destruction, he had a preference over a prior pledgee. (Dig. 20. tit. 4. a. 5, 6.) This rule has been adopted in the English Law as to money lent on ships and secured by bottomry bonds.

Certain hypothecae, both *tactae* and founded on contract, had a preference or priority (*privilegium*) over all other claims. The *Fiscus* had a preference in respect of its claims; the wife in respect of her *dos*; the lender of money for the repair or restoration of a building; a *pupillus* with whose money a thing had been bought. Of those hypo-

thecae which were founded on contract, the following were privileged: the hypothecae of those who had lent money for the purchase of an immovable thing, or of a shop, or for the building, maintaining, or improving of a house, &c., and had contracted for an hypotheca on the thing; there was also the hypotheca which the seller of an immovable thing reserved by contract until he was paid the purchase-money. Of these claimants, the *Fiscus* came first; then the wife in respect of her *dos*; and then the other privileged creditors, according to their priority in point of time.

In the case of unprivileged creditors, the general rule as already observed was, that priority in time gave priority of right. But an hypotheca which could be proved by a writing executed in a certain public form (*instrumentum publice confectum*), or which was proved by the signatures of three reputable persons (*instrumentum quasi publice confectum*), had a priority over all those which could not be so proved. If several hypothecae of the same kind were of the same date, he who was in possession of the thing had a priority.

The creditor who had for any reason the priority over the rest, was intitled to be satisfied to the full amount of his claim out of the proceeds of the thing pledged. A subsequent creditor could obtain the rights of a prior creditor in several ways. If he furnished the debtor with money to pay off the debt, on the condition of standing in his place, and the money was actually paid to the prior creditor, the subsequent creditor stepped into the place of the prior creditor. (Dig. 20. tit. 3. a. 3.) Also, if he purchased the thing on the condition that the purchase-money should go to satisfy a prior creditor, he thereby stepped into his place. A subsequent creditor could also, without the consent either of a prior creditor or of the debtor, pay off a prior creditor, and stand in his place to the amount of the sum so paid. This arrangement, however, did not affect the rights of an intermediate pledgee. (Dig. 20. tit. 4. a. 16.)

The creditor had an *actio hypothecaria* or *pignoratitia* in respect of the pledge against every person who was in possession of it and had not a better right than himself. This right of action existed indifferently in the case of *Pignus* and *Hypotheca*. The *hypothecaria actio* was designed to give effect to the right of the pledgee, and consequently for the delivery of the hypothecated thing or the payment of the debt. A creditor who had a *Pignus*, had also a right to the *Interdictum retinendae et recuperandae possessionis*, if he was disturbed in his possession.

The pledgee was bound to restore a *pignus* on payment of the debt for which it had been given; and up to that time he was bound to take proper care of it. On payment of the debt, he might be sued in an *actio pignoratitia* by the pledger, for the restoration of the thing, and for any damage that it had sustained through his neglect. The remedy of the pledgee against the pledger for his proper costs and charges in respect of the pledge, and for any *dolus* or *culpa* on the part of the pledger relating thereto, was by an *actio pignoratitia contraria*.

The pledge was extinguished if the thing perished, for the loss was the owner's; it was also extinguished if the thing was changed so as no longer to be the same, as if a man should have all the timber in a merchant's yard as a security, and

the timber should be used in building a ship (Dig. 13. tit. 7. s. 18. § 3); if there was confusion, as when the pledgee became the owner of the thing that was pledged. It was also extinguished by the payment of the debt; and in some other ways.

The law of pledge at Rome was principally founded on the Edict. Originally the only mode of giving security was by a transfer of the Quiritarian ownership of the thing by Mancipatio or In jure cessio, if it was a Res Mancipi, on the condition of its being re-conveyed, when the debt was paid (*sub lege remanipationis* or *sub fiducia*). [FIDUCIA.] Afterwards a thing was given to the creditor with the condition that he might sell it in case his demand was not satisfied; there was no transfer of the ownership. But so long as the creditor could not protect his possession by legal means, this was a very insufficient security. Ultimately the Praetor gave a creditor a right of action (*actio in rem*) under the name Serviana actio for the recovery of the property of a colonus which was his security for his rent (*pro mercedibus fundi*); and this right of action was extended under the name of quasi Serviana or hypothecaria generally to creditors who had things pignered or hypothecated to them. (Inst. 4. tit. 6. s. 7.) As to the Interdictum Salvianum, see INTERDICTUM.

The progress of pledge in the Roman system was from the clumsy contrivance of a conveyance and reconveyance of the ownership, to the delivery (traditio) of a thing without a conveyance and upon an agreement that it should be a security (pignus), and finally to the simple Pactum hypothecae, in which case there was no delivery, and all that the creditor got, was a right to have some particular thing of the debtor subject to be sold to pay his debt. The hypotheca was the last stage in the development of the Roman law of Pledge. It gave facilities for pledging beyond what existed when the Pignus was only in use, because things could be hypothecated without a transfer of ownership or a giving of possession, such as mere rights of action, debts, and the like. In fact, Pawn or Pledge under the form of Hypotheca was perfected by the Romans, and there is nothing to add to it.

The Roman Law of Pledge has many points of resemblance to the English Law, but more is comprehended under the Roman Law of Pledge than the English Law of Pledge, including in that term Mortgage. Many of the things comprehended in the Roman Law of Pledge belong to the English Law of Lien and to other divisions of English Law which are not included under Pledge or Mortgage.

(Dig. 20. tit. 1, 2, 3, &c.; Cod. 8. tit. 14—35; Gaius, ii. 59—61; Dig. 13. tit. 7, and Cod. 4. tit. 24. De Pignoratitia Actione vel contra; Puchta, Inst. i. § 246, &c.; there is an English treatise intitled "The Law of Pledges or Pawns as it was in use among the Romans, &c., by John Ayliffe, London, 1732," which appears to contain all that can be said, but the author's method of treating the subject is not perspicuous.) [G. L.]

PILA (σφαίρα), a ball. The game at ball (σφαίριστική) was one of the most favourite gymnastic exercises of the Greeks and Romans from the earliest times to the fall of the Roman empire. As the ancients were fond of attributing the invention of all games to particular persons or occasions, we find the same to be the case with respect to the origin of this game (Herod. i. 94;

Athen. i. p. 14, d. e.; Plin. vii. 56), but such statements do not deserve attention. What is more to the purpose in reference to its antiquity is, that we find it mentioned in the *Odyssey* (vi. 100, &c. viii. 370, &c.), where it is played by the Phaeacian damsels to the sound of music, and also by two celebrated performers at the court of Alcinous in a most artistic manner accompanied with dancing.

The various movements of the body required in the game of ball gave elasticity and grace to the figure; whence it was highly esteemed by the Greeks. The Athenians set so high a value on it, that they conferred upon Aristonicus of Carytus the right of citizenship, and erected a statue to his honour, on account of his skill in this game. (Athen. i. p. 19, a.; compare Suidas, s. v. Ὀρχηρ.) It was equally esteemed by the other states of Greece; the young Spartans, when they were leaving the condition of ephebi, were called σφαίρεις (Pana. iii. 14. § 6; Böckh, *Corp. Inscr.* n. 1386, 1432), probably because their chief exercise was the game at ball. Every complete Gymnasium had a room (σφαίριστήριον, σφαίριςτρα) devoted to this exercise [GYMNASIUM], where a special teacher (σφαίριστικός) gave instruction in the art; for it required no small skill and practice to play it well and gracefully.

The game at ball was as great a favourite with the Romans as the Greeks, and was played at Rome by persons of all ages. Augustus used to play at ball. (Suet. *Aug.* 83.) Pliny (*Ep.* iii. 1) relates how much his aged friend Spurinna exercised himself in this game for the purpose of warding off old age; and under the empire it was generally played before taking the bath, in a room (σφαίριστηριον) attached to the baths for the purpose; in which we read of the *piliorepus* or player at tennis. (Sen. *Ep.* 57; Orelli, *Inscr.* n. 2591.)

The game at ball was played at in various ways: the later Greek writers mention five different modes, σφαίρια, ἐντενυρος, φανίδα, ἀπαστύν, ἀνόρραξις, and there were probably many other varieties. 1. *Οπαρία* was a game, in which the ball was thrown up into the air, and each of the persons who played strove to catch it, when it fell to the ground. (Pollux, ix. 106; Hesych. and Phot. s. v.; Eustath. *ad Od.* viii. 372. p. 1601.) 2. *Ἐντενυρος*, also called *ἐφεικική* and *ἐντενωρ*, was the game at foot-ball, played in much the same way as with us, by a great number of persons divided into two parties opposed to one another. (Pollux, ix. 104.) This was a favourite game at Sparta, where it was played with great emulation. (Siebelis, *ad Pana.* iii. 14. § 6.) 3. *Φανίδα*, called *ἐφεικίδα* by Hesychius (s. v.), was played by a number of persons, who threw the ball from one to another, but its peculiarity consisted in the person who had the ball pretending to throw it to a certain individual, and while the latter was expecting it, suddenly turning, and throwing it to another. Various etymologies of this word are given by the grammarians. (Pollux, ix. 105; Etym. Mag. s. v. *Φανίς*; Athen. i. p. 15, a.) 4. *Ἀπαστύν*, which was also played at by the Romans, is spoken of under *HARPASTUM*. 5. *Ἀνóρραξις*, was a game in which the player threw the ball to the ground with such force as to cause it to rebound, when he struck it down again with the palm of his hand and so went on doing many times: the number of times was counted.

(Pollux, ix. 105.) We learn from Plato (*Theæt.* p. 146) that in one game of ball, played at by boys, though we do not know what kind it was, the boy who was conquered was called ass (*ὄνος*); and the one who conquered was named king (*Βασιλεύς*).

Among the Romans the game at ball was also played at in various ways. Pila was used in a general sense for any kind of ball: but the balls among the Romans seem to have been of three kinds; the *pila* in its narrower sense, a small ball; the *foliis*, a great ball filled with air [*FOLLIS*]; and the *paganica*, of which we know scarcely anything, as it is only mentioned in two passages by Martial (vii. 32. 7, xiv. 43), but from the latter of which we may conclude that it was smaller than the *foliis* and larger than the *pila*. Most of the games at ball among the Romans seem to have been played at with the *pila* or small ball. One of the simplest modes of playing the ball, where two persons standing opposite to one another threw the ball from one to the other, was called *datatim ludere*. (Plaut. *Cure.* ii. 3. 17.) But the most favourite game at ball seems to have been the *trigon* or *pila trigonalis*, which was played at by three persons, who stood in the form of a triangle, *ἐν τριγώνῳ*. We have no particulars respecting it, but we are told that skilful players prided themselves upon catching and throwing the ball with their left hand. (Mart. xiv. 46, vii. 72. 9).

The ancient physicians prescribed the game at ball, as well as other kinds of exercise, to their patients; Antyllus (*ap. Oribus.* vi. 32) gives some interesting information on this subject.

The persons playing with the *pila* or small ball in the annexed woodcut are taken from a painting in the baths of Titus (*Descr. des Bains de Titus*, pl. 17); but it is difficult to say what particular kind of game they are playing at. Three of the players have two balls each.

(Bürette, *De la Sphéristique*, p. 214, &c., in *Mém. de l'Acad. des Inscr.* vol. i.; Krause, *Gymnastik u. Agon. d. Hell.* p. 299, &c.; Becker, *Gallus*, vol. i. p. 268, &c.)

PILA. [MORTARIUM.]

PILA'NI. [EXERCITUS, p. 501, b.]

PILENTUM, a splendid four-wheeled carriage, furnished with soft cushions, which conveyed the Roman matrons in sacred processions, and in going to the Circensian and other games. (Virg. *Aen.* viii. 666; Hor. *Epist.* ii. 1. 192; Claudian, *De Nupt. Honor.* 285; Isid. *Orig.* xx. 12.) This distinction was granted to them by the Senate on account of their generosity in giving their gold and jewels on a particular occasion for the service of the state.

(Liv. v. 25.) The Vestal virgins were conveyed in the same manner. (Prudentius *contra Sym.* ii. *sub fin.*) The *pilentum* was probably very like the *HARMAMAXA* and *CARPENTUM*, but open at the sides, so that those who sat in it might both see and be seen. [J. Y.]

PILEUS or PILEUM (Non. Marc. iii.; *pilea virosum sunt*, Serv. in Virg. *Aen.* ix. 616). *dim.* PILE'OIUS or PILE'OLUM (Colum. *de Arbor.* 25); *πίλος*, *dim.* *πίλιον*, second *dim.* *πιλιδιον*; *πίλημα*, *πιλωτόν*, any piece of felt; more especially, a skull-cap of felt, a hat.

There seems no reason to doubt that felting (*ἡ πιλητική*, Plat. *Polit.* ii. 2. p. 296, ed. Bekker) is a more ancient invention than weaving [*ΤΕΛΑ*], nor that both of these arts came into Europe from Asia.

From the Greeks, who were acquainted with this article as early as the age of Homer (*Il.* x. 265) and Hesiod (*Op. et Dies*, 542, 546), the use of felt passed together with its name to the Romans. Among them the employment of it was always far less extended than among the Greeks. Nevertheless Pliny in one sentence, "*Lanae et per se coactae vestem faciunt*," gives a very exact account of the process of felting. (*H. N.* viii. 48. s. 73.) A Latin sepulchral inscription (Gruter, p. 648. n. 4) mentions "a manufacturer of woollen felt" (*lanarius oocularius*), at the same time indicating that he was not a native of Italy (*Lariensis*).

The principal use of felt among the Greeks and Romans was to make coverings of the head for the male sex, and the most common kind was a simple skull-cap. It was often more elevated, though still round at the top. In this shape it appears on coins, especially on those of Sparta, or such as exhibit the symbols of the Dioscuri; and it is thus represented, with that addition on its summit, which distinguished the Roman flammes and salii, in three figures of the woodcut to the article *APEX*. But the apex, according to Dionysius of Halicarnassus, was sometimes conical; and conical or pointed caps were certainly very common.

In the Greek and Roman mythology different kinds of caps were symbolically assigned to indicate the occupations of the wearers. The painter Nicomachus first represented Ulysses in a cap, no doubt to indicate his sea-faring life. (Plin. *H. N.* xxxvi. § 22.) The woodcut on the following page shows him clothed in the *Exomis*, and in the act of offering wine to the Cyclops. (Winckelmann, *Mon. Ined.* ii. 154; Homer, *Od.* ix. 345—347.) He here wears the round cap; but more commonly both he and the boatman Charon (see woodcut, p. 512) have it pointed. Vulcan (see woodcut, p. 726) and Daedalus wear the caps of common artificers.

A cap of very frequent occurrence in the works of ancient art is that now generally known by the name of "the Phrygian bonnet." The Mysian *pileus*, mentioned by Aristophanes (*Acharn.* 429), must have been one of this kind. For we find it continually introduced as the characteristic symbol of Asiatic life in paintings and sculptures of Priam (see woodcut, p. 882) and Mithras (woodcut on title-page), and in short in all the representations, not only of Trojans and Phrygians, but of Amazons (woodcut, p. 894), and of all the inhabitants of Asia Minor, and even of nations dwelling still further east. The representations of this Phrygian, or Mysian, cap in sculptured marble show that it was made of a strong and stiff material and of a

conical form, though bent forwards and downwards. By some Asiatic nations it was worn erect, as by the Sacae, whose stiff peaked caps Herodotus describes under the name of *κυπέσσιας*. The form of those worn by the Armenians (*πίλοφόροι* 'Αρμενίοι, Brunck, *Anal.* ii. 146) is shown on various coins, which were struck in the reign of Verus on occasion of the successes of the Roman army in Armenia, A. D. 161. It is sometimes erect, but sometimes bent downwards or truncated. The truncated conical hat is most distinctly seen on two of the Sarmatians in the group at page 213.

Among the Romans the cap of felt was the emblem of liberty. When a slave obtained his freedom he had his head shaved, and wore instead of his hair an undyed pileus (*πίλον λευκόν*, Diod. Sic. *Exc. Leg.* 22. p. 625, ed. Wess.; Plaut. *Amphit.* i. 1. 306; Persius, v. 82). Hence the phrase *servos ad pileum vocare* is a summons to liberty, by which slaves were frequently called upon to take up arms with a promise of liberty. (Liv. xxiv. 32.) The figure of Liberty on some of the coins of Antoninus Pius, struck A. D. 145, holds this cap in the right hand.

In contradistinction to the various forms of the felt cap now described, we have to consider others more nearly corresponding with the hats worn by Europeans in modern times. The Greek word *πέτασος*, dim. *πετάσιον*, derived from *πετάσσειν*, "to expand," and adopted by the Latins in the form *petasus*, dim. *petasunculus*, well expressed the distinctive shape of these hats. What was taken from their height was added to their width. Those already described had no brim: the petasus of every variety had a brim, which was either exactly or nearly circular, and which varied greatly in its width. In some cases it is a circular disk without any crown at all, and often there is only a depression or slight concavity in this disk fitted to the top of the head. Of this a beautiful example is presented in a recumbent statue of Endymion, habited as a hunter, and sleeping on his scarf: this statue belongs to the Townley Collection in

the British Museum, and shows the mode of wearing the petasus tied under the chin. In other instances, it is tied behind the neck instead of being tied before it. (See the next woodcut.) Very frequently we observe a boss on the top of the petasus, in the situation in which it appears in the woodcuts, pages 259, 379. In these woodcuts and in that here introduced the brim of the petasus is surmounted by a crown. Frequently the crown is in the form of a skull-cap; we also find it surrounded with a very narrow brim. The Greek petasus in its most common form agreed with the cheapest hats of undyed felt, now made in England. On the heads of rustics and artificers in our streets and lanes we often see forms the exact counterpart of those which we most admire in the works of ancient art. The petasus is also still commonly worn by agricultural labourers in Greece and Asia Minor. In ancient times it was preferred to the skull-cap as a protection from the sun (Sueton. *Aug.* 82), and on this account Caligula permitted the Roman senators to wear it at the theatres. (Dion Cass. lix. 7.) It was used by shepherds (Callim. *Frag.* 125), hunters, and travellers. (Plaut. *Amphit.* Prol. 143, i. 1. 287 *Pseud.* ii. 4. 45, iv. 7. 90; Brunck, *Anal.* ii. 170.) The annexed woodcut is from a fictile vase belonging to Mr. Hope (*Costume*, i. 71), and it represents a Greek soldier in his hat and pallium. The

ordinary dress of the Athenian ephebi, well exhibited in the Panathenaic Frieze of the Parthenon, now preserved in the British Museum, was the hat and scarf. [CHLAMYS.] (Brunck, *Anal.* i. 5, ii. 41; Philemon, p. 367, ed. Meineke; Pollux, x. 164.) Among imaginary beings the same costume was commonly attributed to Mercury (Arnob. *adv. Gent.* vi.; Martianus Capella, ii. 176; Ehipp. *ap. Athen.* xii. p. 537. f.), and sometimes to the Dioscuri.

Ancient authors mention three varieties of the petasus, the Thessalian (Dion Cass. *l. c.*; Callim. *Frag.* 124; Schol. in *Soph. Oed. Col.* 316), the Arcadian (Brunck, *Anal.* ii. 384; Diog. Laërt. vi. 102), and the Laconian (Arrian. *Tact.* p. 12, ed. Blancardi); but they do not say in what the dif-

ference consisted. In like manner it is by no means clear in what respects the CAUSIA differed from the petasus, although they are distinctly opposed to one another by a writer in Athenaeus (xii. p. 537, e). Moreover in the later Greek authors we find *πίλος* used to denote a hat of other materials besides felt. (Athen. vi. p. 274.)

On the use of felt in covering the feet see UNO.

Felt was likewise used for the lining of helmets. [GALBA.] For further illustrations of this subject, see Yates's *Tacticum Antiquorum*, P. I. Appendix B. [J. Y.]

PILI/CREPUS. [PILA.]

PILUM. [HASTA.]

PINACOTHECA (*πίναξ,θήκη*), a picture-gallery. Marcellus, after the capture of Syracuse, first displayed the works of Greek painters and sculptors to his countrymen, whose taste for the fine arts was gradually matured by the conquests of L. Scipio, Flaminius, and L. Paullus, and grew into a passion after the spoils of Achaia had been transported by Mummius to Rome. Objects of this description were at first employed exclusively for the decoration of temples and places of public resort, but private collections were soon formed; and towards the close of the republic we find that in the houses of the more opulent a room was devoted to the reception of paintings and statues. (Varro, R. R. i. 2. 59; Cic. in Verr. i. 21.) In the time of Augustus, Vitruvius includes the pinacotheca among the ordinary apartments of a complete mansion, and gives directions that it should be of ample size and facing the north, in order that the light might be equable and not too strong. (Vitruv. i. 2, vi. 5. 7; compare Plin. H. N. xxxv. 2. 7. 11; Mazon, *Le Palais de Sosus*, cap. ix.; Becker, *Gallus*, vol. i. p. 92.) [W. R.]

PISCATORII LUDI. [LUDI PISCATORIL.]

PISCINA, properly a fish-pond, either of salt-water or of fresh (see the passages in Forcellini and Freund) denotes also any kind of reservoir, especially those connected with the aqueducts and the baths. (AQUAEDUCTUS, p. 114, a; BALNEAE, pp. 189, b, 19. a.) [P. S.]

PISTILLUM. [MORTARIUM.]

PISTOR (*ἀροστικός*), a baker, from *pinere* to pound, since corn was pounded in mortars before the invention of mills. [MOLA.] At Rome bread was originally made at home by the women of the house; and there were no persons at Rome who made baking a trade, or any slaves specially kept for this purpose in private houses, till A. C. 173. (Plin. H. N. xviii. 11. a. 28.) In Varro's time, however, good bakers were highly prized, and great sums were paid for slaves who excelled in this art. (Gell. xv. 19.) The name was not confined to those who made bread only, but was also given to pastry-cooks and confectioners, in which case however they were usually called *pistores dulciarii* or *candidarii*. (Mart. xiv. 222; Orelli, *Inscr.* n. 4263.) The bakers at Rome, like most other tradespeople, formed a collegium. (Dig. 3. tit. 4. a. 1; 27. tit. 1. a. 46.)

Bread was often baked in moulds called *artoptae*, and the loaves thus baked were termed *artopticii*. (Plin. H. N. xviii. 11. a. 27, 28; Plant. *Aulul.* ii. 9. 4.) In one of the bakehouses discovered at Pompeii, several loaves have been found apparently baked in moulds, which may therefore be regarded as *artopticii*; they are represented below. They are flat and about eight inches in diameter.

Bread was not generally made at home at Athens, but was sold in the market-place chiefly by women, called *ἀροστίδες*. (Compare Aristoph. *Vesp.* 1389, &c.) These women seem to have been what the fish-women of London are at present; they excelled in abuse, whence Aristophanes (*Ran.* 856) says, *λοιδορεῖσθαι ὡς ἂν ἀροστίδας*. (Becker, *Charikles*, vol. i. p. 284.)

PISTRINUM. [MOLA; MORTARIUM.]

PLAGA. [RETRA.]

PLAGIARIUS. [PLAGIUM.]

PLAGIUM. This offence was the subject of a Fabia Lex, which is mentioned by Cicero (*Pro Rabirio*, c. 8), and is assigned to the consulship of Quintus Fabius and M. Claudius Marcellus, A. C. 183; but without sufficient reason. The chief provisions of the Lex are collected from the Digest (48. tit. 15. s. 6): "if a freeman concealed, kept confined, or knowingly with *dolus malus* purchased an ingenuus or libertinus against his will, or participated in any such acts; or if he persuaded another person's male or female slave to run away from a master or mistress, or without the consent or knowledge of the master or mistress concealed, kept confined, or purchased knowingly with *dolus malus* such male or female slave, or participated in any such acts, he was liable to the penalties of the Lex Fabia." The penalty of the Lex was pecuniary, and the consequence was *Infamia*; but this fell into disuse, and persons who offended against the lex were punished, either by being sent to work in the mines or by crucifixion, if they were humiliores, or with confiscation of half of their property or perpetual relegation, if they were honestiores. The crime of kidnapping men became a common practice and required vigilant pursuit (Suetonius, *Octavian.* c. 32). A *Senatusconsultum ad Legem Fabiam* did not allow a master to give or sell a runaway slave, which was technically called "*fugam vendere*"; but the provision did not apply to a slave who was merely absent, nor to the case of a runaway slave when the master had commissioned any one to go after him and sell him: it was the object of the provision to encourage the recovery of runaway slaves. The name of the *Senatusconsultum*, by which the Lex Fabia was amended, does not appear. The word *Plagium* is said to come from the Greek *πλάγιος*, oblique, indirect, *dolosus*. But this is doubtful. Schrader (*Inst.* 4. tit. 18. § 10) thinks that the derivation from *plaga* (a net) is more probable. He who committed *plagium* was *plagiarius*, a word which Martial (*Ep.* i. 53) applies to a person who falsely gave himself out as the author of a book; and in this sense the word has come into common use in our language. (Dig. 48. tit. 15; Cod. 9. tit. 20; Paulus, S. R. i. tit. 6 a.; Rein, *Das Criminalrecht der Römer*, p. 386.) [G. L.]

PLANE'TAE, s. STELLAE ERRANTES (πλανήται ἢ πλανώμενοι ἄσπερες as opposed to τὰ ἀπλανῆ-
-ῶν ἄσπερον). The popular astronomy of the early
Greeks was chiefly confined, as is pointed out else-
where [ASTRONOMIA], to a knowledge of the
morning and evening risings and settings of the
brightest stars and most remarkable constellations,
since upon these observations the formation and
regulation of the primitive calendars in a great
measure depended. No single star was more likely
to attract attention under such circumstances than
the planet Venus, and accordingly *The Morning
Star* ('Ἑωσφόρος) is placed first among the stellar
progeny of Erigeneia in the *Theogony* (381) —

τοὺς δὲ μέτ' (sc. ἀνέμους) ἄσπερα τίκτεν Ἑωσ-
φόρον Ἥριγένεια

ἄσπερα τε λαμπρόντα τὰ τ' οὐρανὸς ἐστεφά-
νεται,

while both the *Morning Star* ('Ἑωσφόρος), and the
Evening Star ('Ἑσπερος), are named in the Ho-
meric poems (Il. xxii. 317, xxiii. 226, comp. Od.
xiii. 93), where they are evidently regarded as
distinct from one another. According to Apollo-
dorus, in the second book of his work *Περὶ δεῶν*,
Pythagoras was the first who surmised that Φωσ-
φόρος and Ἑσπερος were one and the same, but by
Phavorinus the honour of this discovery is ascribed
to Parmenides. The latter certainly looked upon
this body, which he called both Ἑῶος and Ἑσπερος,
as altogether different in its nature from the fixed
stars, for he placed it in his highest region or aether;
below it, but also in the aether, was the sun, and
below the sun, in the fiery region (ἐν τῇ πυρώδει),
which he calls οὐρανὸς, were the fixed stars. The
term πλανῆται seems, if we can trust Plutarch and
Stobaeus, to have been recognised as early as the
epoch of Anaximander, according to whom the sun
stood highest in the universe, next below was the
moon, and then the fixed stars and the planets (ὅνδ
δὲ αὐτοὺς τὰ ἀπλανῆ τῶν ἄσπερον καὶ τοὺς πλανή-
-τας). Empedocles supposed the fixed stars to be
imbedded in the crystalline sphere, which, accord-
ing to his system, enveloped all things, but the
planets to be detached from it, thus implying the
necessity felt for some theory, which should account
for their erratic course. Democritus wrote a treatise
Περὶ τῶν πλανητῶν, among which he reckoned
the Sun, the Moon, and Φωσφόρος, but, as yet,
their number had not been determined. This is
expressly affirmed by Seneca (*Quaest. Nat.* vii.
3), "Democritus subtilissimus antiquorum omnium
uspiciari ait se plures stellas esse quae currant;
sed nec numerum illarum posuit, nec nomina, non-
dum comprehensis quinque siderum curibus. Eu-
doxus ab Ægypto hos motus in Graeciam transtulit." But although Eudoxus may have been the
first to communicate scientific details with respect
to the orbits and movements of the planets, Philo-
laus, a Pythagorean, who flourished more than a
century earlier, was certainly acquainted with the
whole five, for he maintained that there was a
central fire around which the ten heavenly bodies
(δέκα σώματα θεία) revolved. Of these, the most
remote from the centre was οὐρανὸς, that is, the
sphere containing the fixed stars, next in order
were the planets, then the sun, then the moon, then
the earth, and, below the earth, the Antichthon
(ἀντίχθων, see Arist. *de Coelo*, ii. 13), thus com-
pleting the number ten if we reckon the planets as
five. In the *Timaeus* of Plato, the planets are

mentioned specifically as five in number (ἑλίας καὶ
σελήνη καὶ πέντε ἄλλα ἄσπερα ἐπικλην ἔχοντα
πλανῆται), and in the same passage, we for the
first time meet with the name *Hermes* as connected
with one of these (Ἑωσφόρον δὲ καὶ τὸν ἱερὸν Ἑρ-
μοῦ λεγόμενον). It is not, however, until we come
down to the *Epinomis*, the work of some disciple
of Plato, that the whole five are enumerated, each
with a distinguishing appellation derived from a
god: τὸν τοῦ Κρόνου, τὸν τοῦ Διὸς, τὸν τοῦ Ἄρεος,
τὴν τῆς Ἀφροδίτης, τὸν τοῦ Ἑρμοῦ. In the tract,
Περὶ κόσμου, found among the writings of Aristotle,
although probably not from his pen, we are fur-
nished with a second set of names — Φαίρων for the
star of Kronus; Φαίθων, for that of Zeus; Πυρρός,
for that of Ares; Φωσφόρος, for that of Aphrodite;
Ἐρίθων, for that of Hermes; and these seem to
have been the ordinary designations employed by
men of science. It is here stated also, that Πυρρός
was by some termed the star of Herakles, and
that Ἐρίθων was by some termed the star of Apollo.
Pliny gives additional variations, for in his list
they are catalogued as SIDUS SATURNI, JOVIS,
MARTIS s. HERCULIS, VENERIS s. JUNONIS s.
ISISIS s. MATRIS DEUM (*Lucifer, Vesper*), MER-
CURI s. APOLLINIS; and these may be still farther
increased from Achilles Tatius, the grammarians
and the lexicographers.

The Earth being generally regarded as the centre
of the Universe, the Moon was believed to be
nearest to it, then the Sun, Venus, and Mercury;
beyond these was Mars, beyond Mars was Jupiter,
beyond Jupiter was Saturnus, the fixed stars being
the most remote of all. But while astronomers
for the most part agreed in placing the Sun, Venus,
and Mercury between the Moon and Mars, the
greatest diversity of opinion obtained with regard
to their relative position. According to some, the
Sun was the nearest of the three to the Earth, ac-
cording to others the most distant, while a third
set of philosophers assigned to it the middle place
between Venus and Mercury. In like manner,
some supposed that Mercury was nearer to the
Earth than Venus, others the reverse, and every
possible combination of the three bodies was ex-
hausted.

Saturnus was believed to perform a complete
revolution in thirty solar years, Jupiter in twelve,
calculations approaching very nearly to the truth.
The period of Mars was fixed at two years, a de-
termination less accurate than the two former,
but not very wide of the truth. As to Venus and
Mercury, not even an approximation was made, for
they were both believed to perform their revolution
in exactly, or very nearly the same time as the Sun:
Pliny, who affects great precision in this matter,
fixes 348 days for Venus, and 339 days for Mercury.

Saturnus being thus removed to a great distance
from the source of heat was naturally viewed as
possessing a cold and icy character (*gelidae ac
rigentis naturae* — *frigida stella Saturni*), Mars, on
the other hand, as of a hot and fiery nature,
while Jupiter which lay between them enjoyed a
temperature made up by the combination of the
extremes. The astrologers caught up these notions,
and uniting them with the legends of mythology,
adapted them to their own purpose, uniformly
representing the influence of Saturnus as malign,
and that of Jupiter as propitious.

Haec tamen ignorat, quid sidus triste minetur
Saturni. Juv. vi. 569.

PLAUSTRUM.

Saturnumque gravem nostro Jove frangimus una.
Pera. v. 48.

Te Jovis impio
Tutela Saturno refulgens
Eripuit.

Hor. Carm. ii. 16. 22.

It must be understood that in the above remarks, we have confined ourselves entirely to the popular notions which prevailed among the ancients without attempting to trace the progress of scientific observation, a subject which belongs to a formal history of astronomy, but does not fall within our limits. (Plut. de Placitis Philos. ii. 14, 15, 16; Stob. Ed. Phys. i. 23. § 1, 25. § 1; Diogen. Laërt. viii. 14, ix. 23; Arat. Phaen. 454; Gemini Elementa Astron. c. 1; Achill. Tat. Isag. ad Arat. Phaen. xvii.; Lydus, De Mens. v. &c.; Cic. de Nat. Deor. ii. 20; Plin. H. N. ii. 6. 8; Tac. Hist. v. 4; Macrob. Somn. Scip. 4.) [W. R.]

PLAUSTICA. [STATUARIA.]

PLAUSTRUM or PLOSTRUM, dim. PLOSTELLUM (πλαῖστρα, dim. πλαῖστis), a cart or waggon. This vehicle had commonly two wheels, but sometimes four, and it was then called the *plaustrum majus*. The invention of four-wheeled waggon is attributed to the Phrygians. (Plin. H. N. vii. 56.)

Besides the wheels and axle the *plaustrum* consisted of a strong pole (*temo*), to the hinder part of which was fastened a table of wooden planks. The blocks of stone, or other things to be carried, were either laid upon this table without any other support, or an additional security was obtained by the use either of boards at the sides (*ὄρεπρες*, Hom. Od. vi. 70; Plato, Theæt. p. 467, Heindorf.) or of a large wicker basket tied upon the cart (*κρίβη*, Hom. Il. xxiv. 267, Od. xv. 131). The annexed woodcut, taken from a bas-relief at Rome, exhibits a cart, the body of which is supplied by a basket. Similar vehicles are still used in many parts of Europe, being employed more especially to carry charcoal.

In many cases, though not universally, the wheels were fastened to the axle, which moved, as in our children's carts, within wooden rings adapted for its reception and fastened to the body. These rings were called in Greek *ἀμαξόροδες*, in Latin *arbusculae*. The parts of the axle, which revolved within them, were sometimes cased with iron. (Vitruv. x. 20. § 14.) The commonest kind of cart-wheel was that called *tympanum*, "the drum," from its resemblance to the musical instrument of the same name. (Varro, de Re Rust. iii. 5; Virg. Georg. ii. 444.) It was nearly a foot in thickness, and was made either by sawing the trunk of a tree across in an horizontal direction, or by nailing together boards of the requisite shape and size. It is exemplified in the preceding

PLEBES.

928

woodcut, and in the sculptures on the arch of Septimius Severus at Rome. Although these wheels were excellent for keeping the roads in repair and did not cut up the fields, yet they rendered it necessary to take a long circuit in turning. They advanced slowly. (Virg. Georg. i. 138.) They also made a loud creaking, which was heard to a great distance (*stridentia plaustra*, Virg. Georg. iii. 536; *gemonia*, Aen. xi. 138). Their rude construction made them liable to be overturned with their load of stone, timber, manure, or skins of wine (Juv. iii. 241—243), whence the Emperor Hadrian prohibited heavily loaded waggon from entering the city of Rome. (Spartian. Hadr. 22.) The waggoner was sometimes required to aid the team with his shoulder. Accidents of this kind gave origin to the proverb "*Plaustrum perculi*," meaning "I have had a misfortune." (Plant. Epid. iv. 2. 22.) Carts of this description, having solid wheels without spokes, are still used in Greece (Dodwell's *Tour*, vol. ii. pp. 102, 103) and in some parts of Asia. (Sir R. K. Porter's *Travels*, vol. ii. p. 533.) [J. Y.]

PLEBEII LUDI. [LUDI PLEBENI.]

PLEBES or PLEBS. PLEBEII. This word contains the same root as *im-pleo*, *com-pleo*, &c., and is therefore etymologically connected with *πληθος*, a term which was applied to the plebeians by the more correct Greek writers on Roman history, while others wrongly called them *δημος* or *δημοτικοί*.

The plebeians were the body of commons or the commonalty of Rome, and thus constituted one of the two great elements of which the Roman nation consisted, and which has given to the earlier periods of Roman history its peculiar character and interest. Before the time of Niebuhr the most inconsistent notions were entertained by scholars with regard to the plebeians and their relations to the patricians; and it is one of his peculiar merits to have pointed out the real position which they occupied in the history of Rome.

The ancients themselves do not agree respecting the time when the plebeians began to form a part of the Roman population. Dionysius and Livy represent them as having formed a part of the Romans as early as the time of Romulus, and seem to consider them as the clients of the patricians, or as the low multitude of outcasts who flocked to Rome at the time when Romulus opened the asylum. (Dionys. i. 8; Liv. i. 8.) If there is any truth at all in these accounts of the early existence of the plebeians, we can only conceive them to have been the original inhabitants of the districts occupied by the new settlers (Rames or Romans), who, after their territory was conquered, were kept in that state of submission in which conquered nations were so frequently held in early times. There are also some other statements referring to such an early existence of the plebeians; for the clients, in the time of Romulus, are said to have been formed out of the plebeians. (Dionys. ii. 9; Plut. Romul. 13; Cic. de Re Publ. ii. 9; Fest. s. v. *Patrocinia*.) In the early times of Rome the position of a client was in many respects undoubtedly far more favourable than that of a plebeian, and it is not improbable that some of the plebeians may for this reason have entered into the relation of clientela to some patricians, and have given up the rights which they had as free plebeians; and occurrences of this kind may have given rise to the

story mentioned by the writers just referred to. A recent writer, Dr. W. Ihne (*Forschungen auf dem Gebiete der Röm. Verfassungsgeschichte*, Frankf. 1847) has undertaken with very plausible arguments to prove that originally plebeians and clients were the same people, and that originally all the plebeians were clients of the patricians, from which dependent relation they gradually emancipated themselves.

Whatever may be thought of the existence of plebeians at Rome in the earliest times, their number at all events cannot have been very great. The time when they first appear as a distinct class of Roman citizens in contradistinction to the patricians, is in the reign of Tullus Hostilius. Alba, the head of the Latin confederacy, was in his reign taken by the Romans and razed to the ground. The most distinguished of its inhabitants were transplanted to Rome and received among the patricians; but the great bulk of Alban citizens, some of whom were likewise transferred to Rome, and received settlements on the Caelian hill, were kept in a state of submission to the *populus Romanus* or the patricians. This new population in and about Rome, combined, perhaps, with the subdued original inhabitants of the place, which in number is said to have been equal to the old inhabitants of the city or the patricians, were the plebeians. They were Latins, and consequently of the same blood as the Ramnes, the noblest of the three patrician tribes. (Liv. i. 30; Dionys. iii. 29, 31; Val. Max. iii. 4. § 1.) After the conquest of Alba, Rome, in the reign of Ancus Marcius, acquired possession of a considerable extent of country containing a number of dependent Latin towns, as Medullia, Fidenæ, Politorium, Tellene, and Ficana. Numbers of the inhabitants of these towns were again transplanted to Rome, and incorporated with the plebeians already settled there, and the Aventine was assigned to them as their habitation. (Liv. i. 33; Dionys. iii. 31, 37.) Many, however, remained in their original homes, and their lands were given back to them by the Romans, so that they remained free land-owners as much as the conquerors themselves, and thus were distinct from the clients.

The order of plebeians or the commonalty, which had thus gradually been formed by the side of the patricians, and which far exceeded the *populus* in number, lived partly in Rome itself in the districts above mentioned, and partly on their former estates in the country subject to Rome, in towns, villages, or scattered farms. The plebeians were citizens, but not *optimo jure*; they were perfectly distinct from the patricians, and were neither contained in the three tribes, nor in the *curiæ* nor in the patrician gentes. They were consequently excluded from the *comitia*, the senate, and all civil and priestly offices of the state. Dionysius is greatly mistaken in stating that all the new citizens were distributed among the patrician *curiæ*, and under this error he labours throughout his history, for he conceives the patricians and plebeians as having been united in the *comitia curiata* (iv. 12, ix. 41). That the plebeians were not contained in the *curiæ*, is evident from the following facts:—Dionysius himself (iv. 76, 78) calls the *curiæ* a patrician assembly; Livy (v. 46) speaks of a *lex curiata*, which was made without any co-operation on the part of the plebeians; and those, who confirm the election of kings or magistrates and confer the imperium, are in some passages called patricians, and in others *curiæ* (Dionys. ii. 60, vi. 90, x. 4; Liv. vi. 42;

compare Niebuhr, *Hist. of Rome*, ii. p. 120; Becker, *Handbuch der Röm. Alterth.* ii. l. p. 133, &c.), which shows that both were synonymous. That the plebeians did not belong to the patrician gentes, is expressly stated by Livy (x. 8). The only point of contact between the two estates was the army, for after the conquest of Alba, Tullus Hostilius doubled the number of legions of the Roman army. (Liv. i. 30.) Livy also states that Tullus Hostilius formed ten new *turmæ* of equites, but whether these new *turmæ* consisted of Albans, as Livy says, or whether they were taken from the three old tribes, as Götting (*Gesch. d. Röm. Staats*, p. 225) thinks, is only matter of speculation. The plebeians were thus obliged to fight and shed their blood in the defence and support of their new fellow-citizens without being allowed to share any of their rights or privileges, and without even the right of intermarriage (*connubium*). In all judicial matters they were entirely at the mercy of the patricians, and had no right of appeal against any unjust sentence, though they were not, like the clients, bound to have a patronus. They continued to have their own *sacra* which they had had before the conquest, but they were regulated by the patrician pontiffs. (Fest. s. v. *Municipalia sacra*.) Lastly, they were free land-owners, and had their own gentes. That a plebeian, when married to a plebeian woman, had the *patria potestas* over his children, and that if he belonged to a plebeian gens, he shared in the *jura* and *sacra gentilitia* of that gens, are points which appear to be self-evident.

The population of the Roman state thus consisted of two opposite elements; a ruling class or an aristocracy, and the commonalty, which, though of the same stock as the noblest among the rulers, and exceeding them in numbers, yet enjoyed none of the rights which might enable them to take a part in the management of public affairs, religious or civil. Their citizenship resembled the relation of aliens to a state, in which they are merely tolerated on condition of performing certain services, and they are, in fact, sometimes called *peregrini*. While the order of the patricians was perfectly organized by its division into *curiæ*, *decuriæ*, and gentes, the commonalty had no such organization, except its division into gentes; its relations to the patricians also were in no way defined, and it consequently had no means of protecting itself against any arbitrary proceedings of the rulers. That such a state of things could not last, is a truth which must have been felt by every one who was not blinded by his own selfishness and love of dominion. Tarquinius Priscus was the first who conceived the idea of placing the plebeians on a footing of equality with the old burghers, by dividing them into three tribes, which he intended to call after his own name and those of his friends. (Verrius Flaccus, *ap. Fest. s. v. Navia*; Liv. i. 36, &c.; Dionys. iii. 71; Cic. *de Re Publ.* ii. 20.) But this noble plan was frustrated by the opposition of the augur Attus Navius, who probably acted the part of a representative of the patricians. All that Tarquinius could do was to effect the admission of the noblest plebeian families into the three old tribes, who, however, were distinguished from the old patrician families by the names of Ramnes, Titics, and Luceres secundi, and their gentes are sometimes distinguished by the epithet *minores*, as they entered into the same relation in which the

Luceres had been to the first two tribes, before the time of Tarquinius. (Fest. s. v. *Ses Vestas Sacerdotes*; Cic. *de Re Publ.* ii. 20; Liv. i. 35, 47.) This measure, although an advantage to the most distinguished plebeian families, did not benefit the plebeians as an order, for the new patricians must have become alienated from the commonalty, while the patricians as a body were considerably strengthened by the accession of the new families.

It was reserved to his successor, Servius Tullius, to give to the commonalty a regular internal organization and to determine their relations to the patricians. The intention of this king was not to upset the old constitution, but only to enlarge it so as to render it capable of receiving within itself the new elements of the state. He first divided the city into four, and then the subject country around, which was inhabited by plebeians, into twenty-six regions or local tribes (Liv. i. 43; Dionys. iv. 14, &c.), and in these regions he assigned lots of land to those plebeians who were yet without landed property. Niebuhr (ii. p. 162) thinks that these allotments consisted of seven jugera each, an opinion which is controverted by Götting (p. 239, &c.). As regards the four city-tribes, it should be observed that the Aventine and the Capitol were not contained in them: the former forming a part of the country tribes, and the latter being, as it were, the city of the gods. (Varro, *de Ling. Lat.* v. 56, ed. Müller.) The twenty-six country tribes are not mentioned by Livy in his account of the Servian constitution, and where he first speaks of the whole number of tribes (ii. 21; compare Dionys. vii. 64), he only mentions twenty-one instead of thirty. Niebuhr (i. p. 418) is undoubtedly right in reconciling this number with the thirty tribes of Servius by the supposition, that in the war with Porsenna Rome lost one third of her territory, i. e. ten tribes, so that there were only twenty left. As, therefore, after the immigration of the Claudii and their clients, a new tribe was formed (Liv. ii. 16), Livy is right in mentioning only twenty-one tribes. These thirty Servian tribes did not, at least originally, contain any patricians, and even after the Claudii had come to Rome, it is not necessary to suppose that the gens Claudia, which was raised to the rank of patrician, was contained in the new tribe, but the new tribe probably consisted of their clients to whom lands were assigned beyond the Anio. (Liv. l. c.; compare TRIBUS.) Some of the clients of the patricians, however, were probably contained in the Servian tribes. (Dionys. iv. 22, &c.) Each tribe had its praefect called tribunus. (Dionys. iv. 14; Appian, *B. C.* iii. 23; TRIBUNUS.) The tribes had also their own sacra, festivals, and meetings (*comitia tributa*), which were convoked by their tribunes.

This division into tribes with tribunes at their heads was no more than an internal organization of the plebeians, analogous to the division of the patricians into thirty curiae, without conferring upon them the right to interfere in any way in the management of public affairs, or in the elections, which were left entirely to the senate and the curiae. These rights, however, they obtained by another regulation of Servius Tullius, which was made wholly independent of the thirty tribes. For this purpose he instituted a census, and divided the whole body of Roman citizens, plebeians as well as patricians, into five classes, according to

the amount of their property. Taxation and the military duties were arranged according to these classes in such a manner, that the heavier burdens fell upon the wealthier classes. The whole body of citizens thus divided was formed into a great national assembly called *comitatus maximus* or *comitia centuriata*. [COMITIA, p. 333, &c.] In this assembly the plebeians now met the patricians apparently on a footing of equality, but the votes were distributed in such a way that it was always in the power of the wealthiest classes, to which the patricians naturally belonged, to decide a question before it was put to the vote of the poorer classes. A great number of such noble plebeian families, as after the subjugation of the Latin towns had not been admitted into the curiae by Tarquinius Priscus, were now constituted by Servius into a number of equites, with twelve suffragia in the *comitia centuriata*. [EQUITES, p. 471.] Lastly, Servius Tullius is said to have regulated the commerce between the two orders by about fifty laws. (Dionys. iv. 13; Νόμους τοὺς μὲν συναλλακτικὰς καὶ τοὺς περὶ τῶν ἀδικημάτων; compare v. 2, vi. 22; Götting, p. 240; Becker, *L. a.* p. 156.)

In this constitution the plebeians, as such, did not obtain admission to the senate, nor to the highest magistracy, nor to any of the priestly offices. To all these offices the patricians alone thought themselves entitled by divine right. The plebeians also continued to be excluded from occupying any portion of the public land, which as yet was only possessed by the patricians, and were only allowed to keep their cattle upon the common pasture, for which they had to pay to the state a certain sum. It is true that by the acquisition of wealth plebeians might become members of the first property class, and that thus their votes in the *comitia* might become of the same weight as those of the wealthy patricians, but the possibility of acquiring such wealth was diminished by their being excluded from the use of the *ager publicus*. Niebuhr (i. p. 430, &c.) infers from the nature of the Servian constitution that it must have granted to the plebeians greater advantages than those mentioned by our historians: he conceives that it gave to them the right of appeal to their own assembly, and to pass sentence upon such as grossly infringed their liberties, in short that the Servian constitution placed them on the same footing in regard to the patricians, as was afterwards permanently effected by the laws of C. Licinius and L. Sextius. There is no doubt that such might and should have been the case, but the arguments which he brings forward in support of his hypothesis do not appear to be convincing, as has been pointed out by Götting (p. 265, &c.). All that we know for certain is, that Servius gave to the body of the plebeians an internal organization by the establishment of the thirty plebeian tribes, and that in the *comitia centuriata* he placed them, at least apparently, on a footing of equality with the populus. Whether he intended to do more, or would have done more if it had been in his power, is a different question. But facts, like those stated above, were sufficient at a later period, when the benefits actually conferred upon the plebeians were taken away from them, to make the grateful commonalty look upon that king as its great patron, and even regard him as having granted all those rights which subsequently they acquired after many years of hard struggle. Thus what he actually had done, was

exaggerated to what he possibly might have done, or would have wished to do. In this light we have to regard the story that he intended to lay down his royal dignity and to establish the government of two consuls, one of whom was to have been a plebeian.

During the reign of the last king the plebeians not only lost all they had gained by the legislation of his predecessor (Dionys. iv. 43, 44); but the tyrant also compelled them to work like slaves in his great architectural works, such as the cloacæ and the circus.

On the establishment of the republic, the comitia centuriata, and perhaps the whole constitution, such as it had been before the reign of the last Tarquinius, were restored, so that the patricians alone continued to be eligible to all the public offices. (Liv. iv. 6, vi. 40, &c., x. 8.) That the comitia centuriata were restored immediately after the banishment of the Tarquins, may be inferred from the words of Livy (i. 60), who says, that the first consuls were elected *ex commentariis Servii Tullii*, for these words probably refer to the comitia centuriata, in which, according to the regulations of king Servius, the elections were to be held. There was still no connubium between the two orders, and the populus was still in every respect distinct from the plebs. Considering the fact that the patricians reserved for themselves all the powers which had formerly been concentrated in the king, and that these powers were now given to a number of patrician officers, we must admit that the plebeians at the commencement of the republic were worse off than if the kingly rule had continued under the institutions introduced by Servius. They, however, soon gained some advantages. The vacancies which had occurred in the senate during the reign of the last king were filled up with the most distinguished among the plebeian equites (*patres conscripti*, Liv. ii. 1; Dionys. v. 13; Fest. s. v. *Qui patres*; Plut. *Public.* 11; SENATUS), and Valerius Publicola carried a number of *leges* by which the relations between patricians and plebeians were more accurately defined than they had hitherto been, and which also afforded some protection to the plebeians. [LEGES VALERIANÆ.] Both orders acted in common only in the army and the comitia centuriata, in which, however, the patricians exercised an overwhelming influence through the number of their clients who voted in them; and in addition to this all decrees of the centuries still required the sanction of the curiæ. Notwithstanding these disadvantages, the plebeians occupied a position which might soon have enabled them to rise to a perfect equality with the patricians, had not a great calamity thrown them back, and put an end to their political progress. This was the unfortunate war with Porsenna, in which a great number (a third) of the plebeians lost their estates, became impoverished, and perhaps for a time subject to the Etruscans.

In the meanwhile, the patricians, not satisfied with the exercise of all the authority in the state, appear not seldom to have encroached upon the rights granted to the plebeians by the Valerian laws. (Liv. ii. 27.) Such proceedings, and the merciless harshness and oppression on the part of the rulers, could not fail to rouse the indignation and call forth the resistance of the plebeians, who gradually became convinced that it was impossible to retain what they possessed without acquir-

ing more. The struggle which thus originated between the two parties, is, as far as the commonality is concerned, one of the noblest that has ever been carried on between oppressors and oppressed. On the one hand we see a haughty and faithless oligarchy applying all means that the love of dominion and selfishness can devise; on the other hand, a commonality forbearing to the last in its opposition and resistance, ever keeping within the bounds of the existing laws, and striving after power, not for the mere gratification of ambition, but in order to obtain the means of protecting itself against fraud and tyranny. The details of this struggle belong to a history of Rome and cannot be given here; we can only point out in what manner the plebeians gradually gained access to all the civil and religious offices, until at last the two hostile elements became united into one great body of Roman citizens with equal rights, and a state of things arose totally different from what had existed before.

After the first secession, in B.C. 494, the plebeians gained several great advantages. First, a law was passed to prevent the patricians from taking usurious interest of money which they frequently lent to impoverished plebeians (Dionys. vi. 83); secondly, tribunes were appointed for the protection of the plebeians [TRIBUNI]; and lastly, plebeian aediles were appointed. [ÆDILES.] Shortly after, they gained the right to summon before their own comitia tributa any one who had violated the rights of their order (Fest. s. v. *Sacer mons*; Götting, p. 300, &c.), and to make decrees (*plebiscita*), which, however, did not become binding upon the whole nation until the year B.C. 449. [PLEBISCITUM.] A few years after this (445, B.C.), the tribune Canuleius established, by his rogations, the connubium between patricians and plebeians. (Liv. iv. 44, v. 11, 12; Dionys. x. 60, xi. 28; Cic. *de Re Publ.* ii. 37.) He also attempted to divide the consulship between the two orders, but the patricians frustrated the realisation of this plan by the appointment of six military tribunes, who were to be elected from both orders. [TRIBUNI.] But that the plebeians might have no share in the censorial power, with which the consuls had been invested, the military tribunes did not obtain that power, and a new curule dignity, the censorship, was established, with which patricians alone were to be invested. [CENSOR.] Shortly after the taking of Rome by the Gauls, we find the plebeians again in a state little better than that in which they had been before their first secession to the *mons sacer*. In B.C. 421, however, they were admitted to the quaestorship, which opened to them the way into the senate, where henceforth their number continued to increase. [QUAESTOR; SENATUS.] In B.C. 367, the tribunes L. Licinius Stolo and L. Sextius placed themselves at the head of the commonalty, and resumed the contest against the patricians. After a fierce struggle, which lasted for several years, they at length carried a rogation, according to which decemvirs were to be appointed for keeping the Sibylline books instead of duumvirs, of whom half were to be plebeians. (Liv. vi. 37, 42.) The next great step was the restoration of the consulship, on condition that one consul should always be a plebeian. A third rogation of Licinius, which was only intended to afford momentary relief to the poor plebeians, regulated the rate of interest. From this time forward the plebeians also

appear in the possession of the right to occupy parts of the *ager publicus*. (Livy, vii. 16; Niebuhr, iii. p. 1, &c.) In a. c. 366, L. Sextius Lateranus was the first plebeian consul. The patricians, however, who always contrived to yield no more than what it was absolutely impossible for them to retain, stripped the consulship of a considerable part of its power and transferred it to two new curule offices, viz., that of praetor and of curule aedile. [AEDILES; PRAETOR.] But after such great advantages had been once gained by the plebeians, it was impossible to stop them in their progress towards a perfect equality of political rights with the patricians. In a. c. 356 C. Marcus Rutilus was the first plebeian dictator; in a. c. 351, the censorship was thrown open to the plebeians, and in a. c. 336 the praetorship. The Ogulnian law, in a. c. 300, also opened to them the offices of pontifex and augur. These advantages were, as might be supposed, not gained without the fiercest opposition of the patricians and even after they were gained and sanctioned by law, the patricians exerted every means to obstruct the operation of the law. Such fraudulent attempts led, in a. c. 286, to the last secession of the plebeians, after which, however, the dictator Q. Hortensius successfully and permanently reconciled the two orders, secured to the plebeians all the rights they had acquired until then, and procured for their plebiscita the full power of *leges* binding upon the whole nation.

In a political point of view the distinction between patricians and plebeians now ceased, and Rome, internally strengthened and united, entered upon the happiest period of her history. How completely the old distinction was now forgotten, is evident from the fact that henceforth both consuls were frequently plebeians. The government of Rome had thus gradually changed from an oppressive oligarchy into a moderate democracy, in which each party had its proper influence and the power of checking the other, if it should venture to assume more than it could legally claim. It was this constitution, the work of many generations, that excited the admiration of the great statesman Polybius.

We stated above that the plebeians during their struggle with the patricians did not seek power for the mere gratification of their ambition, but as a necessary means to protect themselves from oppression. The abuse which they, or rather their tribunes, made of their power, belongs to a much later time, and no traces of it appear until more than half a century after the Hortensian law; and even then, this power was only abused by individuals, and not on behalf of the real plebeians, but of a degenerating democratical party, which is unfortunately designated by later writers by the name of plebeians, and thus has become identified with them. Those who know the immense influence which religion and its public ministers had upon the whole management of the state, will not wonder that the plebeians in their contest with the aristocracy exerted themselves as much to gain access to the priestly offices as to those of a purely political character; as the latter in reality would have been of little avail without the former. The office of *curio maximus*, which the plebeians sought and obtained nearly a century after the Ogulnian law (Liv. xxvii. 6, 8), seems indeed to afford ground for supposing that in this instance the plebeians sought a distinction merely for the pur-

pose of extending their privileges; but Ambroesch (*Studien u. Andeutungen*, p. 95) has rendered it more than probable that the office of *curio maximus* was at that time of greater political importance than is generally believed. It is also well known that such priestly offices as had little or no connection with the management of public affairs, such as that of the *rex sacrorum*, the *flamines*, *salii*, and others, were never coveted by the plebeians, and continued to be held by the patricians down to the latest times. (Dionys. v. 1; Cic. *pro Dom.* 14; Fest. s. v. *Major. flam.*)

After the passing of the Hortensian law, the political distinction between patricians and plebeians ceased, and with a few unimportant exceptions, both orders were placed on a footing of perfect equality. Henceforth the name *populus* is sometimes applied to the plebeians alone, and sometimes to the whole body of Roman citizens, as assembled in the *comitia centuriata* or *tributa*. (Liv. xxvii. 5; Cic. *ad Att.* iv. 2; Gell. x. 20.) The term *plebs* or *plebecula*, on the other hand, was applied in a loose manner of speaking to the multitude or populace in opposition to the nobles or the senatorial party. (Sallust, *Jug.* 63; Cic. *ad Att.* i. 16; Hor. *Epist.* ii. l. 158; Hirt. *Bell. Alex.* 5, &c.)

A person who was born a plebeian, could only be raised to the rank of a patrician by a *lex curiata*, as was sometimes done during the kingly period, and in the early times of the republic. Caesar was the first who ventured in his own name to raise plebeians to the rank of patricians, and his example was followed by the emperors. [PATRICII.]

It frequently occurs in the history of Rome that one and the same gens contain plebeian as well as patrician families. In the gens Cornelia, for instance, we find the plebeian families of the Balbi, Mammulae, Merulae, &c., along with the patrician Scipiones, Sullae, Lentuli, &c. The occurrence of this phenomenon may be accounted for in different ways. It may have been, that one branch of a plebeian family was made patrician, while the others remained plebeians. (Cic. *Brut.* 16, *de Leg.* ii. 3; Sueton, *Ner.* 1.) It may also have happened that two families had the same nomen gentilicium without being actual members of the same gens. (Cic. *Brut.* 16; Tacit. *Annal.* iii. 48.) Again, a patrician family might go over to the plebeians, and as such a family continued to bear the name of its patrician gens, this gens apparently contained a plebeian family. (Liv. iv. 16; Plin. *H. N.* xviii. 4.) At the time when no *connubium* existed between the two orders, a marriage between a patrician and a plebeian had the consequence, that the same nomen gentilicium belonged to persons of the two orders. (Niebuhr, ii. p. 337, n. 756; Suet. *Aug.* 2.) When a peregrinus obtained the *civitas* through the influence of a patrician, or when a slave was emancipated by his patrician master, they generally adopted the nomen gentilicium of their benefactor (Cic. *ad Fam.* xiii. 35, 36, *c. Verr.* iv. 17; Appian, *Civil.* 100), and thus appear to belong to the same gens with him. (Comp. Becker, *l. c.* p. 133, &c.; Ihne, *l. c.*) [L. S.]

PLEBISCITUM, a name properly applied to a law passed at the *Comitia Tributa* on the rogation of a Tribune. According to Laelius Felix (Gellius, xv. 27, and the note in the edition of Gronovius), he who had authority to convene not the *universus populus*, but only a part, could hold

a Concilium, but not Comitia; and as the Tribunes could not summon the Patricii nor refer any matter to them, what was voted upon the proposal of the tribunes was not a Lex, but a Scitum. But in course of time Plebiscita obtained the force of Leges, properly so called, and accordingly they are sometimes included in the term Leges. [LEX.]

The progress of change as to this matter appears from the following passages. A Lex Valeria, passed in the Comitia Centuriata B. C. 449 (Liv. iii. 55, 67) enacted that the Populus should be bound (*leneretur*) by that which the Plebs voted tributum; and the same thing is expressed in other words thus: "Scita plebis injuncta patribus." A Lex Publilia, 339 B. C. (Liv. viii. 12), was passed to the effect that Plebiscita should bind all the Quirites; and a Lex Hortensia B. C. 286, to the effect that Plebiscita should bind all the populus (*universus populus*) as Gaius (i. 3) expresses it; or, "ut eo jure, quod plebs statuisset, omnes Quirites teneretur," according to Laelius Felix, as quoted by Gellius; and this latter is also the expression of Pliny (*Hist. Nat.* xv. 10). The Lex Hortensia is referred to as the Lex which put Plebiscita as to their binding force exactly on the same footing as Leges. The effect of these Leges is discussed in LEX under the several heads of VALERIAN, PUBLILIAN, HORTENSIA.

The principal Plebiscita are mentioned under LEX. [G. L.]

PLECTRUM. [LYRA.]

PLEMO'CHOAE (πλημοχόαι) [ELEUSINIA, p. 454, a.]

PLETHRON (πλέθρον) was originally a measure of surface, which is the only sense of the word πλέθρον in Homer. (*Il.* xxi. 407, *Od.* xi. 577.) It seems to have been the fundamental land measure in the Greek system, being the square of 100 feet, that is, 10,000 square feet. The later Greek writers use it as the translation of the Roman *jugo-rum*, probably because the latter was the standard land measure in the Roman system; but, in size, the *plethron* answered more nearly to the Roman *actus*, or half-juggerum, which was the older unit of land measures. The *plethron* would answer exactly to the *actus*, but for the difference caused by the former being decimal (100×100), and the other partly duodecimal (120×120). The *plethron* contained 4 *aruras* of 2500 square feet each.

2. As frequently happened with the ancient land measures, the side of the *plethron* was taken as a measure of length, with the same name. This *plethron* was equal to 100 feet (or about 101 English feet) = $66\frac{2}{3}$ πήγεις = 10 ἄκαναι or κάλαμοι. It was also introduced into the system of itinerary measures, being 1-6th of the *stadium*. (Herod. ii. 124; comp. *MENSURA*, p. 753, b., and the Tables.) [P. S.]

PLINTHUS (πλίνθος), any rectangular parallelepiped. 1. A brick or tile. [LATER]. 2. The quadrangular piece of stone which should properly form the lowest member of the base of a column, and which may be supposed to have originated in the use of a tile or a flat piece of wood to prevent the shaft from sinking into the ground; although very frequently the plinth is wanting, the highest step or other basement forming a sort of continuous plinth or *podium*. [SPIRA]. [P. S.]

PLUMARII, a class of persons, mentioned by Vitruvius (vi. 7, p. 177, ed. Bip.), Varro (*ap. Nonium*, ii. p. 716), and in inscriptions. It can-

not be decided with certainty what their exact occupation was: their name would lead us to suppose that it had something to do with feathers (*plumae*). Salmasius (*ad Vopisc. Carin.* c. 20) supposes that they were persons who wore in garments golden or purple figures made like feathers. The word, however, probably signifies all those who work in feathers, as *lanarii* those who work in wool, and *argentarii* those who work in silver. Seneca (*Ep.* 90) speaks of dresses made of the feathers of birds. (Becker, *Gallus*, vol. i. pp. 44—48.)

PLU'TEUS, appears to have signified in general any kind of protection or shelter, and was hence used in the following special significations:—1. A kind of shed made of hurdles and covered with raw hides, which could be moved forward by small wheels attached to it, and under which the besiegers of a town made their approaches. (Festus, s. v.; Veget. iv. 15; Liv. xxiv. 17.) 2. A parapet or breastwork made of boards and similar materials, placed on the vallum of a camp, on moveable towers or other military engines, on rafts, the decks of ships, &c. (Festus, s. v.; Caes. *Bell. Gall.* vii. 25, 41, 72, *Bell. Civ.* i. 25.) 3. The board at the side of a bed. The side at which a person entered the bed was open and called *sponda*: the other side, which was protected by a board, was called *pluteus*. (Suet. *Cul.* 26; Martial. iii. 91.) [LÆTUS, p. 674, b.] 4. Cases of some kind upon the walls of houses on which small statues and busts were placed. (Dig. 29. tit. i. s. 17; Juv. ii. 7.)

PLYNTE'RIA (πλυντήρια), from πλύνειν, to wash, was a festival celebrated at Athens every year, on the 22nd of Thargelion, in honour of Athena, surnamed Aglauros (Phot. *Lex.* s. v.; Plut. *Alcib.* 34; Harpocrat. *Suid.* s. v.), whose temple stood on the Acropolis. (Herod. viii. 53; Hesych. s. v. Πλυντήρια.) Plutarch states that the festival took place on the 25th, but probably only because it lasted for several days. (Dodwell, de *Cyclois*, p. 349; comp. *Philol. Mus.* ii. p. 234.) The day of this festival was at Athens among the ἀποφώδιστες or *dies nefasti*; for the temple of the goddess was surrounded by a rope to preclude all communication with it (Pollux, viii. 141); her statue was stripped of its garments and ornaments for the purpose of cleaning them, and was in the meanwhile covered over to conceal it from the sight of man. (Plut. *L. c.*; Xen. *Hellen.* i. 4. § 12.) The persons who performed this service were called πρᾶξιερ-γίδαι. (Plut. *L. c.*; Hesych. s. v.) The city was therefore, so to speak, on this day without its protecting divinity, and any undertaking commenced on it was believed to be necessarily unsuccessful. A procession was also held on the day of the Plynteria, in which a quantity of dried figs, called ἡγηγορία, was carried about. (Etymol. Magn.; Hesych. s. v. ἡγηγορία; Phot. *Lex.* s. v.) [L. S.]

PNYX. [ECCLÆSIA, p. 440, a.]

PO'CULUM was any kind of drinking-cup. It must be distinguished from the *Crater* or vessel in which the wine was mixed [CRATER], and from the *Cyathus*, a kind of ladle or small cup, which was used to convey the wine from the *Crater* to the *Poculum* or drinking-cup. [CYATHUS.] Thus Horace (*Carm.* iii. 19. 11)—

"tribus aut novem
Miscetur cyathis pocula convivia."

PODIUM, in architecture, is a continued pedestal, for supporting a row of columns, or serving for a parapet, or forming a sort of terrace, as the *podium* in the theatre and amphitheatre. (Vitruv. iii. 3, v. 7, vii. 4; **AMPHITHEATRUM**.) [P. S.]

POENA (Greek, ποινή). The Roman sense of this word is explained by Ulpian (Dig. 50. tit. 16. s. 13) at the same time that he explains *Fraus* and *Multa*. *Fraus* is generally an offence, *Noxae* and *Poena* is the punishment of an offence, *Noxae vindicta*. *Poena* is a general name for any punishment of any offence: *Multa* is the penalty of a particular offence, which is now (in Ulpian's time) pecuniary. Ulpian says in his time because by the Law of the Twelve Tables, the *Multa* was pecuniary or a certain number of oxen and sheep. (Plin. xviii. 3; Festus, s. v. *Multam*, *Peculatus*.) [**LEX ATERNA TARPEDIA**] Ulpian proceeds to say that *Poena* may affect a person's caput and existimatio, that is, *Poena* may be loss of citizenship and *Infamia*. A *Multa* was imposed according to circumstances, and its amount was determined by the pleasure of him who imposed it. A *Poena* was only inflicted when it was imposed by some *lex* or some other legal authority (*quo alio jure*). When no *poena* was imposed, then a *multa* or penalty might be inflicted. Every person who had *jurisdictio* (this seems to be the right reading instead of *judicatio*) could impose a *multa*; and these were *magistratus* and *praesides provinciarum*. A *Poena* might be inflicted by any one who was intrusted with the judicial prosecution of the offence to which it was affixed. The legal distinction between *Poena* and *Multa* is not always observed by the Roman writers. [G. L.]

POLEMARCHUS (πολέμαρχος). An account of the functions of the Athenian magistrate of this name is given under **ARCHON**. Athens, however, was not the only state of Greece which had officers so called. We read of them at Sparta, and in various cities of Boeotia. As their name denotes, they were originally and properly connected with military affairs, being entrusted either with the command of armies abroad, or the superintendence of the war department at home: sometimes with both. The polemarchs of Sparta appear to have ranked next to the king, when on actual service abroad, and were generally of the royal kindred or house (*γένος*). (Herod. vii. 173.) They commanded single *morae* (Xen. *Rep. Lac.* xi. 4), so that they would appear to have been six in number (Müller, *Dor.* iii. 12. § 4), and sometimes whole armies. (Herod. l. c.) They also formed part of the king's council in war, and of the royal escort called *δαμοσία* (Xen. *Hell.* vi. 4. § 14), and were supported or represented by the officers called *συμφορεῖς*. (Müller, iii. 12. § 5.) The polemarchs of Sparta had also the superintendence of the public tables: a circumstance which admits of explanation from the fact that Lycurgus is said to have instituted the *sysitia* for the purposes of war, and therefore as military divisions; so that the Lacedaemonians would eat and fight in the same company. (Müller, iii. 12. § 4.) But in addition to their military functions, and the duties connected therewith, the polemarchs of Sparta had a civil as well as a certain extent of judicial power (Id. iii. 7. § 8), in which respect they resembled the *ἄρχων πολέμαρχος* at Athens. In Boeotia also there were magistrates of this name. At Thebes, for instance, there appears to have been two, perhaps

elected annually, and from what happened when Phoeibidas, the Lacedaemonian commander, seized the Cadmeia or citadel of Thebes (B. C. 382), we may infer that in times of peace they were invested with the chief executive power of the state, and the command of the city, having its military force under their orders. (Xen. *Hell.* v. 2. § 30.) They are not, however, to be confounded with the Boeotarchs. At Thebes also (Plut. *Demetr.* c. 39) there were officers of this name, and likewise in Aetolia (Polyb. iv. 79) and Arcadia. At Cynaetha in the latter country the gates of the city were entrusted to the special care of the Polemarchs: they had to keep guard by them in the day-time, and to close them at night, and the keys were always kept in their custody. (Id. iv. 18.) [R. W.]

POLETAE (πωληται), a board of ten officers, or magistrates (for they are called *ἄρχη* by Harpocration), whose duty it was to grant leases of the public lands and mines, and also to let the revenues arising from the customs, taxes, confiscations, and forfeitures. Of such letting the word *πωλεῖν* (not *μισθούν*) was generally used, and also the correlative words *ἀντίσθαι* and *πρίασθαι*. Their official place of business was called *πωλητήριον*. One was chosen from each tribe. A chairman presided at their meetings (*ἐκπυρρῆνε*). In the letting of the revenue they were assisted by the managers of the theoric fund (*τὸ θεωρικόν*), and they acted under the authority of the Senate of Five Hundred, who exercised a general control over the financial department of the administration. Resident aliens, who did not pay their residence-tax (*μετοίκιον*), were summoned before them, and if found to have committed default, were sold in a room called *πωλητήριον τοῦ μετοίκου*. (Demosth. c. *Aristog.* 787.) Other persons who had forfeited their freedom to the state were also sold by the *πωληται*, as foreigners who had been convicted of usurping the rights of citizenship. (Harpoc. and Suid. s. v. *Πωληται* and *μετοίκιον*; Pollux, viii. 99; Böckh, *Publ. Econ. of Athens*, p. 155, 2d ed.; Meier, *de bon. damn.* p. 41.) [C. R. K.]

POLITEIA, POLITES (πολιτεία, πολίτης) [**CIVITAS** (GREEK).]

POLITOPHY'LACES (πολιτοφύλακες). [**TAGUS**.]

POLLICAR'IS. [PNA.]

POLLICITATIO. [OBLIGATIONES, p. 821.]

POLLINCTO'RES. [FUNUS, p. 558, a.]

POLUS (πόλος), in astronomy, is a very difficult word to explain in a perfectly satisfactory manner, on account of the various senses in which it is used. In such a case, the only safe guide to the original meaning of a word is to determine, if possible, its sense in the earliest passage in which it occurs, and to compare that sense with what is known of the etymology of the word. Now it is evident that *πόλος* contains the root ΠΕΛ, which we find in *πέλομαι* and other words, and the fundamental idea attached to which appears to be that of *motion*. Then, turning to the Greek authors, we find the word first occurring in the well-known passage in which Aeschylus (*Prom.* 427) speaks of Atlas as supporting on his shoulders the *pole of heaven*, that is, the *vault of the sky*, which was called *πόλος* in accordance with the notion, which prevailed from the time of Thales, that the sky was a hollow sphere, which moved continually round the earth, carrying the heavenly bodies with it. (Comp. Eurip. *Or.* 1685; Pseudo-Plat. *Διόχοι*

p. 371, b; Aristoph. *Av.* 179; Alex. *ap. Ath.* p. 60, a; Ukert, *Geog. d. Griech. u. Röm.* vol. i. pt. ii. p. 115; Grote, *History of Greece*, vol. ii. pp. 154, 155.) The next passage, in order of time, is that in which Herodotus (ii. 109) says that the Greeks learnt from the Babylonians *πόλον* καὶ γνῶμονα καὶ τὰ δυνάμειδεκα μέρεα τῆς ἡμέρας, where the later commentators and lexicographers for the most part explain the word as meaning an astronomical instrument, different from the γνῶμων or sun dial. Mr. Grote (*l.c.*) interprets the passage as signifying that the Greeks "acquired from the Babylonians the conception of *the pole*, or of the heavens as a complete hollow sphere, revolving round and enclosing the earth." But Herodotus certainly seems to be speaking of something more definite and specific than a mere conception respecting the sky; and, on the whole, the most probable explanation is that of Scaliger and Salmasius, as modified by recent astronomers and scholars (see Bailly, Delambre, Letronne, and Creuzer, as quoted by Bähr, *ad loc.*), namely, that the word signifies *the concave hemispherical sun-dial*, made in imitation of the heavenly sphere, and hence called by the same name, πόλος, which was the earliest form of the sun-dial, inasmuch as it required less skill than the delineation of a sun-dial on a plane surface. The γνῶμων was not another different sort of sun-dial, but the *index*, or, as we still say, *gnomon* of the dial itself, the shadow of which, falling upon the meridian lines of the sun-dial, indicated the hours of the day as marked by the motion of the sun in the true heavenly πόλος; so that, in fact, the words πόλον καὶ γνῶμονα together describe the instrument. Pollux (ix. 46) explains πόλος as meaning ὁρολόγιον, in a passage which he quotes from the *Gerytades* of Aristophanes; and Lucian (*Leasph.* 4) speaks of the γνῶμων *overshadowing the middle of the πόλος*, — a striking confirmation of the explanation we have given. The γνῶμων alone was, in fact, not originally a sun-dial, but a mere upright stile, the length of the shadow of which was measured, to obtain a rough notion of the altitude of the sun and thence of the time of the day: afterwards, a dial was added with lines marked upon it, so as to form a true sun-dial, which was still called γνῶμων. The simple *gnomon* was used by the Greek geographers to determine the latitude of places. (Comp. *HOROLOGIIUM*.)

For the other meanings of πόλος, see the Greek Lexicons. [P. S.]

POLYMITA. [TELA.]

POMOERIUM. This word is compounded of *post* and *moerium* (*murus*), in the same manner as *pomeridiem* of *post* and *meridiem*, and thus signifies a line running by the walls of a town (*pone* or *post muros*). The pomoerium, however, did not consist of the actual walls or fortifications of a place, but was a symbolical wall, and the course of the pomoerium itself was marked by stone pillars (*cippi pomoerii*, Varro, *de Ling. Lat.* v. 143, ed. Müller), erected at certain intervals. The custom of making a pomoerium was common to the Latins and Etrus-

POMOERIUM.

cans, and the manner in which it was done in the earliest times, when a town was to be founded, was as follows:—A bullock and a heifer were yoked to a plough, and a furrow was drawn around the place which was to be occupied by the new town, in such a manner that all the clods fell inward. The little mound thus formed was the symbolical wall, and along it ran the pomoerium, within the compass of which alone the city-*auspices* (*auspicia urbana*) could be taken. (Varro, *de Ling. Lat.* l. c.) That the actual walls or fortifications of a town ran near it, may naturally be supposed, though the pomoerium might either be within or without them. This custom was also followed in the building of Rome, and the Romans afterwards observed it in the establishment of their colonies. The sacred line of the Roman pomoerium did not prevent the inhabitants from building upon or taking into use any place beyond it, but it was necessary to leave a certain space on each side of it unoccupied so as not to unhallow it by profane use. (Liv. i. 44.) Thus we find that the Aventine, although inhabited from early times, was for many centuries not included within the pomoerium. (Gell. xiii. 14.) The whole space included in it was called *ager effutus* or *finis effuti*. The pomoerium of Rome was not the same at all times; as the city increased the pomoerium also was extended, but this extension could, according to ancient usage, be made only by such men as had by their victories over foreign nations increased the boundaries of the empire (Tacit. *Annal.* xii. 23), and neither could a pomoerium be formed nor altered without the augurs previously consulting the will of the gods by augury, whence the *jus pomoerii* of the augurs. (Dionys. iv. 13; Cic. *de Div.* ii. 35.) The formula of the prayer which the augurs performed on such occasions, and which was repeated after them by the people who attended, is preserved in Festus (*s. v. Prosimarium*).

The original pomoerium of Romulus ran, according to Gellius (*l.c.*), around the foot of the Palatine, but the one which Tacitus (*Annal.* xii. 24) describes as the pomoerium of Romulus comprised a much wider space, and was, as Niebuhr thinks (*Hist. of Rom.* i. p. 288; compare Bunsen, *Beschreib. d. Stadt Rom*, i. p. 138; Sachse, *Beschreib. von Rom*, i. p. 50), an enlargement of the original compass, taking in a suburb or borough. Niebuhr also believes that pomoerium properly denotes a suburb taken into the city. The Romulan pomoerium, according to Tacitus, ran from the Forum Boarium (the arch of Septimius Severus) through the valley of the Circus so as to include the *ara maxima Herculis*; then along the foot of the Palatine to the *ara Consi*, and thence from the Septizonium to the *curiae veteres* (a little below the baths of Trajan), along the top of the Velia to the *Sacellum Larium*, and lastly by the *via sacra* to the Forum. From the eastern side of the Forum to the Velabrum there was a swamp, so that Tacitus does not mention the line of the pomoerium here. Servius Tullius again extended the pomoerium (Liv. i. 44; Dionys. iv. 13), but the Aventine was not included, either because the auspices here taken by Remus had been unfavourable, or, which is more probable, because there stood on this hill the temple of Diana, the common sanctuary of the Latins and Romans. (Gell. *l.c.*; Varro, *de Ling. Lat.* v. 43.) The Aventine did not become included within the pomoerium until the

* In the article *HOROLOGIIUM* will be found statements differing in some minor points from those in this article: such differences are unavoidable when a difficult subject is discussed by different writers; and they may even be useful to the reader who wishes to examine the question thoroughly. [Ed.]

time of the Emperor Claudius. (Gell. *l. c.*; Tacit. *Annal.* xii. 23.) Dionysius (*l. c.*) states that down to his time nobody had extended the pomœrium since the time of King Servius, although we know from authentic sources that at least Augustus enlarged the pomœrium (Bunsen, *l. c.* p. 139), and the same is said of Sulla and J. Caesar. (Tacit. *Annal.* *l. c.*; Gell. *l. c.*; Fest. *s. v.* *Prosinurium*; Cic. *ad Att.* xiii. 20; Dion Cass. xliii. 50, xliv. 49.) The last who extended the pomœrium of Rome was the Emperor Aurelian, after he had enlarged the walls of the city. (Fl. Vopisc. *Div. Aurel.* 21; comp. Becker, *Handbuch der Röm. Alterth.* i. p. 92, &c.) [L. S.]

POMPA (πομπή), a solemn procession, as on the occasion of a funeral, triumph, &c. (Cic. *pro Mil.* 13; Suet. *Jul. Cæs.* 37, &c.) It is, however, more particularly applied to the grand procession with which the games of the Circus commenced (*Pompa Circensis*). [CIRCUS.]

PONDERA (σβάμα). The considerations, which lie at the basis of the whole subject of weights and measures, both generally, and with special reference to the ancient Greek and Roman systems, have already been mentioned in the introductory part of the article *MENSURA*. In the present article it is proposed to give a brief general account of the Greek and Roman systems of weights.

1. *Early Greek Weights*. — It has been already stated, in the article *MENSURA*, that all the knowledge we have upon the subject goes to prove that, in the Greek and Roman metrical systems, weights preceded measures; that the latter were derived from the former; and both from a system which had prevailed, from a period of unknown antiquity, among the Chaldeans at Babylon. This system was introduced into Greece, after the epoch of the Homeric poems; for, of the two chief denominations used in the Greek system, namely, *τάλαντον* (*talentum*) and *μνᾶ* (*mina*), Homer uses only the former, which is a genuine Greek word, meaning weight, the other being an Oriental word of the same meaning. (See NUMMUS, p. 810; where some things, which more properly belong to this article, have been necessarily anticipated.) Homer uses *τάλαντον*, like *μέτρον*, in a specific sense (*Il.* xxiii. 260—270); and indeed in all languages the earliest words used for weight are merely generic terms specifically applied; such are *τάλαντον*, *maneh* (*μνᾶ*), *libra*, and our own *pondus*, from *pondus*. Hence the introduction of the foreign word *maneh* (*μνᾶ*) by the side of the native word *τάλαντον* indicates the introduction of a new standard of weight; which new standard soon superseded the old; and then the old word *τάλαντον* was used as a denomination of weight in the new system, quite different from the weight which it signified before. This last point is manifest from the passages in Homer, in which the word is used in a specific sense, especially in the description of the funeral games (*l. c.*), where the order of the prizes proves that the *talent* must have been a very much smaller weight than the later talent of 60 minae, or about 82 pounds avoirdupois; and traces of this ancient small talent are still found at a very much later period. Thus we arrive at the first position in the subject, that the Greek system of weight was post-Homeric.

2. *The Greek System in the Historical Period*. — Of course, by the Greek system here is meant the system which prevailed throughout Greece in

the historical times, and which contained four principal denominations, which, though different at different times and places, and even at the same place for different substances, always bore the same relation to each other. These were the *Talent* (*τάλαντον*), which was the largest, then the *Mina* (*μνᾶ*), the *Drachma* (*δραχμή*), and the *Obol* (*ὀβολός*). The two latter terms are, in all probability, genuine Greek words, introduced for the purpose of making convenient subdivisions of the standard, *δραχμή* signifying a *handful*, and *ὀβολός* being perhaps the same as *ὀβερός*, and signifying a small wedge of silver; so that these words again fall under the description of generic terms specifically applied.

These weights were related to one another as follows:—

1 Talent contained	-	-	60 Minae.
1 Mina	"	-	100 Drachmas.
1 Drachma	"	-	6 Obols.

Their relative values are exhibited more fully in the following table:—

Obol		
6	Drachma	
600	100	Mina
36,000	6000	60 Talent.

3. *Derivation of this System from Babylon*. — Now, in this system, the unhellenic word *μνᾶ* indicates, as already observed, the source from which the standard was derived. This word is undoubtedly of Semitic origin; and it seems to belong more especially to the Chaldee dialect, in which it signifies *number* or *measure* in its widest sense, the proper word for weight being *tekel* or *shekel*.* (See Dan. v. 25, 26, where both words occur). In Hebrew it is used as a specific weight, equal to 50 or 60 shekels† (1 Kings, x. 17; Ezra, ii. 69; Nehem. vii. 71, 72; Ezek. xlv. 12). The word was also used in Egypt, in the sense of a fluid measure and also of a weight of water. (See Böckh, *Metrol. Untersuch.* c. iv.) From an examination of several passages of the Greek writers, by the light of the etymological signification of the word *μνᾶ*, Böckh arrives at the following conclusions, which, if not strictly demonstrated, are established on as strong grounds as we can probably ever hope to obtain in so difficult a subject: (1) that in the astronomical observations of the Chaldees and Egyptians, time was measured by the running out of the water through an orifice:—(2) that the quantity of the water which so ran out was estimated both by measure and by weight:—(4) that this mode of measuring time led naturally to the determination of a connected system both of weights and measures, the unit of which was the *maneh* (*μνᾶ*), which originally signified a definite quantity of water, determined either by weight or measure, and was afterwards used especially in the sense of a definite weight:—(5) that this system passed from Assyria to Phœnicia, and thence to

* The *t* and *sh* are merely dialect variations.

† Which is the true value is doubtful. Perhaps the two values were used at different places, according as the duodecimal or decimal system prevailed.

the Greeks, who are expressly stated to have derived from Babylon their method of dividing the day and measuring time, and other important usages, and whose most ancient talent (the Aeginetan) was still, in the historical times, identical with the Babylonian.

4. *The Babylonian Talent.*—The Babylonian talent itself was current in the Persian Empire as the standard weight for silver. Under Darius the son of Hystaspes, the silver tribute of the provinces was estimated by the Babylonian talent, their gold tribute by the Euboic; and coined silver was also paid from the royal treasury according to the Babylonian talent. (Herod. iii. 89, foll.; Aelian. *V. H.* i. 22.) Now the two standards here mentioned are connected by Herodotus by the statement that the *Babylonian talent is equal to 70 Euboic minae*, which, since every talent contained 60 minae, gives 70 : 60 for the ratio of the Babylonian talent to the Euboic. There are, however, very sufficient reasons for concluding that 70 is here a round number, not an exact one. (See Böckh, c. v.) Pollux gives the same ratio (70 : 60) for that of the Babylonian to the Attic talent; for he says that the Babylonian talent contained 70 Attic minae and 7000 Attic drachmae (ix. 86); and it is probable that this statement is founded on the testimony of Herodotus, but that Pollux substituted the familiar Attic standard for the less known Euboic, which two standards he knew to have some close connection with each other, and so he fell into the error of making them precisely equal. The same correction must be applied to the testimony of Aelian (*l. c.*), who makes the Babylonian talent equal to 72 Attic minae; and in this statement, so corrected, we have probably the true ratio of the Babylonian talent to the Euboic, namely 72 : 60 or 6 : 5. In such arguments as these, it is extremely important to remember that the evidence is not that of Pollux and Aelian, who could not possibly give any independent testimony on such a subject, but that of the ancient authorities whom they followed, and by whom the term *Attic* may have been used *truly* as equivalent to *Euboic*; for the Attic standard before the legislation of Solon was the same as the Euboic, and this standard was still retained in commerce after Solon's alterations.* In this sense there can be little doubt that, in the statement of Aelian, we have the testimony of some ancient writer, who gave a more exact value than the round number which Herodotus deemed sufficient for his purpose as an historian; and the truth of his testimony is confirmed, not only by the greater exactness of the number, but by its very nature; for, not only do we find in 70 ($= 7 \times 10$) a prime factor which is most unlikely to have entered into a system of

weights, namely 7, but in 72 ($= 6 \times 12$) as well as in 60 (5×12) we have the duodecimal computation which we know to have prevailed most extensively in the early metrical systems. The division of the day into 12 hours, which Herodotus expressly ascribes to the Babylonians, is not only a striking example of this, but a fact peculiarly important in connection with the idea that the measurement of time by water led to the invention of the Babylonian system of weights. It is also important to observe that these two ancient systems, the Babylonian and the Euboic, differ from one another in a proportion which is expressed by multiplying 12 by the numbers which form the bases of the decimal and duodecimal systems respectively, namely, 6 and 5. In connection with this fact, it is interesting to observe that the Hebrew talent, which was no doubt essentially the same as the Babylonian, is made, by different computations, to consist of 60 or 50 *maneh*.

Indeed, the whole of the Hebrew system throws important light on the Babylonian, and on its connection with the Greek. The outline of this system is as follows:—

Gerah				
10	Bekah			
20	2	Shekel		
1000	100	50	Maneh	
60,000	6000	3000	60	Kikkas

where the principal unit is the *Shekel*, which can be identified with the principal unit of the old Greek system (in its chief application to coined money), namely, the *didrachm* or old *stater*. Hence we have the

<i>Kikkas</i>	equivalent to the <i>talent</i>	
<i>Maneh</i>	"	<i>mina</i>
<i>Shekel</i>	"	<i>didrachm</i> or <i>stater</i>
<i>Bekah</i>	"	<i>drachma</i> .

To this part of the subject, which we have not space to pursue further, Böckh devotes a long and elaborate chapter (c. vi. *Hebräisches, Phöniciſches, und Syriſches Gewicht und Geld*).

5. *The Aeginetan Talent.*—Returning to the connection between the Babylonian and Greek talent, we have seen that the Babylonian talent contained 72 Euboic minae. It will presently appear that the Euboic talent and mina were the same as the great Attic talent and mina, which were in use before the reduction effected in them by Solon; and further that the nature of that reduction was such that the Old Attic (Euboic) talent was equivalent to 8333½ New Attic (Solonian) drachmae, and the Euboic mina to 138½ Solonian drachmae. Now the Babylonian talent contained 72 Euboic minae, that is ($138\frac{1}{2} \times 72 =$) 10,000 Solonian drachmae. But 10,000 Solonian drachmae were equivalent to an Aeginetan talent. (Pollux, ix. 76, 86; comp. NUMMUS, p. 810, a.) Therefore, the *Aeginetan Talent was equivalent to the Babylonian*. What is meant precisely by the *Aeginetan talent*, and how this talent was established in Greece by the legislation of Pheidon, has already been explained under NUMMUS. The only step remaining to complete the exposition of the outline of the sub-

* It is necessary here to caution the student against an error, which he might mistake for an ingenious discovery; into which Böckh himself fell in his *Public Economy of Athens*; and which Mr. Hussey has adopted; and to which therefore the English student is much exposed. This error consists in assuming that both Herodotus and Aelian may be right; and thus that the Babylonian talent was equal to 70 Euboic or 72 Attic minae; and therefore that the ratio of the Euboic talent to the Attic was 72 : 70. It will presently be shown that this ratio was not 72 : 70, but 100 : 72, i. e. 72 : 51·84.

ject is the obvious remark that Pheidon must have arranged his standard of weights by that which had already been introduced into Greece by the commerce of the Phœnicians, namely, the Babylonian.

6. *The Euboic Talent.*—In the foregoing remarks, the *Euboic talent* has been continually referred to as a standard with which to compare the Babylonian. We have now to investigate independently its origin and value. The name *Euboic*, like the name *Aeginetan*, is calculated to mislead, as we see in the absurd explanations by which some of the grammarians attempt to account for its origin. (See NUMMUS, p. 810.) That the name comes from the island of Eubœa, and that the Euboic standard was not only used there, but was widely diffused thence by the Chalcidic colonies, admits of no reasonable doubt; but it is not very probable that the standard originated there. The most important testimony respecting it is the statement already quoted, that Darius reckoned the gold tribute of his satrapies in Euboic talents. (Herod. iii. 89, 95.) Böckh (c. viii.) thinks it incredible that the Persian king should have made this use of a Greek standard; and, before him, the best of all the writers on metrology, Raper, had acknowledged the Oriental origin of the standard. (*Philos. Trans.* vol. lxi. p. 486.) This view derives also some support from the curious numerical relation already noticed between the Babylonian and Euboic scales; which suggests the idea that the *minæ* of the two scales may have been derived from the subdivision of the same primary unit, in the one, into parts both decimal and duodecimal, that is, sexagesimal (60), in the other, into parts purely duodecimal (72); and then, for the sake of uniformity, a talent of the latter scale was introduced, containing, like the other, 60 *minæ*. Be this as it may, it can be affirmed with tolerable safety that the Euboic talent is derived from a standard of weight used for gold, which existed in the East, in the earliest historical period, by the side of the Babylonian standard, which was used chiefly for silver: that, at an early period, it was introduced by commerce into Eubœa, from which island it derived the name by which it was known to the Greeks, on account of its diffusion by the commercial activity of the Eubœans, just as the Babylonian standard obtained its Greek name from the commercial activity of the Aeginetans. (Comp. NUMMUS, l. c.)

The examination of the testimonies respecting the value of this standard involves a discussion too intricate to be entered upon here, although it is one of the most interesting points of the whole subject. We must be content to refer the reader to the masterly argument of Böckh (c. viii.), who comes to the following conclusions:—that the Euboic standard was not, as some have thought, the same as the Aeginetan; nor the same, or but slightly different from, the Solonian Attic; but the same as the old (ante-Solonian) Attic:—that its true ratio to the Babylonian, or Aeginetan, was that given in round numbers by Herodotus, as 60 : 70, and in exact numbers by Aelian (who by Attic means old Attic) as 60 : 72, that is, 5 : 6; and that its ratio to the Solonian was, as will presently be shown, 25 : 18. These views are confirmed, not only by the consistency of the results to which they lead, but by the decisive evidence of the existing coins of the Euboic standard. [NUMMUS.]

These two standards form the foundation of the whole system of Greek weights. But the second received an important modification by the legislation of Solon; and this modification became, under the name of the *Attic silver talent*, the chief standard of weight throughout the East of Europe, and the West of Asia. We proceed to notice both of the Attic standards.

7. *The Old Attic Talent, and the Solonian Talent.*—We have already noticed, under NUMMUS (p. 812, b.), Plutarch's account of the reduction effected by Solon in the Attic system of weights and money, according to which the old weights were to the new in the proportion of 100 : 73. An important additional light is thrown on this matter by an extant Athenian inscription, from which we obtain a more exact statement of the ratio than in Plutarch's account, and from which we also learn that the old system continued in use, long after the Solonian reduction, for all commodities, except such as were required by law to be weighed according to the other standard, which was also the one always used for money, and is therefore called the silver standard, the old system being called the commercial standard, and its mina the commercial mina (ἡ μὲν ἡ ἐμπορικὴ). The inscription, which is a decree of uncertain date (about O. I. 155, A. C. 160, according to Böckh, C. I. No. 123, § 4, vol. i. p. 164), mentions the commercial mina as weighing "138 drachmæ *ἑξαπνέπον*, according to the standard weights in the mint" [*ἀρεβροκόμιον*], that is, of course, 138 drachmæ of the silver, or Solonian, standard. This would give the ratio of the old to the new Attic weights as 138 : 100, or 100 : 72 $\frac{2}{3}$, certainly a very curious proportion. It appears, however, on closer research, that this ratio is still not quite exact. It often happens that, in some obscure passage of a grammarian, we find a statement involving minute details, so curious and so inexplicable, till the clue is found, that the few scholars who notice the passage reject it as unintelligible, without considering that those strange minutiae are the best evidence that the statement is no invention; and that the grammarian, who copied the statement, without troubling himself to understand it, has preserved a fact, which more systematic writers have lost or perverted. Such passages are grains of pure gold amidst the mud which forms the bulk of the deposit brought down to us by those writers. A striking instance is now before us, in a passage of Priscian (*de Re Numm.*) in which, following a certain Dardanus, he says: "*Talentum Atheniense parvum minæ sexaginta, magnum minæ octingenta tres et unciae quattuor.*" Taking the last words to be the Roman mode of expressing 83 $\frac{1}{2}$, and assuming, what is obvious, that the *minæ* meant in the two clauses are of the same standard, namely, the common Attic or Solonian (for, as a general rule, this standard is to be understood, where no other is specified), and understanding by the *great Attic talent* that of the commercial standard, and by the *small, the silver, or Solonian*, we obtain this result, — that the ratio of the old Attic or commercial talent to the new Attic or Solonian, was as 83 $\frac{1}{2}$: 60, or as 138 $\frac{1}{2}$: 100, or as 100 : 72. For the masterly argument by which Böckh sustains the truth of this statement, we must refer to his own work (c. viii.). It is easy to understand how, in process of time, the fraction came to be neglected, so that, in the decree quoted, the commercial mina of 100

commercial drachmae was spoken of as containing 138 silver drachmae instead of 138½, and how, further, when Plutarch came to calculate how many drachmae of the old scale were contained in the Solonian mina, he gave an integral number 73, instead of 72½, and thus, by these two rejections of fractions, the true ratio of 100 : 72 was altered to 100 : 73.*

8. *Ratios of the three Greek Systems to each other.*

—The importance of this calculation is made manifest, and its truth is confirmed, by comparing the result with the statements which we have of the ratio of the Aeginetan standard to the Solonian. That ratio was 5 : 3, according to the statement of Pollux, that the Aeginetan talent contained 10,000 Attic drachmae, and the drachma 10 Attic obols. (Poll. ix. 76, 86.) Mr. Hussey (who was the first, and, after the reply of Böckh, ought to be the last, to call this statement in question) observes that this value would give an Aeginetan drachma of 110 grains, whereas the existing coins give an average of only 96; and he explains the statement of Pollux as referring not to the Attic silver drachmae of the full weight, but to the lighter drachma which was current in and after the reign of Augustus, and which was about equal to the Roman denarius. [DRACHMA.]

On the other hand, Böckh adheres to the proportion of 5 : 3, as given by Pollux, who could not (he contends) have meant by drachmae those equal to the denarii, because he is not making a calculation of his own, suited to the value of the drachma in his time, but repeating the statement of some ancient writer who lived when the Attic and Aeginetan currencies were in their best condition. Mr. Hussey himself states (p. 34), and for a similar reason to that urged by Böckh, that when Pollux speaks of the value of the Babylonian talent in relation to the Attic, he is to be understood as referring to Attic money of the full weight; and Böckh adds the important remark, that where Pollux reckons by the lighter drachmae, as in the case of the Syrian and small Egyptian talents, this only proves that those talents had but recently come into circulation. Böckh thinks it very probable that Pollux followed the authority of Aristotle, whom he used much, to which he makes frequent references in his statements respecting measures and money, and who had frequent occasions for speaking of the values of money in his political works.

Again, as the Aeginetan standard was that which prevailed over the greater part of Greece in early times, we should expect to find some definite proportion between it and the old Attic before Solon; and, if we take the statement of Pollux, we do get such a proportion, namely, that of 6 : 5, the same which has been obtained from the foregoing investigation.

Böckh supports his view by the evidence of ex-

* The commercial weights underwent a change by the decree mentioned above, which orders that 12 drachmae of the silver standard shall be added to the mina of 138 drachmae; that to every five commercial minae one commercial mina shall be added; and to every commercial talent five commercial minae. Thus we shall have—

the mina = 150 drachmae (silver),
3 minae = 6 minae (commercial),
the talent = 65 minae (commercial).

isting coins, especially the old Macedonian, before the adoption of the Attic standard by Philip and Alexander, which give a drachma of about 110 grains, which is to the Attic as 5 : 3. The identity of the old Macedonian standard with the Aeginetan is proved by Böckh (*Metrol.* p. 89; compare Müller, *Dor.* iii. 10. § 12. and *Aeginet.* pp. 54—58). There are also other very ancient Greek coins of this standard, which had their origin, in all probability, in the Aeginetan system. [NUMMUS, p. 812, a.]

The lightness of the existing coins referred to by Hussey is explained by Böckh from the well-known tendency of the ancient mints to depart from the full standard.

Mr. Hussey quotes a passage where Herodotus (iii. 131) states that Democedes, a physician, after receiving a talent in one year at Aegina, obtained at Athens the next year a salary of 100 minae, which Herodotus clearly means was more than what he had before. But, according to Pollux's statement, says Mr. Hussey, the two sums were exactly equal, and therefore there was no gain. But Herodotus says nothing of different standards; surely then he meant the same standard to be applied in both cases.

From comparing statements made respecting the pay of soldiers, Hussey (p. 61) obtains 4 : 3 as about the ratio of the Aeginetan to the Attic standard. Böckh accounts for this by supposing that the pay of soldiers varied, and by the fact that the Aeginetan money was actually lighter than the proper standard, while the Attic at the same period was very little below the full weight.

There are other arguments on both sides, but what has been said will give a sufficiently complete view of the question.

As the result of the whole investigation, we get the following definite ratios between the three chief systems of Greek weights:

Aeginetan :	Euboic	:	6 : 5
Aeginetan :	Solonian	:	5 : 3
Euboic :	Solonian	:	138½ : 100
	i. e.	:	100 : 72
		:	25 : 18
	or nearly	:	4 : 3

The reason of the strange ratio between the Solonian and old Attic (Euboic) system seems to have been the desire of the legislator to establish a simple ratio between his new system and the Aeginetan. Respecting the diffusion of the three systems throughout Greece, see NUMMUS.

9. *Other Grecian Systems.*—Our information respecting the other standards used in Greece and the neighbouring countries is very scanty and confused. Respecting the *Egyptian*, *Alexandrian*, or *Ptolemaic Talent*, the reader is referred to Böckh, c. x. The *Tyrian Talent* appears to have been exactly equal to the Attic. A *Rhodian Talent* is mentioned by Festus in a passage which is manifestly corrupt (a. e. *Talentum*). The most probable emendation of the passage gives 4000 cistophori or 7500 denarii as the value of this talent. A *Syrian Talent* is mentioned, the value of which is very uncertain. There were two sizes of it. The larger, which was six times that used for money, was used at Antioch for weighing wood. A *Cilician Talent* of 3000 drachmae, or half the Attic, is mentioned by Pollux (ix. 6).

A much smaller talent was in use for gold. It was equal to 6 Attic drachmae, or about ½ oz. It

was called the *gold talent*, or the *Sicilian talent* from its being much used by the Greeks of Italy and Sicily. This talent is perhaps connected with the small talent which is the only one that occurs in Homer. The Italian Greeks divided it into 24 *nummi*, and afterwards into 12 (Pollux, ix. 6; Festus, s. v. *Talentum*). [Compare NUMMUS, p. 814.]

This small talent explains the use of the term *great talent* (*magnum talentum*), which we find in Latin authors, for the silver Attic talent was *great* in comparison with this. But the use of the term by the Romans is altogether very inexact; and in some cases, where they follow old Greek writers, they use it to signify the old Attic or Euboic Talent.

There are other talents barely mentioned by ancient writers. Hesychius (s. v.) mentions one of 100 pounds (*λίτρον*), Vitruvius (x. 21) one of 120; Suidas (s. v.), Hesychius, and Epiphanius (*de Mens. et Pond.*) of 125; Dionysius of Halicarnassus (ix. 27) one of 125 *asses*, and Hesychius three of 165, 400, and 1125 pounds respectively.

Where talents are mentioned in the classical writers without any specification of the standard, we must generally understand the Attic.

10. *Comparison of Grecian Weights with our own.*—In calculating the value of Greek weights in terms of our own, the only safe course is to follow the existing coins; and among these (for the reasons stated under NUMMUS, p. 811, b.), it is only the best Attic coins that can be relied on with any certainty, although there are many other coins which afford valuable confirmatory evidence, after the standards to which they belong have been fixed.

Mr. Hussey's computation of the Attic drachma, from the coins, is perhaps a little too low, but it is so very near the truth that we may safely follow it, for the sake of the advantage of using his numbers without alteration. He makes the *drachma* 66·5 grains. [DRACHMA: comp. NUMMUS, p. 811, b.: for the other weights see the Tables.]

11. *Roman Weights.*—The outline of the Roman and Italian system of weights, which was the same as the ancient system of copper money, has been already given under AS. The system is extremely simple, but its conversion into our own standard is a question of very considerable difficulty. The following are the different methods of computing it:—

(1) *The Roman coins* furnish a mode of calculating the weight of the *libra*, which has been more relied on than any other by most modern writers. The AS will scarcely help us in this calculation, because its weight, though originally a pound, was very early diminished, and the existing specimens differ from each other very greatly [AS], but specimens, which we may suppose to be *asses librales*, may of course be used as confirmatory evidence. We must therefore look chiefly to the silver and gold coins. Now the average weight of the extant specimens of the denarius is about 60 grains, and in the early ages of the coinage 84 denarii went to the pound. [DENARIUS.] The pound then, by this calculation, would contain 5040 grains. Again, the *aurei* of the early gold coinage were equal in weight to a *scrupulum* and its multiples. [AURUM.] Now the *scrupulum* was the 288th part of the pound [UNCIA], and the average of the *scrupular aurei* has been found by Letronne to be about 17½

grains. Hence the pound will be $288 \times 17\frac{1}{2} = 5040$ grains, as before. The next aurei coined were, according to Pliny, 40 to the pound, and therefore, if the above calculation be right, = 126 grains; and we do find many of this weight. But, well as these results hang together, there is great doubt of their truth. For, besides the uncertainty which always attends the process of calculating a larger quantity from a smaller on account of the multiplication of a small error, we have every reason to believe that the existing coins do not come up to their nominal weight, for there was an early tendency in the Roman mint to make money below weight (Plin. *H. N.* xxxiii. 13. s. 46; compare AS, AURUM, DENARIUS), and we have no proof that any extant coins belonged to the *very earliest* coinage, and therefore no security that they may not have been depreciated. In fact, there are many specimens of the denarius extant, which weigh more than the above average of 60 grains. It is therefore probable that the weight of 5040 grains, obtained from this source, is too little. Hence, Wurm and Böckh, who also follow the coins, give it a somewhat higher value, the former making it 5053·635 grains, and the latter 5053·28. (Hussey, c. 9; Wurm, c. 2; Böckh, c. 11).

(2) Another mode of determining the pound is from the *relation between the Roman weights and measures*. The chief measures which aid us in this inquiry are the amphora or quadrantal, and the congius. The solid content of the amphora was equal to that of a cube, of which the side was one Roman foot, and the weight of water it contained was 80 pounds. [QUADRANTAL.] Hence, if we can ascertain the length of the Roman foot independently, it will give us the solid content of the amphora, from which we can deduce the weight of the Roman pound. Taking the Roman foot at 11·65 inches, its cube is 1581·167 cubic inches = 5·7025 imperial gallons = 57·025 pounds avoirdupois, the 80th part of which is 7128 of a pound, or 4989 grains. But there are many disturbing elements in this calculation, of which the chief is our ignorance of the precise density of the fluid, 80 pounds of which filled the amphora.

It might, at first thought, appear that the result might be obtained at once from the congius of Vespasian, which professes to hold 10 Roman pounds [CONGIUS], and the content of which has been twice examined. In 1630, Auzout found it to contain 51468·2 grains of distilled water, which would give 5146·32 grains for the Roman pound. In 1721, Dr. Hase found it to contain 52037·69 grains, giving 5203·77 grains for the Roman pound. Both these results are probably too high, on account of the enlargement which the vessel has undergone by the corrosion of its inner surface; and this view is confirmed by the fact, that the earlier of the two experiments gave it the smaller content. (See Wurm, p. 78; Böckh, pp. 166, 167.) Again, the nature of the fluid employed in the experiment, its temperature, and the height of the barometer, would all influence the result, and the error from these sources must occur twice, namely, at the original making of the congius and at the recent weighing of its contents. We can, therefore, by no means agree with Mr. Hussey in taking the weight of 5204 grains, as obtained from this experiment, to be the nearest approximation to the weight of the Roman pound. On the contrary, if this method were followed at all, we

should be compelled to prefer the theoretical calculation from the *quadrantal* already given, and to say that the value of 5053.28 (or 5053.635) grains, obtained from the coins is too high, rather than too low.

(3) Another method is from *existing Roman weights*, of which we possess many, but differing so greatly among themselves, that they can give no safe independent result, and their examination is little more than a matter of curiosity. A full account of them will be found in Böckh, pp. 168—196.
